PREFACE

The New Columbia Encyclopedia is the fourth edition of *The Columbia Encyclopedia*. Compact and ready for instant reference, the encyclopedia offers authentic and accurate information in condensed form. Cross-references enable the reader to locate an article quickly, and bibliographies at the end of many articles provide guides to additional reading matter. Since the development of specialization, no encyclopedia can succeed in presenting the sum of human knowledge. Nevertheless, the editors of *The New Columbia Encyclopedia* have provided the reader with a wide-ranging variety of subjects that fall within the province of a general reference work. There are articles on the arts and literature, geography, the life and physical sciences, and the social sciences.

The tradition of this encyclopedia can be traced back to the year 1935 and the late Clarke Fisher Ansley, the editor of the first edition. In the Preface to that edition, Dr. Ansley wrote:

One who makes good use of the art of reading needs to have three reference works at hand: a dictionary, an atlas, and an encyclopedia. The dictionary and the atlas for workaday purposes are each in one volume. On the Continent of Europe one-volume encyclopedias have long been in general use. *The Columbia Encyclopedia* has been compiled to serve readers of English in a like way, as the companion of the dictionary and the atlas.

Although the first edition was indeed comprehensive, it did not attempt to provide information for scholars in their own fields. According to Dr. Ansley: "The most that others may have in a specialist's field is first aid, and in the specialties of others, the specialist's need is not less than that of other men."

With these principles in mind, the editors reviewed authoritative sources and summarized generally accepted judgments, not individual interpretations. Insofar as possible, the first edition was a survey of prevailing views, written in language that was clear and intelligible to the general reader.

A second (1950) and a third (1963) edition of *The Columbia Encyclopedia* followed the first, adhering to Dr. Ansley's principle, while at the same time expanding it to meet the needs of contemporary readers. The fourth edition follows the tradition of the first three, of which there are more than 900,000 copies in print, applying it to the world of the 1970s. Between the first and second editions World War II effected enormous sociological and political changes. Between the second and third editions the space age came upon us, school curricula were revised in keeping with the importance of scientific discoveries, and the computer began to reshape our lives. In the years between the third and fourth editions more startling changes occurred. Men traveled more than 200,000 miles from earth and set foot on the moon, study increased in land use, conservation, and environmentalism, and in 1974 for the first time in history a President of the United States resigned from office. *The New Columbia Encyclopedia*, which covers these events, is as up to date as humanly possible as of January, 1975.

The fourth edition in many ways is really new. Although the encyclopedia is still intended primarily for English-speaking readers, its articles cover a wider variety of people, countries, and cultures than ever before. For example, coverage of Africa, Asia, and South America has been greatly expanded. In keeping with the increased knowledge and sophistication of readers, the science entries in this edition include more advanced and detailed

technical information than those in previous editions. *The New Columbia Encyclopedia* was set by computer, an innovation that enabled us to include more information on a page than in previous editions. The type of this edition is also easier to read.

For the convenience of the reader, the fourth edition contains certain other improvements. Drawings and maps are now found within or near the articles they illustrate. More information has been organized into charts for easy reference; for example, there are tables listing Shakespeare's plays, constellations, popes, U.S. Presidents and Supreme Court justices, British and Canadian prime ministers, and French, Spanish, and Russian rulers. Also, metric equivalents are given for most measurements in English standard units.

In the preparation of the fourth edition, every article from the third edition was reviewed. Some were revised or replaced, others were found to be more than adequate and remain as they were in the third edition. Also, we retained a special feature of all previous editions. There is an entry for every proper name in the Authorized Version (King James Version) of the Bible, with alternate names and spellings from the revised versions of the Bible whenever possible. As in former editions, because several people were involved in the production of an article, all entries are unsigned.

This encyclopedia is neither an official nor an unofficial publication of Columbia University, but without Columbia University this book would not have been possible. On the following pages is a list of academic consultants, many from the University, who gave unstintingly of their time and knowledge in helping us prepare the article lists, and in some instances the articles themselves, in their fields of specialty.

The population figures are from the most recent sources available at the time the articles were written. For the figures of the People's Republic of China, we are indebted to Kingsley Davis, Ford Professor of Sociology and Comparative Studies and Director of International Population and Urban Research, University of California, Berkeley. We are especially grateful to Hammond Inc. and to Ashley Talbot, Executive Editor, for his generous cooperation in making many of Hammond's vast files of population statistics available to us.

The editors of *The New Columbia Encyclopedia* wish to express our gratitude to Charles G. Proffitt, former President and Director of Columbia University Press, who from the very beginning of the encyclopedia through the third edition and the inception of the fourth edition has been its mentor and guide. Thanks are due to Robert G. Barnes, the present President and Director of the Press, who saw *The New Columbia Encyclopedia* through to its final stages. We wish also to thank Henry H. Wiggins, Assistant Director of the Press, for his dedication to the encyclopedia, a staff editor on the first two editions and consultant on the third, he contributed both experience and scholarship to the fourth edition. In addition, we are grateful to Gerard S. Mayers, who supervised the production of *The New Columbia Encyclopedia*, and to Marshall Lee, who was our consultant on typography and design and was responsible for setting the style of the maps and other illustrations. Finally, we wish to thank Rocappi, the computerized composition division of the Lehigh Press, Inc., who with patience and skill prepared our manuscript for computer typesetting.

HOW TO USE THE NEW COLUMBIA ENCYCLOPEDIA

The New Columbia Encyclopedia is easy to use. All articles are arranged alphabetically, with each article heading in **boldface type**. The headings of biographical articles are inverted and alphabetized by the subject's surname, with the exception of articles on some historical figures. Thus, William Faulkner appears as **Faulkner, William**, but Stephen Bathory and Joan of Arc are listed as **Stephen Bathory** and **Joan of Arc**.

The problem of alphabetizing names that include de, van, von, and the like has been resolved by employing as the heading the most commonly used form of the name. Accordingly, the German statesman Otto von Bismarck is entered as **Bismarck, Otto von**, while the painter Vincent van Gogh is under **Van Gogh, Vincent**, with a cross-reference from **Gogh, Vincent van**.

M', Mc, and Mac are listed as if they were spelled Mac. Thus the political scientist **McBain, Howard Lee** precedes the Scottish king **Macbeth**, who precedes the American author and public official **McCarthy, Charles**. In each instance it is the letter or letters after the Mc or Mac that determine the alphabetical order. Exceptions to this rule are African names beginning with M', they are listed in strict alphabetical order: M'Ba, Mbandaka, M'Bour, Mdina, etc.

Abbreviations are alphabetized as though they were spelled out (e.g., St is alphabetized as Saint). Therefore, the heading **St. Clair, Arthur** is listed before **Saint Clair, Lake**, which precedes **St. Denis, Ruth** and the Dutch island **Saint Eustatius**. Again, in each case the first letter of the word after Saint determines the alphabetical order.

When two or more articles have the same heading, entries are alphabetized by category: persons, places, and things. Thus, if one were to look for an article heading with the name Washington, **Washington, George** (person) would precede **Washington**, state (place), and that would precede **Washington, Treaty of** (thing). The order of entry for persons of the same name is determined by rank: saints, popes, emperors, kings, followed by titled nobility, such as crown prince, duke or count, baron, baronet, and so forth. Monarchs of the same name are listed numerically and alphabetically by country: **Charles X**, king of France, appears before **Charles III**, king of Naples, who in turn precedes **Charles III**, king of Spain.

Within some articles in *The New Columbia Encyclopedia*, related material is introduced by subheadings in smaller **boldface type**. For example, in the biographical article **Mond, Ludwig** there is a description of the **Mond process**. The main heading **naval conferences** contains five boldface subheadings: **London Naval Conference** (1908-9), **Washington Conference** (1921-22), **Geneva Conference** (1927), **London Conference** (1930), and **London Conference** (1935). If a reader wishes to have information on any one of these subheadings, he can find it directly without reading the entire article.

This method is also used for family articles. The **Bach** family article contains subheadings for seven members, three of these are cross-references to separate articles on **Johann Sebastian Bach**, **Carl Philipp Emanuel Bach**, and **Johann Christian Bach**.

Boldface numbers are also used in some multiple entries. For example, when several U.S. cities have the same name, they are

listed alphabetically by state in a single article.

Jacksonville. 1 City (1970 pop. 19,832), Pulaski co., central Ark. **2** City (1970 pop. 528,865), coextensive (since 1968) with Duval co., NE Fla. **3** City (1970 pop. 20,553), seat of Morgan co., W central Ill. **4** City (1970 pop. 16,289), seat of Onslow co., E N.C.

Because space is limited in a single-volume encyclopedia, information provided in one article is generally not repeated in another. Instead, cross-references are used extensively in the text to guide the reader to various articles containing related material. References to those headings are printed in SMALL CAPITALS. An example of this system may be found in the article **environmentalism**, which has the following definition: "movement to protect the quality and continuity of life through CONSERVATION OF NATURAL RESOURCES, prevention of POLLUTION, and control of LAND USE." All the articles mentioned in SMALL CAPITALS are in the encyclopedia and provide additional information; when read together, they will give the reader a basic understanding of this particular subject. There are many names mentioned in articles that are not indicated as cross-references. However, this does not necessarily mean that there are no separate articles on these persons in the encyclopedia. Cross-references are used only as a means of suggesting that there is further information about the subject matter.

Cross-referencing makes an index in *The New Columbia Encyclopedia* unnecessary. Some boldface entries are cross-references directing the reader to appropriate headings (**mind reading**: see PARAPSYCHOLOGY, TELEPATHY). Others catalog references pertaining to a particular subject; for example, **music** provides some 70 cross-references while instructing the reader how to locate specific information.

music. For information on types of music, see such articles as ABSOLUTE MUSIC, ALEATORY MUSIC, CHAMBER MUSIC, JAZZ. In addition, see entries on the music of various nations and peoples, including AMERICAN NEGRO SPIRITUALS, ARABIAN MUSIC, BALINESE MUSIC, and JEWISH LITURGICAL MUSIC, etc.

An additional aid to the reader is the bibliography that appears at the end of many articles. These books have been selected to enable the reader to expand his knowledge on a subject that cannot be treated at great length in a short-entry encyclopedia and, indeed, cannot be treated comprehensively in any encyclopedia. In order to save space not all books have been identified by title. Instead, the kind of work and the author are given. For example, at the end of the article on the French painter **Eugène Delacroix** there are bibliographic references to his journal, selected letters edited by J. Stewart, and studies by L. F. Johnson and G. P. Mras. Although no specific titles are given, such works may be found without difficulty by consulting the card catalog of a library.

Pronunciations have been provided for headings consisting of unfamiliar names or scientific terms; for many foreign names both native and anglicized pronunciation is shown. The key to pronunciation appears on page xi.

In order to conserve space, many abbreviations are used in the text. A list of terms abbreviated in *The New Columbia Encyclopedia* and other common abbreviations begins on page xii.

KEY TO PRONUNCIATION

ə	sofa (sō'fə), item (ī'təm), easily (ē'zəlē), cannon (kān'an), circus (sūr'kəs)	ng	singing (sīng'ing), finger (fīng'gər), sang (sāng), sank (sāngk)
ă	act (ăkt), bat (băt)	ō	hot (hōt), body (bōd'e)
ā	ape (āp), fail (fāl), day (dā)	ō	over (ō'vər), hope (hōp), grow (grō)
â	air (âr), care (kâr)	ô	orbit (ôr'bit), fall (fôl), saw (sô)
a	art (art), father (fa'thər)	ōō	foot (fōōt), wolf (wōōlf), put (pōōt), pure (pyōōr)
b	back (băk), labor (lā'bər), cab (kāb)	ou	boot (bōōt), lose (lōōz), drew (drōō), true (trōō)
ch	chin (chīn), hatchet (hăch'ət), rich (rīch)	oi	oil (oil), royal (roi'əl), boy (boi)
d	dock (dōk), lady (lā'dē), sad (sād)	ou	out (out), crowd (kroud), how (hou)
ě	end (ěnd), steady (stěd'ě), met (mět)	p	pipe (pīp), happy (hăp'ē)
ē	eve (ēv), clear (klēr), see (sē)	r	road (rōd), appeared (əpērd'), carpenter (kar'pəntər)
f	fat (fât), phase (fāz), cough (kôf)	s	so (sō), cite (sīt), baste (bāst)
g	get (gēt), bigger (bīg'ər), tag (tāg)	sh	shall (shāl), sure (shōōr), nation (nā'shən)
h	hand (hănd), ahead (əhēd')	t	tight (tīt), better (bět'ər), talked (tōkt)
hw	wheel (hwēl), which (hwīch)	th	thin (thīn), bath (băth)
ī	it (īt), pill (pīl), mirror (mīr'ər)	th	then (thēn), father (fa'thər), bathe (băth)
ī	iron (ī'ərən), eye (ī), buyer (bī'ər)	ū	but (būt), flood (flūd), some (sūm)
j	jam (jām), ginger (jīn'jər), edge (ěj)	û	curl (kûrl), girl (gûrl), fern (fûrn), worm (wûrm)
k	kit (kīt), tackle (tak'əl), cook (kōōk)	v	vest (vēst), trivial (trīv'ēəl), eve (ēv)
l	little (līt'əl), holly (hōl'ē), pull (pōōl)	w	wax (wăks), twins (twīnz), coward (kou'ərd)
m	man (măn), hammer (hăm'ər), climb (klīm)	y	you (yōō), onion (ūn'yən)
n	new (nōō), known (nōn), winner (wīn'ər)	z	zipper (zīp'ər), ease (ēz), treads (trēdz)
		zh	pleasure (plēzh'ər), rouge (rōōzh)

Foreign Sounds

o	as in French <i>peu</i> (po), German <i>Goethe</i> (go'tə)
u	as in French <i>Cluny</i> (klunē')
kh	as in German <i>ach</i> (akh), <i>ich</i> (īkh), Scottish <i>loch</i> (lōkh)
N	this symbol indicates that the preceding vowel is nasal as in French <i>cinq</i> (sāNk), <i>un</i> (oN), <i>sans</i> (saN), <i>tombe</i> (tōNb), <i>en</i> (āN)

Accents and Hyphens

- ' primary accent, written after accented vowel or syllable *Nebraska* (nəbrās'kə), *James Buchanan* (byōōkā'nən)
- '' secondary accent *Mississippi* (mīs''əs-sīp'ē)
- dash, replacing obvious portion of pronunciation *hegemony* (hījēm'anē, hē-, hēj'əmō'nē, hēj'ə-)
- hyphen, to prevent ambiguity in syllabification *Erlanger* (ūr'lāng-ər), *dishearten* (dīs-har'tən)

THE NEW COLUMBIA ENCYCLOPEDIA

A, first letter of the ALPHABET Its Greek correspondent is named alpha, symbolizing God It is a usual symbol for a low central vowel as in *father*, English *ā* is pronounced as a diphthong of *ē* and *y* In MUSICAL NOTATION it is the symbol of a note in the scale

Aa (a) [from a word for "water" of the same Indo-European root as Lat *aqua*], name of many small streams of N Europe and Switzerland **Aa**, or a derivative of it, is a component part of hundreds of European place names

aa (ā'a) see LAVA

Aabenraa: see ÅBENRÅ, Denmark

Aachen (ä'khan), **Aix-la-Chapelle** (äks-lä-shapël'), or **Bad Aachen** (bät ä'khan), city (1970 pop 173,473), North Rhine-Westphalia, W West Germany, near the Belgian and Dutch borders One of the great historic cities of Europe, it is now chiefly important as an industrial center and rail and road junction Its manufactures include textiles, machinery, rubber goods, metal products, and furniture Hard coal is mined in the region The city's hot mineral baths, frequented by the Romans in the 1st cent AD, are still used to treat gout, rheumatism, and skin diseases Charlemagne, who was probably born in Aachen in 742, made the city his northern capital and the leading center of Carolingian civilization He built a splendid palace and founded the great cathedral, which reputedly contained his tomb The cathedral, which has an octagonal nucleus modeled on the Church of San Vitale in Ravenna, Italy, received extensive Gothic additions in the 14th-15th cent From 936 to 1531, German kings were usually crowned at Aachen Although it later declined in importance, Aachen remained a free imperial city until it was occupied (1794) by French troops and later annexed (1801) by France It passed to Prussia in 1815 From 1918 to 1930 the city was occupied by the Allies as a result of Germany's defeat in World War I During World War II approximately two thirds of Aachen was destroyed by aerial bombardment, and the city was the first major German city to fall (Oct, 1944) to the Allies Treaties ending the War of Devolution (1668) and the War of the Austrian Succession (1748) were signed at Aachen (see AIX-LA-CHAPELLE, TREATY OF) At the Congress of Aix-la-Chapelle (1818) Czar Alexander I of Russia unsuccessfully proposed that the Holy Alliance be tightened Aachen is the site of a technical university

Aakjaer, Jeppe (jēp'ä ök'yär), 1866-1930, Danish poet and novelist He wrote mostly of his native Jutland, and his concern for the poor is reflected in such novels as *The Peasant's Son* (1899) and *Children of Wrath* (1904) Aakjaer's finest work is his poetry, *Songs of the Rye* (1906) and *Heimdal's Wanderings* (1924) Recall his lyric gift

Aalborg: see ÅLBORG, Denmark

Aalesund see ÅLESUND, Norway

Aalsmeer (äls'mär), town (1970 pop 18,666), North Holland prov, W central Netherlands, on Westeinder Plassen lake, near Amsterdam It has one of the largest flower nurseries in Europe

Aalst (älst), Fr *Alost*, city (1970 pop 46,659), East Flanders prov, W central Belgium It is a commercial and industrial center, manufactures include textiles, clothing, and footwear Known since the 9th cent, Aalst was held by France from 1667 to 1706 and was the capital of Austrian Flanders in the 18th cent Of note are the city hall (13th cent) and the Church of St Martin (15th cent), which contains a painting by Rubens

Aalto, Alvar (öl'vär äl'tö), 1898-, Finnish architect and furniture designer Aalto is considered one of the foremost architects of the 20th cent Most of his designs were made in collaboration with his wife, Aino Marsio, the celebrated furniture designer, until her death in 1949 Aalto's work adapts Finnish building traditions to modern European techniques and to the specific function of the structure in boldly expressive style His designs for the municipal library at Viipuri (1927-35, destroyed when it was made part of Russian territory in 1940) and the tuberculosis sanitarium at Paimio (1929-33) are out-

standing functionalist works He gained international fame by his remarkable designs for laminated-wood furniture and by his plans for the Finnish pavilions at the expositions in Paris (1937) and New York (1939) Appointed professor at the Massachusetts Institute of Technology in 1940, he designed there the serpentine Baker House (1947-48) After World War II he was active in reconstruction in Finland His major postwar works include a number of striking civic buildings in Helsinki, the Maison Carre in Paris (designed in collaboration with Elissa Makkinkheim, his second wife), and the Wolfsburg cultural center in Germany See his complete works, ed by Karl Fleig (tr of 3d ed, 2 vol, 1970-71), studies by F A Gutheim (1960) and George Baird, ed (1971)

Aar, river see AARE

Aarau (ä'rou), town (1970 pop 16,881), capital of Aargau canton, N Switzerland, at the foot of the Jura mts and on the Aare River A noted shoe-manufacturing center, it also has factories producing bells, mathematical instruments, electrical and optical goods, and other products Aarau was founded c 1250, it was the temporary capital (1798) of the HELVETIC REPUBLIC

aardvark (ärd'vark) [Du, =ground pig], nocturnal mammal of the genus *Orycteropus*, sole representative of the order Tubulidentata There are two species, one in central Africa and the other in S Africa The aardvark, about 6 ft (180 cm) long, has a long snout, large erect ears, an almost naked or sparsely haired body, and a long tail Its forefeet are adapted for making burrows in the ground and for clawing open the nests of ants and termites in order to capture the insects with its long sticky tongue Its cylindrical teeth are without enamel and roots The aardvark resembles the New World ANTEATERS but is not closely related to them It is also called ant bear and earth pig Aardvarks are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Tubulidentata, family Orycteropodidae

aardwolf (ärd'wölf), carnivore of the HYENA family The aardwolf, *Proteles cristatus*, resembles the true hyena but is smaller and more delicate It has less powerful teeth and jaws and five instead of four toes on its forepaws The coat of the aardwolf is yellow-gray with dark stripes, a ridge of hair extends down its sloping back It is a nocturnal, burrowing animal, inhabiting sandy plain and scrub from South Africa to Angola and Somaliland A timid beast, it feeds on small animals and insects, especially termites, and defends itself by emitting a foul-smelling fluid from anal scent glands A litter may include as many as six cubs, but two to four is typical, gestation lasts three months Aardwolves are solitary, but several females with cubs may share a burrow In captivity they have been known to live as long as 13 years Aardwolves are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Hyenidae

Aare (är'ä) or **Aar** (är), longest river entirely in Switzerland, 183 mi (295 km) long, rising in the Bernese Alps and fed by several glaciers The upper Aare emerges from dam-impounded Grimsel Lake and flows generally W through Lake Brienz, past Interlaken (where it is canalized), and through Lake Thun, the head of navigation The Aare continues northwest, flowing through Bern before turning and flowing generally northeast, past Solothurn and Aarau, to join the Rhine River opposite Waldshut, West Germany With its chief tributaries, the Reuss and Limmat rivers, the Aare drains most of Switzerland The Aare is connected with Lake Biel by two canals Near Meiringen, the Aare flows through a scenic gorge There are more than 40 hydroelectric power plants on the river

Aargau (är'gou), Fr *Argovie*, canton (1970 pop 433,284), 542 sq mi (1,404 sq km), N Switzerland AARGAU is the capital It is traversed by the Aare and Reuss rivers, and there are wooded hills and fertile valleys Cereals and fruit are raised, and cattle grazing is important Textiles, electrical goods, paper, cement, and metal products are the principal manu-

factures BADEN and RHEINFELDEN are noted health resorts Originally a Celtic settlement, the area was later occupied by the Romans and fell to the Franks in the 6th cent The territory was taken (1415) by BERN from the house of Hapsburg and was governed by the Swiss cantons until 1798 In 1803, Aargau was admitted as a canton to the Swiss Confederation Its population is mainly German-speaking and Protestant

Aarhus: see ÅRHUS, Denmark

Aaron (är'an), in the Bible, first high priest of the Hebrews, the brother of Moses and his spokesman in Egypt He was the instrument of Jehovah in miracles, as in turning his rod into a serpent and in causing the rod to bud, blossom, and bear almonds He made the golden calf and took part in the worship of it Ex 4 14-16, 6 20, 7 1-12, 28-32, Num 12, 17, 18, 20, 33 38, 39, Deut 10 6 His descendants were high priests and priests The prestige of descent from him was emphasized especially after the Exile

Aaron, Hank, 1934-, U S baseball player, b Mobile, Ala His real name is Louis Henry Aaron A right-handed batter with remarkable bat control, he played most of his major league career with the Braves, first in Milwaukee (1954-65) and then in Atlanta (1966-74) At the end of the 1974 season he was traded to the Milwaukee Brewers In 1974, Aaron broke Babe Ruth's monumental lifetime record of 714 home runs, closing the season with 733 Also a fine outfielder with an excellent arm, he was the major league lifetime leader in extra-base hits and total bases

Aaron's-beard, name sometimes applied to several plants usually characterized by some beardlike aspect, as the 5t John's-wort because of its many stamens and the Kenilworth ivy because of its thread-like runners Aaron's-beard cactus is *Opuntia leucotricha*, a true cactus

Aaron's-rod, popular name for several tall-flowering, infrequently branching plants, such as golden-rod and mullein The name is an allusion to the rod that Aaron placed before the ark and that miraculously blossomed and bore almonds (Num 17 8)

Aba (ä'bä), city (1969 est pop 152,000), SE Nigeria It is an important regional market, a road and rail hub, and a manufacturing center for textiles, pharmaceuticals, processed palm oil, shoes, plastics, soap, and beer Originally a small 180 village, Aba was developed by the British as an administrative center in the early 20th cent In 1929, women in Aba rioted against Britain's arbitrary use of indigenous persons as rulers and against direct taxation

abacá see MANILA HEMP

Abaco and Cays (äb'äkö, kēz, káz), island group, c 780 sq mi (2,020 sq km), most northerly of the Bahamas Islands It includes Great Abaco (the largest), Little Abaco, and the surrounding islets The low islands, composed mainly of coral limestone, have native pine forests Fish and sponges are taken from surrounding waters Great Abaco was settled by Loyalists from New York City in 1783

abacus (äb'akəs), in architecture, flat slab forming the top member of a capital In classical orders it varies from a square form having unmolded sides in the Greek Doric, to thinner proportions and ovolo molding in the Greek Ionic, and to sides incurving and corners cut in Roman Ionic and Corinthian examples In Romanesque work the abacus is heavier in proportion, projects less, and is generally molded and decorated In Gothic work the form varies, appearing in square, circular, and octagonal forms with molded members

abacus (äb'äkas, äbäk'-), in mathematics, simple device for performing arithmetic calculations The type of abacus now best known is represented by a frame with sliding counters An elementary abacus might have ten parallel wires strung between two boards on a frame, with nine beads on each wire Each bead on a given wire has the same value either ten or some multiple or submultiple of ten For example, all of the beads on a particular wire may have a value of 1, making this the units wire, or 10,

making this wire the tens wire. Numbers are represented and added together on the abacus by grouping beads together. To represent 155, five beads on the units wire are separated from the others on that wire, five beads on the tens wire, and one bead on the hundreds wire. To add 243 to 155, three more beads on the units wire are slid over to join the group of five, four more beads on the tens wire join the five there, and two more beads on the hundreds wire join the one there. The number 398 is now represented on the abacus. Subtraction can be performed by separating groups of beads. More elaborate processes are used to perform multiplication and division. The abacus is used for calculating in the Middle East, the Orient, and Russia and for teaching children the elements of arithmetic in many countries. An apparatus of pebbles or other movable counters was known in antiquity to the Egyptians, Greeks, Romans, and Chinese. A special merit of the abacus was that it simplified the addition and subtraction of numbers written in Roman numerals. Another type of abacus includes a board covered with sand or wax to facilitate making and erasing marks. See J. M. Pullan, *The History of the Abacus* (1968), P. H. Moon, *The Abacus* (1971).

Abadan (ābādān', ābadan'), city (1971 est. pop. 281,000), Khuzestan prov., SW Iran, on Abadan Island, in the delta of the Shatt al Arab, at the head of the Persian Gulf. It is the terminus of major oil pipelines and is an important oil refining and shipping center. There is a large petrochemical complex that produces plastics, detergents, and caustic soda. Abadan is the point of origin of a natural gas pipeline to the USSR. Abadan Island was ceded to Iran by Turkey in 1847. Abadan city was an unimportant village until the discovery (1908) of nearby oilfields. Its oil refinery (commissioned 1913) was the largest in the world until 1951, when it was temporarily closed as a result of the nationalization of the Anglo-Iranian Oil Company. The city is the site of an institute of technology (1938).

Abaddon (ābādān'), Hebrew name of APOLLYON. Rev. 9:11. In ancient Jewish tradition it was used for part of Sheol.

Abadeh (ābādā'), town (1966 pop. 16,000), Fars prov., S central Iran. It is the trade center for a grain and fruit-growing region. Sesame oil, castor oil, and opium are also produced there. Woodcarving is a local craft.

Abagtha (ābāg'thā), one of Ahasuerus' seven chamberlains. Esther 1:10.

Abakan (ābakan'), city (1970 pop. 90,000), capital of the Khakass Autonomous Oblast, in S central Siberian USSR, on the Yenisei River. A commercial center on the South Siberian RR, it produces textiles, furniture, foodstuffs, and metal products. Founded (1707) as a fortress, Abakan was known as Ust-Abakanskoye until 1931. Bronze Age tumuli and Turkic inscriptions have been found in the city.

abalone (ābālō'nē), popular name in the United States for a univalve GASTROPOD mollusk of the genus *Haliotis*, members of which are also called ear shells, or sea ears, as their shape resembles the human ear. The shell provides a rooflike covering for the abalone and is perforated by a row of holes on one side through which the animal respire. The iridescent mother-of-pearl shell lining is used to make buttons and other articles. The large, muscular foot is edible, and the animal is taken in large numbers off the coast of California for food. Holding tenaciously to a rock with its foot, the abalone feeds by scraping the substratum with its rasping tongue, or radula. Before protective legislation was enacted, much of the dried flesh and some shells were exported to the Orient. Abalone are classified in the phylum MOLLUSCA, class Gastropoda, order Archaeogastropoda, family Haliotidae.

Abana (ābā'nā), river of Damascus. 2 Kings 5:12. It is probably the Barada, flowing near Damascus. See also PHARPAR.

abandonment, in law, voluntary, intentional, and absolute relinquishment of rights or property without conveying them to any other person. Abandonment also means willfully leaving one's spouse or children, intending not to return (see DESERTION). In many states the abandonment of a child is a criminal offense.

Abano, Pietro d' (pyā'trō dā'banō), 1250?-1316?, Italian physician and philosopher, a professor of medicine in Padua. His famous work *Conciliator differentiarum* was an attempt to reconcile Arabian medicine and Greek speculative natural philosophy and was considered authoritative as late as the 16th cent. His efforts marked the rise of the Paduan school as a center for medical study. He was tried

twice by the Inquisition on charges of heresy and practicing magic. Acquitted at the first trial, he was found guilty at the second, after his death.

Abarbanel, Isaac: see ABRAVANEL, ISAAC.

Abarim (āb'arīm), general term for the country E of the Jordan Num. 27:12, 33:47, Deut. 32:49. The same original term is translated "the passages" in Jer. 22:20.

Abascal, José Fernando de (hōsā' fērnān'dō dā abaskāl'), 1743-1827, Spanish viceroy of Peru (1806-16). During the South American revolt against the colonial rule of Spain, he skillfully reconciled the Spanish officials and the creole colonials of Peru. He promoted educational reforms, abolished the Inquisition, reorganized the army, stamped out local rebellions, and opposed the revolutionists of Buenos Aires and Chile.

Abashiri (a'bā'shīrē), city (1970 pop. 43,904), Hokkaido prefecture, E Hokkaido, Japan, on the Sea of Okhotsk and the Abashiri River, lying on the Abashiri plain. It is a fishing center and port.

Abati, Niccolò dell': see ABBATE, NICCOLÒ DELL'.

abattoir (āb'atwār') [Fr.], building for butchering. The abattoir houses facilities to slaughter animals, dress, cut and inspect meats, and refrigerate, cure, and manufacture by-products. The largest abattoirs are those of the MEAT-PACKING industry. Plant construction, drainage, water supply, disposal of refuse, and all operations are under government regulation. Abattoirs are also called slaughterhouses.

Abbadids (ā'bādīdīz), Arab dynasty in Spain that ruled SEVILLE from 1023 to 1091. Taking advantage of the disintegration of the caliphate of CORDOBA, the cadī [governor] of Seville seized power and became (1023) king of the newly founded state as Abbad I. His son, who succeeded him in 1042 as Abbad II, made Seville the most powerful kingdom in S Spain. He was noted for his cruelty. He was succeeded in 1069 by his son, Abbad III (Abbad al-Mutamid), a poet and a great patron of the arts, but an inept ruler. Seeking military support against ALFONSO VI of Leon and Castile, Abbad called in the ALMORAVIDS from Morocco. They defeated Alfonso in 1086 but deposed (1091) Abbad, who died in exile.

Abbagmano, Nicolai (nēkō'lī ab-bagmā'nō), 1901-, Italian philosopher, Ph.D. Univ. of Naples. He taught at the Univ. of Turin from 1936 and became the leading Italian existentialist, criticizing French and German existentialism. He set out his philosophy in *La struttura dell'esistenza* (1939) and called for a change in philosophy's outlook in his 3-volume *Storia della filosofia* (2d ed. 1963). Some of his writings were translated into English in *Critical Existentialism* (ed. by Nino Langiulli, 1969). See Gari Lesnoff-Caravaglia, *Education as Existential Possibility* (1972).

Abbas (āb'ās, āb'ās, abas'), d. 653, uncle of Muhammad the Prophet and of Ali the caliph. A wealthy merchant of Mecca, he was at first opposed to the religious movement initiated by his nephew Muhammad. In 629 he became a convert, however, and from then on he was a companion of Muhammad and the chief financial support of Islam. His descendants founded the Abbasid dynasty. The son of Abbas, Ibn Abbas (Abd Allah), was a celebrated authority on Islamic traditions and law.

Abbas I (Abbas the Great), 1557-1629, shah of Persia (1587-1628), of the Safavid dynasty. In 1597 he ended the raids of the Uzbeks, and subsequently (1603-23) he conquered extensive territories from the Turks. He maintained diplomatic contacts with Europe, and with English aid he took (1622) Hormuz from the Portuguese and founded what is now the port of BANDAR ABBAS. He broke the power of the tribal chiefs and established a new tribe, the Shahsavan [friends of the shah]. At his capital at Esfahan, he erected many palaces, mosques, and gardens and did much to improve public works in Persia.

Abbas II (Abbas Hilmi), 1874-1944, last khedive of Egypt (1892-1914), son and successor of TEWFIK PASHA. Nominally he ruled in subordination to the Ottoman Empire, but in fact Egypt was controlled by the British resident—at first Lord CROMER, and later Kitchener. Although he resisted complete British rule, Abbas met with little success, in 1899 he was forced to admit the British claim to rule jointly with Egypt over the Sudan. When Turkey joined the Central Powers in World War I, Britain declared Egypt a British protectorate and deposed Abbas. He lived thereafter in Switzerland, where he died. He wrote *The Anglo-Egyptian Settlement* (1930).

Abbasid (ābās'īd, ābāsīd) or **Abbaside** (-sīd, -sīd), Arabic family descended from ABBAS, the uncle of Muhammad. The Abbasids held the caliphate from 749 to 1258, but they were recognized neither in

Spain nor (after 787) W of Egypt. Under the Umayyad caliphs the Abbasids lived quietly until they became involved in numerous disputes, beginning early in the 8th cent. The family then joined with the Shiite faction in opposing the Umayyads, and in 747 the gifted ABU MUSLIM united most of the empire in revolt against the Umayyads. The head of the Abbasid family became caliph as ABU AL-ABBAS AS-SAFFAH late in 749. The last Umayyad caliph, Marwan II, was defeated and killed and the Umayyad family nearly exterminated, one surviving member fled to Spain, where the Umayyads came to rule. Under the second Abbasid caliph, called al-Mansur (see MANSUR, AL-, d. 775), the capital was moved from Damascus to Baghdad, and Persian influence grew strong in the empire. The early years of Abbasid rule were brilliant, rising to true splendor under HARUN AR-RASHID, the fifth caliph, and to intellectual brilliance under his son al-Mamun (see MAMUN, AL-), the seventh caliph. After less than a hundred years of rule, however, the slow decline of the Abbasids began. Long periods of disorder were marked by assassinations, depositions, control by Turkish soldiers, and other disturbances, and from the beginning of their reign there were rival caliphs (see CALIPHATE). In 836 the capital was transferred to Samarra, remaining there until 892. Under the later Abbasids, the power of the caliphate became chiefly spiritual. Many independent kingdoms sprang up, and the empire split into autonomous units. The Seljuk Turks came to hold the real power at Baghdad. The conquests of Jenghiz Khan further lowered the prestige of the Abbasids, and in 1258 his grandson Hulagu Khan sacked Baghdad and overthrew the Abbasid caliphate. The 37th caliph died in the disaster, but a member of the family escaped to Cairo, where he was recognized as caliph (see MAMELUKES). The Cairo line of the Abbasid caliphate, completely subordinated to the Mamelukes, survived until after the Ottoman conquest (1517) of Egypt. See Sir William Muir, *The Caliphate* (1898, repr. 1964), Guy Le Strange, *Baghdad during the Abbasid Caliphate* (1925), P. K. Hitti, *History of the Arabs* (10th ed. 1970), M. A. Shaban, *The Abbasid Revolution* (1970).

Abbate or Abati, Niccolò dell' (nēk-kōlō' dēl-labba'tā, -bā'tē), 1512?-1571, Italian mannerist painter. From c. 1552 he assisted Primaticcio in the decorations at Fontainebleau. He was one of the first in France to paint landscapes. Among them is the *Landscape with Orpheus and Eurydice* in the National Gallery, London.

Abbe, Cleveland (āb'ē), 1838-1916, American meteorologist, b. New York City, brother of Robert Abbe. He was the first official daily weather forecaster in the United States. Abbe studied astronomy at the Univ. of Michigan, under B. A. Gould at Cambridge, Mass., and in Pulkovo, Russia. As director of the Cincinnati Observatory, he inaugurated daily weather predictions based on telegraphic reports. This work prompted the establishment of the national weather service, under the Signal Corps (1870), which Abbe joined in 1871, from 1891 to 1916 he served in the U.S. Weather Bureau.

Abbe, Ernst (ērnst ā'bā), 1840-1905, German physicist. He was appointed professor at the Univ. of Jena in 1870 and director of its astronomical and meteorological observatories in 1878. From 1866 he was associated with the Carl-Zeiss optical works at Jena, of which he became sole owner in 1888. He subsequently reorganized the firm on a cooperative basis. He made his plant a laboratory for the development of model working conditions, created a noncontributory pension fund and a discharge compensation fund, and introduced other advanced ideas that have been influential in shaping thought on the conditions of labor. He invented the Abbe refractometer for determining the refractive index of substances and improved photographic and microscopic lenses.

Abbe, Robert (āb'ē), 1851-1928, American surgeon, b. New York City, M.D. Columbia, 1874, brother of Cleveland Abbe. He was noted for his skill and resource, especially in plastic surgery, and was a pioneer in the use of catgut sutures. A friend of the Curies, Abbe was also one of the first in the United States to use radium in treating cancer.

Abbeville (ābvē'l'), town (1968 pop. 25,072), Somme dept., N France, in PICARDY, on the Somme River. Sugar refining, brewing, and the manufacture of jute and hemp are the chief industries. Abbeville received its commercial charter in 1184 and enjoyed prosperity until the revocation of the Edict of NANTES (1685) caused the Protestants, who constituted the skilled labor, to flee. The closing of the Somme River port because of sedimentation also affected prosperity. Although heavily damaged in World War II,

the town retains the late Gothic Church of St Wolfram, with its 13th-century belfry

Abbeville (ā'bēvīl), city (1970 pop 10,996), seat of Vermilion parish, S La., on the Vermilion River, with access to the Intracoastal Waterway, inc 1850 It is a trade and processing center for a region of dairies and rice and sugarcane fields In the colorful Teche Cajun country, Abbeville was settled (1843) by descendants of Acadians from Nova Scotia and was laid out like a French town It grew around the Roman Catholic chapel built in 1845 and preserves much of the early atmosphere in its old buildings

Abbevillian: see PALEOLITHIC PERIOD

Abbey, Edwin Austin, 1852-1911, American illustrator and painter, b Philadelphia, studied at the Pennsylvania Academy of the Fine Arts Employed by Harper & Brothers, he was sent to England, where he gathered materials for his illustration of Herrick's poems and other works His illustration of Shakespeare is usually considered his best work *The Quest of the Holy Grail* (a series of wall panels in the Boston Public Library) is perhaps his most famous painting He was official painter of the coronation of Edward VII See biography by E V Lucas (1921), catalog by Yale University Art Gallery (1974)

abbey, monastic house, especially among Benedictines and Cistercians, consisting of not less than 12 monks or nuns ruled by an abbot or abbess Many abbeys were originally self-supporting In the Benedictine expansion after the 8th cent, abbeys were often important centers of learning and peaceful arts, and, like FULDA, were sometimes the nuclei of future towns The buildings surround a church and include a dormitory, refectory, and guest house, all surrounded by a wall The courtyard, derived from the Roman ATRIUM, was a usual feature, as was the CLOISTER or arcade surrounding the court Cluniac abbeys were always ornate, Cistercian ones notably bare The design of the abbey has been radically altered in the modern Benedictine abbey built by Le Corbusier at La Tourette, France The CARthusians with their special polity developed an altogether different structure called the charterhouse

Abbey Theatre, Irish theatrical company devoted primarily to indigenous drama W B Yeats was a leader in founding (1902) the Irish National Theatre Society with Lady Gregory, J M Synge, and A E (George Russell) contributing their talents as directors and dramatists In 1904, Annie E F Horniman gave them a subsidy and the free use of the Abbey Theatre in Dublin The theater was bought for them by public subscription in 1910 Among dramatists whose works the Abbey Theatre first presented are Padraic Colum, Lennox Robinson, Sean O'Casey, and Paul Vincent Carroll The acting company, which included such notable performers as William Fay and Frank Fay, Dudley Digges, Barry Fitzgerald, and Sara Allgood, toured the United States several times See Lady Gregory, *Our Irish Theatre* (1913), and her journals (ed by Lennox Robinson, 1946), Robert Hogan and M J O'Neill, ed, *Joseph Holloway's Abbey Theatre* (1967), studies by Peter Kavanaugh (1950) and Lennox Robinson (1951, repr 1973)

Abbo of Fleury (abō', florē'), Fr *Abbon de Fleury*, 945?-1004, French monk at the abbey of Fleury (at present-day Saint-Benoît-sur-Loire, France) Head of the monastery school, he later taught at the abbey in Ramsey, England, and in 988 became abbot at Fleury He defended his monastery against domination by the high clergy and also served as a diplomat for King Robert II of France Abbo wrote on grammar, astronomy, mathematics, and philosophy

Abbot, Charles Greeley, 1872-1973, American astrophysicist, b Wilton, N H He was acting director in 1896 and director in 1907 of the astrophysical observatory of the Smithsonian Institution, he was secretary of the institution from 1928 to 1944, when he became a research associate Many of his research studies were initiated by S P Langley, his predecessor He completed the mapping of the infrared solar spectrum and carried out systematic studies of variation in solar radiation, its relation to the sunspot cycle, and its effect on weather variation He also studied intensively the nature of atmospheric transmission and absorption Abbot perfected various standardized instruments now widely used for measuring the sun's heat, and he invented devices utilizing solar energy He was the oldest person ever to receive a U S patent when his last was issued to him at the age of 99

Abbot, George, 1562-1633, archbishop of Canterbury He was one of the collaborators (from Oxford Univ) on the Authorized Version of the Bible and was an authority on geography He became archbishop in 1611 His firm Puritan views and antipathy

toward the growing High Church party made him unpopular His accidental killing of a gamekeeper while hunting (1621) was used against him His steady opposition to William Laud, together with his refusal (1627) to countenance the elevation of the king's prerogative over law and Parliament, led Charles I to force him from active control over church affairs See biography by P A Welsby (1962), bibliography by R A Christophers (1966)

Abbott, Berenice, 1898-, American photographer, b Springfield, Ohio Abbott turned from sculpture to photography in 1923 She was assistant to Man Ray in Paris (1923-25), where she made an extraordinary series of portraits of the artistic and literary celebrities of the 1920s She began her great documentation of New York City in 1929 Abbott produced a vast series of photographs of physical phenomena (begun 1958) She discovered the work of Eugène ATGET in 1925 and labored successfully to secure him international recognition See her *Photographs* (1970)

Abbott, Edith: see ABBOTT, GRACE

Abbott, Edwin Abbott, 1838-1926, English clergyman and author, b London He wrote several theological works and a biography (1885) of Francis Bacon, but he is best known for his standard *Shakespearean Grammar* (1870), see bibliography by R A Christophers (1966)

Abbott, George, 1889-, American theatrical producer, director, and playwright, b Forestville, N Y Abbott became celebrated as co-author and director of many hit plays, including *The Fall Guy* (1925) and *Coquette With Three Men on a Horse* (1935) he was acclaimed as a master of farce His later successes include *On Your Toes*, *The Boys from Syracuse* (1938), *The Pajama Game* (1954, film 1957), and *Damn Yankees* (1955, film 1958) In 1960 he won a Pulitzer Prize for the musical *Fiorello!* (with Jerome Weidman) See his autobiography (1963)

Abbott, Grace, 1878-1939, American social worker, b Grand Island, Nebr She did notable work as director (1921-34) of the Child Labor Division of the U S Children's Bureau *The Child and the State* (2 vol, 1938) is her most important publication Her sister, Edith Abbott, 1876-1957, became dean of the School of Social Service Administration, Univ of Chicago, in 1924 Her publications include *Women in Industry* (1910) and *The Tenements of Chicago* (1936)

Abbott, Lyman, 1835-1922, American clergyman and editor, b Roxbury, Mass, son of Jacob Abbott He was ordained a minister in 1860 and was pastor in several churches before succeeding Henry Ward Beecher at the Plymouth Congregational Church, Brooklyn, in 1888 With Beecher he had begun in 1876 to edit the *Christian Union*, the name of which he changed in 1893 to the *Outlook* He championed a modern rational outlook in American Christianity His works include *The Theology of an Evolutionist* (1897), *Henry Ward Beecher* (1903), and *Reminiscences* (rev ed 1923) See biography by I V Brown (1953, repr 1970)

Abbottabad (āb'atābad), town (1961 pop 31,036), NE Pakistan It is a popular health resort c 4,000 ft (1,220 m) above sea level in the Himalaya region It is also an administrative center and a market town for an agricultural and timber area Founded by Sir James Abbott, a deputy commissioner of British India, it was an important British military post Nearby are rock inscriptions of Indian emperor Asoka (3d cent B C)

abbreviation, in writing, arbitrary shortening of a word, usually by cutting off letters from the end, as in U S and Gen (General) Contraction serves the same purpose but is understood strictly to be the shortening of a word by cutting out letters in the middle, the omission sometimes being indicated by an apostrophe, as in the word *don't* Most abbreviations are followed by a period Usage, however, differs widely, and recently omission of periods has become common, as in NATO and UN A period is never used when apostrophes appear A list of abbreviations used in this encyclopedia may be found in the prefatory matter

Abda (āb'dā) 1 Father of Solomon's officer Adoniram 1 Kings 4:6 2 Levite Neh 11:17 Obadiah 1 Chron 9:16

Abd al-Aziz (āb'dal-azēz', Turk *abdul'azēz'*), 1830-76, Ottoman sultan (1861-76), brother and successor of Abd al-Majid The reforms enacted under his rule could not outpace the decline of the Ottoman Empire (Turkey) In 1875 his bankrupt government repudiated the interest on the huge loans raised in Western Europe, this act led to foreign control over part of the Ottoman revenues RUMANIA, SERBIA and

EGYPT gained virtual independence, and revolts broke out in Bosnia and Herzegovina and Bulgaria Political decay was paralleled, however, by cultural rebirth Many important schools were founded, and newspapers helped to educate the Turks politically In 1876, MIDHAT PASHA, foremost among the liberals (known as the Young Turks), overthrew Abd al-Aziz, who died a few days later, probably by suicide He was succeeded by his nephew, Murad V

Abd al-Aziz IV, 1880-1943, sultan of Morocco (1894-1908), son of Hassan His weak control was evident after the death (c 1900) of the regent 8a Ahmed His submissiveness to foreign influence, his indulgence in European luxuries (which Muslims considered unbefitting his position as religious leader), and his reorganization of the tax system led to widespread unrest The Franco-British agreement of 1904 furnished a pretext for French demands that led in 1906 to the Algeiras Conference (see MOROCCO) Moroccan disapproval of the settlement led to revolt, Abd al-Aziz was deposed (1908) by his brother Abd al-Hafiz

Abd al-Aziz ibn Saud see IBN SAUD

Abd al-Hafid (ab'dal-hāfēd'), 1875?-1937, sultan of Morocco (1908-12) Placed on the throne by the revolution that deposed his brother Abd al-Aziz IV, he was soon confronted with uprisings and the demands of European creditors Besieged (1911) at Fez by rebels, he was relieved by a French army On March 30, 1912, he accepted a French protectorate, and on Aug 12 he abdicated

Abd al-Hamid I (ab'dal-hamēd', Turk *abdul'hamēd'*), 1725-89, Ottoman sultan (1774-89), brother and successor of Mustafa III His reign, one of decline for the Ottoman Empire (Turkey), saw the end of the war of 1768-74 and the beginning of the war of 1787-91 with Catherine II of Russia (see RUSSO-TURKISH WARS) The peace terms in 1774 (see KUCHUK KAINARJI, TREATY OF) established Russia as the foremost power in the Middle East and had incalculable effects In 1775, Austria, jealous of Russian expansion, forced the Turks to cede Bukovina Abd al-Hamid was succeeded by his nephew, Selim III

Abd al-Hamid II, 1842-1918, Ottoman sultan (1876-1909) His uncle, Abd al-Aziz, was deposed from the throne of the Ottoman Empire (Turkey) in 1876 by the Young Turks, a liberal reformist group Abd al-Hamid's brother, Murad V, succeeded as sultan, but was shortly declared insane, and Abd al-Hamid ascended the throne He at first accepted (1876) the constitution promulgated by MIDHAT PASHA but soon suspended it, dismissed Midhat, and eventually had him strangled The war with Russia (see RUSSO-TURKISH WARS) led to the Treaty of SAN STEFANO, subsequently modified by the Congress of Berlin (see BERLIN, CONGRESS OF) To save what remained of his empire, the sultan then pursued a policy of friendship with Germany German officers reorganized the Turkish army, and German business interests obtained concessions, most notably for the construction of the BAGHDAD RAILWAY For his part in the Armenian massacres of 1894-96, he was called the Great Assassin and the Red Sultan Ruling as absolute monarch, Abd al-Hamid lived in virtual seclusion In 1908 the Young Turks, who had penetrated the armed services, revolted and forced the sultan to adhere to the constitution of 1876 He was deposed (1909) when he tried to plot a counterrevolution and was succeeded by his brother, Muhammad V See study by Joan Haslip (new ed 1973)

Abd al-Kadir (ab'dal-kadēr'), c 1807-1883, Algerian leader claiming descent from Muhammad Although born to an anti-Turkish family, he was chosen emir of Mascara to fight the French invaders who had just defeated the Turks From 1832 to 1839, by alternately fighting and coming to terms with the French, he extended his power over much of N Algeria, subduing hostile tribes and organizing the hinterland A learned Muslim, he reformed his army along Western lines and finally proclaimed (1839) a holy war In four years of fighting, General Bugeaud drove Abd al-Kadir into Morocco, where he gained the sultan's support The Moroccan defeat at Isly (1844) soon forced the sultan to repudiate his ally Abd al-Kadir surrendered in 1847 and was imprisoned in France until 1852 See Wilfred Blunt, *Desert Hawk* (1947), 5 A Salik, *The Saint of Ilan* (1961)

Abd Allah ibn Yasin. see ALMORAVIDS

Abd al-Majid (ab'dāl-majēd', Turk *abdul' majēd'*), 1823-61, Ottoman sultan (1839-61), son and successor of Mahmud II to the throne of the Ottoman Empire (Turkey) The rebellion of MUHAMMAD ALI was checked by the intervention (1840-41) of England, Russia, and Austria Abd al-Majid was influenced by the British ambassador, Viscount STRATFORD DE RED

CLIFFE, who helped persuade the sultan to introduce Western reforms. Two decrees (1839, 1856) led to many changes but did not have permanent effect. Confident in British and French support, Abd al-Majid resisted (1853) the Russian claim to act as protector of the Orthodox Christians in the Ottoman Empire. This was a primary cause of the CRIMEAN WAR. Turkey received no concrete gains at the Congress of Paris (1856, see PARIS, CONGRESS OF). The sultan was succeeded by his brother, Abd al-Aziz.

Abd al-Malik (ab'dōl-malik'), c 646-705, 5th Umayyad caliph (685-705), son of Marwan I. At his accession, Islam was torn by dissension and threatened by the Byzantine Empire. With the help of his able general al-Hajjaj, Abd al-Malik overthrew the rival caliphs and united Islam. His battles with Byzantine forces were without final result. An able administrator, he reorganized the government and introduced Arabic coins, improved postal facilities, and made Arabic the official language.

Abd al-Mumin (ab'dal-mōmīn), d 1163, founder of the empire of the ALMOHADS. He was the favorite of the Almohad religious reformer Ibn Tumart and became (1130) his successor. Even before his rise to leadership, he had attacked the ALMORAVIDS. After long campaigns in Morocco and NW Algeria, he was able to destroy (1147) the Almoravid empire. In 1158 he invaded the Muslim states of Tunisia and NE Algeria, which had been weakened by attacks by Arab nomads and Sicilian Normans. By 1160 his rule reached from the Atlantic to Tripoli. The last years of his life were spent fighting the Christians of Spain.

Abd al-Rahman. For Muslim rulers thus named, see ABD AR-RAHMAN.

Abd ar-Rahman (ab'dar-raman'), d 732, Muslim governor of Spain (721-32). Invading Aquitaine in 732, he won a victory over the Franks at Toulouse but was defeated in the battle of Tours by CHARLES MARTEL.

Abd ar-Rahman, 1778-1859, sultan of Morocco (1822-59). He sought, unsuccessfully, to take advantage of the overthrow of Turkish rule in Algeria in order to extend his territory. Later he allied himself with the emir, ABD AL-KADIR, but after their defeat at Isly (1844), he made peace with France and refused the emir further asylum in Morocco. Abd ar-Rahman was at various times involved in difficulties with Austria, Spain, and Great Britain.

Abd ar-Rahman I, d 788, first Umayyad emir of Cordoba (756-88). The only survivor of the Abbasid massacre (750) of his family in Damascus, he fled from Syria and eventually went to Spain. There he defeated (756) the emir of Cordoba at Alameda and seized power. Despite the jealousy of the Arab aristocracy and the turbulence of the Berbers, he reorganized and consolidated the state and tried to unite the various Muslim races. In 778, CHARLEMAGNE invaded N Spain but was turned back at Saragossa and then defeated at Roncesvalles. The great mosque at Cordoba, which Abd ar-Rahman started, was continued by his son and successor, Hisham I.

Abd ar-Rahman III, 891-961, Umayyad emir (912-29) and first caliph (929-61) of Cordoba. When he succeeded to the throne, the Spanish emirate was reduced to Córdoba and its environs and beset with tribal warfare. Abd ar-Rahman recovered the lost provinces, consolidated the central government, and created internal peace and prosperity. He built up a strong army and navy and waged war successfully against the Fatimids in N Africa and the Christian kings of León. He made Cordoba one of the greatest cities in the West.

Abd ar-Rahman Khan (kan, khan), 1844?-1901, emir of Afghanistan (1880-1901), grandson of Dost Muhammad. He opposed his uncle, SHERE ALI, and was forced into exile in 1869. He was, however, recognized by the British as emir in 1880, and he supported British interests as, for example, against Russia.

Abdeel (āb'dēēl), father of the Shelemiah sent to arrest Baruch and Jeremiah. Jer 36:26.

Abd el-Krim (ab'dēl-krim'), 1882?-1963, leader of the Rif tribes of Morocco, called in full Muhammad ben Abd el-Krim. He was an important figure in the administration of the Spanish Zone until 1920, when he took up arms against Spanish rule. In 1921 his small force defeated a disorganized and ill-equipped Spanish army. In the next three years he strengthened his position and in 1924 drove the Spanish back to Tetuán. After capturing his only rival, PAISULT, he advanced into the French Zone in 1925. Defeated by combined Franco-Spanish forces, he surrendered in 1926 and was deported to Reunion. He escaped (1947) to Egypt, was awarded

(1958) the title national hero by King Muhammad V of Morocco, and in 1962 announced that he would return to Morocco, but he died before he could carry out his wish. See study by D. S. Woolman (1968).

Abdera (ābdē'ra) or **Avdīra** (avdē'ra), town, NE Greece, in Thrace, near the mouth of the Mesta River. It is a small agricultural settlement. Founded (c 650 B.C.) by colonists from Clazomenae, it was destroyed by the Thracians (c 550 B.C.) and rebuilt (c 500 B.C.) by refugees from Teos. The town passed to Macedon in 352 B.C. and in 198 B.C. became a free city under Roman rule. The Abderites were considered stupid by the ancient Greeks, and *Abderite* was a term of reproach. However, the philosophers Protagoras, Leucippus, and Democritus lived there.

Abdera, Spain. see ADRA.

Abdi (āb'dī) 1, 2 Merarite Levites. 1 Chron 6:44, 2 Chron 29:12. 3 Israelite married to a foreign wife. Ezra 10:26.

Abdias (ābdī'ās), Vulgate form of OBADIAH.

abdication, in a political sense, renunciation of high public office, usually by a monarch. Some abdications have been purely voluntary and resulted in no loss of prestige. For instance, Holy Roman Emperor CHARLES V, who abdicated for religious motives, remained influential until his death, and PHILIP V of Spain actually resumed the throne after abdicating. In Japan it has not been uncommon for the ruler to retire voluntarily to a life of religious contemplation, assured of a special title and many honors. However, most abdications have amounted to a confession of a failure in policy and are only the final and formal renunciation of an authority that events have already taken away. In the Chinese Empire forced abdications were frequent; the empire itself ending with the abdication of the boy ruler Hsuan T'ung in 1912 (see PU YI, HENRY). Since 1688, when the English Parliament declared James II to have abdicated by reason of flight and subversion of the constitution, abdication by a British ruler without parliamentary consent has been forbidden. When EDWARD VIII of England abdicated in 1936 in order to marry an American divorcee (his ministers having refused to approve the marriage), the abdication was given legal effect by an act of Parliament. Though several written constitutions contain provisions for abdication, there are few uniformly accepted rules for dealing with it. Defeat and political chaos following World Wars I and II forced the abdication of many rulers, most notably Emperor William II of Germany, Farouk of Egypt, and Leopold III of Belgium.

Abdiel (āb'dīāl), in the Bible, a Gadite. 1 Chron 5:15.

abdomen, in man and other vertebrates, portion of the trunk between the diaphragm and lower pelvis. In man the wall of the abdomen is a muscular structure covered by fascia, fat, and skin. The abdominal cavity is lined with a thin membrane, the peritoneum, which encloses the stomach, intestines, liver, and gall bladder, the pancreas, kidneys, and urinary bladder are located behind the peritoneum. The abdomen of the female also contains the ovaries, fallopian tubes, and uterus. The navel, or umbilicus, an exterior scar on the front of the abdomen, marks the point of attachment of the fetus to the maternal organism before birth. In insects, crustacea, and some other arthropods, the term *abdomen* refers to the entire rear portion of the body.

Abdon (āb'dōn) 1 Judge of Israel. Judges 12:13-15. 2 Officer under Josiah. 2 Chron 34:20. Achbor. 2 Kings 22:12, Jer 26:22, 36:12. 3, 4 Benjamites. 1 Chron 8:23,30, 9:36. 5 Unidentified boundary town, NW Palestine. Joshua 21:30, 1 Chron 6:74. Hebron KJV and Ebron RSV. Joshua 19:28.

Abdubakar Tafawa Balewa, Alhaji Sir. see BALEWA, ALHAJI SIR ABUBAKAR TAFAWA.

Abdul Aziz. For Ottoman sultans thus named, see ABD AL AZIZ.

Abdul Hamid. For Ottoman sultans thus named, see ABD AL HAMID.

Abdullah (Abdullah ibn Husayn) (abdōl'la ī'bān hōōsīn', -sān'), 1882-1951, king of Jordan (1946-51), b Mecca, son of HUSAYN IBN ALI. During World War I, Abdullah led Arab revolts against Turkish rule and had British support. After the war he unsuccessfully fought against IBN SAUD for the control of the Hejaz. In 1921, Great Britain created Abdullah emir of Trans-Jordan. In World War II, Abdullah strongly opposed the Axis. Following the partition of Palestine (May, 1948) he led the troops of his British-trained force, the Arab Legion, against Israel. He annexed the portions of Palestine not assigned to Israel. His foreign policy was directed toward creation of an Arab federation, preferably under the rule of a

member of his family. He was assassinated in Jerusalem in 1951. See his *Memoirs* (1951).

Abdullah, Sheikh Muhammad (shākh mōōham'-mad abdōl-la'), 1905-, nationalist leader in Kashmir, known as the Lion of Kashmir. He became active in political reform while a student at Lahore Univ. and was frequently imprisoned from 1931 for urging self-rule for Kashmir, a region now in India but also claimed by Pakistan. He cooperated with Mohandas Gandhi and Jawaharlal Nehru in the movement for India's independence and then became prime minister of Jammu and Kashmir when independence was achieved in 1947. After denouncing (1953) India's treatment of Kashmir, he was removed as prime minister and generally kept in preventive detention by the Indian government, although he was allowed to play a more active role in the early 1970s.

Abdul Mecid. For Ottoman sultans thus named, see ABD AL-MAJID.

Abdul Rahman, Tunku. see RAHMAN, TUNKU ABDUL.

Abdul Razak: see RAZAK, ABDUL.

à Becket, Thomas: see THOMAS À BECKET, SAINT.

Abed-nego (abēd'nēgō), one of the THREE HOLY CHILDREN cast into the fiery furnace.

Abel, son of Adam and Eve, a shepherd, killed by his older brother, Cain. Gen 4:1-8. Mentioned as the first martyr. Mat 23:35.

Abel, Sir Frederick Augustus, 1826-1902, English chemist, an authority on explosives. He was professor of chemistry at the Royal Military Academy (1851-55) and chemist to the War Dept. and government referee (1854-88). Among his achievements are improvements in the manufacture of gun cotton, the invention, with Sir James Dewar, of cordite, a study, in collaboration with Sir Andrew Noble, Scottish physicist, of the behavior of black powder when fired, and the invention of an instrument used in the Abel test, named for him, to determine the flash point of petroleum. He wrote widely on explosives.

Abel, Iorwith Wilbur, 1908-, American labor leader, b Magnolia, Ohio. In 1925 he went to work in a rolling mill in Canton, Ohio. He soon emerged as a leader of union organization in the steel industry. In 1937 he was appointed staff representative of the Steel Workers Organizing Committee, the progenitor of the United Steelworkers of America. From 1942 to 1952 he was the union's district director for the Canton area. In 1953 he became secretary-treasurer of the union, and in 1965 he succeeded David J. McDonald as third president. In the same year he was also elected a vice president of the AFL-CIO.

Abel, John Jacob, 1857-1938, American pharmacologist, b Cleveland, grad Univ of Michigan, 1883, M.D. Univ of Strasbourg, 1888. Professor of pharmacology (1893-1932) and director of the laboratory for endocrine research (from 1932) at Johns Hopkins, he is known for the isolation of epinephrine (adrenaline) in 1898 and later of insulin in crystalline form. Other contributions include the isolation of amino acids from the blood. He was a founder and editor (1909-32) of the *Journal of Pharmacology and Experimental Therapeutics*.

Abel, Niels Henrik (nēls hēn'rik ā'bəl), 1802-1829, Norwegian mathematician. While a student at the University of Christiania (Oslo) he did fundamental work on the integration of functional expressions and proved the impossibility of representing a solution of a general equation of fifth degree or higher by a radical expression. He investigated generalizations of the binomial theorem, pioneered in the general theory of elliptic functions, and showed that elliptic functions are a generalization of trigonometric functions. Commutative groups are also called Abelian groups in his honor. He died of tuberculosis at the age of 26, leaving contributions that rank him as one of the greatest mathematicians of the 19th cent. See Oystein Ore, *Niels Henrik Abel Mathematician Extraordinary* (1957, repr 1973).

Abel, Thomas. see ABELL THOMAS.

Abel 1. Ostensibly a place name. 1 Sam 6:18. The RSV text does not give the name. 2. See ABEL BETH MAACHAH.

Abelard, Peter (āb'elārd), Fr. *Pierre Abelard* (pyēr ābālār'), 1079-1142, French philosopher and teacher, b Le Pallet, near Nantes. He went (c 1100) to Paris to study under WILLIAM OF CHAMPEAUX at the school of Notre Dame and soon attacked the ultrarealist position of his master with such success that William was forced to modify his teaching. Abelard became master at Notre Dame but, when deprived of his place, set himself up (1112) at a school on Mont-Saint-Geneviève, just outside the city walls. Abelard's

fame as a dialectician attracted great numbers of students to Paris, because of this fact Abelard is usually regarded as the founder of the Univ of Paris. This part of his career was cut short by his romance with Heloise (d c 1164), the learned and beautiful niece of Fulbert, canon of Notre Dame, who had hired Abelard as her tutor. After Heloise gave birth to a son, a secret marriage was held to appease her uncle. Fulbert's ill-treatment of Heloise led Abelard to remove her secretly to the convent at Argenteuil. Fulbert, who thought that Abelard planned to abandon her, had ruffians attack and emasculate him. Abelard sought refuge at Saint-Denis, where he became a monk. In 1120 he left Saint-Denis to teach. At the instigation of his rivals, the Council of Soissons had his first theological work burnt as heretical (1121). After a short imprisonment, he returned to Saint-Denis but fell out with the monks and built a hermitage near Troyes. Students sought him out, and to house them he built a monastery, the Paraclete. When he became abbot at Saint-Gildas-en-Rhuys, Brittany, he gave the Paraclete to Heloise, who became an abbess of a sisterhood there. St BERNARD OF CLAIRVAUX thought Abelard's influence dangerous and secured his condemnation by the Council of Sens (1140). Abelard appealed to the pope, who upheld the council. Abelard submitted and retired to Cluny. He was buried at the Paraclete, as was Heloise; their bodies were later moved to Pere-Lachaise in Paris. A Platonist in theology, Abelard emphasized the method of Aristotle's dialectic. His belief that the methods of logic could be applied to the truths of faith was in opposition to the mysticism of St Bernard. He also opposed the extreme views of William of Champeaux and ROSCELIN on the problems of universals. His own solution, in which universals are considered as entities existent only in thought but with a basis in particulars, is called moderate realism and to some extent anticipates the conceptualism of St Thomas Aquinas. His most influential work, the *Sic et non*, a collection of contradictory writings of the Fathers of the Church, formed the basis for the widely read *Sentences* of PETER LOMBARD, who may have been Abelard's pupil. Abelard was perhaps most important as a teacher, among his pupils were some of the celebrated men of the 12th cent, including John of Salisbury and Arnold of Brescia. Of Abelard's poetry only Latin hymns survive. He is chiefly remembered for the events of his life as chronicled in his autobiographical *Historia calamitatum* (tr by J T Muckle, 1954, repr 1964) and revealed in the poignant letters of Heloise and Abelard (tr by C K Scott Moncrieff, 1926). See Joseph McCabe, *Life of Peter Abelard* (1901, repr 1973), J G Sikes, *Peter Abailard* (1932, repr 1965), E H Gibson, *Heloise and Abelard* (tr 1951, repr 1960), D W Robertson, Jr, *Abelard and Heloise* (1972), Regine Pernoud, *Heloise and Abelard* (tr 1973).

Abel-beth-maachah (ā'bal-bēth-mā'ākā), town, Palestine, the modern Tel Abil (Israel), S of Migdalla. It was attacked by Ben-hadad and taken by Tiglath-pileser 1 Kings 15 20, 2 Kings 15 29. Abel and Beth-maachah 2 Sam 20 14. Abel of Beth-maachah 2 Sam 20 15. Abel-maim 2 Chron 16 4.

Abell, Kjeld (kyēl a'bēl), 1901-61, Danish playwright. Abell's *Melody That Got Lost* (1935, tr 1939) was an early success. Trained as a stage designer, he was an innovator in stage technique. He later turned to ethical and social drama, *Anna Sophie Hedvig* (1939, tr 1944), *The Queen Walks Again* (1943), *Silkeborg* (1946), and *Skriget* (1961) are arresting and powerful problem plays concerned with justice and social protest.

Abell or Abel, Thomas (both ā'bəl), d 1540, English priest, chaplain to KATHARINE OF ARAGON. In 1528 he served as Katharine's secret envoy to her nephew, Holy Roman Emperor Charles V, in connection with Henry VIII's proposed divorce. Abell vigorously opposed the divorce both in his sermons and in a book, *Invicta veritas* [truth unconquered] (1532). He was imprisoned for six years in the Tower of London and was finally executed for upholding the validity of Henry's first marriage. See J E Paul, *Katherine of Aragon and Her Friends* (1966).

Abel-maim (ā'bal-mā'im), town, Palestine, the same as ABEL-BETH MAACHAH.

Abel-meholah (ā'bal-mēhō'la), name of towns or districts mentioned in the Bible, probably not all different. 1 Near the Jordan, limit of the Midianites' flight Judges 7 22. 2 In N central Palestine 1 Kings 4 12. 3 Home of Adriel 1 Sam 18 19. 4 Elisha's home 1 Kings 19 16. See MEHOLATHITE.

Abel-mizraim (ā'bal-mīzrā'im), place "beyond Jordan" where Jacob was mourned Gen 50 11.

Abel-shittim: see SHITTIM.

Abenaki Indians: see ABNAKI INDIANS.

Aben Ezra, Abraham ben Meir: see IBN EZRA.

Abengourou (abēng-gōō'rōō), town (1964 est pop 18,000), E Ivory Coast. It is the commercial center for a region producing cacao, coffee, kola nuts, plantains, yams, manioc, and timber. The French established an administrative post in Abengourou in 1896.

Åbenrå (ō'bānrō'), city (1970 com pop 20,484), capital of Sønderjylland co, S Denmark, at the head of the Åbenrå Fjord. It is a port and the commercial center for a rich agricultural region. The city was chartered in 1335. It was held by Prussia from 1864 to 1920 and was then known as Apenrade. The name was spelled Aabenraa until 1948.

Abeokuta (a'bēōkōō'tā, āb'—), city (1969 est pop 217,000), SW Nigeria. It is the trade center for an agricultural region producing cacao, kola nuts, and palm products. Manufactures of the city include beer, cement, dyed textiles, and canned foods. Abeokuta was founded in the 1830s by Egba refugees from the YORUBA civil wars. The city repelled attacks by raiders from Dahomey in 1851 and 1864. It came under British protection in 1893.

Aberavon, Wales: see PORT TALBOT.

Aberbrothock: see ARBROATH, Scotland.

Abercrombie, Lascelles (lās'əlz), 1881-1938, English poet and critic. Complex and cerebral in style, his poetry often expresses his distaste for 20th-century industrialism. His volumes of poetry include *Interludes and Poems* (1908), *Emblems of Love* (1912), and *Collected Poems* (1930). He also wrote influential critical works, notably *Thomas Hardy* (1912) and *The Theory of Poetry* (1924).

Abercrombie, Sir Patrick, 1879-1957, British architect and town planner. Professor of civil design at the Univ of Liverpool from 1915 to 1935 and of town planning at the Univ of London after 1935, he acted as consultant in the rebuilding and planning of London, Edinburgh, Bath, and other British cities. He was knighted in 1945. His voluminous writing has been of considerable influence in the field of city and regional planning. His books include *The Preservation of Rural England* (1926) and *Town and Country Planning* (1933).

Abercrombie, Fort: see FORT ABERCROMBIE.

Abercromby, James, 1706-81, British general in the French and Indian Wars, b Scotland. He arrived in America in 1756 and in 1758 replaced the earl of Loudoun as supreme British commander. After failing to take Ticonderoga from General Montcalm, Abercromby was replaced (1758) by Jeffrey AMHERST.

Abercromby, Sir Ralph, 1734-1801, British general. He served in the Seven Years War but later retired from active service because he sympathized with the American colonists. Returning in 1793 for service against France, he won a major military reputation by his command of a brilliant retreat in Flanders in the winter of 1794-95. He was (1795-97) commander in chief in the West Indies, where he captured Grenada, St Lucia, St Vincent, and Trinidad. In 1800, Abercromby was sent to expel the French from Egypt. He landed at Aboukir in March, 1801, but was mortally wounded in the first engagement (which was successful). He is noted for having renewed the discipline and reputation of the army.

Aberdare (ābārdār'), urban district (1971 pop 37,760), Glamorganshire, S Wales. It is in an anthracite and iron-ore region. Cables are made. In 1974, Aberdare became part of the new nonmetropolitan county of Mid Glamorgan.

Aberdeen, George Hamilton-Gordon, 4th earl of, 1784-1860, British statesman. He served (1813) as ambassador extraordinary at Vienna and helped arrange (1814) the peace terms at Paris after Napoleon I's initial defeat. He was foreign secretary (1828-30) in the duke of Wellington's cabinet and secretary for war and the colonies (1834-35) under Sir Robert PEEL. As foreign secretary (1841-46) in Peel's second government, he settled two boundary disputes with the United States, the Northeast Boundary Dispute by the Webster-Ashburton Treaty (1842) and the Oregon controversy by the treaty of 1846. He also improved relations with France. He supported Peel in repealing the corn laws (1846) and resigned with him. As prime minister (1852-55), Aberdeen headed a brilliant coalition ministry and was quite successful in home affairs. He was, however, unable to prevent Viscount PALMERSTON and others in his cabinet from involving England on the side of the Ottoman Empire (Turkey) in the Crimean War. Bad management of the campaigns and unpopularity of the war forced his resignation in 1855. See biography by

Lady Frances Balfour (1922), study by W D Jones (1958).

Aberdeen, city (1971 pop 182,006), county town of Aberdeenshire, NE Scotland, on the North Sea at the mouth of the Dee River. Part of the city lies in Kincardineshire. It is Scotland's third largest city and the only industrial center outside the midland belt. Famous as a herring and whitefish port, it is also known for its granite quarries. Other manufactures are paper, textiles, linen, and wool. There are shipyards, engineering and chemical works, and facilities for agricultural research. Aberdeen became a royal burgh in 1176 and was a leading port for trade with England and the Low Countries as early as the 14th cent. The town was burned by the English in 1336. It was a stronghold of royalist and episcopal sentiment in the religious wars of the 17th cent. Aberdeen is noted for its granite Cathedral of St Machar. The Univ of Aberdeen includes King's College (founded 1493) and Marischal College (founded 1593). Under the Local Government Act of 1973, Aberdeen became (1975) part of the Grampian region.

Aberdeen. 1 Town (1970 pop 12,375), Harford co, NE Md, in a farm region, inc 1892. Just south, on Chesapeake Bay, is the U S army's huge Aberdeen Proving Ground, a major research, development, and testing installation and site of the army ordnance center and school. To the northeast, on the Susquehanna River, is a large hydroelectric plant 2 City (1970 pop 26,476), seat of Brown co, NE S Dak, inc 1882. The trade and distributing center for a wheat and livestock region, it has flour mills, dairy-processing plants, and a bottling house. Manufactures include fertilizers and feeds, gear boxes, computers, and tools. Northern State College and a junior college are in the city. 3 City (1970 pop 18,489), Grays Harbor co, W Wash, a port of entry on Grays Harbor, at the confluence of the Chehalis and the Wishkah rivers, inc 1890. With its adjacent twin city, Hoquiam, it has lumbering, wood-product, fishing, canning, and shipping industries. The two communities, which have grown together and are for all practical purposes one city, are in a region containing some of the world's densest stands of cedar, hemlock, and Douglas fir. They are a gateway to Olympic National Park. A junior college is in Aberdeen, and nearby are many tree farms and two state parks.

Aberdeen Angus cattle: see ANGUS CATTLE.

Aberdeenshire (ābārdēn'shīr), county (1971 pop 319,887), 1,971 sq mi (5,105 sq km), NE Scotland. ABERDEEN is the county town. The terrain varies from the Grampian Mts in the southwest to the rolling farmlands of the Don valley and the treeless lowlands of Buchan. Oats, barley, turnips, and potatoes are grown. Sheep and the famous Aberdeen Angus cattle are raised. Fishing is carried on from the North Sea ports of Aberdeen, FRASERBURGH, and PETERHEAD. The county played a large role in the Scottish wars of independence (13th cent) and was a royalist stronghold during the ENGLISH CIVIL WAR. It was the headquarters of the JACOBITE uprising of 1715. BALMORAL CASTLE is the Scottish residence of the British kings and queens. Under the Local Government Act of 1973, Aberdeenshire became (1975) part of the Grampian region.

Aberdeen University, at Aberdeen, Scotland, founded by the bishop of Aberdeen under the authority of a papal bull obtained 1494-95. It has faculties of arts, science, divinity, law, and medicine. Robert Gordon's Institute of Technology and the North of Scotland College of Agriculture are affiliated with the university.

Aberhart, William (ā'bārhart), 1878-1943, premier of Alberta, Canada, b Ontario. He was a school-teacher and a founder and dean of the Calgary Prophetic Bible Institute (opened 1927). About 1932 he became interested in SOCIAL CREDIT, which advocated direct money payments to all citizens. He was an organizer of the Social Credit party of Alberta and was elected (1935) to the provincial legislature with enough supporters to control it. Thus Aberhart became premier (1935-43) of the first Social Credit government in the world. However, many of the legislative attempts to enact his principles were declared invalid by the courts.

aberration, in optics, condition that causes a blurring and loss of clearness in the images produced by lenses or mirrors. Spherical aberration is caused by the failure of a LENS or MIRROR of spherical section to bring parallel rays of light to a single focus. The effect results from the operation of the laws of optics, not from defects in construction. Spherical aberration can be prevented by using a parabolic rather than a spherical section, but this involves much

greater complexity and expense in lens or mirror construction. Chromatic aberration results in the blurred coloring of the edge of an image when

A Spherical aberration. Light rays near the edge of the lens are bent more and brought to focus nearer to the lens.

B Chromatic aberration. Shorter wavelengths (higher frequencies) are bent more and focused nearer to the lens.

white light is sent through a lens. This is caused by the fact that some colors of light are bent, or refracted, more than others after passing through a lens. For example, violet light is bent more than red and thus is brought to a focus nearer the lens than red. No single lens can ever be free of chromatic aberration, but by combining lenses of different types, the effects of the component lenses can be made to cancel one another. Such an arrangement is called an achromatic lens. See REFLECTION, REFRACTION.

aberration of starlight, angular displacement of the apparent path of light from a star, resulting in a displacement of the apparent position of the star from its true position, discovered by the English astronomer James Bradley and explained by him in 1729. The phenomenon is caused by the orbital motion of the earth, in the same way, vertically falling raindrops appear to fall diagonally when viewed from a moving vehicle. The true path of light from a star to an observer is along the straight line from the star to the observer, but, because of the component of the observer's velocity in a direction perpendicular to the direction to the star, the light appears to be traveling along a path at an angle to the true direction to the star. Thus, in order to observe a star the central axis of a telescope must be tilted as much as 20.5 (seconds of arc) from the true direction to the star, the exact amount of the angle depending on the direction to the star relative to the direction of the earth's motion in its orbit. Because of the earth's orbital motion, the stars appear to move in elliptical paths on the celestial sphere. All these ellipses have the same semimajor axis, 20.5 of arc, a value known as the constant of aberration. The tangent of the constant of aberration is equal to the ratio of the earth's orbital speed to the speed of light.

Abersychan, Wales. See PONTYPOOL.

Abertawe, England. See SWANSEA.

Abertillery (äb'ärtilär'ë), urban district (1971 pop. 21,140), Monmouthshire, SE Wales. It is located in an area of coal and iron mines and produces tin plate. In 1974, Abertillery became part of the new nonmetropolitan county of Gwent.

Aberystwyth (äb'ärüst'with), municipal borough (1971 pop. 12,672), Cardiganshire, W Wales, on Cardigan Bay. It is a summer resort and a cultural center. Before the construction of railroads, Aberystwyth was a coastal trade center. It is the seat of a constituent college of the Univ. of Wales and of the National Library of Wales, which has an outstanding collection of Welsh manuscripts. In 1974, it became part of the new nonmetropolitan county of Dyfed.

Abiez (ä'baz), city of Issachar. Joshua 19:20.

Abgar, Epistles of: see PSEUDEPIGRAPHIA.

Abhidharma (üb'idür'mä) [Skt., = further dharma, or doctrine], schools of Buddhist philosophy. Early BUDDHISM classified experience into 5 skandhas or

aggregates, and alternatively into 18 dhatus or elements. Later, different schools developed the process of analysis and listing that was called *Abhidharma*, their treatises were collected in the *Abhidharmapitaka*, one of the three main divisions of the Buddhist canon of scriptures (see BUDDHIST LITERATURE). The categories of analysis were dharmas, or natures, ultimate factors or principles that arise and pass away in irreducible moments of time. Orthodox lists of dharmas varied from 75 to 157, with different classifications of the dharmas into groups. The exact definition of a dharma became the subject of much controversy. The greatest systematizer of Abhidharma thought was Vasubandhu (5th cent. A.D.) who wrote the encyclopedic *Abhidharmakosa* or *Treasury of Abhidharma*. See Herbert Guenther, *Philosophy and Psychology in the Abhidharma* (1957), F. I. Shcherbatskoi, *The Central Conception of Buddhism* (4th ed. 1970).

Abi (ä'bī) [short for ABIJAH], King Hezekiah's mother. 2 Kings 18:2. Abijah. 2 Chron. 29:1.

Abia (äbī'ä) see ABIJAH 2 and ABIJAH 6.

Abiah (äbī'ä), variant of ABIJAH. 1 Wife of Hezion. 1 Chron. 2:24. 2 Benjamite. 1 Chron. 7:8. 3 Second son of Samuel. 1 Sam. 8:2.

Abi-albon (ä'bī-äl'bön) see ABIEL 2.

Abiasaph (äbī'äsäf), Levitical family. Ex. 6:24. Ebiaph. 1 Chron. 6:23, 9:19. Asaph. 1 Chron. 26:1.

Abiathar (äbī'äthar), priest, son of Ahimelech, the only one of his family who escaped massacre by Doeg. He fled to David, to whom he remained loyal. Later he sided with Adonijah against Solomon, who took away his priesthood. 1 Sam. 22:9-23, 2 Sam. 15:29, 1 Kings 1:7, 2:27, Mark 2:26. Name exchanged with his father's. 2 Sam. 8:17, 1 Chron. 18:16, 24:6.

Abida or **Abidah** (both äbī'dä), son of Midian. Gen. 25:4, 1 Chron. 1:33.

Abidan (äbī'dän, äbī'-), Benjamite chief. Num. 1:11, 2:22, 7:60, 65, 10:24.

Abidjan (äbī'jän), city (1973 est. pop. 408,000), capital of Ivory Coast, a port on the Ebrie Lagoon (an arm of the Gulf of Guinea). Abidjan is Ivory Coast's administrative center and largest city. Its modern port is centered on Little Bassam Island, which is linked with the rest of the city by two bridges, a canal through the lagoon bar provides access to the Atlantic Ocean. Coffee, cacao, timber, pineapples, and plantains are the chief items shipped from the port. Abidjan's major industries are food processing, sawmilling, and the manufacture of textiles, chemicals, beverages, and soap. A communications and transportation hub, the city is connected by road or rail with neighboring countries. An international airport is nearby. Abidjan was a small village until the French began to enlarge it in the 1920s. In 1934 it became the capital of France's Ivory Coast colony. Today it is one of Africa's most modern cities. The Univ. of Abidjan, several technical colleges, and the Museum of the Ivory Coast are in Abidjan, which is also a popular tourist spot.

Abiel (ä'bēēl, äbī'äl, äb'ēēl) 1 Grandfather of King Saul. 1 Sam. 9:1, 14:51. 2 One of David's valiant men. 1 Chron. 11:32. Probably erroneously Abi-albon. 2 Sam. 23:31.

Abiezzer (ä'bīē'zar) 1 Manasseite. 1 Chron. 7:18. Jeezer. Num. 26:30. 2 One of David's captains. 2 Sam. 23:27, 1 Chron. 27:12.

Abigail (äb'ägäl) 1 The wife of Nabal. She persuaded David not to take vengeance on her husband. When Nabal died, she married David. 1 Sam. 25:2, 5 Sam. 3:3, 1 Chron. 3:1. 2 David's stepsister, mother of Amasa. 2 Sam. 17:25, 1 Chron. 2:16, 17.

Abihail (äbahä'al) 1 Father of Queen Esther. Esther 2:15, 9:29. 2 Gadite. 1 Chron. 5:14. 3 Merarite woman. Num. 3:35. 4 Wife of Abishur. 1 Chron. 2:29. 5 Mother-in-law of Rehoboam. 2 Chron. 11:18.

Abihu (äbī'hyō), son of Aaron, destroyed with his brother, Nadab, for offering "strange" fire. Ex. 6:23, 24:1, 9, 28:1, Lev. 10:1, Num. 3:2, 26:60, 61, 1 Chron. 6:3, 24:1.

Abihud (äbī'häd), grandson of Benjamin. 1 Chron. 8:3.

Abijah (äbī'jä) 1 See ABI. 2 Died c. 911 B.C., king (c. 914-c. 911 B.C.) of Judah, the southern kingdom. He succeeded his father, Rehoboam, and King Jeroboam continued warfare against him. 2 Chron. 13. Abijam. 1 Kings 15:1-8. Abia. 1 Chron. 3:10, Mat. 17:3. Son of Jeroboam, whose death was used by a prophet to foreshadow the death of Jeroboam. 1 Kings 14:4, 5. See ABIAH 2, 3. 6 Priestly family. 1 Chron. 24:10. Abia. Luke 1:5. 7, 8 Priests in the return to Jerusalem. Neh. 10:7, 12:4, 17.

Abijam (äbī'jam) see ABIAH 2.

Abiko (ä'bē'kō), city (1970 pop. 49,240), Chiba prefecture, central Honshu, Japan. It is an important railway junction, a resort town, and a residential suburb NE of Tokyo.

Abildgaard, Nikolaj Abraham (nikölī' ä'bēlgōro), 1743-1809, Danish painter of the neoclassical school. He was a student of Eckersberg. Among his own pupils was Thorvaldsen, whom he greatly influenced. Abildgaard's work may be seen in the House of Representatives in Copenhagen.

Abilene (äb'ilēn) 1 City (1970 pop. 6,661), seat of Dickinson co., central Kansas, on the Smoky Hill River, inc. 1869. It was (1867-71) a railroad for a large cattle-raising region extending SW into Texas. Under the promotion of J. G. McCoy, millions of head of cattle followed the Chisholm Trail into Abilene's stockyards prior to shipment. One of the wildest and toughest cowtowns of the Old West, Abilene once had Wild Bill Hickok as its marshal. The city, now a shipping point for a wheat and farm region, has feed and flour mills. Greyhound racing dogs are bred in Abilene, which is the headquarters of the National Greyhound Association. Former President Dwight D. Eisenhower lived in Abilene in his youth, the Eisenhower Center (completed 1961) includes his old family homestead, a museum, the Eisenhower Library, and his grave. 2 City (1970 pop. 89,653), seat of Taylor co., W central Texas, inc. 1882. Buffalo hunters first settled there, the town, which was founded in 1881 with the coming of the railroad, was named after Abilene, Kansas. Abilene grew as a shipping point for cattle ranches and is now the financial, commercial, and educational center of a large part of W Texas. The city's diversified manufactures include electronic, aircraft, and missile components, oil-field equipment, food and dairy products, cottonseed oil, agricultural equipment, clothing, metals, and musical instruments. Agriculture (cattle, sheep, poultry, cotton, and grain sorghums) and minerals (oil, natural gas, stone, sand and gravel, and clays) are important in the economy of the surrounding area, the headquarters of regional petroleum interests are in Abilene. Hardin-Simmons Univ., Abilene Christian College, and McMurry College are also in the city. Dyess Air Force Base and a Nike missile installation are nearby, as are the ruins of Fort Phantom Hill, an early army post and stagecoach stop. Other points of interest include the ruins of the old frontier town of Buffalo Gap, and Lake Abilene, the city's reservoir, located in a state park.

Abimael (äbīm'äēl), descendant of Shem. Gen. 10:28, 1 Chron. 1:22.

Abimelech (äbīm'alēk) 1 Name or title of a king of Gerar who had various dealings with Abraham and Isaac. Gen. 20:2, 21, 26. 2 See AHIMELECH 1. 3 Son of Gideon. He murdered his 70 brothers, except Jotham, and became "king." Judges 9:1-57, 2 Sam. 11:21. 4 See ACHISH 1.

Abinadab (äbīn'ädäb) 1 Second son of Jesse. 1 Sam. 16:8, 17:13, 1 Chron. 2:13. 2 Son of King Saul, killed at the battle of Mt. Gilboa. 1 Sam. 31:2, 1 Chron. 10:2. 3 Man in whose house the ark remained for 20 years. 1 Sam. 7:1, 2 Sam. 6:3, 4, 1 Chron. 13:7. 4 Father of one of Solomon's chief officers. 1 Kings 4:11. The officer is called Ben-abinadab in RSV.

Abington 1 Town (1970 pop. 12,334), Plymouth co., E Mass., settled 1668, inc. 1713. Chiefly residential, it has some light industry. 2 Township (1970 pop. 62,899), Montgomery co., SE Pa., a residential suburb of Philadelphia, settled 1696, inc. 1906. A junior college campus of Pennsylvania State Univ. is there.

Abinoam (äbīn'ōām), father of Barak. Judges 4:6, 12, 5:12.

Abiram (äbī'rām) 1 Levite who died with his brother DATHAN. 2 Son of a rebuilder of Jericho, associated obscurely with its foundations. 1 Kings 16:34.

Abishag (äb'äshäg), Shunammite woman, David's attendant in his old age and the indirect cause of Adonijah's murder. 1 Kings 1:2.

Abishai (äbīsh'äi, äb'īshī), nephew of David. 2 Sam. 2:18-24, 10:14, 23:18, 1 Sam. 26:6-9.

Abishalom (äbīsh'alōm, äbī'shā-) see ABSALOM.

Abishua (äbīsh'yōōa) 1 Priest. 1 Chron. 6:4, 5, 50, Ezra 7:5. 2 Benjamite. 1 Chron. 8:4.

Abishur (äb'īshär, äbī'-), grandson of Jerahmeel. 1 Chron. 2:28.

Abital (äb'itäl), mother of David's son Shephatiah. 2 Sam. 3:4, 1 Chron. 3:3.

Abitibi Lake (äbātībī'ë), irregularly shaped lake, c. 60 mi (100 km) long, SW Que. and E Ont., Canada. It is a popular tourist area and the site of the Abitibi

Game Reserve. The Abitibi River drains the lake and flows W and N to the Moose River

Abitub (ăb'itab), Benjamite 1 Chron 8:11

Abiud (ăb'iud) [Gr for ABIUD], son of Zerubbabel in Matthew's genealogy Mat 1:13

Abkhaz Autonomous Soviet Socialist Republic (ăbkăz', Rus abkhaz'), autonomous region (1970 pop 487,000, 3,300 sq mi (8,547 sq km), SE European USSR, in Georgia, between the Black Sea and the Greater Caucasus SUKHUMI (the capital) and GAGRA are the chief cities. Despite some perpetually snowcapped peaks, the region is mainly one of subtropical agriculture. Tobacco is the leading crop, there are also tea and citrus plantations, vineyards, and fruit orchards. Industries include sawmilling, canning, metalworking, and the manufacture of leather goods. Coal is the region's chief mineral. The population is made up of Abkhazians (an Orthodox Christian and Muslim people of the North Caucasian linguistic family), Georgians, Russians, and Armenians. Originally colonized in the 6th cent. B.C. by the Greeks, the region later came under Roman and Byzantine rule. In the 8th cent. a leader of the Abkhaz tribe formed an independent kingdom that became part of Georgia in the 10th cent. In 1578 the Turks conquered the area and gradually converted it to Islam. By a treaty with the Abkhazian dukes, Russia acquired Sukhumi in 1810 and declared a protectorate over all Abkhazia, which was formally annexed in 1864. Abkhazia became an autonomous republic in 1921 and was made part of Georgia in 1930. The region is famous for its health resorts.

ablative (ăb'lătiv') [Lat, =carrying off], in Latin grammar, the CASE used in a number of circumstances, particularly with certain prepositions and in locating place or time. The term is also used in the grammar of some languages (e.g., Sanskrit, Finnish) for a case of separation, e.g., "from the house."

ablaut (ap'lout) [Ger, =off-sound], in INFLECTION, vowel variation (as in English sing, sang, sung, song) caused by former differences in syllabic accent. In a prehistoric period the corresponding forms of the language (known through scientific reconstruction) had differences in accent, not differences in vowel. See UMLAUT.

ABM see GUIDED MISSILE

Abnaki Indians or **Abenaki Indians** (both ăbna'-kē), North American Indians of the Algonquian branch of the Algonquian-Wakashan linguistic stock (see AMERICAN INDIAN LANGUAGES). The name *Abnaki* was given to them by the French, but properly it should be *Wabanaki*, a word that refers to morning and the east and may be interpreted as those "living at the sunrise." The Abnaki lived mostly in what is now Maine, New Hampshire, and Vermont. Abnaki legend has it that they came from the Southwest, but the exact time is unsure, although archaeological sites do show that they were in the Northeast several thousand years before the beginning of the Christian era. After a series of bloody conflicts with British colonists, the Abnaki and related tribes (the Malecite, the Passamaquoddy, the Pennacook, the Penobscot, and others) withdrew into Canada, where they received protection from the French. The Abnaki were in settled villages, often surrounded by palisades, and lived by growing corn, fishing, and hunting. Their own name for their conical huts covered with bark or mats, *WIGWAM*, came to be generally used in English.

Abner, relative of Saul and commander in chief of his army. Jealousy and revenge probably caused his death at Joab's hands 1 Sam 14:50, 51, 17:55, 2 Sam 2:8.

Äbo, Finland see TURKU

abolitionists, in U.S. history, particularly in the three decades before the Civil War, members of the movement that agitated for the compulsory emancipation of Negro slaves. Abolitionists are to be distinguished from free-soilers, who opposed the further extension of slavery, but the groups came to act together politically and otherwise in the antislavery cause. Although antislavery sentiment had existed during the American Revolution, and abolitionist Benjamin LUNDY began his work early in the 19th cent., the abolition movement did not reach crusading proportions until the 1830s. One of its main-springs was the growing influence of evangelical religion, with its religious fervor, its moral urgency to end sinful practices, and its vision of human perfection. The preaching of Lyman Beecher and Nathaniel Taylor in New England and the religious revivals that began in W. New York state in 1824 under Charles G. FINNEY and swept much of the North, created a powerful impulse toward social reform—emancipation of the slaves as well as temperance, foreign missions, and women's rights. Outstanding

among Finney's converts were Theodore D. Weld and the brothers Arthur and Lewis TAPPAN. The Tappans and William Lloyd GARRISON, who began publishing an abolitionist journal, *The Liberator*, in 1831, were the principal organizers in Dec., 1833, at Philadelphia, of the American Anti-Slavery Society. The primary concern of the society was the denunciation of slavery as a moral evil, its members called for immediate action to free the slaves. In 1835 the society launched a massive propaganda campaign. It flooded the slave states with abolitionist literature, sent agents throughout the North to organize state and local antislavery societies, and poured petitions into Congress demanding the abolition of slavery in the District of Columbia. The abolitionists were at first widely denounced and abused. Mobs attacked them in the North, Southerners burned antislavery pamphlets and in some areas excluded them from the mails, and Congress imposed the GAG RULE to avoid considering their petitions. These actions, and the murder of abolitionist editor Elijah P. Lovejoy in 1837, led many to fear for their constitutional rights. Abolitionists shrewdly exploited these fears and antislavery sentiment spread rapidly in the North. By 1838, more than 1,350 antislavery societies existed with almost 250,000 members, including many women. Although abolitionists united in denouncing the African venture of the AMERICAN COLONIZATION SOCIETY, they disagreed among themselves as to how their goal might be best reached. Garrison believed in moral suasion as the only weapon, he and his followers also argued that women be allowed to participate fully in antislavery societies, thus disturbing the less radical element. When the Garrisonians passed such a resolution at the 1840 convention, a large group led by the Tappan brothers withdrew and formed the American and Foreign Anti-Slavery Society. The abolitionists were never again united as a single movement. Advocates of direct political action founded (1840) the Liberty party, James G. BIRNEY was its presidential candidate in 1840 and 1844. Writers such as John Greenleaf WHITTIER and orators such as Wendell PHILLIPS gave their services to the cause, while Frederick DOUGLASS and other freed or escaped slaves also took to the lecture platform. An antislavery lobby was organized in 1842, and its influence grew under Weld's able direction. Abolitionists hoped to convert the South through the churches, until the withdrawal of Southern Methodists (1844) and Baptists (1845) from association with their Northern brethren. After the demise of the Liberty party, the political abolitionists supported the FREE-SOIL PARTY in 1848 and 1852, and in 1856 they voted with the Republican party. The passage of more stringent fugitive slave laws in 1850 increased abolitionist activity on the UNDERGROUND RAILROAD. *Uncle Tom's Cabin*, by Harriet Beecher STOWE, became an effective piece of abolitionist propaganda, and the KANSAS question further aroused both North and South. The culminating act of extreme abolitionism occurred in the raid of John BROWN on Harpers Ferry. After the opening of the Civil War, insistent abolitionist demands for immediate freeing of the slaves, supported by radical Republicans in Congress, pushed President Lincoln in his decision to issue the EMANCIPATION PROCLAMATION. The abolitionist movement was one of high moral purpose and courage, its uncompromising temper made the slavery question the prime concern of national politics and hastened the demise of slavery in the United States. See SLAVERY. See G. H. Barnes, *The Antislavery Impulse, 1830-1844* (1933, rev. ed. 1957, repr. 1964), D. L. Dumond, *Antislavery the Crusade for Freedom in America* (1961, repr. 1964), Louis Filler, *The Crusade against Slavery, 1830-1860* (1960), Lawrence Lader, *The Bold Brahmins: New England's War against Slavery* (1961), Martin Duberman, ed., *The Antislavery Vanguard* (1965), Alma Lutz, *Crusade for Freedom: Women in the Antislavery Movement* (1968), Benjamin Quarles, *Black Abolitionists* (1969), A. S. Kraditor, *Means and Ends in American Abolitionism* (1969), Hugh Hawkins, ed., *The Abolitionists* (2d ed. 1972), Lewis Perry, *Radical Abolitionism* (1973).

Abomey (ăbōmă', ăbō'mē), town (1970 est. pop. 42,000), S Dahomey. It is the trade center for an agricultural region where grain and palm products are processed. The town is linked by railroad with COTONOU. Abomey was the capital of the kingdom of DAHOMEY, which was founded in the early 17th cent. and conquered by the French between 1892 and 1894. Ruins of the palaces of former Dahomey kings remain, and there is a museum. The city has a fruit research institute.

abominable snowman or **yeti**, manlike creature so named because it is associated with the perpetual

snow region of the Himalayas. A figure unknown except through tracks ascribed to it and through alleged encounters, it is described as 6 or 7 ft (18 or 21 m) tall and covered with long, dark hair. Attempts after the 1950s to verify these tracks (notably by Sir Edmund HILLARY in 1960) have had no results. While many scholars dismiss the existence of the snowman as a myth, others claim that it may be a form of hitherto unclassified ape.

abortion, expulsion of the product of conception before the embryo or fetus is viable. Any interruption of human pregnancy prior to the 28th week is known as abortion. Some authorities restrict the use of this term to the first 12 weeks and refer to the premature termination of pregnancy after the placenta is formed as a miscarriage. Popularly, miscarriage is used to signify accidental premature birth at any period, as opposed to purposely induced abortion. Spontaneous abortion may occur after the death of the fetus and hemorrhage in the uterus. Spontaneous expulsion during the last two thirds of pregnancy may be due to many causes, among them infectious disease (e.g., syphilis and toxemia), endocrine dysfunction (as in hypothyroidism and diabetes), and trauma. Abortion has long been practiced and was used as a form of birth control in ancient Greece and Rome. In the Middle Ages in Western Europe it was generally accepted in the early months of pregnancy. However, in the 19th cent. opinion about abortion changed. In 1869 the Catholic Church prohibited abortion under any circumstances. In England and in the United States in the 19th cent. stringent antiabortion laws were passed. The 20th cent. has generally seen a liberalization of attitudes toward abortion. In the United States on Jan. 22, 1973, the Supreme Court ruled that a state may not prevent a woman from having an abortion during the first six months of pregnancy, thus invalidating abortion laws in some states and overturning restrictive abortion laws in many other states. Abortion was legalized in England in 1967 and is also authorized in the Soviet Union, Japan, various of the Eastern European countries, and Scandinavia. Nevertheless, different groups, because of religious or other convictions, have continued to protest abortions and in the United States have organized, pressing to prohibit them by constitutional amendment. Abortion procedures include vacuum suction, and dilation and curettage—both methods are used in the early stages of pregnancy—as well as saline injection and hysterotomy.

abracadabra (ăb'rakădăb'ră), magical formula used by the Gnostics (see Gnosticism) of the 2d cent. to invoke the aid of benevolent spirits to ward off disease and affliction. It is supposed to be derived from, or similar in origin to, the abraxas, a word highly significant of the Supreme Power, which was engraved on gems and amulets or was variously worn as a protective charm. Handed down through the Middle Ages, the abracadabra gradually lost its occult significance, and its meaning was extended to cover any hocus-pocus.

Abraham [according to Gen. 17:5 = father of many] or **Abram** [Heb., = the father is high], progenitor of the Hebrews. He is the example of a man devoted to God, as in his journey to Canaan from Haran, his treatment of Lot, or his willingness to sacrifice his son. He is principally important as the founder of Judaism, the religion of a covenant. In this function he instituted circumcision and received the promise of Canaan for his people, who are descended from Isaac, the son of his old age. Gen. 11-25. Because of this dual role as founder of a race and its religion, the expression "Abraham's bosom," meaning the bliss awaiting his children, was current among later Jews and has become, for Christians, a synonym for heaven. Luke 16:22-31. His titles, Father of the Faithful and Friend of God (2 Chron. 20:7, Rom. 4:11), are used by Muslims who deem him ancestor, through Ishmael, of the Arabs. The frequent use of his name among Christians and the numerous paintings depicting the story of the sacrifice of Isaac (e.g., by Andrea del Sarto) testify to the universal reverence in which worshippers of God have held this founder of their faith. Modern biblical research tends to accept his historicity. See Sir C. L. Woolley, *Abraham: Recent Discoveries and Hebrew Origins* (1936), A. Gonzalez, *Abraham, Father of Believers* (tr. 1967), H. Gaubert, *Abraham, Loved by God* (tr. 1968).

Abraham, Plains of, fairly level field adjoining the upper part of the city of Quebec, Canada. There, in 1759, the English under Gen. James Wolfe defeated the French under Gen. Louis Montcalm. The battle decided the last of the FRENCH AND INDIAN WARS and led to British supremacy in Canada. Part of the battle

site is now built over, but a part is preserved as a national park. See C. P. Stacey, *Quebec, 1759: The Siege and the Battle* (1959).

Abraham ben Meir ibn Ezra· see IBN EZRA

Abraham Lincoln Birthplace National Historic Site, 117 acres (47 hectares), central Ky., near Hodgenville, est. 1916. Abraham Lincoln was born in a log cabin in this area on Feb. 12, 1809. The exact location of the original cabin has not been conclusively established, but evidence seems to indicate that it was situated on top of the knoll where the memorial building now stands. Inside of the building is the log cabin traditionally accepted as Lincoln's birthplace.

Abramovitz, Max· see HARRISON WALLACE KIRKMAN

Abrams, Creighton Williams, 1914–74, U.S. military officer, b. Springfield, Mass. After graduating (1936) from West Point, he served with distinction during World War II, most notably as commander of the 37th Tank Battalion, which relieved Allied forces trapped at Bastogne during the Battle of the Bulge. After service in Korea (1953–54) and in West Germany (1960–62) during the Berlin crisis, he became (1964) vice chief of staff of the U.S. army and was promoted (1964) to the rank of general. Abrams was appointed (1967) deputy commander of U.S. forces in Vietnam under Gen. William Westmoreland and later served (1968–72) as commanding general. From 1972 until his death he was U.S. army chief of staff.

Abrantes (ābrān'tīsh), town (1970 municipal pop. 48,161), Santarém dist., W central Portugal, in Ribatejo, on the Tagus River. It is the commercial center of a fruit growing region. Historically, Abrantes was a strategic point on the road to Lisbon. Alfonso I took it from the Moors in 1148. John I gathered his army there before the battle of Aljubarrota (1385). In the Napoleonic Wars, the French under Junot won the battle of Abrantes in 1807, but in 1810 they were unable to take the town by siege.

abrasive, material used for grinding, smoothing, cutting, or polishing another substance. Among the important natural abrasives are DIAMOND (in the form of dust and small inferior stones), CORUNDUM, emery, SAND, ground QUARTZ, PUMICE, KIESELGUHR, CHALK, and TRIPOLI. Important artificial abrasives are alundum (see ALUMINA), carborundum (see SILICON CARBIDE), boron carbide, and tungsten carbide, all of which are very hard. Since it was first produced in 1955, synthetic diamond has also become an important abrasive. Tripoli, chalk, and aluminum hydroxide, suspended in water, are efficient polishing agents. Silicon carbide, emery, and corundum are frequently mixed with cement and molded into wheels, blocks, and sticks. The finer powders are dusted on glue paper to produce emery paper, glass paper, and sandpaper. Pumice, finely powdered, is used in some toothpastes. Sand is used to great advantage in sand-blast machines. Automobile cylinders and valves are ground with emery or carborundum powder, mixed with oil, and tools are sharpened on emery wheels. Diamonds are cut by a thin revolving disk of phosphor bronze that has been impregnated with diamond dust. Materials with abrasive qualities can do much damage to machinery, especially to bearings and sliding parts.

Abra-vanel (ābra'vānēl) or **Abarbanel**, **Isaac** (–bārbā–), 1437–1508, Jewish theologian, biblical commentator, and financier, b. Lisbon. He served as treasurer to Alfonso V of Portugal but fled that country when he was implicated (1483) in a plot. He was then employed by Ferdinand and Isabella of Spain, until they expelled the Jews from their kingdom. He was later employed by the governments of Naples and Venice. His biblical commentaries are notable for their interpretation of the books of the Bible in terms of their various historical and social backgrounds and for their liberal quotations from Christian commentaries. Abra-vanel attacked the use (by Maimonides) of philosophical allegory, which he believed weakened the faith of many and thus tended to undermine the Jewish community in a precarious time. In his analyses of the Messianic prophecies he specifically denied Christian claims of Jesus as the Messiah (a dangerous position to take at that time), and looked to an impending Messianic age in which the Dispersion would end with Israel's return to the Holy Land and the reign of Messianic rule for all humanity. See study by Ben-Zion Netanyahu (2d ed. 1968).

Abra-vanel or **Abarbanel**, **Judah**, c.1460–c.1523, Jewish philosopher, physician, and poet, son of Isaac Abra-vanel, b. Lisbon, he is also known as

Leone Ebreo. He fled (1483) from Portugal to Spain with his father and, after the expulsion (1492) of the Jews from Spain, went to Naples, where he became (1505) physician to the viceroy. Philosophically, Abra-vanel was influenced by the scholars of the Platonic Academy of Florence, most notably Marsilio Ficino and Giovanni Pico della Mirandola, in addition, there are clear indications of philosophical influence from Maimonides and Ibn Gabirol. In his most celebrated work, the *Dialoghi di Amore* (published posthumously, 1535, tr. *The Philosophy of Love*, with introduction by Cecil Roth, 1937), Abra-vanel gave a classic exposition of platonic love. Holding love to be the dominating and motivating force within the universe, and seeing as its end a union of the lover with the idea of the beautiful and the good as embodied in the beloved, he posited as the ultimate goal of all creation a union with the sublime goodness and intellect that are contained within God. A "circle of love" is thus formed between the universe and its creator in which all things find sustenance and fulfillment. The work had a profound effect upon philosophers into the 17th cent., most notably upon Giordano Bruno and Baruch Spinoza.

Abruzzi, Luigi Amedeo, duca degli (lūwē'jē amādē'ō dōō'ka dā'lyē abroōt'sē), 1873–1933, Italian explorer and mountain climber, cousin of Victor Emmanuel III. He led (1897) the first ascent of Mt. St. Elias in Alaska. His polar expedition (1899–1900) reached a point farther north than Nansen's record. He explored (1906) the Ruwenzori range in Africa and unsuccessfully attempted (1909) to reach the peak of Mt. GODWIN AUSTIN, the southeast ridge of the peak is named in his honor. After 1919 he explored and tried to establish colonies in East Africa. A naval officer, he served in the Italo-Turkish War and World War I. Records of his polar exploration and his Asiatic mountain climbing have been translated.

Abruzzi (abroōt'sē), region (1971 pop. 1,163,334), 4,167 sq mi (10,793 sq km), central Italy, bordering on the Adriatic Sea in the east. L'AQUILA is the capital of the region, which is divided into Chieti, L'Aquila, Pescara, and Teramo provs. (named for their capitals). Abruzzi is mostly mountainous and is crossed by three ranges of the Apennines, which reach their highest point (9,560 ft/2,914 m) there in the Gran Sasso d'Italia group. There is a narrow coastal strip along the Adriatic. The chief rivers are the Pescara, the Sangro, and the Tronto. A generally poor region, Abruzzi has mostly small-scale agriculture and limited, but growing, industry. The main crops are grapes, olives, sugar beets, and tobacco; pigs and sheep are raised. The chief manufactures are processed food, textiles, clothing, and plastics. Tourism is important. Abruzzi was conquered by the Romans in the 4th cent. B.C. Later, it was part of the Lombard duchy of Spoleto (6th–11th cent. A.D.), the Norman kingdom of Sicily (12th–13th cent.), and the kingdom of Naples (13th–19th cent.). From 1948 to 1965 it was included in the region of Abruzzi e Molise. There are universities at Chieti and L'Aquila.

Absalom (āb'sālōm), son of David. He murdered his brother Amnon for the rape of their sister Tamar and fled. After a time he returned, but no sooner was he reconciled with his father than he stirred up a rebellion ultimately resulting in his death. 2 Sam. 3:3, 13–39, 2 Chron. 11:20, 21. The form Abishalom is used in Kings 15:2, 10.

Absalon (ap'salōn) or **Axel** (ak'sæl), c.1128–1201, Danish churchman, archbishop of Lund (1178–1201). He had great influence on political affairs under Waldemar I and Canute VI, warred against the pagan Wends, and in 1184 won a naval victory over Bogislav, duke of Pomerania. He attempted monastic reforms, introduced canon law into Denmark, and was patron of Svend Aagesen and Saxo Grammaticus. In 1167, Absalon was in charge of fortifying Copenhagen.

Absaroka Indians· see CROW INDIANS

abscess, accumulation of pus in the tissues as a result of INFECTION. Abscesses are characterized by inflammation and swelling, often painful. They occur in the skin, at the root of a tooth, in the middle ear, on the eyelid (see STY), in the mammary glands, in the recto-anal area, and elsewhere in the body. In tuberculosis, abscesses (tubercles) may develop in lung tissue, in the lymph nodes, and in bone. A sinus abscess may result in a FISTULA, and abscess of the appendix in appendicitis. Unless an abscess discharges spontaneously, surgical incision and drainage is required. Many cases respond to treatment with antibiotics. See BOIL, CARBUNCLE.

abscissa· see CARTESIAN COORDINATES

absentee ownership, system under which a person (or a corporation) controls and derives income from land in a region where he does not reside. Abuses existed in absenteeism in pre-Revolutionary France, in 19th-century Ireland, in E and SE Europe before World War I, and in some oil-producing nations of the Middle East as late as the second half of the 20th cent. Revolution and reform have abolished or greatly reduced the amount of absentee control throughout the world. In the United States the term has been applied to the concentration of economic power through various corporate devices. Chain stores and branch banking are sometimes classified as types of absentee ownership.

absinthe (äb'sīnth), an emerald-green, toxic LIQUEUR distilled from wormwood and other aromatics, including angelica root, sweet-flag root, star anise, and dittany, which have been macerated and steeped in alcohol. It was invented by a Dr. Ordinaire, a Frenchman who lived in Switzerland. Genuine absinthe is 70% to 80% alcohol. Because of the harmful effect it has on the nerves, it has been banned in most western countries—Switzerland (1908), the United States (1912), France (1915), an exception is Spain, where absinthe may be legally consumed.

absolute, in philosophy, term used to identify reality, the opposite of *relative*. The term has acquired numerous widely variant connotations in different philosophical systems. It means unlimited, unconditioned, or free of any relation, perfect, complete, or total, permanent, inherent, or ultimate, independent, or valid without reference to a perceiving subject. In logic, absolute means certain or indubitable as opposed to probable or hypothetical. As a substantive, the absolute is the ultimate basis of reality, the principle underlying the universe. Theologically, it is synonymous with, or characteristic of, God. Philosophically, it may be considered as the unknowable, the thing-in-itself, as that ultimate non-relative that is the basis of all relation, as the ultimate, all-comprehensive principle in which all differences and distinctions are merged. The concept of the absolute was present in Greek philosophy. In modern times, both realists and idealists have used the term, but it is, perhaps, most intimately connected with the idealism of G. W. HEGEL.

absolute differential calculus· see TENSOR

absolute magnitude· see MAGNITUDE

absolute monarchy· see MONARCHY

absolute music, term used for music dependent on its structure alone for comprehension. It is the antithesis of PROGRAM MUSIC. It is not associated with extramusical ideas or with a pictorial or narrative scheme of emotions, nor does it attempt to reproduce sounds in nature. Hence it is always instrumental, although not all instrumental music is absolute. The music of Bach is absolute music.

absolute pitch, the position of a tone in the musical scale determined according to its number of vibrations per second, irrespective of other tones. The term also denotes the capacity to identify any tone upon hearing it sounded alone or to sing any specified tone. Experiments have shown that this ability, a form of memory, can be acquired through practice, but in some individuals it appears to be inborn.

absolute temperature scale· see KELVIN TEMPERATURE SCALE, TEMPERATURE

absolute value, magnitude of a number or other mathematical expression disregarding its sign, thus, the absolute value is positive, whether the original expression is positive or negative. In symbols, if $|a|$ denotes the absolute value of a number a , then $|a| = a$ for $a \geq 0$ and $|a| = -a$ for $a < 0$. For example, $|7| = 7$ since $7 \geq 0$ and $|-7| = -(-7)$, or $|-7| = 7$, since $-7 < 0$.

absorption [Lat. = sucking from], taking of molecules of one substance directly into another substance. It is contrasted with ADSORPTION, in which the molecules adhere only to the surface of the second substance. Absorption may be either a physical or a chemical process, physical absorption involving such factors as solubility and vapor-pressure relationships and chemical absorption involving chemical reactions between the absorbed substance and the absorbing medium.

absorption spectrum· see SPECTRUM

abstinence· see FASTING, TEMPERANCE MOVEMENTS

abstract art· see ABSTRACT EXPRESSIONISM, MODERN ART

abstract expressionism, movement of abstract painting that emerged in New York City during the mid-1940s and attained singular prominence in American art in the following decade, also called

action painting and the New York school. It was the first important school in American painting to declare its independence from European styles and to influence the development of art abroad. Arshile Gorky first gave impetus to the movement. His paintings, derived at first from the art of Picasso, Miro, and surrealism, became more personally expressive. Jackson Pollock's turbulent yet elegant abstract paintings, which were created by spattering paint on huge canvases placed on the floor, brought abstract expressionism before a hostile public. Willem de Kooning's first one-man show in 1948 established him as a highly influential artist. His intensely complicated abstract paintings of the 1940s were followed by images of *Woman*, grotesque versions of buxom womanhood, which were virtually unparalleled in the sustained savagery of their execution. Other important artists were Hans Hofmann and Robert Motherwell. Painters such as Philip Guston and Franz Kline turned to the abstract late in the 1940s and soon developed strikingly original styles—the former, lyrical and evocative, the latter, forceful and boldly dramatic. Abstract expressionism presented a broad range of stylistic diversity within its largely, though not exclusively, nonrepresentational framework. For example, the expressive violence and activity in paintings by de Kooning or Pollock marked the opposite end of the pole from the simple, quiescent images of Mark Rothko. Basic to most abstract expressionist painting were the attention paid to surface qualities, i.e., qualities of brushstroke and texture, the use of huge canvases, the adoption of an approach to space in which all parts of the canvas played an equally vital role in the total work, the harnessing of accidents that occurred during the process of painting, and the glorification of the act of painting itself as a means of visual communication. The movement had an inestimable influence on the many varieties of work that followed it, especially in the way its proponents used color and materials. Its essential energy transmitted an enduring excitement to the American art scene. See articles on individuals (e.g., POLLOCK). See Michael Seuphor, *Abstract Painting: Fifty Years of Accomplishment from Kandinsky to the Present* (1962, repr. 1964); Irving Sandler, *The Triumph of American Painting: A History of Abstract Expressionism* (1970); Maurice Tuchman, ed., *The New York School: Abstract Expressionism in the 40s and 50s* (rev. ed. 1970).

abstract of title, in law, brief history of the title to a piece of land. An account is given of recorded documents, court proceedings, WILLS, MORTGAGES, taxes, previous sales, EASEMENTS, and all other factors that at any time affected the ownership or use of the land. The old rule in England required that an abstract of title should cover the 60 years before the proposed sale. In 1874 this was changed to 40 years. In some U.S. states the title is traced back to the original grant from the government, but in others it is traced only so far back as is necessary to show a present clear title.

Abu al-Abbas as-Saffah (a'boöl-abas' as-safa'), d. 754, 1st ABBASID caliph (749–54). Raised to the caliphate by the armed might of ABU MUSLIM, he took the reign name as-Saffah [shedder of blood]. Most of the Umayyad family was exterminated, and the reign was one of massacre and force. He was succeeded by his brother AL-MANSUR.

Abu al-Ala al-Ma'arri (ä'boö al-ala' al-ma-ar-ré'), 973–1057, Arabic freethinking poet. He was born and lived most of his life in Ma'arrah, S of Aleppo. He was blind from childhood. Brilliantly original, he became one of the literary reformers who discarded classicism for a modern intellectual urbanity. After 35 he lived a life of seclusion, and with his advocacy of an utterly ascetic purity, his poetry became more stereotyped. He believed in the ethical teachings of the monotheistic religions.

Abu al-Faraj. See BAR HEBRAEUS.

Abu al-Faraj Ali of Esfahan (a'boö al-faraj' alé', ésfahan'), 897–967, Arabic scholar. He is mainly known for his invaluable KITAB AL-AGHANI (book of songs), which provides detailed information about the culture and social life of medieval Islam.

Abu al-Fida (a'boöl-fé-da, -fidä'), 1273–1331, Arab historian, b. Damascus. He fought against the Christians in the last period of the Crusades and later became (1310) governor of Hama in Syria. He was a patron of learning and wrote a descriptive geography and a universal history, which is a superior source for Arabic history from the pre-Islamic period to 1329.

Abu Bakr (ä'boö bak'är), 573–634, 1st caliph, friend, father-in-law, and successor of Muhammad. He was

probably Muhammad's first convert outside the Prophet's family and certainly his most zealous believer. He alone accompanied Muhammad on the hegira. The marriage of Abu Bakr's daughter AISHA to Muhammad made the ties even stronger. On the Prophet's death in 632, UMAR secured Abu Bakr's election over the tribal chiefs and AU. The two years of his caliphate were critical for Islam. Though he was himself fervent rather than warlike, his party crushed opposition in Arabia and began the remarkable extension of Islam as a world religion. He was succeeded by Umar. See biography by A. Mohy-Nol-Din (1968); Asadul Qadri, *Interested Stories from the Life of Hazarat Abu Bakr Siddiq* (1970).

Abubus (abyö'bas), father of the Ptolemy who murdered Simon the Maccabee. 1 Mac. 16:11.

Abu Dhabi (a'boö tha'bē, za-, dā-), Arab. *Abu Zabi*, sheikhdom (1968 pop. 46,375), c. 26,000 sq mi (67,300 sq km), part of the federation of UNITED ARAB EMIRATES, E. Arabia, on the Persian Gulf. The sheikhdom is the largest in the federation, in it is located the town of Abu Dhabi, founded c. 1760, which is the temporary capital of the federation pending the construction of a new one on the border between Abu Dhabi and DUBAI. The sheikhdom became a British protectorate in 1892. The history of Abu Dhabi has been marked by violence within the ruling dynasty, few of the rulers died a natural death. Abu Dhabi frequently clashed with the neighboring sheikhdom of Sharjah. There was a long period of tranquility during the rule (1928–66) of Sheikh Shakhbut ibn Sultan, broken only by a war between Abu Dhabi and Dubai from 1945 to 1948. Oil was discovered in Abu Dhabi in the early 1960s. The oil revenues have been used for development and modernization. Abu Dhabi became part of the United Arab Emirates when it was formed in 1971.

Abu Hanifa (abö' hané'fa), 699–767, Muslim jurist. He founded the Hanafite system of Islamic jurisprudence, which gives the judge considerable discretion when the Koran and the Sunna (traditions) are inapplicable (see ISLAM).

Abukir: see ABU QIR, Egypt.

Abulcasis (a'boölka'sis) or **Abu Khasim** (a'boö ka'sim), Arabian physician, d. c. 1013, b. near Cordoba, Spain. His chief work, a detailed account of surgery and medicine, was for many years the leading surgical textbook. Known as the *Tasrif* [the collection], it consisted of three parts, dealing with cautery, with surgery, and with fractures and dislocations. It was translated many times into Latin and into other languages. His name also appears as Albucasis.

Abulfazl (ä'boölfa'zal, ä'boölüz'al), 1551–1602, minister of state and adviser to AKBAR, Mogul emperor of India. His *Book of Akbar*, in Persian, recounts the history of the reign, describing the political and religious organization of the empire. He was in part responsible for the development of Akbar's eclectic religion, Din-i-ilahi. Abulfazl was murdered at the instigation of Akbar's heir, the later emperor Jahangir.

Abu Muslim (ä'boö möös'lim), c. 728–755, Persian leader of the ABBASID revolution. By political and religious agitation he raised (747) the black banners of the Abbasids against the ruling Umayyad family. In 749 he established ABU AL-ABBAS AS-SAFFAH, the head of the Abbasid family, as caliph of Islam. Abu Muslim became governor of Khurasan, but the caliph Mansur feared his power and treacherously murdered him.

Abu Nuwas (a'boö nööwas'), d. c. 810, Arabic poet, b. Ahvaz, Persia. He spent most of his life in Baghdad. High in favor with the caliphs Harun ar-Rashid and Amin, he lived a courtier's life, his exquisite lyric poetry echoes the extravagance of this life.

Abu Qir or **Abukir** (both ä'boökär', äboökär'), village, N. Egypt, on a promontory in the Nile River delta. Admiral Horatio Nelson's victory over the French fleet off Abu Qir on Aug. 1, 1798 (sometimes called the battle of the Nile), restored British prestige in the Mediterranean region and, with the land victory (1801) led by Sir Ralph Abercromby, cut short the French venture in the Middle East begun by Napoleon I.

Abu Said ibn Abi al-Khair (a'boö sa'id 'ibän abé' äl-khär'), 967–1049, Persian poet, a Sufi and a dervish. He was the first to write rubaiyat (quatrains) in the Sufistic strain that Omar Khayyam made famous. **Abu-Simbel** (a'boö-sim'bäl) or **Ipsambul** (ip'sambööl'), village, S. Egypt, on the Nile River. Its two temples, hewn (c. 1250 B.C.) out of rock cliffs during the reign of Ramses II, were raised over 200 ft (61 m) to avoid the rising waters caused by the construction of the Aswan High Dam. UNESCO solicited funds from 52 nations for the salvage of the Nubian

archaeological treasure. The colossal statues of Ramses II and the temples were cut into 950 blocks, raised, and reassembled farther inland. The job was finished in 1966.

Abu Tammam Habib ibn Aus (tam-mam' habéb' 'ibän ous'), c. 805–c. 845, Arabic poet, compiler of the *HAMASA*. His poems of valor, often describing historical events, are important as source material.

abutilon (äbyööl'alön) see MALLOW.

Abydos (äb'ädäs), ancient city of Egypt, c. 50 mi (80 km) NW of Thebes. Associated in religion with Osiris, Abydos became the most venerated place in Egypt. It was the favorite burial place for the kings of the earliest dynasties, and later kings such as Seti I and Ramses II continued to build temples and sanctuaries there. Its remains date from the I to the XXVI dynasty (3100–500 B.C.). A famous list of kings, found on the wall of the temple built by Seti I, has been valuable in determining the order of succession among the Egyptian kings from Menes to Seti. **Abydos**, ancient town of Phrygia, Asia Minor, on the Asiatic side of the Hellespont opposite Sestos, in present-day Turkey. It was originally a Milesian colony. Near there Xerxes built his bridge of boats in 480 B.C., and in 411 the Athenian fleet defeated the Spartans. A free city until it was taken by Philip V of Macedon in 200 B.C., it became a major city of Antiochus III. It was the scene of the story of Hero and Leander.

abyssal plain: see OCEAN.

Abyssinia (äb'isín'ëya) see ETHIOPIA.

Abyssinian cat see CAT.

Abzine, mountains, Africa. See SAHARA.

Abzug, Bella Savitsky (sävit'ské äb'zöög'), 1920–, U.S. Congresswoman (1971–), b. New York City. Admitted to the bar in 1947, she handled many labor, civil rights, and civil liberties cases. Abzug helped found (1961) the Women's Strike for Peace to protest the testing of nuclear weapons and served (1961–70) as its legislative director. A founder (1968) of the reform-oriented New Democratic Coalition, she was elected to the U.S. House of Representatives (1970), where she quickly became a leader of the House antiwar movement. Abzug became known as a sharp critic of the House seniority system and a vigorous proponent of women's rights. See her *Bella! Ms. Abzug Goes to Washington*, ed. by Mel Ziegler (1972).

AC, chemical symbol of the element ACTINIUM.

AC: see ALTERNATING CURRENT.

acacia (äkä'shä), any plant of the large leguminous genus *Acacia*, often thorny shrubs and trees of the family Leguminosae (PULSE family). Chiefly of the tropics and subtropics, they are cultivated for decorative and economic purposes. Acacias are characteristic of savanna vegetation and are especially numerous in the South African bushveld. The foliage often appears feathery because of the many small leaflets, but in some species leaflike flattened stems contain chlorophyll and take the place of leaves. Various Old World species (especially *A. arabica* and *A. senegal*) yield gum arabic, other species, chiefly *A. catechu*, yield the dye CATECHU. Blackwood (*A. melanoxylon*) is valued in Australia for its hardwood timber. Other members of the genus are valuable for LAC, for perfume and essential oils, and for tannins, some are used as ornamentals. The Australian acacias are commonly called wattles—their pliable branches were woven into the structure of the early wattle houses and fences—and Wattle Day celebrates the national flower at blossoming time. Many wattles are cultivated elsewhere, particularly in California, as ornamentals for their characteristic spherical, dense flowers. The Central American bullhorn acacias (e.g., *A. sphaerocephala*) have large hollow thorns inhabited by ants that are said to feed upon a sweet secretion of the plant and in turn guard it against leaf-eating insects. The most common acacia indigenous to the United States is the cat's-claw (*A. greggii*) of the arid Southwest. The Biblical SHITTIM WOOD is thought to have come from an acacia. Various species of locust are sometimes called acacia, and acacias may be called mimosa, all are of the same family. *Acacia* is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

academic freedom, right of scholars to pursue research, to teach, and to publish without control or restraint from the institutions that employ them. It is a civil right that is enjoyed, at least in statute, by all citizens of democratic countries. In the case of scholars, whose occupation is directly involved with that right, the concept of academic freedom generally includes the property right of tenure of office.

(see **TENURE**, in education) Essential to the acceptance of the concept of academic freedom is the notion that truth is best discovered through the open investigation of all data. A less clearly developed corollary of academic freedom is the obligation of all those who enjoy it to pursue the line of open and thorough inquiry regardless of personal considerations. Historically, academic freedom developed during the Enlightenment. Early cultures, which viewed education as a system of absorbing a well-defined content of subject matter, offered little opportunity for speculation. The medieval universities also operated within a field of definite scope, primarily theological, and any teacher or scholar who extended his inquiry beyond the approved limits was subject to the charge of heresy. The scientific method of analyzing data and establishing hypotheses, a vital concomitant of academic freedom, was initiated during the Enlightenment, mainly by scholars outside university life such as Thomas Hobbes, John Locke, and Voltaire. It was in the Prussia of Frederick the Great that the new freedom first flourished within the university itself. In England, it was laymen like Jeremy Bentham, David Ricardo, Herbert Spencer, Charles Darwin, and Thomas Huxley who demonstrated the value of free investigation. Before the concept of academic freedom could gain general acceptance, however, it was necessary that education become secularized. It was not until 1828 that the first nonsectarian university was established in London. In the United States the early colleges were also religiously controlled, and there are still some denominational schools that define areas of inquiry. The AMERICAN ASSOCIATION OF UNIVERSITY PROFESSORS has been active in establishing standards of academic freedom and has investigated cases in which the right was alleged to have been jeopardized. See Richard Hofstadter and W. P. Metzger, *The Development of Academic Freedom in the US* (1955), R. M. MacIver, *Academic Freedom in Our Time* (1955, repr. 1967), Jack Nelson and Gene Roberts, Jr., *Censors and the Schools* (1963), Louis Joughin, *Academic Freedom and Tenure: A Handbook of the AAUP* (rev. ed. 1969), W. P. Metzger et al., *Dimensions of Academic Freedom* (1969), Sidney Hook, ed., *In Defense of Academic Freedom* (1971).

Académie française. see FRENCH ACADEMY

academies of art, official organizations of established artists. Lorenzo de' Medici's informal circle of great artists and thinkers was modeled on similar groups formed in classical Greece. The first official academy, the Accademia del Disegno, was founded in Florence by Vasari in 1561. Offshoots of this were the prototypes for the powerful Académie royale de peinture et de sculpture founded in 1648, the first of many French academies. The academies dictated elaborate conventions and aesthetic doctrines for the manufacture of works of art and the term "academic" came to imply derivative rather than creative work. The English Royal Academy, founded in 1768, now serves primarily as an art school and exhibition facility. The AMERICAN ACADEMY IN ROME is a school that embraces many fields including music and classical studies.

Academy, school founded by PLATO near Athens c. 387 B.C. It took its name from the garden (named for the hero Academus) in which it was located. Plato's followers met there for nine centuries until, along with other pagan schools, it was closed by Emperor Justinian in A.D. 529. The Academy has come to mean the entire school of Platonic philosophy, covering the period from Plato through Cicero. During this period Platonic philosophy was modified in various ways. These have been frequently divided into three phases: the Old Academy (until c. 250 B.C.) of Plato, SPEUSIPPUS, and XENOCRATES; the Middle Academy (until c. 150 B.C.) of ARCESILAUS and CARNEADES, who introduced and maintained skepticism as being more faithful to Plato and Socrates; and the New Academy (c. 110 B.C.) of Philo of Larissa, who, with subsequent leaders, returned to the dogmatism of the Old Academy.

Acadia (ākādēa), region and former French colony, E. Canada, centered on Nova Scotia but including also New Brunswick, Prince Edward Island, and the mainland coast from the Gulf of St. Lawrence S into Maine. The first and chief town, Port Royal (now ANNAPOLIS ROYAL, N.S.), was founded by the sieur de Monts in 1605 and was soon involved in the imperial struggle that was to end in America with the FRENCH AND INDIAN WARS. Destroyed by English colonists under Samuel ARGALL in 1613, the town was later rebuilt, and as British claims temporarily lapsed (see NOVA SCOTIA), the colony grew to be fairly prosperous with farmers on their dike-protected fields,

fishermen on the shore, and fur traders in the forests. Later, attacks on Port Royal were resumed, and its capture by the British in 1710 was confirmed as permanent in the Peace of Utrecht (1713). The British feared and distrusted their French-speaking, Roman Catholic neighbors, who were friendly with the Indians and, wishing only to remain neutral, refused to swear allegiance to Great Britain. In 1755 the British fell upon the peaceful Acadian farms and, seizing most of the Acadians, deported them to the more southerly British colonies, scattering them along the Atlantic coast from Maine to Georgia and sending some to the West Indies and Europe. The men were sent first, families were separated, farmhouses burned, and some lands abandoned to waste. A second expulsion took place in 1758. Later many exiles returned. Today in Canada, Acadian (French *Acadien*) means a French-speaking inhabitant of the Maritime Provinces. Many exiles who did not return found havens elsewhere, the most celebrated being the region around St. Martinville in S. Louisiana, where the Cajuns—as they are popularly called—still maintain a separate folk culture. The sufferings of the expulsion are pictured in Longfellow's *Evangeline*. See G. F. Clarke, *So Small a World: The Story of Acadia* (1958), J. B. Brebner, *New England's Outpost* (1927, repr. 1965), A. H. Clark, *Acadia: The Geography of Early Nova Scotia to 1760* (1968).

Acadia National Park, 41,642 acres (16,853 hectares), SE Maine, on the Atlantic coast, est. 1919. The park occupies a major portion of Mount Desert Island, Isle au Haut and several smaller islands, and the southern tip of Schoodic Peninsula. Almost completely surrounded by the sea, the park is characterized by a rugged, glacier-scoured interior with numerous valleys, lakes, and peaks, and a wave-eroded coastline. A great variety of land and sea life, both plant and animal, as well as several museums and nature centers are found in Acadia. During the 17th and early 18th cent. the region was part of France's New World territory of *La Cadie*.

Acadia University, at Wolfville, N.S., Canada, founded 1838, became Acadia University 1891. It has faculties of arts and science, engineering, home economics, music, theology, education, and business administration. Associated with the university is the Canada-Commonwealth Caribbean Centre.

Acajutla (akahōōt'la), town (1961 pop. 3,662), SW El Salvador, on the Pacific Ocean. It is a coffee and fishing port and a railroad terminus.

acanthus (ākān'thās), common name for a member of the Acanthaceae, a family of chiefly perennial herbs and shrubs, mostly native to the tropics. A few members of the family, many of which have decorative spiny leaves, are cultivated as ornamentals—especially the Mediterranean acanthus, or bear's-breech (genus *Acanthus*), whose ornate leaves were the source of a stylized motif used in Greek and Roman art (see CORINTHIAN ORDER). In Christian art the acanthus symbolizes heaven. Some species of the genus *Ruellia* are native to and cultivated as ornamentals in North America, chiefly in the South. *Acanthus* is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Scrophulariaceae, family Acanthaceae.

Acapulco (ak'apōōl'kō), city (1970 pop. 234,866), Guerrero state, S. Mexico. A fashionable resort, it has lavish hotels and facilities for deep-sea fishing and skin diving. Its fine natural harbor, surrounded by cliffs and promontories, served as a base for Spaniards exploring the Pacific and later played a key role in trade with the Philippines. Today, however, the port is little used for commerce. Coconuts, beans, and bananas are grown in the area. Near the city, which was founded in 1550, are the archeological remains of the Ciudad Perdida [lost city], estimated to be 2,000 years old. Acapulco has suffered frequent earthquake and hurricane damage.

Acarnania (āk'arnā'nēa), region of ancient Greece, between the Achelous River and the Ionian Sea. The inhabitants maintained their isolation, contributing little to Greek civilization. The chief city was Stratos. The Acarnanians generally sided with Athens, and Athens helped Acarnania to uphold its independence against Corinth and Sparta in the 5th cent. B.C. Later (390–375 B.C.) Sparta controlled the region. The persistent struggle with the Aetolians cost Acarnania national existence for a time, but it was restored and the Acarnanians kept some autonomy under the Roman Empire until the Christian era. When the Byzantine Empire broke up (1204), Acarnania passed to Epirus and in 1480 to the Turks. In 1832 it became part of Greece.

Acarya· see BHASKARA

Acastus (ākās'tās), in Greek mythology, son of Pelias, cousin of Jason. He accompanied Jason on the Argonaut expedition, but when Jason and Medea murdered Pelias and usurped the throne of Iolcus, Acastus drove them away. Later, his wife fell in love with Peleus, the father of Achilles, who did not return her affection. Enraged, she falsely accused him of raping her. Acastus took revenge by leaving Peleus unprotected on Mt. Pelion. Rescued by the centaur Chiron, Peleus subsequently captured Iolcus and killed Acastus and his wife.

Accad· see AKKAD

Accademia della Crusca (ak-kadē'mēa dēl'la krōōs'ka) [Ital. = academy of the chaff], Italian literary society founded in Florence in 1582 to maintain the purity of the language. Leonardo Salviati, influenced by Pietro Bembo, and the poet Grazzini formed the society to unify literary Italian on the model of the vernacular of Tuscany. A comedy by Lorenzo de' Medici, *L'Aridosio*, was chosen as a standard, as were two plays by the artist and poet Michelangelo Buonarroti, first consul of the society. The major work of the society was the compilation of Grazzini's *Vocabolario*, a dictionary of "pure" words, first published in 1612. It has gone through many editions and remains one of the finest Italian dictionaries. The society succeeded in establishing literary purism in Italy for several centuries. Joined with two other academies, it is still in existence.

Acca Larentia (āk'a lārēn'shēa,-shə) or **Acca Larentina** (-tī'na), in Roman mythology, wife of the shepherd Faustulus and foster mother of Romulus and Remus. Her 12 sons founded the priesthood of the ARVAL BROTHERS. According to one legend she was a wealthy courtesan who left all her money to the people of Rome.

Accaron· see EKRON

Accault, Michel. see ACO MICHEL

acceleration, change in the VELOCITY of a body with respect to time. Since velocity is a VECTOR quantity, involving both magnitude and direction, acceleration is also a vector. In order to produce an acceleration, a FORCE must be applied to the body. The magnitude of the force *F* must be directly proportional to both the mass of the body *m* and the desired acceleration *a*, according to Newton's second law of motion, *F* = *ma*. The exact nature of the acceleration produced depends on the relative directions of the original velocity and the force. A force acting in the same direction as the velocity changes only the SPEED of the body. An appropriate force acting always at right angles to the velocity changes the direction of the velocity but not the speed. An example of such an accelerating force is the gravitational force exerted by a planet on a satellite moving in a circular orbit. A force may also act in the opposite direction from the original velocity. In this case the speed of the body is decreased. Such an acceleration is often referred to as a deceleration. The following formulas may be used to compute the acceleration *a* of a body from knowledge of the elapsed time *t*, the distance *s* through which the body moves in that time, the initial velocity *v_i*, and the final velocity *v_f*:

$$a = (v_f^2 - v_i^2) / 2s$$

$$a = 2(s - v_i t) / t^2$$

$$a = (v_f - v_i) / t$$

accelerator· see PARTICLE ACCELERATOR

accent, in speech, emphasis given a particular sound, called prosodic systems in linguistics. There are three basic accentual methods: stress, tone, and length. In English each word has at least one primary stressed syllable, as in *weath'er*, words of several syllables may also have secondary stress as in *el'e-va'tor*. In English, vowels in unaccented syllables are often pronounced as a regardless of the orthographic letter. Thus, the vowels of the second syllables in *cr'cus*, *na'tion*, *ther'mos*, *ea's'ly*, *saun'a*, and *so'r'rel* are all pronounced the same. Sentence stress, known as intonation or contour, includes three basic patterns: the statement, *It's a dog*, where the PITCH pattern is level-high-low, the yes/no question, *Is it a dog?* where the pattern is level-high pitch, and the command, *Catch him!* which begins high and ends low. Both word stress and sentence stress are obligatory in English. However, emphasis of certain words within a sentence is optional. Tonal languages, such as Chinese and Swedish, have a system of high low and/or rising falling tones. Duration or length of sounds (quantity) is used in some languages to create systematic differences. No language uses all three types of accentual systems. In writing, accent is also used to show syllable stress as in Spanish *María* (acute accent) and Italian *pieta* (grave accent). Such written symbols, misleadingly termed accents, are often used only to signal spe-

cific pronunciation rather than stress, as in French *éleve*. The word accent in English is also understood to mean the pronunciation and speech patterns that are typical of a speech community, as foreign accent, hillbilly accent, upper-class accent, it also denotes the particular manner of uttered expression that lends a special shade of meaning, as when one speaks in harsh or gentle accents. See also ABLAUT and PHONETICS

accessory, in criminal law, a person who, though not present at the commission of a crime, becomes a participant in the crime either before or after the fact of commission. An accessory before the fact is one whose counsel or instigation leads another to commit a crime. An accessory after the fact is one who, having knowledge that a crime has been committed, aids, or attempts to aid, the criminal to escape apprehension. In a MISDEMEANOR and in treason there is no distinction between principals and accessories. In some states the common law distinction between principal and accessory before the fact has been abolished, and the accessory before the fact is prosecuted as a principal. The penalties for being an accessory are usually much less severe than those meted out to the principal. Except where statutes provide differently, an accessory cannot be tried without his consent before the conviction of the principal, unless both are tried together. If an accessory is called as a witness, the court must decide if he is also an accomplice, because the testimony of an accomplice must be corroborated. An accomplice has been defined as any person who could be prosecuted for the crime of which the defendant is accused. This would include principals and accessories before the fact, depending on the jurisdiction and the facts of the case it might also include conspirators (see under CONSPIRACY) and accessories after the fact. See STOLEN GOODS

Accho (āk'ō), Old Testament variant of AKKO

accident, in law, an unusual or unexpected event producing physical injury or loss of property. The term includes events that happen without human agency (see ACT OF GOD) and those that are produced through human agency although without design. When not an act of God, an accident ordinarily involves NEGLIGENCE on the part of the perpetrator. Such terms as "mere accident" or "pure accident," however, connote absence of negligence. An inevitable accident is an act of God or an event produced through human agency that could not be foreseen or prevented. In EQUITY, relief may be given from the effects of an accident that benefits a party, thus, if by accident the boundaries of property are confused, the party injured may seek a judicial determination of the true boundaries. In INSURANCE and in WORKMEN'S COMPENSATION statutes, the term accident has specifically defined meanings.

Accolti, Benedetto (bānādēt'tō ak-kōl'tē), c 1415-1466?, Italian humanist and historian. From his history of the First Crusade, Tasso supposedly drew the idea for *Jerusalem Delivered*. His son **Bernardo Accolti**, 1465?-1535, was known in his day for extemporaneous poems. Another son, **Pietro Accolti**, 1455-1532, was a cardinal and drew up (1520) the papal bull against Martin Luther.

accomplice. see ACCESSORY

accordion, musical instrument consisting of a rectangular bellows expanded and contracted between the hands. Buttons or keys operated by the player

Accordion

The key to pronunciation appears on page xi

open valves, allowing air to enter or to escape. The air sets in motion free reeds, frequently made of metal. The length, density, shape, and elasticity of the reeds determine the pitch. The first accordions were made in 1822 by Friedrich Buschmann in Berlin. Bouton added a keyboard 30 years later in Paris, thus producing a piano accordion. The accordion is frequently used in folk music. See CONCERTINA

accounting, classification, analysis, and interpretation of the financial, or BOOKKEEPING, records of an enterprise. The professional who supplies such services is known as an accountant. The accountant evaluates records drawn up by the bookkeeper and shows the results of his investigation as losses and gains, leakages, economies, or changes in value, so as to reveal the progress or failures of the business and also its future limitations and possibilities. An accountant must also be able to draw up a set of financial records and prescribe the system of accounts that will most easily give the desired information; he must be capable of arriving at a comprehensive view of the economic and the legal aspects of a business, envisaging the effect of every sort of transaction on the profit and loss statement, and he must recognize and classify all other factors that enter into the determination of the true condition of the business, e.g., statistics or memoranda relating to production, and properties and financial records representing investment, expenditures, receipts, fiscal changes, and present standing. Cost accounting shows the actual cost in a certain period of each service rendered or of each article produced, by this system unprofitable ventures, services, departments, and methods may be discovered. Although there were stewards, auditors, and bookkeepers in ancient times, the professional accountant is a 19th-century development. Unlike his precursors, the modern accountant usually does not serve only one employer, instead he offers his services, for a fee, to various individuals and businesses. The profession was first recognized in Great Britain in 1854, when the Society of Accountants in Edinburgh was given a royal charter. Similar societies were later established in Glasgow, Aberdeen, and London. In the United States the first such professional society was the American Association of Public Accountants, chartered by the state of New York in 1887. All the states and also Puerto Rico and the District of Columbia now have laws under which the public accountant who complies with certain educational and experience requirements and passes the required examination may be granted the title Certified Public Accountant (CPA). The holders of such certificates have organized into societies in most of the states. The bodies representing the accounting profession in the United States are the American Institute of Accountants, which succeeded the American Association of Public Accountants in 1916, and the American Accounting Association, also organized in 1916. With the growth of corporate activity in the 20th cent., accounting has increased greatly in importance and has undergone many improvements in theory and techniques. The chief influences on modern accounting have been the increasingly complex income tax structure and the need to keep uniform accounts for possible governmental or public scrutiny. Much of contemporary accounting has taken on managerial functions and is no longer primarily concerned with ascertaining financial condition but rather with how a company can act on this information. AUDITING is an important branch of accounting. See N. A. H. Stacey, *English Accountancy, 1800-1954* (1954), Morton Backer, ed., *Modern Accounting Theory* (1966), Louis Goldberg and V. R. Hill, *The Elements of Accounting* (3d ed. 1966), James D. Edwards, *History of Public Accounting in the United States* (1960), A. J. Briloff, *Unaccountable Accounting* (1972).

Accra (āk'ra, āk'rā), city (1970 pop. 564,194), capital of Ghana, a port on the Gulf of Guinea. It is Ghana's largest city and its administrative, communications, and economic center. The chief manufactures are processed food, beverages, timber and plywood, textiles, clothing, chemicals, and printed materials. A transportation hub, Accra is linked by road and rail with KUMASI, in the interior, and with TEMA, a major seaport. Accra originally was the village-sized capital of a Ga kingdom. It developed into a sizable town around British and Dutch forts built in the 17th cent. In 1876, Accra replaced CAPE COAST as the capital of the British Gold Coast colony. After the completion (1923) of a railroad to the mining and agricultural hinterland, Accra rapidly became the economic center of Ghana. Riots in the city (1948), against high retail prices and European control, led to the rise of Kwame NKRUMAH as a popular leader

and marked an important early step in Ghana's road to independence (1957). Today Accra is a sprawling, modern city with wide avenues. It is the site of the national museum and Ghana's central library. Also of note is Christianborg Castle, built by the Danes in the 17th cent. On Accra's outskirts are Achimota School (1927), the country's leading secondary school, and, in Legon, the Univ. of Ghana (1948). The Defense Commission of the Organization of African Unity has its headquarters in Accra.

Accrington, municipal borough (1971 pop. 36,838), Lancashire, NW England. The principal industry is cotton weaving. Textile printing and dyeing and the manufacture of machinery and bricks are also important.

acculturation, the more or less continuous interaction between groups brought about by accommodation and resulting in the intermixture of shared, learned behavior patterns. It may result in almost complete absorption of the CULTURE of one of the groups or a relatively equal merging of traits and patterns from both cultures. Not infrequently, acculturative processes result in considerable social disturbance and individual psychological maladjustment. After World War II one of the most active areas in acculturation study was the one often termed "applied anthropology," in which attention was focused on practical programs aimed at desired changes in societies or subcultures dominated by others.

accusative (āk'yōō'zātīv') [Lat. =accusing], in Latin grammar, the CASE typically meaning that the noun refers to the entity directly affected by an action. The term is used for similar, but often not identical, features in the grammar of other languages. Thus in English *him*, usually called objective, is also called accusative.

Aceldama (asēl'damā) [according to Acts 1:18,19 = field of blood], potter's field bought with Judas' 30 pieces of silver, it is apparently the place where Judas died. The purchase of this field to bury strangers in is the origin of the term "potter's field" for the paupers' burying ground. Mat. 27:3-10, Acts 1:19,20.

acetaldehyde (ās'tīdāl'dēhīd) or **ethanal**, CH_3CHO , colorless liquid ALDEHYDE, sometimes simply called aldehyde. It melts at -123°C , boils at 20.8°C , and is soluble in water and ethanol. It is formed by the partial oxidation of ethanol, oxidation of acetaldehyde forms acetic acid. Acetaldehyde is made commercially by the addition of water to acetylene in the presence of sulfuric acid and mercuric sulfate. It is used as a reducing agent (e.g., for silvering mirrors), in the manufacture of synthetic resins and dyestuffs, and as a preservative. When treated with a small amount of sulfuric acid it forms paraldehyde, $(\text{CH}_3\text{CHO})_3$, a trimer, which is used as a hypnotic drug.

acetate, one of the most important forms of artificial cellulose-based fibers. The first patents for the production of fibers from cellulose acetate appeared at the beginning of the 20th cent. During World War I, production of acetylcellulose began on an industrial scale for military applications. Acetate fibers are basically delivered in the form of a continuous textile yarn. Their principal use is in the production of widely used consumer goods, such as men's shirts, women's blouses, underwear, ties, bathing suits, jersey jackets and sweaters, suit fabrics, coats, and sports clothing.

acetic acid (asē'tīk), $\text{CH}_3\text{CO}_2\text{H}$, colorless liquid that has a characteristic pungent odor, boils at 118°C , and is miscible with water in all proportions, it is a weak organic carboxylic acid (see CARBOXYL GROUP). Glacial acetic acid is concentrated, 99.5% pure acetic acid, it solidifies at about 17°C to a crystalline mass resembling ice. Acetic acid is the major acid in VINEGAR, as such, it is widely used as a food preservative and condiment. For industrial use concentrated acetic acid is prepared from acetylene by a reaction yielding ACETALDEHYDE, which is then oxidized to produce acetic acid. Acetic acid is also a product in the destructive distillation of wood. It reacts with other chemicals to form numerous compounds of commercial importance. These include cellulose acetate, used in making acetate rayon, nonflammable motion-picture film, lacquers, and plastics, various inorganic salts, e.g., lead, potassium, and copper acetates, and amyl, butyl, ethyl, methyl, and propyl acetates, which are used as solvents, chiefly in certain quick-drying lacquers and cements. Amyl acetate is sometimes called banana oil because it has a characteristic banana odor.

acetone (ās'tōn), **dimethyl ketone** (dīmēth'əl kē'tōn), or **2-propanone** (prō'pānōn), CH_3COCH_3 , colorless, flammable liquid. Acetone melts at

—94.8°C and boils at 56.2°C. It is the simplest aliphatic KETONE. Acetone is widely used in industry as a solvent for numerous organic substances and is a component of most paint and varnish removers. It is used in the manufacture of synthetic resins and fillers, smokeless powders (e.g., cordite), and numerous other organic compounds. Acetone is produced commercially chiefly by catalytic dehydrogenation of isopropanol.

acetylcholine (asēt'alkō'lēn), organic compound containing carbon, hydrogen, oxygen, and nitrogen. It is liberated at nerve cell endings, and there is strong evidence that it is the transmitter substance that conducts impulses from one cell to another in the ganglia of the autonomic nervous system, from nerve cells to smooth muscle, cardiac muscle, and exocrine glands, and from motor nerve cells to skeletal muscle. Its role in the conduction of nerve impulses elsewhere is still uncertain. The stimulation of skeletal muscle by acetylcholine is inhibited by curare. See NERVOUS SYSTEM.

acetylene (asēt'alēn') or **ethyne** (ēth'in), HC≡CH, a colorless gas. It melts at -80.8°C and boils at -84.0°C. Offensive odors often noted in commercial acetylene are due to impurities. Acetylene forms explosive mixtures with oxygen or air. It is soluble in acetone, ethanol, and water. When dissolved in acetone it is nonexplosive and so is stored dissolved in acetone under pressure in steel cylinders for commercial use. Since it is explosive in the liquid state, it is not generally stored in this form. Acetylene is usually prepared commercially by the reaction of calcium CARBIDE with water. It is used for cutting and welding metals (see OXYACETYLENE TORCH) and is sometimes used as an illuminant gas. When subjected to high temperatures, it undergoes polymerization, benzene may also be formed. It is used in the production of many organic compounds, e.g., neoprene rubber, plastics, and resins. Acetylene is the simplest ALKYNE.

acetylene series: see ALKYNE.

acetylsalicylic acid (asēt'alsāl'tsīl'ik), acetate ester of SALICYLIC ACID. See ASPIRIN.

Achaea (akē'ā), region of ancient Greece, in the northern part of the Peloponnesus on the Gulf of Corinth. It lay between Sicyon and Elis. There the Achaeans supposedly remained when driven from other parts of Greece by the Dorian invasion. The small Achaean cities eventually banded together in the First ACHAEAN LEAGUE. In the late 8th cent. B.C. the Achaeans colonized part of S. Italy but were at first of little significance in Greek politics. Later, however, the Second Achaean League became an important factor. After the downfall of the league, the name Achaea, or Achaia, was given to a Roman province in the Peloponnesus.

Achaean League (akē'ān), confederation of cities on the Gulf of Corinth. The First Achaean League, about which little is known, was formed presumably before the 5th cent. B.C. and lasted through the 4th cent. B.C. Its purpose was mutual protection against pirates. The Achaeans remained aloof from the wars in Greece until they joined the opposition to Philip II of Macedon in 338 B.C. The confederation was dissolved soon after. The Second Achaean League was founded in 280 B.C. Sicyon was freed from the rule of its tyrant in 251 B.C., and it soon joined the confederation under the leadership of ARATUS. Other cities outside Achaea were incorporated on terms of equality, and in 247 B.C. the Macedonians were driven from Corinth. There was some promise of liberating all Greece, but unfortunately the interference of CLEOMENES III of Sparta threatened the Achaean League, and in 227 B.C. he began a war. The Achaean League then requested (224 B.C.) Macedonian aid against Sparta and the Aetolian League. The result was the eclipse of the confederation until the wars between Macedon and Rome. In 198 B.C. the Achaeans went over to Rome and with Roman aid won practically the whole Peloponnesus, forcing Sparta and Messene to join. Later suspecting the Achaeans of again looking toward Macedon, the Romans deported (168 B.C.) many of them (including POLYBIUS) to Italy. Anti-Roman feeling grew, and in 146 B.C. the Achaeans waged a suicidal war. Rome easily triumphed at Corinth, dissolved the confederation, and ended Greek liberty. A smaller Achaean League was formed, but it was powerless.

Achaeans, people of ancient Greece, of unknown origin. In Homer, the Achaeans are specifically a Greek-speaking people of S. Thessaly. Historically, they seem to have appeared in the Peloponnesus during the 14th and 13th cent. B.C., and c.1250 B.C. they became the ruling class. There is no sharp line of separation between the earlier MYCENAEAN CIVIL-

IZATION and the Achaean, the cultures seem to have intermingled. The invasions of the DORIANS supposedly forced some of the Achaeans out to Asia Minor, others were concentrated in the region known in classical times as Achaea.

Achaemenids (āk'amēn'idz), dynasty of ancient Persia. They were descended presumably from one Achaemenes, a minor ruler in a mountainous district of SW Iran. His successors, when ELAM declined, spread their power westward. CYRUS THE GREAT established the Persian rule by his conquest of ASTYAGES of MEDIA. The Achaemenids (c.550-330 B.C.) were important for their development of government administration, the appearance of literature written in CUNEIFORM, and the spread of ZOROASTRIANISM, during this period there was also a great flourishing of PERSIAN ART AND ARCHITECTURE. The Achaemenid rulers after Cyrus were Cambyses, the impostor Smerdis, Darius I, Xerxes I, Artaxerxes I, Xerxes II, Sogdianus, Darius II, Artaxerxes II (opposed by Cyrus the Younger), Artaxerxes III, Arsēs, and Darius III. The dynasty ended when Darius III died in his flight from Alexander the Great.

Achaeus (akē'ās) see CREUSA 1.

Achaicus (ākā'ikas), a Christian. 1 Cor. 16:17, 18.

Achai of Shabcha see AHA OF SHABCHA.

Achan (ā'kān) or **Achar** (ā'kar), Judahite who kept some of the spoil from the city of Jericho. For this he was stoned. Joshua 7, 1 Chron. 27.

Achard, Franz Karl (frants karl akh'art), 1753-1821, German chemist. He made pioneer use of the discovery by his countryman Andreas Marggraf of sugar in beetroots. The government granted him an estate in Silesia where, in 1806, he succeeded in producing beet sugar. Among his other contributions is the discovery of a method for working platinum.

Achaz (ā'kāz), variant of AHAZ. Mat. 19.

Achbor (āk'bōr), same as ABDON 2.

Acheampong, Ignatius Kutu (kōō'tōō achā'ampōng), 1931-, government official in Ghana, b. Kumasi. He taught before joining (1959) the army, where he advanced to colonel. In 1972, following a bloodless army coup that overthrew Kofi Abrefa BUSIA, he became chairman of the ruling National Redemption Council.

Achelous: see AKHELOOS, river, Greece.

Achelous (āk'elō'ās), in Greek mythology, river god, son of Oceanus and Tethys. He possessed the power to appear as a bull, a serpent, or a bullheaded man. Hercules defeated him and broke off one of his horns, which, according to one legend, became the CORNUCOPIA. He is sometimes said to be the father of the Sirens.

achene, dry, simple, one-seeded fruit with the seed attached to the inner wall at only one point. Achenes are indehiscent, i.e., they do not split open at maturity. The so-called seed of a sunflower is an achene, the shell is the wall of the fruit, and the true seed lies within. A strawberry consists of many achenes embedded in a fleshy receptacle.

Achenwall, Gottfried (gōt'frēt akh'ənal), 1719-72, German statistician and political scientist. He used the term *Statistik* for the first time in his *Staatsverfassung der heutigen vornehmsten europäischen Reiche und Völker im Grundrisse* [the political constitution of the present principal European countries and peoples] (1749). By the term he meant a comprehensive description of the social, political, and economic features of a state.

Achernar (ā'karnar'), brightest star in the constellation ERIDANUS, Bayer designation α Eridani, 1970 position R.A. 1^h36^m, Dec. -57°23'. A bluish-white star with apparent MAGNITUDE 0.51, it is one of the 10 brightest stars in the entire sky. Its distance is about 120 light-years, and its luminosity about 600 times that of the sun. Achernar is of SPECTRAL CLASS B5 V. Its name is from the Arabic meaning "end of the river [Eridanus]."

Acheron (āk'ərōn) see HADES.

Acheson, Dean Gooderham (āch'tsən), 1893-1971, U.S. Secretary of State (1949-52), b. Middletown, Conn. He was (1919-21) private secretary to Louis D. Brandeis, became a successful lawyer, and served (1933) as Undersecretary of the Treasury until disagreement with President Franklin Delano Roosevelt's fiscal policy caused his resignation. Assistant Secretary of State (1941-45) and Undersecretary of State (1945-47), he was appointed (Jan. 1949) Secretary of State. Under his direction the policy of containment of Communist expansion through foreign economic and military aid was developed. He played an important role in establishing the NORTH ATLANTIC TREATY ORGANIZATION and the security pact

with Australia and New Zealand. His attempts to dissociate the United States from the Nationalist Chinese regime in Taiwan drew the relentless attack of many Congressmen of his own party, as well as Republicans. His support of U.S. military commitments to South Korea also aroused much criticism. Acheson's earlier friendly attitude toward Alger HISS became the basis for personal abuse and resulted in attacks on his handling of the loyalty and security policy of the Dept. of State. Returning to private practice in 1953, Acheson remained a spokesman for the Democratic party on foreign policy and exerted considerable influence on the Kennedy administration (1961-63). He wrote *A Democrat Looks at His Party* (1955), *A Citizen Looks at Congress* (1957), *Power and Diplomacy* (1958), *Fragments of My Fleece* (1971), and three autobiographical works, *Morning and Noon* (1965), *Present at the Creation* (1969), and *Grapes from Thorns* (1972). See studies by R. J. Stupak (1969) and Gaddis Smith (1972).

Acheulian (ashōō'lēan) see PALEOLITHIC PERIOD.

Achill (āk'il) [Irish, =eagle], island, 56 sq mi (145 sq km), Co. Mayo, W. Republic of Ireland, the largest island of Ireland. It is connected with the mainland by a bridge over Achill Sound. The rugged island is barren, and its inhabitants subsist with great difficulty by fishing and farming. Many of the small villages are resorts. Keel and Doogort are the chief towns. Achill is known for its magnificent cliff scenery. Slievemore, at the north end, rises to 2,204 ft (672 m).

Achilles (ak'il'ēz), in Greek mythology, foremost Greek hero of the Trojan War, son of Peleus and Thetis. He was a formidable warrior, possessing fierce and uncontrollable anger. Thetis, knowing that Achilles was fated to die at Troy, disguised him as a girl and hid him among the women at the court of King Lycomedes of Skyros. He was discovered there by Odysseus, who persuaded him to go to Troy. One of Lycomedes' daughters, Deidamia, bore Achilles a son, Neoptolemus. According to Homer, Achilles came to Troy leading the 50 ships of the Myrmidons. In the last year of the siege, when Agamemnon stole the captive princess Briseis from him, Achilles angrily withdrew and took his troops from the war. Later he allowed his intimate friend Patroclus to borrow his armor and lead the Myrmidons to aid the retreating Greeks. When Hector killed Patroclus, Achilles was filled with grief and rage and returned to the battle, routed the Trojans, and killed Hector, viciously dragging his body back to the Greek camp. Achilles died of a wound inflicted by Paris. According to one legend, Thetis attempted to make Achilles immortal by bathing him in the river Styx, but the heel by which she held him remained vulnerable, and Paris inflicted a fatal wound in that heel. Other legends state that Achilles was struck from behind and killed by Paris when he went to visit Priam's daughter Polyxena, with whom he had fallen in love. Achilles was the object of widespread hero worship.

Achilles' tendon (*tendo calcaneus*) (tēn'dō kāl'kā'nēās), sinew prominent at the back of the ankle, connecting the tendons of the calf muscles to the heelbone. When the musculature contracts, the pull on the Achilles' tendon elevates the heel in the springy motion essential to running and jumping. Since the effect is to lift the entire body weight against a severely adverse leverage ratio, the Achilles' tendon by necessity is the toughest and strongest of human tendons. The name derives from the mythical Greek hero Achilles, who was vulnerable only in the heel.

Achim (ā'kīm), name in the genealogy of Mat. 1:14.

Achish (āk'ish), king of Gath with whom David took refuge. 1 Sam. 27:2. Called Abimelech in the title of Ps. 34.

Achithophel (āk'it'əfēl), variant of AHITHOPHEL.

Achmet, For Ottoman sultans thus named, see AHMED.

Achor (ā'kōr), valley where Achan was stoned. Joshua 7:25, 26, 1 Chron. 27.

Achsa or **Achsa** (both āk'sā), Caleb's daughter, given as wife to Othniel. Judges 1:12-15, 1 Chron. 2:49.

Achshaph (āk'shāf), town of N. Palestine, taken by Joshua. Joshua 11:1, 2:20, 19:25.

Achzib (āk'zīb), 1 Seacoast Palestinian town, c.15 mi (24 km) S of Tyre. Joshua 19:29, Judges 1:31. 2 Unidentified city of Judah. Joshua 15:44, Micah 1:14. Ch�zib in Gen. 38:5 and Chozeba in 1 Chron. 4:22 may be the same.

acid anhydride (ānhī'drīd, -drəd), chemical compound that reacts with water to form an acid (see

ACIDS AND BASES) Anhydrides of inorganic acids are usually oxides of nonmetallic elements. Carbon dioxide, CO_2 , is the anhydride of carbonic acid, H_2CO_3 . Nitrogen pentoxide, N_2O_5 , is the anhydride of nitric acid, HNO_3 . Phosphorus pentoxide, P_2O_5 , is the anhydride of phosphoric acid, H_3PO_4 . Sulfur dioxide, SO_2 , is the anhydride of sulfurous acid, H_2SO_3 . Sulfur trioxide, SO_3 , is the anhydride of sulfuric acid, H_2SO_4 . Anhydrides of organic acids, like the acids themselves, contain the carbonyl group, >CO . Organic anhydrides include acetic anhydride or ethanoic anhydride, $(\text{CH}_3\text{C}=\text{O})_2\text{O}$, and benzoic anhydride, $(\text{C}_6\text{H}_5\text{C}=\text{O})_2\text{O}$.

acid-base indicators: see INDICATORS, ACID-BASE

acidophilus milk (äs'īdōfīl'ās) see FERMENTED MILK

acidosis and alkalosis (äs'īdō'sīs, āl'kālō'sīs), physiological conditions brought about by a disturbance in the balance of acids and bases, or alkalies, in the body. The acid-base balance is kept normal by three separate regulatory systems. First, a group of buffering compounds in the body fluids can react instantaneously to neutralize any excess acids or alkalies. Secondly, the respiratory system can restore balance in 1 to 3 min if the system is upset. Deep, rapid breathing excretes more carbon dioxide and consequently reduces the amount of carbonic acid in the tissues, thereby counteracting acidity; conversely, slow, shallow breathing increases the amount of carbonic acid in the tissues, counteracting alkalinity. The third mechanism, a function of the kidneys, is the most powerful of the regulatory systems; excess acid or alkali is excreted in the urine, but the process requires several hours to a day. Either acidosis or alkalosis follows the disruption of any of these mechanisms. Acidosis depresses the central nervous system, which, in extreme cases, leads to coma and death. It can result from a number of metabolic disturbances, e.g., diabetes, kidney failure, severe diarrhea, severe dehydration, excessive ingestion of acid salts, or liver disease. It is countered by the administration of alkali solutions and by treatment of the original cause of the imbalance. Respiratory acidosis occurs when severely diseased lungs retain too much carbon dioxide and take in too little oxygen; measures must be taken to reduce the carbon dioxide content of the blood and to increase oxygenation. Alkalosis causes overexcitation of the nervous system, which, in extreme cases, causes a state of muscular spasm called tetany. It is usually brought on by ingestion of alkalies in quantities greater than the kidneys can process, or by hyperventilation (rapid breathing) in hysterical or emotional states. Treatment of alkalosis must be addressed to restoring the normal acid-base balance and to removing the original cause of the disturbance.

acids and bases, two related classes of chemicals, the members of each class have a number of common properties when dissolved in a solvent, usually water. Acids in water solutions exhibit the following common properties: they taste sour, turn litmus paper red, and react with certain metals, such as zinc, to yield hydrogen gas. Bases in water solutions exhibit these common properties: they taste bitter, turn litmus paper blue, and feel slippery. When a water solution of acid is mixed with a water solution of base, a SALT and water are formed; this process, called NEUTRALIZATION, is complete only if the resulting solution has neither acidic nor basic properties. Acids and bases can be classified as organic or inorganic. Some of the more common organic acids are CITRIC ACID, CARBONIC ACID, HYDROGEN CYANIDE, salicylic acid, LACTIC ACID, and TARTARIC ACID. Some examples of organic bases are PYRIDINE and ethylamine. Some of the common inorganic acids are HYDROGEN SULFIDE, PHOSPHORIC ACID, HYDROGEN CHLORIDE, and SULFURIC ACID. Some common inorganic bases are SODIUM HYDROXIDE, SODIUM CARBONATE, SODIUM BICARBONATE, CALCIUM HYDROXIDE, and CALCIUM CARBONATE. When an acid or base dissolves in water, a certain percentage of the acid or base particles will break up, or dissociate (see DISSOCIATION), into oppositely charged ions. The Arrhenius theory of acids and bases, named for the Swedish chemist Svante Arrhenius, defines an acid as a compound that can dissociate in water to yield hydrogen ions, H^+ , and a base as a compound that can dissociate in water to yield hydroxide ions, OH^- . For example, hydrochloric acid, HCl , dissociates in water to yield the required hydrogen ions, H^+ , and also chloride ions, Cl^- . The base sodium hydroxide, NaOH , dissociates in water to yield the required hydroxide ions, OH^- , and also sodium ions, Na^+ . Some substances act as acids or bases when they are dissolved in solvents other than water, such as liquid ammonia. The Brønsted-Lowry theory, named

for the Danish chemist Johannes Brønsted and the British chemist Thomas Lowry, provides a more general definition of acids and bases that can be used to deal both with solutions that contain no water and solutions that contain water. It defines an acid as a proton donor and a base as a proton acceptor. In the Brønsted-Lowry theory, water, H_2O , can be considered an acid or a base since it can lose a proton to form a hydroxide ion, OH^- , or accept a proton to form a hydronium ion, H_3O^+ (see AMPHOTERISM). When an acid loses a proton, the remaining species can be a proton acceptor and is called the conjugate base of the acid. Similarly when a base accepts a proton, the resulting species can be a proton donor and is called the conjugate acid of that base. For example, when a water molecule loses a proton to form a hydroxide ion, the hydroxide ion can be considered the conjugate base of the acid, water. When a water molecule accepts a proton to form a hydronium ion, the hydronium ion can be considered the conjugate acid of the base, water. Another theory that provides a very broad definition of acids and bases has been put forth by the American chemist Gilbert Lewis. The Lewis theory defines an acid as a compound that can accept a pair of electrons and a base as a compound that can donate a pair of electrons. Boron trifluoride, BF_3 , can be considered a Lewis acid and ethyl alcohol can be considered a Lewis base. Each of the three theories has its own advantages and disadvantages, each is useful under certain conditions. Acids, such as hydrochloric acid, and bases, such as potassium hydroxide, that have a great tendency to dissociate in water are completely ionized in solution; they are called strong acids or strong bases. Acids, such as acetic acid, and bases, such as ammonia, that are reluctant to dissociate in water are only partially ionized in solution; they are called weak acids or weak bases. Strong acids in solution produce a high concentration of hydrogen ions, and strong bases in solution produce a high concentration of hydroxide ions and a correspondingly low concentration of hydrogen ions. The hydrogen ion concentration is often expressed in terms of its negative logarithm, or pH (see separate article). Strong acids and strong bases make very good electrolytes (see ELECTROLYSIS), i.e., their solutions readily conduct electricity. Weak acids and weak bases make poor electrolytes. See CATALYST, TITRATION, INDICATORS, ACID-BASE, BUFFER.

Acireale (a'chērā'ā), city (1971 pop. 47,086), E Sicily, Italy. Beautifully situated on a volcanic plateau near Mt. Etna and near the Ionian Sea, Acireale has been frequented since Roman times for its warm sulfur springs and today is also a commercial center. The city was damaged by earthquakes in 1169 and 1693.

Acis (ā'sīs) see GALATEA 1.

Ackermann von Bohmer: see JOHANNES VON SAAZ

Acklins Island: see BAHAMA ISLANDS

acknowledgment, in law, formal declaration or admission by a person who executed an instrument (e.g., a will or a deed) that the instrument is his. The acknowledgment is made before a court, a notary public, or other authorized person. Acknowledgment permits the instrument to be given in evidence without further proof of its execution (e.g., witnesses).

Acmeists (āk'mēists), school of Russian poets started in 1912 by Sergei M. Gorodetsky and Nikolai Stepanovich GUMILEV as a reaction against the mysticism of the symbolists. The school aspired to concreteness of imagery and clarity of expression. The leading Acmeists were Gumilev, Anna AKHMATOVA, and Osip MANDELSTAM. See L. I. Strakhovsky, *Graftsmen of the Word: Three Poets of Modern Russia*.

acne, common inflammatory disease of the SEBACEOUS GLANDS characterized by blackheads, whiteheads, and pimples and, in the more severe forms, by cysts and scarring. The lesions appear on the face, neck, back, chest, and arms. Acne is most prevalent among adolescents. Although its exact cause is not known, it is undoubtedly related both to genetic predisposition and to the increased hormonal activity that occurs at puberty, which causes an overproduction of sebum, the oily secretion of the sebaceous glands. Cleanliness of the skin is essential when acne is present, and a mild soap and water should be used several times a day. The contents of blackheads and pustular lesions should be evacuated only by a physician under proper aseptic conditions to lessen the possibility of scarring. Astringent lotions may help to counteract the oiliness of the skin usually present in this condition. Foods rich in carbohydrate and fat, such as chocolate and nuts, should be eliminated from the diet. The more severe

cases of acne may require antibiotic and hormonal treatment. It is possible to improve the appearance of acne-scarred skin by a method of surgical abrasion in which the skin is frozen and anesthetized and then abraded with fine sandpaper or special brushes.

Aco or Accault, Michel (both mēshēl'ākō'), fl. 1680-1702, French explorer. He became La Salle's lieutenant, being favored by that explorer because of his courage, prudence, and wide acquaintance with Indian languages. When LA SALLE reached the mouth of the Illinois River on his famous voyage down the Mississippi, he sent Aco with two companions to explore the upper reaches of the Mississippi. One of the companions was Father Louis HENNEPIN, who in his *Nouvelle Decouverte* made himself the hero of the expedition. Near the Falls of St. Anthony, which they were the first Europeans to see, the three were captured by Sioux Indians and were released only through the energy and influence of Daniel Greysolon DULUTH. Little is known of Aco's subsequent life except that he was a trader on the Illinois for many years and that in 1693 he married the daughter of a Kaskaskia chief. His name also appears as Ako.

Acoma or Ácoma (both āk'āma), pueblo (1970 est. pop. 2,750), alt. c. 7,000 ft (2,130 m), Valencia co., W central N. Mex., founded c. 1100-1250. This "sky city" on top of a steep-sided sandstone mesa, 357 ft (109 m) high and difficult of access, is considered to be the oldest continuously inhabited community in the United States. The residents, who speak a Western Keresan language (see PUEBLO INDIANS), are skilled pottery makers. Below the mesa are the cultivated fields and grazing grounds that help support the community. The pueblo's location has astonished visitors from Fray Marcos de Niza in 1539 and Coronado's men in 1540 to tourists of today. Juan de Oñate was allowed entry in 1598, but the Indians revolted fiercely in 1599 and were subdued only after severe fighting. The missionary Fray Juan Ramirez arrived in 1629. The Acoma people joined in the revolt of the Pueblo Indians in 1680, were forced to submit to Diego de Vargas in 1692, joined in the later uprising of 1696, and were subdued again in 1699. They were later Christianized. Their chief festival is held on Sept. 2, the feast of St. Stephen, their patron saint. See study by L. A. White (1932, repr. 1973).

Acominatus, Michael (ākōmīnā'tās) or **Michael Choniates** (kōnēā'tēz), c. 1140-1220, Byzantine writer and metropolitan of Athens. Acominatus' speeches, poems, and letters give much information about medieval Athens, which he, a classicist, found barbarous and degenerate. His important history of the Byzantine Empire covers the period 1180 to 1206. After the capture (1204) of Athens by the army of the Fourth Crusade, he retired to the island of Kea, where he died. His first name is also written as Nicetas.

Aconcagua (ākōnka'gwa), peak, 22,835 ft (6,960 m) high, Mendoza prov., W Argentina, in the Andes, near the Chilean border. It is the highest peak of the Western Hemisphere. The snow-capped Aconcagua was first scaled in 1897. Uspallata Pass is nearby. See also OJOS DEL SALADO.

aconite (āk'ānīt), **monkshood**, or **wolfsbane**, any of several species of the genus *Aconitum* of the family Ranunculaceae (BUTTERCUP family), hardy perennial plants of the north temperate zone, growing wild or cultivated for ornamental or medicinal purposes. They contain violent poisons that were recognized from early times and were mentioned by Shakespeare (2 King Henry IV, iv 4), more recently they have been used medicinally in a liniment, tincture, and drug, and in India on spears and arrows for hunting. The drug aconite, the active principle of which is the alkaloid aconitine, is used as a sedative, e.g., for neuralgia and rheumatism, and is obtained from *A. napellus*. Aconites are erect or trailing, with deeply cut leaves and, in late summer and fall, hooded showy flowers of blue, yellow, purple, or white. The name wolfsbane derives from an old superstition that the plant repelled werewolves. Winter aconite is a name for plants of the genus *Eranthis*, wild or garden perennials of the same family. Aconites are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Acontius (ākōn'shās), in Greek mythology, young man who loved Cypippe. He met her at a festival of Artemis and threw before her an apple inscribed, "I swear by the temple of Artemis to marry Acontius." She read the inscription aloud. The goddess accepted her words as an oath and brought about the marriage of the lovers.

Acosta, Joaquín (hwakēn' akō'sta), 1800-1852, Colombian historian and scientist. He served under Simon Bolívar in the revolution against Spanish rule and remained active in Colombian politics, holding various political positions. His scientific knowledge was broad, and he wrote about many aspects of Colombia, constituting himself a sort of intellectual publicity agent for his country.

Acosta, José de, c 1539-1600, Spanish Jesuit missionary to Peru. He wrote a well-known history of the Spanish colonial period, *The Natural and Moral History of the Indies* (1590, tr 1604, 1880, repr 1970).

Acosta, Uriel (ōōr'yēl), or **Uriel da Costa**, c 1585-1640, Jewish rationalist, b Oporto, Portugal. His original name was Gabriel da Costa, and his family had been converted to Roman Catholicism. When he reached manhood, he was restive in the Christian faith and persuaded his family to move to Amsterdam, where all of them returned to Judaism. In a work in 1624, he expressed rationalistic doctrines, criticized rabbinical Judaism, and demanded a return to the teachings of the Sadducees. He was tried, imprisoned, and excommunicated. In 1633 he recanted, but soon he again offended and was excommunicated. After seven years, he once more recanted and was subjected to public humiliation. Rather than endure further trouble he committed suicide. He left an autobiographical sketch, *Exemplar humanae vitae* (1687, tr *Specimen of Human Life*, 1695). Karl Ferdinand Gutzkow wrote a tragedy about him, *Uriel Acosta*.

acoustics (akōō'stiks) [Gr, =the facts about hearing], the science of SOUND, including its production, propagation, and effects. Various branches of acoustics that deal with different aspects of sound and hearing include bioacoustics, physical acoustics, ULTRASONICS, and architectural acoustics. One important practical application of architectural acoustics is in the designing of auditoriums, which requires a knowledge of the characteristics and behavior of sound WAVES. The most important factors to be considered are reverberation and INTERFERENCE. Reverberation is the persistence of sound in an enclosed space caused by repeated reflections of the sound waves back and forth by the walls. Reflection of sound sometimes causes an ECHO. Some reverberation in auditoriums is desirable, especially where music is performed, to avoid deadening of the sound to a degree that is unpleasant to the human ear. Depending on the location of the listener and the frequency of the sound, varying degrees of interference between the primary sound and its reflections will be produced. In a good auditorium these variations are minimized. Reflection can be reduced by the use of sound-absorbent materials, which are usually soft and porous, such as draperies, upholstery, carpets, acoustic tile, or plaster. In a room reflection is decreased by the presence of people and open windows and doors. See John Backus, *The Acoustical Foundations of Music* (1969), R B Lindsay, *Acoustics: Historical and Philosophical Development* (1973).

acquired characteristics, modifications produced in an individual plant or animal as a result of mutilation, disease, use and disuse, or any distinctly environmental influence. Some examples are docking of tails, malformation due to disease, and muscle atrophy. Although belief in inheritability of acquired characteristics was accepted by Lamarck, it was later challenged by Darwin and Mendel. Modern geneticists have affirmed that inheritance is determined solely by the reproductive cells and is unaffected by somatic (body) cells. Belief in the inheritance of acquired characteristics is therefore rejected.

Acre (ak'rā), state (1970 pop 216,200), 58,915 sq mi (152,590 sq km), W Brazil, on the borders of Peru and Bolivia. RIO BRANCO is the capital.

Acre, Israel see AKKO

acre, measure of land area used in the ENGLISH UNITS OF MEASUREMENT. The acre was originally the area a yoke of oxen could plow in a day and therefore differed in size from one locality to another. It is now fixed as 10 square chains or 160 square rods, i.e., 4,840 sq yd, 43,560 sq ft, or 1/640 sq mi. It is equal to about 4047 of a hectare or 4,046.9 sq m.

Acrisius (akrīs'ēās) see DANAE and PERSEUS

Acrocorinth (āk'rōkōrīn'thās), acropolis, or citadel, of CORINTH, overlooking the ancient city. Some ruins of the acropolis remain. The Acrocorinthus was the site of a temple of Aphrodite. It was strongly fortified in the Middle Ages. Below gushed the

fountain of Pirene, from which, in legend, PEGASUS was drinking when captured by Bellerophon.

acromegaly (āk'rōmēg'ālē), adult endocrine disorder resulting from hypersecretion of growth hormone produced by the pituitary gland. Since the bones cannot increase in length after full growth is attained, there is a disproportionate thickening of bones, predominantly in the skull and small bones of the hands and feet. Fingers and toes become broadened and spadelike, the skull increases in size, and the cheek bones and jaws protrude. Many of the soft tissues, such as the tongue and liver, enlarge. Frequently glucose metabolism is disturbed, leading to diabetes mellitus. Acromegaly is usually caused by a tumor of the pituitary, treatment consists of irradiation or surgical removal of the tumor. Onset of the disease can also occur in children, before the epiphyses of the bones are closed. In such cases the disorder leads to GIGANTISM.

acropolis (akrōp'alis) [Gr, =high point of the city], elevated, fortified section of various ancient Greek cities. The Acropolis of Athens, a hill c 260 ft (80 m) high, with a flat oval top c 500 ft (150 m) wide and 1,150 ft (350 m) long, was walled before the 6th cent. B C by the Pelasgians. Devoted to religious rather than defensive purposes, the area was adorned during the time of Cimon and Pericles with some of the world's greatest architectural and sculptural monuments. The top was reached by a winding processional path at the west end, where the impressive Propylaea (see under PROPYLAEUM) stood. From here, the Sacred Way led past a colossal bronze statue of Athena (called Athena Promachus) and the site of the old temple of Athena to the PARTHENON. To the north was the ERECHTHEUM and to the southwest the temple of Nike Apteros (Wingless Victory). On the southern slope were the Odeum of Herodes Atticus and the theater of Dionysus. Although the Acropolis was laid waste by the Persians in 480 B C, remains of the Parthenon, Erechtheum, and Propylaea still stand. Many of its treasures are in the national museum of Greece, in Athens. See R J Hopper, *The Acropolis* (1971).

acrostic (akrō'stik), arrangement of words or lines in which a series of initial, final, or other corresponding letters, when taken together, stand in a set order to form a word, a phrase, the alphabet, or the like. A famous acrostic was made on the Greek for Jesus Christ, God's Son, Savior. *I*esous *C*hristos, *T*heou *U*lios, *S*oter (*ch* and *th* being each one letter in Greek). The initials spell *ichthys*, Greek for fish, hence the frequent use of the fish by early Christians as a symbol for Jesus. There are several alphabetic acrostics (pertaining to the Hebrew alphabet) in the Bible, e.g., in Ps 119 and LAMENTATIONS. Acrostic verses are common, and very elaborate puzzles have been devised combining several schemes.

Acrux (āk'raks) [from the Bayer designation α Crucis], brightest star in the constellation CRUX (Southern Cross), 1970 position R A 12h24.9m, Dec -62°56'. Its apparent MAGNITUDE of 0.86 makes it one of the 20 brightest stars in the sky, although its location in the far southern sky prevents it from being seen by most observers in the United States. Acrux is a visual BINARY star, with components of SPECTRAL CLASSES B1 and B3, each component itself being a spectroscopic binary. Its distance is about 400 light-years.

acrylic, man-made fiber made from a special group of vinyl compounds, primarily acrylonitrile. Acrylic fibers are thermoplastic, have low moisture regain, are low in density, and can be made into bulky fabrics. They wash and dry easily and are dimensionally stable. They are resistant to bleaches, dilute acids, and alkalies, and to weathering and microbiological attack.

acrylic plastics see POLYACRYLICS

act, in law, anything done by a person, group, or body to which legal consequences attach. The term also refers to decrees, judgments, and awards handed down by an individual in an official position or by an official body (e.g., a judge or a legislature). In this sense it is often synonymous with statute, meaning a bill that has been enacted into law by the legislature. Public acts are those that relate to the entire community, whereas private acts operate only on particular persons or private concerns.

acta (āk'ta), official texts of ancient Rome, written or carved on stone or metal. Usually acta were texts made public, although publication was sometimes restricted. Acta were first posted or carved for general reading c 131 B C. They were accounts of general interest and were later called *Acta diurna*, and they have been compared to modern newspapers. There were special acta of municipal, legal, or mili-

tary content. The *Acta senatus*, according to a Roman administrative tradition, were for many years kept secret so that the public should have no knowledge of senatorial debate. In 59 B C, Julius Caesar, as consul, ordered their publication along with the *Acta diurna*, but later the publication was censored. Acta was also the term used for the laws themselves, primarily those promulgated by the emperors.

Actaeon (āktē'an), in Greek mythology, son of Aristaeus. Because he saw Artemis bathing naked, she changed him into a stag, and his own dogs killed him.

ACTH, see ADRENOCORTICOTROPIC HORMONE

actin, one of the two major protein constituents of muscle, the other being MYOSIN. Actin occurs in two forms: G-actin (globular actin) and F-actin (fibrous actin). G-actin is a globular protein each molecule of which seems to bind one calcium ion and one ADENOSINE TRIPHOSPHATE (ATP) or adenosine diphosphate (ADP) molecule very tightly. If the ionic strength of a solution of G-actin is raised to a value comparable to that found in muscle, it polymerizes into a high molecular weight protein, F-actin, which has a double-stranded helical structure. The polymerization reaction is accompanied by the hydrolysis of each bound ATP molecule to ADP, releasing an inorganic phosphate. This hydrolysis is not necessary for polymerization, however. Actin and myosin together form the myofibril, which in the presence of ATP is the fundamental contractile unit of muscle.

acting. At its highest levels of accomplishment acting involves an almost total imaginative identification on the part of the actor with the character he is portraying. Only in this way will the full emotional weight of situations on stage be communicated to the audience. The actor must be a sharp observer of life and thoroughly trained in voice projection and enunciation and in body movement. In the ancient Greek theater, acting was stylized, indeed, the large outdoor theaters made subtlety of speech and gesture impossible. The actors, all men, wore comic and tragic masks and were costumed grotesquely, wearing padded clothes and, often, artificial phaluses. Nevertheless, there were advocates of naturalistic acting even at that time, and actors were held in high esteem. In the Roman period actors were slaves, and the level of performance was low, broad farce being the most popular dramatic form. The tragedies of Seneca were probably read in declamatory style, rather than acted on stage. During the Christian period in Rome, acting almost disappeared, the tradition being upheld by traveling mimes, jugglers, and acrobats who entertained at fairs. Nor did the rise of medieval religious drama produce an uplift in the quality of acting. An actor's every gesture and intonation was carefully designated for performance in church, and, as with the later pageants under the auspices of the trade guilds, the actors were amateurs. Modern professional acting began in the 16th cent. with the Italian COMMEDIA DELL'ARTE, whose actors improvised convincing and entertaining situations from general outlines. In England the Elizabethan stage, which featured male actors in all parts, apparently presented a good deal of bombastic acting. During the Restoration period, however, Thomas Betterton and his wife Mary were famous for their naturalness of delivery, as was Edward Kynaston. Their contemporary Charles Hart, however, was well known for his lofty, heroic acting, a style that became dominant in the first third of the 18th cent. Among its chief practitioners were Barton Booth and James Quin. In the mid-18th cent. Charles Macklin and his pupil David Garrick introduced a more naturalistic style, and similar movements took place in France and Germany. However, the old declamatory method never really died out until the early 20th cent., and such great 18th- and 19th-century actors as Lekain, Sarah Siddons, Edmund Kean, and Junius Brutus Booth would probably seem overly histrionic to modern audiences. Part of the reason for the persistence of bombastic acting was the star system that existed until high standards of ensemble playing were set by the MEININGEN PLAYERS in 1874. Important late 19th-century actors, varying considerably in the naturalism of their acting styles, were Edwin Booth, Dame Ellen Terry, Henry Irving, Eleanora Duse, and Sarah Bernhardt. Acting in the 20th cent has been greatly influenced by the theories of the Russian director Constantin STANISLAVSKY. An advocate of ensemble playing, he believed that an actor must strive for absolute psychological identification with the character he is portraying and that this identification is at least as important as mastery of voice projec-

tion or body movement. Stanislavsky's theories were popularized in the United States by the GROUP THEATRE and later by the Actors' Studio, which produced a generation of extremely naturalistic actors, notably Marlon Brando. The emergence of motion pictures and television presented unprecedented opportunities for actors, the sensitivity of camera and microphone making subtlety of voice, expression, and movement absolutely essential. In spite of changing acting styles, however, great acting remains a highly individual achievement. The effectiveness of a performance by Laurence Olivier—whether he be acting Heathcliff in the film *Wuthering Heights*, Othello in Shakespeare's tragedy, or James Tyrone in a television production of O'Neill's *Long Day's Journey into Night*—is dependent on neither the dramatic medium nor any formal theatrical training, but on the extraordinary sensitivity and talent of Olivier the actor. For further information, see DRAMA, WESTERN, ORIENTAL DRAMA, SCENE DESIGN AND STAGE LIGHTING, DIRECTING. See Toby Cole, ed., *Acting: A Handbook of the Stanislavski Method* (1955), Constantin Stanislavski, *Building a Character* (tr 1962) and *An Actor Prepares* (tr 1963), A. Hamerton, ed., *The Actor's Art* (1969), Toby Cole and H. K. Chinow, ed., *Actors on Acting* (rev ed 1970), Tyrone Guthrie, *Tyrone Guthrie on Acting* (1971), Michael Billington, *The Modern Actor* (1973).

actinide series, a series of radioactive metals in group IIIB of the PERIODIC TABLE. Members of the series are often called actinides. ACTINIUM (atomic number 89) is usually considered a member of the series. The series always includes the 14 elements with atomic numbers 90 through 103, which are (in order of increasing atomic number) THORIUM, PROACTINIUM, URANIUM, NEPTUNIUM, PLUTONIUM, AMERICIUM, CURIUM, BERKELIUM, CALIFORNIUM, EINSTEINIUM, FERMIUM, MENDELEVIUM, NOBELIUM, and LAWRENCIUM. Study of the properties of the actinides is hampered by their instability. It is known, however, that all members of the series resemble actinium in their chemical properties. The actinides are reactive and assume a number of different valences in their compounds. As the atomic number increases in this series, added electrons enter the 5f electron orbital. Elements in this series with atomic numbers greater than that of uranium (92) are called TRANSURANIUM ELEMENTS, they are not found (except in minute amounts) on earth, but have been prepared synthetically. Elements with atomic numbers greater than 103 are not members of the actinide series, element 104 is the first TRANSACTINIDE ELEMENT.

actinium (äktīn'ēəm) [Gr., = like a ray], radioactive chemical element, symbol Ac, at no 89, mass no of most stable isotope 227, m.p. about 1050°C, b.p. 3200°C ± 300°C, sp. gr. 10.07, valence +3. Actinium is a silver-white metal with a cubic crystalline structure. It is found with uranium minerals in pitchblende. The pure metal can be prepared by reducing its fluoride with lithium vapor at about 1200°C. Actinium-227, the most stable isotope, has a half-life of 21.6 years. All other isotopes of actinium have very short half-lives. Actinium is in group IIIB of the PERIODIC TABLE. Its chemical properties are similar to those of lanthanum and of members of the ACTINIDE SERIES, of which it is usually considered the first member. It reacts with water to form an insoluble hydroxide, with halides to form a trifluoride, trichloride, bromide, or iodide, with oxalic acid to form the oxalate, with oxygen or sulfur to form the sesquioxide or sesquisulfide. Actinium was first recognized in 1899 by Andre Debierne in uranium residues from pitchblende. It was later found to be identical with an element discovered in 1902 by Fritz Giesel and called by him emanium.

actinium series, natural radioactive decay series beginning with URANIUM-235 (also called actinouranium) and ending with LEAD-207. See RADIOACTIVITY.

actinolite (äktīn'älīt) see AMPHIBOLE.

actinometer (äkt'änöm'etər), instrument used to measure the heating power of radiation. Actinometers are used chiefly in meteorology to measure solar radiation as transmitted directly by the sun, scattered by the atmosphere, or reflected by the earth. A number of different designs have been developed. In one design a small bimetallic strip is heated by the radiation, and the subsequent bending is measured, from knowledge of such factors as the heat capacity of the strip, its surface area, its reflectivity, and the change in its curvature produced by a given change in temperature, the heating power of the radiation striking it can be found. In another design two bimetallic strips, one blackened and one white, are exposed to the radiation and the difference in their subsequent curvatures measured. In a third design a sheet of photographic paper is exposed to the

radiation to provide a measure of the total radiation over a period of time.

actinomycin (äkt'änöm'isən), any one of a group of ANTIBIOTICS produced by bacteria of the genus *Streptomyces*. Actinomycin was the first antibiotic reported to be able to halt cancer, however, it is not widely used to treat cancers because it is highly toxic to humans, interfering with the genetic material of cells. It is mainly used as an investigative tool in cell biology.

actinomycosis (äkt'änöm'ikō'sis), chronic suppurative fungus infection that occurs around the face and neck. The disease is characterized by the formation of abscesses, or pus-filled cavities, below the surface of the skin. These abscesses spread rapidly and form channels that discharge a yellow granular pus on the surface of the skin. In humans these granules consist of *Actinomyces israelii*, a fungus present in the normal flora of the mouth that becomes pathogenic in association with certain bacteria. Infection typically follows a tooth extraction or other trauma. The disease causes extensive tissue destruction and can prove fatal if it invades the abdomen or lungs. Treatment consists of prolonged massive therapy with penicillin. Actinomycosis also occurs in horses, cattle, and swine, it is caused by *A. bovis* and resembles human actinomycosis.

actinon (äkt'änōn') see RADON.

action, in law, see PROCEDURE.

action painting: see ABSTRACT EXPRESSIONISM.

Actium (äkt'ēəm, -shē ~), promontory, NW Acarnania, Greece, at the mouth of the Ambracian Gulf. There are vestiges of several temples and an ancient town. At Actium was fought the naval battle (31 B.C.) in which the forces of Octavian (later Augustus) under Agrippa defeated the sea and land forces of Antony and Cleopatra. The battle established Octavian as ruler of Rome. The Actian games, held at NICOPOLIS every four years, were established to commemorate the event.

activation energy, in chemistry, minimum ENERGY needed to cause a CHEMICAL REACTION. According to the KINETIC-MOLECULAR THEORY OF GASES, the atoms, ions, or molecules of a substance are constantly in motion, the HEAT energy present in a substance is embodied in this motion. A chemical reaction between two substances occurs only when an atom, ion, or molecule of one collides with an atom, ion, or molecule of the other. When the reactants collide, they may form an intermediate product whose chemical energy is higher than the combined chemical energy of the reactants. In order for this transition state in the reaction to be achieved, some energy must enter into the reaction other than the chemical energy of the reactants. This energy, supplied by the heat of the substance, is the activation energy. Once the intermediate product, or activated complex, is formed, the final products are formed from it. The path from reactants through the transition-state activated complex to the final products is known as the reaction mechanism. (Reaction mechanisms for complex reactions may involve several steps analogous to that described here.) If the chemical energy of the final products is greater than that of the reactants, some of the heat energy of the substance will be converted to chemical energy, and the reaction is called endothermic. The activation energy of an endothermic reaction is at least equal to the difference in chemical energy of the reactants and the products. If the chemical energy of the

products is less than that of the reactants, some chemical energy will be converted to heat energy in the course of the reaction, such a reaction is called exothermic. If the amount of heat energy in a system is increased, the temperature of the system increases. An exothermic reaction causes the temperature of the reaction system to rise, since the heat energy of the system is increased as the chemical energy is decreased. In general, the activation energies of exothermic reactions are lower than those of endothermic reactions. Because the heat energy of a substance is not uniformly distributed among its atoms, ions, or molecules, some may carry enough heat energy to react while others do not. If the activation energy is low, a greater proportion of the collisions between reactants will result in reactions. If the temperature of the system is increased, the average heat energy is increased, a greater proportion of collisions between reactants result in reaction, and the reaction proceeds more rapidly. A catalyst increases the reaction rate by providing a reaction mechanism with a lower activation energy, so that a greater proportion of collisions result in reaction. The activation energy and rate of a reaction are related by the equation $k = Ae^{-E_a/RT}$, where k is the rate constant, A is a temperature-independent constant (often called the frequency factor), e is the base of natural logarithms, E_a is the activation energy, R is the universal gas constant, and T is the temperature. This relationship was derived by Arrhenius in 1899. Because the relationship of reaction rate to activation energy and temperature is exponential, a small change in temperature or activation energy causes a large change in the rate of the reaction. Activation energies are usually determined experimentally by measuring the reaction rate k at different temperatures T , plotting the logarithm of k against $1/T$ on a graph, and determining the slope of the straight line that best fits the points, the activation energy is a constant multiple of the slope, with the value of the constant depending on the units of measure used.

active see VOICE.

active site: see ENZYME.

act of God, in law, an ACCIDENT caused by the operation of extraordinary natural force. The effect of ordinary natural causes (e.g., that rain will leak through a defective roof) may be foreseen and avoided by the exercise of human care, failure to take the necessary precautions constitutes NEGLIGENCE, and the party injured in the accident may be entitled to damages. An act of God, however, is so extraordinary and devoid of human agency that reasonable care would not avoid the consequences, hence, the injured party has no right to damages. Accidents caused by tornadoes, perils of the sea, extraordinary floods, and severe ice storms are usually considered acts of God, but fires are not so considered unless they are caused by lightning.

Acton, John Emerich Edward Dalberg Acton, 1st Baron, 1834-1902, English historian, b. Naples, grandson of Sir John Francis Edward Acton and of Emmerich Joseph, duc de Dalberg. He became (1859) a Liberal member of Parliament and editor of the *Rambler*, a Roman Catholic monthly. William E. Gladstone, his close friend, nominated him to the peerage (1869), and in 1892, Acton was made lord-in-waiting. Acton's genuine and ardent liberalism gave frequent offense to Roman Catholic authorities. His hatred of arbitrary power and all forms of absolutism led him to oppose the syllabus of errors issued by Pius IX and the promulgation of the dogma of papal infallibility, but, as a sincere Catholic, he accepted them after their pronouncement rather than risk excommunication. In 1895 he was appointed professor of modern history at Cambridge and in the following years planned the *Cambridge Modern History*, of which only the first volume appeared before his death. Acton never completed a book, his influence was felt through his lectures, his writings for periodicals, and his personal contacts with the leading historians of his time. Many articles, essays, and lectures were brought together after his death in *Lectures on Modern History* (1906), *History of Freedom* (1907), and *Historical Essays and Studies* (1907). Some of these were reprinted in *Essays on Freedom and Power* (1948) and *Essays on Church and State* (1952). His impressive personal library, consisting of more than 59,000 volumes, was bought by Andrew Carnegie after his death and donated to Cambridge. See his correspondence with Richard Simpson, ed. by J. L. Altholz (2 vol., 1970-73), studies by Gertrude Himmelfarb (1962) and David Mathew (1968).

Acton, Sir John Francis Edward, 1736?-1811, Neapolitan statesman of British origin, b. Besançon,

Energy profile of an exothermic reaction. Although the total energy of the products is less than that of the reactants, the activation energy must be added to weaken or break existing bonds before the reaction can take place.

France. Called upon by Queen Marie Caroline and King Ferdinand IV of Naples (later FERDINAND I of the Two Sicilies) to reform the Neapolitan army and navy in 1779, Acton also served as minister of finance and as prime minister (1785-1806 with brief interruptions). With the assistance of Emma Lady HAMILTON, the queen's confidante, he rid Naples of Spanish influence and strengthened ties with Great Britain and with Austria. He shared the political vicissitudes of the royal family, going with them into exile in 1798 after Naples had been taken by the French. After the fall of the PARTHENOPEAN REPUBLIC (1799), he played a major role in the bloody reprisals and consolidated absolutism. In 1806, the French reconquest of Naples under Napoleon I forced Acton into exile again.

Acton, town (1970 pop 14,770), Middlesex co., E Mass., NW of Boston, settled c 1680, inc 1735. Among its manufactures are electrical machinery and chemicals. Points of interest include the Isaac Davis Home, residence of the first man to die at the battle of Concord during the Revolutionary War. The Acton Minutemen's march to the battle of Concord is reenacted in the town annually.

Actors' Studio, The. see STRASBERG, LEE

Acts of the Apostles, fifth book of the New Testament, between the Gospels and the Epistles. It is the only contemporary historical account of the expansion of Christianity in its earliest period. It was written in Greek between A.D. 60 and A.D. 80 as a sequel to the Gospel of St. Luke, and Luke is its traditional author. It falls into two divisions: the first 12 chapters, on the Palestinian church from Pentecost until Herod's death, having chiefly to do with St. Peter, and the rest of the book, dealing with the missionary work of St. Paul among the Gentiles (13-21:14) and his arrest, trial, and trip as prisoner to Rome (21:15-28). St. Luke was sometimes a companion of St. Paul, and the narrative is then in the first person plural (16:10-17, 20:5-21:18, 27:1-28:16). Three critical events are noteworthy—the descent of the Holy Ghost (2), the martyrdom of St. Stephen (6, 7), and the conversion of St. Paul (9). See H. J. Cadbury, *The Book of Acts in History* (1955); Jacob Jerrell, *Luke and the People of God* (1972); C. W. Cartel and Ralph Earle, *The Acts of the Apostles* (1973).

actuary, one who calculates the probabilities involved in any contingency for which INSURANCE is desired and establishes the premium necessary to cover such contingency. Originally, in England, the term was applied to a clerk or registrar appointed either to record court acts or to manage a joint stock company. Later it came to be used exclusively for managers of insurance companies. As insurance against loss of life is the most common type of policy, actuaries are particularly concerned with studying age, health, and other variables to predict the probable longevity of a person or group. The contingencies involved in fire, accident, or group health policies are also important parts of the actuary's work. An actuary also calculates the probabilities upon which annuities are based and the amount of money, at compound interest, necessary to cover them.

Acuña, Cristobal de (krēstō'bal dā akōō'nyā), 1597-1667?, Spanish Jesuit missionary and explorer in South America, rector of the Jesuit college at Cuenca, Ecuador. In 1638 he was sent by the viceroy to accompany TEIXEIRA on his return journey down the Amazon River. Acuña's *New Discovery of the Great River of the Amazons* (1639, modern tr. in C. R. Markham's *Expedition into the Valley of the Amazons*, 1859, repr. 1964) was the earliest firsthand description of the Amazon to be printed.

Acuña, Juan de (hwan), 1658?-1734, Spanish-American administrator, viceroy of New Spain (1722-34), marques de Casa Fuerte, b. Lima, Peru. After a distinguished career in Spain he was sent to Mexico, where his creole origin and his wise government made him popular. He extinguished favoritism and corruption, extended and consolidated Spanish territorial claims, and ordered the construction of many public works. In his term the *Gaceta de Mexico*, Mexico's first newspaper, appeared.

acupuncture, technique of medical treatment, based on traditional Chinese medicine, in which a number of very fine metal needles are inserted into the skin at especially designated points. In China acupuncture has been used, along with herbal medicine, for pain relief and treatment of various ailments. It has often been combined with moxibustion, the burning of leaves of moxa, the Chinese wormwood tree. Today it is widely used in China in the treatment of hay fever, headaches, and ulcers, and some types of blindness, arthritis, diarrhea, and

hypertension. Acupuncture has also recently come into use, especially in China, as a general anesthetic during childbirth and some types of surgery. Unlike conventional anesthesia, acupuncture does not reduce blood pressure or depress breathing, in addition, the patient stays fully conscious and there is no postoperative hangover or nausea. In the practice of acupuncture, needles varying in length from 1/2 in. (1.27 cm) to several inches are inserted in appropriate points of the body, not necessarily near the affected organ. The needles are twirled and vibrated in specific ways, the depth of insertion also affects the treatment. In modern applications, a battery-powered device is often used to provide electrical stimulation through the needles. The traditional acupuncture points (there are about 800) are arranged along 14 lines, or meridians, running the length of the body from head to foot. The traditional Chinese explanation of the effectiveness of acupuncture is based on the Taoist philosophy (see TAOISM), according to which good health depends on a free circulation of T'chi, or life force energy, throughout all the organs of the body, this force is controlled by two forms of energy, yin (negative) and yang (positive). The meridians are the main channels of flow. When energy flow is impeded at any point, e.g., because of a diseased organ or stress, illness in other organs may result. Piercing the channels at the proper points is believed to correct the imbalances. Western researchers have found that the acupuncture points correspond to points on the skin having less electrical resistance than other skin areas. It has been suggested that acupuncture works by stimulating or repressing the autonomic NERVOUS SYSTEM in various ways, and there is some evidence that stimulation of the skin can affect internal organs by means of nerve reflex pathways. In the United States, use of acupuncture has been generally confined to pain relief and anesthesia. In 1974 the National Institutes of Health approved the study of acupuncture for the possible management of chronic pain caused by cancer, neuralgia, and arthritis. See Marc Duke, *Acupuncture* (1972); Felix Mann, *Acupuncture* (rev. ed. 1973).

Ada, city (1970 pop 14,859), seat of Pontotoc co., S central Okla., inc. 1904. It is a large cattle market and the center of a rich oil and ranch area. The city is also a center for horsebreeding, and fine quarter horses are raised there. East Central State College and the Sciences and Natural Resources Center of Oklahoma are there, and the Robert S. Kerr Water Research Center (a federal laboratory) is just south of the city.

Adad see HADAD

Adadah (ād'ada), town of Judah in the southernmost part of Palestine. Joshua 15:22.

Adah (ā'dā) 1 Wife of Esau. Gen. 36:2-20. 2 Wife of Lamech. Gen. 4:19-23.

Adaiab (adā'ya) 1 Josiah's mother's father. 2 Kings 22:1. 2 Gershomite. Leviticus 1 Chron. 6:41. Iddo. 1 Chron. 6:21. 3 Benjamite. 1 Chron. 8:21. Shema. 1 Chron. 8:13. 4 Priest. 1 Chron. 9:12, Neh. 11:12. 5, 6 Men who had foreign wives. Ezra 10:29, 39. 7 Father of MAASEIAH. 2. 8 Ancestor of ASIAH. 4.

Adair, John, 1757-1840, American pioneer in Kentucky, b. North Carolina. He went into the Kentucky country in 1786 and became famous as an Indian fighter and as a political leader. In the War of 1812 he was a commander of Kentucky volunteers in the battle of New Orleans. As governor of Kentucky (1820-24) he adopted a vigorous program of internal improvement to fight hard times. He was (1831-33) a member of the House of Representatives.

Adak (ā'dāk, a'dak) see ALEUTIAN ISLANDS

Adalbert, Saint (ād'əlbərt), 956-97, bishop of Prague, b. Bohemia. He was a missionary in Russia, Prussia, and Poland and was martyred in Danzig. He is patron of Bohemia and Poland. Feast April 23.

Adalbert, d. 1072, German churchman, archbishop of Hamburg-Bremen, a diocese that included Scandinavia. He was a favorite of Holy Roman Emperor Henry III, who appointed Adalbert to the archbishopric in order to break the power of the dukes of N. Europe. He was a guardian of Henry's son and successor, Henry IV, but his relentless ambition to strengthen the church and the monarchy at the expense of the nobles (chiefly by annexing their lands) defeated itself. The nobles allied themselves with the abbots, who hated him for his efforts to subordinate the abbey, and with the bishops, who feared his increasing ecclesiastical power. They accomplished his dismissal in 1066, but Henry IV recalled him in 1069. One of the ablest statesmen of his time, Adalbert, though working mainly for selfish aims,

helped consolidate the imperial authority. See Adam of Bremen, *History of the Archbishops of Hamburg-Bremen* (tr. 1959).

Adalia (ādālī'a), one of Haman's sons. Esther 9:8.

Adalia, Turkey. see ANTALYA

Adam (Heb., =man), in the Bible, the first man. For the account of his creation, of that of his wife EVE, of their life in the Garden of Eden (see EDEN, GARDEN OF), of their first disobedience, and of their expulsion, see Gen. 1:26-5:5. The opening chapters of Genesis are very interesting to believers of the three principal monotheistic religions, for conceptions derived therefrom, see SIN and GRACE, for examples of the mass of legends that Judaism and Islam have collected about the biblical account, see LILITH and PSEUDEPIGRAPHIA. To St. Paul, Adam represented the earthy side of man, as in 1 Cor. 15:20-22, 42-58. The HIGHER CRITICISM has seen in Adam's story an attempt to harmonize Hebrew cosmogonic myths. Critics of that school compare Babylonian myths of creation, which are similar to the biblical account in many features.

Adam, Adolphe Charles (adōlf' sharl' adaN'), 1803-56, French composer of the popular song *Cantique de Noël*. He composed more than 50 stage works, including comic operas such as *Le Postillon de Longjumeau* (1836) and the ballet *Giselle* (1841).

Adam, Robert (ād'am), 1728-92, and **James Adam**, 1730-94, Scottish architects, brothers. They designed important public and private buildings in England and Scotland and numerous interiors, pieces of furniture, and decorative objects. Robert possessed the great creative talents, with his brother James serving chiefly as his assistant. Robert Adam designed his buildings to achieve the most harmonious relation between the exterior, the interior, and the furniture. His light, elegant, and essentially decorative style was a free, personal reconstitution of antique motifs. He drew upon numerous sources including earlier English Palladian architecture, French and Italian Renaissance architecture, and the antique monuments themselves as he knew them through publications and personal investigation. Adam himself contributed an important study, *Ruins of the Palace of the Emperor Diocletian at Spalatro in Dalmatia* (1764). For decorative painting, Adam employed such artists as Angelica Kauffmann and Antonio Zucchi. The Adam manner gained great favor in his day, and designs in the Adam style have never ceased to appear. Especially interesting examples of Adam planning and decoration are Osterly Park, Middlesex (1761-80), Syon House, Middlesex (1762-69), and Luton Hoo, Bedfordshire (1768-75). The brothers wrote *Works in Architecture of Robert and James Adam* (3 vol., 1778-1822). Robert was architect to the king from 1762 until 1768, when he was succeeded by James. Robert Adam was buried in Westminster Abbey. See John Fleming, *Robert Adam and His Circle* (1962) and D. Stillman, *The Decorative Work of Robert Adam* (1966); Doreen Yarwood, *Robert Adam* (1970).

Adam, town on the upper Jordan. Joshua 3:16.

Adamah (ād'amā), Naphtalite city. Joshua 19:36.

Adamawa Massif (adamawā', ād'ama'wā), plateau, c. 26,000 sq. mi. (67,300 sq. km), N. central Cameroon and E. Nigeria, W. central Africa. It is sparsely populated, and grazing is the chief occupation; bauxite is mined there. The Benue River rises on the plateau.

Adam de la Halle (adaN' də la al) or **Adam le Bossu** (lə bōsu'), c. 1240-1287, French dramatist and poet-musician, a great TROUVÈRE. Many of his songs and polyphonic motets are preserved, as is the pastoral comedy with music *Le Jeu de Robin et Marion* (c. 1283). Another work, *Jeu de la feuillie* (1262), was one of the earliest forerunners of comic opera.

Adami (ād'amī) or **Adami-nekeb** (-nē'kēb), border town of Naphtali. Adami-nekeb in RSV. Two towns, Adami and Nekeb, in AV. Joshua 19:33.

Adam le Bossu see ADAM DE LA HALLE

Adams, Abigail, 1744-1818, wife of President John ADAMS and mother of President John Quincy ADAMS, b. Weymouth, Mass. She was born Abigail Smith. A lively, intelligent woman, she was the chief figure in the social life of her husband's administration and one of the most distinguished and influential of the first ladies in the history of the United States. Her detailed letters are a vivid source of social history. The correspondence with her husband was edited in a number of volumes by Charles Francis Adams, her letters, as well as John's, are included in *The Adams-Jefferson Letters*, edited by Lester J. Cappon (1959), letters to her sister, Mary Smith Cranch, are in *New Letters of Abigail Adams, 1788-1801*, edited by Stewart Mitchell (1947, repr. 1973). See biogra-

phies by J. Whitney (1947, repr. 1970) and L. E. Richards (1917, repr. 1971), novel by I. Stone, *Those Who Love* (1965). See also bibliography for ADAMS, JOHN.

Adams, Ansel, 1902–, American photographer, b. San Francisco. Adams began taking photographs in the High Sierra and Yosemite Valley, with which his name is permanently associated, becoming professional in 1930. That year he published the first of many books of his photographs, *Taos Pueblo*. With Edward Weston and others he founded the Group f/64 in reaction against the painterly aesthetic then current. He specialized in characteristic regional landscape, particularly of the Southwest, emphasizing conservation of nature. Adams wrote numerous technical manuals, including the classic *Basic Photo-Books* series, and helped to found the first photographic art department of a museum at the Museum of Modern Art, New York City. His book *Born Free and Equal* (1944) was an effort to aid Japanese-Americans incarcerated during World War II. He began the first college department of photography (California School of Fine Art, 1946). Adams won two Guggenheim grants to photograph national parks and monuments. He published the first superb portfolio reproductions of his own and others' photographs. See *aperture* monograph (1972).

Adams, Brooks, 1848–1927, American historian, b. Quincy, Mass., son of Charles Francis ADAMS (1807–86). His theory that civilization rose and fell according to the growth and decline of commerce was first developed in *The Law of Civilization and Decay* (1895). Adams applied it to his own capitalistic age, of which he was a militant critic, but failed to find the universal law that he persistently sought. His ideas greatly influenced his brother Henry ADAMS, whose essays he edited in *The Degradation of the Democratic Dogma* (1919). In *America's Economic Supremacy* (1900), Brooks said that Western Europe had already begun to decline and that Russia and the United States were the only potential great powers left. His other chief works include *The Emancipation of Massachusetts* (1887), *The New Empire* (1902), and *Theory of Social Revolutions* (1913). See biography by A. F. Berengase (1955), J. T. Adams, *The Adams Family* (1930, repr. 1957), T. P. Donovan, *Henry Adams and Brooks Adams* (1961).

Adams, Charles Francis, 1807–86, American public official, minister to Great Britain (1861–68), b. Boston, son of John Quincy ADAMS. After a boyhood spent in various European capitals, he was graduated (1825) from Harvard and studied law under Daniel Webster. He practiced in Boston, looked after his father's business affairs, and wrote articles on American history for the *North American Review*. Adams served (1840–45) in both branches of the state legislature. He founded and edited the *Boston Whig* and became a leader of the Conscience Whigs. In 1848 he was the Free-Soil party candidate for the vice presidency. He represented (1858–61) his father's old district in Congress and assumed prominence as a Republican leader. On Seward's advice, Lincoln appointed him minister to Great Britain. In the face of English sympathy for the Confederacy, he maintained the Northern cause with wisdom and a bold dignity that won British respect, particularly in the serious *Trent and Alabama* incidents. He is credited with preventing British recognition of the Confederacy, thus contributing much to the Union victory. He later represented the United States in the settlement of the ALABAMA CLAIMS. He published many political pamphlets and addresses and was an editor of the works (10 vol., 1850–56) of his grandfather, John Adams, and of his father's diary (12 vol., 1874–77). See biography by M. B. Duberman (1961), W. C. Ford, ed., *A Cycle of Adams Letters, 1861–1865* (1920), J. T. Adams, *The Adams Family* (1930).

Adams, Charles Francis, 1835–1915, American economist and historian, b. Boston, son of Charles Francis Adams (1807–86). In the Civil War he fought at Antietam and Gettysburg and was brevetted brigadier general of volunteers. Adams became a railroad expert after the war, writing *Chapters of Erie* (1871), which exposed the corrupt financing of the Erie RR, and *Railroads: Their Origin and Problems* (1878). In 1869 he became a member, and from 1872 to 1879 was chairman, of the Massachusetts Board of Railroad Commissioners, the first such board in the nation. Adams was made chairman of the government directors of the Union Pacific in 1878 and became president in 1884, but he was ousted by the forces of Jay Gould in 1890. His reform of the public schools in the home town of the Adamses, Quincy, Mass., was described in *The New Departure in the Common Schools of Quincy* (1879), and the Quincy

system was widely adopted. Adams served 24 years on the Harvard Board of Overseers and was president (1895–1915) of the Massachusetts Historical Society. He wrote *Three Episodes of Massachusetts History* (1892), *Studies: Military and Diplomatic, 1775–1865* (1911), *Trans-Atlantic Historical Solidarity* (1913), which was a collection of lectures he had given at Oxford, and biographies of his father (1900) and Richard Henry Dana (1890). See his autobiography (1916, repr. 1973), W. C. Ford, ed., *A Cycle of Adams Letters, 1861–1865* (1920), J. T. Adams, *The Adams Family* (1930).

Adams, Charles Francis, 1866–1954, U.S. Secretary of the Navy (1929–33), b. Quincy, Mass., grandson of Charles Francis Adams (1807–86). He practiced law for a brief period in Boston but for most of his life was connected with a wide variety of business enterprises in that city and elsewhere. Adams served in the cabinet of Herbert Hoover.

Adams, Franklin Pierce, pseud. F. P. A., 1881–1960, American columnist and author, b. Chicago. He began (1903) work as a columnist on the *Chicago Journal* and continued it on the *New York Evening Mail*, the *Tribune*, the *World*, the *Herald Tribune*, and the *Post*. His column, "The Conning Tower," consisted of verse and humor by F. P. A. and his contributors, who included Ring Lardner and Dorothy Parker. On Saturdays his columns were accounts of his week's activities that imitated the style of Samuel Pepys. They were republished as *The Diary of Our Own Samuel Pepys 1911–1934* (1935). Adams's other works included *So There!* (1923), *Christopher Columbus* (1931), and *Nods and Becks* (1944).

Adams, Henry, 1838–1918, American writer and historian, b. Boston, son of Charles Francis Adams (1807–86). He was secretary (1861–68) to his father, then U.S. minister to Great Britain. Upon his return to the United States, having already abandoned the law and seeing no opportunity in the traditional Adams vocation of politics, he briefly pursued journalism. He reluctantly accepted (1870) an offer to teach medieval history at Harvard, but nonetheless stayed on seven years and also edited (1870–76) the *North American Review*. In 1877 Adams moved to Washington, D.C., his home thereafter. He wrote a good biography of Albert Gallatin (1879), a less satisfactory one of John Randolph (1882), and two novels (the first anonymously and the second under a pseudonym)—*Democracy* (1880), a cutting satire on politics, and *Esther* (1884). His exhaustive study of the administrations of Jefferson and Madison, *History of the United States of America* (9 vol., 1889–91, reprinted in a number of editions), is one of the major achievements of American historical writing. Famous for its style, it is deficient, perhaps, in understanding the basic economic forces at work, but the first six chapters constitute one of the best social surveys of any period in U.S. history. Never of a sanguine temperament, Adams became even more pessimistic after the suicide (1885) of his adored wife. He abandoned American history and began a series of restless journeys, physical and mental, in an effort to achieve a basic philosophy of history. Drawing upon the physical sciences for guidance and influenced by his brother, Brooks ADAMS, he found a satisfactory unifying principle in force or energy. He selected for intensive treatment two periods: 1050–1250, presented in *Mont-Saint-Michel and Chartres* (privately printed 1904, pub. 1913), and his own era, presented in *The Education of Henry Adams* (privately printed 1906, pub. 1918). The first is a brilliant idealization of the Middle Ages, specifically of the 13th-century unity brought about by the force of the Virgin, which was dominant then. The second was classified by his publishers as an autobiography, although it was written in the third person and was unrevealing about much of his life. It is, however, a tour de force, and describes his unsuccessful efforts to achieve intellectual peace in an age when the force of the dynamo is dominant. These two books, containing some of the most beautiful English ever written, rather than his monumental *History*, won Adams his lasting place as a major American writer. *The Degradation of the Democratic Dogma* (1919), edited by Brooks Adams and prefaced with a memoir by Henry Adams, contains three brilliant essays on his philosophy of history—"The Tendency of History," "A Letter to American Teachers of History" (pub. separately in 1910), and "The Rule of Phase Applied to History." Friendships, especially those with John Hay and Clarence King, played a large part in Adams's life, and his personal letters reveal a warmer man than one might suspect. See his letters (ed. by W. C. Ford, 2 vol., 1930–38), J. T. Adams, *Henry Adams* (1933, repr. 1970), Ward Thoron, ed.,

The Letters of Mrs. Henry Adams, 1865–1883 (1936), H. D. Cater, ed., *Henry Adams and His Friends: A Collection of His Unpublished Letters* (1947), Ernest Samuels, *The Young Henry Adams* (1948), Henry Adams, *The Middle Years* (1958) and *Henry Adams: The Major Phase* (1964), T. P. Donovan, *Henry Adams and Brooks Adams* (1961).

Adams, Herbert Baxter, 1850–1901, American historian, b. Shutesbury, near Amherst, Mass. In 1876, the year he received his doctorate at Heidelberg, he became one of the original faculty of Johns Hopkins Univ. There, in 1880, he began his famous seminar in history, where a large proportion of the next generation of American historians trained. Adams founded the "Johns Hopkins Studies in Historical and Political Science," the first of such series, and brought about the organization in 1884 of the American Historical Association, of which he was secretary until 1900. He wrote *The Germanic Origin of New England Towns* (1882), *Life and Writings of Jared Sparks* (1893), and many articles and reports on the study of the social sciences that were very influential in their day. See W. S. Holt, ed., *Historical Scholarship in the United States, 1876–1901, as Revealed in the Correspondence of Herbert B. Adams* (1938).

Adams, James Truslow (trū'slō), 1878–1949, American historian, b. Brooklyn, N.Y. *The Founding of New England* (1921), which brought him the Pulitzer Prize in history for 1922, was followed by *Revolutionary New England, 1691–1776* (1923) and *New England in the Republic, 1776–1850* (1926). Among the best of his many books are *Provincial Society, 1690–1763* (Vol. III in the "History of American Life" series, 1927) and *The Epic of America* (1931), which was widely translated. *The March of Democracy* (2 vol., 1932–33) and *America's Tragedy* (1934) were also popular. *The Adams Family* (1930) and *Henry Adams* (1933) were books on the famous Massachusetts clan, to which he was not related. Adams, who spent much of his time in London as representative of his publishers, Charles Scribner's Sons, also wrote *Building the British Empire: To the End of the First Empire* (1938) and *Empire on the Seven Seas: The British Empire, 1784–1939* (1940). He was editor in chief of *Dictionary of American History* (6 vol., 1940, rev. ed. 1942), *Atlas of American History* (1943), and *Album of American History* (4 vol., 1944–48), three valuable reference works. Some of his later writings reflect his obvious distaste for the New Deal, of which he was a vigorous critic. See biography by Allan Nevins (1968).

Adams, John, 1735–1826, 2d President of the United States (1797–1801), b. Quincy (then in Braintree), Mass., grad. Harvard, 1755. A lawyer, he emerged into politics as an opponent of the Stamp Act and, after moving to Boston, was a leader in the Revolutionary group opposing the British measures that were to lead to the American Revolution. Sent (1774) to the First Continental Congress, Adams distinguished himself, and in the Second Continental Congress he was a moderate but forceful revolutionary. He proposed George Washington as commander in chief of the Continental troops to bind Virginia more tightly to the cause for independence. He favored the DECLARATION OF INDEPENDENCE, was a member of the drafting committee, and argued eloquently for it. As a diplomat seeking foreign aid for the newly established nation, he had a thorny career. Appointed (1777) to succeed Silas Deane as a commissioner to France, he accomplished little before going home (1779) to be a major figure in the Massachusetts constitutional convention. He then returned (1779) to France, where he quarreled with VERGENNES and was able to lend little assistance to Benjamin Franklin in his peace efforts. His attempts to negotiate a loan from the Netherlands were fruitless until 1782. Adams was one of the negotiators who drew up the momentous Treaty of Paris (1783, see PARIS, TREATY OF) to end the American Revolution. After this service he obtained another Dutch loan and then was envoy (1785–88) to Great Britain, where he met with British coldness and unwillingness to discuss the problems growing out of the treaty. He asked for his own recall and ended a significant but generally discouraging diplomatic career. In the United States once more, he was chosen Vice President and served throughout George Washington's administration (1789–97). Although he inclined to conservative policies, he acted somewhat as a balance wheel in the partisan contest between Alexander HAMILTON and Thomas JEFFERSON. In the 1796 election Adams was chosen to succeed Washington as President despite the surreptitious opposition of Hamilton. The Adams administration

was one of crisis and conflict, in which the President showed an honest and stubborn integrity, and though allied with Hamilton and the conservative property-respecting Federalists, he was not dominated by them in their struggle against the vigorously rising, more broadly democratic forces led by Jefferson. Though the Federalists were pro-British and strongly opposed to post-Revolutionary France, Adams by conciliation prevented the near war of 1798 (see XYZ AFFAIR) from developing into a real war between France and the United States. Nor did the President wholeheartedly endorse the ALIEN AND SEDITION ACTS (1798), aimed at the Anti-Federalists. He was, however, detested by his Jeffersonian enemies, and in the election of 1800 he and Hamilton were both submerged in the tide of Jeffersonian democracy. After 1801, Adams lived in retirement at Quincy, issuing sober and highly respected political statements and writing and receiving many letters, notably those to and from Jefferson. Their famous correspondence was edited by Lester J. Cappon in *The Adams-Jefferson Letters* (1959). By remarkable coincidence he and Jefferson died on the same day, Independence Day, July 4, 1826. John Adams and his wife, Abigail ADAMS, founded one of the most distinguished families of the United States; their son, John Quincy ADAMS, was also President. A definitive edition of the voluminous writings of the Adams family was begun with four volumes (1961) containing the diary and autobiography of John Adams. Until completion of the definitive edition, see *Adams's Works* (10 vol., ed. by J. Q. Adams and C. F. Adams, 1850-56, repr. 1969, Vol. 1 is a biography by C. F. Adams), *The Selected Writings of John Adams and John Quincy Adams* (ed. by Adrienne Koch and William Peden, 1946). See also James Truslow Adams, *The Adams Family* (1930), Zoltan Haraszti, *John Adams and the Prophets of Progress* (1952), Manning J. Dauer, *The Adams Federalists* (1953, repr. 1968), Stephen G. Kurtz, *The Presidency of John Adams* (1957, repr. 1961), John R. Howe, Jr., *The Changing Political Thought of John Adams* (1966), biographies by John T. Morse (1884, repr. 1970), Gilbert Chinard (1933, repr. 1964), Page Smith (1962), and J. B. Peabody, ed. (1973).

Adams, John Couch, 1819-92, English astronomer, grad. St. John's College, Cambridge, 1843. By mathematical calculation based on irregularities in the motion of Uranus, he predicted the position of the then unknown planet Neptune. Because of delay in England in making a telescopic search for the planet, the credit for the discovery went to a Frenchman, Leverrier. In 1858, Adams became professor of mathematics at St. Andrews Univ., but he soon returned to Cambridge, to occupy the Lowndean chair of astronomy and geometry until his death. From 1861 he was also director of the university observatory, preferring this post to that of astronomer royal, which was offered to him in 1881. He made valuable studies of the moon's motions, of the Leonids in the great meteor shower of 1866, and of terrestrial magnetism. His collected papers, edited by his brother, were published (1896-1900) at Cambridge.

Adams, John Quincy, 1767-1848, 6th President of the United States (1825-29), b. Quincy (then in Braintree), Mass., son of John and Abigail Adams and father of Charles Francis Adams (1807-86). He accompanied his father on missions to Europe and gained broad knowledge from study and travel—he even accompanied (1781-83) Francis Dana to Russia—before returning home to graduate (1787) from Harvard and to study law. Washington appointed (1794) him minister to the Netherlands, and in his father's administration he was minister to Prussia (1797-1801). In 1803 he became a U.S. Senator as a Federalist, but his independence of mind led him to approve Jeffersonian policies in the Louisiana Purchase and in the Embargo Act of 1807; the Federalists were outraged, and he resigned (1808). Sent as minister to Russia in 1809, he was well received at court, but the wars of Napoleon eclipsed Russian-American relations. He then helped to draw up the Treaty of Ghent (1814), and his diplomatic training was completed as minister to Great Britain. As Secretary of State (1817-25) under President James Monroe, Adams gained an enduring fame. His best-known achievement was the MONROE DOCTRINE (1823). In 1824, Adams was a candidate for the U.S. presidency. Neither he, Andrew Jackson, nor Henry Clay received an electoral majority, and the election was decided in the House of Representatives. There Clay supported Adams and made him President. Adams then appointed Clay Secretary of State, but the Jacksonians' cry that the appointment fulfilled a cor-

rupt bargain was unfounded in fact. With little popular support and without a party, Adams had an unhappy, ineffective administration, despite his attempts to institute a broad program of internal improvements. After Jackson won the 1828 election, Adams retired to Quincy but returned to win new renown as U.S. Representative (1831-48); he was eloquent in attacking the gag rules and all measures that would extend slavery. His coldness and rather gloomy introspection still kept him from general popularity, but he was respected for his high-mindedness and his great knowledge. His interest in science led him to promote the Smithsonian Institution. His diary (selections ed. by C. F. Adams, 12 vol., 1874-77, repr. 1970, abridged by Allan Nevins, 1928 and 1951) is a valuable document. Most of his writings were edited by W. C. Ford (7 vol., 1913-17), and some appear in *The Selected Writings of John and John Quincy Adams* (ed. by Adrienne Koch and William Peden, 1946). See the definitive biography by Samuel Flagg Bemis (2 vol., 1949 and 1956), other biographies by John T. Morse (1883, repr. 1972) and Bennett Champ Clark (1932), James Truslow Adams, *The Adams Family* (1930).

Adams, Maude, 1872-1953, American actress, b. Salt Lake City, Utah. Her father's name was Kiskadden, but she used her mother's maiden name. She began acting at an early age and became leading lady to John Drew under the management of the Frohmans, an assignment that lasted for five years. In 1897 she had her first starring role in Barrie's *Little Minister*. Other Barrie plays she starred in include *Quality Street* (1901), *Peter Pan* (1905), the play for which she was most loved, and *What Every Woman Knows* (1908). In her retirement after 1918, Adams made valuable contributions to the development of stage lighting; in 1937 she became professor of drama at Stephens College. See biography by Phyllis Robbins (1956).

Adams, Robert McCormick, Jr., 1926-, American anthropologist, b. Chicago, Ill., grad. Univ. of Chicago (Ph.B., 1947, M.A., 1952, Ph.D., 1956). He joined the faculty of the Univ. of Chicago in 1955, and in 1962 he became director of the Oriental Institute there, a post he held until 1968. In 1970 he became dean of social sciences. He has done intensive, regionally oriented studies of long-term patterns of settlement and land-use in the Middle East and comparisons of the early growth of civilization in the Middle East and the New World. Among his writings are *Land Behind Baghdad* (1965), *The Evolution of Urban Society* (1966), and *The Uruk Countryside* (1972, with H. J. Nissen).

Adams, Samuel, 1722-1803, political leader in the American Revolution, signer of the Declaration of Independence, b. Boston, Mass., second cousin of John Adams. An unsuccessful businessman, he became interested in politics and was a member (1765-74) and clerk (1766-74) of the lower house of the Massachusetts legislature. As colonial resistance to British laws stiffened, Adams spoke for the discontented and replaced James Otis as leader of the extremists. He drafted a protest against the Stamp Act in 1765 and was one of the organizers of the non-importation agreement (1767) against Great Britain to force repeal of the TOWNSHEND ACTS, and drew up the Circular Letter to the other colonies, denouncing the acts as taxation without representation. More important, he used his able pen in colonial newspapers and pamphlets to stir up sentiment against the British. His polemics helped to bring about the BOSTON MASSACRE. With the help of such men as John Hancock he organized the revolutionary Sons of Liberty and helped to foment revolt through the Committees of Correspondence. He was the moving spirit in the BOSTON TEA PARTY. Gen. Thomas Gage issued (1775) a warrant for the arrest of Adams and Hancock, but they escaped punishment and continued to stir up lethargic patriots. Samuel Adams was a member (1774-81) of the Continental Congress, but after independence was declared his influence declined, the "radical" was replaced by more conservative leaders, who tended to look upon Adams as an irresponsible agitator. He later (1794-97) served as governor of Massachusetts. See writings ed. by H. A. Cushing (4 vol., 1904-8, repr. 1968), biographies by J. C. Miller (1936, repr. 1960), S. Beach (1965), W. V. Wells (2d ed. 1969), and N. B. Gerson (1973).

Adams, Samuel Hopkins, 1871-1958, American author, b. Dunkirk, N.Y., grad. Hamilton College, 1891. He was a reporter for the *New York Sun* (1891-1900) and then joined *McClure's Magazine*, where he gained a reputation as a muckraker for his articles on the conditions of public health in the United

States. Adams also wrote a series of articles for *Collier's Weekly*, in which he exposed patent medicines; these pieces were credited with influencing the passage of the first Pure Food and Drugs Act. Adams was a prolific writer, producing both fiction and nonfiction. His best-known novel, *Revelry* (1926), based on the scandals of the Harding administration, was later followed by *Incredible Era* (1939), a biography of Harding and his times. Among his other works are *The Great American Fraud* (1906), *The Harvey Girls* (1942), *Grandfather Stones* (1955), and *Tenderloin* (1959).

Adams, William (Will Adams), 1564?-1620, first Englishman to visit Japan. As pilot of a Dutch ship, he reached there in 1600. He soon became a favorite of the ruler IYASU, advising him on navigation, trade, and Western affairs. Many of the longer voyages that the Japanese made were in vessels constructed under his direction. Adams attempted to foster trade relations with England, and he himself made trading trips to the Ryukyu Islands, Siam, and Cochinchina. He married a Japanese woman, acquired a Japanese name (Anjin Sama, or Mr. Pilot), and was given an estate at Yokosuka. He remained in Japan until his death. See his letters (ed. by Thomas Randall, 1850) and his logbook (ed. by C. J. Purnell, 1916), R. Cocks, *Diary* (1964) and H. H. Gowen, *Five Foreigners in Japan* (1936, repr. 1967).

Adams, town (1970 pop. 11,772), Berkshire co., NW Mass., in the Berkshires, on the Hoosic River, inc. 1778. Its manufactures include lime products and decorative textiles (made there since 1862). The region attracts summer and winter vacationers. A Society of Friends meeting house (built 1782) is the site of annual Quaker meetings. Susan B. Anthony was born in Adams.

Adam's apple. see LARYNX

Adam's Bridge or Rama's Bridge, chain of shoals, c. 18 mi (30 km) long, in the Palk Strait between India and Sri Lanka (Ceylon). At high tide it is covered by c. 4 ft (1.2 m) of water. A train-ferry links Dhannushkodi, India, with Mannar, Sri Lanka. According to Hindu legend, the bridge was built to transport Rama, hero of the *Ramayana*, to the island to rescue his wife from the demon king Ravanna.

Adams National Historic Site. see NATIONAL PARKS AND MONUMENTS (table)

Adam's-needle. see YUCCA

Adamson, Robert see HILL, DAVID OCTAVIUS

Adam's Peak, Sinhalese *Sri Padastanaya* and *Samanaliya*, mountain, 7,360 ft (2,243 m) high, S central Sri Lanka (Ceylon). It is a sacred mountain, famous as a goal of pilgrimage for Buddhists, Hindus, and Muslims. On its summit is a large flat rock that bears the impression of a gigantic (c. 10 sq ft/93 sq m) human foot. This stone footprint is regarded as Buddha's by Buddhists, Siva's by Hindus, and Adam's by Muslims, who believe this to be the site of Adam's fall from Paradise.

Adana (a'dana), city (1970 pop. 351,655), capital of Adana prov., S Turkey, on the Seyhan River. The fourth largest city in Turkey, it is the commercial center of a farm region where cotton, grains, and fruits are grown. Manufactures include processed food, cotton textiles, cement, and soap. The city is a road and rail center. An ancient city probably founded by the Hittites, Adana was colonized (668 B.C.) by the Romans. It prospered under the Romans and then declined. The city was revived (A.D. c. 782) by Harun ar-Rashid. In the 16th cent. the city passed to the Ottoman Turks. Nearby is Karatepe, a Hittite archaeological site.

Adana, Plain of (a'dana'), fertile region along the Mediterranean coast, S central Turkey. It has a subtropical climate and receives rainfall mainly during the autumn and winter months. The plain, traversed and irrigated by the Seyhan River, is a major agricultural region, producing a large variety of crops including most of the cotton grown in Turkey. The city of Adana is the commercial and marketing center of the region.

Adapazarı (ada'pazar'a), city (1970 pop. 101,590), capital of Adapazarı prov., NW Turkey, on the Sakarya River. It is the trade center for a rich agricultural region where tobacco, sugar beets, and grains are produced. The city's manufactures include refined sugar, farm machinery, textiles, and cement.

adaptation, in biology, the adjustment of living matter to environmental conditions and to other living things. This ability is a fundamental property of protoplasm and constitutes a basic difference between living and nonliving matter. Most living things require free oxygen from the air or from water, but yeasts, many bacteria, and some other simple forms

obtain the oxygen required for oxidation from molecules of substances that contain the element. Various animals and plants are adapted for securing their food and for surviving the extremes of temperature and of water supply in desert, tropical, and polar regions. For most organisms the optimum temperature is between about 20°C (68°F) and 40°C (104°F). Some algae and protozoa live in hot springs, and some bacteria can survive freezing. The cactus can survive heat and drought. Certain fish and other aquatic animals live in deep water and are so specialized to withstand the great pressure that they burst if lifted to sea level. Animals show anatomical adaptations—e.g., the body of the fish is suited to life in the water, the body of the bird is adapted for flight, the land mammals show wide variation in the structure of limbs and body that enables some to run swiftly, some to climb, some to swing from tree to tree, some to glide through the air, and others to jump. The whale, an aquatic mammal, can adjust to great pressure changes at different levels in the water. The beaks of birds vary in shape and size according to the kinds of food they feed on—e.g., on seeds, on insects, on aquatic animals, and on small mammals. The feet and legs of birds also show modifications that fit them for perching, for wading, and for paddling through the water. Adaptive coloration is observed in many animals (see PROTECTIVE COLORATION). Among communal insects, such as ants and honeybees, the individuals are highly adapted to perform their functions in the community. It is believed by many scientists that life originated in the sea and that through gradual evolutionary changes some forms became adapted to life on land. Variations may arise as a result of MUTATION or of recombinations of the genes in the germ cells. Such variations are inherited (see GENETICS). Those that aid the organism to meet the conditions of a changing environment or help it in its competition with other living things enable it to survive and reproduce, the changes thus being passed on from one generation to another and in this way perhaps producing a new species. See ECOLOGY, EVOLUTION, SELECTION.

adaptive radiation, in biology, the evolution of an ancestral species, which was adapted to a particular way of life, into many diverse species, each adapted to a different habitat. Adaptive radiation has occurred in the evolution of many groups of orga-

nisms, and is clearly illustrated by Darwin's finches, 14 species of small land birds of the Galapagos Islands. All the birds on the islands are derived from a single species of ground-dwelling, seed-eating finch that probably emigrated from the South American mainland. Because the environmental niches, or habitats, were unoccupied on the isolated islands, the ancestral stock was able to differentiate into diverse species. Of the 14 species living on the islands, 3 species are ground-dwelling seedeaters, 3 live on cactus plants and are seedeaters, 1 is a tree-dwelling seedeater, and 7 are tree-dwelling insecteaters. See also COMPETITION.

Adar (ā'dar), in the Bible. See HAZAR-ADDAR.

Adasa (ād'āsā), town, near Beth-horon, place of encampment of Judas Maccabaeus. 1 Mac 7:40.

Adbeel (ād'bēēl), son of Ishmael. Gen 25:13, 1 Chron 1:29.

Adda (ād'da), river, 194 mi (312 km) long, rising in the Rhaetian Alps, N Italy, and flowing SW through Lake Como, then S into the Po River near Cremona. Its upper course furnishes much electric power, the lower river irrigates the Lombard plain. Many battles have been fought along its course, notably the Battle of Lodi (1796).

Addams, Charles Samuel, 1912–, American cartoonist, b. Westfield, N.J. Since 1935, Addams's work has appeared in the *New Yorker* magazine. His cartoons are famed for their wit, fantasy, and sense of the macabre. Members of a ghoulish family are his chief subject matter. His cartoons are collected in *Drawn and Quartered* (1942), *Addams and Evil* (1947), *Monster Rally* (1950), *Home Bodies* (1954), *Black Maria* (1960), *Charles Addams' Mother Goose* (1967), and *My Crowd* (1970).

Addams, Jane, 1860–1935, American social worker, b. Cedarville, Ill., grad. Rockford College, 1881. In 1889, with Ellen Gates Starr, she founded Hull House in Chicago, one of the first social settlements in the United States (see SETTLEMENT HOUSE). Based on the university settlements begun in England by Samuel Barnett, Hull House served as a community center for the neighborhood poor and later as a center for social reform activities. It was important in Chicago civic affairs and had an influence on the settlement movement throughout the country. An active reformer throughout her career, Jane Addams was a leader in the woman suffrage and pacifist move-

ments. She was the recipient (jointly with Nicholas Murray Butler) of the 1931 Nobel Peace Prize. Her books on social questions include *The Spirit of Youth and the City Streets* (1909), *A New Conscience and an Ancient Evil* (1912), and *Peace and Bread in Time of War* (1922). See her autobiographical *Twenty Years at Hull-House* (1910) and *The Second Twenty Years at Hull-House* (1930), biographies by her nephew, J. W. Linn (1935), and A. F. Davis (1973), study by Daniel Levine (1971).

Addan (ād'an), unidentified Palestinian town. Ezra 2:59. Addon Neh 7:61.

Addar: see ARD.

addax (ād'āks), large, desert-dwelling ANTELOPE. It is a single species, *Addax nasomaculatus*. The addax is yellowish-white in color, has a brown mane and throat fringe, and may stand as high as 42 in. (106 cm) at the shoulder. Both sexes bear long, spiraling horns reaching up to 43 in. (109 cm) in length. The addax is native to N African deserts, its short, thick legs and broad hooves are adapted to traveling on sand. It is able to survive only on the water obtained from dew or from forage and can scent grasses newly sprouted by recent rain. Addax are typically found in pairs or in small herds. They have been extensively hunted, and, with much of their habitat destroyed, the species is now much reduced in numbers. Addax are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

adder: see VIPER.

adder's-tongue, name for several plants, among them DOGTOOTH VIOLET and a primitive fern genus (*Ophioglossum*). Adder's-tongues are classified in the divisions MAGNOLIOPHYTA and PTERIDOPHYTA, respectively.

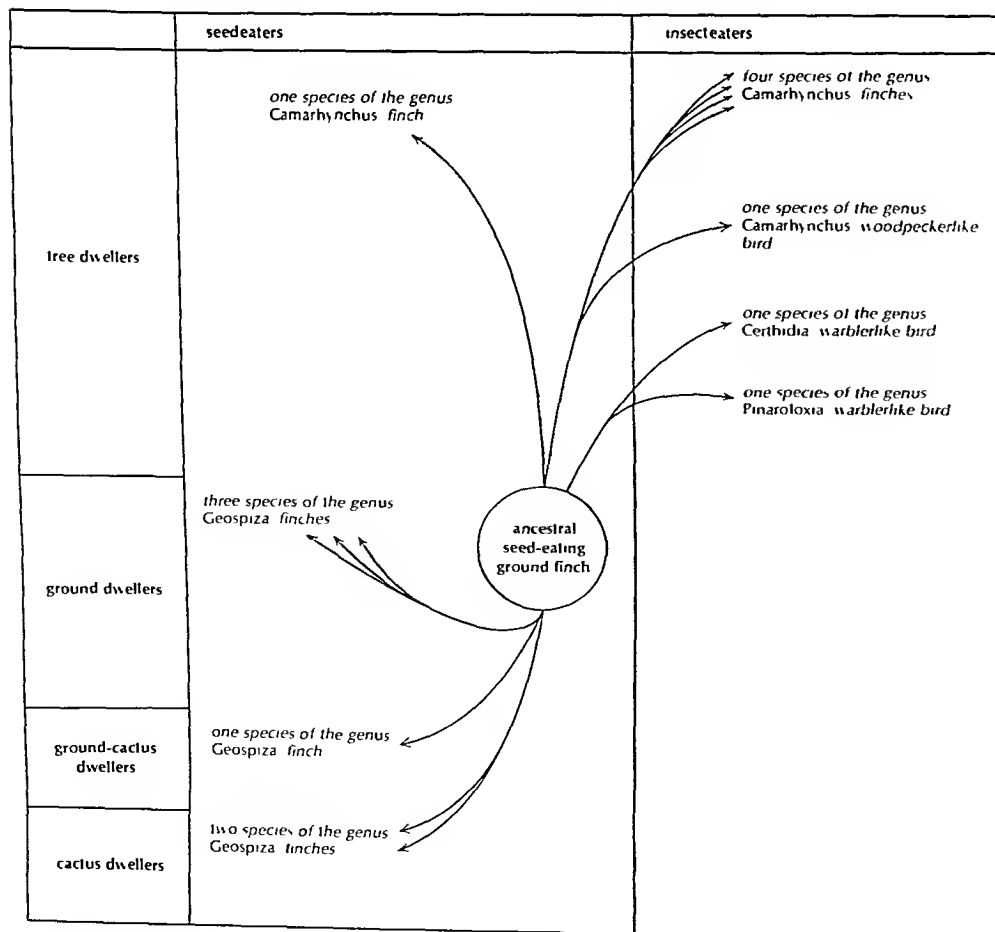

Addi (ād'i), name in Luke's genealogy. Luke 3:28.

adding machine: see CALCULATING MACHINE.

Addington, Henry: see SIDMOUTH, HENRY ADDINGTON VISCOUNT.

Addis Ababa (ād'is āb'ābə) [Amharic, = new flower], city (1971 est. pop. 795,000), capital of Ethiopia. It is situated at c. 8,000 ft (2,440 m) on a well-watered plateau surrounded by hills and mountains. Addis Ababa is Ethiopia's largest city and its administrative and communications center. It is the main trade center for coffee, the country's chief export, and for tobacco, grains, and hides. The major industries produce food, beverages, processed tobacco, textiles, and shoes. Addis Ababa has a large tourist industry. It is the hub of a highway network and a terminus of a railroad that runs to DJIBOUTI, French Territory of the Afars and the Issas. An international airport is near Addis Ababa. In 1886 the city, then known as Finfinnie, was chosen by MENELIK II as the capital of his kingdom of Shoa and was renamed Addis Ababa. In 1889 it was made the capital of Ethiopia. There, in 1896, Italy recognized Ethiopian independence. However, in 1936 (during the Italo-Ethiopian War), Italy captured Addis Ababa and made it the capital of ITALIAN EAST AFRICA. The city was recaptured by the Allies in 1941 and returned to Ethiopian rule. Major growth began after 1945; today the city has many modern buildings. The ORGANIZATION OF AFRICAN UNITY (OAU) and the UN Economic Commission on Africa are headquartered in Addis Ababa, which also hosts numerous international conferences; in 1972 the UN Security Council met in the city. Haile Selassie I Univ., whose Institute of Ethiopian Studies runs an ethnological and traditional arts museum, and Haile Selassie I National Theatre are in Addis Ababa. The OAU center, the imperial palace, the parliament building, and the Coptic and Roman Catholic cathedrals are notable buildings.

Addison, Joseph, 1672–1719, English essayist, poet, and statesman. He was educated at Charterhouse, where he was a classmate of Richard Steele, and at Oxford, where he became a distinguished classical scholar. His travels on the Continent from 1699 to 1703 were recorded in *Remarks on Italy* (1705). Addison first achieved prominence with *The Campaign* (1704), an epic celebrating the victory of Marlborough at Blenheim. The poem was commissioned by Lord Halifax, and its great success resulted in Addison's appointment in 1705 as undersecretary of state and in 1709 as secretary to the lord lieutenant of Ireland. He also held a seat in Parliament from 1708 until his death. Addison's most enduring fame was achieved as an essayist. In 1710 he began his contributions to the *Tatler*, which Richard STEELE had founded in 1709. He continued to write for successive publications, including the *SPECTATOR* (1711–12), the *Guardian* (1713), and the new *Spectator* (1714). His contributions to these periodicals raised the

Adaptive radiation in Darwin's finches

English essay to a degree of technical perfection never before achieved and perhaps never since surpassed. In a prose style marked by simplicity, order, and precision, he sought to engage men's thoughts toward reason, moderation, and a harmonious life. His works also include an opera libretto, *Rosamund* (1707), a prose comedy, *The Drummer* (1716), and a neoclassical tragedy, *Cato* (1713), which had an immense success in its own time, but has since been regarded as artificial and sententious. In his last years Addison received his greatest prominence. In 1717 he was made secretary of state, an office he resigned the following year. But the period (1714-19) was also marked by failing health, a supposedly unhappy marriage, and the severing of his relations with his good friend Richard Steele. See biography by P. H. O. Smithers (1954, repr 1968).

Addison, Thomas, 1793-1860, English physician, b. near Newcastle, grad Univ of Edinburgh (M.D., 1815). In 1837 he became a physician at Guy's Hospital, London, where he conducted important research on pneumonia, tuberculosis, and other diseases. He was the first to recognize (1855) the disease of the adrenal glands that later became known as Addison's disease, and he is equally famous for his description of pernicious anemia.

Addison, village (1970 pop. 24,482), Du Page co., NE Ill., inc. 1884. It has some light manufacturing.

Addison's disease [for Thomas Addison], progressive disease brought about by atrophy of the outer layer, or cortex, of the ADRENAL GLAND, it is also called chronic adrenocortical insufficiency. The deterioration of this tissue causes a decrease in the secretion of steroid hormones, many of which are necessary for the maintenance of life. In many cases of Addison's disease the cause of the wasting process is not known, in others the predominant cause is tuberculous destruction, the formation and infiltration of tumors, inflammatory disease, or surgery. Symptoms are increasing weakness, abnormal pigmentation of the skin and mucous membranes, weight loss, low blood pressure, dehydration, and gastrointestinal upsets. Once considered inevitably fatal, Addison's disease can now be treated with injections of adrenocortical hormones that enable its victims to lead a nearly normal life.

addition, fundamental operation of arithmetic. Given two collections, or SETS, of objects having no common members (disjoint sets), the operation of combining all members of both sets into another set is called addition, in terms of set theory, addition is the union of two disjoint sets. The sets combined under addition are known as the addends and the resulting set is called their sum. A name in the form of a cardinal NUMBER is associated with each set, e.g., the number 3 is used to indicate the set $\{x_1, x_2, x_3\}$, the number 4 is used for the set $\{y_1, y_2, y_3, y_4\}$, and the number 7 is used for the set $\{x_1, x_2, x_3, y_1, y_2, y_3, y_4\}$. In arithmetic addition follows the ASSOCIATIVE LAW, the COMMUTATIVE LAW, and, in combination with multiplication, the DISTRIBUTIVE LAW. Addition is also defined for other types of mathematical objects, for example, VECTORS and TENSORS. See also SUBTRACTION.

addition polymers: see POLYMER

Ad Diwanīyah (ad dēwan'ēya), city (1965 pop. 60,553), S central Iraq, on a branch of the Euphrates River. It is a market place for dates and grains.

Addon, variant of ADDAN

addra (ād'ra) see GAZELLE

Ade, George, 1866-1944, American humorist and dramatist, b. Kentland, Ind., grad Purdue Univ., 1887. His newspaper sketches and books attracted attention for their racy and slangy idiom and for the humor and shrewdness with which they delineated people of the Midwestern scene. He is best known for *Fables in Slang* (1899), other volumes include *People You Knew* (1903) and *Hand-made Fables* (1920). Ade also wrote several musical comedies and farcical plays, among them *The County Chairman* (1903) and *The College Widow* (1904). See *The America of George Ade* (selected writings ed. by Jean Shepherd, 1961), *Letters of George Ade* (ed. by Terence Tobin, 1973), study by Lee Coyle (1964).

Adelaide (ād'alād) or **Adelheid** (a'dēlhīt), c. 931-999, empress consort of Holy Roman Emperor Otto I, daughter of King Rudolf II of Arles. After the death (950) of her first husband, King Lothair of Italy, she was about to be forced into a marriage with the son of BERENGAR II, Lothair's successor. She appealed to OTTO I, who rescued and married her in 951. She was sole regent for her grandson, OTTO III, from 991 to 994. She was a great benefactor of religious houses.

Adelaide, city (1971 urban agglomeration pop. 809,466), capital and chief port of South Australia, S

Australia, at the mouth of the Torrens River on Gulf St. Vincent. It has automotive, textile, and other industries. Grains, wool, dairy products, and fruit are exported. Named for the consort of William IV, it was founded in 1836 and is the oldest city in the state. The Univ. of Adelaide (1874), a natural history museum (1895), and Anglican and Roman Catholic cathedrals are in the city. The Adelaide Festival of the Arts has been held biennially since 1960.

Adelard of Bath (ād'əlard'), fl. 12th cent., English scholastic philosopher, celebrated for his study of Arabic learning. He translated Euclid from Arabic into Latin. His major works were *Perdifficiles quaestiones naturales*, which embodied his scientific studies, and *De eodem et diverso*, his principal philosophical work, which attempts a solution to the problems of NOMINALISM and REALISM.

Adelheid: see ADELAIDE, empress

Adelie Coast (ā'dalē, adālē'), region, E ANTARCTICA, between George V Coast and Wilkes Land. It was discovered by Dumont d'Urville, a French explorer who landed in 1840 to collect rock samples, it was explored by an Australian geologist, Douglas Mawson, from 1911 to 1914. The French claim the area, which they call Terre Adelie, this was the first polar claim made without benefit of administration or occupation. The claim, however, was supported in 1950 when France established meteorological stations there.

Adelphi University, at Garden City, N.Y., coeducational, chartered 1896 as Adelphi College. Originally in Brooklyn, the school moved to its present location in 1929 and in 1963 achieved university status.

Ademar or Adhémar (both ād'əmar), d. 1098, French prelate, bishop of Le Puy. At the Council of Clermont (1095), he energetically promoted the First Crusade (see CRUSADES) and was designated as papal legate on that expedition. He distinguished himself in the sieges of Nicaea and Antioch and carried the Holy Lance (with which Christ's side had been pierced by a Roman soldier) after its discovery, although he at first doubted its authenticity. He died at Antioch.

Aden, city (1970 est. pop. 250,000), SW Southern Yemen, on the Gulf of Aden near the southern entrance to the Red Sea. It is the capital and chief port of Southern Yemen. Aden consists of two peninsulas, Aden and Little Aden, and an intervening stretch of the mainland. Each peninsula has a high volcanic headland (Aden rises to 1,742 ft/531 m, and Little Aden to 1,147 ft/350 m), which is linked to the mainland by a flat, sandy isthmus. The bay between the peninsulas is an excellent harbor. Aden peninsula contains most of the city's population and is divided into a number of districts that were once towns. Wells near Sheikh Othman, on the mainland, supply the city with water. Little Aden peninsula has the city's main industrial district and is the site of a large oil refinery, the manufacture of soap, cigarettes, and salt is also important there. Aden, a free port since 1850, has been the chief entrepôt and trading center of S Arabia since ancient times. It enjoyed commercial importance until the discovery (late 15th cent.) of an all-water route around Africa to India. With the opening of the Suez Canal (1869), Aden regained its importance and again became a major trading center and also an important refueling stop, the harbor was deepened to accommodate the largest vessels able to use the canal. Aden's economy, which heavily depends on canal traffic, suffered from the closing of the canal during and after the 1956 and 1967 Arab-Israeli wars. Aden's strategic location and its importance as a commercial center long made it a coveted conquest. Muslim Arabs held the region from the 7th to the 16th cent. The Portuguese failed in an attempt to capture it in 1513, but it fell in 1538 to the Ottoman Turks. At the end of the 18th cent., Aden's importance as a strategic post grew as a result of British policy to contain French expansion in the region. After the British capture of Aden in 1839, its administrative attachment to India, and the construction of the Suez Canal, Britain purchased areas on the mainland from local rulers and entered into protectionist agreements with them. The Perim, Kamaran, and Kuria Muria islands had been made part of Aden in the 1850s. Aden was formally made into a crown colony in 1935, and the surrounding region (now Southern Yemen) became known as the Aden Protectorate in 1937. Aden was granted a legislative council in 1944 and later received other rights of self-government. In 1963, Aden was joined to the Federation of the Emirates of the South, which then became the Federation of South Arabia (see SOUTH ARABIA, FEDERATION OF). The British-sponsored federation was opposed by nationalists in Aden who feared

domination by the tribal states. They emerged as two rival groups, the National Liberation Front (NLF) and the Front for the Liberation of Occupied Southern Yemen (FLOSY), and they conducted terrorist activities against the British and the federation administration. The NLF, which emerged as the dominant group, forced the collapse of the federal government. With the establishment (1967) of the independent country of Southern Yemen, Aden became the capital along with Madinat ash Shab. In 1970, Aden became the country's sole capital. See Gillian King, *Imperial Outpost, Aden* (1964), Julian Paget, *Last Post, Aden, 1964-67* (1969).

Aden, Gulf of (ā'dən, ā'-), western arm of the Arabian Sea, 550 mi (885 km) long, lying between Southern Yemen and the Somali Republic, connected with the Red Sea by the Bab el Mandeb. The gulf is on the great Mediterranean Sea-Indian Ocean trade route, the importance of which declined following the closing of the Suez Canal in 1967 and the construction of supertankers too large for the canal. After the 16th cent. Portugal, Turkey, and Great Britain were the chief contenders for control of the gulf, but by the 19th cent. Britain dominated the area. In the late 1960s, British military withdrawal E of Suez led to an increased Soviet naval presence in the gulf area.

Adenauer, Konrad (kón'rat ā'dənou'ər), 1876-1967, West German chancellor. A lawyer and a member of the Catholic Center party, he was lord mayor of Cologne and a member of the provincial diet of Rhine prov. from 1917 until 1933, when he was dismissed by the National Socialist (Nazi) regime. He was twice imprisoned (1933, 1944) by the Nazis. Co-founder of the Christian Democratic Union (1945) and its president from 1946 to 1966, he was elected chancellor of the German Federal Republic (West Germany) in 1949 and was reelected in 1953, 1957, and 1961. He also served (1951-55) as his own foreign minister, negotiating the West German peace treaty (1952) with the Western Allies and obtaining recognition of West Germany's full sovereignty through the Paris Pacts and through an agreement with the USSR in 1955. Adenauer's strong will and political wisdom helped to give *Der Alte* [the old man], as he was known, great authority in West German public life. The political architect of the astounding West German recovery, he saw the solution of German problems in terms of European integration, and he helped secure West Germany's membership in the various organizations of the EUROPEAN COMMUNITY. In 1961 his party lost its absolute majority in the Bundestag, and he formed a coalition cabinet with the Free Democrats. In 1962 a cabinet crisis arose over the government's raid of the offices of the magazine *Der Spiegel*, which had attacked the Adenauer regime for military unpreparedness. After agreeing to the Free Democrats' demands that he exclude his defense minister, Franz Josef Strauss, who was implicated in the affair, from a new cabinet, Adenauer succeeded in re-forming the coalition. At the same time Adenauer announced (Dec., 1962) his retirement as part of the agreement with the Free Democrats. He resigned in Oct., 1963. His writings include *World Indivisible* (tr. 1955). See his memoirs of the years 1945-53 (tr. by Beate Ruhm von Oppen, 1966), biography by T. C. F. Prittie (1972), Edgar Alexander, *Adenauer and the New Germany* (tr. 1957), Paul Weymar, *Adenauer* (tr. 1957), A. J. Heidenheimer, *Adenauer and the CDU* (1960).

adenine (ād'ənīn, -nīn, -nēn), organic base of the PURINE family containing carbon, hydrogen, and nitrogen. Adenine combines with the sugar ribose to form adenosine, which in turn can be bonded with from one to three phosphoric acid units, yielding the three nucleotides adenosine monophosphate, adenosine diphosphate, and ADENOSINE TRIPHOSPHATE. These adenine derivatives perform important functions in cellular metabolism. Adenine is one of four bases utilized in the synthesis of NUCLEIC ACIDS. A modified form of the substance is thought to be a secondary messenger in the propagation of many hormonal stimuli. Adenine is an integral part of the structure of many coenzymes.

adenocarcinoma: see NEOPLASM

adenoids, common name for the pharyngeal tonsils, spongy masses of lymphoid tissue that occupy the nasopharynx, the space between the back of the nose and the throat. Normally the adenoids, like the palatine tonsils located on either side of the throat, help prevent infection in the surrounding tissues. However, when they become enlarged they interfere with normal breathing and sometimes with hearing. When severely enlarged, adenoids can affect normal dental development, resulting in an al-

teration of facial expression. Infection of the adenoids is common, the symptoms resembling those of tonsillitis, with which it is frequently associated. Surgical removal of the adenoids is advisable when enlargement and repeated infection interfere with development and health. See RESPIRATION.

adenoma: see NEOPLASM

adenosine diphosphate: see ADENINE, ADENOSINE TRIPHOSPHATE

adenosine monophosphate (AMP) (ădĕn'ăsen mŏn'ăfŏs'fât), organic compound composed of ADENINE, the sugar ribose, and one phosphate unit. AMP is one of the possible products of the hydrolysis of ADENOSINE TRIPHOSPHATE (ATP) and is therefore important in the transfer of chemical energy during anabolism. The action of the enzyme adenylyl cyclase on ATP results in the formation of pyrophosphate and cyclic AMP, a very close structural relative of AMP containing an additional ester linkage between the phosphate and ribose units. American biochemist Earl W. Sutherland, Jr., received the 1971 Nobel Prize in Physiology and Medicine for showing that the hormone epinephrine changes the cellular concentration of cyclic AMP and that this change has a regulatory effect on the rates of certain enzymatic reactions. He thus proved that cyclic AMP acts as a secondary messenger for the hormone. Cyclic AMP has since been shown to play similar roles with norepinephrine, glucagon, and adrenocorticotrophic hormone. Although the exact chemistry of the steps leading from the arrival of a hormone at a cell's surface to a change in cyclic AMP levels in the cell and finally to a particular change in the cell's metabolism are often obscure, involvement of well-defined enzymes has in a few cases been clearly established. For example, epinephrine has been shown to stimulate adenylyl cyclase in the liver. The increased concentration of cyclic AMP produced by this enzyme stimulates protein kinase, an enzyme which catalyzes the first of a complicated series of enzymatic reactions, the last of which results in the splitting of glycogen into its constituent glucose units. Cyclic AMP is converted to AMP by the enzyme phosphodiesterase, which is inhibited by caffeine. This may account in part for the stimulatory effects of this drug.

adenosine triphosphate (ădĕn'ăsen trî'fŏs'fât), organic compound composed of adenine (containing carbon, hydrogen, and nitrogen), ribose (a sugar containing carbon, hydrogen, and oxygen), and three phosphate units (each containing hydrogen, oxygen, and phosphorus). Adenosine triphosphate (ATP) may undergo cyclic degradation and regeneration within the cell, during this process it is converted to adenosine diphosphate and adenosine monophosphate (with the controlled release of energy) and is returned to the original state by reattachment of the phosphate units. ATP is one of the most important intermediates in the metabolism of living cells; the energy resulting from its degradation may be employed in the synthesis of such macromolecules as polysaccharides, proteins, lipids, deoxyribonucleic acid, and ribonucleic acid. It is also believed to play a role in kidney function, in transmission of nerve impulses, and in MUSCLE contraction.

Adenosine triphosphate (ATP)

Ader (ă'dăr), Benjamite 1 Chron 8:15

Adernö. see ADRANO, Italy

ADH: see ANTIDIURETIC HORMONE

Adhara, bright star in the constellation CANIS MAJOR, Bayer designation ε Canis Majoris, 1970 position R.A. 6^h57^m4^s, Dec. -28°56'. A bluish-white giant (spectral class B2 II) with apparent MAGNITUDE 1.5, it is one of the 25 brightest stars in the sky. Adhara is a

visual BINARY with combined luminosity about 8,000 times that of the sun, its distance is about 700 light-years. The name is from the Arabic meaning "virgin."

Adhëmar: see ADEMAR

adhesion and cohesion, attractive FORCES between material bodies. A distinction is usually made between an adhesive force, which acts to hold two separate bodies together (or to stick one body to another), and a cohesive force, which acts to hold together the like or unlike atoms, ions, or molecules of a single body. However, both forces result from the same basic properties of MATTER. Were it not for adhesion and cohesion, solids and liquids would behave like gases, dispersing freely, since, according to the kinetic theory of matter, the particles making up any material body are in constant motion. In solids and liquids the tendency of all matter to disperse is overcome by the forces of adhesion and cohesion. A number of phenomena can be explained in terms of adhesion and cohesion. For example, SURFACE TENSION in liquids results from cohesion, and CAPILLARITY results from a combination of adhesion and cohesion. The hardness of a diamond is due to the strong cohesive forces between the carbon atoms of which it is made. FRICTION between two solid bodies depends in part upon adhesion.

adhesive, substance capable of sticking to surfaces of other substances and bonding them to one another. The term *adhesive cement* is sometimes used in place of *adhesive*, especially when referring to a synthetic adhesive. Animal glue, a gelatin made from hides, hooves, or bones, was probably known in prehistoric times; it remained the leading adhesive until the 20th cent. It is now used especially in cabinetmaking. Animal glue is sold both as a solid (either ground or in sheets, to be melted in a water-jacketed glue pot and applied while hot) and as liquid glue (an acidic solution). Adhesives from vegetable sources are also important; they include natural gums and RESINS, MUCILAGE, and starch and starch derivatives. They are commonly used for sizing paper and textiles and for labeling, sealing, and manufacturing paper goods. Other adhesives derived from animal and vegetable sources include blood glue, casein glue, fish glue, rubber adhesives, and cellulose derivatives. Adhesives having special properties are prepared from synthetic resins. Some synthetic adhesives, such as the epoxy resins, are strong enough to be used in construction in place of welding or riveting. Adhesive tapes have a coating of pressure-sensitive adhesive. See Irving Skeist, ed., *Handbook of Adhesives* (1962); N. A. de Bruyne and Roelof Houwink, ed., *Adhesion and Adhesives* (2 vol., 2d ed. 1965-67).

Adiel (ă'dîl), 1 Father of David's treasurer 1 Chron 27:25. 2 Simeonite 1 Chron 4:36. 3 Priest 1 Chron 9:12.

Adige (ă'dîjĕ), second-longest river of Italy, c. 225 mi (360 km) long, rising in the Tyrolean Alps, N Italy. It flows generally south, past Bolzano, Trent, and Verona, to the Po valley where it turns east to empty into the Adriatic Sea. The Adige is used for irrigation and hydroelectric-power production. Flood-control works protect the valley from sudden floods.

Adirondack Mountains (ăd'ărŏn'dăk), circular mountain mass, NE N.Y., between the St. Lawrence valley in the north and the Mohawk valley in the south, rising to 5,344 ft (1,629 m) at Mt. Marcy, the highest point in the state. Geologically a southern extension of the Laurentian Plateau, the Adirondacks are sometimes mistakenly included in the Appalachian system. Composed chiefly of metamorphic rock, the Adirondacks were formed as igneous rocks (mainly granite) intruded upward, doming the earth's surface, subsequent faulting of the earth's crust and surface erosion, particularly by the Pleistocene glaciers, have given the mountains a rugged topography. The glaciers also carved scenic gorges, waterfalls, and numerous lakes. The Hudson, Ausable, and Black rivers rise in the Adirondacks. The region is a year-round resort area, most of it has been set aside as Adirondack State Park. Lake Placid and Lake George are major resort centers. Lumbering, once a major occupation in the Adirondacks, declined after a forest preserve was established in 1892. Important mineral products of the mountains include iron ore, titanium, vanadium, and talc.

adit (ăd'it), in mining, underground passage excavated nearly horizontally, with one end open to the earth's surface, usually used to service a mine. The adit end is the furthestmost end from the surface, i.e., the location where miners work. The adit collar is the area where an adit opens to the surface and must be reinforced against any surface weakness.

Adithaim (ăd'thā'im), town of Judah, probably c. 10 mi (16 km) from the coast. Joshua 15:36.

adjective, English PART OF SPEECH, one of the two that refer typically to attributes. The other is the adverb. These two classes overlap with the form class marked by *-er* and *-est* (or *more* and *most*). They are functionally distinct in that adjectives never occur far from nouns or pronouns, while adverbs are associated primarily with verbs. There is a small class of words (e.g., *very* and *too*) that typically precede adjectives and adverbs; these words are also called adverbs. Many adverbs belong to a form class of words ending *-ly*. Adjective and adverb are typically Indo-European form classes, and probably most other languages lack specialized classes with analogous functions. See Paul Roberts, *Understanding Grammar* (1954) and *Modern Grammar* (1968).

Adlai (ăd'lāi), father of SHAPATH 4. 1 Chron 27:29.

Adler, Alfred (ăd'lăr), 1870-1937, Austrian psychiatrist, founder of the school of individual psychology. Although one of Freud's earlier associates, he soon rejected the Freudian emphasis upon sex. He maintained that all personality difficulties have their roots in a feeling of inferiority (see INFERIORITY COMPLEX) derived from physical handicaps or from conflict with the environment that restricts an individual's need for power and self-assertion. Thus he saw behavior disorders as overcompensation for deficiencies. In later life he lectured and practiced in the United States. Besides *The Practice and Theory of Individual Psychology* (1923), he wrote *The Neurotic Constitution* (1909) and *Understanding Human Nature* (1927). See biography by Phyllis Bottome (1939), studies by H. H. Mosak, ed. (1973) and Manes Sperber (1974).

Adler, Cyrus, 1863-1940, American Jewish educator, grad. Univ. of Pennsylvania, 1883, Ph.D. Johns Hopkins, 1887. He taught Semitic languages at Johns Hopkins Univ. from 1884 to 1893. He was for a number of years librarian and then secretary of the Smithsonian Institution, was the founder of the American Jewish Historical Society, was one of the editors of the *Jewish Encyclopedia*, and edited the *American-Jewish Year-Book* after 1899. He was president of Dropsie College from 1908 to 1940 and of the Jewish Theological Seminary after 1924. He was a founder of the American Jewish Committee and of the Jewish Welfare Board. His writings include a number of articles on comparative religion, Assyriology, and Semitic philology, *Jews in the Diplomatic Correspondence of the United States* (1906), and, with Allan Ramsay, *Told in the Coffee House* (1898). See biography by A. A. Neuman (1942).

Adler, Elmer, 1884-1962, American bibliophile and printer, b. Rochester, N.Y. From 1930 to 1940 he published *The Colophon*, a highly regarded quarterly of bibliographic research and information for book collectors; it was produced with fine printing. Adler became curator of the graphic arts department of Princeton Univ. in 1940, retiring in 1952.

Adler, Felix, 1851-1933, American educator and leader in social welfare, founder of the ETHICAL CULTURE MOVEMENT, b. Germany. He was brought to the United States as a small child, was graduated from Columbia in 1870, and afterward studied in Ger-

Adin (ă'dîn), family that returned from Exile. Ezra 2:15, 8:6, Neh 7:20, 10:16.

Adina (ăd'ănă, ăd'ī-), Reubenite captain 1 Chron 11:42.

Adino (ăd'ănŏ, ăd'ī-), the EZRITE, one of David's men 2 Sam 23:8.

adipose tissue (ăd'ăpŏs') see CONNECTIVE TISSUE

many. In 1876 he established the New York Society for Ethical Culture and, in connection with the Ethical Culture School, the first free kindergarten in New York City. Adler organized the Workingmen's Lyceum, helped to establish the Workingmen's School and the Manhattan Trade School for Girls, and founded (1883) the first child study society in the United States. He was a member (1885) of New York state's first tenement house commission and served for many years as chairman of the National Child Labor Committee. He became professor of political and social ethics at Columbia in 1902 and was Roosevelt professor (1908-9) at the Univ. of Berlin and Hibbert lecturer (1923) at Oxford. Among his books are *Creed and Deed* (1877), *An Ethical Philosophy of Life* (1918), and *The Reconstruction of the Spiritual Ideal* (1924). See H. J. Bridges, *Humanity on Trial* (1971).

Adler, Viktor (vīk'tōr), 1852-1918, Austrian socialist politician and journalist, founder and leader of the Austrian Social Democratic party. A prominent figure in the Second International of socialist parties, he entered parliament in 1905. When the Austro-Hungarian empire was collapsing, he was named foreign secretary of German Austria, but he died on Nov. 11, 1918, one day before the republic was proclaimed.

Admah (ăd'mă), city destroyed with SODOM.

Admatha (ădmă'thă), counselor of Ahasuerus. Esther 1:14.

Admetus (ădmē'təs) see ALCESTIS.

administration, public: see ADMINISTRATIVE LAW.

administrative law, law governing the powers and processes of administrative agencies. In the United States it deals primarily with questions of the propriety of granting powers to agencies as well as with the judicial checks upon the activities of governmental agencies. Administrative agencies are part of the executive branch of government and are created either by statute, by executive order authorized by statute, or by constitutional provisions. The use of administrative agencies in the United States dates back to 1789, when the original legislative provisions were made for the administration of customs laws, the regulation of oceangoing vessels and the coastal trade, and the payment of pensions to veterans. It was, however, with the growth of public utilities and public transportation that administrative agencies began to play a major role in American life. The passage of the Interstate Commerce Act and the establishment of the INTERSTATE COMMERCE COMMISSION in 1887 marked the start of administrative law in the United States as we know it today. The administrative process involves rule making, adjudication, investigating, supervising, prosecuting, and advising. Agencies have assumed legislative and judicial functions—the day-to-day supervision of details—for which neither Congress nor the courts are adapted. This has resulted in a blurring of the traditional notion of separation of powers that is said to characterize the Federal government. With the growing complexity of modern economic and social life, administrative agencies, having overall knowledge of their fields, are therefore able to deal uniformly and quickly with the numerous complaints referred to them. The principle that Congress cannot delegate its legislative powers has been circumvented by having Congress set a primary standard and allowing the agency to fill in the gaps. As a result of the powers that have been granted the older agencies and the recent proliferation of agencies, administrative agencies have come to participate in nearly every aspect of American life. Administrative agencies affect activities ranging from collective bargaining to television programming. Because of the vast range of subjects dealt with by the agencies the Federal Administrative Procedure Act was enacted (1946) to provide uniform standards of procedure that would be common to all agencies. The act guaranteed the right of judicial review to any person "suffering legal wrong because of any agency action." In general, administrative procedure would be set aside only for abuse of discretion. Under European legal codes, special administrative courts review the activities of administrative agencies. This is in contrast to common law, whereby the ordinary courts have complete jurisdiction over controversies involving the validity of acts of agencies. See FEDERAL COMMUNICATIONS COMMISSION, FEDERAL POWER COMMISSION, FEDERAL TRADE COMMISSION, NATIONAL LABOR RELATIONS BOARD, SECURITIES AND EXCHANGE COMMISSION. See Peter Woll, *Administrative Law, the Informal Process* (1963), M. M. Shapiro, *The Supreme Court and Administrative Agencies* (1968), R. S. Lorch, *Democratic Process and Administrative Law* (1969, repr. 1973).

Admiral's Men, theatrical company of players, officially designated the Admiral's Men in 1585. They were rivals of the CHAMBERLAIN'S MEN and performed at the theaters of PHILIP HENSLOWE. Their leading actor was Edward ALLEYN.

admiralty, in British government, department in charge of the operations of the Royal Navy until 1964. Originally established under Henry VIII, it was reorganized under Charles II. Five lords commissioners composed the board of admiralty, each gradually developing his own field of specific responsibility, with the first lord responsible to Parliament. In 1832 it absorbed the navy board, previously responsible for the administrative organization. In 1964 the admiralty became the navy department, coequal with the other service departments, of the ministry of defence. The admiralty board still exists within the navy department, but its functions are undefined.

Admiralty Inlet: see PUGET SOUND.

Admiralty Islands, group of 40 volcanic islands (1969 pop. 22,035), c. 800 sq. mi. (2,070 sq. km), SW Pacific, in the BISMARCK ARCHIPELAGO and part of Papua New Guinea. Lorengau, the chief port and administrative center of the group, is on Manus, the largest island. Copra, pearls, and marine shells are the principal products. Discovered by the Dutch navigator Willem SCHOUTEN in 1616, the group became part of German New Guinea in 1884 and an Australian League of Nations mandate in 1920.

admiralty law. see MARITIME LAW.

Adna (ăd'nă), name of two Israelites of the returned community. Ezra 10:30, Neh. 12:15.

Adnah (ăd'nă) 1. Deserter from Saul. 1 Chron. 12:20. 2. Officer under Jehoshaphat. 2 Chron. 17:14.

Ado (a'dō), city (1969 est. pop. 183,000), SW Nigeria. Located in a region where rice and yams are grown, the town has rice mills and also manufactures textiles, bricks, tile, and pottery. Ado was the capital of the YORUBA Ekiti state that was probably founded in the 15th cent. It alternated between independence and subjection to BENIN until the British gained control in 1894. The city is sometimes known as Ado-Ekiti.

adobe (ădō'bē) see RAMMED EARTH.

adolescence, time of life from onset of puberty to full adulthood. The exact period of adolescence, which varies from person to person, falls approximately between the ages 12 and 21. Adolescence is characterized by physical changes leading to sexual maturity, problems of identity and achievement of an appropriate sex role, movement toward personal independence, and social changes in which, for a time, the most important fact is peer group relations. Psychologists regard adolescence as a by-product of social pressures specific to the society, not as a unique period of biological turmoil.

Adolf of Nassau, d. 1298, German king (1292-98). He owed his election to the ecclesiastical electors, who, fearing the growing power and ambition of the HAPSBURGs, chose him rather than Albert of Austria (later King ALBERT I), son of Rudolf I of Hapsburg. Seeking to strengthen his kingship by establishing a territorial power of his own, Adolf seized Meissen and Thuringia. He entered into an alliance with Edward I of England against Philip IV of France in an effort to halt French encroachment of German territory, the alliance produced no results, however, and led to Adolf's deposition (1298) and the election of Albert. Soon afterward he was defeated and killed by an army commanded by Albert.

Adonai see GOD.

Adoni-bezek (ădō'nī-bē'zēk, ăd'-), king of Bezek, captured and mutilated by the Judahites. Judges 15:7.

Adonijah (ăd'ōnī'jah, ădōn'jah) 1. Son of David. He sought the throne that David gave to the younger son, Solomon. 2 Sam. 3:4, 1 Kings 1:21-25. 2. Teacher of the law. 2 Chron. 17:7-9. 3. Sealer of the Covenant after the return from the Exile. Neh. 10:16. Perhaps the same as Adonikam, a name in the lists of families. Ezra 2:13, 8:13, Neh. 7:18.

Adoniram (ăd'ōnī'rām), tax overseer. 1 Kings 4:6. Adoram. 2 Sam. 20:24, 1 Kings 12:18. Hadoram. 2 Chron. 10:18.

Adonis (ădō'nīs, ădōn'īs), in Greek mythology, beautiful youth beloved by Aphrodite and Persephone. He was born of the incestuous union of Myrrha (or Smyrna) and Cinyras, king of Cyprus. Aphrodite left Adonis in the care of Persephone, who raised him and made him her lover. Aphrodite later demanded the youth for herself, but Persephone was unwilling to relinquish him. When Adonis was gored to death by a boar, both Persephone and Aphrodite claimed him. Zeus settled the dispute by

arranging for Adonis to spend half the year (the summer months) above the ground with Aphrodite and the other half in the underworld with Persephone. Adonis' death and resurrection, symbolic of the yearly cycle of vegetation, were widely celebrated in ancient Greece in the midsummer festival Adonia. As part of this worship, his image was surrounded by beds of plants (the gardens of Adonis), which quickly grew and withered. The worship of Adonis corresponds to the cults of the Phrygian ATIS and the Babylonian TAMMUZ. See Sir J. G. Frazer, *Adonis, Attis, Osiris* (1907, new ed. 1961).

Adoni-zedec (ădō'nī-zē'dēk, ăd'-), chief at Jerusalem, leader of the allies routed at Gibeon. Joshua 10:1-27.

adoption, act by which the legal relation of PARENT AND CHILD is created. Adoption was recognized by Roman law but not by COMMON LAW. Statutes first introduced adoption into U.S. law in the mid-19th cent. and today it is allowed in all states of the United States and in Great Britain. Adoption is generally a judicial proceeding, requiring a hearing before a judge. Adoption statutes usually provide that the consent of the parents or guardian of the child—and that of the child, if above a certain age—must be obtained. An adopted child generally assumes the rights and duties of a natural legitimate child. Similarly, the rights and duties accompanying natural parenthood generally accompany adoptive parenthood (e.g., the right of custody and the obligation of support). The natural parents have no right to control an adopted child, nor have they any duties toward it, but in some states the child does not lose the right to inherit from them. Many states permit unmarried adults to adopt. See Margaret Kornitzer, *Adoption* (2d ed. 1967), M. L. Leavy, *Law of Adoption* (3d ed. 1968).

adoptionism, Christian heresy taught in Spain after 782 by Elipandus, archbishop of Toledo, and Felix, bishop of Urgel. They held that Christ at the time of his birth was purely human and only became the divine Son of God by adoption when he was baptized. Variations of this doctrine had been held as early as the 3d cent. by the THEODOTIANS, PAUL OF SAMOSATA, and by the Nestorians. It reappeared in the neo-adoptionist heresy among the followers of Peter Abelard. Elipandus and Felix were condemned at Frankfurt (794). The vigorous refutation of ALCUIN had much to do with the sect's disappearance in the early 9th cent. See also MONARCHIANISM.

Adoraim (ăd'ōr'ăim), town, E of Hebron. 2 Chron. 11:9. Adora. 1 Mac. 13:20.

Adoram (ădō'rām), the same as ADONIRAM.

Adoula, Cyrille (sērīl' ădō'la), 1922-, African statesman in the Republic of the Congo (now Zaïre). He was an early associate of Patrice Lumumba in the independence movement, although he later supported Lumumba's rival, Joseph Kasavubu. Adoula was elected to the senate when the Congo achieved (1960) independence and held the ministries of interior and of defense under President Kasavubu. Adoula became prime minister (1961) but was replaced (1964) by Moïse Tshombe.

Adour (ădō'r'), river, 210 mi. (338 km) long, rising in the Pyrenees of Gascony, SW France. It flows north and then west in a wide arc past Bagneres-de-Bigorre, Aire, and Dax and enters the Bay of Biscay near Bayonne.

Adowa, Ethiopia. see ADUWA.

Adra (a'thṛa), town (1970 pop. 16,283), Almería prov., S Spain, in Andalusia, on the Mediterranean Sea. Adra, a port, is the center of a fertile agricultural region. At the foot of a hill below the present town stood Abdera, founded by Phoenician traders and which later became a Roman colony. Adra was the last stronghold of the Moors under Boabdil.

Adrammelech (ădrām'elēk) 1. God of a Samartian cult. 2 Kings 17:31. 2. One of the two men named as murderers of their father, Sennacherib, Sharezer was the other. Babylonian sources mention one son. 2 Kings 19:37 (the same in Isa. 37:38).

Adramyttium (ăd'rāmīt'ēəm), place, the modern Edremit, NW Turkey. Here St. Paul's ship was built. Acts 27:2.

Adrano (ădra'nō), town (1971 pop. 32,270), E Sicily, Italy, at the foot of Mt. Etna, near the confluence of the Simeto and Salso rivers. It is the commercial center for a region where olives and citrus fruit are grown. Adrano was founded c. 400 by Dionysius the Elder near a temple of the god Hadranus. Fierce fighting took place in Adrano during World War II. Of note are the ruins of the town's ancient walls and an imposing 11th-century Norman castle. The town was known as Aderno until 1929.

Adrastus (adrās'tas), in Greek legend, king of Argos. He organized the ill-fated SEVEN AGAINST THEBES expedition and was the only survivor. Ten years later he successfully assisted the sons of the Seven, the EPI-
GONI, in their attack on Thebes.

adrenal gland (adrēn'əl) or **suprarenal gland** (sōprārēn'əl), endocrine gland (see ENDOCRINE SYSTEM) about 2 in. (5.1 cm) long situated atop each kidney. The outer yellowish layer (cortex) of the adrenal gland secretes about 30 steroid hormones, the most important of which are ALDOSTERONE and CORTISOL. Aldosterone regulates water and salt balance in the body and its secretion is controlled by the output of ADRENOCORTICOTROPIC HORMONE (ACTH) from the pituitary gland. Cortisol regulates

Adrenal glands. The cross-sectioned area shows the adrenal cortex and medulla.

carbohydrate, protein, and fat metabolism, its secretion is only slightly influenced by the pituitary. Steroid hormones also counteract inflammation and allergies and influence the secondary sex characteristics to a limited degree. The adrenal cortex controls metabolic processes that are essential to life and if it ceases to function death ensues within a few days. Artificial synthesis of the steroid hormones has made it possible to treat many conditions related to underactivity of the adrenal cortex, e.g., ADDISON'S DISEASE. The inner reddish portion (medulla) of the adrenal gland, which is not functionally related to the adrenal cortex, secretes EPINEPHRINE (adrenaline) and norepinephrine. The release of these hormones is stimulated when an animal is excited or frightened, causing increased heart rate, increased blood flow to the muscles, elevated blood sugar, dilation of the pupils of the eyes, and other changes that increase the body's ability to meet sudden emergencies.

adrenaline (adrēn'əlīn, -lēn) see EPINEPHRINE

adrenocorticotrophic hormone (adrē'nōkōr'tr'ikōtōp'ik), polypeptide hormone secreted by the anterior PITUITARY GLAND. Its chief function is to stimulate the cortex of the ADRENAL GLAND to secrete adrenocortical steroids, chiefly CORTISONE. The release of adrenocorticotrophic hormone (ACTH), also known as corticotropin, is stimulated by corticotropin-releasing factor (CRF), a secretion of the hypothalamus. ACTH secretion is an excellent example of the regulation of a biological system by a negative-feedback mechanism; high levels of adrenocortical steroids in the blood tend to decrease ACTH release, whereas low steroid levels have the opposite effect. ACTH has the same pharmacologic and clinical effects as cortisone when given intravenously or intramuscularly, however, it has no value when applied externally and cannot be taken orally since it is deactivated by digestive enzymes. The action of ACTH is contingent upon normally functioning adrenal glands and is therefore useless in disorders caused by adrenal insufficiency, e.g., as replacement therapy where both adrenal glands have been removed.

Adria (ādrēa), ancient name of the Adriatic, extended to mean the central Mediterranean in Acts 27:27.

Adrian I, d. 795, pope (772-95), a Roman, successor of Stephen IV. At Adrian's urging, CHARLEMAGNE crossed the Alps and defeated the Lombard king, DESIDERIUS, who had annexed papal territory. That defeat marked the end of the Lombard kingdom. Charlemagne, during the siege of Pavia, went to Rome (774) and there confirmed the donation of Pepin to the PAPAL STATES and joined additional prov-

inces to it. Adrian in turn confirmed Charlemagne's title of patrician of the Romans, thereby acknowledging Charlemagne's protectorate over all Italy. Adrian supported Empress Irene in her struggle against iconoclasm, and he sent legates to the Second Council of Nicaea. The great Roman water systems were built during his rule. He was succeeded by St. Leo III.

Adrian IV, d. 1159, pope (1154-59), an Englishman (the only English pope), b. Nicholas Breakspear at Langley, near St. Albans. He was successor of Anastasius IV. At an early age he went to France. There he became an Austin canon and later an abbot. Pope Eugene III made him cardinal bishop of Albano and sent him to Scandinavia to organize the church. After his election to the papacy, Adrian defeated (1155) opposition of ARNOLD OF BRESCIA. He crowned (1155) FREDERICK I but fell into conflict with Frederick when the emperor, disregarding the Concordat of Worms, invested (1158 or 1159) imperial favorites in the archbishoprics of Cologne and Ravenna. To make peace (1156) with William of Sicily, who had invaded papal territory, Adrian acknowledged William's titles to Sicily, Apulia, and Capua. This angered Frederick, who had designs on the Two Sicilies, but it served to protect the Papal States against further imperial encroachments. Frederick's expressed intention to assume the government of Rome almost brought him excommunication. Adrian, forced by imperial intrigues to leave Rome, died before he could pronounce sentence. The historicity of Adrian's donation of Ireland, as a papal fief, to Henry II of England has been the subject of scholarly dispute. He was succeeded by Alexander III.

Adrian VI, 1459-1523, pope (1522-23), a Netherlander (b. Utrecht) named Adrian Florensz, successor of Leo X. He was the most recent non-Italian pope. He taught at Louvain and was tutor of the young prince, later Holy Roman Emperor CHARLES V. This was a time when Roman life was most extravagant, papal expenditures on worldly objects were at their height, and the Curia most needed drastic reform. Adrian, an ascetic and a pious man, did his best to curb the abuses he found, but he died after 20 months. He was succeeded by Clement VII.

Adrian, Roman emperor see HADRIAN

Adrian, Edgar Douglas Adrian, Baron, 1889-, English physiologist, M.D. Trinity College, Cambridge, 1915. He was research professor (1929-37) of the Royal Society and professor of physiology (1937-51) at Cambridge. In 1951 he became master of Trinity College. His research was chiefly on the physiology of the nervous system. He wrote *The Basis of Sensation* (1928), *The Mechanism of Nervous Action* (1932), and, with others, *Factors Determining Human Behavior* (1937). With Sir Charles S. Sherrington he shared the 1932 Nobel Prize in Physiology and Medicine for work on the function of the neuron. He was awarded a barony in 1955.

Adrian, Gilbert: see under FASHION

Adrian, city (1970 pop. 20,382), seat of Lenawee co., SE Mich., on the Raisin River, inc. 1836. It is a manufacturing and trading center for a fertile farm region, its many products include automobile and aircraft parts, metalware, chemicals, and paper goods. The city is known for its chrysanthemums and for the beautiful maples that line its streets. It is the seat of Adrian College and Siena Heights College. Numerous lakes are in the area.

Adrianople, Turkey see EDIRNE

Adrianople, Treaty of, 1829, peace treaty between Russia and the Ottoman Empire (see RUSSO-TURKISH WARS). Turkey gave Russia access to the mouths of the Danube and additional territory on the Black Sea, opened the Dardanelles to all commercial vessels, granted autonomy to Serbia, promised autonomy for Greece, and allowed Russia to occupy Moldavia and Walachia until Turkey had paid a large indemnity.

Adriatic Sea (ādrēā'tik), arm of the Mediterranean Sea, between Italy and the Balkan Peninsula. It extends c. 500 mi (800 km) from the Gulf of Venice, at its head, SE to the Strait of Otranto, which leads to the Ionian Sea. It is from 58 to 140 mi (93-225 m) wide, with a maximum depth of c. 4,100 ft (1,250 m). The Po and Adige rivers of Italy are the chief affluents. The Italian coast (west and north) is low, Venice and Bari are the principal ports. Trieste, at the northern end of the sea, was once the chief Adriatic port. Yugoslavia and Albania border the irregular eastern shore, Rijeka and Split, Yugoslavia, are the main ports. The Yugoslavian coast (see DALMATIA), which is rugged and has many offshore islands and sheltered bays, is a popular tourist resort. Fishing is

an important activity in the Adriatic Sea, lobsters, sardines, and tuna are the chief catch.

Adriel (ā'drīəl), husband of MERAB 1 Sam. 18:17-19.

adsorption, adhesion of the molecules of liquids, gases, and dissolved substances to the surfaces of solids, as opposed to ABSORPTION, in which the molecules actually enter the absorbing medium (see ADHESION AND COHESION). Certain solids have the power to adsorb great quantities of gases. Charcoal, for example, which has a great surface area because of its porous nature, adsorbs large volumes of gases, including most of the poisonous ones, and is therefore used in gas masks. Certain finely divided solids have great adsorptive properties, for example, minute particles of platinum attract and hold multitudes of hydrogen molecules on their surfaces. Its ability to adsorb other gases makes platinum very useful in the production of sulfuric acid by the contact process and in the preparation of ammonia. Adsorption occurs also in solutions, colloidal particles suspended in a solution may adsorb much of the solvent (see COLLOID). Bone black and charcoal are used in industry to remove colors from solutions, since they adsorb many coloring materials and carry these with them when separated from the solution. Liquid dye held to the surface of cloth by adsorption permeates the fibers so that when the liquid has evaporated the dye still remains. Adsorption is employed in the hydrogenation of oils, in gas analysis, and in chromatography, a method used in the chemical analysis of closely related substances.

Adullam (adūl'am), border town of Judah, SW of Jerusalem. Joshua 15:35, 2 Chron. 11:7, Neh. 11:30. David hid in the Cave of Adullam when he fled from Saul. From here three of his men went to get him water from the well at Bethlehem. 1 Sam. 22, 2 Sam. 23:13-17, 1 Chron. 11:15-19.

adult education, extension of educational opportunities to those adults beyond the age of general public education who feel a need for further training of any sort, also known as continuing education. Only in the past two centuries has the field of adult education acquired definite organization. Its relatively recent development results from various social trends—the general spread of public education, the intensification of economic competition with its premiums for skills, the complexities of national and international politics demanding constant study, the stimulating effects of urbanization, opportunities offered by increased leisure time, and increased interest in educational activities on the part of many married women. Modern and formal adult education probably originated in European political groups and, after the Industrial Revolution, as vocational classes for workers. Continuation schools for workers in Germany and Switzerland were common. The FOLK HIGH SCHOOL in Denmark, founded by Bishop Brundtvig, stressed intellectual studies, and the Adult Schools of the Society of Friends in England (1845) fostered the education of the poor. Early American forms of adult education were the public lectures given in the LYCEUM (c. 1826) and the Lowell Institute of Boston endowed by John Lowell (1836). In 1873 the CHAUTAUQUA MOVEMENT introduced the discussion group and modified lecture system. Free public lectures under the department of education of New York City were inaugurated in 1904. Through the merger (1951) of the American Association for Adult Education and the National Education Association's Department of Adult Education, the Adult Education Association of the U.S.A. was founded. This group, through its publications and its research, has worked to systematize the methods and philosophy of the field. The Economic Opportunity Act (1964) provided funds for adult education, as did the later Adult Education Act (1966). Both of these acts, however, have been designed to help disadvantaged and illiterate adults only. Most important, public schools have been active in furnishing facilities and assistance to private adult education groups in many communities. Contemporary adult education can take on many different forms. Colleges have instituted evening programs, extension work, courses without credit, and correspondence courses. COMMUNITY COLLEGES have been especially active in this area. Organizations designed to relieve ILLITERACY are instrumental in adult education, as are the schools established to teach the English language and American customs to the foreign-born. A large amount of adult education is carried on in the field of worker education by labor unions and in VOCATIONAL EDUCATION programs. Community centers, political and economic action associations, and dramatic, musical and artistic groups are regarded by many as adult education activities. Great Books groups (est. 1947), in which

ADULTERATION OF FOOD

adults read and discuss a specified list of volumes, grew out of great books seminars at Chicago and Columbia universities and St John's College. In many places the public library sponsors the group. See PARENT EDUCATION. See C H Grattan, *In Quest of Knowledge* (1955), *Handbook of Adult Education in the United States* (ed by Malcolm S Knowles, 1960), Malcolm S Knowles, *The Adult Education Movement in the United States* (1962), P E Bergevin et al., *Adult Education Procedures* (1963), R W Axford, *Adult Education: The Open Door* (1968), Darrell Anderson, *Adult Education and the Disadvantaged Adult* (1969).

adulteration of food. see FOOD ADULTERATION

Adummim (ədūm'īm), ascent in the Jericho road Joshua 15:7, 18:17

Aduwa or Adowa (both a'dāwa), Ital Adua, town (1970 est pop 16,000), Tigre prov., N Ethiopia. Aduwa was the most important commercial center of Tigre in the 19th cent., but declined in the 1870s as a result of the dislocation caused by the fighting between Ethiopia and Egypt. In 1896, Aduwa was the site of the battle in which Menelik II decisively defeated Italian invaders and forced them out of Ethiopia. The name is also spelled Adwa.

advaita: see VEDANTA

Advent [Lat. = coming, i.e., of Jesus], season of the Christian ecclesiastical year, lasting in the West from the Sunday nearest Nov. 30 (St Andrew's) until Christmas. It is a season of penitence, to prepare for the holy day, and its liturgical color is purple. The first Sunday of Advent is the first day of the church calendar. In the Roman Catholic Church it was until recently a period of fasting, but now, as in the Anglican and Lutheran churches, its observance is primarily liturgical.

Advent Christian Church: see ADVENTISTS

Adventists (ăd'ven'tists) [advent, Lat. = coming], members of a group of related religious denominations whose distinctive doctrine centers in their belief concerning the imminent second coming of Christ (see JUDGMENT DAY). The name Adventism is specifically applied to the teachings of William Miller (1782-1849), who predicted the end of the world for 1843, then for 1844. When it did not occur, the Millerites, or Second Adventists, at a meeting at Albany, N.Y., in 1845 adopted a statement declaring their belief in the visible return of Christ at an indefinite time, when the resurrection of the dead would take place and the millennium would have its beginning. Later this body took the name Evangelical Adventists. Another and larger branch of the original Adventist group became known in 1861 as the Advent Christian Church. This branch was formed as a result of a controversy over the question of the soul's immortality. The largest Adventist body, the Seventh-Day Adventists, under the leadership of Joseph Bates and James and Ellen White, adopted in 1844 the observance of Saturday as the Sabbath. Formally organized in 1863, they are fundamentally evangelical, taking the Bible as the sole rule of faith and practice. Fundamental to their doctrine is their belief in the imminent, premillennial, personal, and visible return of Christ. The Seventh-Day Adventists carry on worldwide missionary work, they number some 1.6 million. Another Adventist group is the Church of God, which was organized as Churches of God in Christ Jesus in 1888 and then permanently organized as Church of God in 1921, its members number some 75,000. The Advent Christian Church, organized in 1861, has a membership of about 31,000 (the Life and Advent Union, which was organized in 1863, merged with the Advent Christian Church in 1964). See M E Olsen, *A History of the Origin and Progress of Seventh-Day Adventists* (1925, repr. 1972), Le Roy E. Froom, *Movement of Destiny* (1972).

adverb. see PART OF SPEECH, ADJECTIVE

advertising, in general, any openly sponsored offering of goods, services, or ideas through any medium of public communication. At its inception advertising was merely an announcement, for example, entrepreneurs in ancient Egypt used criers to announce ship and cargo arrivals. The invention of printing, however, may be said to have ushered in modern advertising. After the influence of salesmanship began to insert itself into public notice in the 18th cent., the present elaborate form of advertising began to evolve. The advertising agency, working on a commission basis, has been chiefly responsible for this evolution. The largest group of advertisers are the food marketers, followed by marketers of drugs and cosmetics, soaps, automobiles, tobacco, appliances, and oil products. The major U.S. advertising media are newspapers, magazines,

television and radio, business publications, billboards, and circulars sent through the mail. Since many large advertising agencies were once located on Madison Avenue in New York City, the term "Madison Avenue" is frequently used to symbolize the advertising business. The major criticisms of advertising are that it creates false values and impels people to buy things they neither need nor want and that, in fact, it may be actually harmful (such as cigarettes). In reply, its defenders say that advertising is meant to sell products, not create values, that it can create a new market for products that fill a genuine, though latent, need, and that it furthers product improvement through free competition. The Association of National Advertisers and the American Association of Advertising Agencies, both founded in 1917, are the major associations. See Martin Mayer, *Madison Avenue, USA* (1958), S W Dunn, *Advertising: Its Role in Modern Marketing* (2d ed. 1969), A W Frey, *Advertising* (4th ed. 1970), Robert Glazer, *The New Advertising* (1970).

advocate: see ATTORNEY

Ady, Endre (ĕn'drĕ ô'dĕ), 1877-1919, Hungarian poet. He abandoned his studies in law for a career in journalism and literature. His first volume of poetry, *Versek*, appeared in 1899. After 1903 he spent most of his time in Paris, where he fell in love with a woman who became the subject of many poems. A lyric poet noted for an original and creative use of language, Ady was influenced by the French Symbolists. He became a leader of the politically and artistically radical Hungarian writers who attacked the complacent materialism of Hungary's upper classes. Ady's poetry was published in 12 volumes and his prose works in 7. See his poems, ed. by A N Nyerges (1969).

Adyge Autonomous Oblast (ădgyĕ'), administrative division (1970 pop. 386,000), c. 2,935 sq mi (7,600 sq km), Krasnodar Krai, SE European USSR, at the northern foothills of the Greater Caucasus. MAIKOP is the capital. Agriculture is the chief occupation, wheat, maize, and rice are the leading food crops. Valuable forests in the Caucasian foothills have made lumbering a major industry. The Adyge region has rich oil and natural gas deposits. Oil refining, food processing, furniture making, and the production of machinery, machine tools, and building materials are leading industries. The Muslim Adyge people, related to the Circassians, are known for their tapestries and other handicrafts. Russian immigration has made them a minority in their oblast. The region was conquered (1830-64) by the Russians from the Turks, who had introduced Islam. The autonomous oblast was created in 1922.

adze, tool similar in purpose and use to an axe but with the cutting edge at right angles to the handle rather than aligned with it. The details of construction of a particular adze will depend on its intended application. Some types have a single cutting edge with the rear side of the head formed into a hammer or a picklike tool. Other types have a head with two identical cutting edges back to back. The principal use of the adze is in dressing and squaring large timbers. However, since these two processes are now usually performed by machine tools in factories, the adze is no longer commonly used.

Adzhār Autonomous Soviet Socialist Republic (ăjār') or **Adzhāristan**, autonomous region (1970 pop. 310,000), c. 1,160 sq mi (3,000 sq km), SE European USSR, on the Black Sea, bordering Turkey on the south. The capital is BATUMI. Mountainous and forested, the region has a subtropical climate, and there are many health resorts. Tobacco, tea, citrus fruits, and avocados are leading crops; livestock raising and copper mining are also important. Industries include tea packing, tobacco processing, fruit and fish canning, oil refining, and shipbuilding. The Adzhars, a mainly Muslim people of the South Caucasian linguistic family, constitute the bulk of the population, the remainder are Georgians, Armenians, Russians, and Greeks. Colonized by Greek merchants in the 5th and 4th cent. B.C., the region later came under Roman rule and after the 9th cent. A.D. was part of Georgia. The Turks conquered Adzhāristan in the late 17th and early 18th cent. and introduced Islam. Acquired by Russia in 1878, the region became an autonomous republic in 1921.

A. E. see RUSSELL, GEORGE WILLIAM

Aeacus (ē'ăkəs), in Greek mythology, son of Zeus and the nymph Aegina. He was the father of Peleus and Telamon. After a plague had nearly wiped out the inhabitants of his land, Zeus rewarded the pious Aeacus by changing a swarm of ants to men (known as Myrmidons). According to one legend, Aeacus and his people assisted Apollo and Poseidon in

building the walls of Troy. After Aeacus' death, Zeus made him one of the three judges of Hades.

Aedon (ăĕ'dən), in Greek legend, the wife of Zethus, king of Thebes. She had only one son, while her sister-in-law, NIOBE, had many. Her jealousy increased until, in trying to murder Niobe's oldest son, she killed her own child. She was changed to a nightingale, and her song was a mournful call for her son, Itys or Itylus.

Aedui (ĕ'dyōōi) or **Haedui** (hĕ'dyōōi), Gallic people, occupying in the 1st cent. B.C. a part of what later became Burgundy. Defeated by ARIOVISTUS and at odds with their Gallic neighbors, they were allies of the Romans. The Aedui at first aided Julius Caesar in the GALLIC WARS and later were not wholehearted in their support of Vercingetorix's revolt against Caesar. Their early capital was BIBRACTE.

Aeetes (ē-ĕ'tēz) see JASON

AEE see WORLD WAR I

Aegadian Isles: see EGADI ISLANDS, Italy

Aegates: see EGADI ISLANDS, Italy

Aegean civilization (ĕjĕ'ăn), term for the Bronze Age cultures of pre-Hellenic Greece. The complexity of those early civilizations was not suspected before the excavations of archaeologists in the late 19th cent. The most remarkable of the cultures was perhaps that of Crete, which was flourishing by the beginning of the 3d millennium B.C., this was the MINOAN CIVILIZATION. On the mainland of Greece excavations have uncovered the remains of MYCENAEAN CIVILIZATION. The exploration of the ruins of Troy provided knowledge of another culture, and ruins in the Cyclades have demonstrated remarkable early development there. The exact relationships of these different centers are not yet known, and there are many subjects of conjecture, such as the role of the Achaeans and the causes of the decline of Crete before 1100 B.C. See V. R. d'Arbo Desborough, *The Greek Dark Ages* (1972), Colin Renfrew, *The Emergence of Civilisation* (1972).

Aegean Sea, Gr. *Aigaion Pelagos*, Turkish *Ege Denizi*, arm of the Mediterranean Sea, c. 400 mi (640 km) long and 200 mi (320 km) wide, off SE Europe between Greece and Turkey. Crete and Rhodes mark its southern limit. Irregular in shape, it is dotted with islands, most of which belong to Greece, they include Évoia, the Sporades, the Cyclades, Samos, Khios, Lesbos, Thasos, and the Dodecanese. The Aegean Sea's greatest depths (more than 6,600 ft/2,010 m) are found off N. Crete. The Dardanelles strait connects the Aegean Sea with the Sea of Marmara and the Black Sea. Sardines and sponges taken from the Aegean are economically important, natural gas has been found off NE Greece. The name Aegean has been variously derived from Aegae, a city of Évoia, from Aegeus, father of Theseus, who drowned himself in the sea believing his son had been slain by the Minotaur, and from Aegya, an Amazon queen who drowned in it. The sea's ancient name, Archipelago, now applies to its islands and, generally, to any island group.

Aegeus (ĕ'jōs, -jĕs) see THESEUS

Aegina or **Āiyina** (ă'yĕnă), island (1971 pop. 5,704), 32 sq mi (83 sq km), off SE Greece, in the Gulf of Aegina or Saronic Gulf, near Athens. Sponge fishing and farming (figs, almonds, grapes, olives, and peanuts) are the most important occupations. The chief town is Aegina on the northwest shore. The island, inhabited from late Neolithic times, was named for the mythological figure Aegina. Its culture was influenced by Minoan Crete. Conquered by Dorian Greeks, it grew rapidly as a commercial state and struck the first Greek coins. In 431 B.C. the Athenians, against whom Aegina sided in the Peloponnesian War, expelled the population of the island, and Aegina fell into insignificance. In the 12th cent. it served as a haven for pirates, and the Venetians, in suppressing the outlaws, conquered the island. Albanians settled there in the 16th cent. During the Greek War of Independence the town of Aegina was (1828-29) the capital of Greece. Points of interest include the temple of Aphaia, where the AEGINETAN MARBLES were discovered in 1811.

Aegina (ĕj'ĭnă), in Greek mythology, river nymph, daughter of the river god Asopus. She was abducted by Zeus to the island Oenone, where she bore him a son, Aeacus. Aeacus later renamed the island in her honor.

Aegina, Gulf of: see SARONIC GULF, Greece

Aegineta, Paulus: see PAUL OF AEGINA

Aeginetan marbles (ĕ''jĭnĕ'tən), archaic Greek sculptures, c. 500-480 B.C., from the temple of Aphaia at Aegina, discovered in 1811 and erroneously restored by Thorvaldsen. Now in the Glyptothek at

Munich, they originally decorated the pediments of the temple. They represent scenes from the Trojan War.

aegis (é'jís), in Greek mythology, weapon of Zeus and Athena. It possessed the power to terrify and disperse the enemy or to protect friends. The aegis was usually described as a garment made of goat-skin slung over the shoulder or as a piece of armor. The aegis of Athena was a breastplate covered with goatskin and bordered with snakes, bearing in the center the head of the Gorgon Medusa.

Aegisthus (éjís'thas), in Greek mythology, according to most legends the incestuous offspring of Thyestes and his daughter Pelopia. At Thyestes' behest Aegisthus revenged the murder of his brothers by killing his uncle ATREUS. Later, he was known as the paragon of Clytemnestra and aided her in the murdering of her husband, Agamemnon. He was killed in revenge by Clytemnestra's son, Orestes.

Aegospotamos (é'gaspótámas), river of ancient Thrace flowing into the Hellespont. At its mouth in 405 B.C. occurred the culminating battle of the PELLONNESIAN WAR. Lysander and his Spartan fleet had come north to cut the grain supply of Athens. The Athenian fleet under Conon came to Aegospotamos and at first vainly tried to induce the Spartans to fight. Despite the warnings of ALKIBIADES, Conon and his men did not take proper precautions. Lysander fell upon them and completely destroyed the Athenian fleet.

Aegyptus (éj'p'tas) see DANAUS

Aehrenthal, Alois Lexa, Graf von (a'löes lāk'sā graf fən ā'rantal), 1854-1912, Austro-Hungarian foreign minister (1906-12). The chief event of his ministry was the Austrian annexation (1908) of BOSNIA AND HERCEGOVINA. The Russian foreign minister, IZVOLSKY, had given his formal agreement to the annexation in a secret meeting at Buchlau, Moravia, in return, Aehrenthal promised Austrian support for the opening of the Dardanelles to Russian warships. The annexation followed promptly, whereas Izvolsky was frustrated in his Dardanelles plan by English opposition. Serbian indignation at the annexation as well as belated Russian opposition almost led to a European war in 1909. Aehrenthal, with difficulty, restrained the Austrian war party led by Conrad von Hotzendorf. At last the crisis was ended by German mediation. The signatory powers of the Congress of Berlin (1878), including Russia, ratified the annexation.

Aeken, Jerom van: see BOSCH, HIERONYMUS

Ælfric (āl'frík), c. 955-1020, English writer and Benedictine monk. He was the greatest English scholar during the revival of learning fostered by the Benedictine monasteries in the second half of the 10th cent. His aim was to educate the laity as well as the clergy. He wrote in English a series of saints' lives and homilies—designed for use as sermons by the preachers who were generally unable to read Latin. Ælfric was also the author of a grammar, a glossary, and a colloquy, which were for many years the standard texts for Latin study in English monasteries. Among his other writings are the *Heptateuch*, a free English version of the first seven books of the Bible. Ælfric is considered the chief prose stylist of the period. His later writings were strongly influenced by the balance, alliteration, and rhythm of Latin prose. See *Selected Homilies* (ed. by Henry Sweet, 1922) and the *Heptateuch and Other Writings* (ed. by Early English Text Society, 1922), study by James Hurt (1972).

Aelian (ē'lēan), fl. 2d cent. A.D., Roman author, his original name was Claudius Aelianus. He lived in Praeneste and taught rhetoric in Rome. His works, all in Greek, include *Historical Miscellanies*, anecdotes about celebrities of the day, and *On the Characteristics of Animals*. Both of these are largely extant. He also wrote *Peasant Letters*, 20 epistles attributed to farmers from Attica.

Aemilian Way. see ROMAN ROADS

Aeneas (ē'nēas, īnē'-), pious man whom Peter cured. Acts 9:33,34.

Aeneas (īnē'ās), in classical legend, a Trojan, son of ANCHISES and Venus. After the fall of Troy he escaped, bearing his aged father on his back. He stayed at Carthage with Queen Dido, then went to Italy, where his descendants founded Rome. The deeds of the "pious" Aeneas are the substance of the great Roman epic, the *Aeneid* of VERGIL.

Aeneas Silvius Piccolomini: see PIUS II

Aenesidemus (ēnēs'idē'mās), Greek skeptic philosopher, fl. probably 1st cent. B.C. Thought to be a native of Knossos, Crete, he taught in Alexandria. Although his writings have been lost, it is known that his main contributions were 10 tropoi (ways to

conduct arguments) that appeared in *Pyrrhonian Discourses*. His arguments, which asserted the impossibility of knowledge, made him one of the leading skeptics.

Aenon (ē'nōn), unidentified place, where John the Baptist baptized people. John 3:23.

Aeolia: see AEOLIS

Aeolian Islands: see LIPARI ISLANDS, Italy

Aeolians: see GREECE

Aeolis (ē'alīs) or **Aeolia** (ēō'lēā), ancient region of the west coast of Asia Minor (in present-day Turkey). Aeolis was not a geographic term but a collective term for the cities founded there by the Aeolians, a branch of the Hellenic peoples. The 12 southern cities were grouped in the Aeolian League; these were Temnos, Smyrna, Pitane, Neonteichos, Aegirusa, Notium, Cilla or Killa, Cyme, Gryneum, Larissa, Myrina, and Aegae.

Aeolus (ē'ālās), in Greek mythology. 1 The wind god. He lived on the island of Aeolia, where he kept the winds in a cave. 2 Son of Hellen and ancestor of the Aeolian branch of the Hellenic race.

Aepinus, Franz Ulrich Theodosius (frānts ōōl'rīkh tā'ōdō'zēōs āpē'nōs), 1724-1802, German physicist. He studied at Jena and Rostock and taught mathematics at Rostock from 1747 to 1755. After a brief stay in Berlin he went to St. Petersburg as professor of physics and academician, remaining there until 1798 and rising to a high position as courtier to Catherine the Great. He made experimental and theoretical contributions to the study of electricity, including work on the thermoelectric properties of tourmaline and the invention, with J. C. Wilche, of the air capacitor. A consideration of the implications of this device led him to reject then current mechanical theories of electricity and to elaborate in his *Tentamen Theoriae Electricitatis et Magnetismi* (1759) a theory of electrostatics similar to Newton's gravitational theory.

aerial see ANTENNA, in electronics

aerial photography, technology and science of taking still or moving-picture photographs from an aircraft in flight. It was tried before the advent of the airplane by using kites and balloons. World War I demonstrated its tremendous military value, and during the ensuing peacetime years methods were so far perfected for taking still pictures that photography, the science of measurement from photographs, became an important tool of agencies making any type of surface map. During World War II and subsequent conflicts, aerial photographs were a most important source of intelligence. The quality of these photographs is now so good that the rank of a foot soldier can be determined from photographs taken at altitudes of c. 100,000 ft (30,500 m). The pilot sets his aircraft on the correct speed and course before entering the area to be photographed to insure uniformity of speed and altitude. The camera is activated before the area is entered and remains in operation until the plane is well past the area. This is done to insure longitudinal overlapping between this area and any adjacent area to be subsequently photographed so that the photographs may later be joined together. Aerial photographs may be high oblique (including the horizon), low oblique (below the horizon), or vertical (perpendicular to the earth). Only the vertical may be accurately scaled for mapping purposes. Often a multilens camera is used to photograph one section vertically and the adjacent areas obliquely. The individual oblique exposures are then corrected, scaled, and joined to the vertical section to form one continuous photograph. A photograph formed by fitting together several overlapping vertical photographs is called a mosaic. By viewing two overlapping photographs through a stereoscope, a three-dimensional image of a region can be obtained. A reproduction of a photograph to which grid lines, place names, and the like have been added is called a photomap. In addition to its military uses, aerial photography has proved valuable in such fields as archaeology, geology, forestry, highway plotting and construction, mapping, and land conservation. See W. H. Baker, *Elements of Photogrammetry* (1960), Beaumont Newhall, *Airborne Camera* (1969), Grover Heiman, Jr., *Aerial Photography* (1972).

aerodynamics, study of gases in motion. As the principal application of aerodynamics is the design of aircraft, air is the principal gas with which the science is concerned. One of the phenomena studied in aerodynamics is the lift exerted on an aircraft's wings as they move through the atmosphere. BERNOULLI'S PRINCIPLE, which states that the pressure of a moving gas decreases as its velocity increases, has been used to explain the lift produced by a wing

having a curved upper surface and a flat lower surface. Since the flow is faster across the curved surface than across the plane one, a greater pressure is exerted in the upward direction. This principle, however, does not explain how an airplane can fly upside down. A more general explanation accounting for this phenomenon is that the wing of an aircraft in flight intersects the air at an angle that causes air to be deflected downward. It is easily shown that any heavier-than-air craft must divert air downward in order to stay aloft. It is almost as easily shown that a force that retards the forward motion of the aircraft is developed by diverting air in this way. This force is known as drag due to lift. It decreases with gains in speed and loss of altitude, for subsonic flight, i.e., at speeds less than the speed of sound, it decreases with increasing wingspan, while the reverse is true for supersonic flight, i.e., at speeds greater than the speed of sound. This explains the advantage of swept-back wings for supersonic flight and why some planes are designed with wings that can be fully extended for subsonic flight and swept back for supersonic flight. The slowing of air very near to the aircraft's surface results in a drag caused by friction, which can be reduced by making the surface area of the craft as small as possible. As speeds close to the speed of sound, or Mach 1, are approached, the compressibility of the air, negligible at lower speeds, becomes a factor. There is in the neighborhood of Mach 1 a large and sudden increase in drag, which has been called the sonic, or sound, barrier. While the practical problems that made this drag a barrier have been largely solved through the choice of proper shapes and the use of more powerful propulsion systems, the general phenomena associated with these speeds are still of interest to scientists. One of the troublesome phenomena still associated with supersonic flight is the SHOCK WAVE that trails after the craft. Odd as it may seem, no sound from an aircraft at supersonic speed is heard ahead of it, it literally outruns its own sound. It is also true that craft in supersonic flight experience aerodynamic forces in different locations than in subsonic flight. This can greatly alter the effects of controls. Early supersonic craft were often subject to control reversal, a condition in which a control had exactly the opposite effect from what was expected. Modern jet aircraft have been designed so that these conditions do not arise. For flight at hypersonic speeds, i.e., speeds five times or more the speed of sound, aircraft must be built to withstand the extremely high temperatures created by the air flowing along its surface. Aerodynamics is not solely concerned with flight, it is used in designing automobile bodies and trains for minimum drag and in computing wind stresses on bridges, buildings, smokestacks, trees, and the like. It is also used in charting flows of pollutants in the atmosphere and in determining frictional effects in gas ducts. The WIND TUNNEL is one of the aerodynamicist's basic experimental tools. See Theodore Von Karman, *Aerodynamics* (1963).

aeroembolism: see DECOMPRESSION SICKNESS

aerolite (ār'ālī'') see METEORITE

aeronautical engineering see ENGINEERING

aeronautics see AERODYNAMICS, AIRPLANE, AVIATION

aerosol (ār'ēsōl,-sōl) see COLLOID

aerosol dispenser, device designed to produce a fine spray of liquid or solid particles that can be suspended in a gas such as the atmosphere. The dispenser commonly consists of a container that holds under pressure the substance to be dispersed (e.g., paints, insecticides, medications, and hair sprays) and a liquefied-gas propellant. When a valve is released, the propellant forces the substance through an atomizer out of the dispenser in the form of a fine spray. These devices are more properly termed spray dispensers rather than aerosol dispensers because the particles of the dispersed substance are usually larger than the particles of a true aerosol, such as a fog or a smoke.

aerospace medicine see AVIATION MEDICINE, SPACE MEDICINE

aerovane (ār'ōvān'), WEATHER VANE with a propeller attached to measure wind speed. By means of a system of synchronous motors and electric circuitry, both wind direction and speed are monitored on a remote indicator. See WIND.

Aertsen or Aertzen, Pieter (both pē'tər art'sən), 1503?-1575, Dutch painter, b. Amsterdam. Aertsen painted genre scenes (see GENRE) that are lighthearted in spirit and realistic in style. He also painted religious subjects, including a few surviving altarpieces. Aertsen's works reveal his rich sense of color and attention to homely detail.

Aeschines (ē'skīnēz), c 390-314? B C, Athenian orator, rival of DEMOSTHENES. Aeschines rose from humble circumstances and became powerful in politics because of his oratorical gifts. At first he opposed Philip II of Macedon, then later changed sides, arguing that resistance to Macedonian power was useless. Both he and Demosthenes were members of the embassy to Philip in 348 B C, and afterward Demosthenes bitterly and baselessly accused Aeschines of accepting Macedonian bribes. He was to have been joined in his action by Timarchus, but Aeschines prevented this by his oration *Against Timarchus* (345 B C). Aeschines defended himself well in his oration *On the False Legation* (342 B C)—a title also used by Demosthenes in his accusatory oration. The trouble between the orators grew and culminated in a dispute over a gold crown that the orator Ctesiphon proposed should be given Demosthenes in 330 B C. Aeschines brought suit with *Against Ctesiphon*. Demosthenes replied with his sturdy defense *On the Crown*. Aeschines lost and was fined, and retired to Asia Minor where, according to Plutarch, he lived as a professional Sophist.

Aeschylus (ēs'kīlās, ēs'-), 525-456 B C, Athenian tragic poet, b. Eleusis. The first of the three great Greek writers of tragedy, he was the predecessor of SOPHOCLES and EURIPIDES. He fought at Marathon and at Salamis. In 476 B C he went to Sicily to live at the court of Hiero I, and he died at Gela. He wrote perhaps 90 plays (7 survive in full) and won 13 first prizes at the Greater Dionysia, the spring festival of Dionysus. In each case 4 connected plays were submitted (a tragic trilogy and a lighter satyr play). Aeschylus is often credited with the invention of tragedy, as tragedy previously had been merely a dialogue between a chorus and one actor—a dramatically limited form. Aeschylus added an actor, thus increasing the potentialities of his vehicle immeasurably. (Though only two actors and the chorus appeared on the stage at the same time, an actor often took more than one part.) Aeschylus introduced costumes, decorated his scene, and placed supernumeraries on the stage. By his supreme poetic ability and his piety he made Athenian tragedy more of an artistic and intellectual creation than it had been before. His choral lyrics are, at their best, rivals of the odes of Pindar. The choruses, more important in Aeschylus than in his successors, are both ethical commentaries on the action and the means for its presentation. Vivid in its character portrayal, majestic in its tone, and captivating in its lyricism, Aeschylus' tragic poetry is esteemed among the greatest of all time. He alone of Greek tragedians was honored at Athens by having his plays performed repeatedly after his death. His extant plays are hard to date. The earliest is probably *The Suppliants*, simple in plot (on the marriage of the 50 daughters of Danaus) and with only one actor besides the chorus. *The Persians* (472? B C), glorifying the Athenian victory over Persia at Salamis, has two actors, but the new form is still unpolished. *The Seven against Thebes* can be dated in 467. *Prometheus Bound* (see PROMETHEUS), of uncertain date, is striking for its bald attack on the vengefulness of the gods toward man, but the later two parts of its trilogy, which are lost, may have portrayed Zeus as just. The last three tragedies of Aeschylus compose the only extant ancient trilogy, called the *Oresteia*, a history of the house of Atreus, with which the poet won first prize in 458. The three plays are *Agamemnon*, *The Choephoroe* (The Libation Bearers), and *The Eumenides*, in each play three actors are used—an innovation of Sophocles. Because of its scope, complexity, and the profundity of its themes (the significance of human suffering and the true meaning of justice) the *Oresteia* as a whole is considered by many to be the greatest Attic tragedy. Browning's *Agamemnon* is a poetic translation of the first play, and Eugene O'Neill's *Mourning Becomes Electra* is an American version of the trilogy. The translation by David Grene and Richmond Lattimore in *The Complete Greek Tragedies* is one of many English translations of his plays. See studies by Gilbert Murray (1940), J. H. Finley (1955), A. J. Podlecki (1966), and M. H. McCall, ed. (1972).

Aesculapius: see ASCLEPIUS

Aesir (ē'sār) see GERMANIC RELIGION

Aesop (ē'sāp, ē'sōp), semilegendary Greek fabulist. According to Herodotus, he was a slave who lived in Samos in the 6th cent. B C and who was eventually freed by his master. Other accounts state that he was deformed, associate him with many wild adventures, and connect him with such rulers as Solon and Croesus. The fables called Aesop's fables were preserved principally through BABRIUS, PHAEDRUS,

and PLANUDES MAXIMUS. The most famous of these fables include "The Fox and the Grapes" and "The Tortoise and the Hare." See FABLE.

aesthetics (ēsthēt'iks), the branch of philosophy that is concerned with the nature of art and the criteria of artistic judgment. The classical conception of art as the imitation of nature was formulated by Plato and developed by Aristotle in his *Poetics*, while modern thinkers such as Immanuel Kant, F. W. Schelling, Benedetto Croce, and Ernst Cassirer have emphasized the creative and symbolic aspects of art. The major problem in aesthetics concerns the nature of the beautiful. Generally speaking there are two basic approaches to the problem of beauty—the objective, which asserts that beauty inheres in the object and that judgments concerning it may have objective validity, and the subjective, which tends to identify the beautiful with that which pleases the observer. Outstanding defenders of the objective position were Plato, Aristotle, and G. E. Lessing, and of the subjective position, Edmund Burke and David Hume. In his *Critique of Judgment*, Kant mediated between the two tendencies by showing that aesthetic judgment has universal validity despite its subjective nature. Among the modern philosophers interested in aesthetics, the most important are Croce, Robin Collingwood, Cassirer, John Dewey, and George Santayana. See K. E. Gilbert and Helmut Kuhn, *A History of Esthetics* (rev. ed. 1953, repr. 1972), M. C. Beardsley, *Aesthetics from Classical Greece to the Present* (1965), Harold Osborne, *Aesthetics and Art Theory* (1970), George Dickie, *Aesthetics: An Introduction* (1971).

aestivation (ē's'tāvā'shan) see HIBERNATION

Aeta: see PYGMY

Æthelbald (ē'thælbôld, ā'-), d. 757, king of Mercia (716-57), grandson of a brother of Penda. He spent many years in exile before he became king. A strong ruler, by 731 he controlled all England S of the Humber River, and he led expeditions into Northumbria (740) and against the Welsh (743). He was murdered by his own bodyguard.

Æthelbert (ē'thælbært, ā'-), d. 616, king of Kent (560?-616). Although defeated by the West Saxons in 568, he later became the strongest ruler in England S of the Humber River. His wife, Bertha, daughter of a Frankish king, was a Christian. Æthelbert received (597) the missionaries sent by Pope Gregory I to England and was converted by St. Augustine of Canterbury. The first Christian king in Anglo-Saxon England, he made his capital, Canterbury, a great Christian center. The code of laws issued by him is the earliest surviving document in the Anglo-Saxon vernacular.

Æthelbert, d. 865, king of Wessex (860-65), son of Æthelwulf. After the death of his father in 858 he ruled Kent, Surrey, Sussex, and Essex, and he reunited them with Wessex when in 860 he succeeded his brother Æthelbald in that kingdom. Throughout his reign the attacks of the Danes were severe, and they continued through the reign of his brother and successor, Æthelred.

Æthelflæd (ē'thælfled, ā'thælfled) or **Ethelfleda** (-flē'da), d. 918, daughter of King Alfred the Great of Wessex and wife of Æthelred, ealdorman of Mercia. After her husband's death in 911, she ruled the semi-independent Mercia alone and was known as the Lady of the Mercians. Campaigning with her brother, EDWARD THE ELDER, she helped to recover the Danish-held lands S of the Humber River. After her death Mercia was fully incorporated into the kingdom of Wessex.

Æthelfrith (ē'thælfriþ, ā'-), d. 616, king of Northumbria (c 593-616). He was the first great leader to arise among the northern English, and he ruled over both Bernicia and Deira, uniting them into the kingdom of Northumbria. He repulsed an attack by the Scots in 603 and about 10 years later defeated the Welsh at Chester. During Æthelfrith's lifetime (if not solely as a result of the battle of Chester) the English penetrated to the Irish Sea, thus separating the Welsh in Wales from the Welsh in SW Scotland. Æthelfrith forced his brother-in-law EDWIN, who was heir to the throne in the Deiran line, into a long exile. Edwin found a protector in Rædwald of East Anglia, who fought against Æthelfrith and killed him in battle at the Idle River near the present-day town of Nottingham.

Æthelmar of Valence: see AYMER OF VALENCE

Æthelred (ē'thælrēd, ā'-), d. 871, king of Wessex (865-71), son of Æthelwulf and brother of ALFRED. He succeeded his brother Æthelbert as king of Wessex and as overlord of Kent and possibly of East Anglia. Æthelred spent much of his short reign gather-

ing forces to oppose the Danes, who occupied York (866) and ravaged much of England. Alfred was important as his second in command in a series of battles (870-71) and succeeded him in April, 871. **Æthelred**, 965?-1016, king of England (978-1016), called Æthelred the Unready [from Old Eng. *un-ræd*=without counsel]. He was the son of Edgar and the half brother of EDWARD THE MARTYR, whom he succeeded. Æthelred began his reign under a cloud of suspicion because of the murder of Edward. He was a weak king, but his efforts to resist the Danes, who resumed their raids on England in 980, were also considerably hampered by the frequent treachery of his commanders. In 991 he began paying tribute to the Danes, which he raised by the DANEGELD, but his tributary status did not prevent the Danes from returning. In 997 they came not only to raid but to remain and plunder the rich realm until 1000. A massacre of Danes in England in 1002 (possibly on the king's order) provoked another major raid (1003) led by the Danish king SWEYN. Æthelred tried to defend his kingdom. In 1002 he married Emma, sister of Richard II, duke of Normandy, perhaps in an attempt to gain an ally, in 1007 the army was placed under a single commander, by 1009 a navy had been built, but many of its commanders took to piracy. A severe harrying (1009-12) by the Danes left England disorganized and without hope, and when Sweyn returned in 1013 to conquer, he was well received in the DANELAW, and London capitulated with little resistance. Æthelred fled to Normandy. Upon Sweyn's death in 1014, Æthelred's restoration was negotiated in the first recorded pact between an English king and his subjects. Sweyn's son, CANUTE, withdrew, but he returned with a powerful army in 1015. War was in progress when Æthelred died in April, 1016. His son EDMUND IRONSIDE was declared his successor, but after concluding a treaty with Canute, he died in November. Æthelred's heirs were restored to the throne only with EDWARD THE CONFESSOR.

Æthelstan: see ATHELSTAN

Æthelwulf (ē'thælwôlf, ā'-), d. 858, king of Wessex (839-56), son and successor of Egbert, father of Æthelbert, Æthelred, and Alfred. He was lord of Kent, Surrey, Sussex, and Essex before his father's death in 839. As king of Wessex he was compelled to defend his realm against constant Danish attacks, and he won a notable victory over them at Aclea in 851. He also campaigned against the Welsh. A man of great piety, he went with his son Alfred to Rome in 855. In 856 he took as his second wife Judith, daughter of Charles II (Charles the Bald) of France. Learning before his return to England that his son Æthelbald, who had ruled in his absence, would resist his resumption of the kingship, Æthelwulf left his son as king of Wessex and himself ruled only in Kent and its dependencies, where Æthelbert succeeded him.

aether: see ETHER, in physics and astronomy

Aetius (āē'shēās), d. 367, Syrian theologian. He became prominent (c 350) as an exponent of the extreme ARIANISM developed mainly by his secretary EUNOMIUS. Members of his party were called Aetians and Anomoeans.

Aetius, c 396-454, Roman general. At first unfriendly to VALENTINIAN III, he later made his peace with Valentinian's mother, GALLA PLACIDIA, and was given a command in Gaul. An ambitious general, he was embroiled in difficulties with his rival BONIFACE, who defeated him near Rimini in 432. Aetius went briefly into exile among the Huns but returned in 433 and rose to be the chief ruler of the Western Empire. He defeated the Germans in Gaul, then crowned his career by commanding (451) Roman and Visigothic troops in the repulse of Attila and the Huns in the battle near the modern Châlons-sur-Marne—a battle generally said to have saved the West. Valentinian, presumably jealous of Aetius' success, had him murdered.

Aetna, volcano. See ETNA, Italy.

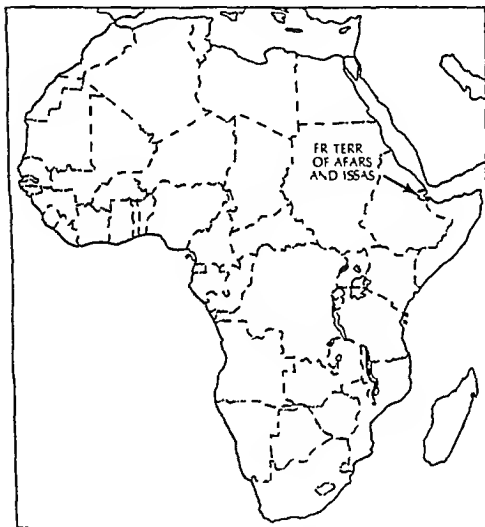

Aetolia (ētō'lyā), region of ancient Greece, N of the Gulf of Corinth and the Gulf of Calydon, E of the Achelous River (separating it from Acarnania). Little is known of the early population of Aetolia, but later Aetolians, though they had coastal cities, were primarily an inland farming and pastoral people. They had famous shrines at Calydon (to Artemis) and at Thermum (to Apollo). Aetolia was of little significance in Greek history until the rise of the AETOLIAN LEAGUE. After the downfall of that confederation, Aetolia was absorbed by the Romans into Achaea.

Aetolian League, confederation centering in the cities of Aetolia. It was formed in the 4th cent. B C.

and began to gain power in the 3d cent in opposing the ACHAEN LEAGUE and the Macedonians. At its height, the league stretched across Greece from sea to sea, including Locris, Malis, Dolopes, part of Thessaly, Phocis, and Acarnania. In alliance with the Romans, the Aetolians helped to defeat Philip V of Macedon at Cynoscephalae in 197 B.C. The Aetolians, dissatisfied, turned against Rome and allied themselves with Antiochus III of Syria. His defeat (189 B.C.) spelled the ruin of the league. Although formally it continued, its power had vanished.

Afanasyev, Aleksandr Nikolayevich (alyk'sän'där nykäl'i'ävich afäna'syäf), 1826-71, Russian folklorist. His collections, published from 1866 on, were instrumental in introducing Russian popular tales to world literature. A selection was translated into English as *Russian Fairy Tales* (1945).

Afars and the Issas, French Territory of the (äf'arz, ä'saz), overseas territory of France (1970 est. pop. 95,000), c. 8,500 sq mi (22,020 sq km), E Africa, on the Gulf of Aden. DJIBOUTI is the capital. It is bounded on the N and W by Ethiopia, on the S by the Somali Republic, and on the E by the Gulf of Aden. Largely a stony desert with isolated plateaus and highlands, it has a generally dry and torrid climate. The territory is economically underdeveloped, and nomadic pastoralism is the chief occupation; exports are hides, cattle, and coffee (transhipped from Ethiopia). Some revenue is derived from the port of Djibouti. Manufacturing is limited to shipbuilding and repair, building and construction, production of compressed or liquid gas, and the manufacture of foodstuffs. The population is almost evenly divided between Somali (Issas and others) and Afars, both of whom are Muslim. Strategically

situated, the territory commands the strait between the Gulf of Aden and the Red Sea. France first obtained a foothold there in 1862, French interest centered around Djibouti, the French commercial rival to Aden. By 1896 the present territory was organized as a colony. It remained a colony until 1946, at which time it became a territory within the French Union. Membership in the French Community followed in 1958. The political status of the territory was determined by a referendum in March, 1967, in which the Afar population, until then the group that had the lesser voice in government, gained political ascendancy with French support. The Afars opted for the continuation of the connection with France, whereas the Somalis voted for independence and eventual union with the Somali Republic. France retains control of foreign and defense matters. The territory was formerly known as French Somaliland. See V. M. Thompson and Richard Adloff, *Djibouti and the Horn of Africa* (1968), I. M. Lewis, *Peoples of the Horn of Africa* (1969), H. G. Marcus, *The Modern History of Ethiopia and the Horn of Africa* (1972).

affenpinscher (äf'änpin'shar), breed of TOY DOG perfected in Europe at the end of the 19th cent. It stands from 8 to 10 in. (20.3-25.4 cm) high at the shoulder and weighs about 8 lb (3.6 kg). Its wiry coat is short and dense over most of the body, but grows longer and shaggier on the legs and around the eyes, nose, and chin. It is usually solid black or black with tan, red, or gray markings. Believed by many authorities to have existed as a distinct breed as early as the 17th cent., the affenpinscher is alert and lively and makes a devoted pet. See DOG.

affine geometry. see GEOMETRY

Afghan hound (äf'gän), breed of tall, swift hound originating about 5,000 years ago in ancient Egypt. Its modern ancestors were perfected in the northern part of Afghanistan and introduced into England after World War I. The Afghan hound stands between 24 and 28 in. (61-71 cm) high at the shoulder and weighs between 50 and 60 lb (22.7-27.2 kg). The long, silky coat is very fine in texture and may be any color. Its unique appearance is partly the result of the position of its hipbones, which are set wider apart and higher than in most other breeds. This hip conformation enables the Afghan to cover uneven country swiftly and contributes to its effectiveness as a sight hunter in the mountainous terrain of its native Afghanistan. Today it is rapidly gaining popularity as a house pet. See DOG.

Afghanistan (äfgän'istän', äfgän'istan'), republic (1973 est. pop. 18,100,000), 249,999 sq mi (647,497 sq km), S central Asia. The capital is KABUL. Afghanistan is bordered by Iran on the west, by Pakistan on the east and south, and by the USSR on the north. A narrow strip, the Vakhān, extends in the northeast to touch Kashmir and the Sinkiang Uigur Autonomous Region of China. The great mass of the country is steep-sloped with mountains, the ranges fanning out from the towering Hindu Kush (reaching a height of more than 24,000 ft/7,315 m) across the center of the country. There are, however, within the mountain ranges and on their edges, many fertile valleys and plains, with fields of wheat, corn, barley, and rice, and orchards yielding fine fruits, such as the famous peaches and grapes of KANDAHAR. In the south, and particularly in the southwest, are great stretches of desert, including the regions of Seistan and Registan. To the north, between the central mountain chains (notably the Selseleh-ye Kuh-e Baba, or Koh-i-Baba, and the Paropamisus) and the Amu Darya (Oxus) River, which marks part of the boundary with the USSR, are the highlands of Badakhshan (with the finest lapis lazuli in the world), Afghan Turkistan, the Amu Darya plain, and the rich valley of HERAT on the Hari Rud (Arius) River in the northwest corner of the country (the heart of ancient ARIANA). The regions thus vary widely, although most of the land is dry. The rivers are mostly unnavigable, the longest is the Helmand, which flows generally southwest from the Hindu Kush to the Iranian border. Its water has been used since remote times for irrigation, as have the waters of the Hari Rud and of the Amu Darya. The Kabul River, on which the capital stands, is particularly famous because it leads to the Khyber Pass and thus S to India. This has been the traditional route of conquerors, and the incursions of various invaders from prehistoric days until relatively recent times has helped to make the population of present-day Afghanistan almost as variegated as its regions. Tadjiks live around Herat, Uzbeks and nomadic Turkmen in the Vakhān. In the central mountains are the Hazararas, of Mongolian origin. In the east and south are the Afghans and their almost indistinguishable kinsmen, the Pathans (a name used particularly for those in the North-West Frontier Province of Pakistan). There are many other groups in Afghanistan, but Afghan and Iranian are the country's principal languages. A unifying factor is religion, almost all the inhabitants being Muslim, the large majority are Sunni, the minority (perhaps numbering as many as a million), Shiite. Agriculture is the main occupation, but less than 10% of the land is cultivated. Grazing is also of great importance in the economy, the fat-tailed sheep, a staple of Afghan life, supplies skins and wool for clothing and meat and fat for food. Fine horses are the pride of many tribesmen. Mineral wealth is being developed, and there are deposits of iron ore, coal, copper, and sulfur, oil and natural gas fields are found in the north. Industry is still only in the beginning stages. Cotton and other fabrics, cement, and processed agricultural goods are the main products. Fruits and lambskins (Karakul) are the main exports, manufactured goods and foodstuffs the main imports. Imports greatly exceed exports. The USSR, India, the United States, and Japan are the chief trading partners. Road communications are good, but there are no railroads. There are universities at Kabul (1933) and JALALABAD (1963). **History.** The location of Afghanistan astride the land route to India has enticed conquerors throughout history. But its high mountains, while hindering unity, have helped the hill tribes to preserve their independence. It is probable that there were well-developed civilizations in S Afghanistan in prehistoric times, but the archaeological record is not clear. Certainly cultures had flourished in the north and east before Darius I (c. 500 B.C.) by conquest

annexed these areas to the Persian Empire. Later, Alexander the Great conquered (329-327 B.C.) them on his way to India. After Alexander's death (323 B.C.) the region at first was part of the Seleucid empire. In the north, BACTRIA became independent, and the south was acquired by the MAURYA dynasty. Bactria expanded southward but fell (mid-2d cent. B.C.) to the Parthians and rebellious tribes (notably the Saka). Buddhism was introduced from the east by the Yüechi, who founded the Kushan dynasty (early 2d cent. B.C.). Their capital was PESHAWAR. The Kushans declined (3d cent. A.D.) and were supplanted by the Sassanids, the Mongol Epthalites, and the Turkish Tu-Kiue. The Arab conquest of Afghanistan began in the 7th cent. Several short-lived Muslim dynasties were founded, the most powerful of them having its capital at GHAZNI. MAHMUD OF GHAZNI, who conquered the lands from Khurasan in Iran to the Punjab in India early in the 11th cent., was the greatest of Afghanistan's rulers. Jenghiz Khan (c. 1220) and Tamerlane (late 14th cent.) were subsequent conquerors of renown. BABUR, a descendant

of Tamerlane, used Kabul as the base for his conquest of India and the establishment of the Mogul empire in the 16th cent. In the 18th cent. the Persian NADIR SHAH extended his rule to N of the Hindu Kush. After his death (1747) his lieutenant, AHMAD SHAH, an Afghan tribal leader, established a united state covering most of present-day Afghanistan. His dynasty, the Durani, gave the Afghans the name (Durani) that they themselves frequently use. The reign of the Durani line ended in 1818, and no predominant ruler emerged until DOST MUHAMMAD became emir in 1826. During his rule the status of Afghanistan became an international problem, as Britain and Russia contested for influence in central Asia. Aiming to protect the northern approaches to India, the British tried to replace Dost Muhammad with a former emir, subordinate to them. This policy caused the first Afghan War (1838-42) between the British and the Afghans. Dost Muhammad was at first deposed but, after an Afghan revolt in Kabul, was restored. In 1857, Dost Muhammad signed an alliance with the British. He died in 1863 and was succeeded, after familial fighting, by his third son, SHER ALI. As the Russians acquired territory bordering on the Amu Darya, Shere Ali and the British quarreled, and the second Afghan War began (1878). Shere Ali died in 1879. His successor, Yakub Khan, ceded the Khyber Pass and other areas to the British, and after a British envoy was murdered the British occupied Kabul. Eventually ABD AR RAHMAN KHAN was recognized (1880) as emir. In the following years Afghanistan's borders were more precisely defined. Border agreements were reached with Russia (1885 and 1895), British India (the Durand Agreement, 1893), and Persia (1905), although the line with what is now Pakistan remained disputed. The Anglo-Russian agreement of 1907 guaranteed the independence of Afghanistan under British influence in foreign affairs. Abd ar-Rahman Khan died in 1901 and was succeeded by his son Habibullah. Despite British pressure, Afghanistan remained neutral in World War I. Habibullah was assassinated in 1919. His successor, AMANULLAH, attempting to free himself of British influence, invaded India (1919). This third Afghan War was ended by the Treaty of Rawalpindi, which gave Afghanistan full control over its foreign relations. The attempts of Amanullah (who, after 1926, styled himself king) at westernization—including reducing the power of the country's religious leaders and increasing the freedom of its women—provoked opposition that led to his deposition in 1929. A tribal leader, Bacha-i Saka, held

Africa, second largest continent, c 11,677,240 sq mi (30,244,050 sq km) including adjacent islands, 1971 est pop 354,000,000. Broad to the north (c 4,600 mi/7,400 km wide), Africa straddles the equator and stretches c 5,000 mi (8,050 km) from Cape Blanc (Tunisia) in the north to Cape Agulhas (South Africa) in the south. It is connected with Asia by the Sinai Peninsula (which is crossed by the Suez Canal) and is bounded on the N by the Mediterranean Sea, on the W and S by the Atlantic Ocean, and on the E and S by the Indian Ocean. The largest offshore island is Madagascar (see MALAGASY REPUBLIC), other islands include St Helena and Ascension in the S Atlantic Ocean, São Tome, Principe, Annobon, and Fernando Póo in the Gulf of Guinea, the Cape Verde, Canary, and Madeira islands in the N Atlantic Ocean, and Mauritius, Reunion, Zanzibar, Pemba, and the Comoro and Seychelles islands in the Indian Ocean. Most of Africa is a stable, ancient plateau that has been warped into a series of basins, low in the north and west and higher (rising to more than 6,000 ft/1,830 m) in the south and east. The plateau is composed mainly of metamorphic rock that has been overlaid in places by sedimentary rock. The escarpment of the plateau is in close proximity to the coast, thus leaving the continent with a generally narrow coastal plain, in addition, the es-

carpment forms a barrier of falls and rapids in the lower course of rivers that impedes their use as transportation routes into the interior North Africa, a region composed mainly of folded sedimentary rock, is, geologically, more closely related to Europe than to the rest of Africa, the Atlas Mts., which occupy most of the region, are a part of the Alpine mountain system of S Europe. The entire African continent is surrounded by a narrow continental shelf. The lowest point on the continent is 436 ft (133 m) below sea level in the Qattarah Depression, NW Egypt, the highest point is Mt. Kibo (19,340 ft/5,895 m), a peak of Kilimanjaro in NE Tanzania. From north to south the principal mountain ranges of Africa are the Atlas Mts. (rising to more than 13,000 ft/3,960 m), the Ethiopian Highlands (rising to more than 15,000 ft/4,570 m), the Ruwenzori mts. (rising to more than 16,000 ft/4,880 m), and the Drakensberg Range (rising to more than 11,000 ft/3,350 m). The continent's largest rivers are the Nile (the world's longest river), the Congo (or Zaïre), the Niger, the Zambezi, the Orange, the Limpopo, and the Senegal. The largest lakes are Victoria Nyanza (the world's second largest freshwater lake), Tanganyika, Albert, Rudolf, and Nyasa (or Malawi), all in E Africa, shallow Lake Chad, the largest in W Africa, shrinks considerably in the dry season. The lakes and major rivers (most of which are navigable in stretches above the escarpment of the plateau) form an important inland transportation system. Geologically, recent major earth disturbances have been confined to areas of NW and E Africa. Geologists have long noted the excellent fit (in shape and geology) between the coast of Africa at the Gulf of Guinea and the Brazilian coast of South America, and they now have evidence that Africa formed the center of a large ancestral supercontinent known as Pangaea. Pangaea began to break apart in the Jurassic period to form Gondwanaland, from which Africa, the other southern continents, and India were formed. South America was separated from Africa c 76 million years ago, when the floor of the S Atlantic Ocean was opened up by sea-floor spreading, Madagascar was separated from it c 65 million years ago, and Arabia was separated from it c 20 million years ago, when the Red Sea was formed. There is also evidence of one-time connections between NW Africa and E North America, N Africa and Europe, Madagascar and India, and SE Africa and Antarctica. Similar large-scale earth movements (see PLATE TECTONICS) are also believed responsible for the formation of the GREAT RIFT VALLEY of E Africa, which is the continent's most spectacular land feature. From c 40 to c 60 mi (60–100 km) wide, it extends in Africa c 1,800 mi (2,900 km), from the Red Sea to near the mouth of the Zambezi River, the eastern branch of the rift valley is occupied in sections by lakes Nyasa and Rudolf, and the western branch, curving north from Lake Nyasa, is occupied by lakes Tanganyika, Kivu, Edward, and Albert. The lava flows of the recent and subrecent epochs in the Ethiopian Highlands, and volcanoes farther south, are associated with the rift, among the principal volcanoes are Kilimanjaro, Kenya (now extinct), Nyamulagira, Elgon, Meru, and the Virunga range with Mt. Karisimbi. A less spectacular rift, the Cameroon Rift, is associated with volcanic activity in W Africa and trends NE from St. Helena Island to São Tome, Principe, Fernando Poo, and near the Tibesti Massif in the Sahara. Africa's climatic zones are largely controlled by the continent's location astride the equator and its almost symmetrical extensions into the northern and southern hemispheres. Thus, except where altitude exerts a moderating influence on temperature or precipitation (permanently snow-capped peaks are found near the equator), Africa may be divided into six general climatic regions. Areas near the equator and on the windward shores of SE Madagascar have a tropical rain forest climate, with heavy rain and high temperatures throughout the year. North and south of the rain forest are belts of tropical savanna climate, with high temperatures all year and a seasonal distribution of rain during the summer season. The savanna grades poleward in both hemispheres into a region of semiarid steppe (with limited summer rain) and then into true desert conditions in the extensive Sahara (north) and the smaller Kalahari (south). Belts of semiarid steppe with limited winter rain occur on the poleward sides of the desert regions. At the northern and southern extremities of the continent are narrow belts of Mediterranean type climate with subtropical temperatures and a concentration of rainfall mostly in the autumn and winter months. African peoples, who account for about 10% of the world's population, are divided into more than 50 different

political units and are further fragmented into a larger (and disputed) number of linguistic and cultural groups. The Sahara forms a great ethnic divide. North of it Caucasoids, mostly Arabs along the coast and Berbers, Tuareg, and Tibbu in the interior regions, predominate. The southern (or sub-Saharan) sections of the continent are occupied by a diverse group of predominantly Negroid peoples, mostly Bantu-speaking (see AFRICAN LANGUAGES). Numerous other groups, of mixed and often disputed origin, occupy transitional areas S of the Sahara and include, among others, the Mossi, Fulani, Yoruba, Ibo, Masai, and Hausa. Europeans are concentrated in areas with subtropical climates or tropical climates modified to temperate by altitude, in the south are persons of Dutch and British descent and in the northwest are persons of French, Italian, and Spanish descent. Indians are an important minority in many coastal towns of S and E Africa. As a whole, Africa is sparsely populated, the highest densities are found in the lower Nile valley, along the Guinea coast, around Victoria Nyanza, along the coast of E Africa S of Mombasa, and along the Mediterranean fringe of NW Africa. The principal cities of Africa are usually the national capitals and the major ports, and they usually contain a disproportionately large percentage of the national populations, Cairo, Alexandria, Johannesburg, Casablanca, and Algiers are the largest cities of Africa. About three quarters of Africa's population is rural, but, except for cash crops, such as cacao and groundnuts (peanuts), agricultural production is low by world standards. Africa produces three quarters of the world's cocoa beans and about one third of its groundnuts, but only small percentages of the world's corn, wheat, meat, and eggs. Rare and precious minerals (including most of the world's diamonds) are abundant in the continent's ancient crystalline rocks, which are found mostly to the south and east of a line from the Gulf of Guinea to the Sinai Peninsula, extensive oil, gas, and phosphate deposits occur in sedimentary rocks to the north and west of this general line. Manufacturing is concentrated in the Republic of South Africa and in N Africa (especially Egypt and Algeria), with only small-scale production in the other countries. Despite Africa's enormous potential for hydroelectric power production, only a small percentage of it has been developed. Africa's fairly regular coastline affords few natural harbors, and the shallowness of coastal waters makes it difficult for large ships to approach the shore, deepwater ports, protected by breakwaters, have been built offshore to facilitate commerce and trade. Major fishing grounds are found over the wider sections of the continental shelf as off NW, SW, and S Africa and NW Madagascar.

Outline of History Africa's history is long, complex, and only partly known. Man's oldest ancestor, discovered (1959) by Louis S. B. Leakey, the British anthropologist, lived in E Africa's Olduvai Gorge at least 1,750,000 years ago, agriculture, brought from SW Asia, appears to date from the 6th or 5th millennium B.C. Africa's first civilization began in Egypt in 3400 B.C., other ancient centers were Kush and Aksum. Phoenicians established Carthage in the 9th cent. B.C. and probably explored the northwestern coast as far as the Canary Islands by the 1st cent. B.C. Romans conquered Carthage in 146 B.C., controlled N Africa until the 4th cent. A.D., and, in the 1st or 2nd cent. A.D., were probably the first Europeans to cross the Sahara into tropical Africa. Arabs began their conquest in the 7th cent. and, except in Ethiopia, extended Arabic and the religion of Islam across N Africa and S across the Sahara into the great medieval kingdoms of the W Sudan. The earliest of these kingdoms, which drew their wealth and power from the control of a lucrative trans-Saharan trade in gold, salt, and slaves, was ancient Ghana, already thriving when first recorded by Arabs in the 8th cent. In the 13th cent. Ghana was conquered and incorporated into the kingdom of ancient Mali, famous for its gold and its wealthy capital of Timbuktu. Mali in turn was conquered and incorporated into the Songhai empire in the late 15th cent. There are few written accounts of the interior of the continent before 1500, but it appears from available evidence that the original San, Pygmy, and Azanian inhabitants were displaced beginning in the 1st cent. A.D. by the Bantu, a group of black African peoples speaking related languages. The Bantu spread over most of the continent south of the equator, probably from an original homeland in modern S Zaïre, and established small villages and, in places, powerful kingdoms, such as Kongo, Mwata Yamvo, and Monomotapa. Prior to 1500 pastoralists moved south until they encountered the various

Bantu groups and founded the kingdom of Kitara in the 16th cent. and, subsequently, the kingdoms of Bunyoro, Buganda, Rwanda, and Ankole, all of which had elaborate social structures based on a cattle-owning aristocracy with Bantu serfs. The Portuguese began to explore the coasts of Africa in the 15th cent. in an attempt to establish a safe route to India and to tap the lucrative gold trade of the Sudan and the east coast trade in gold, slaves, and ivory conducted for centuries by Arabs, Persians, and Indians. In 1488, Bartolomeu Dias rounded the Cape of Good Hope, in 1498, Vasco da Gama reached the east coast and, the following year, India. In the centuries that followed, coastal trading stations were established by Portugal and later by the Dutch, English, French, and other European maritime powers, under them the slave trade rapidly expanded. At the same time Ottoman Turks extended their control over N Africa and the shores of the Red Sea, and the Omani Arabs established suzerainty over the east coast as far south as Cape Delgado. Before 1800 few Europeans had penetrated the interior of the continent, and Africa was largely controlled by numerous African states, some of whom were weakened and some strengthened by European intervention. Explorations in the 18th and 19th cent. by Mungo Park, James Bruce, John Speke, David Livingstone, Henry Stanley, Heinrich Barth, and others reported the great natural wealth of the continent. Between 1880 and 1912 all of Africa except Liberia and Ethiopia passed under the control or protection of European powers, the boundaries of the new colonies and protectorates often bearing no relationship to the realities of geography or to the political and social organization of the indigenous population. This created a major problem throughout the continent, continuing during independence, when some governments sought to control the movement of peoples across political boundaries in an attempt to assimilate various ethnic groups into national units. This resulted in refugee movements, often of massive proportions, as one group fled the domination of another or as members of a group, scattered throughout a region, sought to concentrate in one area and thereby strained local resources—these movements taking place both within national boundaries and across them. In the northwest and west, France ultimately acquired regions that came to be known as French West Africa, French Equatorial Africa, and the French Cameroons, and established protectorates in Algeria, Morocco, and Tunisia. Other French territories were French Somaliland, French Togoland, Madagascar, and Reunion. The main group of British possessions was in E and SE Africa, it included the Anglo-Egyptian Sudan, British Somaliland, Uganda, Kenya, Tanganyika (after World War I), Zanzibar, Nyasaland, Northern and Southern Rhodesia, Bechuanaland, Basutoland and Swaziland. Following Britain's victory in the South African War (1899–1902), its South African possessions (Transvaal, Orange Free State, Cape Colony, and Natal) became a dominion within the British Commonwealth of Nations. Gambia, Sierra Leone, the Gold Coast, and Nigeria were British possessions on the west coast. Portugal's African empire was made up of Portuguese Guinea, Angola, and Mozambique, in addition to various enclaves and islands on the west coast. Belgium held the Belgian Congo and, after World War I, Ruanda-Urundi. The Spanish possessions in Africa were the smallest, being composed of Spanish Guinea, Spanish Sahara, Ifni, and the protectorate of Spanish Morocco. The extensive German holdings—Togoland, the Cameroons, German South-West Africa, and German East Africa—were lost after World War I and redistributed among the Allies. Italy's empire included Libya, Eritrea, Italian Somaliland, and, briefly after 1936, Ethiopia. The Union of South Africa was formed and became virtually self-governing in 1910, Egypt achieved a measure of sovereignty in 1922, and in 1925, Tangier, previously attached to Morocco, was made an international zone. Beginning in 1950, in the face of rising nationalism, the former colonies and protectorates were granted independence by all the European powers except Portugal, which began to grant its territories independence in 1974. The sequence of change included independence for Libya in 1951, independence for Eritrea in 1952 in a federation with, and in 1962 merged with, Ethiopia, in 1956 independence for Morocco, Sudan, and Tunisia and the return of Tangier to Morocco, in 1957 independence for Ghana, in 1958 independence for Guinea and the return of Spanish Morocco to Morocco. In 1960 independence was granted to the former French colonies of Cameroon, the Central African Republic, Chad, Republic of the Congo—

Brazzaville (renamed People's Republic of the Congo in 1970), Dahomey, Gabon, Ivory Coast, the Malagasy Republic, Mali (briefly merged in 1959-60 with Senegal as the Sudanese Republic), Mauritania, Niger, Senegal, and Upper Volta, also newly independent in 1960 were the Republic of the Congo (renamed Zaire in 1971), Nigeria, Somali Democratic Republic, and Togo. In 1961, Sierra Leone and Tanganyika (renamed Tanzania in 1964) became independent, the Portuguese enclave of São João Baptista de Ajudá was seized by Dahomey, the former British Cameroons were divided between Nigeria and the Republic of Cameroon (thereafter the Federal Republic of Cameroon and, in 1972, renamed the United Republic of Cameroon), and the Union of South Africa became a republic. In 1962, Uganda, Algeria, Rwanda, and Burundi became separate and independent nations. Remaining British possessions after 1962 were Zanzibar, which gained independence in 1963 and joined with Tanganyika to form Tanzania in 1964, Gambia and Kenya, which became independent in 1963, Malawi (formerly Nyasaland) and Zambia (formerly Northern Rhodesia), independent in 1964, Lesotho (formerly Basutoland) and Botswana (formerly Bechuanaland), independent in 1966, and Mauritius and Swaziland, independent in 1968. Rhodesia (formerly Southern Rhodesia) unilaterally declared itself independent in 1965, but Great Britain termed the act illegal and imposed trade sanctions against the country, the UN Security Council ordered a trade embargo in 1968. In the mid-1970s Great Britain retained control of the islands of St. Helena, Ascension, and the Seychelles and Dependencies. Remaining French territories included the Comoro Islands, Reunion, and the French Territory of the Afars and the Issas (formerly French Somaliland), which elected in a referendum (1967) to remain French. In 1968, Spain granted independence to Equatorial Guinea, including Rio Muni on the mainland and the islands of Fernando Poo and Annobon, and in 1969 returned Ifni to Morocco, it retained the Canary Islands, Spanish Sahara, and Ceuta and Melilla, two small enclaves on Morocco's coast. Portugal retained most of its territories, including Angola, Cabinda, Mozambique, Portuguese Guinea, Cape Verde Islands, and the islands of São Tomé and Príncipe until the early 1970s, in 1974 Portuguese Guinea became independent as Guinea-Bissau, and Mozambique was scheduled to become independent in mid-1975. South West Africa (Namibia) has been administered by South Africa since 1922 under an old League of Nations mandate, South Africa's continued administration of the territory was declared illegal by the UN Security Council in 1970 and by the International Court of Justice in 1971. The African states wield considerable voting power in the UN General Assembly, where, in the mid-1970s, they made up about one third of the membership. Recognition among the new states that greater power was to be found in increased unity and cooperation has aided the cause of Pan-Africanism, and in 1963 at Addis Ababa the Organization of African Unity was established. The most pressing problems facing new African states are their need for aid for the development of natural resources, for education, and for the improvement of living standards, threats of secession and military coups, and shifting alliances among the states and with outside powers. Beginning in the late 1960s and continuing through the mid-70s, a severe drought desiccated the Sahel region S of the Sahara. The drought, along with belated and sporadic heavy rainfall that did more harm than good, had a particularly devastating effect on the people and economy of Senegal, Mauritania, Mali, Upper Volta, Niger, N. Nigeria, the Sudan, and Ethiopia. Along with the resulting famine, disease, and poverty, it caused the death of thousands of people and forced the southward migration of additional hundreds of thousands to areas less affected by the drought. See separate entries on individual African states. See Raymond Furon, *Geology of Africa* (tr 1963), R. I. Rotberg, *A Political History of Tropical Africa* (1965), Basil Davidson, *Africa: History of a Continent* (1966), Anthony Silley, *Africa: A Social Geography* (2d ed 1972), J. F. A. Ajayi and Michael Crowder, *History of West Africa* (2 vol., 1972 and 1973), G. S. P. Freeman-Greville, *Chronology of African History* (1974), W. A. Hance, *The Geography of Modern Africa* (rev ed 1975).

African art, traditional art created by the peoples S of the Sahara. The predominant art forms are masks and figures, which were generally used in religious ceremonies. The decorative arts, especially in textiles and in the ornamentation of everyday tools, were a vital art in nearly all African cultures. Estab-

lished forms had evolved long before the arrival (late 15th cent.) of the Portuguese in Africa, but because of its perishable nature little work that is more than 150 years old has survived. No effort was made to preserve these works, as their creators valued them for ritual use rather than for aesthetic accomplishment. Wood—often embellished by clay, shells, beads, ivory, metal, feathers, and shredded raffia—was the dominant material. The discussion here is limited to the works of the peoples of W and central Africa—the regions richest in indigenous art. **Western Sudan and Guinea Coast.** Here the style of wood carving is highly abstract. Distortion is often used to emphasize features of cultic significance. The figures of the Dogon tribe of central Mali stress the cylindrical shape of the torso. The Bambara of W Mali are famous for their striking wooden head-dresses in the form of stylized antelope heads. The art of the Baga of NW Guinea includes snake carvings, drums supported by small free-standing figures, and spectacular masks. The Poro society of Liberia made ceremonial masks notable for their massiveness, color, and vitality of expression. The Baule of the Ivory Coast created figurines to house the spirits of the dead or to represent their gods. These have precise renderings in high relief of ornate hairdresses and scarification patterns (see BODY-MARKING). The art of the Guro of the Ivory Coast consists almost entirely of human masks and of weaving pulleys. Guro figures are characterized by slanting eyes and a carved zig-zag design just above the forehead. The southern groups of the Senufo of the Ivory Coast produced an art akin to that of the Baule, but more simplified and geometric. Senufo masks represent human features with geometric projections and have legs jutting out from each side of the face. The ASHANTI kingdom of Ghana employed (18th and 19th cent.) a system of brass weights based on a unit that was used to weigh gold dust, the state currency. These weights are small figures, many less than 2 in. (5.1 cm) high, which were cast in the CIRE PERDUE (lost wax) process indigenous to many W African regions. They portray simplified human and animal forms with a spontaneity unusual in African art. The sculptors of Dahomey also cast (16th-19th cent.) figures in brass by the cire perdue process. Their work is notable for its naturalism and finely chased metal surfaces. Figures are shown in everyday activities. This art was purely aesthetic, and the statues were reserved for the enjoyment of royalty.

Nigeria. From the north, the remarkable Nok terra-cotta heads, most of them fragments of figures, are the earliest African sculpture yet found (c. 500-200 B.C.). Characteristic are the impressive simplification of facial features and the pierced pupils of the eyes. The art of S. Nigeria reveals considerable contrast. Yoruba work is often brilliantly polychromed. The world-famous Ife portrait heads in bronze and terra-cotta are unique in Africa because of their naturalistic detail, perfection of modeling, and control over the cire perdue process. Nothing certain is known of the artistic sources or, in fact, of the culture that produced them. The art of BENIN arose from the needs of the royal household. It was largely commemorative, ritualistic, and ceremonial in function. Models of human heads were considered to be reincarnations of past kings, or Obas, and held to be divine. Abundant descriptive detail and sharp, precise lines are characteristic of Benin art. The Ibo, Ibibio, Ekoi, and Ijaw of SE Nigeria carved wooden masks for use in their rites and secret societies. Ibo masks were modeled after human skulls, with deep eye sockets, carved exposed teeth, and emaciated faces. On the banks of Middle Cross River are about 300 monolithic carvings, supposedly Ekor ancestor figures from between 1600 and 1900.

Cameroon. The small tribes of the Cameroon grasslands display a fairly homogeneous style. Sculpture is bold in execution and vital in expression. Wood carvings include large house posts, masks, and other ritual objects.

Gabon. Among the Fang tribes, the decorative motifs on stringed musical instruments, drums, and spoons emphasize the human figure, often elongated with smooth surface planes. Some figures are said to act as guardian spirits over ancestors whose bones are kept in boxes. The art of the Bakota tribes consists almost entirely of highly stylized wood and metal figurines that were placed in reliquaries.

The Congo Region. The sculpture of the Bakongo kingdom is usually characterized by naturalism. Each of the ancestor figures represents a personalized portrait and reveals details of body decoration and dress. The best-known art works of the Bateke of the W Congo are small fetish figures. These asex-

ual figures stand with arms close to the body in a stiff, frontal pose. The Bapende sculptors of the W Congo give a fluid surface to their ivory pendants, which portray human faces. In the Bushongo kingdom statues of royalty were carved (17th to 19th cent.). The king was shown in a pose of static aloofness, wearing a flat crown and often holding a ritual sword. The Basonge of the central Congo carved small, standing fetish figures and masks, bold in proportion and suggestive of cubism. The Baluba of the SE Congo produced bowls and stools supported by slender figures. Small ivory masks and neck rests were made in the E Congo. The art of the Badjokwe of S. Congo and Angola consists of free-standing figures, ceremonial staff heads, masks, and carved stools. The dynamic and aggressive figures are particularly outstanding.

Influence. African art came to European notice c. 1905, when artists began to recognize the aesthetic value of African sculpture. Such artists as Vlaminck, Derain, Picasso, and Modigliani were influenced by African art forms. In the United States, fine collections of African art can be found in the Museum of Primitive Art, New York, the Natural History Museum, Chicago, the Peabody Museum, Harvard, and the Univ. Museum at the Univ. of Pennsylvania. See general books on African art by Pierre Meauze (1968), Michel Leiris and Jacqueline Delange (tr 1968), Frank Willett (1971), Ely Leuzinger (tr 1972), M. W. Mount (1973), and W. L. D'Azevedo, ed (1973).

African languages, geographic rather than linguistic classification of languages spoken on the African continent. These languages do not belong to a single family, but are divided among several distinct linguistic stocks having no common origin. It is estimated that more than 800 languages are spoken in Africa, however, they belong to comparatively few language families. Some 50 African tongues have more than half a million speakers each, but many others are spoken by relatively few people. Unlike the American Indian languages, which on the whole seem to be dying out, the African tongues appear vigorous. In the last few decades great strides have been made in the study and classification of the African languages, although the results are still far from definitive. The principal linguistic families of Africa are now generally said to be HAMITO-SEMITIC (recently renamed Afroasiatic in some scholarly circles), Niger-Kordofanian (including Niger-Congo), Nilo-Saharan, and Khoisan, or Click, two other stocks, INDO-EUROPEAN and MALAYO-POLYNESIAN, are also represented. Niger-Kordofanian and Nilo-Saharan are the two large families of languages native to about 160 million inhabitants of Africa and spoken exclusively by Negroes. These languages are spoken in all parts of the continent, from the extreme south up to the territory of the Hamito-Semitic languages of N. Africa. The Hamito-Semitic, or Afroasiatic, family has both Caucasian and Negro speakers, while the San and Khoikhoi, who are the principal speakers of the Khoisan languages, belong to a different race from that of the Negroes. Some authorities believe that the languages spoken in the Niger-Kordofanian and Nilo-Saharan families are sufficiently similar to suggest that both stocks had the same ancestor language.

Niger-Kordofanian. The largest language stock of the African Negroes, the Niger-Kordofanian family has two branches, Niger-Congo and Kordofanian. The Kordofanian tongues are spoken in the Sudan and form five small groups (Koalib, Tegali, Talodi, Tumtum, and Katla). Niger-Congo is an enormous branch whose languages are found throughout S and central Africa and in most of W Africa below the Sahara. It is generally subdivided into six groups: West Atlantic, Mande, Gur, or Voltaic, Kwa, Benue-Congo, and Adamawa-Eastern. The West Atlantic branch includes many languages, among them Wolof (in Senegal), Temne (in Sierra Leone), and Fula, the tongue of several million people inhabiting an area from Senegal to a region E of Lake Chad. The Mande group consists of languages prevalent in the Niger valley, Liberia, and Sierra Leone, such as Mende in Liberia and Malinke in Mali. Gur, or Voltaic, is made up of several language groups and includes Mossi, the dominant tongue of Upper Volta, as well as the Dagomba and Mamprusi of N. Ghana. The Kwa languages, spoken chiefly in Ghana, Ivory Coast, Dahomey, Nigeria, and Liberia, include Ewe, Yoruba, Ibo, Nupe, Bini, Ashanti, and possibly Ijo (which is sometimes considered a separate branch). Benue-Congo includes the huge Bantu group of hundreds of tongues found throughout central and S Africa (see BANTU LANGUAGES), as well as such non-

Bantu languages as Tiv, Jukun, and Efik, which are spoken in Nigeria and Cameroon. The Adamawa-Eastern branch, to which Banda, Zande, and Sango belong, is composed of a number of languages spoken in Nigeria, Cameroon, and an area north of the Bantu territory to the Sudan. A characteristic feature of most of the Niger-Congo languages is the use of tones. Case inflection is entirely lacking, and sex/gender is almost unknown in the Niger-Congo family. The verb root tends to remain unchanged, moods and tenses are denoted either by particles or by auxiliary verbs. For example, in a number of languages the verb "to come" is the auxiliary designating the future. Typical of the Niger-Kordofanian stock as a whole is the division of nouns, which has been compared to the gender system of the Indo-European tongues. However, Indo-European features only three classifications (masculine, feminine, and neuter), whereas some of the Niger-Kordofanian languages have as many as 20 noun classes. The formal basis for these class divisions is not known, except that one class designates human beings, another is used for liquids, and a third class is used for animals. Each class has its own pair of affixes to indicate the singular and the plural.

Nilo-Saharan. The other sizable language stock of Negro Africans, Nilo-Saharan, has six branches: Songhai (spoken in Mali), Saharan (including languages spoken both near Lake Chad, as in Kanuri, and in central Sahara), Maban (a group of tongues found E of Lake Chad), Furian (comprising only Fur, an important language of the Sudan), Coman (a group of languages of Ethiopia and the Sudan), and Chari-Nile, the principal branch of Nilo-Saharan, composed of the Eastern Sudanic languages, the Central Sudanic languages, and two additional tongues, Kunama and Berta; the Chari-Nile tongues are spoken in the Sudan, Zaïre, Uganda, Cameroon, Chad, the Central African Republic, Kenya, mainland Tanzania, and Ethiopia. The Eastern Sudanic subdivision of Chari-Nile itself has ten branches, the two most important of which are Nubian and Nilotic, both found in the Sudan. Nubian is unique among modern African Negro languages in that it has written texts of the medieval period. The Nilotic tongues include Shilluk, Dinka, Nuer, Masai, Turkana, Nandi, and Suk. The Central Sudanic subdivision of Chari-Nile consists of a number of languages, among them Mangbetu, spoken in the Congo, and Efe, used by the pygmies. Like the Niger-Congo languages, most of the Nilo-Saharan languages use tones, some Nilo-Saharan tongues inflect their nouns according to case, and still others have gender. The verb in many Nilo-Saharan languages has a system of verb derivation.

Khoisan. The Khoisan, or Click, linguistic family is made up of three branches: the Khoisan languages of the San (Bushmen) and Khoikhoi (Hottentots), spoken in various parts of S Africa, Sandawe, a language found in E Africa, and Hata, or Hadzapi, also spoken in E Africa. Tonality is a common feature of African languages. There are usually two or three tones (based on pitch levels rather than the rising and falling in inflections of Chinese tones) used to indicate semantic or grammatical distinction. All of the Khoisan languages appear to use tones to distinguish meanings. Grammatically, the Khoikhoi languages and some of the San languages inflect the noun to show case, number, and gender. The outstanding characteristic of the Khoisan tongues, however, is their extensive use of click sounds. (Examples of click sounds familiar to speakers of English are the interjection *tsk-tsk* and the click used to signal to a horse.) Click sounds, which are found only in Africa as parts of words, involve a sucking action by the tongue, but the position of the tongue and the way in which air is released into the mouth vary, just as in the formation of other sounds, thus clicks may be dental, palatal, alveolar, lateral, labial, or retroflex, voiced, voiceless, or nasal, and aspirated or glottal. Six types of clicks are known for the San languages as a whole, although no single tongue has all of them. The Khoikhoi languages have dental, palatal, retroflex, and lateral clicks. Some Bantu languages, notably Zulu and Xhosa, which are spoken near the Khoisan area, have borrowed click sounds from the Khoisan languages.

Indo-European and Malayo-Polynesian. Indo-European tongues used in Africa include AFRIKAANS and ENGLISH (native to many people in the Republic of South Africa and Rhodesia). American Negroes coming to Liberia in the 19th cent. introduced English there, and repatriated slaves who settled in Freetown, Sierra Leone, in the 19th cent. used a form of PIGDIN English, from which a creole English (now called Krio) developed. A form of creole Portuguese

is current in Guinea-Bissau. Many other African lands employ European languages, particularly French, Portuguese, and English, which is often found in schools and in government as a second language. The Malayo-Polynesian family is represented by Malagasy, which is spoken on the island of Madagascar.

Twentieth-Century Developments. Since the majority of Africans do not know a European tongue, the use of written African languages has become increasingly important for the growing field of mass communication. Most of the Niger-Kordofanian and Nilo-Saharan languages still have no writing except perhaps for translations of the Bible. An exception is Swahili, a Bantu tongue of the Niger-Kordofanian stock that was written before the European conquest of Africa (see SWAHILI LANGUAGE). Vai, a language belonging to the Mande subdivision of Niger-Congo, still employs a native script developed in the 19th cent. The Nilo-Saharan tongue Nubian, the only modern Negro language with early written records (dating from the 8th cent. A.D. to the 14th cent.), is of considerable linguistic interest. Its alphabet was derived from that of COPTIC. Both Arabic and Roman letters are now being used increasingly for languages of the Niger-Kordofanian and Nilo-Saharan stocks, but as yet no standardized writing for these tongues has been universally adopted. The International African Institute has had some success in promoting the use of the written form of native African languages. Many newspapers, magazines, and radio broadcasts now employ various vernaculars, and film theaters can switch sound tracks to accommodate the audience in a given language area. However, Africa's linguistic diversity can be a hindrance to mass communication, and European tongues (especially English and French) are still widely used in the mass media. The modern scientific study of the classification and distribution of African languages has thrown some light on the history of Africa and its inhabitants. More knowledge can be expected from the combined use in the future of evidence from linguistic sources, historical records, reliable traditions, and archaeology. For example, the study of loan words from languages such as Greek, Latin, Punic, Arabic, and Portuguese should reveal much about contacts between African and non-African cultures. The study of loan words of African origin that have been absorbed by English (such as *banjo*, *jigger*, *gumbo*, *okra*, and *voodoo*) has become of increasing interest to American linguists and scholars in the field of black studies. See DIEDRICH WESTERMANN and I. C. WARD, *Practical Phonetics for Students of African Languages* (1933), M. A. BRYAN, *Notes on the Distribution of the Semitic and Cushitic Languages of Africa* (1947), *Distribution of the Nilotic and Nilo-Hamitic Languages of Africa* (1948), and (ed.) *The Bantu Languages of Africa* (1959), J. H. GREENBERG, *The Languages of Africa* (2d ed. 1966), E. C. POLOME, *Swahili Language Handbook* (1967), DAVID DALBY, ed., *Language and History in Africa* (1971), W. E. WELMERS, *African Language Structures* (1974).

African lion hound. See RHODESIAN RIDGEBACK.

African Methodist Episcopal Church, one of the leading Negro denominations of METHODISM. It was established in 1816 with Richard ALEX as its first bishop. There are c. 1,100,000 members.

African Methodist Episcopal Zion Church, Negro Protestant denomination. It was founded in 1796 by Negro members of the Methodist Episcopal Church in New York City and was organized as a national body in 1821. The church operates in the United States, Africa, South America, and the West Indies and maintains Livingstone College in Salisbury, N.C. The membership of the church is about 900,000, making it one of the largest African Methodist bodies. See D. H. BRADLEY, *A History of the A.M.E. Zion Church* (2 vol., 1956-70).

African Negro literature. The earliest examples of this literature are to be found in those ancient Muslim religious books written by African Negroes in Swahili and Arabic. A great oral tradition exists in the seemingly inexhaustible folklore of the continent: myths, tales, legends, riddles, and proverbs. Throughout the history of Africa these have been used to instruct the young, and they have been transported to North and South America and to the Caribbean. The oral tradition remains strong in the 20th cent., and folktales now often concern contemporary events or political figures. The influence of the oral tradition can also be found in the works of many 20th-century African writers. Modern African Negro literature developed first in areas long in contact with European civilization. It is written in native

languages, notably the Bantu languages, and in French, Portuguese, and English. Important 19th-century African Negro writers were Koba Ntsikana, William W. Gqoba, and, most importantly, Thomas Mofolo, who wrote several novels, the best-known being *Chaka* (tr. 1931), about the famous Zulu chief. In the early 20th cent., Negro writers from the French colonies in Africa made Paris their center. There, during the 1930s, the concept of *négritude* was born. Led by the poet-statesman Leopold Sedar SENGHOR, the major adherents of *négritude* included AIME CÉSAIRE, LEON DAMAS, BIRAGIO DIOP, and DAVID DIOP. These writers rejected the French policy of assimilation and asserted the importance of their African Negro heritage. They also felt their sense of pride, dignity, and racial awareness should extend to Negroes in all parts of the world. In 1947, Césaire and Damas founded the *Presence Africaine*, which became Africa's leading literary journal. Other outstanding writers in French were René Maran, Paul Hazoume, Camara Laye, Ferdinand Oyono, Mongo Beti, and Edouard Maunick. After World War II certain themes were dominant in the literature of the emerging African nations: pride in being black and African and in becoming part of the modern world, castigation of the Europeans who had subjugated black Africa for so long, foreboding that blacks would now be prey to evils that had long been exclusive to white men, exploration of the conflict between old tribal values and customs and those of the modern Western world, and satire of old and new aspects of African life. During the 1950s and 60s strong national literatures began emerging in several nations, notably Nigeria, Senegal, and Cameroon. In 1966 the World Festival of Negro Arts was held in Dakar, Senegal. It was opened by a performance of the satiric comedy *Kong's Harvest* by the Nigerian playwright Wole Soyinka. Other important postwar writers include Mario de Andrade and Luis Bernardo Honwana, whose works are in Portuguese, James Mbotela, Omar Shariff, and Robert Shaaban, writing in Swahili, and numerous writers whose works are in English, including the Nigerians Amos Tutuola, Chinua Achebe, Cyprian Ekwensi, John Pepper Clark, and Gabriel Okara, the South African Ezekiel Mphahlele (author of the now classic autobiography, *Down Second Avenue* (1959)), the Gambian Lenrie Peters, the Ruandan J. Saverio Nguigiziki, and the Ghanaians Kofi Awoonor and Ama Ato Audoo. See also AFRICAN LANGUAGES, SOUTH AFRICAN LITERATURE. See LANGSTON HUGHES, ed., *An African Treasury* (1960), CLAUDE WAUTHIER, *The Literature and Thought of Modern Africa* (tr. 1967), WILFRED CARTEY, *Whispers from a Continent: The Literature of Contemporary Black Africa* (1968), JANHEINZ JAHN, *Neo-African Literature: A History of Black Writing* (1969), RUTH FINNEGAN, *Oral Literature in Africa* (1970), O. R. DATHORUE, *The Black Mind: A History of African Literature* (1974).

African Negro music. Although its details vary with cultural and linguistic boundaries, sub-Saharan African music has as its distinguishing feature a rhythmic complexity common to no other region. Polyrhythmic counterpoint, wherein two or more locally independent attack patterns are superimposed, is realized by handclaps, xylophones, rattles, and a variety of tuned and nontuned drums. The remarkable aspect of African polyrhythm is the discernible coherence of the resultant rhythmic pattern. Pitch polyphony exists in the form of parallel intervals (generally thirds, fourths, and fifths), overlapping choral antiphony and solo-choral response, and occasional simultaneous independent melodies. In addition to voice, many wind and string instruments perform melodic functions. Common are bamboo flutes, ivory trumpets, and the one-string ground bow, which uses a hole in the ground as a resonator. Scale systems vary between regions but are generally diatonic. Music is highly functional in tribal life, accompanying birth, marriage, hunting, and even political activities. Much music exists solely for entertainment, ranging from narrative songs to highly stylized musical theater. Similarities with other cultures, particularly Indian and Middle Eastern, can be ascribed primarily to the Islamic invasion (7th-11th cent.). How much the American Negro spiritual is indebted to African music is still a subject of inquiry. See JAZZ, AMERICAN NEGRO SPIRITUALS, GOSPEL MUSIC. See E. M. von Hornbostel, *African Negro Music* (1929), Percival Kirby, *Musical Instruments of the Native Races of South Africa* (1953), A. M. JONES, *Studies in African Music* (2 vol., 1959), ROSE BRANDEL, *The Music of Central Africa* (1961), FRED WARREN, *The Music of Africa* (1970), J. S. ROBERTS, *Black Music of Two Worlds* (1972), ORTIZ WALTON, *Music: Black, White and Blue* (1972).

Africanus, Sextus Julius (sɛk'stəs ʒoʊ'l'yəs afrikā'nəs), fl. 221, Christian historian, resident of Palestine. He wrote a history of the world from the creation to 221 (which was used by Eusebius of Caesarea), letters, and an anthology, mostly of materials on magic.

African violet* see *GESNERIA*

Afrikaans (äf'rikans'), member of the West Germanic group of the Germanic subfamily of the Indo-European family of languages (see *GERMANIC LANGUAGES*). Although its classification is still disputed, it is generally considered an independent language rather than a dialect or variant of Dutch (see *DUTCH LANGUAGE*). Afrikaans is spoken by close to 3 million people, most of whom live in the Republic of South Africa, where it is one of the official languages. It arose from the Dutch spoken by the Boers, who emigrated from the Netherlands to South Africa in the 17th cent., but in its written form it dates only from 1861. The grammar has been considerably simplified. Although its vocabulary is essentially similar to that of Dutch, Afrikaans has absorbed quite a few words from Hottentot and Bantu (such as words designating local flora and fauna) and also from English.

Afro-Asian Bloc. see *THIRD-WORLD*

Afroasiatic, another name for the Hamito-Semitic family of languages. See *HAMITO-SEMITIC LANGUAGES*

afterdamp: see *DAMP*

Afton, uninc. city (1970 pop. 24,898), St. Louis co., E. Mo., a suburb of St. Louis. The name is also spelled Afton.

Afyonkarahisar (äfyon'ka'rähisar') [Turkish, = black castle of opium], city (1970 pop. 51,660), capital of Afyonkarahisar prov., W. central Turkey, at an elevation of c. 3,500 ft (1,070 m). It is the commercial center of a region where opium poppies and grains are grown. Carpets are manufactured in the city, which is a major rail junction.

Afzelius, Arvid August (ar'ved ou'gast), 1785-1871, Swedish historian, mythologist, and song writer. He made a notable collection of folk material in *Swedish Folk Tunes from Olden Times* (3 vol., 1814-16). His autobiography was published in 1901.

Ag, chemical symbol of the element *SILVER*

Agabus (äg'äbas), prophet who foretold the famine in the time of Claudius Caesar and the imprisonment of Paul. Acts 11:27,28; 21:10,11.

Agade, ancient Mesopotamian city. see *AKKAD*

Agadès (agadēs'), town (1963 est. pop. 7,100), W. central Niger, in the Air Mts. A traditional, picturesque town, Agadès is a trade center visited by TUAREG pastoral nomads. Leather and silver handicrafts are made. Tin, tungsten, uranium, and salt are mined nearby. Founded by the 11th cent., Agadès developed mainly because of its location on trans-Saharan caravan routes linking Egypt and Libya with the Lake Chad area. Agadès was held by the MALI empire during part of the 14th cent., captured by the SONGHAI empire in 1515, and controlled by BORNU in the 17th cent. It remained a trade center until the late 19th cent. During much of this time it was a noted center of Islamic learning. The French occupied the town in the early 20th cent. Agadès has a 16th-century mosque.

Agadir (agadēr', ägädēr'), city (1970 est. pop. 34,000), SW Morocco, on the Atlantic Ocean. Agadir has metal-processing industries and exports of fruit and vegetables. While France was engaged in establishing a protectorate in Morocco, the German gunboat *Panther* appeared (1911) in Agadir with the intention of protecting German interests. For a time war seemed imminent, but the Germans agreed to drop their demands when France ceded to them a substantial part of the French Congo. In 1960, Agadir was almost completely destroyed by an earthquake.

Agag (äg'äg) 1 King of the Amalekites who was defeated and spared by Saul, but killed by Samuel. 1 Sam. 15:2. The allusion is not understood in Num. 24:7.

Agagite (äg'ägīt), a not necessarily ethnical term used of Haman because of his hatred of the Jews. Esther 3:1.

Aga Khan III (Aga Sir Sultan Mahomed Shah) (a'ga khan), 1877-1957, Muslim leader, b. Bombay, India. Hereditary ruler of the Muslim Ismaili sect, with followers in India, Pakistan, East Africa, and Central Asia, the Aga Khan was born to great power and wealth. He attempted to secure Muslim support for British rule in India, particularly by founding (1906) the All-India Muslim League, of which he served as president (1909-14). He was chairman of the British Indian delegation to the imperial conference in London in 1930-31. He also represented India at the Geneva disarmament conference (1932) and in the

League of Nations (1932, 1934-37), where he was (1937) president of the General Assembly. He was, however, perhaps best known for his fabulous wealth, for his liberal donations to Muslim causes, and for his interest in horse breeding and racing. Early in his rule he took up residence in Europe, where he died. He was succeeded by his grandson, Prince Karim, who became Aga Khan IV. See his memoirs (1954), biography by H. I. Greenwall (1952).

agaloch (ägäl'äk) see *ALOES*

Agamedes (äg'amē'dēz) see *TROPHONIUS*

Agamemnon (äg'amēm'nōn), in Greek mythology, leader of the Greek forces in the Trojan War, king of Mycenae (or Argos). He and Menelaus were sons of Atreus and suffered the curse laid upon PELOPS. Agamemnon married Clytemnestra, and their children were Iphigenia, Electra, and Orestes. To win favorable winds for the ships sailing against Troy, he sacrificed Iphigenia to Artemis and thus incurred the hatred of Clytemnestra. After arriving at Troy, he quarreled bitterly with Achilles over possession of the captive princess Briseis. Agamemnon was forced to yield the girl to Achilles after the latter withdrew, with his troops, from the war. On his return home, Agamemnon was treacherously murdered by Clytemnestra and her lover, Aegisthus. To avenge his death, Orestes and Electra killed their mother.

Aga Muhammad Khan or Agha Muhammad Khan (both a'gā mōhām'mad khān), 1742-97, shah of Persia, founder of the Kajar, or Qajar, dynasty. He was emasculated by family enemies at the age of five. He was vigorous and able, but his cruelty is proverbial. In 1794, he captured and killed the last ruler of the Zand dynasty and ended his campaign with a wholesale massacre in Kerman. He became shah in 1796. Aga Muhammad resisted a Russian invasion and himself invaded (1795) Georgia. Hated by his subjects, he was finally assassinated. His nephew Fath Ali succeeded him.

Agana (ägā'nyā), city (1970 pop. 2,119), capital of the island of GUAM, W. Pacific, in the MARIANAS ISLANDS. It is the administrative center of Guam, and most of the city's economic activities are related to the provision of goods and services to the large U.S. military bases on the island. Completely destroyed in World War II, Agana was subsequently rebuilt.

Aganippe (äg'anīp'ē), in Greek mythology, nymph. Her spring on Mt. Helicon, sacred to the MUSES, gave poetic inspiration to all who drank from it.

Agapemone (ägapēm'ōnē) [Gr. = abode of love], English religious community of men and women, holding all goods in common. It was founded (c. 1850) at the village of Spaxton, Somerset, by Henry James Prince (1811-99), Samuel Starky, and others. Prince and Starky were clergymen who had left (c. 1843) the Church of England after Prince claimed that the Holy Ghost had taken up residence in his body. The Agapemonites proclaimed the imminent second coming of Christ. Riotous conditions at the community caused scandal, and after Prince lost a lawsuit brought by two disenchanted followers in 1860 the community slipped from public notice. There was a period (c. 1890) of renewed activity when J. H. Smyth-Pigott, who believed himself to be Jesus Christ reincarnated, conducted meetings at an Agapemone branch establishment in Clapton, London. He succeeded Prince as leader of the sect, which soon vanished. See Donald McCormick, *Temple of Love* (1962).

Agar (ä'gər), the same as *HAGAR*

agar (ä'gär, ä'-, äg'är), product obtained from several species of red algae, or *SEAWEED*, chiefly from the Ceylon, or Jaffna, moss (*Gracilaria lichenoides*) and species of *Gelidium*. Although most agar comes from the Far East, California also is a source of supply. Chemically, agar is a polymer made up of subunits of the sugar galactose; it is a component of the algae cell walls. Dissolved in boiling water and cooled, agar becomes gelatinous; its chief uses are as a culture medium (particularly for bacteria) and as a laxative, but it serves also as a thickening for soups and sauces, in jellies and ice cream, for clarifying beverages, and for sizing fabrics. It is conveniently marketed in the form of dried flakes.

Agartala (ägür'tälä), city (1971 pop. 59,682), capital of Tripura state, NE India, near the Bangladesh border. It is a market town for rice, tea, jute, and oilseed.

Agasias (ägä'shēās), fl. 1st cent. B.C., Greek sculptor, commonly known as Agastias of Ephesus, son of Dositheus. His *Borghese Warrior*, discovered in the 17th cent., is in the Louvre.

Agassiz, Alexander (äg'äsē), 1835-1910, American naturalist and industrialist, b. Neuchâtel, Switzer-

land, son of Louis Agassiz, stepson of Elizabeth Cary Agassiz. He came to the United States in 1849 and studied at Harvard, receiving degrees in engineering (B.S., 1857) and natural history (B.S., 1862). Throughout his life he was connected in various capacities with Harvard. In 1871 he consolidated the Calumet and Hecla copper mines on Lake Superior and, as president, developed the combined interests with great success. He adopted safety and welfare measures relating to the mines. Agassiz contributed much of his fortune to science—chiefly in endowments to Harvard and to the Museum of Comparative Zoology founded there through his father's efforts. He also financed expeditions and publications of his own research. In 1877 he began his oceanographic explorations, including detailed observations of the Pacific and the Caribbean. Noting that the deep-sea animals of the two are similar, he suggested that the Caribbean was a bay of the Pacific that had been cut off in the Cretaceous period by the rise of the Panama isthmus. He also developed a theory of the formation of coral atolls that differed from that of Darwin. His chief work is *Revision of the Echini* (2 vol., 1872-74). See study by his son G. R. Agassiz (1913).

Agassiz, Elizabeth Cabot Cary, 1822-1907, American author and educator, b. Boston. In 1850 she married Louis Agassiz, and together they established the pioneering Agassiz School for girls in Boston (1856-65). She accompanied her husband on expeditions to Brazil (1865-66) and along the Atlantic and Pacific coasts of the Americas (1871-72). She was one of a group (along with Arthur Gilman and Alice Longfellow) influential in the founding of Radcliffe College, and was (1894-1903) its first president. Her writings include *A Journey in Brazil* (in collaboration with her husband, 1868), a biography of her husband (1885), and, with her stepson Alexander Agassiz, *Seaside Studies in Natural History* (1885). See study by L. A. Paton (1919), Louise Tharp, *Adventurous Alliance* (1959).

Agassiz, Louis (Jean Louis Rodolphe Agassiz) (zhān lwē rōdōl'f), 1807-73, Swiss-American zoologist and geologist, b. Môtiers-en-Vully, Switzerland. He studied at the universities of Zurich, Erlangen (Ph.D., 1829), Heidelberg, and Munich (M.D., 1830). Agassiz practiced medicine briefly, but his real interest lay in scientific research. In 1831 he went to Paris, where he became a close friend of Alexander von Humboldt and studied fossil fishes under the guidance of Cuvier. In 1832 he became professor of natural history at the Univ. of Neuchâtel, which he made a noted center for scientific study. Among his publications during this period were *Recherches sur les poissons fossiles* (5 vol. and atlas, 1833-44), a work of historic importance in the field (although his system of classification by scales has been discarded), studies of fossil echinoderms and mollusks, and *Étude sur les glaciers* (1840), one of the first expositions of glacial movements and deposits, based on his own observations and measurements. Agassiz came to the United States in 1846 and two years later accepted the professorship of zoology and geology at Harvard. His first wife died in Germany in 1848, and in 1850 in Cambridge he married Elizabeth Cabot Cary. In the United States he was primarily a teacher and very popular lecturer. Emphasizing advanced and original work, he gave major impetus to the study of science directly from nature and influenced a generation of American scientists. His extensive research expeditions included one along the Atlantic and Pacific coasts of the Americas from Boston to California (1871-72). His *Contributions to the Natural History of the United States* (4 vol., 1857-62) includes his famous "Essay on Classification," an extension of the theory of RECAPITULATION to geologic time. Despite his own evidences for evolution, Agassiz opposed Darwinism and believed that new species could arise only through the intervention of God. See biographies by Jules Marcou (including letters, 1896), J. D. Teller (1947), and Edward Lurie (1960, repr. 1967), Lane Cooper, *Louis Agassiz as a Teacher* (rev. ed. 1945).

Agassiz, Lake, glacial lake of the PLEISTOCENE EPOCH, c. 700 mi. (1,130 km) long, 250 mi. (400 km) wide, formed by the melting of the continental ice sheet some 10,000 years ago, covered much of present-day NW Minnesota, NE North Dakota, S Manitoba, and SW Ontario. The lake was named in 1879 in memory of Louis Agassiz for his contributions to the theory of the glacial epoch. Lake Traverse, Big Stone Lake, and the Minnesota River are in the channel of prehistoric River Warren. Lake Agassiz's original outlet to the south. As the ice melted, the water drained E into Lake Superior, and after the ice disappeared, N into Hudson Bay, leaving lakes Winnipeg, Mani-

toba, and Winnipegosis, Red Lake, Lake of the Woods, and many smaller lakes. The bed of the old lake, the Red River valley, has become an important wheat-growing region because of its rich, deep soil. See Warren Upham, *The Glacial Lake Agassiz* (1895, U.S. Geological Survey, Monographs, Vol. XXV).

agate, cryptocrystalline variety of QUARTZ banded in two or more different colors, extensively used as a semiprecious gemstone and in the manufacture of grinding equipment. The banded appearance owes its origin to the fact that agates are built up by the slow deposition of silica from solution into cavities in older rock—often igneous rocks. The layers differ in porosity, and the stones can be artificially stained to produce combinations of color more vivid and pleasing than those found in the natural state. The cutting and staining of agates has long had its center at Idar-Oberstein in Germany. Important sources of agate are Brazil, Uruguay, India, Mexico, and the United States (in the Lake Superior region and in some western states). The moss agate or mocha stone is so called because it contains dendritic inclusions resembling moss. See CHALCEDONY, ONYX, SARD.

Agate Fossil Beds National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Agatha, Saint (äg'äthä), 3d cent., Sicilian virgin, martyred under Roman Emperor Decius. She is mentioned in the Canon of the Mass and is invoked against outbreaks of fire. She is also the patron saint of bell makers. Feast Feb. 5.

Agatharchus (äg'ätharkäs), fl. 5th cent. B.C., Greek painter of the Athenian school, b. Samos. He is credited with important discoveries in the application of shading and perspective and is said to have been the first painter of scenery for tragedies.

Agathon (äg'äthön), c. 450–c. 400 B.C., Athenian tragedian. Plato's *Symposium* has as its scene the celebration of Agathon's first dramatic victory. Less than 40 lines of his work survive.

Agave (ägä'vë) see PENTHEUS

agave* see AMARYLLIS

Agawam (äg'äwam), 1 town (1970 pop. 21,717), Hampden co., SW Mass., on the Connecticut River, settled 1636, inc. 1855. Leather goods, machinery, and electronic equipment are produced. 2 former name of IPSWICH, Mass.

Agboville (ägbö'vël'), town (1964 est. pop. 15,475), Ivory Coast. Situated in a forest zone, the town is the market center for a region producing plantains, yams, coffee, cassava, manioc, rice, and timber. Fishing is pursued in numerous family ponds nearby. Agboville is on the country's railroad line, which reached the town in 1907.

Agdistis. see ATTIS, CYBELE

age, in classical mythology, a period of the world's history, especially as systematized by the poets Hesiod and Ovid. The ages were the Golden Age, ruled by Cronus (Saturn), a period of serenity, peace, and eternal spring; the Silver Age, ruled by Zeus (Jupiter), less happy than the preceding, with luxury prevailing; the Bronze Age, a period of strife; and the Iron Age, the present, a time of travail, when justice and piety have vanished. Hesiod also included a Heroic Age before the Iron Age, during which the Trojan War was fought. The division of history into three technological ages (stone, bronze, and iron) was also present in ancient Greek and Roman writings. The sequence became more widely used in the 19th cent. as archaeological evidence confirmed the historical validity of the three stages. Artifacts were first arranged according to the three-age system in 1836 by C. J. Thomsen at the Museum of Northern Antiquities in Copenhagen.

Agee (äg'ë-ë), father of Shammah, a mighty man. 2 Sam. 23:11.

Agee, James (ä'jë), 1909–55, American writer, b. Knoxville, Tenn., grad. Harvard, 1932. He was a writer for *Fortune* magazine, a movie critic for *Time* and *The Nation*, and a film scriptwriter. His best-known work is the posthumously published novel *A Death in the Family* (1957, Pulitzer Prize), which recounts in poetic prose the tragic impact of a man's death on his wife and family. Agee's other works include *Let Us Now Praise Famous Men* (1941), a prose commentary on the tenant farmer; a novel, *The Morning Watch* (1954), a collection of reviews, comments, and scripts; *Agee on Film* (2 vol., 1958–60), a collection of letters to a former teacher; *Letters of James Agee to Father Flye* (1962); *Collected Poems* (1968); and *Collected Short Prose* (1969). See study by P. H. Ohlin (1966).

age grade or age set, in anthropology, differentiation of social role based on age. Entry into a grade may come about by the attainment of a certain bio-

logical state, especially puberty, or a socially recognized status change that typically occurs at certain age periods, notably marriage and the birth of a child. Persons of junior grade may give respect and some degree of obedience to those of more senior grade; the seniors expect deference but may also acknowledge obligations to assist, teach, test, or lead their juniors. The practice of age grading is found in some form in every society.

Ageladas (äj'älä'däs), c. 540–c. 460 B.C., Greek sculptor of the Argive school, famous for his statues of gods and Olympian athletes. A popular tradition, discredited by many authorities, names him as the teacher of the great sculptors, Polykleitos, the Elder, Phidias, and Myron.

Agen (azha'n'), town (1968 pop. 37,470), capital of Lot-et-Garonne dept., SW France, on the Garonne River, in GUYENNE. It is an agricultural market place in the center of a fruit-growing region and an industrial center where food products, clothing, agricultural machinery, bicycles, tiles, drugs, furniture, and musical instruments are manufactured. Originally a Gallic settlement, Agen was a crossroads in Roman times. It became the capital of the county of Agenois under the CAROLINGIANS. An episcopal see from the 10th cent., it passed (1154) to England with the rest of AQUITAIN. It was reconquered in the HUNDRED YEARS WAR (1337–1453) and incorporated into the province of Guyenne. Among the historic structures are chapels from the 13th and 14th cent., the Church of St. Jacobus (13th cent.), with its Gothic frescoes, the St. Hilaire Church (15th cent.), and the Romanesque and Gothic St. Caprais Cathedral.

Agency for International Development (AID), Federal agency in the State Dept. created by Congress (Sept., 1961) to consolidate U.S. nonmilitary foreign-aid programs. The agency incorporated the International Cooperation Administration, the Development Loan Fund, and related agencies such as the Office of Food for Peace. AID is organized into five divisions—one for each major underdeveloped area—East Asia, Vietnam, Near East and South Asia, Latin America, and Africa. AID offers technical, capital, and commodity assistance and gives priority to programs in agriculture, population-growth control, and education. AID stresses long-run development goals financed through long-term loans and encourages the investment of private capital through liberal investment guarantees. Countries applying for loans are required to show that they have made effective use of their human and material resources and have undertaken policies such as land reform so as to insure that AID benefits will reach the populace as rapidly as possible.

Agenor (äj'ënör), in Greek mythology, 1 King of Tyre, father of Cadmus and Europa. When Europa disappeared, Agenor sent Cadmus and his other sons in search of her. 2 Trojan hero, son of Antenor.

Ageo (a'gäo), city (1970 pop. 110,792), Saitama prefecture, central Honshu, Japan. It is an agricultural and communications center. Raw silk and sake are produced in the city.

age of consent, the age at which, according to the law, persons are bound by their words and acts. There are different ages at which one acquires legal capacity to consent to marriage, to choose a guardian, to conclude a contract, and the like. For marriage, the age may be higher for males than for females if the jurisdiction does not guarantee equal rights to men and women. Age of consent also means the age below which consent of the female to sexual intercourse is not a defense to a charge of RAPE. Under common law this age was 10; state statutes in the United States generally set it between 13 and 18. See also CONSENT.

ageratum (äj'ärä'täm, äjër'ä-) [Gr., =unaging], any plant of the genus *Ageratum*, tropical American annuals of the family Compositae (COMPOSITE family). The commonly cultivated species is the Mexican *A. houstonianum*, with thick terminal clusters of blue flowers. The similar mistflower, a *Eupatorium* (see BONESET), is a perennial sometimes called hardy ageratum. *Ageratum* is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Asterales, family Compositae.

Agessander (äj'äsän'där) see LAOCOON

Agessilaus II (äj'ë'silä'äs), c. 444–360 B.C., king of Sparta. After the death of Agis I (398? B.C.), he was brought to power by Lysander, whom he promptly ignored. After the Peloponnesian War the Greek cities in Asia Minor had not been ceded to Persia despite Sparta's promises, and in 396 B.C. Agessilaus went there to oppose the Persian satraps TISSAPHERNES and PHARNABAZUS by attacking them. He managed to rout Tissaphernes, but Persian naval power

drove him back to Greece, where he won (394 B.C.) a hollow victory over the Thebans and their allies at Coronea, but he could not reestablish Spartan hegemony. By the King's Peace (or Peace of Antalcidas) in 386 B.C., the cities of Asia Minor were ceded to Persia. Thebes and Athens entered an alliance against Sparta, and war followed. When Agessilaus deliberately excluded Thebes from the peace talks, Thebes renewed the war and the Theban general Epaminondas won (371 B.C.) a resounding victory at LEUCTRA. Sparta did not recover. Agessilaus took Spartan mercenaries to Asia Minor and Egypt and died on the way back. His rule had seen the ruin of Sparta, although he was lauded by his contemporaries, notably Xenophon.

aggada: see HALAKAH

Aggeus (äg'ë'äs), Vulgate form of HAGGAI

agglutination, in biochemistry see IMMUNITY

agglutination, in linguistics see INFLECTION

aggression, a form of behavior characterized by forceful physical or verbal attack. It may be appropriate and self-protective, even constructive, as in healthy self-assertiveness, or inappropriate, destructive, or annihilatory. Aggression may be directed outward, against others, as in explosive personality disorders, or inward, against the self, leading to self-damaging acts or suicide. The directness and degree of hostility may vary from physical assault to gentle verbal criticism, and the means of expression may include deprecation, avoidance, teasing, provocation, and obstructiveness. In ordinary social life aggressive tendencies are restrained except in such ritualized situations as competitive sports. In adults physical aggression that is not a response to a clear threat or unusual provocation is usually considered a symptom of mental illness or character disorder and is attributed to pathological intensity of aggressive drives, weakness of controls, or both. Sadistic or masochistic acts are a combination of aggressive and affectionate behavior. Sigmund Freud postulated in 1920 the potential, present in humans at birth, of an aggressive drive, which together with the opposing sexual, or libidinal, drive contributed to the development of personality and found expression in behavior. However, many psychoanalysts who followed Freud have not accepted aggression as a primary drive and have instead viewed it as a reaction to frustration of primary needs. The ethologist Konrad Lorenz extrapolated from animal data that human aggression is an inborn legacy from man's prehuman primate ancestors. His colleague Nicholas Tinbergen traced this aggressiveness from the time when man ceased to be a vegetarian individualist like most of his primate cousins and became a carnivorous group hunter like the wolf. Tinbergen believes that there is a complex relationship between this innate aggressive potential and a social conditioning that evokes it. Other ethological data also suggest the presence of innate mechanisms to prevent or terminate aggressive behavior destructive to species. Anthropologists such as Montagu have argued that animal data cannot be applied directly to man's special situation, that man is largely instinctless, and that his aggressiveness is wholly a learned form of behavior. Some psychoanalysts share a similar view, holding that aggressive behavior is learned as a maladaptive means of coping with real and symbolic threats to the satisfaction of needs. Interest in the causes of violence, war, and assassination has led to wide inquiry into the social and biological roots of violence as a specific expression of aggression. The contributions of abnormal genetic endowment, learning difficulties, minimal brain damage, brain abnormalities, such as certain forms of temporal lobe epilepsy, and such social factors as crowding and poverty have been suggested in certain cases to have contributed to exaggeratedly aggressive behavior. But even if these factors were proved to be causative, each would have limited applicability to the range of aggressive phenomena in man. See Konrad Lorenz, *On Aggression* (tr. 1966), Alexander Alland, *The Human Imperative* (1972), R. N. Johnson, *Aggression in Man and Animals* (1972).

Agha Muhammad Khan. see AGA MUHAMMAD KHAN

Aghrim, Republic of Ireland see AUGHRIM

agilawood see ALOES

Agincourt (azhän'kōör'), modern Fr. Azincourt, village (1968 pop. 276), Pas-de-Calais dept., N France. There, on Oct. 25, 1415, Henry V of England defeated a much larger French army in the HUNDRED YEARS WAR (1337–1453). His success, which was due mainly to the superiority of the masses of English longbow men over the heavily armored French

knights, demonstrated the obsolescence of the methods of warfare of the age of chivalry. The victory enabled the English to conquer much of France. The battle is the central scene of Shakespeare's drama *Henry V*.

Agis (ā'jīs), name of four Spartan kings. Agis I, fl. late 10th cent. B.C., was the traditional founder of the Agiad dynasty, one of the two ruling dynasties of Sparta, which had a dual kingship. The other dynasty, the Eurypontids, fathered the succeeding Agises. Agis II, d. 398 B.C., acceded to the throne on the death (c. 427) of his father, Archidamus II. Agis led Spartan forces at the battle of Mantinea (418 B.C.) during the Peloponnesian War. Advised by Alcibiades, who had fled to Sparta to avoid trial at home, he quickly invaded Attica and established a post there. Later he quarreled with his adviser Agis aided Lysander in the final Spartan victories of the war. Agis III, d. 331 B.C., succeeded his father Archidamus III in 338. He led a revolt of Peloponnesian cities against Alexander the Great, who was in Asia. The rebels were crushed, and Agis was killed at Megalopolis. His death ended Greek revolts against Alexander. Agis IV, d. c. 240 B.C., son of Eudamidas II, succeeded his father c. 244 B.C. He tried to revitalize Sparta by reform and by returning to the constitution of Lycurgus. His efforts failed, and he was murdered.

Aglaia (āglā'ā) see GRACES

Aglipay, Gregorio (grāgō'rēō aglēp'i), 1860-1940, Philippine clergyman. A priest who joined the revolutionary forces of Emilio Aguinaldo, he was excommunicated (1902). He took his followers from the Roman Catholic Church to found the Philippine Independent Church. Bishop Aglipay attracted many followers, said to number more than 1 million. His church, which retained many of the forms of the Roman Catholic Church, discarded confession and celibacy for the priesthood. Later it established friendly relations with the Unitarians. After Aglipay's death dissension shook the organization. In 1961, however, full communion was established between the Philippine Independent Church and the American Episcopal Church. Aglipay was defeated by Manuel Quezon in the presidential election of 1935.

Aglipayans: see PHILIPPINE INDEPENDENT CHURCH

Agnes, Saint, 4th cent., virgin martyr. A noble Roman girl, she was martyred at the age of 13 after rejecting a well-born suitor. She is commemorated in the Canon of the Mass. On her feast two lambs are blessed and from their wool pallia (see PALLIUM) are made. Feast Jan. 21.

Agnes Scott College, at Decatur, Ga., Presbyterian, U.S., for women, founded 1889 as the Decatur Female Seminary, chartered 1906 as Agnes Scott College.

Agnew, Spiro Theodore (spēr'ō), 1918-, 39th Vice President of the United States (1969-73), b. Baltimore, Md. Admitted to the bar in 1949, he entered politics as a Republican and was elected (1961) chief executive of Baltimore co. He later became (1967) governor of Maryland, where he won passage of an open housing law and expanded the state's antipoverty programs. Nominated (1968) for the vice presidency on the Republican ticket with Richard M. Nixon, Agnew campaigned on a tough law-and-order platform. As Vice President, he sharply attacked opponents of the Vietnam War as disloyal, criticized intellectuals and college students for questioning traditional values, and frequently accused the news media of biased news coverage. In the 1970 congressional campaigns, he campaigned vigorously against liberals and antiwar candidates in both parties. Reelected with Nixon in 1972, Agnew was forced to resign on Oct. 10, 1973, after a Justice Dept. investigation uncovered evidence of corruption during his years in Maryland politics, his alleged acceptance of bribes overlapped with his tenure as Vice President. He pleaded no contest to the charge of Federal income tax evasion. He was sentenced to three years' probation and fined \$10,000, and he was later disbarred (1974) by the Maryland court of appeals. See biographies by Joseph Alright (1972), Theo Lipmann (1972), and Jules Witcover (1972).

Agni (āg'nē) see VEDA

Agnon, Shmuel Yosef (shmōō'ēl' yōsēf' agnōn'), 1888-1970, Israeli novelist and short-story writer, b. Galicia, Poland, as Samuel Josef Czaczkes. He changed his name after settling in Palestine in 1907, where he remained for the rest of his life, except for 10 years in Germany (1913-23). Although he initially wrote in both Hebrew and Yiddish, eventually he wrote in classical Hebrew alone. His works were thus difficult to translate and were not widely appre-

ciated for many years. He is now regarded as the greatest modern writer of fiction in Hebrew. Often containing symbolic and mystical elements, his novels and stories explore various aspects of Jewish life. They frequently focus on the problems of Jews assimilating into Western culture. His works include the novels *The Bridal Canopy* (1919, tr. 1937), *A Guest for the Night* (1938, tr. 1968), and *The Day Before Yesterday* (1945), the short-story collections *Forsaken Wives* (1908), *Two Tales* (tr. 1966), and *Twenty-One Stories* (tr. 1970), and *In the Heart of the Seas: A Story of a Journey to the Land of Israel* (1966). Agnon shared the 1966 Nobel Prize for literature with the poet Nelly Sachs.

agnosticism (āgnōs'tīzəm), form of skepticism that holds that the existence of God cannot be logically proved or disproved. Among prominent agnostics have been Herbert Spencer, T. H. Huxley (who coined the word *agnostic* in 1869), and Auguste Comte. Immanuel Kant was an agnostic who argued that belief in divinity can rest only on faith. Agnosticism is not to be confused with **ATHEISM**, which asserts that there is no God.

Agnus Dei (āg'nās dē'i, an'yōōs dā'ē) [Lat.], the Lamb of God, i.e., Jesus Christ. The lamb of the PASSOVER sacrifice is said to prefigure the crucifixion. Isaiah calls the expected Messiah the Lamb of God, and Jesus is met by John the Baptist with the words, "Behold, the Lamb of God, who takes away the sins of the world." In the Mass the Agnus Dei, or Lamb of God, is said or sung while the communion bread is being broken for distribution. It is usually the final movement of choral masses. In Anglican worship it is sung during communion. In iconography a lamb with halo and cross is called an Agnus Dei.

agora (āg'ərə) [Gr., =market], in ancient Greece, the public square or market place of a city. In early Greek history the agora was primarily used as a place for public assembly, later it functioned mainly as a center of commerce. Usually in a readily accessible part of the city, it was often surrounded by the public buildings, such as the royal palace, the law courts, the assembly house, and the jail. A favorite architectural device was the colonnade surrounding the agora. One of the highest honors was to be granted a tomb in the agora. The agora was similar to the Roman FORUM.

Agoracritus (āg'ōrāk'rītəs), fl. 5th cent. B.C., Athenian sculptor born on the island of Paros, said to have been the favorite pupil of Phidias. His best-known work was the colossal Nemesis at Rhamnus in Attica, erroneously ascribed by some to Phidias himself. Fragments of this statue and of its pedestal are in the British Museum and in the national museum in Athens.

Agostino di Duccio (agōstē'nō dē dōō'tchō), b. 1418, d. after 1481, Florentine sculptor. Agostino worked mainly in other parts of Italy; he carved marble narrative reliefs for the facade of the cathedral at Modena, decorated portions of the so-called Tempio Malatestiano at Rimini, and worked on the facade of San Bernardino at Perugia. Somewhat awkward in his rendering of anatomy, Agostino nevertheless developed a lively style. There are numerous charming reliefs by him of the *Madonna and Child* (Opera del Duomo, Florence, Louvre, National Gall. of Art, Washington, D.C.).

agouti (agōō'tē), name applied to rabbit-sized rodents of the genus *Dasyprocta*, found in Central and South America and in the West Indies. They have slender limbs with five front and three hind toes, rudimentary tails, and coarse rough hair that varies from reddish to dark brown depending upon the species. Agoutis are forest dwellers, they eat leaves, roots, nuts, fruits, and sugarcane. They are good swimmers and fast runners. *Agouti* is occasionally used instead of *Cuniculus* as the generic name of the related paca, or spotted CAVY. Agoutis are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Dasyproctidae.

Agra (ā'grā, āg'rā), former province, N central India. The presidency, or province, of Agra was created in 1833 when the British partitioned the Bengal presidency. In 1836, Agra was renamed the North West Province. In 1877, Agra and Oudh were placed under one administrator, and in 1902 they became known as the United Provinces of Agra and Oudh. The city of Agra (1971 pop. 594,858), Uttar Pradesh state, is on the Jumna River. An important rail junction and commercial center and a district administrative headquarters, it is noted for its shoes, glass products, handicrafts, carpets, and especially its historic architecture. The present city was established (1566) by AKBAR and was for many years a Mogul

capital. In the reign of Shah Jehan (1628-58), the magnificent TAJ MAHAL was built. Other notable historic buildings are Akbar's fort, the Pearl Mosque, and the Great Mosque (within the fort). Agra's importance diminished after the Mogul court moved to Delhi in 1658. During the decline of the Mogul empire, the city frequently changed rulers until 1803, when it was annexed by the British. From 1836 to 1858 it was the capital of the North West Province. Agra Univ. is in the city.

Agramonte, Aristides (arē'stēdās agramōn'tā), 1869-1931, Cuban physician and pathologist, M.D. Columbia, 1892. A member of the medical corps of the U.S. army, he was appointed pathologist on the Commission on Yellow Fever in Havana, with Walter Reed and James Carroll, in 1900. He was professor of bacteriology and experimental pathology at the Univ. of Havana. Shortly before his death he undertook the organization of a department of tropical medicine at Louisiana State Univ.

Agramonte, Ignacio (ēgnā'syō), 1841-73, Cuban revolutionist. He played an important part in the Ten Years War. He became (1869) an official of the revolutionary government, but, disagreeing with Carlos Manuel de Céspedes, resigned. For a time commander in chief of the revolutionary forces, Agramonte died in battle.

agranulocytosis (āgrān'yālōsītō'sīs), disease in which the production of granulated white blood cells by the bone marrow is impaired. Although the disease may occur spontaneously it is usually induced by exposure to certain drugs, commonly antithyroid drugs, sulfonamides, and phenothiazines. Granulocytes are necessary to protect the body against infectious agents; their depletion results in severe respiratory infections, ulceration of the mouth and colon, high fever, and prostration. These symptoms may occur suddenly or over a period of days or weeks. Penicillin is usually the drug of choice to combat the bacterial invasion. The fatality rate is high (approaching 80%) in untreated cases, and deaths are common even with antibiotic treatment.

Aggrapha of Jesus (āg'rāfā) [Gr., =unwritten], sayings attributed to Jesus not found in the Gospels. There are quotations in the New Testament that do not appear in the Gospels (e.g., Acts 20:35), and in early Christian literature there are some Aggrapha from oral tradition. Thus the papyri found at Oxyrhynchus have given some new Aggrapha. Many may be PSEUDEPIGRAPHIA.

agrarian laws, in ancient Rome, the laws regulating the disposition of public lands (*ager publicus*). It was the practice of Rome to confiscate part of the land of conquered cities and states, and this was made public land. So long as it remained public land, it was occupied by tenants who paid rent, usually in produce, to the state. From the earliest times the patricians gained the largest part of the public lands, and the holding of public lands tended always in Italy to become the exclusive prerogative of the wealthy. There was also a tendency to consider land long occupied as real property of the occupier. The agrarian laws resulted from the continued efforts of the poorer classes to gain some share in the public lands. Since these lands were occupied without lease, the strictly legal aspects were not difficult, but inasmuch as most agrarian legislation challenged the lucrative privilege of the powerful of retaining the lands they held, the agrarian laws were often flagrantly disobeyed or calmly ignored. In 486 B.C., Spurius Cassius Viscellinus tried to pass a law assigning some new lands in Gaul to the poor of Rome and Latium, but Roman jealousy prevented its passage. The most famous of early agrarian laws were the Licinian Rogations (367 B.C.) of Caius Licinius Calvus Stolo (see under LICINIUS), which limited strictly the amount of land any citizen could hold and the number of sheep and cattle he could pasture on public land. These laws fell into disuse. About 233 B.C., Caius Flaminius succeeded in assigning some public lands to poor citizens. The next serious attempt to rectify an increasingly difficult situation was the Sempronian Law of 133 B.C. devised by Tiberius Sempronius Gracchus (see GRACCHI). This reenacted the provisions of the Licinian Rogations and added to the maximum allowance an extra amount for each son. The occupants were to be reduced to the legal maximum and the surplus given to the poor. The occupants were to receive in compensation full title to the land they retained. A commission was set up to execute the law, but the senate by its obstructionist tactics weakened the commission, thus rendering the law ineffective. In 123 B.C., Caius Gracchus revived the Sempronian

Law, but this time the senate ruined the reform by allowing the new tenants to sell their new land, which the wealthy bought up. From time to time newly acquired lands would be assigned to the poor, but as a rule they simply passed into the hands of the wealthy landholders. In the 1st cent. B.C. there were several assignments of public lands to veterans in Italy as well as on the borders of the empire. The wholesale confiscation and reassignment of private lands by Sulla (82 B.C.) and Octavian and Antony (43 B.C.) were called agrarian laws. The first step in the final collapse of the democratic effort that had resulted in the agrarian laws was the edict of Domitian (A.D. c.82) assigning the title of public lands in Italy to those who held them. The poorer classes were thus confirmed in a dependency on the powerful that foreshadowed the greater dependency of FEUDALISM.

agrarian reform, redistribution of the agricultural resources of a country. The traditional conception of agrarian, or land, reform is confined to the redistribution of land, in a wider sense it includes other related changes in agricultural institutions, such as credit, taxation, rents, and cooperatives. Reform of the conditions for land tenure has been one of the recurring themes in history. The history of the Greek city-states is filled with struggles between landowners and the landless. The land reform issue erupted into violence several times in Rome's history and was a major part of the Gracchan AGRARIAN LAWS. During the Middle Ages many peasant rebellions were triggered by demands for land reform, among the more famous were the Peasants' Revolt in England led by John Ball and Wat Tyler in 1381 and the German PEASANTS' WAR of 1524-26. In the 20th cent., with the successful revolution of the Bolsheviks in Russia, a new dimension to the concept of agrarian reform was added. The socialization of agriculture (i.e., the collective ownership of all land, partly through state farming but mainly through collective farming under state control) was regarded by the Marxists as vital to the realization of COMMUNISM. A major element in the success of the Russian Revolution was the desire for land among the peasantry, who formed 80% of the population. Shortly after he assumed power, Vladimir Ilyich Lenin, the Bolshevik leader, published his decree (1917) declaring all land to be state property. The landed estates belonging to the nobility and gentry were seized by peasants, and until 1929 there were approximately 25 million peasant holdings. Government propaganda urging the collectivization of farms had little effect, and, under Joseph Stalin, collectivization was enforced at the cost of much bloodshed. After World War II most of the countries of Eastern Europe under Communist governments experienced similar agrarian reforms. Large landed estates, operated by laborers whose social and economic status was little better than that of serfs, were broken up and redistributed, with a maximum size of 50 to 124 acres (20.2-50 hectares) imposed. Following the pattern established in the Soviet Union, however, this step toward individual small holdings was only a prelude to the introduction of compulsory collectivization, the ultimate goal of Communist land reform. In China, the successful revolution by the Communists in 1949 brought about a fundamentally more agrarian revolution than had occurred in the Soviet Union. Initially, 40% to 50% of the arable land was transferred from landlords and rich peasants to poor peasants and workers. By 1956 more than 95% of the peasant households had been organized into agricultural cooperatives. In 1958 it was decided to amalgamate these cooperatives into the larger people's communes, the main objective of the communes was to establish a collective socialist agriculture prior to mechanization, a decision much criticized by the Soviet Union. World pressure for land reform is most powerful in the underdeveloped areas, particularly in Asia and Latin America. In Asia, especially in densely populated areas such as the Indian subcontinent and Japan, agitation has been mainly for redistribution among landless laborers, for security of tenure, and for the elimination of middlemen rent receivers, oppressive rents, and usurious interest. Agrarian reforms began in Japan during the Meiji Restoration (1868-1912), when feudal fiefs and stipends were abolished and the land tax was revised. From this period until World War II agrarian disputes continued from time to time. After the war the U.S. occupation forces supervised further land reform so that by 1949 over 80% of Japan's tenanted land had been transferred from absentee landlords to tenant cultivators. In India and Pakistan similar programs of agrarian reform were instituted as well as programs of land donation

(see BHAVE, Vinoba). In Latin America land reform is a major problem. The agrarian structure in Latin America consists of enormous tracts of land (latifundios) concentrated in very few hands. Because of this degree of concentration, greater than that of any other world region of comparable size, there is a growing demand for expropriation and redistribution. Ownership is often of the absentee type, with laborers no better off than serfs. Although the revolution in Mexico resulted in a land reform (1917), the program of redistribution of land is still only partially completed. A land reform law also followed the Bolivian revolution of 1952, but by 1970 only 45% of the peasant families had received titles to land. One of the most complete agrarian reforms in Latin America has taken place in Cuba, where land reform was one of the main platforms of the revolution of 1959. Nearly all the large holdings subject to expropriation were taken over by the National Institute for Land Reform (INRA), which is responsible not only for administering land reform, but for planning and directing all agricultural policy. The remaining agricultural area is limited to a ceiling of about 166 acres (67 hectares) with the tenants having full ownership rights. Most of the land taken over by INRA has not been distributed to the peasants, but is being managed by officials of INRA or by army personnel. An agrarian reform program was conducted in Chile between 1970 and 1973 under the socialist government of Salvador Allende. All farms of over 198 acres (80 hectares) were expropriated, and redistribution to the peasants was begun, this program ceased (1973) with the downfall of Allende's government. See COLLECTIVE FARM. See United Nations, *Land Tenure, Land Reform. Defects in Agrarian Structure as Obstacles to Economic Development* (1951), Kenneth Parsons, ed., *Land Tenure* (1956), Clarence Senior, *Land Reform and Democracy* (1958), Kuo-chün Chao, *Economic Planning and Organization in Mainland China* (2 vol., 1959-60), J. R. Brown and Sein Lin, ed., *Land Reform in Developing Countries* (1967), Doreen Warriner, *Land Reform in Principle and Practice* (1969), E. H. Jacoby, *Man and Land* (1971).

Agricola (Cneius Julius Agricola) (ægrík'əla), A.D. c.40-A.D. 93, Roman general, the conqueror of Britain. After a distinguished military and political career (partly in Britain), he was made consul (A.D. 77) and was governor (A.D. 78?-A.D. 85?) of Britain. He pacified most of the island, conquering North Wales and advancing far into Scotland. He also circumnavigated the island. An enlightened governor, he sought to Romanize Britain without harshness or oppression. As portrayed in the biography by his son-in-law, Tacitus, Agricola was the finest exemplar of the old Roman virtues in his day. See A. R. Burn, *Agricola and Roman Britain* (1953, repr. 1965).

Agricola, Georgius, latinized from Georg Bauer (gä'örk bou'ər), 1494-1555, German physician and scientist, known as the father of mineralogy. He was a pioneer in physical geology and the first to classify minerals scientifically. His celebrated work *De re metallica* (1556) was a standard in metallurgy and mining for over a century and was translated into English (1912) by Herbert C. Hoover and Lou H. Hoover.

Agricola, Johann or Johannes (yō'hān, yōhā'nəs), c.1494-1566, German Protestant minister, whose family name was Schnitter (originally Schneider). He was born at Eisleben and is sometimes called Magister Islebius. He had an early association with Martin Luther and was active in the founding of Protestantism. In 1536 he espoused antinomianism, thus breaking with Luther. He was court preacher to Joachim II, elector of Brandenburg and helped draw up the Augsburg Interim. Agricola also made a collection of German proverbs.

Agricola, Rudolphus, 1443-85, Dutch humanist, whose real name was Roelof Huysman. He opposed scholasticism and spread the culture of the Renaissance throughout Germany.

Agricultural Adjustment Administration (AAA), former U.S. government agency established (1933) in the Dept. of Agriculture under the Agricultural Adjustment Act of 1933 as part of Franklin Delano Roosevelt's New Deal program. Its purpose was to help farmers by reducing production of staple crops, thus raising farm prices and encouraging more diversified farming. Farmers were given benefit payments in return for limiting acreage given to staple crops, in the case of cotton and tobacco coercive taxes forced (1934-35) farmers to cut the amounts that they marketed. In 1936 the Supreme Court declared important sections of the act invalid, but Congress promptly adopted (1936) the Soil Con-

servation and Domestic Allotment Act, which encouraged conservation by paying benefits for planting soil-building crops instead of staple crops. The Agricultural Adjustment Act of 1938 empowered the AAA in years of good crops to make loans to farmers on staple crop yields and to store the surplus produce, which it could then release in years of low yield. Soil conservation was continued and farmers could by two-thirds vote adopt compulsory marketing quotas (as they did for cotton and tobacco). In World War II the AAA turned its attention to increasing food production to meet war needs. It was renamed (1942) the Agricultural Adjustment Agency, and in 1945 its functions were taken over by the Production and Marketing Administration. See E. G. Nourse and others, *Three Years of the Agricultural Adjustment Administration* (1937, repr. 1971), G. S. Shepherd, *Agricultural Price and Income Policy* (3d ed. 1952), V. L. Perkins, *Crisis in Agriculture* (1969).

agricultural subsidies, financial assistance to farmers through government-sponsored price support programs. Since the 1930s most industrialized countries have developed agricultural price support policies to reduce the instability of farm prices and to raise farm income, the programs vary considerably by country. In food-importing countries, such as Great Britain and the nations of the Continent, agricultural price support programs are also aimed at encouraging domestic production to make the economies more self-sufficient. In food-exporting countries, such as the United States and Canada, agricultural subsidy programs are used primarily to increase farm income by raising the long-term level of prices above free-market levels. In the United States the federal government first assisted agriculture directly in the 1920s. During World War I farmers had been encouraged to increase production, and in the postwar period wartime levels of production were maintained, resulting in an oversupply that caused a disastrous collapse of prices. In Congress, in order to aid the farmer, a nonpartisan farm bloc attempted to promote favorable legislation. The Agricultural Credits Act (1923) expanded Federal credit available to farmers for intermediate loans, but the measure failed to solve the problem. Although President Coolidge vetoed the McNary-Haugen bills (1927, 1928), which featured price fixing of products and direct subsidies, the situation of the farmers had so worsened by 1929, even before the onset of the depression, that President Hoover signed the Agricultural Marketing Act (1929), initiating a program of direct aid to agriculture. The act established the Federal Farm Board with a fund of \$500 million to further farming cooperatives and to set up stabilization boards, which by their purchases on the open market were to fix the prices of grain and cotton. The purchases of the Farm Board, however, encouraged farmers to raise still larger crops in expectation of higher prices, the Farm Board failed and sold out its holdings at a loss of \$200 million. Between 1929 and 1932 the ratio of prices paid by farmers to that received by farmers fell to the lowest point on record. The Agricultural Adjustment Act of 1933, one of the first pieces of legislation passed under President Franklin Delano Roosevelt's New Deal program, attempted to control farm prices by reducing and controlling the supply of basic crops. Previous attempts to raise farm prices—such as the Farm Board—had failed because of the difficulty in controlling supply. Through the Agricultural Adjustment Administration (AAA) in the Dept. of Agriculture, the Secretary of Agriculture was empowered to fix marketing quotas for major farm products, to take surplus production off the market, and to cut the production of staple crops by offering producers payments for voluntarily reducing their acreage. It was hoped that these measures would not only provide farmers with immediate relief in the form of cash payments but would increase the prices for their products by reducing their surpluses. The Commodity Credit Corporation (CCC), also created in 1933, began making loans to farmers on corn and cotton and, later, on other basic farm commodities. These were nonrecourse loans for which borrowers gave no security except the commodities that were put in storage, if prices advanced above the loan value, the farmers could sell the products and repay the loan, and if they dropped below the loan level the CCC sold the commodities and absorbed the loss. Loans were granted only to farmers who agreed to sign production control agreements. Severe drought and the programs of the AAA led to the curtailment of the surpluses, and farm prices subsequently improved, between 1932 and 1937 the prices for major farm products increased by approximately 85%. In 1936 the Supreme Court de-

clared unconstitutional certain production control features of the Agricultural Adjustment Act. Later in 1936 the Soil Conservation and Domestic Allotment Act was passed, although it made for better land use, it provided inadequate authority for price and income stabilization operations. Heavy crops of wheat and cotton in 1937 led to passage of the Agricultural Act of 1937, in its amended form this act provided the framework for the major farm program since that time. The act made price support loans by the CCC mandatory on the designated basic commodities of corn, wheat, and cotton, optional support was authorized for other commodities. Under this act and related legislation, the CCC has supported more than 100 different commodities, including fruit, vegetables, and various types of seed. From 1941 to 1948, during and just after World War II, surpluses were being rapidly utilized and price supports were used as an incentive to stimulate production of agricultural commodities. The Steagall Amendment of 1941 made supports on many nonbasic commodities mandatory for the duration of the war and for two years after the end of hostilities. In 1948 price support levels were lowered for most of these commodities. By 1949 the agriculture of war-devastated Europe and Asia had recovered to a considerable extent, and demand for American farm products declined considerably. In the meantime, however, crop production in the United States had greatly increased, with the result that farm commodity prices dropped and surpluses began to build up. The Agricultural Act of 1948, which replaced wartime controls, maintained rigid support levels for the basic commodities. The Agricultural Act of 1949 retained mandatory supports for basic commodities and provided flexible support levels for a new list of nonbasic commodities. The Korean War strengthened farm prices, and most CCC stocks were sold, from the creation of the CCC in 1933 to the end of 1952 the CCC showed a profit on basic commodities of over \$13 million. The National Wool Act of 1954 provided mandatory price supports for wool and mohair. Mounting surpluses and increased costs of government programs led to the enactment of a flexible price support program in 1954, its objective was to decrease price support levels when large surpluses existed. Large quantities of surplus basic commodities were also moved overseas under the Agricultural Trade Development and Assistance Act of 1954, popularly known as Public Law 480. In 1956 the Soil Bank Program was created, which called for payment to farmers for reducing their acreage of major supported crops and required leaving idle the land removed from production. Price-support operations, as directed by the Congress, are financed by the CCC and constitute its major activity. The largest and probably the most effective programs used were the loan and storage programs of the CCC, in addition to the nonrecourse loan program of the CCC, in some cases direct purchases were made. The desired effect of control programs was largely being negated by the utilization by farmers of improved technology that made it possible to greatly increase yields per acre. In general, the price support levels were set above the market-clearing price and the disequilibrium between prices and quantities that might be offered has been handled by stock accumulation, land withdrawal programs, and export subsidies of various types. In the early 1960s there was a shift in emphasis. The market price supports on major commodities were dropped to or near market-clearing prices, and producer's incomes meanwhile were protected by direct payments on fixed quantities of products. This shift made possible the reduction of export subsidies on major price supported crops without inducing continual stock increases or applying compulsory production controls. Direct payments to farmers greatly increased in the 1960s and 70s. The feed grain, cotton, and wheat programs accounted for most of this increase. Subsidies to maintain prices, once introduced, have proved extremely difficult to end. Representatives of the farm states have fought for their continuation despite the high prices for farm commodities. See O. B. Jesness, *Readings in Agricultural Policy* (1947), M. R. R. Benedict, *Farm Policies of the United States* (1953) and *Can We Solve the Farm Problem?* (1955), Karl Fox, *The Contribution of Farm Price-Support Programs to General Economic Stability* (1954), C. Perkins, *Crisis in Agriculture* (1969), D. F. Hadwiger, *Federal Wheat Commodity Programs* (1970), E. A. Heady, *Future Farm Programs* (1972).

agriculture, science of producing crops and livestock from the natural resources of the earth. The primary aim of agriculture is to cause the land to produce more abundantly and at the same time to protect it from deterioration and misuse. The diverse branches of modern agriculture include AGRONOMY, HORTICULTURE, entomology, animal husbandry, DAIRYING, agricultural engineering, soil chemistry, and agricultural economics. Early man depended for his life on hunting, fishing, and food gathering. To this day, some groups still pursue this simple way of life, and others have continued as roving herdsmen (see NOMAD). However, as various groups of men undertook deliberate cultivation of wild plants and domestication of wild animals, agriculture came into being. Cultivation of crops—particularly grains such as wheat, rice, rye, barley, and millet—encouraged settlement of stable farm communities, some of which grew to be towns and city-states in various parts of the world. Early agricultural implements—the digging stick, the HOE, the scythe, and the PLOW—developed slowly over the centuries, each innovation (e.g., the introduction of iron) causing profound changes in human life. From early times, too, men created ingenious systems of irrigation to control water supply, especially in semiarid areas and regions of periodic rainfall, e.g., the Middle East, the American Southwest and Mexico, the Nile Valley, and S. Asia. Farming was intimately associated with landholding (see TENURE) and therefore with political organization. Growth of large estates involved the use of slaves (see SLAVERY) and bound or semi-free labor. In the Western Middle Ages the MANORIAL SYSTEM was the typical organization of more or less isolated units and determined the nature of the agricultural village. In the Orient large holdings by the nobles, partly arising from feudalism (especially in China and Japan), produced a similar pattern. As the Middle Ages waned, increasing communications, the commercial revolution, and the steady rise of cities in Western Europe tended to turn agriculture away from subsistence farming toward the growing of crops for sale outside the community (commercial agriculture). In Britain the practice of INCLOSURE allowed landlords to set aside plots of land, formerly subject to common rights, for intensive cropping or fenced pasturage—leading to efficient production of single crops. In the 16th and 17th cent. horticulture was greatly developed and contributed to the so-called agricultural revolution. Exploration and intercontinental trade, as well as scientific investigation, led to the development of horticultural knowledge of various crops and the exchange of farming methods and products, such as the potato, which was introduced from America along with beans and corn (maize) and became almost as common in N. Europe as rice is in SE Asia. The appearance of mechanical devices such as the sugar mill and Eli Whitney's cotton gin helped to support the system of large plantations based on a single crop. The Industrial Revolution after the late 18th cent. swelled the population of towns and cities and increasingly forced agriculture into greater integration with general economic and financial patterns. In the American colonies the independent, more or less self-sufficient farm worked by the farmer and his family became the norm in the North, while the plantation, using slave labor, was dominant (although not universal) in the South. The free farm pushed westward with the frontier. In the N and W United States the era of mechanized agriculture began with the invention of such farm machines as the REAPER, the CULTIVATOR, the thresher, and the COMBINE. Other revolutionary innovations, e.g., the TRACTOR, continued to appear over the years, leading to a new type of large-scale agriculture. Modern science has also revolutionized food processing, refrigeration, for example, has made possible the large meat-packing plants and shipment and packaging of perishable foods. Urbanization has fostered the specialties of MARKET GARDENING and TRUCK FARMING. Harvesting operations (see HARVESTER) have been mechanized for almost every plant product grown. Breeding programs have developed highly specialized animal, plant, and poultry varieties, thus increasing production efficiency greatly. In the United States and other leading food-producing nations agricultural colleges and government agencies attempt to increase output by dis-

seminating knowledge of improved agricultural practices, by the release of new plant and animal types, and by continuous intensive research into basic and applied scientific principles relating to agricultural production and economics. These changes have, of course, given new aspects to agricultural policies. Most of the governments of the world face their own type of farm problem, and the attempted solutions vary as much as does agriculture itself. The modern world includes areas, such as Denmark, where specialization and conservation have been highly refined, as well as areas such as N. Brazil and parts of Africa where forest peoples still employ "slash and burn" agriculture—cutting down and burning trees, exhausting the ash-enriched soil, and then moving to a new area. In other regions, notably SE Asia, dense population and very small holdings necessitate intensive cultivation, using manpower and animals but few machines, here the yield is low in relation to energy expenditure. In many countries extensive government programs control the planning, financing, and regulation of agriculture. See also DRY FARMING, GRANGER MOVEMENT, GREEN REVOLUTION, RANCH, RANGE.

Agriculture, United States Department of, Federal executive department established in 1862, whose head was made a cabinet member in 1889. The department is charged with administering Federal programs related to food production and rural life. Although the department's principal duty is to aid farmers through research, planning, service, and regulatory agencies, it also serves consumers by inspecting and grading certain products, and administers Federal food programs designed to alleviate hunger. Divisions of the Dept. of Agriculture are Rural Development (which includes the Farmers Home Administration and the RURAL ELECTRIFICATION ADMINISTRATION), Marketing and Consumer Services (which includes the Food Stamp Program and agencies overseeing government inspection of meat, poultry, and dairy products), International Affairs and Commodity Programs, Conservation, Research and Education (which includes the Agricultural Research Service, the Forest Service, and the Soil Conservation Service), and Agricultural Economics. The publications of the department are of great value to farmers, horticulturists, and others. See Ferdie Deering, *USDA, Manager of American Agriculture* (1945), U. S. Department of Agriculture, *Century of Service* (1963), study by J. U. Terrell (1966).

Ağrı Dağı (arū' da-ū') see ARARAT

Agrirento (agrē'jān'tō), Lat. *Agrirentum*, city (1971 pop. 49,174), capital of Agrirento prov., S. Sicily, Italy, on a hill above the Mediterranean Sea. It is an agricultural market and a tourist center. Sulfur, salt, and gypsum are produced. Founded c. 580 B.C. as Acragas (or Akragas) by Greek colonists of GELA, the city became one of the most prosperous in the Greek world, as is indicated by the imposing ruins that remain. It was destroyed c. 406 B.C. by Carthage but recovered. During the first of the PUNIC WARS the city suffered at the hands of both the Romans and the Carthaginians. It fell definitively to Rome in 210 B.C. during the Second Punic War. After the fall of Rome, Agrirento passed to the Byzantines and then to the Arabs (9th cent.) and to the Normans (11th cent.). Of note in the city are the remains of several Doric temples (6th–5th cent. B.C.), Roman ruins, Christian catacombs, and archaeological and art museums.

agrimony (āg'rīmō'nē), any plant of the genus *Agri- monia*, perennials of the family Rosaceae (ROSE family) native to north temperate zones, to Brazil, and to Africa. They are found wild in the N. and central United States. Agrimony is sometimes cultivated in herb gardens for its small yellow flowers and aromatic leaves, used for an astringent tea. Agrimony is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Rosaceae.

Agrippa (āgrīp'ə), in Palestinian history see HEROD **Agrippa**, **Marcus Vipsanius** (mar'kəs vīpsā'nēəs), c. 63 B.C.–12 B.C., Roman general. A close friend of Octavian (later Emperor AUGUSTUS), he won a name in the wars in Gaul before becoming consul in 37 B.C. He organized Octavian's fleet and is generally given much credit for the defeat (36 B.C.) of Sextus Pompeius in the naval battles at Mylae and Naulochus (N. Sicily). Agrippa took part in the war against Antony, and his naval operations were the basis of Octavian's decisive victory at Actium in 31 B.C. He was perhaps the most trusted of all Augustus' lieutenants and rendered many services, notably in putting down disorders in both the East and West. His third wife was Augustus' daughter Julia. See biography by Meyer Reinhold (1933).

Agrippina I (äg'ripī'nā), d. A.D. 33, Roman matron, daughter of Agrippa and Julia and granddaughter of Augustus. She was the wife of GERMANICUS CAESAR and accompanied him on his provincial duties. After her husband's death (A.D. 19), she accused TIBERIUS of having Germanicus poisoned, and thereafter she was consistently on bad terms with the emperor. Exiled to Pandateria Island in the Bay of Naples, she starved herself to death. She is also called Agrippina Major or Agrippina the Elder. Her son Caius Caesar Germanicus became the emperor CALIGULA.

Agrippina II, d. A.D. 59, Roman matron, daughter of Germanicus Caesar and Agrippina I. By her first husband, Cn. Domitius Ahenobarbus, she was the mother of NERO. After her brother Caligula became emperor, she had some power until she was discovered conspiring against him. She achieved her ambitions for her son after her uncle Emperor CLAUDIUS I took her as his third wife. She dominated the emperor and persuaded him to advance the interests of Nero at the expense of his own son, BRITANNICUS. She almost certainly poisoned Claudius, thus bringing Nero to power. She quarreled with Seneca, with Claudius' secretary Narcissus, and with the other ministers. Her son, weary of her intrigues, had her murdered. Colonia Agrippinensis (modern Cologne) was named for her.

agronomy (əgrŏn'əmē), branch of agriculture dealing with soil management and production of major field crops. It embraces a variety of physical and biological disciplines, e.g., soil fertility and conservation, plant breeding and physiology, and climatology. Its aim is to provide food and fiber for mankind, and it thus comprises the world's largest single industry. Agronomy deals primarily with the production of large-scale crops, e.g., wheat, barley, corn, oats, rice, soybeans, and cotton, as opposed to HORTICULTURE, which is concerned with fruits, vegetables, flowers, and ornamental plants.

Agua (a'wa, a'gwa), inactive volcano, 12,310 ft (3,752 m) high, S Guatemala. In 1541, climaxing several days of unceasing rain and earthquakes, a wall of water, whose origin is not scientifically explained, swept down from its slopes, completely destroying Ciudad Vieja. Over 1,000 inhabitants were drowned, including the governor, Doña Beatriz de la Cueva. The flood resulted in the founding of Antigua.

Aguadilla (a'gwadē'yā, a'wa-), town (1970 pop. 21,031), NW Puerto Rico, a port on Mona Passage. It is the trade center for an agricultural region. Columbus reputedly landed at the site of Aguadilla in 1493.

Aguascalientes (a'gwaskalyān'tās, a'was-) [Span. = "hot waters"], state (1970 pop. 334, 936), 2,499 sq mi (6,472 sq km), central Mexico, on the Anahuac plateau, a fertile agricultural region. AGUASCALIENTES is the capital. Cattle are raised on the wide plains and in the foothills, and there is some mining in the mountainous areas, though much of the mineral wealth, especially copper, remains unexploited. Aguascalientes is noted for the warm mineral springs, for which it is named, and for a fine climate.

Aguascalientes, city (1970 pop. 173,126), capital of Aguascalientes state, central Mexico. The city is a pleasant health resort, noted for its mineral waters. Its industries include smelting and the manufacture of textiles. Aguascalientes is built over an ancient, intricate system of tunnels constructed by early, still unidentified, inhabitants. Founded in 1575, the city was long a Spanish outpost against hostile Indians; railroad development in the late 19th cent. gave it commercial importance.

Aguesseau, Henri François d' (aNre' fraNswa' dāgēsō'), 1668-1751, French lawyer. He became procureur general in the Parlement of Paris (1700) and chancellor of France (1717). Because of his opposition to John LAW he was briefly exiled to his estates. He served as chancellor again (1720-22, 1737-50) and devoted himself to judicial reform. The name also appears as Daguesseau.

Aguinaldo, Emilio (āmē'lyō agēnāl' dō), 1869-1964, Philippine leader. In the insurrection against Spain in 1896 he took command, and by terms of the peace that ended it he went into exile at Hong Kong. After the outbreak of the Spanish-American War, Aguinaldo returned to the Philippines and led a Philippine insurrection in concert with U.S. attacking forces. He set up a republic with its capital at Malolos and himself as president, and when Philippine independence was brushed aside in the peace treaty that ended the Spanish-American War, he headed (1899-1901) a rebellion against U.S. occupying forces until he was captured by Frederick Funston. Aguinaldo took the oath of allegiance to the United States, was briefly imprisoned, and retired to private life. In 1935 he ran for president but was

defeated by Manuel Quezon. Aguinaldo was charged with cooperating with the Japanese occupying the Philippines in World War II, in 1945 he was taken into custody, but he was not tried. With V. A. Pacis he wrote *A Second Look at America* (1957). See his memoirs (tr. 1967), biography by Carlos Quirino (1969).

Aguirre, Lope de (lō'pā thā agē'rā), c. 1510-1561, Spanish rebel and adventurer in colonial South America. He was often involved in violence and sedition before joining (1560) the expedition of Pedro de URSUA down the Marañon and the Amazon. He was one of the men who overthrew and killed Ursua, then he killed Ursua's successor, Fernando de Guzmán, and took command himself. He and his men reached the Atlantic—probably by the Orinoco River—and on the way wantonly laid waste Indian villages. In 1561 he seized Margarita island and held it in a grip of terror. He then crossed to the mainland in an attempt to take Panama, openly proclaiming rebellion against the Spanish crown. Surrounded at Barquisimeto, Venezuela, Aguirre in desperation crowned his infamous life by the murder of his own daughter. He surrendered and was shot. See Walker Lowry, *Lope Aguirre, the Wanderer* (1952), A. F. Bandler, *The Gilded Man* (1893, repr. 1962).

Agulhas, Cape (əgū'lās) [Port. = needles], W Cape Province, Republic of South Africa, the southernmost point of Africa. Its name refers to the saw-edged reefs and sunken rocks that run out to sea and make navigation hazardous. A powerful lighthouse on the cape alerts ships. The meridian of Cape Agulhas, long 20° E, is used to divide the Atlantic and Indian oceans.

Agur (ā'gər), unidentified author of Prov. 30.

Agusan (agoō'san), river, c. 240 mi (390 km) long, rising in the mountains of SE Mindanao, the Philippines, and flowing N past Butuan to Butuan Bay. It is navigable for small craft c. 160 mi (260 km) upstream. The Agusan valley is very fertile and is one of the Philippines' chief rice-growing regions.

Agustini, Delmira (dēlmē'ra agoōstē'nē), c. 1886-1914, Uruguayan poet. Essentially a poet of ideas, Agustini combined deep spiritual and erotic yearnings in bold and expressive imagery. She abandoned traditional forms in her strongly controlled verses. After a brief and unhappy marriage she was murdered by her estranged husband. *El Rosario de Eros* (1914) is one of her best-known collections; her complete works were published in 1924.

Ahab (ā'hāb), d. c. 853 B.C., king of Israel (c. 874-c. 853 B.C.), son and successor of OMRI 1. Ahab was one of the greatest kings of the northern kingdom. He consolidated the good foreign relations his father had fostered, and Israel was at peace during much of his reign. His marriage with JEZEBEL helped his friendship with Tyre, and his alliance with JEHOASHAPATH 1, king of Judah, made Ahab sure of his less powerful neighbor to the south. Ahab's prestige is seen in Assyrian inscriptions mentioning his alliance against SHALMANESER III, who won an indecisive victory (c. 854 B.C.) at Karkar on the Orontes. After this campaign Ahab and BENHADAD 2 of Damascus went to war over the country E of the Jordan. Ahab was killed in battle. The biblical account of Ahab's reign (1 Kings 16:28-22:40) is most interesting in its religious aspects. To the devout, Ahab's foreign wife, with her Tyrian cults and behavior, represented evil. Besides, she was a willful woman and entertained exalted ideas of royal prerogative. She met her match in ELIJAH, the champion of Israel's God. He was an important factor in the discontent that began to develop in Israel at this period. Ahab was succeeded by his sons, first Ahaziah, then Jehoram. The ruins of his palace have been excavated at SAMARIA. The Ahab of Jer. 29:21,22 is a different person, a lying prophet.

Ahad Ha-Am (akhād' ha-am), 1856-1927, Jewish thinker and Zionist leader, b. Russia. Originally named Asher Ginsberg, he adopted the pen name of Ahad Ha-Am [One of the People] when he published his first and highly controversial essay "The Wrong Way" (1889), in which he criticized those who sought immediate settlement in Palestine, advocating instead Jewish cultural education as the basis for building a strong people for later settlement. At first he received a traditional Hasidic education. His later philosophic and literary studies (in Russian, German, French, English, and Latin) led him to develop a strong rationalist attitude that resulted in his rejection first of Hasidism and then of religion itself. Not a political Zionist, he saw Palestine as the "spiritual center" in which the best in Jewish life would be revived and strengthened, giving strength and direction to Jews in the Diaspora.

Since he regarded religion as no longer valid in a modern age, he saw the chief obligation of Jewish life as fulfillment of the ethical demands of the Old Testament prophets. He spent his last years in Palestine and died there. A number of his essays have been anthologized in *Selected Essays of Ahad Ha-Am* (tr. and ed. by Leon Simon, 1912, repr. 1962). See biography by Leon Simon (1960).

Ahaggar, mountains, Africa. See SAHARA.

Aha of Shabcha (a'ha, shab'kha) or **Achai of Shabcha** (a'khī), c. 680-c. 762, Babylonian rabbi. He settled (c. 752) in Palestine after being passed over for appointment as head of the rabbinic academy of Pumbedita for political reasons. His major work, *Sheilthoth* [Questions], reflects both the Babylonian Talmud of his earlier years and the influence of the Palestinian Talmud, with which he became familiar at this later period. It is a collection of legal and ethical sermons or treatises intended to be of use to laymen as well as to the scholars for whom most of the learned Jews wrote. Aha is the first scholar after the close of the compilation of the Talmud of whom there is record. His work emphasizes the value of the basic virtues and everyday morals.

Aharah (āhār'ā), the same as AHIRAM.

Aharhel (āhar'hēl), Judahite family. 1 Chron. 4:8.

Ahasai (āhās'āi, āhā'sī), priest. Ahazai. RSV. Neh. 11:13. Jahzerai. 1 Chron. 9:12.

Ahasbai (āhās'bāi, -bī), father of ELIPHELET 3.

Ahasuerus (āhās'yōōē'rās), Hebrew form of the name Xerxes, as used in the Bible. The Ahasuerus of Esther is probably Xerxes I. That of Tobit 14:15 may be Cyaxares I, destroyer of Nineveh. The name of the father of DARIUS THE MEDE is also given as Ahasuerus.

Ahava (āhā'vā), unidentified place, where Ezra collected one of his expeditions. Ezra 8:15,21,31.

Ahaz (ā'hāz), d. c. 727 B.C., king of Judah (c. 731-727 B.C.), son of Jotham. His reign marked the end of the real independence of Judah. A coalition of Pekah of Israel and Rezin of Syria attacked him and nearly took Jerusalem. Ahaz appealed for help to Tiglathpileser III of Assyria, who defeated Ahaz's enemies but demanded tribute of Judah. Ahaz sent some Temple gold as payment. The greatest figure of that time in Judah was the prophet Isaiah, who opposed the Assyrian alliance. Ahaz is denounced in the Bible for his heathen abominations and his sacrilege with the Temple gold. In Ahaz's reign Judah lost Elath, its Red Sea port, permanently. Ahaz was succeeded by Hezekiah. 2 Kings 16, 2 Chron. 28, Isa. 7. Ahaz. Mat. 1:9. A different Ahaz, otherwise unknown, is mentioned in 1 Chron. 8:35 and 9:42.

Ahaziah (āhāz'ā), 1. King of Israel, son of Ahab. He was a worthy successor of his father only in that he followed Ahab's religious views. He was succeeded by his brother JEHOHAM 1. 1 Kings 22:51-53, 2 Kings 1, 2 Chron. 20:35-37. 2. King of Judah, son of JEHOHAM 2 and ATHALIAH 1. He was considered a typical descendant of Ahab. He was killed in Jehu's coup d'état while visiting at Jezreel. His mother succeeded him. 2 Kings 8:25-29, 9, 2 Chron. 22. He is called Azariah in 2 Chron. 22:6 and Jehoahaz in 2 Chron. 21:17 and 25:23.

Ahban (a'bān), Jerahmeelite. 1 Chron. 2:29.

Aher (ā'hār), Benjamite. 1 Chron. 6:12. Perhaps the same as AHIRAM.

Ahi (ā'hī), 1 Gadite. 1 Chron. 5:15. 2. Asherite. 1 Chron. 7:34.

Ahiah (āhī'ā), variant of AHIAH.

Ahiam (āhī'ām), one of David's men. 2 Sam. 23:33, 1 Chron. 11:35.

Ahian (āhī'an), Manassite. 1 Chron. 7:19.

Ahidjo, Ahmadou (ama'dō ahē'jōō), 1924-, president of the United Republic of Cameroon (1960-). The son of a Muslim Fulani chief, he served with the French during World War II. Entering politics in the French Cameroons after the war, he became vice premier (1957) and then premier (1958) of the territory. With the independence (1960) of the Cameroonian Republic, he was elected its first president. He also became president of the Mouvement d'Union Camerounaise, a political party affiliated with the Rassemblement Démocratique Africain (RDA), both of which favored continued strong ties with France. As a result of his efforts, the British-administered Southern Cameroons voted (1961) to unite with the Cameroonian Republic in the Federal Republic of Cameroon. He was reelected president in 1965 and 1970 as the candidate of the country's sole political party. In 1972 he secured adoption of a new unitary constitution, creating the United Republic of Cameroon.

Ahiezer (āhīē'zār) 1 Prince of Dan Num 112
2 Chief of David's bowmen 1 Chron 123

Ahihud (āhī'hād) 1 Prince of Asher Num 3427
2 Benjamite 1 Chron 83

Ahijah (āhī'jā), common name in the Bible, occasionally spelled Ahiah 1 Prophet from Shiloh 1 Kings 1129, 1215, 141-18, 2 Chron 1015 2 Priest in the time of Saul, perhaps the same as AHIMELECH 1. 1 Sam 143 3 One of David's captains 1 Chron 1122 4 Scribe 1 Kings 43 5 Father of King BAASHA 6 Jerahmeelite 1 Chron 225 7 Benjamite 1 Chron 87 Ahoah 1 Chron 84 8 Levite 1 Chron 2620 9 Sealer of the covenant Neh 1026

Ahikam (āhī'kām), protector of Jeremiah and the father of Gedaliah 2 Kings 2212, 14, 2 Chron 3420, Jer 2624, 405

Ahilud (āhī'lād) 1 Father of JEHOSHAPHAT 2 2 Father of BAANA 3

Ahimaaz (āhīm'āz) 1 Father of AHINOAM 1. 2 One of the men set to spy on Absalom 2 Sam 1527, 1717-21, 1819-32 3 Husband of BASMATH and perhaps the same as 2

Ahiman (āhīm'an) 1 Son of ANAK 2 Family of porters 1 Chron 917

Ahimelech (āhīm'elēk) 1 Priest at Nob, brother of, or perhaps the same as, AHIAH 2. He befriended David, and Saul had him killed 1 Sam 229-19 Abimelech 1 Chron 1816 Name reversed with that of his son, Abiathar 2 Sam 817, 1 Chron 1816, 246 2 Hittite in David's camp 1 Sam 266

Ahimoth (āhīm'ōth), Merarite Levite 1 Chron 625
ahimsa (āhīm'sa) [Sanskrit, =noninjury], ethical principle of noninjury to both men and animals, common to Buddhism, Jainism, and Hinduism Ahimsa became influential in post-Vedic India, contributing to the spread of vegetarianism Political implications of ahimsa were developed in the non-violence movement of Mohandas GANDHI

Ahinadab (āhīn'adāb), one of Solomon's stewards 1 Kings 414

Ahinoam (āhīn'ōam) 1 A wife of Saul 1 Sam 1450 2 One of David's early wives 1 Sam 2543, 273, 305, 2 Sam 22, 32

Ahio (āhī'ō) 1 One of those who drove the cart that carried the Ark 2 Sam 63, 4, 1 Chron 137 2 Uncle of Saul 1 Chron 831, 937 3 Benjamite 1 Chron 814

Ahira (āhī'rā), prince of Naphtali Num 115

Ahiram (āhī'rām), son of Benjamin Num 2638 Ehi Gen 4621 Aharah 1 Chron 81 AHER may be the same

Ahisamach (āhīs'amāk), father of AHOLIAB

Ahishahar (āhīsh'ahar, āhī'-), Benjamite 1 Chron 710

Ahishar (āhī'shar), royal steward 1 Kings 46

Ahitophel (āhīth'afēl), David's counselor who joined with Absalom against David He killed himself when Absalom ignored his counsel He may have been the grandfather of Bath-sheba 2 Sam 1512, 1620-1723, 2334 The Vulgate form of the name is Achitophel

Ahitub (āhī'tāb) 1 Father of AHIMELECH 1 and AHIAH 2. 2 Father, or grandfather, of ZADOK 1. 3 Father of ZADOK 5

Ahlab (a'lāb), town of Asher Judges 131

Ahlai (a'lāi) 1 Jerahmeelite 1 Chron 231,34 2 Father of one of David's men, Zabad 1 Chron 1141

Ahlin, Lars (larsh alēn'), 1915-, Swedish novelist Ahlin's works are marked by great creative vitality, psychological realism, and a concern with spiritual values Although his novel *If* (1946) was criticized for narrative meandering and excessive religious theorizing, *The Cinnamon Stick* (1953) won him critical acclaim His baring of human foibles and self-deceptions and his vision of life as bizarre are reminiscent of Dostoyevsky

Ahmad. For Ottoman sultans thus named, see AH-MED

Ahmad al-Mansur (a'mād al-mansūr', Arabic akhmad') [al-Mansur, =the victorious], d 1603, emir of Morocco (1578-1603) Proclaimed ruler after his brother's death at the battle of ALCAZARQUIVIR, he gained great prestige from the victory over Portugal In addition, the ransom of the Portuguese captives made him wealthy He was able to give Morocco a quarter-century of relative peace and prosperity His conquest of Timbuktu (1590-91) marked the peak of Morocco's extension into the territory south of the Sahara The cost of maintaining an army as great a distance prevented him from gaining any permanent benefit from the conquest He engaged in a commercial correspondence with Queen Elizabeth I of England and encouraged foreign trade

Ahmad Khan, Sir Sayyid (sa'yēd akhmad' khan), 1817-98, Indian Muslim educator His family was long connected with the Mogul court, but he entered the service of the British East India Company Convinced of the futility of revolt, he remained loyal to the British during the Indian Mutiny (1857-58) and saved the lives of many Europeans Seeking to revitalize the Muslim community by the introduction of Western ideas, Sayyid Ahmad Khan organized societies for the translation of English works into Urdu and for the teaching of civics to the Indian public In 1875 he established the Muslim Anglo-Oriental College at Aligarh, which later became Aligarh Muslim University He was knighted in 1888 Among his works are *Loyal Mohammedans of India* (1860-61) and *Causes of the Indian Revolt* (1873) See J M S Baljon, *Reforms and Religious Ideas of Sir Sayyid Ahmad Khan* (1949)

Ahmad Mirza (akhmad' mērza'), 1898-1930, shah of Persia (1909-25), son of Muhammad Ali The last of the Kajar, or Qajar, dynasty, he came to power as a result of a coup d'état against his father A regent initially ruled for him A weak figure, Ahmad was overthrown in 1921 in a military coup by Reza Khan (later REZA SHAH PAHLEVI) The shah, unable to oppose the new government, left (1923) for Europe, where he died

Ahmadnagar or Ahmednagar (both amādnūg'ar), city (1971 pop 117,275), Maharashtra state, W central India, on the Sina River It is a district administrative center and has textile manufacturing and some light industry Founded in 1490, it was the capital of a kingdom that lasted until 1600 Sivaji, leader of the Marhattas, was born in Ahmadnagar

Ahmad Shah, c 1723-1773, Afghan ruler (1747-73), founder of the Durani dynasty His success in commanding Afghan forces in India for Nadir Shah of Iran won him the rule of Afghanistan on Nadir's death (1747) He invaded India several times and twice (1756, 1760) occupied and sacked Delhi, the capital of the Mogul empire He conquered a vast territory, extending roughly from the Oxus to the Indus rivers and from Tibet to Khurasan, but he was unable to consolidate this empire and it soon disintegrated He united and strengthened Afghanistan, however, and is therefore often considered its modern founder His family retained power until the rise of Dost Muhammad

Ahmed. For some names beginning thus, see AH-MAD

Ahmed I (a'mēd, akhmēt'), 1589-1617, Ottoman sultan (1603-17), son and successor of Muhammad III to the throne of the Ottoman Empire (Turkey) The chief event of his reign was the Treaty of Szatvatorok (1606), which supplemented the Treaty of Vienna between Archduke (later Holy Roman Emperor) MATTHIAS and Prince Stephen BOCSKAY of Transylvania By the treaty, the emperors, as kings of Hungary, ceased to pay tribute to the sultan, and Transylvania was recognized as independent The treaty also marked the first time the sultan recognized other European rulers as his equals In the Asian provinces disorders were suppressed by Ahmed's vizier, the Croatian Murad Pasha, but after Murad's death (1611) they broke out again, allowing Shah Abbas I of Persia to retain Tabriz On becoming sultan Ahmed had not killed his brother Mustafa as was the custom Therefore Mustafa I succeeded as the oldest male in the ruling family

Ahmed II, 1642-95, Ottoman sultan (1691-95), brother and successor of Sulayman II to the throne of the Ottoman Empire (Turkey) Soon after his reign began, the Turkish defeat at SLANKAMEN (1691) heralded the start of the conquest of Hungary by Austria His nephew, Mustafa II, succeeded him

Ahmed III, 1673-1736, Ottoman sultan (1703-30), brother and successor of Mustafa II to the throne of the Ottoman Empire (Turkey) He gave asylum to CHARLES XII of Sweden and to MAZEPA after Peter the Great of Russia had defeated (1709) them at Poltava Charles's advice helped to bring about war between Turkey and Russia (1710-11) By the Treaty of the Pruth (1711), Turkey recovered Azov and the surrounding territory from Russia Ahmed seized (1715) the Peloponnesus and the Ionian Isles (except Corfu) from Venice, but he was defeated by the Austrians under Prince EUGENE OF SAVOY in 1716-18 By the Treaty of Passarowitz (1718), Banat, Lesser Walachia, and N Serbia, including Belgrade, were lost to the Hapsburg emperor Ahmed's grand vizier (chief executive officer) after 1718 was Ibrahim, who encouraged learning by establishing several notable libraries and favored the rise of Greek Phanariots (see under PHANAR) to high offices The sultan and his minister were overthrown by the JANISSARIES, who

were jealous of the new aristocracy Ahmed's nephew Mahmud I became sultan, and Ahmed died in prison

Ahmedabad or Ahmadabad (both a'mādābad'), city (1971 pop 1,588,378), capital of Gujarat state, NW India, on the Sabarmati River An industrial center noted for its cotton mills, Ahmedabad is also a transportation hub and a commercial center Founded in 1412 by Ahmad Shah, it fell to Akbar in 1573 and enjoyed great prosperity under the Mogul empire The British opened a trading post there in 1619, by the early 19th cent they controlled the city The cultural center of Gujarat, Ahmedabad has many outstanding mosques and tombs It is also sacred to the Jains, who have more than 100 temples there The Jama Masjid, an ancient Hindu temple converted (15th cent) to a mosque, is one of the city's most beautiful buildings Mahatma Gandhi lived for a while in Ahmedabad Gujarat Univ (1950) is in the city

Ahmed Shah: see AHMAD SHAH

Ahoah (āhō'ā), the same as AHIAH 7. The patronymic Ahoite suggests this name, it occurs with the names of DODO 2 and ILAI

Aholah (āhō'lā) and **Aholibah** (āhōl'ibā), the sisters in an allegory on Israel's idolatry Ezek 23

Aholiab (āhō'lēāb), specially chosen worker on the Tabernacle Ex 316, 3534, 361,2, 3823

Aholiab see AHOLAH

Aholibamah (āhō'lībā'mā, ā'hālīb'ā-) 1 One of Esau's wives Gen 362 2 Duke of Edom Gen 3641

Ahome (aō'mā), city (1970 pop 165,612), Sinaloa state, W Mexico, on the Pacific Ocean Ahome lies along the Inter-American Highway and is linked by rail with Mexico City Sugarcane, grains, and cotton are grown in the region, which is irrigated by the Fuerte River The city also has an important fishing industry, based mainly on shrimp

Ahriman (a'rīmān) see ZOROASTRIANISM

Aht Confederacy: see NOOTKA INDIANS

Ahuachapán (awachapan'), city (1968 est pop 26,000), W El Salvador, near the Guatemalan border It is the westernmost city in the country and is the center of an agricultural region producing coffee, sugar, grain, and fruit There are thermal springs nearby

Ahumai (āhūō'māi, -mī), Judahite 1 Chron 42

Ahura Mazda (a'hōōrā mād'zā) see ZOROASTRIANISM

Ahuzam (āhūō'zām), Judahite 1 Chron 46

Ahuzzath (āhūz'āth), friend of Abimelech of Gerar Gen 2626

Ahvaz or Ahwaz (both awaz'), city (1971 est pop 215,000), SW Iran, on the Kurun River It is an oil center, a transportation hub, and an industrial city that has petrochemical, textile, and food-processing industries An ancient city, Ahvaz was rebuilt (3d cent AD) by Ardashir I, who named it Hormuzd-Ardashir In the 4th cent Ahvaz became the seat of a bishopric, and a large church was built there It was an important Arab trading center in the 12th and 13th cent but later declined The discovery of oil nearby in the early 20th cent restored the city to its former importance The new part of Ahvaz, the administrative and industrial center, is on the right bank of the Kurun, but the population is still concentrated in the old section on the left bank

Ahvenanmaa Islands (a'venanma'') or **Åland Islands** (a'lānd, ō'-), Swed Ålandsoerna (ō'lāntsū-urna), archipelago (1970 pop 21,010), 581 sq mi (1,505 sq km), in the Baltic Sea between Sweden and Finland, at the entrance of the Gulf of Bothnia It belongs to Finland The archipelago consists of about 7,000 islands, but fewer than 100 are inhabited The climate is mild The chief town is MAARIAN HAMINA, a port on Åland, the largest of the islands Shipping, fishing, forestry, farming, and tourism are the chief occupations Swedish is the main language The islands, colonized by Swedes, are of strategic importance With Finland, they were ceded by Sweden to Russia in 1809 In the Crimean War the Russian fortifications were destroyed (1854), and remilitarization was forbidden by the Treaty of Paris (1856) At the end of World War I, the islanders sought to join Sweden The League of Nations in 1921, however, recognized Finland's sovereignty, but guaranteed the autonomous status of the islands and confirmed their demilitarization After the Finnish-Russian War (1939-40) Finland and Russia signed a demilitarization agreement that was renewed after World War II Under pressure from Russia, Finland's parliament renounced the League guarantee of autonomy in 1951 but at the same time accorded the islanders additional rights of self-gov-

ernment Pro-Swedish sentiment continues, however, and emigration to Sweden has caused a population decline in recent years

AI (ā'i) 1 Canaanite royal city, E of Bethel Abraham pitched his tent there when he arrived in Canaan It is probably the modern et-Tell, near Bethel (Jordan) Excavations have revealed a strongly fortified city situated there AI was in ruins at the time of Joshua's conquest The account in Joshua 7 possibly refers instead to BETHEL 1, whose people may have used the nearby ruins of AI as a bastion against the invading Israelites Hai Gen 12:8, 13:3 Aith Isa 10:28 Aija Neh 11:31 2 City of the Ammorites, near Heshbon Jer 49:3

Aiah (ā'ā) 1 Edomite 1 Chron 1:40 Ajah Gen 36:24 2 Father of RIZPAH

Aiath (ā'āth), the same as AI 1.

Aichi (i'chē), prefecture (1970 pop 5,386,116), 1,962 sq mi (5,082 sq km), central Honshu, Japan NAGOYA is the capital Bounded on the E by Ise Bay and on the S by the Philippine Sea, Aichi consists of a coastal plain and a mountainous, forested interior It is drained by the Kiso River, an important source of hydroelectric power The major industrial centers are Nagoya, Toyohashi, Okazaki, Ichinomiya, Toyota, Tanjo, and Seto Agricultural products and raw silk are produced, and lignite and quartz are mined

aids, in FEUDALISM, type of feudal due paid by a vassal to his suzerain (overlord) Aids varied with time and place, although in English-speaking countries aids were traditionally due on the knight of the lord's eldest son, on the marriage of the lord's eldest daughter, and for ransom of the lord from captivity These are the three aids specified in the MAGNA CARTA (1215), which forbade the king to levy aids from the barons on occasions other than these, except by the "common counsel" of the realm It is difficult to distinguish aids from other feudal dues such as SCUTAGE and TALLAGE The term had a much wider scope than was indicated in the Magna Carta In general, aids fell into disuse with the decline of feudalism, although they continued nominally in most places On the Continent, the aids often became land or justice taxes due the local lords In France, the aids were converted later into a royal tax that continued until the French Revolution

Aiea (ā'ēā'), city (1970 pop 12,560), Honolulu co., Oahu, Hawaii, a residential suburb of Honolulu, on the eastern shore of Pearl Harbor Once a quiet sugarcane town with a sugar refinery, it is now the site of numerous housing developments and a shopping center Many residents work at nearby military installations Between Aiea and Honolulu are the U S Army Tripler General Hospital and U S Fort Shafter, headquarters of the Army of the Pacific

Aiglon, L': see NAPOLEON II

Aija (ā'jā), the same as AI 1

Aijal (i'jāl), city (1971 pop 31,436), capital of the union territory of Mizoram, NE India Situated on a ridge in the Lushai Hills that is 3,500 ft (1,067 m) high, Aijal is an important trade center for the surrounding area

Aijalon (ā'jālōn, i'-, ā'-) 1 Town, on the border between Philistia and Israel, the modern Yalo (Israel), NW of Jerusalem Judges 1:35, 2 Chron 11:10 Aijalon Joshua 19:42, 2 Chron 28:18 In the Tel-el-Amarina letters it is called Aialuna 2 Town in Zabulon Judges 12:12 3 Valley over which Joshua commanded the moon to stand still Joshua 10:12

Ajeleth Shahar (ā'jēlēth shā'hār), superscription of Ps 22, probably the tune to which it was to be sung, named from the first words of some other verse set to it Other superscriptions of similar explanation are Al-taschith Pss 57, 58, 59, 75 Jonath-elem-rechokim Ps 56 Mahalath Ps 53 Mahalath Leanoth Ps 88 Shoshannim Pss 45, 69 Shoshannim-Eduth Ps 80 Shushan-eduth Ps 60

Aiken, Conrad (ā'kīn), 1889-1973, American author, b Savannah, Ga., grad Harvard, 1912 His writings reveal a concern for the workings of the mind and for the evolution of personal identity Aiken is best known for his poetry, which is often preoccupied with the sound and structure of music, his volumes of verse include *The Camel Rose* (1918), *Selected Poems* (1929, Pulitzer Prize), *Brownstone Eclogues* (1942), *Collected Poems* (1953), *A Letter from Li Po* (1956), *A Seizure of Limericks* (1964), and *The Clerk's Journal* (1971) In 1924 he edited Emily Dickinson's *Selected Poems*, which established her literary reputation Aiken's interest in psychopathology is evident in the novels *Blue Voyage* (1927) and *Great Circle* (1933) His collected critical essays, *A Reviewer's ABC*, appeared in 1958, his collected short stories—including "Mr Arcularis" and "Silent

Snow, Secret Snow"—in 1961 From 1950 to 1952, Aiken held the poetry chair at the Library of Congress In 1969 he was awarded the National Medal for Literature See his autobiography, *Ushant* (1952, repr 1971), studies by Jay Martin (1962) and F J Hoffman (1962)

Aiken, city (1970 pop 13,436), seat of Aiken co., W S C, inc 1835 It is a fashionable resort and polo center located in the midst of sand hills and pine forests Aiken is also an industrial city, with textile and lumber mills and a large fiberglass plant, kaolin mines are nearby A branch of the Univ of South Carolina is located in the city Nearby is the Atomic Energy Commission's Savannah River Plant, which produces nuclear materials Aiken State Park is to the east

ailanthus (ālān'thəs), any tree of the genus *Ailanthus*, native to the warm regions of Asia and Australia Ailanthus wood is sometimes used for cabinet-making and for the manufacture of charcoal The leaves are a source of food for silkworms, and the bark and leaves are used medicinally Females of a species called tree of heaven, native to China, are widely grown in European and American cities because of their attractive foliage and their resistance to smoke and soot, the male flowers, however, have a disagreeable odor Ailanthus is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Sapindales, family Simarubaceae

ailanthus moth: see SILKWORM

aileron: see AIRFOIL, AIRPLANE

Ailey, Alvin, 1931-, American modern dancer and choreographer, b Rogers, Tex Ailey studied in Los Angeles with Lester HORTON, whose strong, dramatic style influenced his choreography In the late 1950s he formed his own company, the American Dance Theater, which has been internationally acclaimed His best-known works include *Creation of the World* (1960), *Roots of the Blues* (1961), *Hermit Songs* (1962), and *Revelations*, as well as works he created for other companies, such as *Macumba* for the Harkness Ballet

Ailly, Pierre d' (pyēr dā'yē'), 1350-1420, French theologian and writer, cardinal of the Roman Catholic Church He was the teacher of John Gerson and was Gerson's predecessor as chancellor at the Univ of Paris (1385-95) Ailly figured prominently among the conciliarists working to end the Great Schism (see SCHISM, GREAT) He urged that in order to name a new pope a general council be called as the only means of settling the schism He seems to have been more concerned with a practical solution than with the implications of the conciliar theory He participated in both the Council of Pisa (see PISA, COUNCIL OF) and the Council of Constance (see CONSTANCE, COUNCIL OF) In the latter Ailly took part in the trial and condemnation of John Huss His vast writings embrace theology, philosophy, cosmography, plans for ecclesiastical reform, and French religious verse His best-known work, the *Imago mundi*, an astronomical compendium, was studied by Columbus See studies by J P McGowan (1936) and Francis Oakley (1964)

Ailsa Craig (āl'sā), island, c 1 sq mi (2.6 sq km), off SW Scotland, W of Girvan in the Firth of Clyde, it rises to 1,114 ft (340 m) It has granite quarries and a lighthouse and is a sanctuary for sea birds

Ain (ā'n), department (1968 pop 339,262), E central France, in BURGUNDY, bordering on Switzerland BOURG-EN-BRESSE is the capital

Ain (ā'in) 1 Town, N Palestine Num 34:11 2 See EN-RIMMON

Aintab, Turkey see GAZIANTEP

Ainu (i'nō), aborigines of Japan who may be descended from the Caucasoid people who once lived in N Asia The more powerful Oriental invaders from the Asian mainland gradually forced the Ainu to retreat to the northern islands, where today, they reside on the N Japanese island of Hokkaido and in Sakhalin and the Kuril Islands, now part of the Soviet Union Reduced in number, they live by hunting, fishing, and small-scale farming On Hokkaido, the Ainu have attracted the attention of tourists, and some now make a living by selling reproductions of their cultural artifacts Physically, they seem related to European peoples, i.e., they have much more body hair than Orientals, but intermarriage with Asians has introduced Oriental traits among them Contact with the Orientals has led to culture change and assimilation, which the Ainu have resisted in the past, with decreasing success Their religion is highly animistic and centers on a bear cult, a captive bear is sacrificed at an annual winter feast and his spirit, thus released, is believed to guard the Ainu

settlements See N G Munro, *Ainu Creed and Cult* (1963), Inez Hilger, *Together with the Ainu* (1971)

Aioi (i-oi'), city (1970 pop 40,657), Hyogo prefecture, W Honshu, Japan, on the Inland Sea and Aioi Bay It is a major port with a good natural harbor and a flourishing shipbuilding industry

air: see ATMOSPHERE, LIQUID AIR, VENTILATION

air, law of the, in the broadest sense, all law connected with the use of the air, including radio and telegraph communications More commonly, it refers to laws concerning civil aviation The development of large-scale air transport after World War I brought with it the need for regulation, both national and international In 1919 a meeting of the victorious nations of World War I resulted in the International Convention for Air Navigation, commonly called the Paris Convention The convention was a compromise between two contradictory views some nations held that a state had sovereignty over the air above it, others that there should be freedom of the air comparable to the freedom of the seas The convention recognized the sovereignty of each state over its own air space without prejudice to innocent passage by aircraft of another state It further provided that each aircraft (like each ship) must have a registered nationality Rules were adopted as to the airworthiness of aircraft, certification of pilots as competent, and licensing of pilots Among the 33 signatory nations were Great Britain, France, Italy, and Japan The United States signed but did not ratify the convention Nevertheless U S air laws were modeled on it These laws are administered by the CIVIL AERONAUTICS BOARD and the FEDERAL AVIATION ADMINISTRATION Other countries adopted legislation modeled on the Paris Convention There were also many bilateral agreements among nations as well as general conventions—notably the Pan American Convention on Air Navigation (1925) World War II emphasized the need for sounder regulation of international air transport and for uniformity of equipment, laws, and regulations Even before the war's end an international civil aviation conference met in Chicago in Nov., 1944 Representatives of 52 nations attended, but the USSR did not take part There was much discussion of the "five freedoms of the air"—freedom to fly across the territory of a state without landing, freedom to land for nontraffic purposes, the right to disembark in a foreign country traffic from the country of registry of the aircraft, the right to pick up in a foreign country traffic destined for the country of registry, and the right to carry traffic between two foreign countries The first two were accepted, but the fifth was bitterly opposed, only the first two were included in the International Air Services Transit Agreement, which was generally signed Authorization to carry traffic between two nations is given through an agreement between those two nations The conference, after considerable debate, set up the Provisional International Civil Aviation Organization, which had its seat at Montreal In 1947 this organization became the INTERNATIONAL CIVIL AVIATION ORGANIZATION, affiliated with the United Nations There have been several general conferences since the Chicago Convention to interpret its provisions, and many bilateral agreements have been concluded by parties to the convention The successful launching of satellites necessitated the development of SPACE LAW

air bladder, in fish see SWIM BLADDER

air brake: see BRAKE

air cargo: see AVIATION

air conditioning, mechanical process for controlling the humidity, temperature, cleanliness, and circulation of air in buildings and rooms Indoor air is conditioned and regulated to maintain the temperature-humidity ratio that is most comfortable and healthful In the process, dust, soot, and pollen are filtered out, and the air may be sterilized, as is sometimes done in hospitals and public places Most air-conditioning units operate by ducting air across the colder, heat-absorbing side of a refrigeration apparatus and directing it back into the air-conditioned space (see REFRIGERATION) The refrigeration apparatus is controlled by some form of thermostat In water-cooled air-conditioning units, the waste heat is carried away by a flow of water For recirculation in water-cooled units, a cooling tower is used This apparatus maintains a constant level of water in the system and replaces water lost by evaporation The development of small, self-contained systems has greatly expanded the use of air conditioning in homes A portable or window-mounted unit drawing 7.5 amperes or less from a 117-volt power line is usually adequate for one room Often domestic

heating systems are converted to provide complete air conditioning for a home. In the construction of office buildings in the United States, air-condition-

Cross section of air conditioning unit

ing systems are commonly included as integral parts of the structure. First used c 1900 in the textile industry, air conditioning found little use outside of factories until the late 1920s. It is of great importance in chemical and pharmaceutical plants, where air contamination, humidity, and temperature affect manufacturing processes. See A. D. Althouse et al., *Modern Refrigeration and Air Conditioning* (1968), E. P. Anderson, *Air Conditioning* (1969), Ernest Tricomi, *A B C's of Air Conditioning* (1970).

aircraft carrier, ship designed to carry aircraft and to permit takeoff and landing of planes. The carrier's distinctive features are a flat upper deck (flight deck) that functions as a takeoff and landing field, and a main deck (hangar deck) beneath the flight deck for storing and servicing the aircraft. The aircraft carrier emerged after World War I as an experimentally modified cruiser. The first aircraft carrier built (1925) from the keel up as an aircraft carrier for the U.S. navy was the USS *Saratoga*. The aircraft carrier remained an experimental and untested war vessel until World War II, when the Japanese destroyed or drove out of the Far Eastern waters the British, Dutch, and U.S. navies with carrier-borne aircraft. By 1942 the aircraft carrier had replaced the battleship as the major unit in a modern fleet, and in World War II it was indispensable in naval operations against a sea- or land-based enemy. The battle of the Coral Sea (1942) was fought by naval aircraft, and the two opposing fleets never came within gunshot range of each other. After World War II aircraft carriers were enlarged and improved by the British and U.S. navies. With the introduction of nuclear-powered carriers in the 1960s, extremely lengthy voyages became possible because such carriers do not need regular refueling. See Norman Polmar, *Aircraft Carriers* (1969), G. L. Pawlowski, *Flat-Tops and Fledglings* (1971).

air-cushion vehicle, abbr. ACV, device designed to travel close to but above ground or water. It is also called a ground effect machine or hovercraft. These vehicles are supported in various ways. Some of them have a specially designed wing that will lift them just off the surface over which they travel when they have reached a sufficient horizontal speed. Others are supported by fans that force air down under the vehicle to create lift. In a plenum chamber vehicle the rate of leakage of this air from underneath the vehicle is reduced by placing a skirt around the lower edge of the craft. In an annular jet vehicle the rate of leakage is reduced by directing the air downward and inward from the outer edges of the vehicle. Air propellers, water propellers, or water jets usually provide forward propulsion. Most early vehicles of this type came into existence in the late 1950s. In 1962 a British vehicle became the first to go into active service on a 19-mi (31-km) ferry run. The maximum size of air-cushion vehicles is now over 100 tons, some of them travel at over 100 mi (160 km) per hr. Ships of several thousand tons and special trains, both employing air cushions, are under development. The advantages expected from air-cushion vehicles include higher speeds than those of ships and most land vehicles and lower power requirements than for helicopters of the same weights. However, a relatively smooth land or water surface below is a necessity, most of these vehicles cannot clear waves higher than 3 to 5½ ft (1-1½ m). See Jane's *Surface Skimmer Systems* (annually, 1968-), W. T. Gunston, *Hydrofoils and Hovercraft* (1969), Garry Hogg, *The Hovercraft Story* (1970).

Airdrie (âr'drê), burgh (1971 pop. 37,736), Lanarkshire, S. central Scotland. Chemicals and electrical and electronic equipment are produced, and there are facilities for electronic research. Airdrie's free library was the first established in Scotland.

airedale terrier (âr'däl), breed of dog developed in England in the 19th cent. It is the largest of the TERRIER group, standing about 23 in. (58.4 cm) high at the shoulder and weighing from 40 to 50 lb (18.1-22.7 kg). Its dense, wiry, close-lying coat is a mixture of tan, black, and grizzle in color. Although little can be said with certainty of its history prior to 1850, authorities generally believe the airedale was produced from crosses of the extinct black-and-tan terrier and the otterhound. It has been used to hunt a variety of game, trained as a police dog and dispatch bearer in war, bred for show competition, and kept as a pet. See DOG.

air embolism: see EMBOLUS

airfoil, surface designed to develop a desired force by reaction with a fluid, especially air, that is flowing across the surface. For example, the fixed wing surfaces of an airplane produce lift, which opposes gravity. Airfoils that are manipulated to produce variable forces are called control surfaces. Ailerons, control surfaces hinged to the trailing edges of wings, can produce rolling, which is rotational motion of the aircraft about a line running through its fuselage, or yawing, which is rotational motion about a line running from the top to the bottom of an aircraft. Modern aircraft have fairly complex arrays of control surfaces, including elevators, a rudder, and flaps. Elevators, which are hinged to the rear of the horizontal airfoil of the tail assembly, are used to produce pitching, which occurs when an airplane in level flight points its nose upward or downward. The rudder, which is hinged to the rear of the vertical airfoil of the tail assembly, is used to produce yawing. Flaps are located near the ailerons to increase lift for takeoff and landing. Spoilers, which can be made to protrude from lifting surfaces to give controlled reduction of lift, often replace ailerons and elevators. In aircraft of the swing-wing type, in which the sweep of the wings is variable, the entire wing can be considered a control surface. Other airfoils include propeller blades and the blades utilized in turbojet engines.

Air Force, United States Department of: see DE FENSE, UNITED STATES DEPARTMENT OF

air forces. The history of air forces begins with the use of balloons by French forces in Italy in 1859 and

Air-cushion vehicle. In vehicles modified with a trunk or skirt (A), the rate of leakage is reduced and less power is needed to maintain the cushion. Vehicles designed to travel over deep water (B) have sides extending into the water so that the vehicle actually rides on an air bubble.

by Union forces in the U.S. Civil War. Balloons thereafter proved useful as a means of observation, but air forces in the modern sense date from World War I, when the offensive capabilities of the airplane were first demonstrated. The airplane was first used for war purposes by Italy against the Turks in Tripoli in 1911, but until World War I it had served mainly for reconnaissance. Germany, with a large number of airplanes and airships, established its superiority in the air at the beginning of the war. The German Fokker monoplane, with a fixed machine gun that could fire forward through the propeller blades, quickly assured Germany's superiority and inspired Allied efforts toward better aircraft. Indeed, throughout World War I such development and counterdevelopment accounted for the rapid advance of military aeronautics. The initial use of aircraft for reconnaissance made control of the skies essential to military operations. As a result, aerial combat developed, which in turn led to formation flying, dogfights, and the bombing of enemy lines of communication and munitions depots. Throughout most of the war the air forces were considered an extension of the nations' armies and were mostly employed tactically in support of the ground forces. As the effectiveness of aircraft as a tactical weapon increased, consideration was given to the establishment of air forces independent of a nation's ground forces. Giulio DOUHET, an Italian, was the first to develop a full-scale theory of strategic AIR POWER and to suggest the primacy of an independent air force. Douhet and others, such as Gen. William MITCHELL of the United States, called for the development of strong independent air forces to gain control of the air over an enemy's homeland and to destroy the enemy's means of resistance by intensive aerial bombardment of his industrial centers. Their urgings, combined with the rapid and extensive advance in aeronautical knowledge and technique that followed World War I, brought about a much broader application of air power in World War II. During the 1930s, Germany devoted great efforts to air armament and in the early years of World War II held a marked superiority over the Allies. The first great air battle in history was the BATTLE OF BRITAIN, in which the British Royal Air Force defeated the German Luftwaffe (1940) over Britain. In the Pacific, Japan entered the war with a stunning air attack launched from aircraft carriers (see AIRCRAFT CARRIER) on PEARL HARBOR. The subsequent development of air power greatly altered the nature of warfare, and the use of aircraft to control the air over both land and sea was decisive in nearly all major engagements of World War II. Airplanes were used for strategic and tactical bombing, attacking of naval and merchant ships, transportation of personnel and cargo, mining of harbors and shipping lanes, anti-submarine patrols, photographic reconnaissance, and support of ground, naval, and amphibious operations. Throughout the war the British and U.S. air forces conducted strategic bombardment of Germany, which led to the destruction of the Luftwaffe and the crippling of German industry, transportation, and communications. In the Pacific, U.S. carrier-based aircraft by the end of 1944 had destroyed the Japanese fleet and air force. In the last months of the war Japan itself was subjected to massive strategic bombardment, ending with the dropping of atomic bombs on Hiroshima and Nagasaki. Major developments of World War II included improved techniques of flying and aircraft design and an accumulation of geographical and technological knowledge essential to modern aviation. The development of nuclear weapons, jet propulsion, and the GUIDED MISSILE have combined to widen the concept of air power and the role of air forces. Wars in Korea and Vietnam were limited wars, in which tactical air operations were more important than strategic operations. However, air forces have come to assume a primary strategic role in deterring major war by employing in readiness a second-strike retaliatory force. In the United States this mission is carried by the Strategic Air Command and by the Aerospace Defense Command as well as by the Tactical Air Command. See H. B. Hinton, *Air Victory: The Men and the Machines* (1948), A. P. De Sevresky, *Air Power: Key to Survival* (1950), Quentin Reynolds, *They Fought for the Sky* (1957), Jane's *All the World's Aircraft* (pub. annually since 1911), Johnnie Johnson, *Full Circle: The Story of Air Fighting* (1964), Robert B. Casari, *Encyclopedia of U.S. Military Aircraft* (2 vol., 1970).

air gas: see FUEL

airglow, faint diffuse illumination of the night sky originating in the tenuous upper atmosphere. The energy in the form of visible light is derived from

the sun's ultraviolet light, which ionizes atoms and dissociates molecules at heights between 40 and 200 mi (64-322 km) above the earth's surface. When the fragments collide and recombine, some atoms and molecules are left with excess energy, which they release as light at characteristic wavelengths. Most prominent in the visible spectrum are the red and green light of oxygen and the yellow light of sodium. In polar regions the airglow is masked by the aurora, this is caused by charged particles spiraling into the atmosphere along magnetic lines of force.

air lock, compartment connecting two different environments, usually at different pressures, that enables personnel to transfer from one environment to the other. Space capsules have air locks to enable astronauts to move between the pressurized cabin and the near vacuum of space. A more common example is the air lock between the outer atmosphere and the working chamber of a CAISSON. By its means access can be gained to the working chamber without loss of pressure. It is also used at the head of tunnel excavations under water. There is a door at each end. When the outer door of the air lock is opened, men or material may be admitted into the compartment. After the outer door is closed, compressed air is admitted to raise pressure in the air lock to the level of the pressure in the working chamber, and the inner door can be opened. The reverse of this procedure takes place on leaving the working chamber. Great care must be exercised in passing workmen through an air lock, so that the change of atmospheric pressure takes place gradually. Too sudden a change of pressure may cause DECOMPRESSION SICKNESS.

airmail, transport of mail by airplanes. Demonstration flights that showed the feasibility of carrying mail by air were made in Great Britain and in the United States in 1911. In the United States, after money for experimentation was appropriated by Congress in 1918, the first regular airmail service for carrying civilian mail began on May 15, 1918. Army pilots and army equipment were used. The first flight was from Washington, D.C., to New York City, although the pilot got lost and never completed the trip, regular airmail service was soon established. The Post Office Dept. took over operation of the line in 1920, but in 1921 the line was discontinued. In May, 1920, the transcontinental route from New York City to San Francisco was completed. On July 1, 1924, coast to coast service by air was scheduled for the first time (before then the mail had been transferred to trains at night). Transpacific airmail was introduced in 1935 and transatlantic airmail in 1939. The Civil Aeronautics Authority, established in 1938, took over the work of the Bureau of Air Mail (created in the Interstate Commerce Commission in 1934). In the United States today, the Civil Aeronautics Board determines the rates to be paid by the U.S. Postal Service for the carriage of mail by air. Airmail service now extends to most parts of the world.

air mass, large body of air within the earth's atmosphere in which temperature and humidity, although varying at different heights, remain similar throughout the body at any one height. Air masses form over parts of the earth's surface called source regions, which are large, relatively uniform expanses, often ranging hundreds of thousands of square miles in area. Stable atmospheric conditions, e.g., high-pressure systems, are conducive to their formation. When a body of air remains over a source region for days or weeks, it reaches an equilibrium with the surface, radiation and convection exchanges between the earth's surface and the air, as well as evaporation and condensation, determine the air's temperature and humidity distribution. As a result of these exchanges, air masses formed over oceans generally contain more moisture than those formed over continental regions, and air masses formed in polar latitudes are colder than those from the tropics. As an air mass moves away from its source region, it brings its particular weather conditions to the areas over which it travels. At the same time, its characteristic properties are slowly modified by exposure to new environments. The boundaries between air masses, called FRONTS, are, typically, zones of rapid transition from cold to warm or from dry to moist air. This turbulence at the boundary often breeds low-pressure storms.

Air Mountains, Africa. see SAHARA

air navigation, science and technology of determining the position of an aircraft with respect to the surface of the earth and accurately maintaining a desired course (see NAVIGATION). Because of the relatively high speeds of aircraft and the intense

congestion of airways, the pilot of an aircraft must be able to determine quickly and accurately his position, course, and speed. The simplest and least sophisticated way in which this can be done is by pilotage, a method in which landmarks are noted and compared with an aeronautical chart. A craft flown by this technique is usually subject to visual flight regulations (VFR). These establish the minimum weather conditions under which navigation by visual reference to points outside the cockpit is permissible. Sometimes pilotage is carried on by means of electronic aids to navigation, e.g., a ground-looking radar, with which landmarks can be observed and later identified by reference to a radar map. Pilotage is not satisfactory for long trips, especially over water or terrain lacking distinctive features. In these cases, or when weather conditions do not permit navigation by visual reference, recourse to instruments is necessary. Air navigation by instruments is governed by instrument flight regulations (IFR), which require that the aircraft be equipped with the necessary instruments and that the pilot be trained in operating those instruments. Also required under IFR is the filing of a flight plan with air traffic control authorities at the departure point. The aircraft is then cleared for a given course and a given altitude. Air traffic controllers monitor the craft until it reaches its destination. Basic to air traffic control are special air routes called AIRWAYS. Airways are defined on charts and are provided with RADIO RANGES, devices that allow the pilot whose craft has a suitable receiver to determine his bearing from a fixed location. This fixed location is the site of a radio transmitter sending a specially modulated signal via a directional antenna. A second type of radio range, the VHF omnidirectional radio range, operates at very high frequencies and emits a signal that varies according to the direction in which it is transmitted. Using a special receiver, an air navigator can obtain an accurate bearing on the transmitter. For long distances LORAN, another electronic navigation system, has been developed. Other electronic aids include the radio ALTIMETER, a radar device that indicates the distance of the plane from the ground, and the ground-speed indicator, which operates by measuring the Doppler shift in a radio wave reflected from the ground. The advent of computers small enough to be airborne has made possible systems that perform astronomical observations automatically and give the pilot a readout of his position. Other similar systems use inertial devices such as free-swinging pendulums and gyroscopes as references in determining position. In addition, computer systems can be used to carry out the position-determining technique called dead reckoning by monitoring all course and speed changes of the aircraft. Pressure-based systems use the difference in reading between a radio altimeter and an aneroid altimeter as a basis for computing the local wind velocity. These automated and semiautomated procedures free the pilot from some of the activities necessary to control the aircraft and thus allow him to concentrate on actual flying of the aircraft. Another device which is useful in this way is the automatic pilot, which interprets data on direction, speed, attitude, and altitude to maintain an aircraft in straight, level flight on a given course at a given speed. Light aircraft, flown by pilotage, may have quite a simple set of navigational instruments. These would include an airspeed indicator (see PITOT STATIC SYSTEM), an aneroid altimeter, and a magnetic compass. An airspeed indicator is included in a sophisticated set of instruments to help the pilot maintain an airspeed above the value at which the airplane stalls. For supersonic and hypersonic aircraft the airspeed indicator is altered to show the airspeed as a Mach number, which is the ratio of the speed of an aircraft to the speed of sound. Advanced aircraft also use electronic systems that give the pilot highly accurate positional information for use during landing. In many cases the pilot is guided by radio communication from a controller observing the plane via ground-based radar. Some systems actually land the plane automatically, although the pilot always has the option of overriding manually.

airplane, aeroplane, or aircraft, heavier-than-air vehicle, mechanically driven and fitted with fixed wings that support it in flight through the dynamic action of the air. Early attempts were made to build flying machines according to the principle of bird flight, but these failed, it was not until the beginning of the 20th cent. that flight in heavier-than-air craft was achieved. On Dec. 17, 1903, Americans Orville and Wilbur WRIGHT produced the first manned, power-driven, heavier-than-air flying machine near Kitty Hawk, N.C. The first flight lasted 12 sec, but

later flights on the same day were a little longer, a safe landing was made after each attempt. The machine was a biplane (an airplane with two main supporting surfaces, or wings) with two propellers chain-driven by a gasoline motor. Modern airplanes are monoplanes (airplanes with one wing) and may be high-wing, mid-wing, or low-wing. Airplanes may be further classified as driven by propeller, jet, turbojet, or rocket. The airplane has six main parts—fuselage, wings, stabilizer (or tail plane), rudder, one or more engines, and landing gear. The fuselage is the main body of the machine, customarily streamlined in form. It usually contains control equipment, and space for passengers and cargo. The wings are the main supporting surfaces. The objects, such as fuel tanks and engines, that are carried outside the fuselage are enclosed in structures called nacelles, or pods, to reduce air drag. The lift of an airplane, or the force that supports it in flight, is basically the result of the direct action of the air against the surfaces of the wings, which causes air to be accelerated downward. The lift varies with the speed, there being a minimum speed at which flight can be maintained. This is known as the stall speed. At the trailing edge of the wings are auxiliary hinged surfaces known as ailerons that are used to gain lateral control and to turn the airplane. Directional stability is provided by the tail fin, a fixed vertical AIRFOIL at the rear of the plane. The stabilizer, or tail plane, is a fixed horizontal airfoil at the rear of the airplane used to suppress undesired pitching motions. To the rear of the stabilizer are usually hinged the elevators, movable auxiliary surfaces that are used to produce controlled pitching. The rudder, generally at the rear of the tail fin, is a movable auxiliary airfoil that gives the craft a yawing movement in normal flight. The rear array of airfoils is called the empennage, or tail assembly. Some aircraft have additional flaps near the ailerons that can be lowered during takeoff and landing to augment lift at the cost of increased drag. On some airplanes hinged controls are replaced or assisted by spoilers, which are ridges that can be made to project from airfoils. Until recently, most engines were of the internal-combustion, piston-operated type, which may be air- or liquid-cooled. During and after World War II, duct-type and gas-turbine engines became increasingly important, and since then JET PROPULSION has become the main form of power in most commercial and military aircraft. This has had a major effect upon airplane design, which is closely associated with the ratio between power load (horsepower) and weight. The Wright brothers' first engine weighed about 12 lb (5.4 kg) per horsepower. The modern piston engine weighs about 1 lb (0.4 kg) or less per horsepower, and jet and gas-turbine engines are much lighter. With the use of jet engines and the resulting higher speeds, airplanes have become less dependent on large values of lift from the wings. Consequently, wings have been shortened and swept back so as to produce less drag, especially at supersonic speeds. In some cases these radically backward wings have evolved into a single triangular lifting surface, known as a delta wing, that is bisected by the fuselage of the plane. Similar alterations have been made in the vertical and horizontal surfaces of the tail, again with the aim of decreasing drag. The lessened lift associated with swept-back designs increases the length of runway needed for takeoffs and landings. To keep runway lengths within reasonable limits the variable-sweep, or swing, wing has been developed. A plane of this type can extend its wings for maximum lift in taking off and landing, and swing them back for travel at high speeds. A proposed variant of the swing wing, in which one wing sweeps to the rear and another forward, produces an arrangement that causes a minimum shock wave at supersonic speeds. It is thought that if this modification is applied to supersonic transport (SST) designs it will somewhat lessen their objectionable noise levels. No solution has been proposed to lessen their high fuel consumption. Recent developments in fan-jet engines, in which a turbine powers a set of vanes that drive air rearward to augment thrust, have made supersonic flight possible at low altitude. Much research has also gone into reducing the noise and air pollution caused by jet engines. The landing gear is the understructure that supports the weight of the craft when on the ground or on the water and that reduces the shock on landing. There are five common types—the wheel, float, boat, skid, and ski types. For certain applications, e.g., short-haul traffic between small airports, it is desirable to have airplanes capable of operating from a runway of minimum length. Two approaches to the problem have been tried. One,

A Side view of propeller-driven airplane B Top view of propeller-driven airplane

the VERTICAL TAKEOFF AND LANDING (VTOL) approach, seeks to produce craft that take off and land like HELICOPTERS, but that can fly much faster. The other approach, SHORT TAKEOFF AND LANDING (STOL), seeks to design more conventional aircraft that have reduced runway requirements. See AERODYNAMICS, AIRPORT, AVIATION, AUTOGIRO, GLIDER, SEAPLANE. See bibliography under AVIATION.

air plant. See EPIPHYTE

air pollution, contamination of the air by noxious gases and minute particles of solid and liquid matter (particulates) in concentrations that endanger health. The major sources of air pollution are transportation, which is responsible for more than 50% by weight of all air pollution in the United States, power and heat generation, industrial processes, and the burning of SOLID WASTE. The combustion of GASOLINE and other hydrocarbon fuels in AUTOMOBILES, trucks, and jet airplanes produces several primary pollutants: nitrogen oxides, gaseous hydrocarbons, and carbon monoxide, as well as large quantities of particulates, chiefly lead. In the presence of sunlight, nitrogen oxides combine with hydrocarbons to form a secondary class of pollutants, the photochemical oxidants, among them OZONE and the eye-stinging peroxyacetyl nitrate (PAN). Nitrogen oxides also react with oxygen in the air to form nitrogen dioxide, a foul-smelling brown gas. In urban areas like Los Angeles where transportation is the main cause of air pollution, nitrogen dioxide tints the air, blending with other contaminants and the atmospheric water vapor to produce brown SMOG. In cities, air may be severely polluted not only by transportation but also by the burning of fossil fuels (oil and coal) in generating stations, factories, office buildings, and homes, and by the incineration of garbage. The massive combustion produces tons of ash, soot, and other particulates responsible for the gray smog of cities like New York and Chicago, along with enormous quantities of sulfur oxides. These oxides rust iron, damage building stone, decompose nylon, tarnish silver, and kill plants. Like photochemical pollutants, sulfur oxides contribute to the incidence of respiratory diseases such as emphysema, bronchitis, asthma, and even influenza and the common cold. When a weather condition known as a TEMPERATURE INVERSION prevents dispersal of smog, inhabitants of the area, especially children and the elderly and chronically ill, are warned to stay indoors and avoid physical stress. The dramatic and debilitating effects of severe air pollution episodes in cities throughout the world—such as the London smog of 1952 that resulted in 4,000 deaths—have alerted governments to the necessity for crisis procedures. But even everyday air pollution may insidiously affect health

and behavior. Carbon monoxide, for example, by driving oxygen out of the bloodstream, causes apathy, fatigue, headache, disorientation, and decreased muscular coordination and visual acuity. Air pollution may possibly harm populations in ways so subtle or slow that they have not yet been detected. For that reason research is now under way to assess the long-term effects of chronic exposure to low levels of air pollution—what most people experience—as well as to determine how air pollutants interact with one another in the body and with physical factors such as nutrition, stress, alcohol, cigarette smoking, and common medicines. Another subject of investigation is the relation of air pollution to cancer, birth defects, and genetic mutations. Every industrial process exhibits its own pattern of air pollution. Petroleum refineries are responsible for extensive hydrocarbon and particulate pollution. Iron and steel mills, metal smelters, pulp and paper mills, chemical plants, cement and asphalt plants—all discharge vast amounts of various particulates. Uninsulated high-voltage power lines ionize the adjacent air, forming ozone and other hazardous pollutants. Airborne pollutants from other sources include INSECTICIDES, HERBICIDES, radioactive FALLOUT, and DUST from fertilizers, mining operations, and livestock feedlots. The yearly economic toll exacted by air pollution from all sources has been estimated at more than \$16 billion in the United States alone. To combat pollution in the United States, the Clean Air Act Amendments of 1970 gave the Environmental Protection Agency (EPA) the authority to establish and enforce air pollution standards. National "ambient air quality standards" describe the concentrations of various pollutants allowable in the air. To meet those standards, the states are required to regulate the emissions of various pollutants from existing stationary sources, such as power plants and incinerators. The EPA itself determines emission standards for new factories and new motor vehicles and for certain extremely hazardous industrial poisons such as asbestos, beryllium, mercury, and lead. The law then requires that local governments, public utilities, and factories install pollution control devices such as smokestack scrubbers, electrostatic precipitators, and filters that will prevent gases and particulates from reaching the environment. Auto manufacturers must install exhaust controls or develop an improved engine that will not generate gaseous or particulate contaminants. In the long run the most satisfactory solutions to the air pollution problem may well be the elimination of fossil fuels and the ultimate replacement of the INTERNAL COMBUSTION ENGINE. To these ends efforts have begun in the United States, Japan, and Europe to develop alternative energy sources, such as nuclear fusion and solar heat (see ENERGY, SOURCES OF), as well as differ-

ent kinds of transportation engines, perhaps powered by electricity or steam. See ENVIRONMENTALISM, POLLUTION. See R. G. Bond et al., *Air Pollution* (1972); U.S. Council on Environmental Quality, *Environmental Quality* (3d Annual Report, 1972); S. J. Williamson, *Fundamentals of Air Pollution* (1973).

airport or airfield, place for landing and departure of aircraft, usually with facilities for housing and maintaining planes and for receiving and discharging passengers and cargo. The essential requirements in airport construction are that the field be as level as possible, that the ground be firm and easily drained, that approaches to runways be free of trees, hills, buildings, and other obstructions, and that the site be as free as possible of smoke and weather that produces low-visibility conditions. The runways of large airports vary from 2,500 to 12,000 ft (762–3,658 m) in length and 100 to 200 ft (30–61 m) in width. Narrower paved strips called taxiways that connect the runways to other parts of the airport are entered by aircraft as soon as possible after landing, thus freeing the runways for use by other traffic. A taxiway and a runway are usually connected at each end and at several intermediate points. Besides the hangars (buildings for housing and servicing aircraft), airports are usually provided with office and terminal buildings which house administrative, traffic control, communication, and weather observation personnel. The rapid development of aircraft, especially after the introduction of jet propulsion, has created problems for all major airports. Greater speed and weight of aircraft have made longer and more durable runways necessary. The increasing number of high-speed jet aircraft has caused problems of noise control and has led many communities to reject plans to build an airport within their boundaries. Locating airports away from densely populated areas can alleviate noise problems, but this solution makes it difficult for passengers and others to reach the airport. In England airports are sometimes called aerodromes. See B. J. Hurren, *Airports of the World* (1971); G. E. Campbell, *Airport Management and Operation* (1972); E. G. Blankenship, *Airports*, (1974).

air power, concept that achieved progressive importance in military strategy with the rapid development of aviation and the increased use of aircraft in war during the 20th cent. (see AIR FORCES). The somewhat tentative use of scout planes at the beginning of World War I was followed by the creation of small forces of fighter planes that engaged in aerial combat and some bombing. The Germans took the lead in air strategy, but the Allies soon closed the gap. After the war a few Allied strategists, among them Gen. William Mitchell, Air Chief Marshal Sir Hugh Montague Trenchard, and Gen. Giu-

lio DOUHET, fought for the intensive development of air power and pleaded for large air forces, arguing that future wars would be won by strategic bombardment of an enemy's industrial centers, thereby destroying the economic means of conducting a war. Their theories were controversial, and many continued to see air power as merely an adjunct to ground power. However, Great Britain, France, and Italy established separate departments of government for air strategy, and by 1935 the U.S. Air Corps Tactical School had developed and was teaching a full-blown theory of high-level precision bombardment. Adolf Hitler effectively intimidated other nations by the threat of air war, and the early days of World War II seemed to uphold Hitler's boasts of the effectiveness of the Luftwaffe under Hermann Goering. Aircraft were to a great extent responsible for German victories in Poland, Norway, the Low Countries, and France. However, Germany suffered a setback with the failure of the Luftwaffe to destroy the Royal Air Force in the BATTLE OF BRITAIN. The capture of Crete (1941) by air-transported troops seemed to bear out some of the more extreme claims of air power enthusiasts. The effect of air power in revolutionizing naval warfare was demonstrated by the attack by Japanese aircraft, launched from aircraft carriers, on PEARL HARBOR. Extensive use of the AIRCRAFT CARRIER was decisive in the battles of the CORAL SEA and MIDWAY, and thereafter aircraft were employed in all major naval battles. Throughout the war the Allies conducted an intensive campaign of strategic bombardment against Germany and wrought enormous destruction in German cities, postwar studies, however, have cast doubt on the effectiveness of this campaign. Aircraft also provided invaluable support to ground forces throughout the war by attacking enemy troops, transport, and supply bases. And it was, of course, aircraft that delivered the atomic bombs that finally ended World War II. After the war, moderates argued that no major battle had been won by air forces alone, but only by air forces combined with land or naval forces. Air-power advocates argued that air power should have been used as the primary strategic weapon instead of being used mainly to support ground troops seeking to occupy territory. The importance of air power was, however, accepted by all. In Korea air forces of the United Nations Command effectively enveloped the North Korean army and later cut supply arteries to Chinese Communist troops so that an armistice could be negotiated. Similar ground-air tactics were employed by the United States in Vietnam, while the North Vietnamese made effective use of Soviet-built ground-to-air missiles and tactical air support. After World War II the GUIDED MISSILE came to surpass the airplane as a strategic weapon, but manned bombers as well as offensive and antiballistic missiles have had an important role in the building and maintenance of air power by major nations. There is continued controversy over the number and types of strategic missiles and bombers to be designed and built, but the primary role of air power as a deterrent to attack is hardly contested. See Giulio Douhet, *Command of the Air* (1927, tr 1942), W. F. Craven and J. L. Cate, ed., *The Army Air Forces in World War II* (7 vol., 1948-58), C. K. Webster and Noble Frankland, *The Strategic Air Offensive against Germany, 1939-1945* (4 vol., 1961), S. M. Ulanoff, *True Stories of Strategic Air Power from World War I to the Present* (1971).

airship or **dirigible balloon** (dir'əjəbəl), aircraft consisting of a cigar-shaped balloon that carries a propulsion system, a steering mechanism, and accommodations for passengers, crew, and cargo. Although sails, paddles, and flapping wings were tried, propellers proved to be the most suitable means of propulsion. The balloon section is filled with a lighter-than-air gas, either helium or hydrogen, to give the airship its lift, helium, although lesser in lifting power, has the decided advantage of being nonflammable. In the nonrigid type of airship the balloon maintains its form by the internal gas pressure. In the semirigid type the form is maintained in a similar manner with addition of a rigid keel. The rigid type maintains its form by having a balloonlike hull of metal that holds its shape regardless of the internal gas pressure, inside the hull are a number of small balloons called gas cells that hold a lifting gas. The first successful power-driven airship was built by the French inventor Henri Giffard in 1852. Many experimenters, including the Tissandier brothers of France, followed his efforts. In 1884, Charles Renard and Artur Krebs, also of France, built and successfully operated an airship, *La France*, with propulsion obtained from electric storage batteries. The Brazilian Alberto Santos-Dumont was prominent in the

early development of the nonrigid airship. This type, sometimes called a blimp, is simple in construction and very light. It proved useful during World War II for coastal patrol and antisubmarine warfare, before the war it was used commercially in such activities as advertising, traffic control, and mail delivery. Blimps were kept in use by the U.S. navy until the early 1960s. Count Ferdinand von ZEPPELIN of Germany invented the first rigid airship, which was completed in 1900. Except for the *Mayfly*, which met with disaster upon completion, the building of rigid airships was not undertaken in England until World War I, when the *R33*, *R34*, and others were built. The *R34* was the first airship to cross (1919) the Atlantic, returning in 75 hr. Postwar airships constructed in England were the *R100* and *R101*, which were built as commercial vessels. The *Graf Zeppelin*, built in Germany in 1926-27, traveled 20,000 mi (32,000 km) around the world in 1929. The first rigid airship built in the United States, the *Shenandoah*, completed in 1923, was the first vessel to use helium as a lifting gas. She was wrecked by a violent storm in 1927. The *Los Angeles*, built by Germany as part of her reparations payment to the United States and completed in 1924, was successfully navigated across the Atlantic late in 1924 by Capt. Hugo Eckener of Germany. The German airship *Hindenburg*, built in 1936, and those aboard burned at its mooring mast at Lakehurst, N.J., in 1937. No rigid airship survived World War II. See M. M. Mooney, *The Hindenburg* (1972), Patrick Abbott, *Airship* (1973), Robert Jackson, *Airships* (1973), D. H. Robinson, *Giants in the Sky* (1973).

airsickness: see MOTION SICKNESS

airspeed indicator, instrument that indicates the speed of a vehicle, especially an aircraft, relative to the speed of the surrounding air. See AIR NAVIGATION, PITOT STATIC SYSTEM.

air transportation. See AVIATION.

airway, air route between air traffic centers that is over terrain best suited for emergency landings, with landing fields at intervals equipped with aids to air navigation and with a communication system for the transmission of information pertinent to the operation of aircraft. Airways do not always follow a straight line, since it is often advisable to detour in order to avoid mountains or certain localities where weather conditions are generally unfavorable. Definite flying rules have been established that require all aircraft to keep to the right of an airway and to observe regulations governing minimum altitudes, approaching and overtaking other aircraft, and acrobatic flying.

Airy, Sir George Biddell, 1801-92, English astronomer. The son of a poor farmer, he distinguished himself as Senior Wrangler at Cambridge, where he was elected fellow of Trinity College (1824) and appointed professor (1826). As Astronomer Royal and director of the Royal Greenwich Observatory from 1835 to 1881, he organized the efficient and accurate observation of stellar positions. Airy wrote many governmental reports on astronomical and other subjects, published works on celestial mechanics, and made discoveries in theoretical and practical optics, including the cylindrical lens for correcting astigmatism, an eye defect he himself possessed. See his autobiography (1896).

Aisha (ī'shā, a'īshā'), c. 614-678, favorite wife of MUHAMMAD the Prophet. She was the daughter of Abu Bakr and was married to the Prophet soon after the hegira. A brilliant, astute woman, she was devoted to her husband and his teachings, and after his death she exerted considerable influence, especially against Ali. She fomented an unsuccessful revolt during Ali's tenure of the caliphate. The name also appears as Ayesha or Aishah. See Nabia Abbott, *Aishah, the Beloved of Mohammed* (1942, repr. 1973).

Aisne (ēn), department (1968 pop. 526,346), NE France, in ÎLE-DE-FRANCE, PICARDY, and CHAMPAGNE, touching the Belgian border. LAON is the capital.

Aix-en-Provence (ēk-sān-prōvāns'), city (1968 pop. 93,671), Bouches-du-Rhône dept., in Provence, SE France. It is a commercial center in an area producing olives, grapes, and almonds. Its manufactures include food products, wine-making equipment, and electrical apparatus. Founded (123 B.C.) by the Romans near the site of mineral springs, it has long been a popular spa. There, in 102 B.C., Marius defeated the Teutons. It became an archiepiscopal see in the 5th cent. It has been the capital of Provence since the 12th cent. (except when replaced by Arles), and passed with Provence to the crown in 1487, becoming the seat of a provincial PARLEMENT. A music center since the 11th cent. and a focus of PROVENÇAL LITERATURE, Aix has a university (founded

1409, recently combined with one at Marseilles). A notable structure is the Cathedral of Saint-Sauveur (13th-14th cent.). A picturesque town, Aix has become a favorite sojourn for painters. A music festival is held each summer. Cézanne was born and died there.

Aix-la-Chapelle: see AACHEN, West Germany.

Aix-la-Chapelle, Treaty of (ēks-lā-shapēl'),

1 Compact of May 2, 1668, that ended the French invasion of the Spanish Netherlands (see DEVOLUTION, WAR OF). France kept most of its conquests in Flanders, Cambrai, Aire, Saint-Omer, and the province of Franche-Comte were returned to Spain, and the remainder of Spain's possessions in the Low Countries were guaranteed by the TRIPLE ALLIANCE. 2 Treaty of 1748, ending the War of the AUSTRIAN SUCCESSION. In general, it restored the status quo ante, but it awarded Silesia and Glatz to Prussia and conferred the duchies of Parma, Piacenza, and Guastalla on the Spanish infante Philip. It confirmed the PRAGMATIC SANCTION of 1713, and it renewed Britain's privilege (acquired 1713) over transporting slaves to Spanish America, the trade agreements with Britain regarding the Spanish colonies, and the recognition of the Protestant succession in England.

Aix-les-Bains (ēks-lā-bān'), town (1968 pop. 20,718), Savoie dept., SE France, situated on Lake Bourget at the foot of the Alps. It is a popular resort and spa. The town's alum and sulphur springs have been frequented since Roman times. There are ruins of Roman baths.

Aizu-Wakamatsu (ī'zōō-wakamat'sōō), city (1970 pop. 101,065), Fukushima prefecture, N Honshu, Japan. Its major products are wooden items, sake, rice, and persimmons. The capture of its castle by imperial forces in 1868 marked the end of civil war in Honshu.

Ajaccio (ayāt'chō), town (1968 pop. 42,300), capital of Corsica, France, on the Gulf of Ajaccio, an inlet of the Mediterranean. A fortified seaport, it is an important market town, an active industrial center, and a year-round tourist attraction. Its present site was established by Genoese colonists in 1492. Ajaccio was the birthplace of Napoleon I, the house where he was born is preserved. Other points of interest are the old cathedral (16th cent.) and St. Erasmus Church (17th cent., restored). In World War II, Ajaccio was occupied by the Italians until the people successfully revolted (Sept., 1943) with the aid of Free French troops.

Ajah (ā'jā), variant of AIAH 1.

Ajalon (ā'jālōn, ā'-), variant of AJALON.

Ajanta (ājūn'tā), village, Maharashtra state, W central India, in the Ajanta Hills. The famous Ajanta caves, discovered in 1819, contain remarkable examples of Buddhist art. The caves, carved out of the side of a steep ravine, consist of chapels and monasteries dating from c. 200 B.C.-A.D. 650 with magnificent frescoes and sculpture depicting scenes from the life of Buddha.

Ajax (ā'jāks), Gr. Aias, in Greek mythology. 1 Hero of the Trojan War, son of TELAMON, thus called the Telamonian Ajax, also called Ajax the Greater. In the *Iliad* he is represented as a gigantic man, slow of thought and speech, but quick in battle and always showing courage. He led the troops of Salamis against Troy and was one of the foremost Greek warriors, fighting both Hector and Odysseus to draw. He and Odysseus rescued the corpse of Achilles from the Trojans, but when the armor of Achilles was awarded to Odysseus, the disappointment of Ajax was so great that he went mad and committed suicide. The Ajax of Sophocles deals with the madness and death of the great warrior. Ajax had hero cults at Salamis, Attica, and Troas. 2 Leader of the forces from Locris in the Trojan War, called the Locrian Ajax, Ajax of Oileus (after his father, Oileus), or Ajax the Lesser, because he was not the equal of the Telamonian Ajax. In the sack of Troy he violated Cassandra at the altar of Athena, and Athena caused him to be shipwrecked on the way home. Poseidon saved him, but Ajax, boasting of his own power, defied the lightning to strike him down and was instantly struck by it. Other versions of the story say that he stole the PALLADIUM and that later Poseidon destroyed him for blasphemy.

Ajivika (ajē'vīkā), religious sect of medieval India, once of major importance. The Ajivikas were an ascetic, atheistic, anti-Brahmanical community whose pessimistic doctrines are related to those of JAINISM. Its founder, Gosala (d. c. 484 B.C.), was, it is said, a friend of Mahavira, the founder of Jainism. Gosala denied that a man's actions could influence the process of transmigration, which proceeded according to a rigid pattern, controlled in the smallest detail by

an impersonal cosmic principle, *Niyati*, or destiny. After a period of prosperity under Asoka, the sect rapidly declined and only retained local importance in SE India, where it survived until the 14th cent. See A. L. Basham, *History and Doctrines of the Ajivikas* (1951).

Ajman (ajman'), sheikhdom (1968 pop 4,245), c 100 sq mi (260 sq km), part of the federation of UNITED ARAB EMIRATES, E Arabia, primarily on the Persian Gulf. The smallest member of the federation, Ajman consists principally of a town (pop 3,725) of the same name and two mountain villages. Oil production in Ajman began in 1964. A former British protectorate, it joined the United Arab Emirates in 1971.

Ajmer (ājmer', aj-), former state, NW India. Now part of Rajasthan state, it formerly consisted of two detached areas surrounded by Rajasthan and was identical with the former British province of Ajmer-Merwara. The city of Ajmer (1971 pop 262,480), the former capital and now a district administrative center, was founded in the 12th cent. The city is a trade center and has cotton mills and railroad shops. Marble is quarried nearby. Ajmer was a Mogul military base, it was there that Jehangir received Sir Thomas Roe, ambassador of James I of England. A Jain temple (constructed 1153, now a mosque), the tomb of the Muslim saint Muin-al-din Hasan Chishti, and a palace of AKBAR are the most notable historic buildings. Mayo Rajkumar College is in Ajmer.

Ajodhya (əjōd'yə) or **Ayodhya** (əyōd'yə), village, Uttar Pradesh state, N India, on the Gogra River. It is a joint municipality with Faizabad. Ajodhya was the capital of the kingdom of Kosala (7th cent. B.C.). Long associated with Hindu legend, the town is a center of pilgrimage and is one of the seven sites sacred to Hindus. It is also called Oudh.

Akaba: see AQABA, Jordan.

Akademgorodok (akadāmgō'rōdōk), city, W central Siberian USSR, near NOVOSIBIRSK. A scientific center begun in 1959, it is the site of 15 institutes of the Soviet Academy of Sciences.

Akan (āk'kän), descendant of Esau. Gen. 36:27. Jakin 1 Chron. 1:42.

Akan (akan', ak'an), people of W Africa, primarily in S Ghana, E Ivory Coast, and parts of Togo. They speak languages of the Twi branch of the Kwa subfamily. Although patrilineal descent is recognized, matrilineal descent is more important, social organization is through clans. The ASHANTI and the FANTI, both of Akan stock, developed powerful confederacies in the 17th and 18th cent.

Akashi (a'ka'shē), city (1970 pop 206,525), Hyogo prefecture, W Honshu, Japan, on the Harima Sea and the Akashi Channel. It is a fishing port and industrial center where electrical machinery is produced.

Akbar (āk'bar), 1542-1605, Mogul emperor of India (1556-1605), son of Humayun, grandson of Babur. He succeeded to the throne under a regent, Bairam Khan, who rendered loyal service in expanding and consolidating the Mogul domains before he was summarily dismissed (1560) by the young king Akbar, however, continued the policy of conquest. A magnetic personality and an outstanding general, he gradually enlarged his empire to include Afghanistan, Baluchistan, and nearly all of the Indian peninsula north of the Godavari River. To unify the vast state, he established a uniform system of administration throughout his empire and adopted a policy of religious toleration. Having defeated the Rajputs, the most militant of the Hindu peoples, he allied himself with them, giving their chiefs high positions in his army and government, he twice married Rajput princesses. Although he was himself illiterate, Akbar's courts at Delhi, Agra, and FATEHPUR SIKRI were centers of the arts, letters, and learning. He was much impressed with Persian culture, and because of him the later Mogul empire bore an indelible Persian stamp. At his sumptuous courts, where he reigned as a philosopher-king, Akbar surrounded himself with Muslim divines, Hindu Brahmins, and Jesuits. Apparently disillusioned with orthodox Islam and hoping to bring about religious unity within his empire, he promulgated (1582) the Din-i-Ilahi [divine faith], an eclectic creed derived from Islam, Hinduism, Zoroastrianism, and Christianity. A simple, monotheistic cult, tolerant in outlook, it centered on Akbar as prophet. This religious revolution led to serious rebellions by outraged Muslims. The Din-i-Ilahi never took hold in India and disappeared soon after Akbar's death. Akbar, generally considered the greatest of the Mogul emperors, was succeeded by his son Jahangir. See biographies by Laurence Binyon (1930) and V. A. Smith (2d rev. ed. 1966), R. Krishnamurti, *Akbar, the Religious Aspect* (1961).

Akeldama (akēl'dāma), variant of ACELDAMA.

Akeley, Carl Ethan (āk'lē), 1864-1926, American naturalist, animal sculptor, and author, b. Orleans, N.Y. He served (1887-95) at the Museum of Milwaukee, from 1895 to 1909 he was at the Field Museum, Chicago (now the Chicago Natural History Museum), and from 1909 he was affiliated with the American Museum of Natural History, New York City. His principal contribution was in the field of taxidermy, his system of mounting specimens by applying the skin to a finely contoured model is still used by museums. His animal sculptures and paintings may be seen in Akeley Hall in the Museum of Natural History and in the Chicago Natural History Museum. The extraordinary realism of Akeley's displays derived from his wide field experience, he made numerous expeditions to Africa to collect specimens. He invented the cement gun for use in his own work, and the Akeley camera is widely used by naturalists. His influence led to the establishment in 1926 of the Albert National Park, an animal sanctuary in Zaire. He wrote *In Brightest Africa* (1923).

Akenside, Mark (āk'insid), 1721-70, English poet and physician. His chief literary work was the didactic poem *The Pleasures of Imagination* (1744). Among his other works are the neoclassical *Odes on Various Subjects* (1745) and the *Epistle to Curio* (1744), a vigorous political satire. Akenside's conversion to Tory principles at the accession of George III earned him the appointment of physician to the queen. See biography by C. T. Houpt (1944).

Akershus (a'kars-hōs'), county (1972 est. pop. 332,000), 1,895 sq mi (4,908 sq km), SE Norway, bordering on the Oslofjord in the south and on Sweden in the east. The capital is Oslo. The county has productive farms and extensive forests. Manufactures include processed food, textiles, metals, and forest products.

Akhelōs or **Achelous** (akhēlō'ōs), river, 137 mi (221 km) long, rising in the Pindus Mts., NW Greece, and flowing generally south, traversing many mountain gorges, and emptying into the Ionian Sea opposite Kefallinia. It is used for floating logs and is an important source of hydroelectric power. It formed a part of the boundary between ancient Aetolia and Acarnania and was formerly called Aspropotamos.

Akhenaton: see IKHNATON.

Akhetaton: see TEL EL AMARNA.

Akhisar (ak'hī'sar'), city (1970 pop. 47,856), W Turkey. It is in a region where tobacco, cotton, and grapes are grown. The city is noted for its rugs. It is the biblical THYATIRA.

Akhmatova, Anna (an'nā akhma'tava), pseud. of **Anna Andreyevna Gorenko** (āndrā'avnā gōryēng'kō), 1888-1966, Russian poet of the ACMEIST school. Her brief lyrics, simply and musically written in the tradition of Pushkin, attained great popularity. Her themes were personal, emotional, and often ironic. Among her most popular volumes are *Chiotki* [the rosary] (1914) and *Iva* [the willow tree] (1940). She was married to the Acmeist poet Gumilev until 1918. Akhmatova remained silent for two decades. She began writing again at the outbreak of World War II, after which her writings regained popularity. She was harshly denounced by the Soviet regime in 1946 and 1957 for "bourgeois decadence." See her *Selected Poems* (Fr. 1969) and *Poems of Akhmatova* (tr. 1973), study by S. N. Driver (1972).

Akhmim (ākhmēm'), city (1966 pop. 44,800), E central Egypt, on the Nile. Textiles and handicrafts are produced. The ancient Chemmis and Panopolis, the city was long noted for its linen and limestone, the temple of Pan is there.

Akiba ben Joseph (ākē'bā), A.D. c. 50-A.D. c. 135, Palestinian rabbi. He was one of the first Jewish scholars to make a systematic compilation of the Hebrew oral laws. This compilation, known as the *Mishna of Rabbi Akiba*, exercised a profound influence upon the development of Mishnaic doctrines. Akiba believed in the Messianic mission of BAR KOKBA and sided with him in his revolt against Rome. He was idolized by the people, and the facts of his life are obscured with legends. He was incarcerated and, it is said, tortured to death by the Romans; he is one of the martyrs mentioned in the Jewish penitential prayer. See study by Louis Finkelstein (1936, repr. 1970).

Akihito (ākē'hēto), 1933-, Japanese crown prince, son of HIROHITO. In 1952 he was officially proclaimed heir to the throne. A popular figure, he has traveled widely, visiting Great Britain, Canada, the United States, and many countries of South America and Asia. In April, 1959, he married Michiko Shoda, a commoner, it was the first time that an heir to the

Japanese throne had wed outside of the court nobility. They have three children, the oldest, a son, was born in 1960.

Akimiski, island. See JAMES BAY, Canada.

Akita (a'kēta), city (1970 pop. 235,879), capital of Akita prefecture, NW Honshu, Japan, on the Sea of Japan. An oil-refining center, it is also a large port that exports lumber and rice. It became an important feudal town in the 8th cent., and its castle-fort (733) still stands. Akita prefecture (1970 pop. 1,241,261), 4,503 sq mi (11,663 sq km), contains Japan's largest oil field and copper mine. The prefecture's mountains have extensive stands of quality timber, and its fertile lowlands yield crops of rice, tobacco, and fruit. Akita (the capital), Noshiro (the chief port), Tsushisoki, and Yokote are centers of population.

Akita (akē'ta), breed of large dog developed in Japan from ancient ancestry and used originally as a hunter of such game as deer, wild boar, and bear. It stands from 20 to 27 in. (50.8-68.6 cm) high at the shoulder and weighs from 75 to 110 lb (34.1-49.9 kg). Its double coat consists of a thick, furry underlayer and a medium-length, harsh, straight topcoat which may be any shade of cream, brown, red, gray, black, silver, or brindle. A muscular dog with erect ears and tail curved over its back, the Akita has been used in the 20th cent. as a police and war dog and as a companion and watchdog. It is rapidly gaining popularity in the United States and is presently exhibited in the miscellaneous class at the dog shows sanctioned by the American Kennel Club. See DOG.

Akka: see PYGMY.

Akkad (āk'ād, a'kad), ancient region of Mesopotamia, occupying the northern part of later Babylonia. The southern part was SUMER. In both regions city-states had begun to appear in the 4th millennium B.C. In Akkad a Semitic language, Akkadian, was spoken. Akkad flourished after SARGON began (c. 2340 B.C.) to spread wide his conquests, which ranged from his capital, Agade, also known as Akkad, to the Mediterranean shores. He united city-states into a vast organized empire. Furthermore, he was overlord of all the petty states of Sumer and Akkad, as were his successors, most notably Naramsin. The merit of Sargonic art can be seen in the stele of Naramsin. The naturalistic sculpture, depicting a wide range of mythological scenes, reflected a high achievement in glyptic art. After more than a century the empire declined and was overrun by mountain tribes. When the Akkadian empire had fallen, Mesopotamia was in chaos. Peace was maintained only in the south in the city-state of Lagash under Gudea. Lagash was later absorbed by the 3d dynasty of Ur, which governed both Akkad and Sumer. Toward the end of the 3d millennium Elam took over most of the power as a new wave of Semitic-speaking peoples entered Mesopotamia. It was by defeating the Elamites that Hammurabi was able to create Babylonia. The name Akkad also appears as Accad.

Akkadian (ākādēan), language belonging to the Northeast Semitic subdivision of the Semitic subfamily of the Hamito-Semitic family of languages (see HAMITO-SEMITIC LANGUAGES). Also called Assyro-Babylonian, Akkadian (or Accadian) was current in ancient Mesopotamia (now Iraq) from about 3,000 B.C. until the time of Christ. The earliest surviving inscriptions in the language go back to about 2,500 B.C. and are the oldest known written records in a Semitic tongue. Old Akkadian is the earliest period of the language and can be dated from its appearance in Mesopotamia c. 3000 B.C. to c. 1950 B.C., when the 3d dynasty of Ur fell. Thereafter, Akkadian evolved into two dialects, Assyrian, the tongue of ancient Assyria, and Babylonian, the language of ancient Babylonia. The history of both Assyrian and Babylonian can be roughly divided into three successive periods designated as Old (beginning c. 1950 B.C.), Middle (c. 1500-c. 1000 B.C.), and New or Late (after c. 1000 B.C.). Around 1500 B.C., Babylonian began to be widely used, both in the Near East and in international diplomacy. As time went on, Babylonian even replaced Assyrian to a large extent in the written records and literature of the Assyrian civilization. By the beginning of the Christian era, however, Babylonian had died out, and it remained a lost language until modern times, when it was deciphered during the first half of the 19th cent. Unlike the other Semitic languages, which employed an alphabetic writing system, Akkadian and its later forms, Assyrian and Babylonian, were written in CUNEIFORM. The Akkadians adopted cuneiform c. 2500 B.C. from the Sumerians, a non-Semitic people who are believed to have invented it. See AKKAD. See I. J. Gelb, *Old Akkadian Writing and Grammar* (2d ed.

1961), Erica Reiner, *A Linguistic Analysis of Akkadian* (1966)

Akkerman: see BELGOROD DNESTROVSKY, USSR

Akko (āk'ō) or **Acre** (ā'kar, ā'-), Fr. *Saint-Jean d'Arce*, Arab. Acca, city (1970 est. pop. 33,900), NW Israel, a fishing port on the Bay of Haifa (an arm of the Mediterranean Sea). Its manufactures include iron and steel, chemicals, and textiles. The city was captured (A.D. 638) by the Arabs, who developed its natural harbor. In 1104 it was captured in the First Crusade and was held by Christians until 1187, when it was taken by Saladin. In the Third Crusade it was won back (1191) by Guy of Lusignan, Richard I of England, and Philip II of France, who gave it to the Knights Hospitalers (the Knights of St. John, hence its French name). For the next century it was the center of the Christian possessions in the Holy Land. Its surrender and virtual destruction by the Saracens in 1291 marked the decline of the Latin Kingdom of Jerusalem and the Crusades. Akko was taken by the Ottoman Turks in 1517 and was revived in the late 18th cent. under Dahir al-Umar, the local Ottoman ruler. In 1799, Ottoman forces, with the aid of Great Britain, withstood a 61-day siege by Napoleon I. The city was taken in 1832 by Ibrahim Pasha for Muhammad Ali of Egypt, but European and Ottoman forces won it back for the Ottoman Empire in 1840. British troops captured the city in 1918. Akko was assigned to the Arabs in the 1948 partition of Palestine, but it was captured by Israeli forces in the Arab-Israeli war of that year.

Akkub (āk'ub) 1 Descendant of David 1 Chron. 3:24. 2 Levitical family 1 Chron. 9:17, Ezra 2:42, Neh. 7:45, 11:19, 12:25. 3 One of the Nethinim. Ezra 2:45. 4 One who explained the Law. Neh. 8:7.

Aklavik (āk'lā'vik), settlement (1971 pop. 677), Mackenzie dist., Northwest Territories, Canada, on the west channel of the Mackenzie River. The unsuitability of the land at the site led to the construction of INUVIK.

Akmoilinsk. see TSELINOGRAD, USSR

Ako, Michel. see ACO, MICHEL

Ako (āk'ō), city (1970 pop. 45,942), Hyogo prefecture, W Honshu, Japan, on the Harima Sea. It is an industrial city where fire bricks, fishing nets, medicine, and cement are produced. Ako is famous for its Oishi (Shinto) shrine and Kogakuji (Buddhist) temple.

Akola (āk'ō'lā), town (1971 pop. 168,454), Maharashtra state, W central India, on the Morna River. It is a district administrative center and a market town. Cotton and groundnuts are the chief products of the region. A citadel built by the Mogul emperor Akbar Shah II in the 19th cent. stands in Akola.

Akosombo Dam, Ghana. see VOLTA, river

A-k'o-su (a-kō-sōō), town, SW Sinkiang Uygur Autonomous Region, China, on the A-k'o-su River. The center of an oasis at the foot of the Tien Shan mts., it is a caravan hub on the Old Silk Road. Industries include textile and carpet manufacturing, jade carving, tanning, and metalworking. Iron deposits are in the area. A-k'o-su has ancient Buddhist statues and caves, but most are in poor condition. The name is sometimes spelled Aksu or Aqsu.

Akrabbim (āk'rāb'im) see MAALEH-ACRABBIM

Akranes (a'krānēs'), town (1969 est. pop. 4,245), SW Iceland, on a peninsula in the Faxaflói. It is a fishing port and industrial center, with a huge cement plant.

Akron (āk'rān), city (1970 pop. 275,425), seat of Summit co., NE Ohio, on the Little Cuyahoga River, on the highest point of the Ohio and Erie Canal, inc. 1825. It is a port of entry, an important industrial and transportation center, and the heart of the country's rubber industry. In addition to its enormous variety of rubber products, its many manufactures range from fishing tackle to plastics, missiles, and heavy machinery, the dirigibles *Akron* and *Macon* were built there. The Ohio and Erie Canal (opened 1827) and later the railroad spurred the city's growth. The first rubber plant was established in 1870. The city is the seat of the Univ. of Akron and the Institute of Rubber Research. It has an art institute, a music center, and a symphony orchestra. Points of interest include a giant dirigible airdock, one of the world's largest buildings without inner supports, the John Brown home, where the abolitionist lived from 1844 to 1846 (now housing a museum), and several old mansions.

Akron, University of, at Akron, Ohio, coeducational, established 1870 as Buchtel College, transferred 1913 as the nucleus of the Municipal Univ. of Akron. In 1967 the school became a state university. During World War II scientists connected with the university worked on the critical development of

synthetic rubber, similar scientific programs are now carried on by the Institute of Polymer Science. The university has an extensive adult education system.

Aksakov, Konstantin Sergeyevich, 1817-60, Russian critic and writer, son of Sergei Timofeyevich Aksakov. Like his brother Ivan, he was an ardent Slavophile and strongly idealized the village community as a voluntary association. His literary criticism was devoted mainly to urging writers to seek closer ties with the Orthodox religion and with the peasantry. He wrote *O vnutrennem sostoyanii Rossii* [on the internal situation of Russia] in 1855.

Aksakov, Sergei Timofeyevich, 1791-1859, Russian writer, known for his nostalgic descriptions of the Orenburg region. Aksakov's chief work is *Family Chronicle* (1856, tr. 1924), a picture of country life in the days of serfdom. His *Years of Childhood* (1858, tr. 1960) vividly describes his joyous youth.

Aksu: see A-K'O SU, China

Aksum or **Axum** (both āksōm'), town (1970 est. pop. 12,800), Tigre prov., N Ethiopia. Aksum was the capital of an empire (c. 1st-8th cent. A.D.) that controlled much of what is now N Ethiopia. In the 4th cent. the emperor Ezana was converted to Christianity, and today Aksum is a major center of Ethiopian Christianity. The Ark of the Covenant is said to have been brought there from Jerusalem and placed in the church of St. Mary of Zion, where Ethiopia's emperors were crowned. There are gigantic carved obelisks dating from pre-Christian times.

Akte, Greece. see ATHOS

Aktyubinsk (āktyōō'bīnsk), city (1970 pop. 550,000), capital of Aktyubinsk oblast, Kazakhstan, S European USSR, on the Ileik River and the Kazalinsk RR. Aktyubinsk has an important ferroalloy plant and chromium complex based on nearby ore deposits. Founded in 1869, the city grew rapidly with the expansion of metallurgical industries during World War II.

Akure (ākōō'rā), town (1969 est. pop. 82,000), S Nigeria. Timber is cut nearby and processed in Akure. The town is also a cacao marketing center. Akure was a small independent YORUBA kingdom until it was conquered by BENIN in the early 19th cent. Great Britain gained control in 1894. Akure has a school of agriculture.

Akureyri (ā'kurā'rē), city (1970 pop. 10,735), N Iceland, at the head of the Eyjafjörður. The second largest city of Iceland, it is a fishing, commercial, and industrial center. It was settled A.D. c. 900 and chartered in 1786. The modern Lutheran Church is a landmark.

Akyab see SITWE, Burma

al- For some Arabic names beginning thus, see second part of name, e.g., for Anwar al-Sadat, see SADAT ANWAR AL-

Al, chemical symbol of the element ALUMINUM

Alabama (ālābām'ā), state (1970 pop. 3,444,165), 51,609 sq. mi. (133,667 sq. km), SE United States, admitted as the 22d state of the Union in 1819. The capital is MONTGOMERY, the largest city is BIRMINGHAM, and the major seaport is MOBILE. Alabama is bounded on the N by Tennessee, on the E by Georgia, on the S by Florida and the Gulf of Mexico, and on the W by Mississippi. Except for the mountainous section in the northeast (the southern end of the Cumberland Plateau) the state is a rolling plain with a mean elevation of c. 500 ft (150 m) in two geologic regions—the Appalachian Piedmont above the FALL LINE and the coastal plain below. These plains, drained by the ALABAMA and the TOBIEGEE rivers and their tributaries, are primarily devoted to agriculture. The central BLACK BELT, formerly a principal cotton-growing area, is now a center for raising cattle and poultry. Alabama's most valuable agricultural products are cotton, grown in the Tennessee River valley, is still the chief crop. Other important crops are peanuts, soybeans, and hay. Although about half of Alabama's area is devoted to agriculture, manufacturing accounts for a larger share of the state's income. Where the Tennessee River loops across the north, hydroelectric power from the TENNESSEE VALLEY AUTHORITY has been increasingly turning an agricultural land into an industrial section. The mineral riches of coal, oil, stone, and iron also contribute to the state's industries, and Birmingham is a leading U.S. iron and steel center. Other major industries produce chemicals, textiles, paper products, and processed foods. In addition Gulf fishing and lumbering add to the wealth of Alabama, pine plywood is also an important product. Agriculture was known to the four great Indian groups of the region (Creek and Cherokee in the east, Choctaw

and Chickasaw in the west) when the Spanish explorers arrived. Cabeza de Vaca (and possibly Panfilo de Narvaez) visited Alabama in 1528, and Her-

nando De Soto spent some time in the region in 1540. White settlement was begun, however, not by the Spanish but in 1702 by the French under the sieur de Bienville in the Mobile area. The French and British contended for the furs gathered by the Indians, and the region passed (1763) to the British, who were victorious over France and Spain in the French and Indian Wars. At the close of the American Revolution, Great Britain ceded (1783) to the United States all lands E of the Mississippi except the Floridas (see West Florida Controversy). The territory of Mississippi, which included parts of present-day Alabama, was set up in 1798, but the land was still largely wilderness with a considerable fur trade, centered at Saint Stephens, and with only the beginnings of cotton cultivation. Both were interrupted during the War of 1812, when part of the Creek Confederacy began attacking under William Weatherford. Andrew Jackson decisively defeated the Indians at Horseshoe Bend on March 27, 1814. That Jackson victory, coupled with the British demand for cotton, ushered in a period of heavy settlement. New settlers poured into the Alabama region, especially from Georgia and Tennessee. The wealthy newcomers settled in the fertile bottomlands and established great plantations based on slave labor, which helped to produce cotton for the markets of Southern ports. Poorer newcomers took over less fertile uplands, where they eked out a living. The population grew to such an extent that the Territory of Alabama, taking Saint Stephens as its capital, was set up in 1817 with William W. Bibb as governor, two years later it became a state. In Alabama the slave-owning planters were dominant because of the prosperous cotton crop, and as the Civil War loomed closer the support of Southern rights and secession sentiment grew under the urging of "fire-eaters" such as William L. Yancey. Alabama broke away from the Union on Jan. 11, 1861, when its second constitutional convention passed the ordinance of secession. The government of the Confederacy was organized at Montgomery on Feb. 4, 1861. Federal troops held the Tennessee valley after 1862. One of the great naval battles of the war was won by Admiral D. G. Farragut in Mobile Bay in 1864, but most of the state was not occupied in force until 1865. Alabama ratified the Thirteenth Amendment to the U.S. Constitution in 1865, but in 1867 it refused to ratify the Fourteenth Amendment and was placed under military rule. That rule ended the following year when a new state legislature operating under a new constitution approved the Fourteenth Amendment. However, Federal troops did not leave Alabama until 1876. In the RECONSTRUCTION era Alabama's government was filled with CARPETBAGGERS and SCALAWAGS, and corruption was widespread. Few reforms emerged during the period, but the mining of coal and iron was expanded by Daniel Pratt and his successor, H. F. De Bardeleben, marking the rise of industry in Alabama. Railroads built during Reconstruction also encouraged industrialization. BIRMINGHAM was founded in 1870, and its first blast furnace began operations in 1880.

The cotton textile industry developed in the 1880s. At that time farming was still dominant, and the fortunes of the state rose and fell with the market price of cotton, however, constant use and erosion began to exhaust the land. Diversification of crops, much advocated in the 20th cent., was accelerated when the boll weevil invaded the cotton fields and the great demand during World War I brought high prices for food crops. The Great Depression and the agricultural program of President Franklin D. Roosevelt's New Deal caused more farmers to produce subsistence crops and took more land away from the wasting cotton culture. Industrialization was greatly increased during World War II with the appearance of factories producing machines, munitions, powder, and other war supplies. HUNTSVILLE became a center for rocket research, and its population more than quadrupled between 1950 and 1960. Industrialization and commerce increased throughout the state. Adding impetus to that growth was an ambitious development program of Alabama's inland waterways to provide cheap water transportation, more hydroelectric power, and flood-control measures. In 1954 the U.S. Supreme Court handed down a decision ruling racial segregation in public elementary and secondary schools unconstitutional, and the decision was followed by a severe rise in racial tension (see INTEGRATION). Alabama has witnessed many civil rights protests, including a year-long black boycott of public buses in Montgomery in 1955-56 to protest segregated seating and a Freedom March from Montgomery to Selma in 1965. Alabama's constitution, adopted in 1901, provides for an elected governor, who may not succeed himself in office. The legislature is made up of a 35-member senate and a 106-member house of representatives. The state elects 2 Senators and 7 Representatives to the U.S. Congress and has 9 electoral votes. Although Republicans gained in the state in the 1960s, Alabama is still predominantly Democratic. George C. Wallace, a Democrat, was elected governor in 1962 and again in 1970 and entered the U.S. presidential race in 1968 as the candidate of the American Independent party. He ran for the presidency again in 1972 and was reelected governor in 1974. In 1966 his wife, Lurleen Wallace, was elected governor. Alabama contributed such important figures to the country as Hugo L. Black and Helen Keller. Places of interest in the state include Russell Cave National Monument, near Bridgeport, the site of caves that were inhabited almost continuously from 6000 B.C. to A.D. 1650, and Mound State Monument, near Tuscaloosa, the site of numerous early Indian mounds. Among Alabama's educational institutions are the Univ. of Alabama, at University, Auburn Univ., at Auburn, Birmingham-Southern College and Howard College, at Birmingham, Huntingdon College, at Montgomery, the Univ. of Montevallo, at Montevallo, and Tuskegee Institute, at Tuskegee. See W. L. Fleming, *Civil War and Reconstruction in Alabama* (1905), W. T. Jordan, *Antebellum Alabama, Town and Country* (1957), T. P. Abernethy, *The Formative Period in Alabama, 1815-1828* (2d ed. 1965), V. B. Haagen, *Alabama, Portrait of a State* (1968), C. P. Denman, *The Secession Movement in Alabama* (1933, repr. 1971), Lucille Griffith, *Alabama: A Documentary History to 1900* (rev. ed. 1972), Federal Writers' Project, *Alabama: A Guide to the Deep South* (1941, repr. 1973).

Alabama, river, 315 mi (507 km) long, formed in central Ala. by the confluence of the Coosa and Tallapoosa rivers N of Montgomery, Ala., and flowing SW to Mobile, Ala., where it joins the Tombigbee to form the Mobile River, drains c. 22,600 sq mi (58,500 sq km). In the 1800s the Alabama played an important role in the development of the region's economy as a transporter of goods. It remains an important mover of farm products, lumber, and manufactured goods, especially textiles and iron and steel products. The Cahaba River, its chief tributary, is the source of water for Birmingham, Ala.

Alabama, ship see CONFEDERATE CRUISERS

Alabama, University of, mainly at University, near Tuscaloosa, state supported, coeducational, chartered 1820, opened 1831. An experimental station of the U.S. Bureau of Mines, the state natural history museum, the state geological survey, and a business research bureau are there. The university also has a campus at Huntsville and a branch offering medical programs at Birmingham.

Alabama claims, claims made by the U.S. government against Great Britain for the damage inflicted on Northern merchant ships during the American Civil War by the *Alabama* and other CONFEDERATE CRUISERS that had been built, fitted out, and other-

wise aided by British interests. William H. Seward failed to reach a settlement while he was Secretary of State. However, his successor, Hamilton Fish, brought about the Treaty of Washington (1871), which provided for arbitration. Charles Francis Adams for the United States, Alexander J. E. Cockburn for Great Britain, and three members from neutral countries constituted the tribunal, which met at Geneva in 1871-72. The arbitrators threw out American claims for indirect losses, but they awarded the United States \$15.5 million for all the direct damage done by the *Alabama* and the *Florida* and for most of the damage caused by the *Shenandoah*. The British were absolved of blame in the cases of several less important cruisers. See study by T. W. Balch (1900, repr. 1969).

Alabama Indians or Alibamu Indians (ālībām'ōō), North American Indians whose language belongs to the Muskogean branch of the Hokan-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). They lived in S. Alabama in the early 18th cent. and were members of the Creek confederacy. During the 19th cent. they moved to W. Louisiana and E. Texas. The state of Alabama takes its name from them. The Alabama share a reservation with the Coushatta Indians in Texas where together they number some 380; they are often referred to jointly as the Alabama-Coushatta Indians.

Alabama Polytechnic Institute: see AUBURN UNIVERSITY

alabamine (āl'abām'ēn) see ASTATINE

Alabaster, William, 1567-1640, English theologian and poet. Although he wrote two epic poems in Latin, he is remembered for his theological studies, including *Spiraculum Tubarum* (1633). Alabaster converted to Roman Catholicism in Spain in 1597 and was imprisoned on his return to England in 1598. He reconverted to Protestantism and was chaplain to James I.

alabaster, fine-grained, massive, translucent variety of GYPSUM, pure white or streaked with reddish brown, used in statuary and for other decorative purposes. It is soft enough to be scratched with the fingernail and hence is easily carved, but it is also easily broken, soiled, and weathered. It is quarried in England and also in Italy. Vases and statuettes of Italian alabaster are sold as "Florentine marbles." The alabaster of the ancients, called Oriental alabaster and onyx marble, to distinguish it from true alabaster, is MARBLE, a calcium carbonate, whereas gypsum is a calcium sulphate. The calcium carbonate form occurs both in spring deposits (TRAVERTINE) and in cave formations (see STALACTITE AND STALAGMITE). Important sources of supply are Algeria, Egypt, Iran, and Mexico (from which it is exported under the name Mexican onyx); in the United States there are important sources in Utah and Arizona. Oriental alabaster (marble) was extensively used by the Egyptians in sarcophagi, in the linings of tombs, in the walls and ceilings of temples, and in vases and sacrificial vessels. The Romans worked the Algerian and Egyptian quarries and used the stone for similar purposes. In modern times it was used by Muhammad Ali for his mosque in Cairo. The French make extensive use of alabaster in interior decoration. See R. Webster, *Gems* (1970), J. L. Gillson, *Industrial Minerals and Rocks* (1960).

Alacoque, Margaret Mary: see MARGARET MARY SAINT

Alagez, Mount see ARAGATS, MOUNT, USSR

Alagoas (alagō'ās) [Port. = lagoons], state (1970 pop. 1,589,605), 10,707 sq mi (27,331 sq km), NE Brazil, on the Atlantic Ocean. MACEIÓ is the capital.

Alai or **Alay** (both alī'), mountain range, SW Kirghizstan, Central Asian USSR. A western branch of the Tien Shan system, it extends c. 200 mi (320 km) west from the Chinese border and rises to c. 19,280 ft (5,880 m) in its western portion. The Alai Valley, south of the range, is a fertile elevated (c. 9,800 ft/2,990 m) grassland used for grazing; there is irrigated grain cultivation in the west.

Alain see CHARTIER, ÉMILE-AUGUSTE

Alain de Lille (alān' dā lēl), c. 1128-c. 1202, French scholastic philosopher, a Cistercian, honored by his contemporaries as the Universal Doctor. He was born in Lille, he taught at Paris and Montpellier before retiring to Cîteaux. De Lille attempted to give rational support to the tenets of Christian faith in his writings. He held that the mind unaided by revelation can know the universe, but by faith alone can man know God. Although his thought was largely Neoplatonic, he made use of numerous Aristotelian and neo-Pythagorean elements. The mathematical and deductive method had an important

place in the working out of his theology. One of his chief works, *De fide catholica contra haereticos*, was written in order to refute heretics and unbelievers. Alain de Lille was also one of the foremost didactic poets of his day; his chief poem *Anticlaudian* (tr. 1935) is a complicated allegory. He is also called *Alanus de Insulis*.

Alain-Fournier (alān-'fōrnyā'), 1886-1914, French novelist, whose real name was Henri Alban Fournier. He was killed in action during World War I. His single full-length work is his poetic novel about a youthful search for the ideal, *Le Grand Meaulnes* (1913, tr. *The Wanderer*, 1928). Set in an imaginary locale called "the domain," it is based partly on Alain-Fournier's own childhood and partly on his mystical experiences and ideas. Its distinctiveness lies in its delicate blend of symbolism and realism.

Alais: see ALÈS

Alajuela (alahwā'la), city (1970 pop. 29,171), capital of Alajuela prov., central Costa Rica. On the central plateau, it is a commercial and agricultural center with sugar, coffee, and lumber industries. It was the national capital in the 1830s.

Alam, Assadollah (as-sadōl'lā' alām'), 1919-, Iranian political leader, prime minister of Iran (1962-64). He held a variety of governmental posts in the decade following World War II. When Shah Muhammad Reza Pahlavi announced his desire for a democratic party system in Iran, Alam became head of the newly formed People's party (1956). He became prime minister in 1962 and proceeded to support large-scale land reform and a pro-Western foreign policy until his resignation in 1964. One of Iran's largest landholders, he later returned (1966) to government to serve as minister of the imperial court.

Alaman, Lucas (lōō'kas alaman'), 1792-1853, Mexican historian and statesman. As deputy to the Spanish Cortes, he failed to win a hearing for the insurgents in Mexico. Returning to Mexico, he held several public offices and was twice minister of foreign affairs in the government after the fall of Agustín de Iturbide. Alaman founded the Archivo General and the National Museum, in Mexico City. He is chiefly remembered for his magnificent history of Mexico, *Historia de Mejico* (5 vol., 1849-52).

Alamanni or Alemanni, Luigi (lōō'e'ē alaman'nē, alā-), 1495-1556, Italian poet and patriot. He was a friend of Machiavelli, who may have encouraged his conspiracy (1522) against Cardinal Giulio de' Medici (later Pope Clement VII). Its failure forced him to flee to the French court. He returned (1527) to Florence to fight the Medici, but after their restoration (1532) he was declared a rebel. Alamanni was versatile and prolific. He wrote plays (*La Flora*, a comedy and *Antigone*, a tragedy) and lively letters to his friends and introduced the epigram into modern Italian poetry.

Alamayn, Al, Egypt see ALAMEIN EL

Alameda (ālāmē'dā, -mā'dā), city (1970 pop. 70,968), Alameda co., W. central Calif., on an island just off the eastern shore of San Francisco Bay, settled 1850, inc. as a city 1884. Shipbuilding, ship repairing, and the production of peanut butter are the leading industries. It is primarily residential, however, with excellent beaches, parks, and pleasure-boating facilities. The major employer in the city is the Alameda Naval Air Station, a large U.S. carrier base, which was built from 1938 to 1940. An important Coast Guard base and a junior college are also there. The city is connected with the mainland by four bridges and two tunnels.

Alamein, El (ēl ālamān', a-) or **Al Alamayn** (al ālamān'), town, N. Egypt, on the Mediterranean Sea. It was the site of a decisive British victory in World War II (see NORTH AFRICA CAMPAIGNS IN). In preparation for an attack by German Field Marshal Erwin Rommel from Libya (begun May 26, 1942) the British forces retreated into Egypt and by June 30 had set up a defense line extending 35 mi (56 km) from Alamein 5 to the Qattara Depression, a badland which could neither be crossed nor flanked. If this position had fallen, the British might have lost Alexandria and been forced to withdraw from North Africa. In August, Gen. Bernard L. MONTGOMERY took command of the 8th Army. The British offensive opened on Oct. 23 with tremendous air and artillery bombardments. Montgomery's forces cleared the German minefields and on Nov. 1 and 2 burst through the German lines near the sea and forced a swift Axis retreat out of Egypt, across Libya, and into E. Tunisia. Egypt was definitely saved, and with the landing on Nov. 7 and 8 of American troops in Algeria the Axis soon suffered (May, 1943) total defeat in North Africa. The Allies thereafter received more support from Middle Eastern countries, some of

which had drawn close to the Axis powers. For his victory Montgomery was made a viscount with the title Montgomery of Alamein. See Michael Carver, *El Alamein* (1962).

Alameth (āl'əmath), Benjamite 1 Chron 7 B

Alamgir: see AURANGZEB

Alammelech (ālām'ələk), village of Asher, NW Palestine Joshua 19 26. The modern Wadi el-Melek near Mt Carmel perhaps echoes the name.

Alamo, the [Span. = cottonwood], building in San Antonio, Texas, "the cradle of Texas liberty." Built as a chapel after 1744, it is all that remains of the mission of San Antonio de Valero, which was founded in 1718 by the Franciscans and later converted into a fortress. In the Texas Revolution, San Antonio was taken by Texas revolutionaries in Dec. 1835, and was lightly garrisoned. When Santa Anna approached with an army of several thousand in Feb. 1836, only some 150 men held the Alamo, and confusion, indifference, and bickering among the insurgents throughout Texas prevented any help from joining them, except for 32 volunteers from Gonzales who slipped through the Mexican lines after the siege had already begun. Defying Santa Anna's demands for surrender, the Texans in the fort determined to fight against the hopeless odds. The siege, which began Feb. 24, ended with hand-to-hand fighting within the walls on March 6. William B. Travis, James Bowie, Davy Crockett, and some 180 other defenders were dead, but the heroic resistance roused fighting anger among Texans, who six weeks later defeated the Mexicans at San Jacinto, crying, "Remember the Alamo!" The chapel-fort was bought by the state in 1883, the surrounding area was added in 1905, and the whole complex was restored and improved from 1936 to 1939. See A. G. Adair and M. H. Crockett, ed., *Heroes of the Alamo* (2d ed. 1957), Lon Tinkle, *13 Days to Glory* (1958), Walter Lord, *A Time to Stand* (1961).

Alamogordo (āl'amagōrdō, -də), city (1970 pop. 23,035), seat of Otero co., S N Mex., near the Sacramento mts., inc. 1912. It is a trade center for a large livestock, irrigated farm, timber, and recreational area. Pressure cookers, wearing apparel, and lumber are among its products. Holloman Air Force Base, headquarters of the 49th Tactical Air Command and site of the White Sands Missile Range, where the first atomic bomb was exploded on June 16, 1945, is located in Alamogordo. The city was founded in 1898 with the arrival of the Southern Pacific RR. New Mexico State Univ. has a branch at Alamogordo. Near the city are White Sands National Monument (see NATIONAL PARKS AND MONUMENTS, table), an Apache Indian Reservation, and Lincoln National Forest.

Alamoth (āl'amōth), Hebrew musical term, unknown in meaning, although some have guessed "soprano," connecting it with a word for "maidens." It occurs in 1 Chron. 15 20 and in the title of Ps. 46. The term *Sheminith*, in the titles of Pss. 6 and 12, has been explained as "bass," complementary to Alamoth.

Alanbrooke, Alan Francis Brooke, 1st Viscount, 1883-1963, British general. He entered the field artillery in 1902 and served with distinction during World War I. In the 1930s he made himself a master of mechanized warfare. At the beginning of World War II he commanded the 2d Army Corps in France and was (1940-41) commander in chief of the British Home Forces. From Dec. 1941, to 1946 he was chief of the imperial general staff and participated in the war conferences of Winston Churchill, Franklin Delano Roosevelt, and Joseph Stalin. He was made Baron Alanbrooke in 1945 and Viscount Alanbrooke in 1946.

Åland Islands, Finland: see ÅHVENANMAA ISLANDS

alanine, organic compound, one of the twenty-two alpha AMINO ACIDS commonly found in animal proteins. Only the L-stereoisomer participates in the biosynthesis of proteins (see STEREOCHEMISTRY). Its one-carbon aliphatic side chain confers no special reactivity upon this amino acid when it is included within a protein by two amide bonds, but it does allow the side chain to participate in hydrophobic

interactions. Alanine is not essential to the human diet, since it can be synthesized from other cellular metabolites. It was discovered in protein in 1875.

Alarcón, Hernando de (ārnan'dō dā alār'kōn'), fl. 1540, Spanish explorer in the Southwest. He was given command of a fleet that was supposed to support the land expedition of Francisco Vazquez de CORONADO. In the summer of 1540 he sailed up the Gulf of California, proved definitely that Lower California was a peninsula, not an island, and discovered the Colorado River. He failed, however, to make contact with Coronado's expedition. He explored the river a few months before Garcia Lopez de Cárdenas discovered the Grand Canyon.

Alarcón, Pedro Antonio de (pāth'rō āntō'n'yō), 1833-91, Spanish writer and diplomat. Alarcón was active in politics, became editor of a revolutionary journal in Madrid, and was later an ambassador. His first important literary work was a masterful and popular memoir of the Spanish Moroccan campaign (1859-60). He wrote several novels, including *El sombrero de tres picos* (1874, tr. *The Three-cornered Hat*, 1891), on which Manuel de Falla based his popular ballet, and *El capitán Veneno* (1881, tr. *Captain Venom*, 1914). In these works Alarcón shows keen powers of observation and subtle humor. A longer novel is *El escándalo* (1875, tr. *The Scandal*, 1945).

Alarcón y Mendoza, Juan Ruiz de (hwan rōōēth' dā alār'kōn' ē mändō'thā), 1581?-1639, Spanish dramatic poet, one of the great literary figures of the Spanish Golden Age, b. Mexico. After practicing law in Spain (1600-1608) and Mexico, he returned (1613) to Spain, where he obtained a minor government post. Like Molière, Alarcón was a comedic moralist, his comedies (2 vol., 1628-34) are notable for brilliant characterization and lively dialogue. Alarcón was a hunchback, and his carefully wrought plays reflect the stoic point of view that this circumstance compelled him to adopt. Best known is *La verdad sospechosa* [the suspicious truth], which was the model for Corneille's *Le Menteur*. Among the others are *Las paredes oyen* [the walls have ears] and *El anticristo*.

Alaric I (āl'arīk), c. 370-410, Visigothic king. He headed the Visigothic troops serving Emperor Theodosius I. After the emperor's death (395) the troops rebelled and chose Alaric as their leader (see VISIGOTHS). Alaric devastated Thrace, Macedonia, and Greece. Stopped, but not defeated, by STILICHO, he retired northward, and by an agreement with the Eastern emperor, ARCADICIUS, occupied Epirus. In 401 he invaded Italy, where after some indecisive warfare he agreed to withdraw. Stilicho persuaded (407) the Romans to buy Alaric's alliance, but shortly afterward Emperor HONORIUS had Stilicho executed for treason. Alaric again invaded (408) Italy and laid siege to Rome. Raising the siege after an agreement with the Roman senate, Alaric again turned on Rome (409) and forced the city to accept a puppet emperor, Attalus, whom he himself deposed the next year for disregarding his advice. After the failure of renewed negotiations with Honorius (who all the while held out at Ravenna), Alaric stormed and sacked Rome (410) and then marched south to attack Sicily and Africa. A storm destroyed his fleet, and Alaric, having turned back, died of an illness. His brother Athaulf was elected his successor. It is said that Alaric was buried with his treasures near Cosenza in the bed of the Busento River, which was temporarily diverted from its course. That the secret of his burial place might be kept, the slaves employed in the labor were killed. See study by Marcel Brion (tr. 1932).

Alaric II, d. 507, Visigothic king of Spain and of 5 Gaul (c. 484-507), son and successor of Euric. He issued (506) at Toulouse the BREVARY OF ALARIC for his Roman subjects. Alaric's adherence to Arianism gave CLOVIS I, king of the Franks, an easy pretext for attacking him in the name of orthodoxy. Alaric was defeated and slain at Vouille (507), and the Visigoths lost all their possessions in Gaul except Septimania.

Alas, Leopoldo (lāōpōl'dō ā'lās), 1852-1901, Spanish novelist, short-story writer, and literary critic who wrote under the pseudonym Clarín, b. Zamora. Although he began his literary career as a journalist, he later was a professor of law at the Univ. of Oviedo. He is best known for his naturalistic novel *La Regenta* (1884-85), a detailed analysis of provincial life. His other works include another novel, *Su único hijo* [his only son] (1890), and several volumes of short stories, which are generally regarded as among the best of the genre. See study by Albert Brent (1951).

Alasco or à Lasco, Johannes: see LASKI, JOHN

Alaşehir (alā'shēhēr'), town (1970 pop. 20,313), W Turkey, at the foot of the Tmolus mts. (Boz Dağ). It is the trade center for a region where tobacco, fruit, and mineral water are produced. The town is picturesque, with narrow winding streets and a Byzantine wall. Nearby is the site of ancient PHILADELPHIA.

Alaska, state (1970 pop. 302,173), 586,400 sq mi (1,518,776 sq km), including 15,335 sq mi (39,718 sq km) of water surface, NW North America, admitted 1959 as the 49th state. Nearly one fifth the size of the rest of the United States, Alaska is the largest state in the Union but the least populous one. JUNEAU is the capital, ANCHORAGE the largest city. Alaska is a huge block of land at the northwestern extremity of the North American continent, between the Arctic Ocean on the north and the Gulf of Alaska and the Pacific Ocean on the south. It is bounded on the E by Canada (Yukon and British Columbia) and on the W by the Bering Sea, Bering Strait, and Chukchi Sea. The tip of the Seward Peninsula is only a few miles from Far Eastern USSR, the two are separated by the narrow Bering Strait. Seward Peninsula is chiefly tundra-covered and sparsely inhabited. Nome was founded there when gold was discovered (1898) in the sand on the beaches, but gold mining has greatly declined, and Nome's population is now well under 5,000. The Bering Strait widens in the north to the Chukchi Sea, which slices into Alaska with Kotzebue Sound, in the south the strait widens to the Bering Sea, which cuts into Alaska with Norton Sound and Bristol Bay. The state again extends toward the USSR in the Alaska Peninsula and the Aleutian Islands, reaching out a total of 1,200 mi (1,931 km) toward the Soviet Komandorski Islands, together they divide the Bering Sea from the Pacific. The Aleutian Range, which is the spine of the Alaska Peninsula, is continued in the grass-covered, treeless Aleutian Islands, the climate there is unrelentingly bad—foggy and, in the winter, disagreeably damp and cold and subject to violent winds (the williwaws). Once traversed by Russian fur traders hunting sea otters, the Aleutians are now chiefly of strategic importance. The southern shore of Alaska is deeply indented by two inlets of the wide Gulf of Alaska, Cook Inlet and Prince William Sound, the Kenai Peninsula between them extends southwest toward Kodiak Island. The narrow Panhandle dips southeast along the coast from the Gulf of Alaska, cutting into British Columbia. It consists of the offshore islands of the Alexander Archipelago and the narrow coast, which rises steeply to the mountains of the Coast Range and the St. Elias Mts. Winters in the Panhandle are relatively mild, with heavy rainfall and, except on the upper slopes of the mountains, comparatively little snow. The interior of Alaska, on the other hand, has very cold winters and short but very hot summers. In Arctic Alaska, N of the Brooks Range, the temperature in winter reaches -10°F to -40°F (-23°C to -40°C). The land there is mostly barren, cut by many short rivers and one long one, the Colville. Alaska's major river is the Yukon, which crosses the state from east to west for 1,200 mi (1,931 km), from the Canadian border to the Bering Sea. The northernmost reach of Alaska is Point Barrow. Alaska's climate and terrain (rough coast and high mountain ranges) divide it into isolated regions, the difficulty of communication is one of the state's most troublesome problems. Air transport is a partial solution, and all Alaskan cities have airports, but they nevertheless remain fundamentally isolated, self-contained units. This is true even in the Panhandle, the most populous region, where the capital and the state's third largest city, KETCHIKAN, are located. The Panhandle's connection with Seattle is by steamships, which ply the INSIDE PASSAGE between the coast and the offshore islands. In S central Alaska, Anchorage is the center for the Alaskan RR and for airways, it is also connected with the Alaska Highway. The port of Seward, having lost its commanding position as terminus of the Alaska RR to Whittier, was forced to construct a road link to the Alaska Highway at Fairbanks. Cordova and Kodiak both depend upon the ocean lanes. In the north, the entire Arctic coast is icebound most of the year, the ground there is permanently frozen. Alaska has very little agriculture, in number of farms and in the value of its farm products, it ranks last in the nation. The Panhandle, which has the best climate, is generally too steep for farming. The state's best farmland is in its S central region, in the Matanuska Valley, farmers from drought-stricken areas of the Midwest were resettled there by the Federal government in 1935. The Tenana Valley (the area around Fairbanks) is also good farmland. Most of Alaska's farms are dairies or poultry ranches, and the state's most valu-

able farm commodities are dairy products, potatoes, cattle, and eggs. Fishing is a leading industry. Alaska heads the nation in the value of its commercial catch—chiefly salmon, crab, shrimp, halibut, herring, and cod. Its largest manufacturing enterprise is food processing, particularly the freezing and canning of fish. Lumbering and related industries are second. The state has two great national forests. Mining, principally of petroleum, sand and gravel, natural gas, and coal, is the state's most valuable industry. Alaska leads the nation in the production of platinum, is second in production of antimonies, and is a leading producer of tin, mercury, uranium, and beryllium are also found. Gold, which led to the opening of the area in the 19th cent., is no longer mined in quantity. Fur-trapping, Alaska's oldest industry, still endures, and pelts are obtained from a great variety of animals. The Pribilof Islands are especially noted as a source of sealskins. The seals there are now owned by the U.S. government, and their use is carefully regulated. Government—Federal, state, and local—is Alaska's major source of employment. The state's strategic location has generated considerable defense activity, including the establishment of permanent military bases. However, construction on the Distant Early Warning line and on the Ballistic Missiles Early Warning System is now completed, and Federal employment in the state declined in the early 1970s. Oil and natural gas offer the best hope for Alaska's future. The vast discoveries on the Arctic North Slope indicate that that area, along with the offshore deposits in S central Alaska, may make the state one of the world's greatest petroleum and natural gas producers. The proposed construction of an 800-mi (1,287-km) pipeline from the Arctic North Slope to the ice-free port of Valdez, however, encountered heated opposition from ecologists, but work on it began in 1974. Alaska's tourist industry also has great potential, especially with improvements in transportation. The state abounds in natural wonders. In the Panhandle, the scenic beauty of the mountains and the rugged fjord-indented coast are augmented by such attractions as the MALASPINA GLACIER and the acres of blue ice in GLACIER BAY NATIONAL MONUMENT. In the Alaska Range of S central Alaska stands the highest point in North America, Mt. McKinley (in MOUNT MCKINLEY NATIONAL PARK), while the Alaska Peninsula and the Aleutian Islands have numerous volcanoes. KATMAI NATIONAL MONUMENT contains the Valley of Ten Thousand Smokes, scene of a volcanic eruption in 1912. Alaska was discovered by white men, not from the United States or Canada but from Russia. The disastrous voyage of Vitus Bering and Aleksey Chirikov in 1741 climaxed the march of Russian traders across Siberia. The survivors who returned with sea otter skins started a rush of fur hunters to the Aleutian Islands. Rough, resourceful men, they survived

great hardships to bring away fortunes in fur. Grigori Shelekhov in 1784 founded the first permanent settlement in Alaska on Kodiak Island and sent (1790) to Alaska the man who was to dominate the period of Russian influence there, Aleksandr Baranov. A monopoly was granted to the Russian American Company in 1799, and it was Baranov who directed its Alaskan activities. Sitka was founded in 1799 as his capital, it was rebuilt after destruction by the Indians in 1802. Baranov extended the Russian trade far down the west coast of North America and even, after several unsuccessful attempts, founded (1812) a settlement in N California. Rivalry for the northwest coast was strong, and British and American trading vessels began to threaten the Russian monopoly. In 1821 the czar issued a ukase (imperial command) claiming the 51st parallel as the southern boundary of Alaska and warning foreign vessels not to transgress beyond it. British and American protests, the promulgation of the Monroe Doctrine, and Russian embroilment elsewhere resulted (1824) in a negotiated settlement of the boundary at lat 54°40' N (the present southern boundary of Alaska). Russian interests in Alaska gradually declined, and, after the Crimean War, Russia sought to dispose of the territory altogether. In 1867, Alaska was sold to the United States for \$7,200,000. The U.S. purchase was accomplished solely through the determined efforts of Secretary of State William H. Seward, and for many years afterward the land was derisively called Seward's Folly or Seward's Icebox because of its supposed uselessness. Since Alaska appeared to offer no immediate financial return, it was neglected. The U.S. army officially controlled the area until 1876, when scandals caused the withdrawal of the troops. After a small lapse, during which government was in the hands of customs men, the U.S. navy was given charge (1879). Most of the territory was not even known, although the British (notably Sir John Franklin and Capt. F. W. Beechey) had explored the coast of the Arctic Ocean, and Hudson's Bay Company men had explored the Yukon. It was not until after the discovery of gold in the Juneau region in 1880 that Alaska was given a governor and a feeble local administration (under the Organic Act of 1884). Missionaries, who had come to the region in the late 1870s, exercised considerable influence. Most influential was Sheldon Jackson, best known for his introduction of reindeer to help the Alaska Eskimo, impoverished by the wanton destruction of the fur seals. Sealing was the subject of a long international controversy (see Bering Sea Fur-Seal Controversy under BERING SEA), which was not ended until after gold had permanently transformed Alaska. Paradoxically, the first finds that tremendously influenced Alaska were in Canada. The great KLONDIKE strike of 1896 brought a stampede, mainly of Americans, and most of them came through Alaska. The

big discoveries in Alaska itself followed—Nome in 1898-99, Fairbanks in 1902. The miners and prospectors (the sourdoughs) took over Alaska, and the era of the rough mining camps reached its height; this was the Alaska of Jack London. It was lawless, and a criminal code was belatedly applied in 1899. Not until 1906 did Alaska get a territorial representative in Congress. The longstanding controversy concerning the boundary between the Alaska Panhandle and British Columbia was aggravated by the large number of miners traveling the Inside Passage to the gold fields. The matter was finally settled in 1903 by a six-man tribunal, composed of American, Canadian, and British representatives. The decision was generally favorable to the United States, and a period of rapid building and development began. Mining, requiring heavy financing, passed into the hands of Eastern capitalists, notably the monopolistic Alaska Syndicate. Opposition to the "interests" became the burning issue in Alaska and was catapulted into national politics; Gifford Pinchot and R. A. Ballinger were the chief antagonists, and this was a major issue on which Theodore Roosevelt split with President William Howard Taft. A new era began for Alaska when local government was established in 1912 and it became a U.S. territory (Juneau had officially replaced Sitka as capital in 1900 although it did not begin to function as such until 1906). The building of the Alaska RR from Seward to Fairbanks was commenced with government funds in 1915. Already, however, gold mining was dying out, and Alaska receded into one of its quiet periods. The fishing industry, which had gradually advanced during the gold era, became the major enterprise. Alaska enjoyed its greatest economic boom during World War II. The ALASKA HIGHWAY was built, supplying a still weak but much-needed link with the United States. After Japanese troops occupied the Aleutian islands of Attu and Kiska, U.S. forces prepared for a counterattack. Attu was retaken in May, 1943, after bloody fighting, and the Japanese evacuated Kiska in August after intensive U.S. bombardments. Dutch Harbor became a major key in the U.S. defense system. The growth of air travel after the war, the permanent military bases established in Alaska, and the success of arctic farming in Siberia all brightened the hopes for Alaska's growth, between 1950 and 1960 the population nearly doubled. In 1958, Alaskans approved statehood by a 5 to 1 vote, and on Jan. 3, 1959, Alaska was officially admitted into the Union as a state, the first since Arizona in 1912. On Mar. 27, 1964, the strongest earthquake ever recorded in North America occurred in Alaska, taking approximately 114 lives and causing extensive property damage. Some cities were almost totally destroyed, and the fishing industry was especially hard hit, with the loss of fleets, docks, and canneries from the resulting tidal waves. Reconstruction, with large-scale Federal aid, however, was speedily completed. Alaska operates under a constitution drawn up and ratified in 1956 (effective with statehood). Its executive branch is headed by a governor and a secretary of state, both elected (on the same ticket) for four-year terms. Alaska's bicameral legislature has a senate with 20 members elected for four-year terms and a house of representatives with 40 members elected for two years. The state sends 2 Senators and 1 Representative to the U.S. Congress and has 3 electoral votes. Democrats have generally dominated Alaskan politics, but there has been a Republican trend since 1966. William A. Egan, a Democrat, served as Alaska's first governor, from 1959 to 1967. He was succeeded by Walter J. Hickel, a Republican, after whom Egan was returned to office in 1971. In 1974, Alaska voted to move its capital from Juneau to a more central location, but a precise date and place was not set. Alaska has a four-year institution of higher learning, the Univ. of Alaska, at College, near Fairbanks. See W. W. Woolsten, *The Inside Passage to Alaska, 1792-1920* (1924); Herbert Hilscher and Miriam Hilscher, *Alaska, U.S.A.* (1959); George Rogers, *The Future of Alaska* (1962); H. Chevigny, *Russian Alaska* (1965); E. H. Gruening, *The Battle for Alaska Statehood* (1967) and *The State of Alaska* (rev. ed. 1969); C. C. Hulley, *Alaska, Past and Present* (3d ed. 1970); Bern Keating, *Alaska* (2d ed. 1971); H. W. Clark, *History of Alaska* (1930, repr. 1972); Bryan Cooper, *Alaska, the Last Frontier* (1973); Federal Writers' Project, *A Guide to Alaska, Last American Frontier* (1940, repr. 1973).

Alaska, University of, at College, near Fairbanks, land-grant and state supported, coeducational, chartered 1917, opened 1922 as Alaska Agricultural College and School of Mines. In 1935 it became a

university There are several two-year branches throughout the state

Alaska Highway, all-weather graveled road, 1,523 mi (2,451 km) long, extending NW from Dawson Creek, British Columbia, to Fairbanks, Alaska. An extension of an existing Canadian road between Dawson Creek and Edmonton, Alta., the Alaska Highway was constructed (March–Sept., 1942) by U.S. troops as a supply route to military forces in Alaska during World War II. It was a significant engineering feat because of the difficulties of terrain and weather. In the last stretch to Fairbanks the road used the previously built Richardson Highway. The Haines Cutoff connects the Alaska Highway with the Alaska panhandle. In 1946 control of the Canadian part of the road was transferred to Canada. In 1947 the entire highway was opened to unrestricted travel, it is one of the best routes to Alaska. The highway is open throughout the year, and there are roadside facilities along its length. It was formerly known as the Alaskan International Highway and the Alcan Highway.

Alaskan malamute (mäl'amyoot'), breed of strong, compact WORKING DOG believed to be one of the oldest arctic sled dogs. It stands about 23 in (58.2 cm) high at the shoulder and weighs from 70 to 85 lb (31.75–38.5 kg). Its coarse coat is composed of oily, woolly underhairs and a thick cover coat. It may be colored any shade of gray or black with white markings. Named after the Malamutes, an Inuit tribe of N. Alaska, it has been raised for centuries as a sled dog. The malamute is by nature a gentle and devoted companion, claims of wolf ancestry have never been proved. The malamute is often called a "husky," a term which properly applies to one purebred arctic dog, the Siberian husky. See DOG.

Alaska North Slope or Arctic North Slope, region, N. Alaska, between the Arctic Ocean and the Brooks Range. Large petroleum reserves were found there in the late 1960s.

Alaska Range, S. central Alaska, rising to the highest mountain in North America, Mt. McKinley (20,320 ft/6,194 m). The range divides S. central Alaska from the great plateau of the interior.

Alastor (aläs'tar), in Greek mythology, spirit of vengeance. It is an epithet applied to Zeus or any other god in his aspect as avenger and is also sometimes applied to an evildoer who is subject to vengeance.

Ala-Tau (ä'la-tou) [Turkic, =mottled mountains], several ranges of the Tien Shan system in central Asia. The Ala-Tau ranges are the Dzungarian, the Kungei, the Täläss, the Terskei, and the Trans-Ili, all except the Täläss Ala-Tau rise to more than 16,000 ft (4,880 m). Generally forested, these ranges are chiefly inhabited by Turkic-speaking pastoral tribes. A variety of grains are grown. The Dzungarian Ala-Tau, the northernmost and loftiest branch of the Tien Shan, forms part of the USSR-China border. Silver and lead mines and hot springs are found there (see DZUNGARIA). The Kungei Ala-Tau lies N. of Issyk-Kul, a huge lake in the Tien Shan. The Trans-Ili Ala-Tau, on the Kirghizia-Kazakhstan border, supports intensive, irrigated agriculture. Alma-Ata, the region's largest city, is on the northern slope.

Alatyr (alätir'), city (1967 est. pop. 43,000), Chuvash Autonomous Republic, E. European USSR, at the confluence of the Sura and Alatyr rivers. Founded in 1552, it is a river port and railroad junction with locomotive and food-processing plants.

Alaungpaya (älöng'pāyā), 1711–60, Burmese king, founder of the Konbaung dynasty, which ruled until 1885. His name, also given as Alompra, means "the coming Buddha." The son of a village headman, he rallied the Burmese and led them against their Mons rulers. He seized the important town of Ava in 1753 and moved south, uniting upper and lower Burma under his rule. Pursuing the Mons, he invaded Siam but was wounded in a siege of Ayuthia and died while returning to Burma.

Alava: see BASQUE PROVINCES

Alay: see ALAI, mountains, USSR

Al Aziziyah (äl äzēzē'yā) or **Azizīa** (äzizē'a), town, NW Libya, near Tripoli. It is a major trade center of the Gafara plain. The hottest recorded temperature on earth, 141°F (60.6°C), was recorded there.

Alba or **Alva**, **Fernando Álvarez de Toledo, duque de** (äl'bä, älvä, Span. both fämän'dō älväräth dā tölä'thō döökä dā älvä), b. 1507 or 1508, d. 1582, Spanish general and administrator. After a distinguished military career in Germany and Italy, Alba returned to Spain as adviser to King Philip II. Advocating a stern policy toward the rebels against Spain in the NETHERLANDS, he was appointed (1567)

captain general there, with full civil and military powers. The regent, MARGARET OF PARM, opposed him and resigned, and Alba became regent and governor general. A religious fanatic and ruthless absolutist, he set out to crush the Netherlands' attempts to gain religious toleration and political self-government. He set up a special court at Brussels, popularly known as the Court of Blood, which spread terror throughout the provinces. Some 18,000 persons were executed (among them the counts of EGMONT and HOORN) and their properties confiscated. Increased taxation also fanned popular resentment, and in 1572 the Netherlands rebelled again. Alba defeated the invading forces of WILLIAM THE SILENT, but he was unable to recover much of the NW Netherlands, which had been taken by the GUEUX. At the Spanish court he was accused of having compromised the royalist cause, and in 1573 he was recalled to Spain. In 1580, Philip was persuaded to use Alba for the conquest of Portugal. He took Lisbon within a few weeks.

Albacete (älbathä'tä), city (1970 pop. 93,233), capital of Albacete prov., SE Spain, in Murcia. Under the Moors, Albacete was a part of the Kingdom of MURCIA, with which it was incorporated (1269) into Castile. The city now has a modern aspect and is mainly an agricultural center. It is noted for the manufacture of fine knives and daggers.

albacore: see TUNA

Alba Iulia (äl'ba-yööl'ya), Hung. *Gyulafehérvár*, Ger. *Karlsburg*, town (1969 est. pop. 84,000), W. central Rumania, in Transylvania, on the Mureșul River. It is a rail junction and distribution center for a wine-making region, where grain, poultry, and fruit are raised. The town's light manufactures include soap, furniture, and footwear. Alba Iulia is the site of the ancient Apulum, founded by the Romans in the 2d cent. A.D., and destroyed by Tatars in 1241. It was the seat (16th–17th cent.) of the princes of Transylvania, of a Roman Catholic bishop, and of an Eastern Orthodox metropolitan. From 1599 to 1601, Alba Iulia was the capital of the united principalities of Walachia, Transylvania, and Moldavia. It was the site (1918) of the proclamation of Transylvania's union with Rumania and of the coronation (1922) of King Ferdinand. Points of interest include an 18th-century fortress, built by Emperor Charles VI, a 13th-century Roman Catholic cathedral, and a museum and library housing exhibits from the Roman period and rare manuscripts.

Alba Longa (äl'bä löng'ga), city of ancient Latium, in the Alban Hills near Lake Albano, c. 12 mi (19 km) SE of Rome. It was a city before 1100 B.C. and apparently the most powerful in Latium. Legend says that it was founded by Ascanius, son of Aeneas, and that Romulus and Remus were born there, thus making it the mother city of Rome. Tradition also says that Tullus Hostilius, king of Rome, razed it in 665 B.C. Possibly Rome was founded from Alba Longa, and certainly the Romans destroyed it (c. 600 B.C.). The modern Castel Gandolfo occupies the site.

Alban, Saint (öl'bän), 3d or 4th cent., traditionally the first British martyr. He lived and died at Verulamium, now St. Albans. In 793 an abbey was founded there in his honor. Feast: Roman Catholic Church, June 22; Church of England, June 17.

Albanel, Charles (sharl älbänē'), 1616–96, French missionary explorer in Canada, a Jesuit priest. After arriving in Canada (1649), he was stationed many years at Tadoussac where he explored the surrounding wilderness. At the time when the English Hudson's Bay Company was beginning operations, he was a leader of a French party that went (1671–72) by the Saguenay River, Mistassini Lake, and the Rupert River to Hudson Bay. The region was claimed for France. On another journey there he was captured (1674) by the English and taken to England. After returning (1676) to Canada, he served at missions in western Canada and died at Sault Ste. Marie.

Albanese, Licia (lē'chēä albanä'sä), 1913–, Italian-American lyric soprano, b. Bari. Albanese made her debut (1935) in *Madame Butterfly* in Parma. She first sang at the Metropolitan Opera House in 1940. After 1945 she appeared with the NBC Symphony Orchestra and continued to sing at the Metropolitan Opera.

Albania (älbä'nyä), Albanian *Shqipëri* or *Shqipëria*, independent republic (1970 est. pop. 2,100,000), 11,701 sq mi (28,752 sq km), SE Europe, on the Adriatic Sea coast of the Balkan Peninsula, between Yugoslavia to the north and east and Greece to the south. TIRANE is the capital, other important cities

are VLORE, DURRES, SHKODER, and KORÇE. Albania is rugged and mountainous, except for the fertile Adriatic coast. Mt. Korab (9,066 ft/2,763 m), on the

Yugoslav-Albanian border, is the highest point in the country. The coastal climate is typically Mediterranean, with hot, dry summers and mild, wet winters. The mountainous interior, especially in the north, has severe winters and mild summers. The chief rivers of Albania are the Drin, Mat, Shkumbi, Vjose, and Seman, but they are mostly unnavigable. The largest lakes are the Scutari and Ohrid, both shared with Yugoslavia, and the Prespa, on the border with Greece. More than one third of Albania's land is covered by forests and swamps, about one third is pasture, and only about one tenth is cultivated, nearly one half of the cultivated land being given over to vineyards and olive groves. Grains (especially wheat and maize), cotton, tobacco, potatoes, and sugar beets are also grown. Livestock raising (particularly the raising of sheep) is important. Agriculture is socialized in the form of collective and state farms, but small private plots are permitted. Albania is rich in mineral resources, notably oil, lignite, copper, chromium, limestone, salt, and bauxite. Although about two thirds of the population is still engaged in agriculture, mining provides the largest percentage of the national income and employs the highest proportion of the industrial labor force. Industry provides an increasing share of the national income, agricultural processing and the manufacture of textiles and cement and other building materials being among the leading industries, other important products include naphtha, copper, and machinery. Engineering, chemical, and iron and steel plants are being developed, and several hydroelectric stations have been built. All industrial enterprises and mines are nationalized, and the economy is run on the basis of Five-Year Plans. Foreign trade is carried by sea, Durrës and Vlorë (also the terminus of the oil pipeline) being the major ports. Exports include crude oil, coal, chromium, copper, textiles, iron, and agricultural produce. Among the imports are machinery, industrial equipment, and metal, chemical, and rubber products. Almost half of the total foreign trade is with China, Albania's chief trade partner in Eastern Europe is Czechoslovakia and in Western Europe, Italy. The Albanian unit of currency is the lek, which equals 100 qintars. The country's rugged and inaccessible terrain has traditionally isolated Albania from its neighbors, thus helping to preserve its ethnic homogeneity. About 97% of the population is ethnic Albanian, with scattered Greek, Vlach, Bulgar, Serb, and Gypsy minorities. About one million Albanians live in the Kosovo region of Yugoslavia, with which there has long been a border dispute. Albanian is one of the Indo-European languages. The Shkumbi River, which virtually bisects the country, separates speakers of the northern dialect (Gheg) from those of the southern dialect (Tosk). The great majority of the people are Muslim, with Roman Catholic and Greek Orthodox minorities, however, Albania is officially an atheist country.

Historic Albania The Albanians are reputedly descendants of Illyrian and Thracian tribes that settled the region in ancient times. The area then comprised parts of ILLYRIA and EPIRUS and was known to the ancient Greeks for its mines. The coastal towns,

Epidamnus (Durrës) and APOLLONIA, were colonies of Corcyra (Kérkira) and Corinth, but the interior formed an independent kingdom that reached its height in the 3d cent A D After the division (395) of the Roman Empire, Albania passed to Byzantium. While nominally (until 1347) under Byzantine rule, N Albania was invaded (7th cent) by the Serbs, and S Albania was annexed (9th cent) by Bulgaria. In 1014, Emperor Basil II retook S Albania, which remained in the Byzantine Empire until it passed to Epirus in 1204. Venice founded coastal colonies at present-day Shkoder and Lezhe in the 11th cent, and in 1081 the Normans began to contest Byzantine control of Albania. Norman efforts were continued by the Neapolitan Angevins, in 1272, Charles I of Naples was proclaimed king of Albania. In the 14th cent, however, the Serbs under Stephen DUSHAN conquered most of the country. After his death (1355), Albania was ruled by native chieftains until the Turks began their conquests in the 15th cent. In return for serving the Turks, a son of one of these chieftains received the title Skander Bey (Lord Alexander), which in Albanian became Skanderbeg. Later, however, he led the Albanian resistance to Turkish domination and, after his death in 1468, was immortalized as Albania's national hero. Supported by Venice and Naples, Albania continued to struggle against the Turks until 1478, when the country passed under Ottoman rule. Many Albanians distinguished themselves in the Turkish army and bureaucracy, others were made pashas and beys and had considerable local autonomy. In the early 19th cent, ALI PASHA ruled Albania like a sovereign and founded an Egyptian dynasty that lasted until the 1950s. Under Turkish rule Islam became the predominant religion of Albania, but the Albanian highlanders, never fully subjected, were able to retain their tribal organizations. Economically, the country stagnated under Ottoman rule, numerous local revolts flared. A cultural awakening began in the 19th cent, and Albanian nationalism grew in the aftermath of the Treaty of San Stefano (1877), which Russia imposed on the Turks and which gave large parts of Albania to the Balkan Slavic nations. The European Great Powers intensified their struggle for influence in the Balkans during the years that followed.

National Independence. The first of the BALKAN WARS, in 1912, gave the Albanians an opportunity to proclaim their independence. During the Second Balkan War (1913), Albania was occupied by the Serbs. A conference of Great Power ambassadors defined the country's borders in 1913 and destroyed the dream of a Greater Albania by ceding large tracts to Montenegro, Serbia, and Greece. The ambassadors placed Albania under their guarantee and named WILLIAM, PRINCE OF WIED, as its ruler. Within a year he had fled, as World War I erupted and Albania became a battleground for contending Serb, Montenegrin, Greek, Italian, Bulgarian, and Austrian forces. Secret treaties drafted during the war called for Albania's dismemberment, but Albanian resistance and the principle of self-determination as promoted by US President Woodrow Wilson helped to restore an independent Albania. In 1920 the Congress of Lushnje reasserted Albanian independence. The early postwar years witnessed a struggle between conservative landlords led by Ahmed ZOGU and Western-influenced liberals under Bishop Fan S. Noli. After Noli's forces seized power in 1924, Zogu fled to Yugoslavia, where he secured foreign support for an army to invade Albania. In 1925, Albania was proclaimed a republic under his presidency, in 1928 he became King ZOG. Italy, whose political and economic influence in Albania had steadily increased, invaded the country in 1939, forcing Zog into exile and bringing Albania under Italian hegemony. The Albanian puppet government declared war on the Allies in 1940, but resistance groups, notably the extreme leftist partisans under Enver HOXHA, waged guerrilla warfare against the occupying Axis armies. In 1943-44, a civil war also raged between the partisans and non-Communist forces within Albania. The only European Communist country that was liberated from the Axis invaders without the aid of the Red Army or of direct Soviet military assistance, Albania received most of its war materiel from the Anglo-American command in Italy. In late 1944, Hoxha's partisans seized most of Albania and formed a provisional government. The Communists held elections (Dec., 1945) with an unopposed slate of candidates and, in 1946, proclaimed Albania a republic with Hoxha as premier. From 1944 to 1948, Albania maintained close relations with Yugoslavia, which had helped to estab-

lish the Albanian Communist party. After Marshal TITO of Yugoslavia broke with STALIN, Albania became a virtual satellite of the USSR. Albania's disapproval of de-Stalinization and of Soviet-Yugoslav rapprochement led in 1961 to a break between Moscow and Tirane. Chinese influence and economic aid replaced Soviet, and Albania became China's only ally in Communist Eastern Europe. Albania ceased active participation in the COUNCIL FOR MUTUAL ECONOMIC ASSISTANCE and, after the Soviet invasion of Czechoslovakia in 1968, withdrew from the Warsaw Pact military alliance (in which it had long been inactive). In the early 1970s continuing Soviet hostility and Albanian isolation led the Hoxha regime to make overtures to neighboring Yugoslavia, Greece, and Italy, as well as to other Western nations. The Albanian constitution (adopted 1946) names the People's Assembly as "the highest organ of state power," but in practice the Communist party (officially the Albania Workers' party) wields complete control. Hoxha is the party's first secretary. Deputies to the unicameral people's assembly (which rubber-stamps party legislative proposals) are elected by universal suffrage for four-year terms. The assembly elects a presidium, whose chairman becomes titular head of state. The country's highest executive body, the council of ministers, is appointed by the assembly. The chairman of the council of ministers serves as premier. Albania is divided into 26 districts, the chief units of local government are the district-level people's councils. See FERDINAND SCHEVILL, *History of the Balkan Peninsula* (1922), E P. Stickney, *Southern Albania or Northern Epirus in European International Affairs, 1912-1923* (1926), Harry Hamm, *Albania—China's Beachhead in Europe* (tr 1963), Stavro Skendi, ed., *Albania* (1956) and *The Albanian National Awakening, 1878-1912* (1967), E K. Keefe et al., *Area Handbook for Albania* (1971).

Albano, Lake (alba'nō), crater lake, 2 sq mi (5.2 sq km), central Italy, in the Alban Hills SE of Rome. It is c 6 mi (9.7 km) in circumference and c 560 ft (170 m) deep. An underground tunnel built in the 4th cent B C is still its only outlet. ALBA LONGA was located near the lake. Castel Gandolfo, the Pope's summer residence, is located there. South of the lake is Albano Laziale, a small town on the Appian Way, noted for the beautiful villas and several tombs built there by the ancient Romans.

Albany, Alexander Stuart or Stewart, duke of: see STUART OR STEWART, ALEXANDER, DUKE OF ALBANY.

Albany, Louisa, countess of (ôl'bānē), 1752-1824, wife of Charles Edward STUART (the Young Pretender), self-styled count of Albany, daughter of a German noble, the prince of Stolberg-Gedern. Married in 1772, she was made unhappy by her dissolute husband, left him after eight years, and became the mistress of the poet Vittorio Alfieri. After his death in 1803, she was mistress of a French painter, François Fabre. Secret marriages with both men were rumored, but not well attested. See biography by Margaret Crosland (1962).

Albany, Robert Stuart or Stewart, 1st duke of: see STUART OR STEWART, ROBERT, 1ST DUKE OF ALBANY.

Albany, ancient and literary name of Scotland, N of the Firth of Forth and Firth of Clyde. Variants are Alban and Albin.

Albany, town (1971 pop. 12,434), Western Australia, SW Australia. It is a port on Princess Royal Harbour of King George Sound. The town has woolen mills and fish canneries. Founded in 1826 as a penal colony, Albany is the oldest settlement in the state of Western Australia.

Albany. 1 Residential city (1970 pop. 14,674), Alameda co., W Calif., on the eastern shore of San Francisco Bay, inc. 1908. A US Dept. of Agriculture research laboratory and a Univ. of California agricultural experiment station are there. 2 City (1970 pop. 72,623), seat of Dougherty co., SW Ga., on the Flint River, inc. 1841. It is the industrial center of a great pecan and peanut area. Among its many industries are peanut and pecan processing, meat-packing, and cotton milling. Manufactures include airplanes and airplane parts, farm tools, fertilizers, pharmaceuticals, and paper, wood, cotton, and concrete products. In the city are Albany State College, a junior college, the Albany Naval Air Station, and a US marine corps supply center. The Georgia Pecan Festival is held there annually. Nearby are Chehaw State Park and the popular resort, Radium Springs. 3 City (1970 pop. 114,873), state capital and seat of Albany co., E N.Y., on the west bank of the Hudson, inc. 1686. A deepwater port of entry, it handles

much shipping and is a major transshipment point. The trading center for a large agricultural and resort area, it has oil tanks, breweries, machine shops, foundries, meat-packing houses, and plants making paper items, felt, textiles, chemicals, brushes, and sports equipment. In 1609, Henry Hudson visited the site, and four years later the Dutch built a fur-trading post, called Fort Nassau, on Castle Island. In 1624 several Walloon families began permanent settlement at the Dutch post of Fort Orange, which was renamed Albany when the English took control (1664). Albany was long important as a fur-trading center and was involved in the French and Indian Wars. In 1754 the ALBANY CONGRESS met there, and after the Revolution the state capital was moved (1797) to Albany from New York City. Albany's trade grew with the development of the state, particularly after the opening of the Champlain and Erie canals in the 1820s. Today it is the seat of the State Univ. of New York at Albany, the schools of pharmacy, law, and medicine of Union Univ., the College of St. Rose, two junior colleges, and the Albany Institute of History and Art. Siena College is in suburban Loudonville. Among the many old buildings are the Schuyler mansion (1762), where Gen. Philip Schuyler's daughter, Elizabeth, was married to Alexander Hamilton, Ten Broeck Mansion (1798), and Cherry Hill (1768), the home of Philip Van Rensselaer and his descendants until 1963. Dominating the city, at the top of State Street hill, is the capitol, built (1867-98) in the French chateau style. The colonnaded State Education Building contains the state museum and state library. An annual tulip festival is held in the city. In the 1960s a major urban renewal project resulted in the razing of 90 acres (36.4 hectares) in the downtown section for a great complex of state administrative buildings, residences, and parks. Bret Harte was born in Albany. 4 City (1970 pop. 18,181), seat of Linn co., NW Oregon, on the Willamette River, inc. 1864. A metallurgical center in the Pacific Northwest, it is the seat of a US Bureau of Mines experimental station. Many refractory metals are produced there. The city also has important lumbering and paper and wood-product industries. Other manufactures are packaged meats, frozen foods, mobile homes, and seeds. An annual world championship timber carnival is held there. Albany has a junior college.

Albany, river, 610 mi (982 km) long, rising in Lake St. Joseph, W. Ont., Canada, and flowing generally E into James Bay, near Fort Albany. The Kenogami and Ogoki rivers are its chief tributaries. The river, named for the duke of York and Albany, later James II, was long an important fur-trading route. Fur-bearing animals are still caught along the river. Gold is found near Lake St. Joseph.

Albany, Fort: see FORT ALBANY, Canada.

Albany Congress, 1754, meeting at Albany, N.Y., of commissioners representing seven British colonies in North America to treat with the Iroquois, chiefly because war with France impended. A treaty was concluded, but the Indians of Pennsylvania were resentful of a land purchase made by that colony at Albany and allied themselves with the French in the ensuing French and Indian War. The meeting was notable as an example of cooperation among the colonies, but Benjamin Franklin's Plan of Union for the colonies, though voted upon favorably at Albany, was refused by the colonial legislatures (and by the crown) as demanding too great a surrender of their powers. See Robert Newbold, *Albany Congress and the Plan of Union of 1754* (1955).

Albany Regency, name given, after 1820, to the leaders of the political machine developed in New York state by Martin VAN BUREN. The name derived from the charge that Van Buren's principal supporters, residing in Albany, managed the machine for him while he served in the US Senate. During the Jacksonian period the Regency controlled the Democratic party in New York. It was one of the first effective political machines, using the SPOILS SYSTEM and rigid party discipline to maintain its control. Notable figures in the Regency were William L. MARCY, Silas WRIGHT, Azariah C. FLAGG, and the elder Benjamin F. BUTLER. After 1842 it split into factions (BARNBURNERS and HUNKERS) over issues of internal improvements and slavery, thereby losing its power. See J. D. Hammond, *The History of Political Parties in the State of New York* (3 vol., 1852), Robert Remini, *Martin Van Buren and the Making of the Democratic Party* (1959).

Al Basrah see BASRA. Iraq.

albatross (al'batrōs), common name for sea birds of the order of tube-nosed swimmers (Procellari-

(formes), which includes petrels, shearwaters, and fulmars. The wandering albatross, *Diomedea exulans*, made famous by Coleridge's *Rime of the Ancient Mariner*, has a wingspread of from 10 to 12 ft (305–366 cm), although the wings are only about 9 in (22.5 cm) wide. Because of their tapering wing design they excel at gliding and flying. Albatrosses eat mainly fish, floating carrion, and refuse. Most albatrosses are found in the South Pacific region, e.g., the wandering and the sooty species, a few, the black-footed (*D. nigripes*), the short-tailed, and the Laysan (*D. immutabilis*) albatrosses, regularly frequent the N Pacific. Albatrosses have unique courtship behavior. They groan, scrape their bills, and dance about awkwardly, before pairing and mating occurs. They are colonial breeders, the female laying her single white egg in crude nests on the ground. Both sexes incubate the egg; incubation takes from two to three months. Albatrosses have few natural enemies, with the exception of man. They were slaughtered for their feathers and wings in the 19th cent., and used in millinery and as "swansdown" pillow stuffings. Albatrosses are somewhat hazardous to aircraft, with many collisions reported between bird and plane, resulting in the bird's death and minor damage to the plane. Albatrosses are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Procellariiformes, family Diomedidae.

Al-Battani (al-bat-tā'nē) or **Albatenius** (āl'batē'nēas), b. before 858, d. 929, Arab astronomer and mathematician. He is best known in astronomy for his improvements and corrections of the Ptolemaic tradition. His *Kitab al-Zij*, which in Latin translation was very influential in the Middle Ages and the Renaissance, contains an elaborate set of astronomical tables and discusses a wide range of practical problems in spherical astronomy, some of which were devised for the purpose of solving related astrological problems. He recognized the possibility of an annular eclipse of the sun and obtained the very accurate value of 23°35' for the obliquity of the ecliptic.

Albay (albi'), province (1970 pop. 672,285), SE Luzon, on the Bicol peninsula, in the Philippines. Legaspi is the capital, chief port, and largest city. Albay's terrain is rugged, but its fertile volcanic soil and heavy rainfall favor farming, and the province is a major hemp-producing area. It has many small, sheltered harbors for interisland shipping. Major tourist attractions are the beautiful active volcano, Mt. Mayon (c. 8000 ft/2,440 m), the church of Cagsawa, half-buried since an eruption of Mayon early in the 19th cent., and Tiwi Hot Springs. In 1968, Mt. Mayon erupted and engulfed three villages as some 20,000 people fled their homes.

Al Bayda (al bā'da) or **Beida** (bā'dā), city (1964 pop. 12,799), NE Libya, situated at 2,000 ft (610 m) in the Jabal al Akhdar plateau. Construction of the city began in 1961 on the site of the tomb of Rawefi ibn Thabit, a revered Muslim holy person who was a companion of the prophet Muhammad. It is the seat of an Islamic university and government offices.

albedo (ālbē'dō), reflectivity of the surface of a planet, moon, asteroid, or other celestial body that does not shine by its own light. Albedo is measured as the fraction of incident light that the surface reflects back in all directions. A perfect diffuse reflector by definition has an albedo of unity, i.e., all the incident light is reflected, a body that reflects no light at all would have an albedo of zero. Real surfaces have albedos between these values. The albedos of planets, moons, and asteroids provide valuable information about the structure and composition of their surfaces. The dark regions on the earth's moon give it the very low average albedo of 0.07, while highly reflective clouds give Venus an albedo of 0.85, the highest of any body in the solar system.

Albee, Edward (āl'bē), 1928–, American playwright, b. Washington, D.C. Considered the major American exponent of the theater of the absurd, Albee is most famous for his clever, satiric, and often vindictive commentaries on American life. *Who's Afraid of Virginia Woolf* (1962), generally regarded as his finest play, presents an all-night drinking bout in which a middle-aged college professor and his wife verbally lacerate each other in scathingly brilliant colloquial language. Albee's other plays include five one-act plays, *The Zoo Story* (1959), *The Death of Bessie Smith* (1960), *The Sandbox* (1960), *Box* (1968), and *Quotations from Chairman Mao Tse-Tung* (1968), a dramatization of Carson McCullers's no-

vella *The Ballad of the Sad Cafe* (1963), *Tiny Alice* (1965), *Malcolm* (1966), a dramatization of James Purdy's novel, *Everything in the Garden* (1967), from a play by Giles Cooper, *A Delicate Balance* (1967, Pulitzer Prize), *All Over* (1971), and *Seascape* (1975).

Albemarle, Arnold Joost van Keppel, 1st earl of (āl'bamarl), 1669–1718, Dutch adherent and constant companion of William III of England. He accompanied the king to England (1688) and was made an earl in 1696. After William's death (1702), he returned to Dutch service and fought in the War of the Spanish Succession.

Albemarle, George Monck or Monk, 1st duke of: see MONCK, GEORGE

Albemarle, city (1970 pop. 11,126), seat of Stanly co., central N.C., in the Piedmont region, inc. 1857. A marketing center in an agricultural and aluminum-mining area, Albemarle has poultry-processing and textile and clothing industries. Pfeiffer College is in nearby Misenheimer. There is also a state park in the vicinity.

Albemarle, island, Ecuador. see GALAPAGOS ISLANDS

Albemarle Sound, large inland body of generally fresh water, c. 55 mi (90 km) long, from 3 to 14 mi (4.8–22 km) wide, NE N.C. Shallow and tideless, the sound is separated from the Atlantic Ocean by a long, narrow barrier island. The Chowan and Roanoke rivers are the largest of many streams flowing into the sound. Albemarle Sound forms a vital link in the Intracoastal Waterway; canals connect it with Chesapeake Bay. Fort Raleigh National Historic Site on Roanoke Island and Wright Brothers National Memorial at Kitty Hawk are at the western end of the sound (see NATIONAL PARKS AND MONUMENTS, table).

Albéniz, Isaac (ēsak' albā'nēth), 1860–1909, Spanish pianist and composer. He made his debut as a pianist at the age of four. When still young, he ran away from home and traveled in North and South America and Spain, supporting himself by playing the piano. As a composer, he was influenced by Liszt and later by Debussy, and studied with D'Indy and Dukas, among others. Filipe Pedrell interested him in Spanish music. Although he wrote operas, songs, and many short piano pieces, he is best remembered for his later piano works (especially *Iberia*, 1906–9), which combine a stylized use of Spanish folk material with a brilliant pianistic idiom.

Alberdi, Juan Bautista (hwan boutēs'ta albār'dē), 1810–84, Argentine political philosopher, patriot, and diplomat. With other young intellectuals he opposed Juan Manuel de Rosas, and after 1838 he spent years of exile in Uruguay, Chile, and in Europe writing against Rosas. After the overthrow of Rosas by Justo José de Urquiza (1852), Alberdi served on a number of diplomatic missions. His most important work, *Bases y puntos de partida para la organización política de la república argentina*, a masterpiece of political science, was published in 1852. Many of the suggestions contained in it were incorporated into the Argentine constitution of 1853. After Urquiza was defeated (1861), Alberdi settled in Paris and wrote political tracts against Bartolome Mitre and Domingo Faustino Sarmiento as well as sociological works and essays.

Alberoni, Giulio (jōō'lyō albārō'nē), 1664–1752, Italian statesman in Spanish service, cardinal of the Roman Catholic Church. Appointed (1713) representative of the duke of Parma at the court of Philip V of Spain, Alberoni gained influence and ultimately became de facto prime minister. With the princesses des Ursins he arranged the marriage of the king with Elizabeth Farnese. His aims were to strengthen Spain, nullify the Peace of Utrecht (see UTRECHT, PEACE OF), and crush Austrian hegemony in Italy. The expeditions by which he recovered Sardinia from Austria (1717) and Sicily from Savoy (1718) provoked Britain, the Netherlands, France, and Austria to form the Quadruple Alliance. Spain was forced to yield, and Philip dismissed and banished (1719). Alberoni, who retired to Rome, he later became papal legate in the Romagna and in Bologna.

Albers, Josef, 1888–, German-American painter, printmaker, designer, and teacher, b. Bottrop, Germany. After working at the Bauhaus (1920–23), Albers and his wife, the weaver Anni Albers, emigrated to the United States. He has taught throughout the Americas and Europe, and, as director of the Yale School of Art (1950–58), was responsible for major innovations in art education. An extremely versatile artist, he is best known for his *Homage to the Square*, a series of paintings begun in 1949. These serene works, quasi-concentric squares of

subtly related colors, form an extensive examination of color properties. See his *Interaction of Color* (1963), studies by Eugen Gomringer (1968) and Werner Spies (1971).

Albert I, 1875–1934, king of the Belgians (1909–34), nephew and successor of Leopold II. He married (1900) Elizabeth, a Bavarian princess. In World War I his heroic resistance (1914) to the German invasion of Belgium greatly helped the Allied cause. Albert spent the entire war at the head of his army, and in 1918 he led the Allied offensive that recovered the Belgian coast. The king and queen did much to improve social conditions in Belgium and in the Belgian Congo. Albert's democratic and affable ways won him great regard at home and abroad. He died in a rock-climbing accident and was succeeded by his son, Leopold III. His daughter, Marie José, married the crown prince (later King Humbert II) of Italy. See biography by Emile Cammaerts (1935).

Albert I, c. 1250–1308, German king (1298–1308), son of Rudolf I. Albert was invested with Austria and Styria in 1282 by his father, who also hoped to secure the succession as king of the Germans for Albert. However, on Rudolf's death (1291) the Electors rejected Albert's candidacy in order to check the growing power of the Hapsburgs and to prevent the crown from becoming hereditary within the Hapsburg dynasty. They chose Adolf of Nassau as king. Albert later engineered Adolf's deposition and replaced him. As king, Albert attempted to strengthen Hapsburg claims for a hereditary dynasty by allying (1299) with Philip IV of France, by supporting the Rhine towns against the Rhenish imperial electors, and by unsuccessfully attempting (1300) to add Holland and Zeeland to the Hapsburg domains. These actions provoked a revolt (1300–1302) by the Rhenish electors, backed by Pope Boniface VIII, which Albert suppressed. He later reached an agreement with Boniface, who recognized his title in 1303. Albert attempted to expand his dominion to the east by preventing Wenceslaus II of Bohemia from acquiring Hungary, but his campaign was unsuccessful until Wenceslaus's death (1305). Albert's son Rudolf succeeded Wenceslaus III (1306). Albert was assassinated by a band of conspirators that included his nephew Henry of Luxemburg (Henry VII) who was elected to succeed him.

Albert II, 1397–1439, German king, king of Hungary and Bohemia (1438–39), duke of Austria (1404–38). He was the son-in-law of Holy Roman Emperor Sigismund, whom he aided against the Hussites of Bohemia. Albert was unable to suppress the Bohemian revolts (see HUSITE WARS) and subsequently died on a disastrous campaign against the Turks. With Albert began the lasting Hapsburg rule over the Holy Roman Empire.

Albert, 1819–61, prince consort of Victoria of Great Britain, whom he married in 1840. He was of WETTIN lineage, the son of Ernest I, duke of Saxe-Coburg-Gotha, and first cousin to Victoria. As an alien prince he was initially unpopular in England, but, in time, the English came to admire him for his irreproachable character, his devotion to the queen and their children, and his responsible and studious concern with public affairs. His influence was particularly strong in diplomacy, and his insistence on a moderate approach to the Trent Affair (1861) may have averted war with the United States. See biographies by Hector Bolitho (1932), Roger Fulford (1949), Frank Eyck (1959), and Reginald Pound (1974).

Albert, 1490–1545, German churchman, cardinal of the Roman Catholic Church. A member of the house of Brandenburg, he became (1514) archbishop-elect of Mainz. It was on his authorization that Johann Tetzel began in 1517 to preach an indulgence in Albert's diocese—occasioning Martin Luther's first attack on the church. A patron of Ulrich von Hutten, Albert was expected to join the Reformers, but after 1525 he actively opposed them. Later he invited the Jesuits to preach in his diocese. He was a friend of Erasmus.

Albert, Carl Bert, 1908–, U.S. Congressman (1947–), b. McAlester, Okla. Admitted to the bar in 1935, Albert enlisted (1941) in the army as a private, served (1942–46) in the Pacific during World War II, and rose to the rank of lieutenant colonel. Elected (1946) as a Democrat to the House of Representatives from a rural Oklahoma district, he rose to the position of majority whip (1955–62), majority leader (1962–71), and speaker of the House (1971). A loyal member of the farm bloc, Albert was also a reliable supporter of the liberal social and economic policies of the

Democratic party As presiding officer of the 1968 Democratic National Convention, he kept in check the antiwar supporters of Senators Eugene McCarthy and George McGovern

Albert, Lake, E Africa see ALBERT NYANZA

Alberta (älbûr'tä), province (1971 pop 1,627,874), 255,285 sq mi (661,188 sq km), including 6,485 sq mi (16,796 sq km) of water surface, W Canada EDMONTON is the capital and the largest city The second largest city is CALGARY, other important cities are Lethbridge, Red Deer, and Medicine Hat Alberta is bounded on the E by Saskatchewan, on the N by Mackenzie dist, Northwest Territories, on the W by British Columbia, and on the S by Montana Westernmost of the Prairie Provinces, it lies on a high plateau, rising on the W to the Continental Divide at the British Columbia border There are the foothills of the Rocky Mts and the spectacular mountains themselves, with three noted national parks—Jasper, Banff, and Waterton Lakes (the Canadian section of Waterton-Glacier International Peace Park) Although Alberta is known as a Prairie Province, only about one quarter of its area is actually treeless—chiefly the undulating prairie of S Alberta Central Alberta has parklike, partly wooded country, and the northern stretches bear thousands of acres of virgin timberland Endowed with many lakes,

streams, and rivers, the province is drained by the Peace, the Athabasca, the north and south branches of the Saskatchewan, the Red Deer, the St. Mary, the Milk, and many other rivers The population is concentrated in S and central Alberta, and except for farm centers in the fertile valley of the Peace, the northern portion is sparsely settled, it is still fur-trapping country Until recently agriculture was Alberta's basic industry Grain, especially wheat, is the dominant crop, but farming is becoming increasingly diversified In the south, large irrigation developments, such as the St. Mary-Milk development and those around Calgary, have placed thousands of additional acres under cultivation In this area is grown a variety of crops, such as vegetables and sugar beets The province is noted as well for the quality of its livestock Meat packing, flour milling, dairying, and food processing are important industries But Alberta's major industry, since the early 1960s, has been the exploitation of its vast petroleum and other mineral resources Alberta's coal beds contain about one half of Canada's reserves, while the province leads the country in the production of oil, it is believed to have the richest oil deposits in the world, most notably in the famous tar beds of the Athabasca River Its sources of natural gas are also among the world's greatest Pipelines radiate from Alberta, carrying crude oil and natural gas to points in E and W Canada and into the United States The refining of oil and the production

of petrochemicals within Alberta itself are growing industries Other industries include lumbering, textile milling, and the manufacture of iron, steel, and clay products Alberta's landscape—its rolling wheat fields, huge granaries, sprawling cattle ranches, and vast oil refineries—reminds many visitors of the U.S. Southwest Annual festivals include the Indian Days Celebration at Banff, which attracts thousands of Indians from a wide area, and the famous Calgary Exhibition and Stampede Other tourist attractions are Elk Island National Park and the extensive Wood Buffalo National Park, which shelters some 15,000 bison Alberta was originally part of the territory granted to the HUDSON'S BAY COMPANY by King Charles II in 1670, and its early history was dominated by the fur trade Traders arrived from the upper Great Lakes before Sir Alexander Mackenzie crossed (1793) the region on his way to the Pacific In 1794 a Hudson's Bay Company fort was built at the site of present-day Edmonton Destroyed by Indians in 1807, it was rebuilt 12 years later, and for 50 years it served traders and missionaries within a wide radius The area remained under the control of the Hudson's Bay Company until 1870 when it was sold, as part of the company's vast domain, to the newly created confederation of Canada In 1872 mounted police established Fort Macleod in S Alberta, and the following year they built a log fort on the site of present-day Calgary An act of 1882 created four administrative divisions from the Northwest Territories, and one was named Alberta in honor of Queen Victoria's daughter, Princess Louise Alberta, whose husband was then governor general of Canada The railroad came through in the mid-1880s, opening up the area to ranchers and homesteaders To settle the vast fertile land, the Canadian government advertised for immigrants, offering many free acres as inducements Europeans and Americans began streaming in, and farming began in earnest The city of Edmonton boomed during the 1898 Klondike gold rush, serving as a supply base, and its growth continued during the early 1900s as immigrants began settling the rich surrounding farmlands Alberta became a province in 1905 The discovery (1914) of oil in quantity at Turner Valley, near Calgary, presaged a new era for the mineral-rich province, but it was not until 1947, when oil was found in the Leduc fields near Edmonton, that the basic change in Alberta's economy began By then agriculture had suffered extensively the 1929 crash, followed by droughts, early frosts, grasshopper plagues, and dust storms, had triggered emigration from the area Politically, Albertans turned to the SOCIAL CREDIT party in 1935, when William Aberhart became premier of the first Social Credit government Social Credit administrations were elected for many years after Aberhart's death in 1943, but most attempts to reform banking and money control were declared unconstitutional by the courts In 1971 the Progressive Conservatives gained control of the provincial government, and Peter Lougheed became premier In 1974, Ralph Steinhauer, a Cree Indian, was appointed lieutenant governor of Alberta by Canadian Prime Minister Trudeau, Steinhauer was the first Indian to hold such a high executive post Alberta sends 6 senators (appointed) and 19 representatives (elected) to the national parliament The Univ. of Alberta is at Edmonton See W. A. McIntosh, *Prairie Settlement The Geographical Setting* (1934), P. F. Sharp, *The Agrarian Revolt in Western Canada* (1948), E. J. Hanson, *Dynamic Decade* (1958), C. B. Macpherson, *Democracy in Alberta* (2d ed. 1962), W. F. Schultz, *The People and Resources of Northeastern Alberta* (rev. ed. 1967), Robert Kroetsch, *Alberta* (1968)

Alberta, University of, at Edmonton, Alberta, Canada, provincially supported, coeducational, chartered 1906, opened 1908 It has faculties of arts, engineering, medicine, agriculture, law, dentistry, education, pharmacy and pharmaceutical science, science, graduate studies and research, business administration and commerce, and physical education, as well as schools of dental hygiene, library science, nursing, household economics, and rehabilitation medicine The Boreal Institute for Northern Studies promotes and supports research in the circumpolar regions

Albert Achilles, 1414–86, elector of Brandenburg (1470–86), third son of Elector FREDERICK I He succeeded his brother in 1470 Anxious to consolidate Hohenzollern power in Brandenburg, he issued (1473) the *Dispositio* of Achillea, which decreed that the title of elector should pass to the eldest son This established the law of primogeniture in Bran-

denburg The *Dispositio* remained in force until 1918

Albert Canal, waterway, c 80 mi (130 km) long N Belgium, from the Meuse River to the Scheldt River, constructed 1930–39 The canal connects the important industrial region around Liege with the port of Antwerp, Belgium

Alberti, Domenico (dōmā'nēkō albērtē), c 1710–c 1740, Venetian singer, harpsichordist, and composer The Alberti bass (which he used but probably did not invent) is a broken, left-hand chord accompaniment frequently employed in 18th-century keyboard music

Alberti, Leone Battista (lāō'nā bat-tēs'tā), 1404–72, Italian architect, musician, painter, and humanist, active at the papal court, Florence, Rimini, and Mantua His treatise *De re aedificatoria* was written c 1450 Though largely dependent upon Vitruvius, it was the first modern work on architecture and influenced the development of Renaissance architectural style Buildings erected from his designs from c 1450 until his death are among the most dignified and classical of the 15th cent They include the exteriors of the churches of San Francesco in Rimini, and San Andrea and San Sebastiano in Mantua, part of the facade of Santa Maria Novella, Florence, and the Palazzo Rucellai, Florence, where superimposed orders of architecture adorned the facade for the first time since antiquity His treatise on painting (1436), the first book in this field to treat theory as well as technique, exercised a great influence on the Renaissance painters and sculptors, in it Alberti discusses the imitation of nature, beauty, perspective, and ancient art His treatise on sculpture, written c 1464, another first work in its field, dealt, in addition, with human proportions Other writings include mathematical studies, a treatise on St. Potitus, one on the family, and works on ethics, jurisprudence, and other subjects See his *On Painting*, tr. by J. R. Spencer (rev. ed. 1966) and study by E. Arntzen (1959)

Alberti, Rafael (rafa'ēl'), 1902–, Spanish poet After abandoning an earlier career as a painter, Alberti published his first book, *Marinero en tierra* (1925), which was widely applauded His poems show the influence of Juan Ramon Jimenez and of the Spanish classics, especially of Gongora His poetic brilliance is revealed in *Concerning the Angels* (1929, tr. 1967), a collection of introspective lyrics with surrealist overtones A Loyalist in the Spanish civil war, Alberti sought exile in Buenos Aires after Franco's triumph His later poetry is enhanced by an intimate, spiritual lyricism He edited *A Year of Picasso Paintings* (1969) See his selected poems, ed. and tr. by Mark Strand (1973), studies by C. B. Morris (1966) and Joan Gadol (1969)

Albertinelli, Mariotto (maryōt'tō albārtēnēl'lē), 1474–1515, Italian painter A product of the Florentine school of the High Renaissance, Albertinelli was influenced by Leonardo and Raphael His best-known works are *The Visitation* (1503, Uffizi) and *The Annunciation* (1510, Accademia, Florence) Albertinelli's works were typical products of his time, revealing an infatuation with classical elegance

Albert Lea (lē), city (1970 pop 19,418), seat of Freeborn co., S Minn., near the Iowa line, inc. 1878 It is an important manufacturing and marketing center in a dairy, livestock, and poultry region Lea College is located there on Lake Chapeau A state park is nearby

Albert Nile, river, Uganda see NILE

Albert Nyanza (niān'zā, nyan'zā) or **Lake Albert**, 2,064 sq mi (5,346 sq km), on the Zaïre-Uganda border, E central Africa The lake is c 100 mi (160 km) long and c 19 mi (30 km) wide, with a maximum depth of 168 ft (51 m) Lying in the GREAT RIFT VALLEY, 2,030 ft (619 m) above sea level, Albert Nyanza receives the Semliki River and the Victoria Nile and is drained by the Albert Nile, which becomes the Bahr-el-Jebel when it enters the Republic of the Sudan Albert Nyanza, discovered in 1864 by Sir Samuel Baker, was named for Queen Victoria's consort

Albert of Brandenburg, 1490–1568, grand master of the TEUTONIC KNIGHTS (1511–25), first duke of Prussia (1525–68), grandson of Elector Albert Achilles of Brandenburg In 1525 he became a Protestant, and on the advice of Martin LUTHER he secularized the dominions of the Teutonic Knights and became duke of the hereditary duchy of PRUSSIA The knights' lands had been held as a fief from the king of Poland, and the new duchy remained under Polish suzerainty On the extinction of Albert's line (1618), Prussia passed to the senior line of Brandenburg, and in 1701 it was made a kingdom

Alberston, town (1970 pop 30,322), Transvaal, NE Republic of South Africa, on the WITWATERSRAND, founded 1904. It is an industrial center manufacturing cast iron, machine tools, paints, and abrasives.

Albert the Bear, c 1100–1170, first margrave of Brandenburg (1150–70). He was a loyal vassal of Holy Roman Emperor Lothair II, who, as duke of Saxony, helped him take (1123) Lower Lusatia and the eastern march of Saxony. Albert lost these lands in 1131. He was rewarded (1134) for his share in Lothair's first Italian campaign with the North March. Calling himself margrave of Brandenburg as early as 1136 or 1142, he used the North March as a base for campaigns against the Wends, a pagan Slavic people. Invested (1138) with Saxony by Conrad III, Lothair's successor, he was expelled from the dukedom by HENRY THE PROUD, whom Conrad had deprived of the duchy. Albert later made peace (1142) with HENRY THE LION, son of Henry the Proud. He took part in the Wendish Crusade of 1147, but preferred more conciliatory methods of dealing with his pagan neighbors. As a result he inherited (1150) Brandenburg from its last Wendish prince. Albert's achievements in Christianizing and Germanizing NE Germany were important.

Albertus Magnus, Saint (älbûr'tas mäg'nas), or **Saint Albert the Great**, b 1193 or 1206, d 1280, scholastic philosopher, Doctor of the Church, called the Universal Doctor. A nobleman of Bollstädt in Swabia, he joined (1223) the Dominicans and taught at Hildesheim, Freiburg, Regensburg, Strasbourg, and Cologne before the Univ. of Paris made him doctor of theology in 1245. Later he taught again at Cologne, and he was also briefly (1260–62) bishop of Regensburg. He was a thorough student of Aristotle, and he not only followed Robert Grosseteste in his approach to Aristotelian thought but also did much to introduce Aristotle's scientific treatises and scientific method to Europe. Like Roger Bacon, he had a scientific interest in nature. He made notable botanical observations (recorded in such works as *De vegetabilibus*), was the first to produce arsenic in a free form, and studied the combinations of metals. In philosophy he set out in his *Summa theologiae* to controvert AVERROES and others and to reconcile the apparent contradictions of Aristotelianism and Christian thought. He wrote many treatises, and many more have been ascribed to him, the problem of determining which are genuinely of his authorship is difficult. He was a strong influence on his favorite pupil, St Thomas Aquinas. Albertus was canonized in 1931. Feast Nov 15. See biography by T. M. Schwertner (1933), D. H. Madden, *A Chapter of Medieval History* (1969).

Albertville, Zaire see KALEMI

Albi (älbé'), town (1968 pop 46,613), capital of Tarn dept., S France, in Languedoc, on the Tarn River. A commercial center in an area yielding coal, salt, and sand, it has glassworks, foundries, and food and textile industries. An old Roman city (Albiga), it became an episcopal see in the 5th cent. It was the center of the heresy to which it gave its name (see ALBIGENSES). The old part of the city, known as the *ville rouge* because of its red-brick buildings, is a marvel of medieval architecture. The huge Gothic Cathedral of Sainte-Cécile, begun in 1282, resembles a fortress rather than a church. Other structures include the episcopal palace (13th–15th cent.) and an 11th-century bridge. The birthplace of Toulouse-Lautrec, Albi has an art museum containing much of his work.

Albigenses (älbijën'sēz) [Lat., =people of Albi, one of their centers], religious sect of S France in the Middle Ages. They were officially heretics, but actually they were CATHARI, i.e., not Christians at all, but Provençal adherents of the great Manichaean dualistic system that was endemically popular in the Mediterranean basin for centuries (see MANICHAISM, BOGOMILS). They held the coexistence of two principles, good and evil, represented by God and the Evil One, light and dark, the soul and the body, the next life and this life, peace and war, and the like. They believed that Jesus only seemed to have a human body (a typically Gnostic idea, see DOCTRINISM). They were extremely ascetic, bound to absolute chastity, and abstaining from flesh in all its forms, including milk and cheese. They comprised two classes, believers and Perfect, the former much more numerous, making up a catechumenate not bound by the stricter rules observed by the Perfect. The Perfect were those who had received the sacrament of *consolamentum*, a kind of laying on of hands. The Albigenses held their clergy in high re-

gard. One of the most curious practices of the sect was the custom of suicide, preferably by starvation, for, if this life is essentially evil, its end is to be hastened. They had proselyting enthusiasm and preached vigorously. This fact partly accounted for their success, for at that time preaching was unknown in ordinary parish life. In the practice of asceticism as well the contrast between local clergy and the Albigenses was helpful to the new sect. Albigensianism appeared in the 11th cent and soon had powerful protectors. Local bishops were ineffectual in dealing with the problem, and the pope sent St Bernard of Clairvaux and other Cistercians to preach in Languedoc, the center of the movement. In 1167 the Albigenses held a council of their own at Toulouse. Pope Innocent III attacked the problem anew, and his action in sending (1205) St Dominic to lead a band of poor preaching friars into the Albigensian cities was decisive. These missionaries were hampered by the war that soon broke out. In 1208 the papal legate, a Cistercian, Peter de Castelnau, was murdered, probably by an aid of RAYMOND VI of Toulouse, one of the chief Albigensian nobles. The pope proclaimed (1208) the Albigensian Crusade. From the first, political interests in the war overshadowed others, behind Simon de MONTFORT, the Catholic leader, was France, and behind Raymond was Peter II of Aragon, irreproachably Catholic. Innocent attempted to make peace, but the prize of S France was tempting, and the crusaders continued to harry the whole region. In 1213 at Muret, Montfort was victor and Peter was killed. The war went on, with the son of Philip II (later Louis VIII) as one of the leaders. Simon's death in 1218 robbed him of victory and left his less competent son to continue the fight. Raymond's son, Raymond VII, joined the war, which was finally terminated with an honorable capitulation by Raymond. By the Peace of Paris (1229), Louis IX acquired the county of Toulouse. The religious result of the crusade was negligible. In 1233, Pope Gregory IX established a system of legal investigation in Albigensian centers and put it into the hands of the Dominicans, this was the birth of the medieval INQUISITION. After 100 years of the Inquisition, of tireless preaching by the friars, and of careful reform of the clergy, Albigensianism was dead. See Steven Runciman, *The Medieval Manichee* (1947, repr 1961), studies by Edmond Holmes (1925), Jacques Madaule (tr 1967), J. R. Strayer (1971).

albino (älbī'nō) [Port., =white], animal or plant lacking normal pigmentation. The absence of pigment is observed in the body covering (skin, hair, and feathers) and in the iris of the eye. The blood vessels of the retina show through the iris, giving it a pink or reddish color, and the eyes are highly sensitive to light. Albinism is inherited as a Mendelian recessive character in humans and other animals. Through experimental breeding races of albinos have been established among some domestic animals, e.g., mice, rabbits, pigeons, and chickens. Albino animals are sometimes held sacred, for example, white elephants in Siam and white cattle in India. The presence of an excess of black pigment is called melanism.

Albinoni, Tomaso (älbënō'nē), 1671–1751, Italian violinist and composer. He wrote nearly 50 operas, as well as instrumental works. His orchestral music was admired by Bach, who used several of Albinoni's themes in his own compositions. Albinoni's surviving works include a violin concerto, two violin sonatas, three oboe concertos, and an adagio for strings and orchestra.

Albinus (älbī'nās) see ALCUIN

Albion (älbē'an), ancient and literary name of Britain. It is usually restricted to England and is perhaps derived from the Latin *albus* meaning "white," referring to the chalk cliffs of S England.

Albion, industrial city (1970 pop 12,112), Calhoun co., S Mich., at the forks of the Kalamazoo River, inc 1855. Among its manufactures are iron castings, electronic parts, air conditioners, heaters, bakery ovens, and wire products. Albion College is there, it was established in 1835 and the city developed around it. There are many lakes in the area.

Al-Biruni (älbērō'nē) or **Al Beruni**, **Abu Rayhan Muhammad ibn Ahmad** (äbōō' nīhān' mōhām'id īb'an ā'mād āl bē'rō'nē), b 973, d after 1050, Central Asian scientist. His earlier years were disturbed by political troubles, but after 1017 he was patronized by members of the Ghaznavid dynasty of Turkey. He traveled in Afghanistan and India, making astronomical and geographic observations. The larg-

est part of his writings are on astronomy, astrology, and applied mathematics, but he also wrote on pharmacology, geography, philosophy, history, and other subjects. A taste for precise observation is shown in his determinations of latitudes and the densities of gemstones. His encyclopedic *India* (tr 1888) and *Chronology* (tr 1879) provide invaluable information about his time.

albite (älbīt) see FELDSPAR

Albizu Campos, Pedro (pā'drō älbē'sōō kām'pōs), 1891–1965, Puerto Rican political leader. After service in a Negro unit during World War I he developed a lasting enmity for the United States and became the fiery champion of Puerto Rican independence. His Nationalist party, however, failed to receive popular support in the Puerto Rican elections of 1932, and Albizu Campos turned increasingly to violent action. Convicted of seeking to overthrow the U.S. government, he was imprisoned (1937–43) at Atlanta, then hospitalized in New York City before returning to Puerto Rico in 1947. His party made a poor showing in the 1948 election, and in 1950 Nationalists attacked the governor's mansion in Puerto Rico and Blair House in Washington. Charged with inciting to murder, Albizu Campos was again imprisoned. He was pardoned (1953) because of failing health, but the next year he was implicated in the Nationalist armed attack on the U.S. House of Representatives, and his pardon was revoked. He was sentenced to life imprisonment. He suffered a stroke in 1956 that left him speechless and bedridden. He was again pardoned in 1964 and died the next year.

Alboin (älbōin), d 572?, first Lombard king in Italy (569–572?). With the AVARS he defeated the Gepidae (see GERMANS). He then led (568) an army across the Alps into Italy, took (569) Milan, and after a three-year siege conquered Pavia, which became his capital. He won most of N and central Italy from the Byzantines (see LOMBARDS). According to a legend probably based on fact, he was murdered at the instigation of his wife, ROSAMOND.

Ålborg (öl'börg, öl'bör), city (1970 com pop 154,343), capital of Nordjylland co., N Denmark, on the Limfjord. It is a major industrial, transportation, and cultural center. Manufactures include cement, machinery, chemicals, liquor, ships, and textiles. Known in the 11th cent., Ålborg was chartered in 1342. Of note are the Cathedral of St Botolph (12th cent.), a castle (early 16th cent.), and a large cultural hall (1953). The city has two colleges. Until 1948 the name was spelled Aalborg.

Albornoz, Gil Álvarez Carrillo de (hēl al'varēth karē'lyō dā älbörnōth'), 1310?–1367, Spanish and papal statesman and general, cardinal of the Roman Catholic Church. Under Alfonso XI of Castile he became archbishop of Toledo and distinguished himself fighting the Moors at Tarifa and Algeciras. He also served as chancellor of Castile. Created cardinal in 1350, he left Spain and entered the service of the pope, then at Avignon. He was put in charge of the papal armies and sent (1353) to the Papal States with Cola di RIENZI to restore papal authority. By skillful diplomacy and force of arms, he reduced the communes and petty local tyrants to obedience, thus preparing the way for the return (1378) of the popes from Avignon to Rome. He compiled the law code of the Marches, known as the Constitutions of Aegidius (1357), which was in use until 1816. He died soon after becoming papal legate at Bologna, where he founded a college for Spanish students.

Albrecht. For rulers thus named, see ALBERT

Albrechtsberger, Johann Georg (yō'hān gā'ōrk al'brēkhtsbēr'gər), 1736–1809, Austrian musical theorist, teacher, and composer. He became (1772) court organist in Vienna and later was chief organist, conductor, and choirmaster of St Stephen's Cathedral, Vienna. He composed more than 240 works and wrote one of the most important books on counterpoint in the 18th cent. Considered the best teacher of composition in Vienna in his time, he taught Beethoven.

Albret, Jeanne d': see JEANNE D'ALBRET

Albret (älb'rā'), former duchy, SW France, in the LANDES of Gascony. The powerful lords of Albret became kings of NAVARRE by the marriage (1484) of Jean d'Albret with Catherine de Foix, queen of Navarre, who also brought him FOIX and BÉARN. Their son, Henri d'Albret, married (1527) Margaret of Angoulême (MARGARET OF NAVARRE). The marriage added ARMAGNAC to Henri's territories, which now included nearly all of Gascony. In 1550, Albret was raised to a duchy. Henri's daughter and heir, JEANNE

D'ALBRET, married Antoine de BOURBON, and their combined territories were inherited by Henry of Navarre, who in 1589 became king of France as Henry IV. Henry added Albret to the royal domain in 1607 as part of the province of Gascony.

Albright, Ivan Le Lorraine (ôl'brîl), 1897–, American painter, b. North Harvey, Ill. Allied with the Magic Realist group, Albright developed a style combining American scene painting with surrealist influences. He sought to portray the decadence of mankind and the horror of America during the depression. His compositions, such as *Poor Room* (1942, artist's coll.), contain much realistic detail organized into a fantastic conglomeration. The surfaces of his works are uniform in texture, predominantly gray in tone, and sordid in effect.

Albright, Jacob, 1759–1808, American religious leader, founder of the Evangelical Association (later the Evangelical Church), b. near Pottstown, Pa. A Pennsylvania German and a Lutheran, he was converted c. 1790 to Methodism. Preaching and forming classes among his converts in the German settlements, he was ordained a minister (1803) by representatives from these classes and was elected bishop at the first annual conference held by his followers in 1807. The movement, unrecognized by the Methodists, did not take the name Evangelical Association until after Albright's death. A college in Reading, Pa., bears his name. The Evangelical Church united in 1946 with the United Brethren in Christ to form the EVANGELICAL UNITED BRETHREN CHURCH.

Albumazar (âl'bôomaz'ar), 805?–885, Arabian astronomer, more fully Abu-Mashar Jafar ibn Muhammad. In his *De magnis conjunctionibus* he claimed that the world had been created when the seven planets were in conjunction in the first degree of the constellation Aries and that its end would come when they should be in conjunction again in the last degree of Pisces. In his astronomical tables he used the Persian calculations of the years and pointed out that they did not follow the Jews' reckoning of time.

albumin (âlbyôd'män) [Lat., =white of egg], member of a class of water-soluble, heat-coagulating PROTEINS. Albumins are widely distributed in plant and animal tissues, e.g., ovalbumin of egg, myogen of muscle, serum albumin of blood, lactalbumin of milk, legumelin of peas, and leucosin of wheat. Some albumins contain carbohydrates. Separation of serum albumins from other blood proteins can be carried out by electrophoresis or by fractional precipitation with various salts. (A 27% solution of sodium sulfate will precipitate the globulins from blood serum while leaving the albumins in solution.) Albumins normally constitute about 55% of the plasma proteins. They adhere chemically to various substances in the blood, e.g., amino acids, and thus play a role in their transport. Albumins and other proteins of the blood aid significantly in regulating the distribution of water in the body. In conditions of shock, heart action may be impaired by a decrease in the volume of circulating blood. Intravenous injection of an albumin solution restores the fluid volume by causing water to flow from the tissues into the circulatory system. In certain types of kidney disease albumin is lost through excretion, as the concentration of blood albumin falls water tends to flow into the tissues, causing edema. Albumins are also used in textile printing, in the fixation of dyes, in sugar refining, and in other important processes.

Albuquerque, Afonso de (afôn'zô dî âlbôokêr'ka, -dâ al'bâkêr'ka), 1453–1515, Portuguese admiral, the effective founder of the Portuguese Empire in the East. He first went to India in 1503, and in 1506 he set out for India again, carrying a royal commission empowering him to supersede Francisco de ALMEIDA in command. Albuquerque sailed with Tristão da CUNHA along the coasts of Madagascar and E. Africa and captured the island of Socotra (Suqutra). Then, leaving da Cunha, he ravaged the Oman coast and took (1507) the island of Hormuz, he attempted to build a fort at Hormuz but had to retire to Socotra when some of his men deserted. Almeida disavowed the conquest and, after Albuquerque had arrived in India, refused to yield command and imprisoned him. When a Portuguese fleet arrived with confirmation of Albuquerque's appointment, Almeida gave way (1509). Albuquerque captured Goa (1510), making it the mainstay of Portuguese power in India, Malacca (1511), extending Portuguese domination to SE Asia, and Hormuz again (1515), thus cutting off the Arab spice trade. While returning from Hormuz to India, Albuquerque learned

that he had been replaced. He died at the entrance to Goa harbor. Albuquerque had built forts at Goa, Calicut, Malacca, and Hormuz, reconstructed those of Cannanore and Cochin, begun shipbuilding and other industries in Portuguese India, and established relations with the rulers of SE Asia. The main goals of his policy—control over the spice sources and of the trade routes—were nearly attained during his brief tenure of power. See his *Commentaries* (tr., 4 vol., 1875–84, repr. 1970), biography by Elaine Sanceau (1936).

Albuquerque (âl'bâkûr'kê), city (1970 pop. 243,751), seat of Bernalillo co., W. central N. Mex., on the upper Rio Grande, inc. 1890. The largest city in the state, it is an important commercial, industrial, and transportation center serving a rich timber, livestock, and farm area. It has railroad shops, lumber mills, food-processing plants, and a large electronics industry. A major employer is the huge Atomic Energy Commission installation there, engaged in nuclear research, testing, and weapons development. Kirtland Air Force Base, home of the air force special weapons center, is in Albuquerque. Spanish settlers arrived in the mid-1600s but were driven out (1680) by the Indians. The old town was founded in 1706 and named for the viceroy of New Spain, the duke of Albuquerque. The new town was platted in 1880 in connection with the railroad and grew rapidly, soon enveloping the old town. Albuquerque is a noted health resort with many sanatoriums and hospitals (including a U.S. veterans' hospital and a U.S. Indian hospital). It is the seat of the Univ. of New Mexico, the Univ. of Albuquerque, a U.S. polytechnical institute for Indians, and the headquarters for Cibola National Forest. Tourist attractions in and about the city include the Church of San Felipe de Neri (1706), the Old Town plaza, numerous museums, the Sandia mts., with caves that contain remains of some of the oldest inhabitants in the western hemisphere, and many Indian pueblos. Coronado State Monument, to the north, is an excavated pueblo near which Coronado camped in 1541. More than one third of the city's residents speak Spanish.

Albury, city (1971 pop. 28,398), New South Wales, SE Australia, on the Murray River at the Victoria border. It is an agricultural market. Among the industries are food processing (including wine) and woollens milling. Albury is also a railroad center.

Alcaeus (âlsê'as), d. c. 580 B.C., Greek poet of Lesbos, a noted early writer of personal lyrics. An aristocrat, he was often embroiled in political battles with the ruling tyrants. The extant fragments of his verse are mostly convivial and light, but his political poetry is sterner. He was, according to tradition, a close associate of SAPPHO. The Alcaic strophe said to have been his invention was much used by Greek lyricists. It was greatly admired by Horace who employed it with slight modification. See C. M. Bowra, *Greek Lyric Poetry* (1936, repr. 1961), Denys Page, *Sappho and Alcaeus* (1955), Hubert Martin, *Alcaeus* (1972).

Alcalá de Henares (alkalá' dâ âna'räs), town (1970 pop. 59,783), Madrid prov., central Spain, on the Henares River, in New Castile. Leather, soap, and china are produced in the town, which is surrounded by an agricultural district that yields wheat. Called Complutum in Roman times, the town is triply famous as the former seat of a great university founded in 1508 and transferred in 1836 to Madrid, as the birthplace of Ferdinand I, Katherine of Aragon, and Cervantes, and as the scene of the Cortes in which ALFONSO XI promulgated the *Ordenamiento de Alcalá*. The town was severely damaged in the Spanish civil war. Among the landmarks are a Gothic collegiate church and the former archiepiscopal palace.

Alcalá la Real (la râal'), town (1970 pop. 21,349), Jaen prov., S. Spain, in Andalusia. It has well-known mineral springs. The town played an important part in the conquest of Granada from the Moors (15th cent.). In 1810 it was the site of a French victory in the Peninsular War.

Alcalá Zamora, Niceto (nêthä'tô alkalá' thamô'ra), 1877–1949, Spanish statesman and president of Spain (1931–36). After holding several cabinet posts under the monarchy, he became a republican and was jailed for his political activity in 1930. He helped lead the successful revolution of 1931 and became first provisional and then constitutional president of the Spanish republic. A middle-of-the-road liberal, he was deposed by the Cortes on a Socialist motion (April, 1936) and was succeeded as president by Manuel Azaña. He went into exile first to France and then (1942) to Argentina.

alcalde (âlkâl'dê, Span. alkal'dâ) [Span., from Arab., =the judge], Spanish official title, in existence at least from the 11th cent. Since the late 19th cent. it has been used for the mayor of a town or village who also acts as justice of the peace. Originally, however, it designated a judge whose scope of jurisdiction varied and who had administrative functions as well. There were, for example, *alcaldes de la hermandad* (judges attached to the tribunals of the town federations formed to assure public order and safety, see HERMANDAD) and *alcaldes de corte* (judges whose jurisdiction extended over the royal residence and the surrounding area). The *alcaldes* were distinguished from the *regidores*, whose functions were primarily administrative. In the 14th cent. the *corregidores*, royal appointees charged with assisting the *regidores* in their duties, encroached upon the judicial functions of the *alcaldes*, depriving them of all but minor civil and criminal jurisdiction. Moreover, *alcaldes* were increasingly chosen by the crown, with only a few towns keeping the right to choose their own *alcaldes* (these being known thereafter as *alcaldes ordinarios*). Since the *corregidores* were often inadequately versed in law, each usually received advice from two trained lawyers, termed *alcaldes mayores*, who specialized in criminal and civil law, respectively. The office was also instituted in the Spanish colonies, but changed its character. There the *alcalde mayor* was the administrator of a provincial division usually smaller than that of a *corregidor*, he also presided over the town ayuntamiento (later known as the CABILDO). The *alcalde ordinario* was an elected municipal officer who frequently exercised the powers of mayor and sheriff and was in some villages the sole representative of the law.

Alcámenes (âl'kamê'nêz), fl. 5th cent. 8 C., Athenian sculptor, said to have been a pupil and rival of Phidias. He worked in gold, ivory, and bronze. His *Aphrodite of the Gardens* at Athens is one of the great masterpieces of antiquity. Pausanias erroneously attributed to him the sculptures of the west pediment of the temple of Zeus at Olympia. He was also well known for his *Hermes Propylaios* [Hermes of the gateway] at the entrance of the Acropolis of Athens. A Roman copy found at Pergamum is in the Turkish Museum of Antiquities in Istanbul.

Alcamo (âl'kamô), city (1971 pop. 41,340), NW Sicily, Italy. It is an agricultural and industrial center and is noted for its white wine. The ruins of the ancient Greek settlement of Segesta are nearby.

Alcántara (alkan'tara), town (1970 pop. 4,636), Caceres prov., W. Spain, in Estremadura, near the Tagus River. A fine Roman bridge (Arabic al-kantara) built in honor of Emperor Trajan and the ruins of the convent and church of the Knights of Alcántara are located in the town. The Order of Alcántara, one of the great military religious orders of Spain, established its seat in the town in the 13th cent. after the expulsion of the Moors and enjoyed a period of great splendor (13th–14th cent.). The dignity of grand master passed to the Castilian crown in the 15th cent.

Alcatraz (âl'katraz') [Sp. *Álcatrazes*=pelicans], rocky island in San Francisco Bay, W. Calif. Discovered by the Spanish in 1769, it was named for its large pelican colony. The Spanish fortified Alcatraz, which, in 1851, came under U.S. control. The island was used as a U.S. military prison from 1859 until 1933, when it became a Federal prison for incorrigible criminals; the prison was closed in 1963. Nicknamed "The Rock," it was a symbol of the impregnable fortress prison with maximum security and very strict discipline. The island became part of Golden Gate National Recreation Area in 1972.

Alcazarquivir (alka'tharkêvêr'), city (1960 pop. 34,035), N. Morocco. The name also appears as Al Qasr al Kabir and Kasr el Kebir. Near the city on Aug. 4, 1578, the Moroccans soundly defeated the Portuguese. King Sebastian of Portugal had invaded Morocco in support of a pretender to the Moroccan throne. Abd al-Malik, ruler of Morocco, King Sebastian, and the Moroccan pretender, Muhammad, all died in the fighting. As a result of the battle, Portugal soon passed (1580) to Philip II of Spain, and the new Moroccan ruler, Ahmad al-Mansur, began his reign with tremendous prestige.

Alcestis (âlsês'tis), in Greek mythology, daughter of PELIAS. She was won in marriage by ADMETUS, who fulfilled her father's condition that her suitor come for her in a chariot pulled by a wild boar and a lion. So great was her wifely devotion that when Admetus was granted life by the gods if someone would die in his place, she willingly gave her life. In some myths Hercules rescued her from the dead, in others

Persephone was so touched by her devotion that she reunited husband and wife. The legend was dramatized by Euripides in his play *Alceste*.

alchemy (ăl'kāmē), ancient art of obscure origin that sought to transform base metals (e.g., lead) into silver and gold, forerunner of the science of chemistry. Some scholars hold that it was first practiced in early Egypt and others that it arose in China (in the 5th or 3d cent. B.C.) and was carried westward. It consisted chiefly of experiments with metals and other chemical materials. Alchemical apparatus included the alembic (or ambix) for distillation and the kerotakis for sublimation. In its beginnings alchemy was essentially a craft and embraced many kinds of metalwork, including the use of alloys resembling gold and silver. Alexandria is generally considered a center of early alchemy, and the art was influenced by the philosophy of the Hellenistic Greeks, the conversion of base metals into gold (considered the most perfect of metals) was part of a general striving of all things toward perfection. Since the early alchemists were mainly artisans, they tried to conceal the secrets of their work, thus, many of the materials they used were referred to by obscure or astrological names. It is believed that the concept of the philosopher's stone (called also by many other names, including the elixir and the grand magistry) may have originated in Alexandria, this was an imaginary substance thought to be capable of transmuting the less noble metals into gold and also of restoring youth to the aged. Alchemy, strongly tinged with magic, reached the Arabs (perhaps in the 8th cent.) and remained for several centuries under Muslim influence, in the 12th cent. it reached parts of Europe through translations of Arab writings (the early Greek treatises were not known in Europe in the Middle Ages). Arabian alchemy was preserved especially in the works of Geber, and the earlier Greek alchemy in those of Zosimus and others. The alchemical writings of the Middle Ages continued to be couched in symbolic and cryptic language. The alchemists became obsessed with their quest for the secret of transmutation, some adopted deceptive methods of experimentation, and many gained a livelihood from hopeful patrons. As a result, alchemy fell into disrepute. However, in the searching experimental quests of the alchemists chemistry had its beginnings, indeed, the histories of alchemy and chemistry are closely linked. TRANS-MUTATION OF ELEMENTS has been accomplished in modern chemistry. See Lynn Thorndike, *A History of Magic and Experimental Science* (8 vol., 1923-58), John Read, *Prelude to Chemistry* (2d ed. 1939, repr. 1966), A. J. Hopkins, *Alchemy: Child of Greek Philosophy* (1943), Mark Graubard, *Astrology and Alchemy* (1953), C. A. Burland, *The Arts of the Alchemists* (1967), Jack Lindsay, *The Origins of Alchemy in Graeco-Roman Egypt* (1970).

Alcibiades (ălsīb'ādēz), c. 450-404 B.C., Athenian statesman and general. Of the family of Alcmaeonidae, he was a ward of Pericles and was for many years a devoted attendant of Socrates. He turned to politics after the Peace of Nicias (421 B.C.), and during the PELOPONNESIAN WAR he was the leader in agitating against Sparta. He was so successful that Athens joined an alliance against Sparta. When Sparta attacked (418 B.C.) Argos, Alcibiades led an Athenian force to help the Argives, but Athens and the allies were beaten at Mantinea. He was (415 B.C.) the chief promoter of the Sicilian campaign and was one of the three leaders (with Nicias and Lamachus) of the Athenian forces. On the night before the expedition sailed, all the statues of Hermes (the hermae) in Athens were mutilated, a sacrilege that caused fear and commotion in the city. Alcibiades was accused—almost certainly falsely—of the crime and was not allowed to have an immediate trial before sailing. When the forces reached Sicily, he proposed an attempt to win allies rather than attacking the hostile cities of Selinus and Syracuse at once. Nicias carried out this policy to ultimate disaster. Alcibiades had meanwhile been summoned home to stand trial. Instead he fled to Sparta, where he gave advice to King AGIS I, who was successful against Athens. Alcibiades later fell into trouble with the Spartan king, and c. 413 he fled to the protection of the Persian satrap TISSAPHERNES and then sought to return to Athens. After the oligarchy of the Four Hundred fell (411), he was recalled at the request of Thrasybulus. Athens had a short era of greatness as Alcibiades directed brilliantly the Athenian fleet in the Aegean and in 410 won a victory over the Peloponnesian fleet off Cyzicus. In command of Athenian forces, he recovered (408) Byzantium and was acclaimed in Athens. A new Spartan commander, however, appeared in Lysander, who defeated the

Athenian fleet at Notium in c. 406 B.C. Though Alcibiades was absent on another expedition at the time, he was, nevertheless, blamed and exiled. He went to a castle he owned on the western shore of the Hellespont. There in 405 B.C. he attempted to warn the Athenian fleet at AEGOSPOTAMOS against a surprise attack by the Spartans, but his advice was ignored. In 404 at the behest of Lysander, the Persian satrap PHARNABAZUS had Alcibiades murdered. Historians have disagreed in their estimate of Alcibiades from his own day to the present, some have viewed him as a highly competent and unappreciated leader, but most have considered him to be largely responsible for the decline of Athens.

Alcimus (ăls'īmās), Hellenizing Jew, appointed to the high priesthood, but opposed by the Maccabees. 1 Mac 7, 9, 154-57, 2 Mac 14, 3, 13, 26.

Alcindor, Lew: see JABBAR, KAREEM ABDUL.

Alcinous (ălsin'ōēs), in Greek mythology, king of Phaeacia, father of Nausicaa. He aided Odysseus in his journey back to Ithaca. In the story of Jason, he protects Jason and Medea from the Colchians.

Alciphron (ăls'ifrōn, -frān), fl. A.D. c. 200?, Greek satirist. His only extant work, in fine Attic style, consists of 122 imaginary letters by common people living in Athens in the 4th cent. B.C. The letters tell much about domestic life of the times.

Alcmaeon (ălkmē'ēn), in Greek legend, son of Amphiaräus and Eriphyle, a leader of the expedition of the EPIGONI against Thebes. He murdered his mother in revenge for his father's death and consequently was haunted by the Erinyes until he found haven on Achelous' island. There he married Callirrhoe, daughter of Achelous, and lived in peace until his wife demanded the sacred robe and necklace of Harmonia, which were in the possession of his former wife Arsinoe. When he tried to regain them from Arsinoe, her brothers killed him.

Alcmaeonidae (ălkmē'ōnīdē), Athenian family powerful in the 7th, 6th, and 5th cent. B.C. Blamed for the murder of the followers of Cylon, the would-be tyrant (c. 632 B.C.), they were considered attainted and were exiled. They were again in Athens in the 6th cent. The most prominent members of the family later were CLEISTHENES, PERICLES (whose mother was an Alcmaeonid), and ALICIBIADES.

Alcman (ălkm'an), fl. before 600 B.C., Greek poet of Sparta, founder of the Dorian school of choral lyric poetry. Short choral fragments and a longer one (part of a *parthenion* or choir song for girls) survive. His verse, simple, clear, and musical, was often sung at festivals. See his *Partheneion* (ed. by Denys L. Page, 1951).

Alcmene (ălkmē'nē) see AMPHITRYON.

Alcobaça (ălkōbă'să), town (1970 pop. 4,799), Leiria dist., W. central Portugal, in Estremadura. The town became a center of the Cistercians in the reign of Alfonso I, and its abbey (building begun 1152) was the greatest of medieval Portugal. The Alcobaça Cistercians exercised enormous influence on education, social conditions, finance, and politics. The early kings of Portugal are buried in the abbey.

alcohol, any of a class of organic compounds with the general formula R-OH, where R represents an alkyl group made up of carbon and hydrogen in various proportions and -OH represents one or more HYDROXYL GROUPS. In common usage the term *alcohol* usually refers to ETHANOL. The class of alcohols also includes METHANOL, the amyl, butyl, and propyl alcohols, the GLYCOLS, and GLYCEROL. An alcohol is generally classified by the number of hydroxyl groups in its molecule. An alcohol that has one hydroxyl group is called monohydric, monohydric alcohols include methanol, ethanol, and ISOPROPANOL.

Alcohols

Glycols have two hydroxyl groups in their molecules and so are dihydric. Glycerol, with three hydroxyl groups, is trihydric. The monohydric alcohols are further classified as primary, secondary, or tertiary according to the number of carbon atoms bonded to the carbon atom to which the hydroxyl group is bonded. Many of the properties and reactions characteristic of alcohols are due to the electron charge distribution in the C-O-H portion of the molecule (see CHEMICAL BOND). Chemical reactions involving the hydroxyl group in an alcohol molecule are of two kinds: those in which the hydroxyl group is replaced as a whole, e.g., reaction of ethanol with hydrogen iodide to form ethyl iodide and water, and those in which only the hydrogen in the hydroxyl group is replaced, e.g., the reaction of ethanol with sodium, an active metal, to form sodium ethoxide and hydrogen. Alcohols are generally less volatile, have higher melting points, and are more soluble in water than the corresponding hydrocarbons (in which the -OH group is replaced with hydrogen). For example, at room temperature methanol is a liquid, while methane is a gas.

Alcoholics Anonymous, worldwide organization dedicated to the curing of alcoholics, founded 1935 by two former alcoholics, one a New York broker, the other an Ohio physician. They developed a philosophy of life that has made recovery from alcoholism possible for countless men and women everywhere. It includes psychological principles that have long been recognized as being effective in the reorganization of personality. The organization functions through local groups that have no constitutions, officers, or dues. Anyone who has a drinking problem may become a member. There are presently about 17,000 local groups in the United States, with a total membership of approximately 575,000.

alcoholism, the consumption of alcoholic beverages to a degree that interferes with bodily or mental health or with normal social and occupational behavior. Chronic alcoholism is a condition in which the drinker is physiologically dependent on alcohol, i.e., he is addicted. Alcoholism, either in the form of heavy steady drinking or in the form of occasional periods of intense drinking alternating with sober periods, is the most widespread drug addiction problem; it is estimated that about 9 million of the 95 million social drinkers in the United States are problem drinkers or alcohol addicts (see DRUG ADDICTION AND DRUG ABUSE). Because alcohol can profoundly alter behavior (by blocking inhibitions, for example, and releasing aggressive behavior), it is one of the most dangerous addictive drugs. A large proportion of arrests in the United States are for drunkenness or for drunken driving, and a high proportion of crimes of violence (e.g., child beating, homicide, and suicide) are committed by people who have been drinking. Alcoholics cause one half of all highway fatalities and are responsible for much lost work time and inefficiency on the job. Intoxication is produced by alcohol as it circulates in the blood and acts to depress the central NERVOUS SYSTEM (see DEPRESSANT). Alcohol, which requires no digestion, can pass directly into the bloodstream. The absorption rate depends principally on the concentration of the drug in the stomach and small intestine; the presence of food in the stomach slows the absorption process. Alcohol is not stored in the body or excreted but is metabolized in the liver at a fixed rate of between 0.25 and 0.33 oz (7.1-9.4 grams) per hr, varying with the individual. Thus alcohol is found in the bloodstream and signs of intoxication appear when the rate of alcohol consumption is greater than the rate at which it is metabolized in the liver. At a blood level of about 0.05%, alcohol lowers alertness, increases appetite, and may relieve fatigue. In increasing doses, it causes exaggerated behavior, impairs muscular coordination and judgment, slows reflexes, and reduces negative feelings such as anxiety and guilt. Definite intoxication occurs at more than 0.15%, although 0.10% is frequently considered legal drunkenness. The lethal level, often given as 0.60%, may be as low as 0.40% in some people. Death results from respiratory failure as the medulla of the brain is depressed. The rapid ingestion of about a pint of absolute ethyl alcohol or its equivalent would be fatal for most individuals. In practice, most people become unconscious before they drink themselves to death. However, ingestion of adulterated alcoholic beverages containing methyl (wood) alcohol will cause damage to retinal cells and may lead to complete blindness within a few days. The effects of alcohol are similar to those of BARBITURATES, and the combination of the two is particularly dangerous. Like all addictive drugs, alcohol produces tolerance.

and physical dependence in the habitual user. A hangover, a combination of headache, nausea, fatigue, and depression, may be a mild type of withdrawal from alcohol. Sudden abstinence by the chronic alcoholic produces a severe withdrawal syndrome—including tremors, vomiting, and convulsions resembling those of epilepsy—that is more likely to cause death than withdrawal from narcotic drugs. The final and most dangerous phase in this withdrawal pattern is DELIRIUM TREMENS, a toxic psychosis characterized by insomnia, hallucinations, seizures, and maniacal behavior. Chronic use of alcohol results in loss of brain cells, producing memory lapses, impaired learning ability, motor disturbances, and general disorientation. It is not known whether the deterioration is caused by the alcohol itself or by malnutrition and vitamin deficiencies resulting from the body's decreased ability to use vitamins. Other ailments that can result from prolonged alcoholism include CIRRHOSIS, a liver ailment, diseases of the digestive system, damage to the heart, and lowered resistance to infection. Although anyone who drinks alcohol experiences intoxicating effects, only a small percentage of all drinkers become alcoholics. The steps in the development of chronic alcoholism vary with the individual, it is usually not possible to determine which of a group of drinkers will become addicted. Although there is no such thing as an alcoholic personality, there are certain personality traits common in alcoholics, e.g., feelings of inadequacy and inability to tolerate frustration or deal with the demands of life. Many alcoholics may border on serious mental illness. Nearly half come from broken homes or have an alcoholic parent. Certain cultural groups, e.g., some N European peoples, and some groups where the social structure has been disrupted, e.g., Eskimos and North American Indians, seem to be more susceptible than others. In the United States, although the number of women drinkers has markedly increased in recent years, four out of five alcoholics are male. It is possible that a hereditary component exists, i.e., some people may experience a unique sense of gratification when intoxicated. A typical case of beginning alcoholism resembles ordinary social drinking, although drinking may be more intense and prolonged. Later the drinker may begin to drink in the morning to obliterate his guilt feelings and to relieve the physical discomfort of the hangover from the drinking of the night before. As the alcoholic becomes increasingly unable to control his drinking he becomes antisocial and disorganized. Severe chronic alcoholism may result in loss of job, home, and family. The treatment of alcoholism begins with medical efforts to achieve sobriety. Anti-anxiety drugs such as certain SEDATIVES and barbiturates are used to ease withdrawal and delirium tremens. Medical treatment is usually followed by membership in a supportive group such as ALCOHOLICS ANONYMOUS, in which alcoholics commit themselves to change and work together to solve their drinking problems. Although most therapeutic methods emphasize complete abstinence, some experimental groups try to teach alcoholics to keep drinking under control. Psychoanalysis is not usually helpful. Some alcoholics are helped by hypnotic suggestion, methods of conditioning to avoid alcohol, or self-administration of drugs such as ANTABUSE, which produces severe discomfort if present in the system when alcohol is consumed. An experimental treatment for severe drinking bouts is the use of lithium salts, presently used to treat manic-depressive illness. Increased sensitivity to the problem of alcoholism led to the establishment of the US National Institute on Alcohol Abuse and Alcoholism as part of the National Institutes of Mental Health. The Federal government now sponsors rehabilitation centers, outpatient halfway houses, and much research. See H M Trice, *Alcoholism in America* (1966), Henrik Wallgren, *Actions of Alcohol* (2 vol., 1970), Yedy Israel and Jorge Mardones, ed., *Biological Basis of Alcoholism* (1971), P G Bourne and Ruth Fox, ed., *Alcoholism: Progress in Research and Treatment* (1973).

Alcor (ä'lkör'), in astronomy see MIZAR

Alcott, Bronson (Amos Bronson Alcott) (öl'kät'), 1799–1888, American advocate of educational and social reform, b near Wolcott, Conn. His meager formal education was supplemented by omnivorous reading, while he gained a living from farming, working in a clock factory, and as a peddler in the South. He taught in several places before he opened (1834) his Temple School in Boston. His own records, as well as those made by Elizabeth Palmer Peabody, his assistant, show his concern with the integrated mental, physical, and spiritual development

of the child. Yet unfavorable reactions to his advanced and liberal theories forced him to close his school. His disappointment was lessened when he learned of the success of Alcott House, a school founded by his disciples in England. One of the leading exponents of TRANSCENDENTALISM, he wrote for the transcendental periodical *Dial* (the "Orphic Sayings" being his most famous contribution) and was a nonresident member of Brook Farm. He was one of the founders (1843) of a cooperative vegetarian community, "Fruitlands," near Harvard, Mass., but it was abandoned in 1844. Poverty continually plagued the life of the Alcotts until the writings of his daughter, Louisa May Alcott, relieved the family of financial worry. He became superintendent of the Concord public schools, whose reformation he described in his *Reports*. From 1879 he was dean of the Concord School of Philosophy, which annually gathered disciples to hear him and many other speakers. Among his writings are *Observations on the Principles and Methods of Infant Instruction* (1830), *Record of a School* (1835), and *Ralph Waldo Emerson* (1882). See his journals (ed. by Odell Shepard, 1938, repr. 1966) and his letters (ed. by R L Herrin, 1969), biographies by F B Sanborn (1893, repr. 1965) and D McCuskey (1969), study by G E Haefner (1970), Odell Shepard, *Pedlar's Progress* (1937, repr. 1967).

Alcott, Louisa May, 1832–88, American novelist and writer of children's books, b Germantown, Pa., daughter of Bronson Alcott. She is chiefly remembered for *Little Women*, one of the most popular girls' books ever written. Mostly educated by her father, she was also guided by her friends Emerson and Thoreau, and her first book, *Flower Fables* (1854), was a collection of tales originally created to amuse Emerson's daughter. Alcott was determined to contribute to the small family income and worked as a servant and a seamstress before she made her fortune as a writer. By 1860 her poems and short stories were appearing in the *Atlantic Monthly*. Her letters written to her family when she was a Civil War nurse were published as *Hospital Sketches* (1863) and were received with enthusiasm, her first novel, *Moods*, followed in 1864. In 1867 she became editor of a children's magazine, *Merry's Museum*. She first achieved wide fame and wealth with *Little Women*, published in two volumes in 1868–69. The novel, which recounts the adolescent adventures of the four March sisters, is largely autobiographical, the author herself being represented by the spirited Jo March. Her other books for juveniles include *Little Men* (1871) and *Jo's Boys* (1886), both sequels to *Little Women*, *An Old-Fashioned Girl* (1870), *Eight Cousins* (1875), with its sequel *Rose in Bloom* (1876), and *Under the Lilacs* (1879). They all picture family life in Victorian America with warmth and perception. Another novel, *Work* (1873), draws on Alcott's early experiences as a breadwinner for her family. In her mature years she was active in the abolition and temperance movements, woman suffrage, and other causes. Her letters and journal were edited by E D Cheney (1889, repr. 1966). See biographies by M M Worthington (1958) and C L Meigs (1970).

Alcoy (alkor'), city (1971 pop. 61,371), Alicante prov., SE Spain, in Valencia, on the Serpis River. An important industrial center with manufactures of paper (especially cigarette paper), matches, and textiles, it also has trade in grain, wine, and oil from the surrounding region.

Alcuin (ä'lkwin) or **Albinus** (älbī'nəs), 735?–804, English churchman and educator. He was educated at the cathedral school of York by a disciple of Bede, he became principal in 766. CHARLEMAGNE invited him (781?) to court at Aachen to set up a school. For 15 years Alcuin was the moving spirit of the Carolingian renaissance. He combated illiteracy with a system of elementary education. On a higher level he established the study of the seven liberal arts, the trivium and quadrivium, which became the curriculum for medieval Western Europe. He encouraged the study and preservation of ancient texts. His dialogue textbook of rhetoric, called *Compensia*, was widely used. He wrote verse, and his letters were preserved. Alcuin's treatise against Felix of Urgel did much to defeat the heresy of ADOPTIONISM. He died as head of the abbey of St Martin of Tours, where he had one of his most famous schools. See studies by E J B Gaskoin (1904), Eleanor Duckett (1951, repr. 1965), and Gerald Ellard (1956).

Alcyone: see HALCYONE

Aldan (äldän'), city (1967 est. pop. 67,000), Yakut Autonomous Republic, E Siberian USSR, on the Aldan Plateau. Located on a major north-south highway of

the region, it is also in the heart of an important gold-mining area. Nearby, at Emeldzhak, are valuable mica deposits.

Aldan, river, c 1,400 mi (2,250 km) long, rising in the Stanovoy Range, Yakut Autonomous Republic, SE Siberian USSR. It flows north and east, past Tommot and around the Aldan Plateau, before flowing generally northwest to enter the Lena River c 100 mi (160 km) N of Yakutsk. The Amga, Uchur, and Maya rivers are its main tributaries. The Aldan River is navigable c 1,000 mi (1,610 km) upstream. Gold is found in its basin.

Aldana, Francisco de (fränthēs'kō thā äldā'nā), 1537–78, Spanish general, diplomat, and poet, b Alcantara or Naples. He symbolizes the ideal of the Spanish Renaissance. As a soldier he served Philip II of Spain and Sebastian of Portugal in Europe and Africa. He cultivated many verse forms, and his poetry treats themes such as love and religion. His works were published posthumously by his brother Cosme.

Aldanov, Mark (mark äldā'naf), pseud. of Mark Aleksandrovich Landau, 1886–1957, Russian writer. Aldanov earned degrees in chemistry and law. He took part in the Revolution of 1917, after which he emigrated to France, where he wrote novels about social conflict. These include *The Thinker*, a tetralogy on the events of the era 1793–1821, comprising *The Ninth Thermidor* (1923, tr. 1926), *The Devil's Bridge* (1925, tr. 1928), *The Conspiracy* (1927), and *St. Helena Little Island* (1921, tr. 1924). *The Tenth Symphony* (1931, tr. 1948) concerns Vienna in Beethoven's time. *The Fifth Seal* (1939, tr. 1943) portrays the decay of revolutionary idealism during the Spanish civil war. Aldanov describes the clash between Soviet and American ideologies in *Nightmare and Dawn* (tr. 1957). Among his last works are *A Night at the Airport* (tr. 1949) and *The Escape* (tr. 1950). He visited the United States in 1941, returning to France shortly before his death.

Aldebaran (ä'l'dēb'ārən), brightest star in the constellation TAURUS, Bayer designation α Tauri, 1970 position R.A. 4^h34^m2^s, Dec. +16°27'. An orange giant star (SPECTRAL CLASS K5 III) with apparent magnitude averaging 0.85, it is one of the 20 brightest stars in the sky. Aldebaran is a visual BINARY STAR and an irregular VARIABLE STAR, with MAGNITUDE ranging from 0.78 to 0.93. Its distance is 68 light-years. The name is from the Arabic meaning "follower (of the Pleiades)".

aldehyde (ä'l'dēhīd) [alcohol + New Lat. *dehydrogenatus*=dehydrogenated], any of a class of organic compounds that contain the CARBONYL GROUP, >C=O , and in which the carbonyl group is bonded to at least one hydrogen, the general formula for an aldehyde is RCHO , where R is hydrogen or an alkyl or aryl group. Aldehydes are formed by partial oxidation of primary alcohols and form carboxylic acids

Aldehydes

when they are oxidized. The common name for an aldehyde is often derived from the name of the acid it forms, the IUPAC name is usually derived from the name of the alcohol from which it is formed. Low molecular weight aldehydes, e.g., FORMALDEHYDE and ACETALDEHYDE, have sharp, unpleasant odors, higher molecular weight aldehydes, e.g., BENZALDEHYDE and FURFURAL, have pleasant, often flowery, odors and are found in the ESSENTIAL OILS of certain plants. Aldehydes are important in industry for the manufacture of synthetic resins, e.g., bakelite, and for making dyestuffs, flavorings, perfumes, and other chemicals. Some are used as preservatives and disinfectants.

Alden, Henry Mills (öl'dən), 1836–1919, American editor, b Mt. Tabor, Vt. He was editor of *Harper's*

Magazine from 1869 until his death. A highly religious and fastidious man, he directed his efforts toward making *Harper's* a family magazine. His works include *A Study of Death* (1895) and *Magazine Writing and the New Literature* (1908).

Alden, John, c.1599–1687, Puritan settler in Plymouth Colony. He came to America on the *Mayflower* and was prominent as assistant to the governor of the colony. He moved (c.1627) to Duxbury and there was neighbor and friend of Miles STANDISH. Alden's marriage to Priscilla Mullens gave rise to the romantic legend made familiar by Longfellow's poem, *The Courtship of Miles Standish*.

Alder, Kurt (al'dar), 1902–58, German chemist, educated at Berlin and at Kiel. He was on the research staff of the Bayer Dye Works (1936–40) before becoming (1940) professor of chemistry and director of the chemical institute of the Univ. of Cologne. He shared with Otto Diels the 1950 Nobel Prize in Chemistry for discovering a process for the synthesis of complex organic compounds. The commercial application of the process led to the preparation of various products, including dyes, drugs, insecticides, and plastics.

alder (ôl'dar), name for deciduous trees and shrubs of the genus *Alnus* of the family Betulaceae (BIRCH family), widely distributed, especially in mountainous and moist areas of the north temperate zone and in the Andes. The black alder (*A. glutinosa*) is an Old World species now naturalized in E. North America. Its bark, still used for dyes and tanning, was formerly considered medicinal, its wood is useful chiefly as charcoal. *A. rugosa*, the speckled alder, forms extensive swamp thickets in Eurasia and North America. The red alder (*A. rubra*), the largest tree of the genus, is the most important hardwood timber tree in its native region, the Pacific coast of North America. Alder trees are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Fagales, family Betulaceae.

alderfly: see DOBSONFLY

Alderney (ôl'darnê), Fr. Aurigny (ôrên'yê'), anc. Riduna, island (1971 pop. 1,686), c. 3 sq mi (7.7 sq km), in the English Channel, northernmost of the larger Channel Islands. It is separated from the French coast and from other islands by swift tidal races. The soil is fertile and well cultivated about St. Anne, the principal town, the island's main crops are potatoes and grains. Tourism is important.

Aldershot (ôl'darshôt), municipal borough (1971 pop. 33,311), Hampshire, S. central England. It is the site of the largest military training center (est. 1854) in Great Britain. The minister of defense appoints most of the borough council.

Aldhelm, Saint (ôld'hêlm), 639?–709, English churchman and scholar. He was abbot of Malmesbury (from 675) and became the first bishop of Sherborne (705). A distinguished student of the classics whose own Latin prose style was widely imitated, he was also a skilled musician and wrote hymns, popular songs, and ballads for the people. He founded several monasteries and built several churches, the one still standing at Bradford-on-Avon is considered a fine example of Saxon architecture. His name also occurs as Ealdhelm. Feast: May 25.

Aldington, Richard (ôl'dîngtôn), 1892–1962, English poet and novelist. While studying at the Univ. of London, he became acquainted with Ezra Pound and H. D. (Hilda DOOLITTLE), whom he married in 1913. He was one of the leading Imagists and helped edit the *Egoist*, the principal imagist organ. His early poems, extraordinary in their verbal precision, were published under the title *Images* (1915). *Images of War* and *Images of Desire* followed in 1919, the latter marking a departure from pure imagism. Aldington's first novel, *Death of a Hero* (1929), was a bitter indictment of war. It was followed by *The Colonel's Daughter* (1931), equally biting in its satiric intent. Aldington was at his best when in an angry state of artistic and intellectual rebellion, experiments with milder satire proved less effective. After World War II he published little poetry. His most important work was in biography—*Wellington* (1946), *Portrait of a Genius, But* (1950), a study of D. H. Lawrence, *Lawrence of Arabia* (1955), a harshly critical portrait of T. E. Lawrence, and *Portrait of a Rebel: The Life and Work of Robert Louis Stevenson* (1957). See his autobiographical *Life for Life's Sake* (1941), study by N. T. Gates (1974).

aldosterone (ôl'dôstêrôn'), steroid secreted by the cortex of the adrenal gland. It is the most potent HORMONE regulating the body's electrolyte balance. Aldosterone acts directly on the kidney to decrease the rate of sodium-ion excretion (with accompanying retention of water), and to increase the rate of

potassium-ion excretion. The secretion of aldosterone appears to be regulated by two mechanisms. First, the concentration of sodium ions may be a factor since increased rates of aldosterone secretion are found when dietary sodium is severely limited. Second, reduced blood flow to the kidney stimulates certain kidney cells to secrete the proteolytic enzyme renin, which converts the inactive angiotensinogen globulin in the blood into its active form, angiotensin. This peptide in turn stimulates the secretion of aldosterone by the adrenal cortex. Pathologically elevated aldosterone secretion with concomitant excessive retention of salt and water often results in edema.

Aldrich, Nelson Wilmarth, 1841–1915, U.S. Senator from Rhode Island, b. Foster, R.I. He rose in local politics as state assemblyman (1875–76) and U.S. Representative (1879–81) before he served as Senator (1881–1911). Aldrich, after the death of Henry B. Anthony, dominated Republican politics in Rhode Island, and because of his wide interests in banking, manufacturing, and public utilities he was popularly considered the spokesman of big business in the Republican party and the nation. After the controversy of 1888 he was the great proponent of protective tariffs and was successful in saving the Payne-Aldrich Tariff Act of 1909 even against the combined opposition of the Democrats and the Progressives. He took charge of Republican administrative legislation after 1897 and helped force the Silver Republicans out of the party, the Gold Standard Act of 1900 completing the work. As Theodore Roosevelt's sympathies grew increasingly progressive, Aldrich led the Senate opposition to him. Aldrich was deeply concerned with monetary problems, helped shape the Aldrich-Vreeland Currency Act of 1908, and headed the National Monetary Commission to study bank reform. He visited Europe in the course of this study, which he continued after leaving the Senate. The "Aldrich plan," published in 1911, was not made into law, but it did offer information that was used by the Democrats in setting up the Federal Reserve System. See biography by N. W. Stephenson (1930, repr. 1971).

Aldrich, Thomas Bailey, 1836–1907, American author and editor, b. Portsmouth, N.H. His most widely read work was *The Story of a Bad Boy* (1870), a vigorous narrative based on his own boyhood. His short stories, especially those in *Marjorie Daw* and *Other People* (1873), are noted for their naturalness and craftsmanship. Aldrich also excelled at writing light verse. In 1881 he succeeded W. D. Howells as editor of the *Atlantic Monthly*, a position he held until 1890. See biography by Ferris Greenslet (1908, repr. 1965), Mrs. T. B. Aldrich, *Crowding Memories* (1920), study by C. E. Samuels (1966).

Aldridge-Brownhills, urban district (1971 pop. 88,475), Staffordshire, central England. It was created in 1966 through the merger of two former districts. Aldridge-Brownhills is residential and has extensive areas of open countryside. Chasewater Pleasure Park, in the northern part of the district, has the largest area of open water in the Midlands. The village of Rushall in the district was the site of a battle in 1643 during the English civil war. In 1974, Aldridge-Brownhills became part of the new metropolitan county of West Midlands.

aldrin (ôl'drîn) see INSECTICIDE

Aldrovandi, Ulisse (ôlê'ssâ aldrovân'dê), 1522–1605, Italian naturalist, professor at the Univ. of Bologna. He instigated the establishment (1567) of the Bologna Botanical Garden and wrote an early pharmacopoeia. His chief work was the *Natural History* (14 vol.), of which four volumes (some sources say five) were published before his death, the rest were prepared for publication from his manuscripts.

Aldus Manutius (âl'das manyôô'shas) or **Aldo Manuzio** (âl'dô mânôô'tsyô), 1450–1515, Venetian printer. He was educated as a humanistic scholar and became tutor to several of the great ducal families. One of them, the Pio family, provided him with money to establish a printery in Venice. Aldus was at this time almost 45 years old. He devoted himself to publishing the Greek and Roman classics, in editions noted for their scrupulous accuracy, a five-volume set of the works of Aristotle, completed in 1498, is the most famous of his editions. He was especially interested in producing books of small format for scholars at low cost. To this end he designed and cut the first complete font of the Greek alphabet, adding a series of ligatures or tied letters, similar to the conventional signs used by scribes, which represented two to five letters in the width of one character. To save space in Latin texts he had a type designed after the Italian cursive script, it is

said to be the script of Petrarch. This was the first italic type used in books (1501). Books produced by him are called Aldine and bear his mark, which was a dolphin and an anchor. Aldus employed competent scholars as editors, compositors, and proofreaders to insure accuracy in his books. Much of his type was designed by Francesco Griffi, called Francesco da Bologna. The Aldine Press was later managed by other members of his family, including a son, Paulus Manutius (1512–74), and a grandson, Aldus Manutius (1547–97), who was best known for his classical scholarship.

ale: see BEER

Aleandro, Girolamo (jêrô'lamô âläân'drô), 1480–1542, Italian scholar, cardinal of the Roman Catholic Church. He is also called Hieronymus Alexander. A principal in the Lutheran crisis, he obtained the condemnation of Martin Luther at the Diet of Worms (1521), and he made an outline of policy for the Catholic Reformation. His grandnephew Girolamo Aleandro, the younger, 1574–1649, was a humanist, known for his antiquarian studies.

aleatory music (â'lêâtôr'ê), music in which elements traditionally determined by the composer are determined either by a process of random selection chosen by the composer or by the exercise of choice by the performer(s). At the compositional stage, pitches, durations, dynamics, and so forth are made functions of playing card drawings, dice throwings, or mathematical laws of chance, the latter with the possible aid of a computer. Those elements usually left to the performers' discretion include the order of execution of sections of a work, the possible exclusion of such sections, and subjective interpretation of temporal and spatial pitch relations. Also called "chance music," aleatory music has been produced in abundance since 1945 by several composers, the most notable being John CAGE and Iannis XENAKIS.

Alecsandri, Vasile (vasê'lê âlêksân'drê), 1821–90, Rumanian poet, dramatist, and statesman. He was (1858) provisional foreign minister and subsequently served in various diplomatic posts. Besides writing lyric poetry celebrated for the description of his native landscape, he published a notable collection of Rumanian folk songs. His plays include *Ovidiu* (1890). See study by Alexandre Cioranescu (tr. 1973).

Alecto (âlêk'tô) see FURIES

Alegría, Ciro (sê'rô âlâgrê'a), 1909–67, Peruvian novelist. Imprisoned several times for his political activities, Alegría was exiled to Chile in 1934. He gained fame with his novel *La serpiente de oro* (1935, tr. *The Golden Serpent*, 1943). In 1941 he won the Latin American Nobel Prize for *El mundo es ancho y ajeno* (tr. *Broad and Alien Is the World*, 1941), which depicts the exploitation of the Indian by the white man.

Aleichem, Sholom (shô'lâm alâ'khâm) [Heb. = Peace be upon you!—a very common form of greeting in Yiddish], 1859–1916, Yiddish author, b. Russia. His real name was Solomon, or Shalom, Rabinowitz. The first part of his pseudonym is also written Sholem or Shalom. He was influential in establishing Yiddish as a literary language. His stories are celebrated for their portrayal of character, and he is perhaps best known for his humorous tales of life among the poverty-ridden and oppressed Russian Jews of the late 19th and early 20th cent. His five novels, many plays, and some 300 short stories, all written in Yiddish, have been translated into Russian, German, and other European languages. English translations of some of his tales include *The Old Country* (1946) and *Tevye's Daughters* (1949). In the last years of his life Sholom Aleichem lived in the United States; he died in New York City where, through his work, he helped to found the Yiddish Art Theater. His autobiographical writings include *Adventures of Mottel* (tr. 1953) and *The Great Fair* (tr. 1955). See biography by his daughter, Marie Waife-Goldberg (1968), Maurice Samuel, *The World of Sholom Aleichem* (1943, repr. 1973), Melech Grafstein, ed., *Sholom Aleichem Panorama* (1949).

Aleijadinho (âlâzhâdê'nyô) [Port. = little cripple], 1730–1814, Brazilian sculptor. His real name was Antônio Francisco Lisboa. Although he was maimed in hands and feet, he is known for the brilliance of his church sculpture. His most famous works are the carvings in the Church of São Francisco at OURO PRÊTO and the statues of the Twelve Prophets at Congonhas do Campo. The distinctive baroque style of Aleijadinho's works, carved in wood and indigenous soapstone, has caused much church sculpture in his native Minas Gerais to be attributed to him.

Alexandre, Vicente (vēthēn'tā alāhan'drā), 1898–, Spanish lyric poet. He won the national prize for literature for *La destrucción o el amor* (1935). His verse, often free in form, is pessimistic and surrealist, it expresses the anguish and hope of man. Alexandre's works are collected in *Poesías completas* (1960) and *Obras completas* (1968). See study by Kessel Schwartz (1970).

Alekhine, Alexander (alyēkh'ēn), 1892–1946, Russian-French chess player, b. Moscow. He became a naturalized French citizen after the Russian Revolution. At the age of 16 he gained the rank of master and in 1927, by a surprising defeat of Capablanca at Buenos Aires, became world champion. In 1930 at San Remo, Italy, he did not lose a single game in a tournament that included all of the major European players. In 1935 he lost the championship to Max Euwe but regained it in 1937 and kept it until his death. His clear and realistic style and the brilliance of his middle-game and end-game combinations are found in his book, *My Best Games of Chess, 1924–1937* (1939). See study by R. G. Eales and A. H. Williams (1973).

Aleks-. For some Russian names beginning thus, see ALEX-, e.g., for Aleksandr, see ALEXANDER.

Aleksandropol, see LENINAKAN, USSR.

Aleksandrov (alyiksan'drəf), city (1967 est. pop. 46,000), Russian Republic, E. European USSR. It has radio, textile, and food industries. The city came under the control of the Muscovite princes in 1302. Ivan IV resided (1564–81) in Aleksandrov, where he organized his political police, the Oprichnina. The city is also the site of the first printing establishment in Russia, founded during the reign of Ivan IV, and of the famous Uspenski convent (late 17th cent.).

Aleksandrov-Grushevski, see SHAKHTY, USSR.

Aleksandrovsk, see ZAPOROZHYE, USSR.

Aleksandrovsk-Sakhalinski (alyiksan'drəfsk-sakhalyēn'skē), city on N. Sakhalin island, Far Eastern USSR. A port on the Tatar Strait, it is also a coal-mining center and has lumber and fishing industries. The city was founded in 1881 as a place of exile.

Alekseyev, Mikhail Vasilyevich (mēkhāēl'vasē'-lyāvich alyiksyā'ēf), 1857–1918, Russian general, chief of staff (1915–17) of Czar Nicholas II. With other officers he urged the czar to abdicate in favor of the czarévich in order to save the dynasty prior to the Russian Revolution. Alekseyev was briefly chief of staff in the provisional government headed by Aleksandr Feodorovich Kerensky after the czar was overthrown. After the Bolsheviks took over in Nov., 1917 (Oct., 1917, O.S.), Alekseyev and General KORNILOV organized an anti-Bolshevik movement in the south.

Alema (āl'ama), unidentified town, E. of the Jordan 1 Mac 5:26.

Alemán, Mateo (matā'ō alāman'), 1547–1614?, Spanish novelist, b. Seville. Aleman studied medicine and practiced accounting. He led a turbulent life, was sent to jail twice for his debts, and at the age of 60 found refuge in Mexico. The first part of his picaresque novel, *Guzmán de Alfarache*, was published in 1599 and the second part in 1604. Written with moralizing overtones, the novel presents a valuable picture of contemporary life and a view of mankind as corrupt but salvageable through divine grace. James Mabbe translated it into English as *The Rogue, or, The Life of Guzman de Alfarache* (1922).

Alemán, Miguel (mēgēl' alāman'), 1902–, president of Mexico (1946–52). Son of a revolutionary general, Aleman became a highly successful lawyer and a champion of Mexican labor. He was governor of Veracruz from 1936 to 1940 but resigned to manage the presidential campaign of Manuel Ávila Camacho, under whom Aleman held (1940–45) the ministry of the interior. Elected president in 1946, Aleman became the first civilian president of Mexico since Francisco I. MADERO. He changed the name of the official government party from National Revolutionary party to Institutional Revolutionary party (PRI), to indicate the permanent status of the revolution. Aleman's administration was characterized by a vigorous program of modernization. He encouraged foreign investment, developed reclamation and power projects, improved communications and education, and generally raised the standard of living. In his post-presidential years he headed the national tourism council, encouraging the development of Acapulco as a resort and helping to bring the Olympic games to Mexico City in 1968.

Alemanni (ālīmān'i), Germanic tribe, a splinter group of the Suebi (see GERMANS). The Alemanni may have been a confederation of smaller tribes. First mentioned (A.D. 213) as unsuccessfully assault-

ing the Romans between the Elbe and the Danube, they later settled (3d cent.) in upper Italy. By the 5th cent. they occupied territories on both sides of the Rhine south of its junction with the Main (present Alsace, Baden, and NE Switzerland). Their westward expansion brought them into conflict with the Franks, whose king CLOVIS I defeated them in 496. In 505 he forced them to retire into Rhaetia, and in 536 they passed under Frankish rule. By the 7th cent. they had accepted Christianity. SWABIA is also known as Alamannia, and the High German dialects of SW Germany and Switzerland are called Alemannic. In French speech the name *Allemands* came to signify all Germans.

Alemanni, Luigi: see ALAMANNI, LUIGI.

Alembert, Jean le Rond d' (zhaN lārōN' dalaN-bēr'), 1717–83, French mathematician and philosopher. The illegitimate son of the chevalier Des-touches, he was named for the St. Jean le Rond church, on whose steps he was found. His father had him educated. Diderot made him coeditor of the *ENCYCLOPÉDIE*, for which he wrote the "preliminary discourse" (1751) and mathematical, philosophical, and literary articles. Discouraged, however, by attacks on his unorthodox views, he withdrew (1758) from the *Encyclopédie*. A member of the Academy of Sciences (1741) and of the French Academy (1754, appointed secretary, 1772), he was a leading representative of the ENLIGHTENMENT. His writings include a treatise on dynamics (1743), in which he enunciated a principle of mechanics known as D'ALEMBERT'S PRINCIPLE, a work on the theoretical and practical elements of music (1759), and a valuable history of the members of the French Academy (1787).

Alembert's principle: see D'ALEMBERT'S PRINCIPLE.

Alemeth (āl'amēth), 1. Descendant of Saul. 1 Chron 8:36, 9:42. 2. Town, NE of Jerusalem. 1 Chron 6:60. Almon. Joshua 21:18.

Alemtejo: see ALENTEJO, Portugal.

Alençon, François, duc d': see FRANCIS, duke of Alençon and Anjou.

Alençon (alaNsōN'), town (1968 pop. 33,388), capital of Orne dept., N. France, in Normandy, on the Sarthe. A commercial center in a fertile farm area, it is particularly noted for its fine lace work, an industry which dates from the 17th cent. The town also has spinning mills, printing plants, sawmills, and quarries. Alençon was heavily damaged in World War II. Among its surviving structures are Notre Dame Church, with windows and a porch from the 16th cent., the Gothic St. Leonard's Church (completed in 1505), and the Oze House (15th cent.).

Alentejo (ālāntā'zhōō), historic province, SE Portugal, now divided into Alto (Upper) Alentejo (4,888 sq mi/12,660 sq km) and Baixo (Lower) Alentejo (5,318 sq mi/13,774 sq km). The capital of Alto Alentejo is Évora, and the capital of Baixo Alentejo is Beja. The historic province has been further subdivided into the districts of Beja, Évora, and Portalegre. Alentejo, "the granary of Portugal," is drained by the Guadiana River and tributaries of the Sado River. Sheep, horses, cattle, and hogs are raised, and grains, olives, cork trees, and fruits are grown. Alentejo was involved in Portugal's many wars with Castile. The name was formerly spelled Alemtejo.

Aleppo (alēp'ō) or **Alep** (alēp'), Arabic *Haleb*, city (1970 est. pop. 639,000), capital of Aleppo governorate, NW Syria. It is a commercial center located in a semidesert region where grains, cotton, and fruit are grown. The city is also a market for wool, hides, and fruit. Manufactures include silk, printed cotton textiles, dried fruits and nuts (especially pistachios), and cement. Aleppo is a transportation hub, it has an international airport and is connected by rail with Damascus and the Mediterranean port of Latakia, as well as with Turkey and Iraq. The city was inhabited perhaps as early as the 6th millennium B.C. In the 14th–13th cent. B.C. it was controlled by the Hittites. Later, Aleppo was a key point on the major caravan route across Syria to Baghdad. From the 9th to the 7th cent. B.C. it was mostly ruled by ASSYRIA and was known as Halman. It was later (6th cent. B.C.) held by the Persians and Seleucids. Seleucus I (d. 280 B.C.) rebuilt much of the city, renaming it Berea. The city's commercial importance was enhanced by the fall of Palmyra in A.D. 272, and by the 4th cent. Aleppo was a major center of Christianity. A flourishing city of the Byzantine Empire, it was taken without a struggle by the Arabs in 638, subsequently, in the late 11th cent., it was captured by the Seljuk Turks. Crusaders besieged Aleppo without success in 1118 and 1124, and Saladin captured it in 1183, making it his stronghold. The city was held

briefly by the Mongols under Hulagu Khan (1260) and by Tamerlane (1401), in 1517 the Ottoman Empire annexed Aleppo, which then became a great commercial city. From 1832 to 1840 it was held by Muhammad Ali of Egypt. Aleppo's importance declined in the late 19th cent. with the advent of the Suez Canal and other trade routes, but the city revived under French control after World War I and continued to prosper after Syrian independence (1941). The Univ. of Aleppo (1960), Aleppo Institute of Music (1955), and Muslim theological schools are in the city. Points of interest include the Byzantine citadel (12th cent.) and the Great Mosque (715).

Alert, settlement, on Ellesmere Island, extreme N. Northwest Territories, Canada, on the Arctic Ocean. It is the most northerly permanent settlement in the world. The settlement has a radio and meteorological station and a landing strip operated jointly by Canada and the United States.

Ales, Alexander: see ALESIUS, ALEXANDER.

Alès (alēs'), formerly **Alais** (alā', alēs'), city (1968 pop. 44,607), Gard dept., S. France, in Languedoc, at the foot of the Cévennes mts., on the Gardon River. Situated in one of the most important coal basins in SE France, it has iron and steel industries, vehicle-repair facilities, and factories making machinery and hosiery. In the 16th cent. Alais was one of the principal centers of French Protestantism (see HUGUENOTS). The Peace of Alais, signed there (1629), stripped the Huguenots of their political power. Several buildings date from the 17th cent.

Alesia (alē'zhā), hilltop town of Celtic and Roman Gaul, on the site of Alise-Sainte-Reine, near Dijon. It was held by VERDUNTORIX and his men (52 B.C.) when Caesar besieged it. Caesar prevented Verdugetorix' allies from raising the siege and starved out the town, thereby ending Gallic resistance to Rome.

Alesius (alēs'shās), **Ales**, or **Aless**, **Alexander** (both alēs'), 1500–1565, Scottish Protestant theologian. As canon of the collegiate church at St. Andrews he tried to reclaim Patrick HAMILTON from his Lutheran views but was himself persuaded to accept the reformed teachings. In 1532 he escaped to the Continent, where he gained the confidence of Martin Luther and Philip Melancthon and joined in signing the Augsburg Confession. He was commended to Henry VIII by them, and arriving in England in 1535, he enjoyed friendly association with Archbishop Cranmer, Thomas Cromwell, and others. He lectured on divinity at Cambridge and afterward practiced medicine in London. After Cromwell's fall in 1540, Alesius returned to Germany, where he was professor of theology, first at Frankfurt-an-der-Oder and later at Leipzig.

Alessandri, Arturo (artōō'rō alēssan'drē), 1868–1950, president of Chile (1920–25, 1932–38). The 1920 presidential candidate of the Liberal Alliance, a coalition of all the enemies of the conservatives, Alessandri was elected on a reform platform. During his first administration, the conservatives were able to block most of his program, and when his cabinet refused to support him, Alessandri went (1924) into voluntary exile. Returning in 1925, he supervised the writing of a new constitution that guaranteed universal male suffrage, granted greater provincial powers, and effectively ended the power of the conservative-clerical oligarchy. During these years, Chile underwent a political reformation that was supported essentially by the middle class and the labor unions. His second term was also stormy, but marked by continued political and social reforms.

Alessandria (alās-san'drēā), city (1971 pop. 102,349), capital of Alessandria prov., in Piedmont, NW Italy, at the confluence of the Tanaro and Bormida rivers. It is an industrial center and agricultural market. Manufactures include furniture, machinery, and hats. Alessandria was built (1164–67) as a stronghold of the LOMBARD LEAGUE and was named for Pope Alexander III. At first a free commune, the city passed in 1348 to the duchy of Milan and, in 1707, to the duke of Savoy. Alessandria was the scene of a pro-Mazzini conspiracy in 1833. There are two 13th-century churches and remains of the city's medieval fortifications.

Ålesund (ō'lēsōōn), city (1970 pop. 39,496), Møre og Romsdal county, W. Norway, on 3 islands in the Atlantic Ocean at the mouth of the Storfjord. It is a major commercial and fishing port. Products include clothing, processed fish, and dairy goods. Of note is a nearby stone church (early 13th cent.). The name was formerly spelled Aalesund.

Aletsch (alēch), glacier, 66 sq mi (171 sq km), 16 mi (26 km) long and 1.2 mi (1.9 km) wide, 5 central Switzerland, largest in the Alps. It lies between the

Jungfrau and the Aletschhorn, one of the highest (13,721 ft/4,182 m) peaks in the Bernese Alps

Aleut (alōōt', āl'ēōōt'), native inhabitant of the Aleutian Islands and W Alaska. Like the ESKIMO, the Aleuts are racially similar to Siberian peoples. Their language is a member of the ESKIMO-ALEUT family (see AMERICAN INDIAN LANGUAGES). When they were first noted by Vitus Jonassen Bering in 1741, their estimated population was between 20,000 and 25,000. Because of their skill in hunting sea mammals, the Aleuts were exploited by Russian fur traders throughout the coastal waters of the Gulf of Alaska, sometimes as far south as California. The ruthless policies of their masters and conflict with the fierce mainland natives reduced their population by the end of the 18th cent. to one tenth its former size. They now number about 1,000 and continue to live in relative isolation. Most are members of the Russian Orthodox Church. See V. I. Jochelson, *The History, Ethnology and Anthropology of the Aleut* (1933, repr 1966), Robert Ackerman, *Ethnohistory in Southwestern Alaska and the Southern Yukon* (1970).

Aleutian Islands (alōō'shan), chain of rugged, volcanic islands curving c 1,200 mi (1,900 km) west from the tip of the Alaska Peninsula and approaching the Komandorski Islands, USSR. A partially submerged continuation of the Aleutian Range, they separate the Bering Sea from the Pacific Ocean. The Aleutians are composed of four main groups: Fox Islands, nearest to the mainland, including Unimak, Unalaska, Umnak, and Akutan; Andreanof Islands, including Adak, Atka, Kanaga, and Tanaga; Rat Islands, including Amchitka and Kiska; and Near Islands, smallest and westernmost group, including Agattu and Attu. The Semich Islands, of which Shemya Island is the largest, are nearby. The Aleutians have few good harbors, and the numerous reefs make navigation treacherous. Temperatures are relatively moderate, but heavy rains and constant fog make the climate dreary. Almost completely treeless, the islands have a luxuriant growth of grasses, bushes, and sedges. Sheep and reindeer are raised. Hunting and fishing are the main occupations of the Eskimo population. The Aleutian Islands were discovered in 1741 by Vitus Bering, a Danish explorer employed by Russia. The indigenous Aleuts were exploited by the Russian trappers and traders who, in search of sea otter, seal, and fox fur, established settlements on the islands in the late 18th and early 19th cent. The Aleutian Islands were included in the Alaska purchase in 1867 and at that time became part of the United States. After the purchase, the U.S. government forbade seal trapping off the Aleutians except by the Aleuts. Fishing and fur hunting are now controlled by the Federal government. Dutch Harbor, one of the few good Aleutian harbors, became a transshipping point for Nome in 1900, after the discovery of gold turned Nome into a boom town. The Aleutian Islands were important during World War II; in 1940, a U.S. naval base was established at Dutch Harbor. In 1942 the Japanese bombed the base and later occupied Attu, Kiska, and Agattu islands. From bases on Adak and Amchitka, the United States launched a counterattack and regained the islands in 1943. The Aleutian Islands play an important role in U.S. defense because of their proximity to the USSR. Radar stations (part of the Distant Early Warning Line) and military bases are located on the islands. Most of the islands are incorporated in the Aleutian National Wildlife Reserve. The islands have a population of 8,057. The main settlements are on Unalaska Island.

Aleutian Range, volcanic mountain chain, c 1,600 mi (2,600 km) long, SW Alaska, extending W from Anchorage along the Alaska Peninsula, and continuing, partly submerged as the Aleutian Islands, to Attu Island. Mt. Redoubt (10,200 ft/3,109 m) is the highest peak. Part of the volcanic belt that rings the Pacific Ocean, the Aleutian Range has been active in recent years, notably at Katmai (see KATMAI NATIONAL MONUMENT).

alewife, see HERRING

Alex-, For some Russian names beginning thus, see ALEKS-, e.g., for Alexandrov, see ALEKSAANDROV

Alexander III, d. 1181, pope (1159-81), a Sienese named Orlando Bandinelli, successor of Adrian IV. He was a learned canonist who had studied law under Gratian and had taught at Bologna. He came to Rome under Eugene III, was made a cardinal, and became a trusted adviser of Adrian IV. Alexander's election to the papacy was opposed by a few cardinals, who elected an antipope, Victor IV. Although the antipope was supported only by Germany and some Lombards, the schism thus begun continued until 1178 with antipopes Paschal III and Calixtus III.

Alexander was forced (1162) by Holy Roman Emperor FREDERICK I into exile in France. In the long struggle with the emperor, the pope was aided by the LOMBARD LEAGUE which named the town of Alessandria for him. After the battle of Legnano (1176), the emperor was forced to submit. Alexander had already (1174) received the penance of Henry II of England for the murder of St. Thomas a Becket, whom Alexander had canonized in 1173. He convened and presided at the Third LATERAN COUNCIL. One of the great medieval popes, he issued many decretals, established the procedure for canonizing saints, inaugurated the two-thirds rule for papal elections, protected the universities, and was one of the most distinguished champions of ecclesiastical independence in the Middle Ages. He was succeeded by Lucius III. See biography by Cardinal Bosio (tr. 1973).

Alexander VI, 1431?-1503, pope (1492-1503), a Spaniard (b. Jativa) named Rodrigo de Borja or, in Italian, Rodrigo Borgia, successor of Innocent VIII. He took Borja as his surname from his mother's brother Alfonso, who was Pope Calixtus III. Rodrigo became cardinal (1456), vice chancellor of the Roman Church (1457), and dean of the sacred college (1476). Cardinal Borgia had four illegitimate children by a Roman woman, Vannozza, among them were Cesare and Lucrezia Borgia. Alexander was elected by a corrupt conclave. The foreign relations during his papacy were dominated by the increasing influence of France in Italy, which culminated in the invasion of Charles VIII in 1494. Alexander prevented Charles from taking the church property in Rome, but he turned over to the French the valuable Ottoman hostage Djem, brother of Sultan BEYAZID II. Alexander's son, Cesare Borgia, was the principal leader in papal affairs, and papal resources were spent lavishly in building up Cesare's power. For his daughter Lucrezia, Alexander arranged suitable marriages. The favoritism shown his children and the lax moral tone of Renaissance Rome as well as the unscrupulous methods employed by Cesare and other papal officials have made Alexander's name the symbol of the worldly irreligion of Renaissance popes. Girolamo SAVONAROLA was an outspoken opponent and critic of Alexander. Recent studies tend to minimize the pope's immorality and stress his solid achievements as a political strategist and church administrator. It was Alexander who proclaimed the line of demarcation that awarded part of the new discoveries in the world to Spain, part to Portugal (see TORDESILLAS TREATY OF). Alexander was a munificent patron of the arts. He was succeeded by Pius III. See Orestes Ferrara, *The Borgia Pope*. Alexander VI (1940), Michael de La Bedoyere, *The Meddlesome Friar and the Wayward Pope* (1958).

Alexander I, 1777-1825, czar of Russia (1801-25), son of PAUL I (in whose murder he may have taken an indirect part). In the first years of his reign the liberalism of his Swiss tutor, Frederic César de LA HARPE, seemed to influence Alexander. He suppressed the secret police, lifted the ban on foreign travel and books, made attempts to improve the position of the serfs, and began to reform the backward educational system. In 1805, Alexander joined the coalition against NAPOLEON I, but after the Russian defeats at Austerlitz and Friedland he formed an alliance with Napoleon by the Treaty of Tilsit (1807) and joined Napoleon's CONTINENTAL SYSTEM. Alexander requested M. M. SPERANSKI to draw up proposals for a constitution, but adopted only one aspect of Speranski's scheme, an advisory state council, and dismissed him in 1812 to placate the nobility. During this period Russia gained control of Georgia and parts of Transcaucasia as a result of prolonged war with Persia (1804-13) and annexed (1812) Bessarabia after a war with Turkey (1806-12). Relations with France deteriorated, and Napoleon invaded Russia in 1812. Alexander's defeat of the French made him one of the most powerful rulers in Europe. At first his foreign policy was liberal. He insisted on a constitutional charter and mild treaty terms for France at the Congress of Vienna, and he gave autonomy to Finland (annexed in 1809) and a constitution to Poland, of which he became king in 1815. From 1812 on, Alexander was preoccupied by a vague, mystical Christianity, which contributed to his increasing conservatism. Under the influence of the pietistic Juliana KRÜDENER and others, he created the HOLY ALLIANCE to uphold Christian morality in Europe. Viewing revolutionary movements as challenging to the authority of legitimate Christian monarchs, the czar now supported METTERNICH in suppressing all national and liberal movements. Alexander's religious fervor was partly responsible for the establishment of military colonies, which

were agricultural communities run by peasant soldiers. Intended to better the lot of the common soldier, the colonies became notorious for the regimentation and near-serfdom imposed on the soldiers. Alexander abrogated many of his earlier liberal efforts. His policies caused the formation of secret political societies, and when Alexander's brother NICHOLAS I succeeded him the societies led an abortive revolt (see DECEMBRISTS). After Alexander's death, rumors persisted that he escaped to Siberia and became a hermit. His tomb was opened (1926) by the Soviet government and was found empty, the mystery remains unsolved. In Alexander's reign St. Petersburg became a social and artistic center of Europe. Ivan KRYLOV and Aleksandr PUSHKIN dominated the literary scene. An excellent picture of Alexander's period is found in Leo Tolstoy's *War and Peace*. See biographies by Maurice Paleologue (1938, repr 1969), Allen McConnell (1970), and Alan Palmer (1974).

Alexander II, 1818-81, czar of Russia (1855-81), son and successor of Nicholas I. He ascended the throne during the Crimean War (1853-56) and immediately set about negotiating a peace (see PARIS CONGRESS OF). Influenced by Russia's defeat in the war and by peasant unrest, Alexander embarked upon a modernization and reform program. The most important reform was the emancipation of the serfs (1861, see EMANCIPATION, EDICT OF). This failed, however, to meet the land needs of the newly freed group and created many new problems. In 1864, a system of limited local self-government was introduced (see ZEMSTVO) and the judicial system was partially westernized. Municipal government was overhauled (1870), universal military training was introduced (1874), and censorship and control over education were temporarily relaxed. In Poland, Alexander initially adopted a moderate policy, granting the subject nation partial autonomy. When revolt broke out in 1863, however, Alexander reacted with brutal suppression, imposing severe russification. The Western powers were sharply warned against interference. Prussia's support of Russia during this diplomatic crisis led to a Russo-Prussian rapprochement, and in 1872 the THREE EMPERORS LEAGUE was formed by Russia, Prussia, and Austria-Hungary. Throughout his reign Alexander promoted vigorous expansion in the East. The conquest of the Ussuri region in the Far East was confirmed by the Treaty of Peking (1860) with China. Central Asia was added to Russia by the conquest of Kokand, Khiva, and Bokhara (1865-76). Alaska, however, was sold (1867) to the United States. In 1877-78 Russia waged war on Turkey, ostensibly to aid the oppressed Slavs in the Balkans (see RUSSO-TURKISH WARS). Meanwhile, in domestic affairs, Alexander's reforms, while outraging many reactionaries, were regarded as far too moderate by the liberals and radicals. Radical activities increased sharply among the intelligentsia, resulting in a reassertion of repressive policies. When the populist, or "to the people," movement arose in the late 1860s (see NARODNIKI), the government arrested and prosecuted hundreds of students. Many radicals responded with terrorist tactics. In 1881, after several unsuccessful attempts, a member of the People's Will, a terrorist offshoot of the populist movement, assassinated Alexander with a hand-thrown bomb, this on the very day (March 13) that Alexander had signed a decree granting the zemstvos an advisory role in legislation. He was succeeded by his son Alexander III. See biography by Stephen Graham (1935, repr 1968), studies by W. E. Mosse (rev. ed. 1962), E. M. Almedingen (1964), and David Footman (1974).

Alexander III, 1845-94, czar of Russia (1881-94), son and successor of Alexander II. His father's assassination, his limited intelligence and education, his military background, and the influence of such advisers as Konstantin P. POBYEDONOSTZEV and Mikhail N. Katkov all contributed to his reactionary policies. On his accession he discarded the modest proposals for reform made by Count LORIS-MELIKOV. Alexander increased the repressive powers of the police and tightened censorship and control of education. He limited the power of the zemstvos [local assemblies] and the judiciary, increased controls over the peasantry, subjected the national minorities to forcible Russification, and persecuted all religious minorities, especially the Jews. Perhaps the only enlightened policy of Alexander's reign was pursued by his energetic minister of finance, Count WITTE, who used governmental pressure and investments to stimulate industrial development and to begin construction of the TRANS-SIBERIAN RR. The czar and his foreign minister, Nikolai K. GIEPS, worked for peace in Europe, although Russian expansion in Central

Asia almost led to conflict with Great Britain. In the Balkans, Russia's attempts to make Bulgaria a satellite proved unsuccessful and led to a final break with Austria-Hungary, which also had interests there. The Three Emperors' League of Russia, Austria-Hungary, and Germany was replaced (1887) with a Russo-German alliance. This was not renewed in 1890, and a Franco-Russian entente grew after 1891 (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). Alexander was succeeded by his son Nicholas II.

Alexander, 1893-1920, king of the Hellenes (1917-20), second son of CONSTANTINE I. After his father's forced abdication, he succeeded to the Greek throne with the support of the Allies, who distrusted the sympathies of his elder brother George (later King George II). Alexander died of a monkey bite. His father, Constantine I, was restored to the throne shortly afterward.

Alexander III, king of Macedon. See ALEXANDER THE GREAT.

Alexander I, 1078?-1124, king of Scotland (1107-24), son of Malcolm III and St. Margaret of Scotland. He succeeded his brother Edgar, who had divided the kingdom so that Alexander ruled only N of the Forth and Clyde rivers, while his brother David ruled in the south. Early in his reign he decisively quelled an uprising in N Scotland. Like his mother, Alexander encouraged ecclesiastical conformity with English ways and established several monasteries, including the abbeys at Inchcolm and Scone. David succeeded him as David I.

Alexander II, 1198-1249, king of Scotland (1214-49), son and successor of William the Lion. He joined the English barons in their revolt against King John of England in 1215. Though he made his peace with John's successor, Henry III, in 1221, there was later friction that almost led to war. In 1237, Alexander agreed to give up his claims to overlordship in old Northumbria and to exchange lands he held in central England for lands in the north. At home Alexander was firm in quelling disorder.

Alexander III, 1241-86, king of Scotland (1249-86), son and successor of Alexander II. He married a daughter of Henry III of England and quarreled with Henry, and later Henry's son Edward I, over the old English claims to overlordship in Scotland. The great achievement of Alexander was his final acquisition for Scotland of the Hebrides and of the Isle of Man, which his father had already claimed from Norway. King Haakon IV of Norway attempted to drive the Scots from the islands in 1263, but a storm battered his ships, and he was defeated in the battle of Largs in the Clyde River. In 1266, Alexander signed a treaty with Haakon's successor, Magnus VI, assigning the islands to Scotland. This was followed by an arrangement with Norway providing for the marriage of Magnus's son Eric with Alexander's daughter Margaret. Alexander survived his children, and when he died his only near relative was his little granddaughter MARGARET MAID OF NORWAY. See biography by James Fergusson (1937).

Alexander (Alexander Obrenović) (ōbrě'nāvīch), 1876-1903, king of Serbia (1889-1903), son of King MILAN. He succeeded on his father's abdication. Proclaiming himself of age in 1893, he took over the government, abolished (1894) the relatively liberal constitution of 1889, and restored the conservative one of 1869. He recalled his father in 1897, gave him command of the army, and permitted him to undertake a campaign against the pro-Russian Radical party. In 1900 he married Draga Mašin, the widow of a foreign engineer and a former lady-in-waiting (see DRAGA). The scandal of the marriage exasperated his opposition. In 1903, after Alexander had arbitrarily suspended and then restored the new liberal constitution that he had granted in 1901, he and his queen were assassinated by a clique of officers. Peter Karadjordjević was recalled as King Peter I, and the Obrenović dynasty came to an end.

Alexander, 1888-1934, king of Yugoslavia (1921-34), son and successor of Peter I. Of the Karadjordjević family, he was educated in Russia and became crown prince of Serbia upon the renunciation (1909) of the succession by his brother George. He led Serbian forces in the Balkan War of 1912, became regent in June, 1914, led the Serbian army in World War I, and became (Dec., 1918) regent of the kingdom of the Serbs, Croats, and Slovenes (later Yugoslavia). In 1922 he married Princess Marie of Rumania. After his accession increasing disorder arose from the Croatian autonomy movement. After the assassination (1928) of Stepan RADČIĆ, the Croat Peasant party leader, Alexander in 1929 dismissed the parliament, abolished the constitution and the parties, and became absolute ruler. To emphasize

the unity he hoped to give the country he changed (Oct., 1929) its official name to Yugoslavia. Although he announced the end of the dictatorship in 1931 and proclaimed a new constitution, he kept power in his own hands. His authoritarian and centralizing policy brought him the hatred of the separatist minorities, particularly the Croats and Macedonians, as well as the opposition of Serbian liberals. In foreign policy he was loyal to the French alliance and to the LITTLE ENTENTE. In 1934 he debarked at Marseilles on a state visit to France. A member of a Croatian terrorist organization fired on his car, killing the king and fatally wounding the French foreign minister, Louis Barthou. Alexander was succeeded by his young son, Peter II. See Stephen Graham, *Alexander of Yugoslavia* (1939, repr. 1972).

Alexander (Alexander of Battenberg), 1857-93, prince of Bulgaria (1879-86), second son of Prince Alexander of Hesse-Darmstadt and nephew of Alexander II of Russia. He served in the Russian army against the Turks (1877-78) and, backed by the Russian czar, was elected hereditary prince of Bulgaria under Turkish suzerainty. In 1885 the revolutionaries in Eastern RUMELIA, also known as Southern Bulgaria, proclaimed the union of that province with Bulgaria. Alexander accepted the union, thus incurring the wrath of the Russian czar and Serbia. The latter declared war. Alexander was victorious and by an agreement with Turkey became governor of Eastern Rumelia, but he was forced to abdicate by a group of officers. He became an Austrian officer, and Ferdinand was elected to succeed him as prince. See biography by E. C. Corti (1920, tr. 1955).

Alexander (Alexander Karadjordjević) (kāřājōr'jāvīch), 1806-85, prince of Serbia (1842-58), son of KARAGEORGE (Karadjordje). He was elected to succeed the deposed MICHAEL of Serbia. Weak and vacillating, he did not send troops to aid the Slavic minorities in Hungary during the revolution of 1848-49. He later submitted to Turkish and Austrian pressure in withholding his support from Russia in the Crimean War of 1854-56. Discontent with his ineffective government finally led his subjects to depose him and to recall MILOŠ as king. In 1868, Alexander was condemned to death in absentia by a Serbian court for his alleged part in the assassination of Michael, who had succeeded Miloš. Alexander was the father of Peter I of Yugoslavia.

Alexander, in the Bible. 1 Kinsman of Annas. Acts 4:6. 2 Son of Simon of Cyrene, probably a Christian. Mark 15:21. 3 Heretic condemned by Paul. 1 Tim. 1:20. 4 Copper-smith who did Paul harm. 2 Tim. 4:14. 5 Jew who tried to speak during a riot at Ephesus. Acts 19:33. The last three may be the same man. The Alexanders in the books of the Maccabees are Alexander the Great and ALEXANDER BALAS.

Alexander, Grover Cleveland, 1887-1950, American baseball player, b. St. Paul, Nebr. One of the great right-hand pitchers of the National League, Alexander pitched 696 games, won 373 of them, and compiled a 642 winner percentage. He played for the Philadelphia Phillies (1911-17) and again in 1930, the Chicago Cubs (1918-26), and the St. Louis Cardinals (1926-29). Alexander was elected to the National Baseball Hall of Fame in 1938.

Alexander, Harold Rupert Leofric George, 1st Earl Alexander of Tunis, 1891-1969, British field marshal. His long military career began with service in World War I, followed by a period (1934-38) in the North-West Frontier Province, India. In World War II he directed the retreats at Dunkirk (1940) and in Burma (1942). Then, appointed (Aug., 1942) head of the Middle Eastern Command (see NORTH AFRICA, CAMPAIGNS IN), he directed the conquest of Sicily (1943) and the bitter fighting in Italy. In 1944, Alexander was made field marshal and Allied commander in chief in the Mediterranean. In 1946 he was appointed governor general of Canada (holding the post until 1952) and was created viscount. He became minister of defense under Sir Winston Churchill and was raised (1952) to the rank of earl. See his *Alexander Memoirs 1940-1945* (1962), biography by Nigel Nicholson (1973), study by W. G. F. Jackson (1972).

Alexander, Samuel, 1859-1938, British philosopher, b. Australia. From 1893 to 1924 he was professor of philosophy at Victoria Univ., Manchester. Strongly influenced by the theory of evolution, Alexander conceived of the world as a single cosmic process in which higher forms of being emerge periodically. The basic principle of this process is space-time, and the result is God. His works include *Space, Time, and Duty* (1920), *Spinoza and Time* (1921), *Art and the Material* (1925), and *Beauty and Other Forms of Value* (1933). See studies by J. W. McCarthy

(1948), A. P. Stiernotte (1954), and S. R. Dasgupta (1965).

Alexander, Sir William, d. 1640. See STIRLING. WILLIAM ALEXANDER, EARL OF.

Alexander, William, known as *Lord Stirling*, 1726-83, American Revolutionary general, b. New York City. Although the House of Lords rejected his claim to succeed as the 6th earl of Stirling, in America he was generally considered a nobleman. He served in the French and Indian Wars and joined the Continental Army early in the Revolution. Although he fought well at the battle of Long Island (1776), he was captured by the British. After being freed in a prisoner exchange, he saw action at Trenton, Brandywine, Germantown, and Monmouth. In 1778 he helped to expose the CONWAY CABAL. See A. C. Valentine, *Lord Stirling* (1969).

Alexander, in Greek mythology. See PARIS.

Alexander Archipelago (arkipēl'agō), island group off SE Alaska. The islands are the exposed tops of the submerged coastal mountains that rise steeply from the Pacific Ocean. Deep, fjordlike channels separate the islands and cut them off from the mainland; the northern part of the Inside Passage threads its way among the islands. The largest islands are Chichagof, Admiralty, Baranof, Wrangell, Revillagigedo, Kupreanof, Mitkof, and PRINCE OF WALES. All the islands are rugged, densely forested, and have an abundance of wildlife. The Tlingit Indians are native to the area. Ketchikan (1970 pop. 6,994) on Revillagigedo island, Sitka (1970 pop. 3,310) on Baranof island, and Wrangell (1970 pop. 2,029) on Wrangell island are the largest towns. Lumbering, trapping, fishing, and canning are the main industries. The archipelago was discovered by the Russians in 1741 and was later explored by Britain, Spain, and the United States.

Alexander Balas (bālās), d. 145 B.C., ruler of Syria, putative son of Antiochus IV. He seized power from his uncle Demetrius I (c. 152 B.C.), Jonathan the Maccabee supported him. He died in battle against Ptolemy Philometor 1 Mac. 10-11.

Alexander Bay, town, Cape Prov., NW South Africa, where the Orange River enters the Atlantic Ocean, site of some of the world's richest alluvial diamond deposits.

Alexander City, city (1970 pop. 12,358), Tallapoosa co., E central Ala., in a piedmont farm area, inc. 1874. Nearby Martin Dam supplies power for the city's textile mills, foundries, and mobile home manufactures; the dam also has created Lake Martin, a superb recreational area. A junior college is in Alexander City, and nearby is Horseshoe Bend National Military Park (see NATIONAL PARKS AND MONUMENTS, table), site of a fierce battle (1814) between Andrew Jackson and the Creek Indians.

Alexander John I, prince of Rumania. See CUZA, ALEXANDER JOHN.

Alexander Karadjordjević: see ALEXANDER, prince of Serbia, ALEXANDER, king of Yugoslavia.

Alexander Karageorgevich: see ALEXANDER, prince of Serbia, ALEXANDER, king of Yugoslavia.

Alexander Nevsky (nēv'skē) [Rus., = of the Neva], 1220-1263, Russian hero, grand duke of Vladimir-Suzdal. As prince of Novgorod (1236-52) he earned his surname by his victory (1240) over the Swedes on the Neva River. He successfully defended N. Russia against its western neighbors by defeating the Livonian Knights (1242) and the Lithuanians (1245). After the Tatar invasion of Russia Alexander submitted to Tatar rule and was appointed (1252) grand duke by the khan. His submissive attitude toward the Tatars and his suppression of the anti-Tatar movements in Novgorod and other cities provoked much resentment among the local princes and the common people. However, he saved the principality from ruin by his cooperation with the invaders. Russian popular tradition made him a national hero, and he was canonized by the Russian Orthodox Church. The order of Alexander Nevsky was instituted (1725) by Catherine I of Russia. Although abolished in 1917, it was revived by the Soviet government in 1942.

Alexander of Aphrodisias (āfrōdīsh'ēās), fl. A.D. 200, Greek Peripatetic philosopher. A celebrated ancient commentator on Aristotle, he was often called the Exegete. During the Renaissance, his interpretations of Aristotle were used to counter those of the church. Two original treatises are extant.

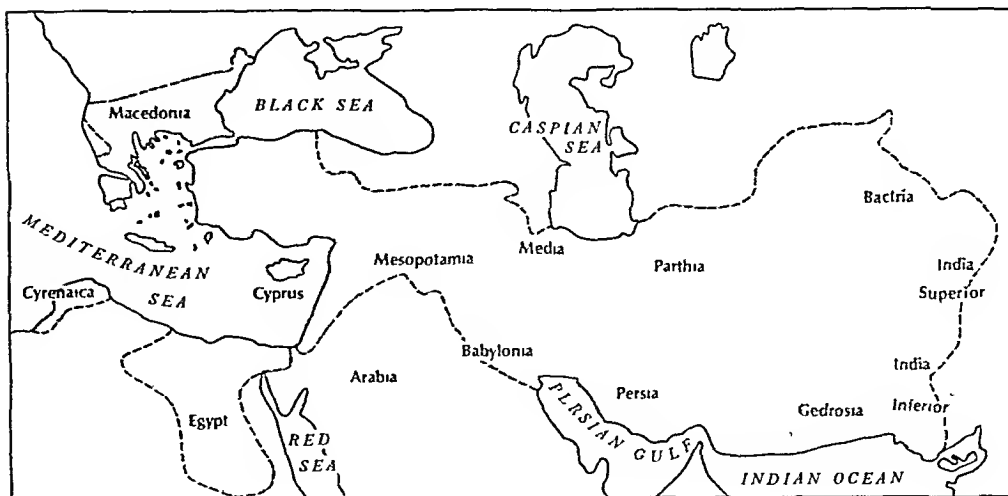

Alexander of Hales, d. 1245, English scholastic philosopher, called the Unanswerable Doctor by his fellow scholastics. He was a Franciscan and a lecturer at the Univ. of Paris. His *Summa universae theologiae* was the first systematic exposition of

Christian doctrine to introduce Aristotle as a prime authority. His eclectic work also contains elements of Neoplatonism and Augustinian and Arabic ideas. Alexander held that all created things, spiritual as well as corporeal, are made up of matter and form. This teaching became the central feature of Franciscan scholasticism and an important influence on St. Thomas Aquinas.

Alexander of Pherae (fēr'ē), d. 358 B.C., tyrant of the city of Pherae in Thessaly after 369 B.C. He was opposed by other Thessalian cities and by the Thebans. PELOPIDAS failed (368 B.C.) in one expedition against him and was briefly imprisoned. Returning in 364 B.C., Pelopidas destroyed Alexander's power in the battle of Cynoscephalae, though he himself was killed. Alexander was murdered by members of his own family.

Alexander Severus (Marcus Aurelius Alexander Severus) (sivēr'as), d. 235, Roman emperor (222–35), b. Syria. His name was changed (221) from Alexius Bassianus when he was adopted as the successor to HELIOGABALUS. He possessed a virtuous and studious character, and during his reign Christians enjoyed a brief immunity from the persecutions of his century. Although he won a triumph in a campaign (232) against Ardashir I of Persia, he could not maintain discipline among his own troops and had to retire from battle. In a mutiny on the Rhine, he and his mother, Julia Mamaea, were murdered by the supporters of MAXIMIN (d. 238).

Alexander the Great or Alexander III, 356–323 B.C., king of Macedon, conqueror of much of Asia, one of the greatest leaders of all time. The son of PHILIP II of Macedon and OLYMPIAS, he had Aristotle as his tutor and was given the education of a model prince. Alexander had no part in the murder of his father, although he may have resented him because he neglected Olympias for another wife. He succeeded to the throne in 336 B.C. and immediately showed his brilliance by quieting the restive cities of Greece, then putting down uprisings in Thrace and Illyria. Thebes revolted on a false rumor that Alexander was dead. The young king rushed south and sacked the city, sparing only the temples and Pindar's house. Greece and the Balkan Peninsula secured, he then crossed (334) the Hellespont (now the Dardanelles) and, as head of an allied Greek army, undertook the war on Persia that his father had been planning. The march he had begun was to be one of the greatest in history. At the Granicus River (near the Hellespont) he met and defeated a Persian force and moved on to take Miletus and Halicarnassus. None could stand up against his military skill. For the first time in history Persia faced a united Greece, and Alexander saw himself as the spreader of Pan-Hellenic ideals. Having taken most of Asia Minor, he entered (333) N. Syria and there in the battle of Issus met and routed the hosts of DARIUS III of Persia, who fled before him. Alexander, triumphant, now envisioned conquest of the whole of the Persian Empire. It took him nearly a year to reduce Tyre and Gaza, and in 332, in full command of Syria, he entered Egypt. There he met no resistance. When he went to the oasis of Ammon he was acknowledged as the son of Ammon-Ra, and this may have contributed to a conviction of his own divinity. In the winter he founded Alexandria, perhaps the greatest monument to his name, and in the spring of 331 he returned to Syria, then went to Mesopotamia where he met Darius again in the battle of Gaugamela. The battle was hard, but Alexander was victorious. He marched S. to Babylon, then went to Susa and on to Persepolis, where he burned the palaces of the Persians and looted the city. He was now the visible ruler of the Persian Empire, pursuing the fugitive Darius to Ecbatana, which he submitted in 330, and on to Bactria. There the satrap Bessus, a cousin of Darius, had the Persian king murdered and declared himself king. Alexander went on through Bactria and captured and executed Bessus. He was now in the regions beyond the Oxus River (the present-day Amu Darya), and his men were beginning to show dissatisfaction. In 330 a conspiracy against Alexander was said to implicate the son of one of his generals, PARMENION, Alexander not only executed the son but also put the innocent Parmenion to death. This act and other instances of his harshness further alienated the soldiers, who disliked Alexander's assuming Persian dress and the manners of an Oriental despot. Nevertheless Alexander conquered all of Bactria and Sogdiana after hard fighting and then went on from what is today Afghanistan into N. India. Some of the princes there received him favorably, but at the Hydaspes (the present-day Jhelum River) he met and defeated an army under Porus. He overran the Pun-

*Empire of Alexander the Great
(including dependencies)*

jab, but there his men would go no farther. He had built a fleet, and after going down the Indus to its delta, he sent Nearchus with the fleet to take it across the unknown route to the head of the Persian Gulf, a daring undertaking. He himself led his men through the desert regions of modern Baluchistan, S. Afghanistan, and S. Iran. The march, accomplished with great suffering, finally ended at Susa in 324. There he found that many of the officials he had chosen to govern the conquered lands had indulged in corruption and misrule. Meanwhile certain antagonisms had developed against Alexander, in Greece, for instance, many decried his execution of Aristotle's nephew, the historian CALLISTHENES, and the Greek cities resented his request that they treat him as a god. Alexander's Macedonian officers balked at his attempt to force them to intermarry with the Persians (he had himself married ROXANA, a Bactrian princess, as one of his several wives), and he resisted his Orientalizing ways and his vision of the equality of peoples. There was a mutiny, but it was put down. In 323, Alexander was planning a voyage by sea around Arabia when he caught a fever and died at 33. Whether or not he had plans for a world empire cannot be determined. He had accomplished greater conquests than any before him, but he did not have time to mold the government of the lands he had taken, and after his death his generals fell to quarreling about dividing the rule (see DIADOCHI). His only son was Alexander Aegus, born to Roxana after Alexander's death and destined for a short and pitiful life. Incontestably, Alexander was one of the greatest generals of all time and one of the most powerful personalities of antiquity. He influenced the spread of Hellenism and instigated profound changes in the history of the world. There are many legends about him, e.g., his feats on his horse Bucephalus and his cutting of the Gordian knot. The famous Greek sculptor Lysippus did several studies of Alexander. Arrian and Plutarch wrote biographies of him in ancient times, and the literature of the Middle Ages romanticized his life. See modern biographies by J. W. Snyder (1966), Peter Bamm (1968), R. D. Milns (1969), Peter Green (1970), C. B. Welles (1970), and R. L. Fox (1974).

Alexandra, 1844–1925, queen consort of Edward VII of Great Britain, whom she married in 1863. She was the daughter of Christian IX of Denmark.

Alexandra, Mount, E. Africa. See RUWENZORI, mts.

Alexandra Feodorovna (fēō'dorōv'nā, Rus. fyō'dorōv'nā), 1872–1918, last Russian czarina, consort of NICHOLAS II, she was a Hessian princess and a granddaughter of Queen Victoria. Neurotic and superstitious, she was easily dominated by RASPUTIN, who seemingly was able to check the hemophilia of her son. During World War I, when Nicholas took command (Sept. 1915) of the forces at the front, Alexandra Feodorovna assumed control in St. Petersburg and prevailed upon her weak husband to replace independent and liberal ministers with those favored by Rasputin. Her great unpopularity was increased by widespread suspicions that she was pro-German. With her husband and children, she was shot by the Bolsheviks.

Alexandrescu, Grigore (grēgō'rē əlēksandrē'skōō), 1812–85, Rumanian poet. Of a noble family, he was active in secret revolutionary societies. In his fables he commented ironically on the complications of living in a Russian protectorate and tried to encourage pride in the national heritage. In *The Tombs at*

Drăgășani he recalls the greatness of the Rumanian past.

Alexandretta, Turkey. See ISKENDERUN.

Alexandretta, sanjak of (san'jāk', āl'igzāndrēt'a), former name of Hatay prov. (1970 pop. 596,201), 2,141 sq. mi. (5,545 sq. km), S. Turkey, including the cities of Antioch (now Antakya) and Alexandretta (now Iskenderun). The population includes many Christians. The sanjak of Alexandretta was awarded to Syria in 1920 and in 1936 became the subject of a complaint to the League of Nations by Turkey, which claimed that the privileges of the Turkish minority in the sanjak were being infringed. The sanjak was given autonomous status in 1937 by an agreement, arranged by the League, between France (then mandatory power in Syria) and Turkey. Rioting by Turks and Arabs resulted (1938) in the establishment of joint French and Turkish military control. In 1939, France transferred the sanjak to Turkey.

Alexandria, Arabic *Al Iskandariyah*, city (1970 est. pop. 2,000,000), N. Egypt, on the Mediterranean Sea. It is at the western extremity of the Nile River delta, situated on a narrow isthmus between the sea and Lake Maryut. The city is Egypt's leading port, a commercial and transportation center, and the heart of a major industrial area where refined petroleum, asphalt, cotton textiles, processed food, paper, and plastics are produced. In addition, motor vehicles are assembled and fish are caught. Alexandria, founded in 332 B.C. by Alexander the Great, was (304–30 B.C.) the capital of the Ptolemies. The city took over the trade of TYRE (sacked by Alexander the Great), outgrew CARTHAGE by c. 250 B.C., and became the largest city in the Mediterranean basin. It was the greatest center of Hellenistic and Jewish culture. The SEPTUAGINT, a translation by Jews of the Old Testament into Greek, was prepared there. Alexandria had two celebrated royal libraries, one kept in a temple of Zeus and the other in a museum. The collections at their maximum were said to contain, counting duplicates, c. 700,000 rolls. A great university grew around the museum and attracted many scholars, including ARISTARCHUS OF SAMOTHRACE, the collator of the Homeric texts, EUCLID, the mathematician, and HEROPHILUS, the anatomist, who founded a medical school there. Julius CAESAR temporarily occupied (47 B.C.) the city while in pursuit of Pompey, and Octavian (later Augustus) entered it (30 B.C.) after the suicide of Antony and Cleopatra. Alexandria formally became part of the Roman Empire in 30 B.C. It was the greatest of the Roman provincial capitals, with a population of about 300,000 free persons and numerous slaves. In the later centuries of Roman rule and under the Byzantine Empire, Alexandria was a center of Christian learning that rivaled Rome and Constantinople. It was (and remains today) the seat of a patriarch of the Eastern Orthodox Church. The libraries, however, were gradually destroyed from the time of Caesar's invasion, and suffered especially in A.D. 391, when THEODOSIUS I had pagan temples and other structures razed. When the Muslim Arabs took Alexandria in 642, its prosperity had fallen severely, largely because of a decline in shipping, but the city still had about 300,000 inhabitants. The Arabs moved the capital of Egypt to Cairo in 969 and Alexandria's decline continued, becoming especially rapid in the 14th cent., when the canal to the Nile silted up. During his Egyptian campaign, NAPOLEON I took the city in 1798, but it fell to the British in 1801. At that time

Alexandria's population was only about 4,000. The city gradually regained importance after 1819, when the Mahmudiya Canal to the Nile was completed by MUHAMMAD ALI, who developed Alexandria as a deepwater port and a naval station. During the 19th cent. many foreigners settled in Alexandria, and in 1907 they made up about 25% of the population. In 1882, during an anticolonial uprising in Egypt spearheaded by Arabi Pasha, a liberal nationalist, there were anticolonial riots in Alexandria, which was subsequently bombed by the British. During World War II Alexandria, the chief Allied naval base in the E Mediterranean, was bombed by the Germans. In 1944 at a meeting in Alexandria, plans for the ARAB LEAGUE (founded 1945) were drawn up. The city's foreign population declined during the 20th cent., particularly after the 1952 revolution. The Univ. of Alexandria, the Institute of Alexandria, an affiliate of Al Azhar Univ. in Cairo, a college of nursing, and medical and textile research centers are in the city, which is also the Middle East headquarters of the World Health Organization (WHO). Much of ancient Alexandria is covered by modern buildings or is under water, only a few landmarks are readily accessible, including ruins of the emporium and the Serapeum and a granite shaft (88 ft/27 m high) called Pompey's Pillar. Nothing remains of the lighthouse on the PHAROS (3d cent. B.C.), which was one of the SEVEN WONDERS OF THE WORLD. The Greco-Roman Museum in Alexandria houses a vast collection of Coptic, Roman, and Greek art.

Alexandria. 1 City (1970 pop. 41,557), seat of Rapides parish, central La., on the Red River, inc. 1818. It is a trade, rail, and medical center for a rich agricultural and timber area. Among its many manufactures are valves, lumber, paper, and soaps and cleansers. During the Civil War the city was burned (May, 1864) to the ground by Federal troops. Alexandria is the headquarters for Kisatchie National Forest and the seat of a branch of Louisiana State Univ. Louisiana College is in its neighboring twin city of Pineville. Also in the immediate area are a veterans' hospital, a state mental hospital, and a national cemetery. Several nearby lakes, recreation areas, state parks, and a hot mineral springs resort attract tourists. 2 City (1970 pop. 6,973), seat of Douglas co., W. Minn., in a rich farm and timber region surrounded by over 200 lakes, inc. 1877. Its economy is based upon tourism, agriculture, and light manufacturing. The KENSINGTON RUNE STONE is on exhibition at a museum there. Also of interest is a walk-in prehistoric Indian mound. A state park is to the north. 3 City (1970 pop. 110,938), independent and in no county, N. Va., a port of entry on the Potomac, patented 1657, permanently settled 1730s, inc. 1779. Primarily a residential suburb of Washington, D.C., it also has extensive railroad yards and repair shops, a sizeable deepwater port, and a great variety of manufactures, including fertilizers, chemicals, and farm equipment. A number of U.S. government buildings and scientific and engineering research firms are there. George Washington helped lay out the streets in 1749. The city was part of the District of Columbia from 1789 to 1847. In May, 1861, it was occupied by Federal troops and was cut off from the rest of the South throughout the Civil War. Its many historic buildings include Gadsby's Tavern (1752), frequented by Washington, Carlyle House (1752), General Braddock's headquarters in the French and Indian War, where Washington received his commission as major, Christ Church (1767-73), where Washington, and later Robert E. Lee, worshiped, and Ramsey House (1749-51). A famous landmark, the George Washington Masonic National Memorial Temple (1923-32), modeled after the ancient lighthouse at Alexandria, Egypt, houses Washington mementos. The Alexandria Gazette, believed to be the nation's oldest daily newspaper, was first printed in 1784. Nearby are MOUNT VERNON, Woodlawn, one of the Washington family estates (made a national shrine in 1949), an Episcopal seminary (1823), and U.S. Fort Belvoir, the U.S. Army Engineer Center, with an engineer school and research and development laboratories.

Alexandria Troas (trō'ās), ancient Greek seaport city, Mysia, NW Asia Minor, called Troas in the Bible. It was important under the Greeks and Romans (Acts 16 B, 11, 20 5, 6, 2 Cor. 2:12, 2 Tim. 4:13).

alexandrine, in prosody, a line of 12 syllables (or 13 if the last syllable is unstressed). Its name probably derives from the fact that some poems of the 12th and 13th cent. about Alexander the Great were written in this meter. In French, rhyming couplets of two alexandrines of equal length, usually containing four accents, have been the classic poetic form since the time of Ronsard, e.g., in the dramas of

Racine and Corneille. In English an iambic HEXAMETER line is often called an alexandrine. The most notable example is found in the Spenserian stanza, which contains eight iambic PENTAMETERS and an alexandrine rhyming with the last pentameter. Pope's "Essay on Criticism" contains what is probably the most quoted alexandrine in literature.

A needless alexandrine ends the song
that like a wounded snake, drags its slow length
along.

Alexandroupolis (alēksandroō'pōlē), city (1971 pop. 22,995), capital of Evros prefecture, NE Greece, W Thrace, a seaport on the Gulf of Ainos, an inlet of the Aegean Sea. It is near the Turkish frontier. Alexandroupolis is a commercial center with rail connections to Thessaloniki and Edirne, wheat, cotton, rice, tobacco, salt, and dairy products are traded. Originally called Dedeagach, it developed from a small fishing village after 1871. It supplanted the older port of Enos upon the completion (1896) of the Thessaloniki-Istanbul RR. The city suffered greatly at the hands of the Bulgarians in both World Wars. It was ceded to Greece in 1919, and it was renamed for King Alexander of Greece.

Alexis (alēk'sīs) (Aleksey Mikhailovich) (aly'kyä' mēkhī'lavich), 1629-76, czar of Russia (1645-76), son and successor of Michael. His reign, marked by numerous popular outbreaks, was crucial for the later development of Russia. A new code of laws was promulgated in 1648 and remained in effect until the early 19th cent.; it favored the middle classes and the landowners, but tied the peasants to the soil. The reforms of Patriarch NIKON resulted in a dangerous schism in the Russian Church, and Nikon's deposition (1666) was a prelude to the abolition of the Moscow patriarchate in 1721. In 1654 the Cossacks of Ukraine, led in revolt against Poland by Bohdan CHMIELNICKI, voted for the union of Ukraine with Russia. War with Poland ensued and ended in 1667 with Russia retaining most of Ukraine. A serious revolt against the czar (1670) among the Don Cossacks under Stenka RAZIN was quelled by 1671. Alexis was succeeded by his son Feodor III. A younger son, by a second marriage, became Peter I (Peter the Great).

Alexis (Aleksey Petrovich) (aly'kyä' pētrō'vich), 1690-1718, Russian czar, son of PETER I (Peter the Great) by his first wife, and father of PETER II. Opposing his father's anticlerical policy, Alexis renounced his right of succession and fled (1716) to Vienna. Peter, who feared that Alexis might win foreign backing, enticed him to return, he then had him arrested and tried for treason. Sentenced to death, Alexis died from the effects of torture shortly before his scheduled execution.

Alexius I (Alexius Comnenus) (alēk'sēas, kām'nē-nas), 1048-1118, Byzantine emperor (1081-1118). Under the successors of his uncle, ISAAC I, the empire had fallen prey to anarchy and foreign invasions. In 1081, Alexius, who had become popular as a general, overthrew Nicephorus III and was proclaimed emperor. The most immediate danger besetting the empire was the Norman invasions (1081-85) under ROBERT GUISCARD and his son, BOHEMOND I. Alexius obtained Venetian help at the price of valuable commercial privileges. This and a truce with the Seljuk Turks enabled him to defend the Balkan Peninsula until the death of Robert Guiscard, when the Normans temporarily withdrew (1085). Next, Alexius secured the alliance of the CUMANS and with their help defeated (1091) the PECHENEGS, who had besieged Constantinople. He then repulsed the Cumans, who had turned against him, regained territory from the Turks, and suppressed insurrections in Crete and Cyprus. At the same time as Alexius was seeking aid from the West against the Turks, the First Crusade (see CRUSADES) was declared. Faced with the presence of an army of unruly and pillaging Crusaders near his capital, Alexius sought both to rid himself of the Crusaders and to employ them for his own purposes. He furnished them with money, supplies, and transportation to Asia Minor after he had persuaded the leaders to swear him fealty and to agree to surrender to him all conquests of former Byzantine territories. In return, he promised to join the Crusaders, who at first complied. Bohemond, however, seized Antioch for himself, and in 1099 Alexius began operations against him. In 1108, Bohemond was forced to acknowledge Alexius as his suzerain. The last years of Alexius' reign were consumed by fresh struggles with the Turks and by the intrigues of his daughter ANNA COMNENA against his son and heir, John II. Alexius' reign restored Byzantine military and naval power and political prestige, but brought onerous taxation, the depreciation

of currency, and the extension of feudalism by grants of estates, draining imperial strength.

Alexius II (Alexius Comnenus), 1168-83, Byzantine emperor (1180-83), son and successor of Manuel I. His mother, Mary of Antioch, who was regent for him, alienated the population by favoring the Latin element in Constantinople. In 1182 Alexius' cousin Andronicus, after instigating a massacre of the Latins, stormed the city, had Alexius sign the death sentence of his mother, and, as Andronicus I, became coemperor. One month later he strangled Alexius and married his widow.

Alexius III (Alexius Angelus) (ān'jēlās), d. after 1210, Byzantine emperor (1195-1203). He acceded to power by deposing and blinding his brother Isaac II. This act served as pretext for the leaders of the Fourth Crusade (see CRUSADES) to attack Constantinople (1203). The Crusaders made Isaac II and his son Alexius IV coemperors, Alexius III having fled. In 1204, Alexius III's son-in-law was briefly emperor as Alexius V. Another son-in-law, Theodore I, became emperor of Nicaea. Alexius died in obscurity.

Alexius IV (Alexius Angelus), d. 1204, Byzantine emperor (1203-4), son of ISAAC II. When his father was deposed, Alexius fled to Italy and then went to Germany. Encouraged by his brother-in-law, Philip of Swabia, he obtained (1202) from the leaders of the Fourth Crusade (see CRUSADES) the promise of help in deposing his uncle, Alexius III. Made joint emperor with Isaac II after the Crusaders entered Constantinople, he was overthrown for his subservience to his allies and was strangled by order of Alexius V.

Alexius V (Alexius Ducas Mourtzouphlos) (dōō'-kās mōōrt'sōōflōs), d. 1204, Byzantine emperor (1204), son-in-law of Alexius III. The head of the Byzantine national party, he overthrew emperors Isaac II and Alexius IV (who had been installed by the Crusaders), thus precipitating the conquest and sack of Constantinople (1204) by the army of the Fourth Crusade (see CRUSADES). He was deposed and executed, and Baldwin I was elected by the Crusaders as Latin emperor of Constantinople.

alfalfa (ālfāl'fā) or **lucern**, perennial leguminous plant (*Medicago sativa*) of the family Leguminosae (PULSE family), the most important pasture and hay plant in North America, also grown extensively in Argentina, S. Europe, and Asia. Probably native to Persia, it was introduced to the United States by Spanish colonists. Of high yield, high protein content, and such prolific growth that it acts as an effective weed control, alfalfa is also valued in crop rotation and for soil improvement because of the nitrogen-fixing bacteria in its nodules. The several varieties of the species grow well in most temperate regions except those with acid soil or poor drainage. The alfalfa belt of the United States centers chiefly in the northern and western parts of the country. Young alfalfa shoots have been used as food for humans and have antiscorbutic properties. Carotene and chlorophyll for commercial use are extracted from the leaves. Alfalfa is also called medic, the name for any plant of the genus *Medicago*—Old World herbs with blue or yellow flowers similar to those of the related clovers. Black medic (*M. lupulina*) and the bur clovers (*M. arabica* and *M. hispida*) are among the annual species naturalized as weeds in North America and sometimes also grown for hay and pasture. Alfalfa is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Leguminosae.

alfalfa caterpillar, larva of the alfalfa butterfly, *Colias eurytheme*, a member of the family Pieridae. Found throughout most of Mexico, the United States, and S. Canada, it is sometimes a serious pest of alfalfa, clover, and other legumes in the SE United States. It usually overwinters as a pupa, the orange adult emerging in early spring, when large numbers of these butterflies may be seen fluttering low over alfalfa fields. The female lays several hundred eggs on the undersides of leaves. The larvae are fully grown in 12 to 15 days, there are two generations each season in the northern part of the range and up to seven in the south. Low cutting of infested alfalfa, which exposes the larvae to sun and predators, aids control. The alfalfa caterpillar is classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Pieridae.

Alfarabius—see FARABI, AL-

Al-Farghani (al-fargā'nē) or **Alfraganus** (ālfargā'nēs), d. after 861, Arab astronomer. Al-Farghani was born in Farghana, Transoxania (present-day Pakistan), and died in Egypt. His most important work, written between 833 and 857, is *Elements*, a thorough, readable, nonmathematical summary of Ptolemaic astronomy. The book, which circulated in

several Latin editions, was widely studied in Europe from the 12th to the 17th cent. Two treatises on astrolabes by Al-Farghani also survive.

Alfaro, Flavio Eloy (flā'vyō āloi' ālfā'rō), 1867-1912, president of Ecuador (1897-1901, 1907-11). Regarded as a champion of liberalism, Alfaro introduced legal and economic reforms that largely undid the clerical privileges granted by Gabriel García Moreno. Exiled by the opposition, he returned to lead a revolt but was defeated, imprisoned, and murdered by an angry mob.

Al-Fasi, Isaac ben Jacob ha-Kohen (al-fā'sē), 1013-1103, first prominent Jewish Talmudic scholar, following the Gaonic period, b. near Fez, N. Africa. His *Halachoth*, a codification of the Talmud, is his greatest work; it contains a simplified exposition of complicated Talmudic passages. It has been reprinted many times, and the edition of 1881 is appended to the regular editions of the Talmud. He is also known for his collection of *Responsa*, a great deal of which was written in Arabic and later translated into Hebrew.

Al Fatah see ARAFAT, YASIR, PALESTINE LIBERATION ORGANIZATION

Alfieri, Vittorio, Conte (vēt-tō'rēō kōn'tā ālfyē'rē), 1749-1803, Italian tragic poet. A Piedmontese, born to wealth and social position, he spent his youth in dissipation and adventure. From 1767 to 1772 he traveled over much of Europe but returned to Italy fired by a sense of the greatness of his own country. He saw himself as a prophet called to revive the national spirit of Italy and chose tragic drama as his means. The first of his plays, *Cleopatra*, written in a vigorous, harsh, and individual style, was staged in Turin in 1775. From 1776 to 1786 he wrote 19 tragedies, among them *Philip the Second*, *Saul*, *Antigone*, *Agamemnon*, *Orestes*, *Sophonisba*, and *Maria Stuart*—all in the tradition of French classical tragedy. He also wrote comedies, a bitter satire against France, the *Misogallo*, and a revealing autobiography (1804, tr. by W. D. Howells, 1877). Alfieri's most productive period coincided with the beginning of his love for the countess of Albany, wife of Charles Edward Stuart, the Young Pretender. The rest of his life was spent with her; they may have married secretly after her husband's death. Alfieri's complete works, which figured in the rise of Italian nationalism, were posthumously edited and published (1805-15) by the countess. His tragedies were translated into English in 1815 and 1876. *Della tirannia* appeared as *Of Tyranny* (1961). See biography by G. Megaro (1930, repr. 1971).

Alfiós see ALPHEUS, river, Greece

Alfold (āl'fōld), Hun. Nagy-Alfold [Great Alfold], great central plain of Hungary extending into N. Yugoslavia and W. Rumania. The level region is drained by the Tisza and Danube rivers. Formerly wooded, the Alfold gradually became a steppe region as the Mongol invaders (13th cent.) cut down many trees, exposing the soil to dry winds. Grasslands covered most of the Alfold until the late 19th cent., when extensive irrigation and drainage projects transformed it into fertile farmland, grains, hemp, flax, and livestock are now raised. The Alfold, on a primary invasion route to Europe, has been the scene of many major battles. The Little Alfold (Hun. Kis-Alfold) is located in NW Hungary and extends into S. Czechoslovakia.

Alfonsine tables or Alphonsine tables (ālfōn'sīn), compilation of astronomical data tabulating the positions and movements of the planets, completed c. 1252 and printed in Venice in 1483. They were a revision and improvement of the Ptolemaic tables and were compiled at Toledo, Spain, by about 50 astronomers assembled for the purpose by Alfonso X of Castile.

Alfonso I (Alfonso the Battler) (ālfōn'sō, āl-), d. 1134, king of Aragon and Navarre (1104-34), brother and successor of Peter I. The husband of URRACA, queen of Castile, he fought unsuccessfully to extend his authority over her kingdom. He also fought energetically against the Moors, from whom he captured Zaragosa (1118), Calatayud (1120), and many other towns. His raid (1125) into Andalusia bolstered Christian morale, and he encouraged Christians in Muslim lands to settle in his domain. Alfonso was killed in battle against his stepson, Alfonso VII of Castile, and was succeeded by his brother Ramiro II in Aragon and by Garcia IV in Navarre.

Alfonso II, 1152-96, king of Aragon (1162-96) and, as Raymond Berengar V, count of Barcelona (1162-96), son and successor of Raymond Berengar IV of Barcelona and Petronilla of Aragon. He inherited Provence (1166), which he successfully defended

against the counts of Toulouse, and Roussillon (1172). He conquered (1171) Teruel from the Moors and, after releasing himself from homage to Alfonso VIII of Castile, concluded with him the Treaty of Cazorla (1179), which reserved the reconquest of Valencia for Aragon. He was succeeded in Aragon by his eldest son, Peter II, and in Provence by a younger son.

Alfonso III, 1265-91, king of Aragon and count of Barcelona (1285-91), son and successor of Peter III. He was forced to grant wide privileges to the cortes of the Aragonese nobles. At first he supported the claim to Sicily of his brother James (later JAMES II of Aragon) against CHARLES II of Naples. Later, however, he recognized papal suzerainty over Sicily and pressed James to abandon his claim. He also made war on Castile and on his uncle, JAMES I of Majorca. James II succeeded him.

Alfonso IV, 1299-1336, king of Aragón and count of Barcelona (1327-36), son and successor of James II. Before his accession he conquered (1323-24) SARDINIA, where later a revolt involved him in war with Genoa and Pisa. He was succeeded by his son, Peter IV.

Alfonso V (Alfonso the Magnanimous), 1396-1458, king of Aragón and Sicily (1416-58) and of Naples (1443-58), count of Barcelona. He was the son of Ferdinand I, whom he succeeded in Aragon and Sicily. Queen JOANNA II of Naples sought his aid against LOUIS III, rival king of Naples, and, after Alfonso had defeated (1421) Louis, Joanna adopted Alfonso as her heir. They quarreled in 1423, and when Joanna died (1435), she left her throne to RENÉ of Anjou. Attempting to conquer Naples, Alfonso was captured (1435) by the Genoese, but he was released through the agency of the duke of Milan. In 1442 he defeated René, took Naples, and was recognized (1443) as king by the pope. Leaving his Spanish possessions under the rule of his wife and his brother, Alfonso spent the rest of his life in Naples, where he accorded great privileges to Spanish nobles and tried to introduce Spanish institutions. A patron of arts and letters, he held a splendid court and beautified the city. Alfonso also played a vigorous part in Italian politics. He left Naples to his son Ferdinand I and the rest of his kingdom to his brother John II.

Alfonso I, 1109?-1185, first king of Portugal, son of Henry of Burgundy. After his father's death (1112), his mother, Countess Teresa, ruled the county of Portugal with the help of her Spanish lover, Fernando Perez. In 1128 young Alfonso, who had allied himself with discontented nobles, defeated her in battle and drove her into Leon with Pérez. (Alfonso did not, despite the popular legend, put her in chains at Guimarães.) Beginning as little more than a quasi-independent guerrilla chief, Alfonso spent his life in almost ceaseless fighting against the kings of Leon and Castile and against the Moors to increase his prestige and his territories. In 1139 he defeated the Moors in the battle of Ourique (fought not at Ourique, but at some undetermined place). In 1147 he took Santarém by surprise attack and, with the help of the English, Flemish, and German crusaders, captured Lisbon. He began to style himself king in 1139, and in 1143, by the Treaty of Zamora, he placed his lands under papal protection and secured Castilian recognition of his title, which was confirmed (1179) by Pope Alexander III. Alfonso's son SANCHE I ascended an established throne.

Alfonso II (Alfonso the Fat), 1185-1223, king of Portugal (1211-23), son and successor of Sancho I. His reign was spent in struggles with the church and his brothers and sisters, to whom his father had left many of his estates. Alfonso's measures against the church holdings and the bishops led to his excommunication (1219). Though he was himself unwarlike, Alfonso's army took part in the major victory over the Moors at Las Navas de Tolosa (1212) and captured (1217) Alcacer do Sal. He was succeeded by his son Sancho II (reigned 1223-48).

Alfonso III, 1210-79, king of Portugal (1248-79), son of Alfonso II, brother and successor of Sancho II. By his marriage with Matilda, countess of Boulogne, he became count of Boulogne and thus was known as *Alfonso o Bolonhez* [Alfonso of Boulogne]. He seized power after the deposition (1245) of his brother by the pope, becoming king on Sancho's death. Alfonso completed the reconquest of Portugal from the Moors by taking (1249) the rest of the Algarve. This involved him in a long quarrel with Alfonso X of Castile, who had been receiving revenues from Algarve, but the two kings reached an agreement by which Alfonso III married the illegitimate daughter of Alfonso X, and Alfonso X was to relinquish all rights to the Algarve when the heir

born of this union (the later King Diniz) should reach the age of seven. Alfonso's second marriage brought the Portuguese king into disfavor with the church because Matilda was still living, but her death ended the conflict. Despite promises he had made at the time of Sancho's deposition, Alfonso seized lands and revenues from the church. This caused another break with the church, which healed shortly before his death. Alfonso called the Cortes of Leiria (1254), the first Portuguese Cortes to include commoners. He also instituted administrative and financial reforms, encouraged commerce and the development of the towns, and commuted many feudal dues into money payments. French and Provençal culture was imported to the court, and the period was one of great intellectual activity. Alfonso was succeeded by Diniz.

Alfonso IV, 1291-1357, king of Portugal (1325-57), son and successor of DINIZ. Disgruntled by the favoritism his father showed toward Alfonso's illegitimate half brothers, Alfonso rose in revolt in 1320. Although peace was arranged twice by his mother, St. Elizabeth (or St. Isabel) of Portugal, he was estranged from Diniz most of the five years before his father's death. He was involved (1337-40) in a fruitless war with Alfonso XI of Castile before joining him in a campaign against the Moors that culminated in the notable victory of Tarifa (Oct., 1340). Alfonso is, however, best remembered for countenancing the murder (1355) of his son's mistress (or wife), Ines de CASTRO, one of the most romantic figures in Portuguese history. His son (later PETER I) promptly led a rebellion, but peace between father and son was restored before Alfonso's death.

Alfonso V, 1432-81, king of Portugal (1438-81), son of Duarte and Queen Leonor. During his minority there was a struggle for the regency between the queen mother and Alfonso's uncle, Dom Pedro, duke of Coimbra. The duke was triumphant (1440) and retained power after Alfonso was declared of age (1446) until the young king fell under the influence of Dom Pedro's illegitimate half brother, Alfonso, duke of BRAGANZA. The dismissal (1448) of Dom Pedro led to a civil war, in which the king's troops killed (1449) his uncle at Alfarrobeira. Alfonso undertook ventures in Morocco and by capturing Alcacer-Seguer (1458) and Tangier (1471) won the name Alfonso the African. Less rewarding was his long attempt to win the throne of Castile after his marriage—never sanctioned by the church—in 1475 to JUANA LA BELTRANEJA, officially the daughter and heiress of Henry IV of Castile, although generally thought to be the child of Beltrán de la Cueva. This claim brought Alfonso into war with ISABELLA I of Castile and her husband, FERDINAND II of Aragon. Alfonso, badly beaten in the battle of Toro (1476), capitulated in 1479. During his reign Prince HENRY THE NAVIGATOR was active. Alfonso was succeeded by his son, John II, who was the effective ruler of Portugal after 1476.

Alfonso VI, 1643-83, king of Portugal (1656-83), son and successor of John IV. Slightly paralyzed and mentally defective, he distinguished himself under the regency of his mother, Queen Luisa, by associating with a group of rowdy youths. After their ring-leader was dismissed from court, Alfonso, directed by the count of Castelo Melhor, ousted his mother in 1662. The count of Castelo Melhor then took over the government and ruled ably. Under his direction the army won the series of victories over Spain (1663-65) that finally secured Spanish recognition of Portuguese independence (1668). After Alfonso's marriage (1666) to Marie Françoise of Savoy, daughter of the duc de Nemours, the young queen took a hand in government. She and the king's younger brother (later PETER II) fell in love, and in 1667 they forced Castelo Melhor from power and made Alfonso sign over the government to Peter, who became prince regent. A quick annulment of her marriage to Alfonso enabled Marie Françoise to wed the new regent. Alfonso was confined in the Azores until 1674 and at Sintra thereafter.

Alfonso I (Alfonso the Catholic), 693?-757, Spanish king of Asturias (739-57). He was the son-in-law of the first Asturian king, PELAYO. A Berber rebellion (740-41) against the Moors enabled him to conquer parts of Galicia, Leon, and Santander.

Alfonso II (Alfonso the Chaste), 759-842, Spanish king of Asturias (791-842), grandson of Alfonso I. He established his capital at Oviedo, which his father, Fruela I, had founded. Continuing the struggle against the Moors, he sought the support of the Frankish emperors Charlemagne and Louis I. Alfonso II built the first church on the site of SANTIAGO DE COMPOSTELA.

Alfonso III (Alfonso the Great), 838?-911?, Spanish king of Asturias (866-911?). He recovered the territory of León from the Moors. The kingdom was consolidated in his reign, but after his forced abdication, it was divided among his sons.

Alfonso V (Alfonso the Noble), 994?-1027, Spanish king of León (999-1027). While he was still a minor, the Moorish ruler al-Mansur died, and the Spanish court recovered the city of León. Alfonso gave (1020) León its *fuero* [charter]. He was killed in the siege of Viseu.

Alfonso VI, 1030-1109, Spanish king of León (1065-1109) and Castile (1072-1109). He inherited León from his father, Ferdinand I. Defeated by his brother SANCHE II of Castile, he fled to the Moorish court of Toledo. After Sancho's assassination (1072) Alfonso succeeded to the throne of Castile and took Galicia from his brother Garcia (1073). He thus became the most powerful Christian ruler in Spain. He encouraged Christians in Muslim lands to migrate north, and he raided Muslim territory, penetrating as far south as Tanja. After the conquest of strategic Toledo (1085), he took many other cities and reached the line of the Tagus River. Alarmed by his advance, Abbad III (see ABBADIDS) and his Muslim allies called to their aid the Almoravid YUSUF IBN TASHFIN, who defeated Alfonso in 1086. Alfonso was defeated again in 1108, and his only son died in the battle. Alfonso's reign gave a great crusading impulse to the reconquest of Spain and was also notable for the exploits of the Cid. Alfonso's court at Toledo became the center of cultural relations between Muslim and Christian Spain. French influence was strong because of the king's many French followers, French monks introduced the Cluniac reform into León during his reign. Alfonso was succeeded by his daughter URRACA.

Alfonso VII (Alfonso the Emperor), 1104-57, Spanish king of Castile and León (1126-57), son and successor of URRACA. He recovered the places in Castile that his stepfather, Alfonso I of Aragon, had occupied and soon gained supremacy over the other Christian states in Spain. In 1135 he had himself crowned emperor in León. His many victories over the Moors had no permanent results, his most famous conquests, Córdoba (1146) and Almería (1147), were soon lost again. Alfonso left Castile to his son Sancho III (reigned 1157-58) and León to his son Ferdinand II.

Alfonso VIII (Alfonso the Noble), 1155-1214, Spanish king of Castile (1158-1214), son and successor of Sancho III. Chaos prevailed during his minority, but he quickly restored order after assuming (1166) the government. Alfonso took (1177) Cuenca from the Moors, but later (1195) he was seriously defeated by them at Alarcos. León and Navarre then invaded Castile, but Alfonso forced them to make peace, annexing Álava and Guipuzcoa from Navarre. Allied with his former Christian enemies, he led them to the great victory over the Almohads at Las Navas de Tolosa (1212). Alfonso was married to Eleanor, daughter of Henry II of England. Their children included Henry, who succeeded his father as Henry I, Blanche, who married Louis VIII of France, and Berenguela, who married Alfonso IX of León and whose son Ferdinand III united Castile and León.

Alfonso IX, 1171-1230, Spanish king of León (1188-1230), son and successor of Ferdinand II. He conquered from the Moors several cities in Estremadura and was frequently at war with Alfonso VIII of Castile. His marriages with Teresa of Portugal and Berenguela of Castile were both annulled by the pope. He defeated (1230) the Moors at Mérida. His son by Berenguela, Ferdinand III, reunited (1230) León and Castile.

Alfonso X (Alfonso the Wise), 1221-84, Spanish king of Castile and León (1252-84), son and successor of Ferdinand III, whose conquests of the Moors he continued, notably by taking Cadiz (1262). His mother, Beatriz, was a daughter of the German king Philip of Swabia, and Alfonso's principal ambition was to become Holy Roman Emperor. In 1257 he was elected by a faction of German princes as anti-king to Richard, earl of Cornwall, but because of papal opposition and Spanish antagonism, he did not go to Germany, and in 1275 he finally renounced his claim to the imperial throne. In his domestic policy, Alfonso's assertion of royal authority led to a rebellion of the nobles. His Moorish subjects also rose (1264) against him and were subdued only with the help of James I of Aragon. After the death (1275) of his eldest son, Ferdinand, while fighting the Moors, civil war for the succession broke out between Ferdinand's children and Alfonso's second son, who eventually succeeded him as

Sancho IV. Sancho's partisans in the Cortes at Valladolid even declared Alfonso deposed (1282). The king died while the dynastic dispute was still unsettled. Alfonso stimulated the cultural life of his time. Under his patronage the schools of Seville, Murcia, and Salamanca were furthered, and Muslim and Jewish culture flowed into Western Europe. He was largely responsible for the *Siete Partidas*, a compilation of the legal knowledge of his time, for the ALFONSINE TABLES in astronomy, and for other scientific and historical works. See studies by E. E. S. Procter (1951), J. E. Keller (1967), and J. Ribera y Tarrago (1970).

Alfonso XI, 1311-50, Spanish king of Castile and León (1312-50), son and successor of Ferdinand IV. His vigorous campaign against Granada provoked an invasion by the Moors from Morocco, they took Gibraltar in 1333. In 1340, having formed alliances with Portugal, Navarre, and Aragon, Alfonso won the great victory of Tarifa (also called the battle of Salado), and in 1344 he took Algeciras. By the *Ordenamiento de Alcalá*, issued at Alcalá de Henares in 1348, Alfonso enforced the *Siete Partidas* of Alfonso X. He died while besieging Gibraltar and was succeeded by his son, Peter the Cruel.

Alfonso XII, 1857-85, king of Spain (1874-85), son of ISABELLA II. He went into exile with his parents at the time of the revolt of the CARLISTS in 1868 and was educated in Austria and England. In 1870 his mother abdicated her rights in his favor, and in 1874 he was proclaimed king. He entered Madrid in triumph early in 1875 and soon won great popularity. Supported by MARTINEZ DE CAMPOS and CANOVAS DEL CASTILLO, he consolidated the monarchy, suppressed republican agitation, and restored order. His widow, MARIA CRISTINA (1858-1929), was regent during the minority of his posthumous son, Alfonso XIII.

Alfonso XIII, 1886-1941, king of Spain (1886-1931), posthumous son and successor of Alfonso XII. His mother, MARIA CRISTINA (1858-1929), was regent until 1902. In 1906, Alfonso married Princess Victoria Eugenie of Battenberg, granddaughter of Queen Victoria of Great Britain. An attempt was made to kill the couple on their wedding day, the first of several assassination attempts. Although Alfonso enjoyed some personal popularity, the monarchy was threatened by social unrest in the newly industrialized areas, by Catalan agitation for autonomy, by dissatisfaction with the constant fighting in Morocco, and by the rise of socialism and anarchism. In 1909 the government was widely attacked for the execution of the radical publicist FRANCISCO FERRER GUARDIA, following an uprising in Barcelona. After keeping Spain out of World War I, Alfonso, dissatisfied with the functioning of parliamentary government, supported Gen. Miguel PRIMO DE RIVERA in establishing (1923) a military dictatorship. At the fall (1930) of Primo de Rivera, discontent was running high. After the municipal elections of 1931 showed an overwhelming republican majority, Alfonso "suspended the exercise of royal power" and went into exile (April 14, 1931). A few weeks before his death in Rome he renounced his claim to the throne in favor of his third son, Juan (see BOURBON, family).

Alfraganus: see AL-FARGHANI.

Alfred, 849-99, king of Wessex (871-99), sometimes called Alfred the Great, b. Wantage, Berkshire. The youngest son of King Æthelwulf, he was sent in 853 to Rome, where the pope gave him the title of Roman consul. He returned to Rome with his father in 855. His adolescence was marked by ill health and deep religious devotion, both of which persisted for the rest of his life. Little is known of him during the reigns of his older brothers Æthelbald and Æthelbert, but when Æthelred took the throne (865), Alfred became his *secundarius* (vicar?) and aided his brother in subsequent battles against the Danes, who then threatened to overrun all England. When the Danes began their assault on Wessex in 870, Æthelred and Alfred resisted with varying results; they won a victory at Ashdown, Berkshire, they were defeated at Basing, and they had several indecisive engagements. Upon his brother's death after Easter in 871, Alfred became king of the West Saxons and overlord of Kent, Surrey, Sussex, and Essex. Faced by an enemy too powerful to defeat decisively, Alfred cleared the Danes from Wessex by a heavy payment of tribute (see DANEGELD) in 871. Alfred used the five-year respite that followed to begin building up a fleet. In 876 and 877 the Danes returned to ravage for several months and finally, halted by Alfred's army, swore to leave Wessex forever. However, in a surprise invasion early in 878 they crushed Alfred's forces, and he fled to Athelney in the fens of Somerset, where he organized a series of harassing raids

on the enemy. The famous legend in which, unrecognized, he is scolded by a peasant woman for letting her cakes burn probably derives from this period of his life. In May, 878, Alfred rallied his army and won a complete victory over the Danes at Edington. He then dictated the Peace of Chippenham (or Wedmore) by which Guthrum, the Danish leader, accepted Christian baptism and probably agreed to separate England into English and Danish spheres of influence. The Danes moved into East Anglia and E. Mercia, and Alfred established his overlordship in W. Mercia. Later, Alfred captured (886) London and concluded another treaty with Guthrum that marked off the DANELAW E. and N. of Thames, Lea, and Ouse rivers, and Watling Street, leaving the south and west of England to Alfred. Security gave Alfred the chance to institute numerous reforms within his kingdom. Against further probable attacks by the Danes, he reorganized the militia, or *fyrð*, about numerous garrisoned forts throughout Wessex. Drawing from the old codes of Æthelbert of Kent, Ine of Wessex, and Offa of Mercia, he issued his own code of laws, which contained measures for a stronger centralized monarchy. He reformed the administration of justice and energetically participated in it, and he reorganized the finances of his court. He came eventually to be considered the overlord of all England, although this title was not realized in concrete political administration. Alfred's greatest achievements, however, were the revival of learning and the establishment of Old English literary prose. He gathered together a group of eminent scholars, including the Welshman Asser. They strengthened the church by reviving learning among the clergy and organized a court school like that of Charlemagne, in which not only youths and clerics but also mature nobles were taught. Alfred himself between 887 and 892 learned Latin and translated several Latin works into English—Gregory the Great's *Pastoral Care*, Orosius's universal history, Boethius's *Consolation of Philosophy*, and St. Augustine's *Soliloquies*. A translation of Bede's *Ecclesiastical History* is also commonly ascribed to him, but there is some doubt since it differs markedly in style from the others. Alfred liberally interpolated his own thoughts into his writings, and the Orosius is particularly interesting for the addition of accounts of voyages made by the Norse explorers OTHHERE and Wulfstan. Although he probably was not directly responsible for the compilation of the ANGLO-SAXON CHRONICLE, his patronage of learning undoubtedly encouraged it. All these pursuits were interrupted, but not ended, by new Danish invasions between 892 and 896. The struggle was severe because Alfred's military reforms had not been completed and because the invading forces were joined by settlers from the Danelaw. He received strong support from his son EDWARD THE ELDER, his daughter Æthelflæd, and her husband, Æthelred of Mercia, and in the critical year of 893 the great Danish fort at Benfleet was successfully stormed. The one Danish attempt to penetrate deeply into Wessex was halted by Edward the Elder. In 896 the Danes slowly dispersed to the Danelaw or overseas, and Alfred's new long ships fought with varying success against pirate raids on the south coast. Alfred's career was later embroidered by many heroic legends, but history alone justifies calling him Alfred the Great. See J. A. Giles, ed., *The Whole Works of King Alfred the Great* (1858, repr. 1969), biographies by E. S. Duckett (1956), P. J. Helm (1963), and H. R. Loyn (1967), F. M. Stenton, *Anglo-Saxon England* (3d ed. 1971).

Alfred University, at Alfred, N.Y., state and private support, coeducational, opened as a school 1836, chartered 1857 as Alfred University. It is especially known for the College of Ceramics, which is among the few institutions in the United States offering a doctoral program in ceramics. The college is administered by Alfred Univ., although it is a division of the State University of New York.

algae (ăl'jē) [plural of Lat. *alga*=seaweed], group of plants belonging to the most primitive subkingdom of the plant kingdom, the THALLOPHYTES, plants that lack true roots, stems, leaves, and flowers. Unlike the fungi, the other large group of thallophytes, the algae have chlorophyll. They are of world-wide distribution and form the chief aquatic plant life both in the sea and in fresh water. Practically all seaweeds are marine algae. The simplest algae are single cells (e.g., the diatoms), the more complex forms consist of many cells grouped in a spherical colony (e.g., Volvox), in a ribbonlike filament (e.g., *Spirogyra*), or in a branching thallus form (e.g., *Fucus*). The cells of the colonies are generally similar, but some are differentiated for reproduction and for other func-

tions Many algae are microscopic, though the marine thalloid forms, known as kelps, may attain a length of more than 100 ft (30 m). *Euglena* and similar genera are free-swimming one-celled forms that contain chlorophyll but that are also able, under certain conditions, to ingest food in an animal-like manner. They are therefore classified either as protozoan animals or as a unique group separate from both plant and animal phyla. The blue-green algae and green algae include most of the freshwater forms. The POND SCUM, a green slime found in stagnant water, is an alga, as is the green film found on the bark of trees. The more complex brown algae and red algae are chiefly saltwater forms, the green color of the chlorophyll is masked by the presence of other pigments. Algae, the major food of fish (and thus indirectly of many other animals), are a keystone in the food chain of life, they are the primary producers of the food that provides the energy to power the whole system. They are also important to aquatic life in their capacity to supply oxygen through photosynthesis, hence algae are a necessary component of a healthy aquarium. Research has investigated the possibility of sea gardening with algae (especially the diatoms, the most numerous of marine plants) as a solution to the problem of insufficient output of land agriculture to meet the needs of the growing world population. In experimental cultivation, algae utilize about 2% of available solar energy for photosynthesis and carbohydrate production, as compared to 0.1% for land plants in general. Algae have also been suggested as a source of oxygen and food for prolonged space travel. Seaweeds (e.g., AGAR) have long been used as a limited source of food, especially in the Orient. Algae are also much used as fertilizer. See the separate algal divisions CHLOROPHYTA, EUGLENOPHYTA, CRYPTOPHYTA, PYRROPHYTA, CHRYSOPHYTA, PHAEOPHYTA, RHODOPHYTA.

Algardi, Alessandro (alās-sān-drō algār'dē), 1595-1654, Italian sculptor and designer, b. Bologna. He studied under Ludovico Carracci. In Rome his friend Domenichino obtained his first commissions for him, the *Magdalene* and *St. John* statues for San Silvestro al Quirinale. When Bernini temporarily fell from favor, Algardi replaced him c. 1644 as the most important sculptor in Rome under Pope Innocent X and received numerous commissions, including some from Spain. Although greatly influenced by Bernini, he retained the classical inclination of the Bolognese in his work, lacking Bernini's emotional vitality. An example of Algardi's work in relief is *The Meeting of Leo and Attila* (St. Peter's). A few prints in the style of Agostino Carracci are attributed to Algardi.

Algarve (algār'vā), province (1970 est. pop. 316,200), 1,958 sq mi (5,070 sq km), extreme S Portugal, coextensive with Faro dist. The capital is FARO, and other important cities are Silves, Portimão, and LAGOS. Much fruit (almonds, citrus, grapes, olives, figs, pomegranates) is grown in Algarve, and there are offshore tuna and sardine fisheries. The region was settled by the Phoenicians and later prospered under the Moors, who made it their last stronghold in Portugal. Alfonso III completed its reconquest in 1250.

algebra, branch of MATHEMATICS concerned with operations on sets of NUMBERS or other elements that are often represented by symbols. In elementary algebra letters are used to stand for numbers, e.g., in the EQUATION $ax^2 + bx + c = 0$, the letters a , b , and c stand for various known constant numbers called coefficients and the letter x is an unknown variable number whose value depends on the values of a , b , and c and may be determined by solving the equation. Much of classical algebra is concerned with finding solutions to equations or systems of equations, i.e., finding the ROOTS, or values of the unknowns, that upon substitution into the original equation will make it a numerical identity. For example, $x = -2$ is a root of $x^2 - 2x - 8 = 0$ because $(-2)^2 - 2(-2) - 8 = 4 + 4 - 8 = 0$, substitution will verify that $x = 4$ is also a root of this equation. The equations of elementary algebra usually involve POLYNOMIAL functions of one or more variables (see FUNCTION). The equation in the preceding example involves a polynomial of second degree in the single variable x (see QUADRATIC). One method of finding the zeros of the polynomial function $f(x)$, i.e., the roots of the equation $f(x) = 0$, is to factor the polynomial, if possible. The polynomial $x^2 - 2x - 8$ has factors $(x+2)$ and $(x-4)$, since $(x+2)(x-4) = x^2 - 2x - 8$, so that setting either of these factors equal to zero will make the polynomial zero. In general, if $(x-r)$ is a factor of a polynomial $f(x)$, then r is a zero of the polynomial and a root of the equation $f(x) = 0$. To determine if $(x-r)$ is a factor, divide it

into $f(x)$, according to the Factor Theorem, if the remainder $f(r)$ (found by substituting r for x in the original polynomial) is zero, then $(x-r)$ is a factor of $f(x)$. In many cases a polynomial cannot be separated into simple factors because the roots of the equation are not real, e.g., $x^2 - 9$ separates into $(x+3)(x-3)$, which yields two zeros, $x = -3$ and $x = +3$, but $x^2 + 9$ does not have simple factors because its zeros are imaginary numbers. The Fundamental Theorem of Algebra states that every polynomial $f(x) = a_n x^n + a_{n-1} x^{n-1} + \dots + a_1 x + a_0$, with $a_n \neq 0$ and $n \geq 1$, has at least one zero, from which it follows that the equation $f(x) = 0$ has exactly n roots, which may be real or complex and may not all be distinct. For example, the equation $x^4 + 4x^3 + 5x^2 + 4x + 4 = 0$ has four roots, but two are identical and the other two are imaginary, the factors of the polynomial are $(x+2)(x+2)(x+i)(x-i)$, as can be verified by multiplication. Algebra is a generalization of arithmetic and gains much of its power from dealing symbolically with elements and operations (chiefly addition and multiplication) and relationships (such as equality) connecting the elements. Thus, $a+a=2a$ and $a+b=b+a$ no matter what numbers a and b represent. Modern algebra is yet a further generalization. It deals with operations that are not necessarily those of arithmetic and that apply to elements that are not necessarily numbers. The elements are members of a SET and are classed as a GROUP, a RING, or a FIELD according to the axioms that are satisfied under the particular operations defined for the elements. Among the important concepts of modern algebra are those of a MATRIX and of a VECTOR space. See Garrett Birkhoff and Saunders MacLane, *A Brief Survey of Modern Algebra* (1965), R. H. Bardell and Abraham Spitzbart, *College Algebra* (2d ed. 1966).

algebraic geometry, branch of GEOMETRY, based on ANALYTIC GEOMETRY, that is concerned with geometric objects (loci) defined by algebraic relations among their coordinates (see CARTESIAN COORDINATES). In plane geometry an algebraic curve is the locus of all points satisfying the POLYNOMIAL equation $f(x,y) = 0$, in three dimensions the polynomial equation $f(x,y,z) = 0$ defines an algebraic surface. In general, points in n -space are defined by ordered sequences of numbers $(x_1, x_2, x_3, \dots, x_n)$, where each n -tuple specifies a unique point and $x_1, x_2, x_3, \dots, x_n$ are members of a given FIELD (e.g., the complex numbers). An algebraic hypersurface is the locus of all such points satisfying the polynomial equation $f(x_1, x_2, x_3, \dots, x_n) = 0$, whose coefficients are also chosen from the given field. The intersection of two or more algebraic hypersurfaces defines an algebraic set, or variety, a concept of particular importance in algebraic geometry.

algebraic number: see NUMBER

Algeciras (alhāthē'rās), city (1970 pop. 81,622), Cadiz prov., S Spain, in Andalusia, on the Bay of Algeciras opposite Gibraltar. A Mediterranean seaport, it has fishing and tourist industries. It was the first Spanish town taken (711) by the Moors. In the naval engagements of July, 1801, near Algeciras, the British defeated the French and Spanish fleets.

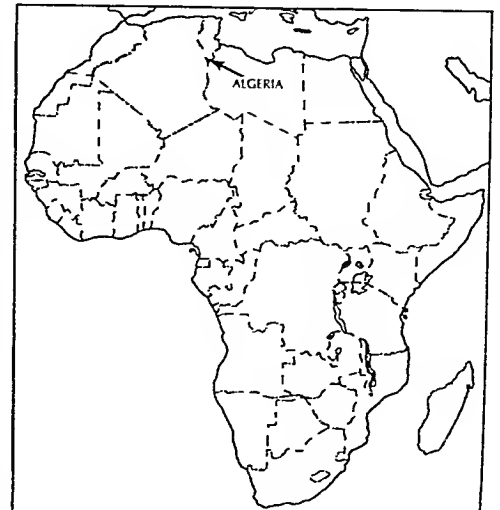

Algeciras Conference: see MOROCCO

Alger, Horatio (āl'jār), 1834-99, American writer of boys' stories, b. Revere, Mass. He wrote over 100 books for boys, the first, *Ragged Dick*, being published in 1867. By leading exemplary lives, struggling valiantly against poverty and adversity, Alger's heroes gain wealth and honor. His works were all extremely popular. *Silas Snobden's Office Boy*, which ran serially in the *Argosy* magazine in 1889-90, was not published as a book until 1973. See H. R. Mayes, *Alger: A Biography without a Hero* (1928), biography by Frank Gruber (1961), studies by J. W. Tebbel (1963) and R. D. Gardner (1964).

Alger, Russell Alexander, 1836-1907, U.S. Secretary of War (1897-99), b. near Medina, Ohio. After moving to Michigan he engaged in the lumber business, in which he made a fortune. During the Civil War he rose from the ranks to be a brevet major general. Alger was (1885-86) a popular governor of Michigan and was prominent in Republican national affairs. He was made Secretary of War by President McKinley, but the inefficiency of his department, which was highly disorganized when he took charge, and his appointment of William R. SHAFER as leader of the Cuban expedition were bitterly criticized, and he resigned. He was later (1902-7) Senator from Michigan.

Algeria (āl'jēr'ēā), Arab *Al Djazair*, Fr *Algerie*, republic (1973 est. pop. 15,200,000), 919,590 sq mi (2,381,741 sq km), NW Africa, bordering on Mauritania, Spanish Sahara, and Morocco in the west, on the

Mediterranean Sea in the north, on Tunisia and Libya in the east, and on Niger and Mali in the south. ALGIERS is the capital and largest city of the country, which is divided into 15 departments. Other major cities include ANNABA, BLIDA, CONSTANTINE, MOSTAGANEM, ORAN, SÉTIF, SIBI-BEL-ABBES, SKIKDA, and TLEMCEN. Algeria falls into two main geographical areas, the northern region and the much larger Saharan or southern region. The northern region, which is part of the MAGHREB, is made up of four parallel east-west zones: a narrow lowland strip (interspersed with mountains) along the country's 600-mi (970-km) Mediterranean coastline, the Tell Atlas Mts. (highest point c. 7,570 ft/2,310 m), which have a Mediterranean climate and abundant fertile soil, the sparsely populated, semiarid Plateau of the Chotts (average elevation c. 3,500 ft/1,070 m), containing a number of shallow salt lakes (chotts) and supporting mainly sheep and goat herders, and the Saharan Atlas Mts., a broken series of mountain ranges and massifs (highest point 7,638 ft/2,330 m), also a semiarid area and used chiefly for pasturing livestock. The arid and very sparsely populated Saharan region has an average elevation of c. 1,500 ft (460 m), but reaches greater heights in the Ahaggar Mts. in the south, where Algeria's loftiest point, Mt. Tahat (9,850 ft/3,002 m), is located. Most of the region is covered with gravel or rocks, with little vegetation, there are also large areas of sand dunes in the north (the Great Western Erg) and east (the Great Eastern Erg). In addition, the region contains several oases (including TOUGGOURT, BISKRA, Chenachane, In Zize, and Tin Rerhoh), where date palms are cultivated. The Cheliff River, which flows into the Mediterranean, is the largest of the country's few permanent streams. The great majority of Algeria's inhabitants are Berbers, who, beginning in the late 7th cent. A.D., adopted the Arabic language and Islam from the small number of Arabs who settled in the country. Many Berbers today are partly of Arab descent. About 15% of the population still speaks a Berber language, these inhabitants live mostly in the mountainous regions of the north, but also include the nomadic TUAREG of the Sahara. About 80,000 persons of European descent live in Algeria. Almost all Algerians are Sunni Muslims, Arabic is the official language of the country. About half of Algeria's workers are engaged in farming, but agriculture's contribution to the country's annual domestic product is much less than that of either mining or manufacturing, both of which began their main growth in the mid-1960s. The state plays a leading role in planning the economy and owns many important industrial concerns. Farming is concentrated in the fertile valleys and basins of the north and in the oases of the Sahara. The principal crops are wheat, barley, oats, potatoes, citrus fruit, wine grapes, olives, tomatoes, tobacco, figs, and dates. Large numbers of sheep, poultry, goats, and cattle are raised. Petroleum, found principally in the E Sahara and produced almost exclusively under the auspices of the state-owned SONATRACH corporation, is Algeria's most important mineral resource and its leading export. There are pipelines to the seaports of Arzew and BEJAIA in Algeria and As Sukhayrah in Tunisia. Much natural gas is also produced. Other minerals extracted in significant quantities include iron, lead, and copper ores, phosphates, zinc, mercury, antimony, kaolin, salt, and coal. The country's leading manufactures are processed food (notably olive oil),

beverages (especially wine), tobacco products, construction materials, chemicals, metals (including steel), refined petroleum, liquefied natural gas, textiles, and clothing. There are small forest-products and fishing industries. Algeria's limited rail and road networks serve mainly the northern region. The annual cost of Algeria's imports is usually slightly higher than the earnings from exports. The chief imports are food, machinery, iron and steel, and transport equipment. The principal exports besides petroleum (which accounts for about 70% of annual foreign exchange earnings) are wine, agricultural goods (especially fruit), and liquefied natural gas. Algeria's main trade partners are France, West Germany, the USSR, and Italy.

History to the early 19th cent. The earliest known inhabitants of Algeria were Berber-speaking nomads, who lived there in small political units by the 2d millennium B.C. In the 9th cent. B.C., CARTHAGE was founded in modern-day Tunisia, and Carthaginians eventually established trading posts at Annaba, Skikda, and Algiers. Coastal Algeria was known as Numidia and was usually divided into two kingdoms, both of which were strongly influenced by Carthage. The kingdoms of Numidia were united by King MASINISSA (c. 238–149 B.C.). In 146 B.C., Rome destroyed Carthage, and by 106 B.C., after defeating King JUGURTHA of Numidia, it held coastal Algeria. The Romans also gained control of the Tell Atlas region and part of the Plateau of the Chotts; the rest of present-day Algeria remained under Berber rulers and was outside Roman influence. Under Rome, the cities were built up and impressive public works (including roads and aqueducts) were constructed. Much grain was shipped from Algeria to Rome. By the Christian era, Algeria (divided into Numidia and Mauritania Caesariensis) was an integral, albeit relatively unimportant, part of the Roman Empire. One of its most famous citizens was St. AUGUSTINE (354–430), who was bishop of Hippo (now Annaba) and a leading opponent of DONATISM (which was in part a Berber protest against Roman rule). However, by the 5th cent. Roman civilization in Algeria had been eroded by the incursions of Berbers and Saharan tribes, and the destruction wreaked by the VANDALS (who passed through Algeria on their way to Tunisia) in 430–431 marked the end of effective Roman influence. Algeria again came under the control of numerous small indigenous political units. In the early 6th cent. a temporary veneer of unity and order was forged by the Byzantine Empire, which conquered parts of the North African coast including the region E of Algiers. In the late 7th and early 8th cent. Muslim Arabs conquered Algeria and ousted the Byzantines. Although few Arabs settled in the region, they had a profound influence as most of the Berbers quickly became Muslims and gradually absorbed the Arabic language and culture. In addition, the Arabs interbred with the Berbers. A number of small Muslim states rose and fell in Algeria, but generally the eastern part of the country came under the influence of dynasties centered in Tunisia (notably the Aghlabids of Kairouan) and the western part was controlled by states centered in Morocco (notably the ALMORAVIDS and ALMOHADS). Also, in the 8th and 9th cent. Tlemcen was the center of the Muslim Kharajite sect, and in the early 10th cent. the FATIMID dynasty began its major rise from a base in NE Algeria. In the late 15th cent. Spain expelled the Muslims from its soil and soon thereafter captured the coastal cities of Algeria. Algerians appealed to Turkish pirates (especially the BARBAROSSA brothers) for help, and, with the aid of the Ottoman Empire, they ended Spanish control by the mid-16th cent. Algeria then came under Ottoman rule. The country was at first governed by officials sent from Constantinople, but in 1671 the dey (ruler) of Algiers, chosen by local civilian, military, and pirate leaders to govern for life and virtually independent of the Ottoman Empire, became head of Algeria. The country was divided into three provinces (Constantine, Titteri, and Mascara), each governed by a bey. The power of the Ottomans, and later of the deys, did not extend much beyond the Tell Atlas. The coast was a stronghold of pirates (see BARBARY STATES) who preyed on the Mediterranean shipping of Christian countries. Privateering reached a high point in the 16th and 17th cent. and declined thereafter; there was a temporary increase during the Napoleonic Wars (early 19th cent.). A large percentage of the dey's revenues came from pirates. Considerable trade with Europe also was conducted from Algerian ports, the chief exports were wheat, fruit, and woven goods. The country was in addition a center of the slave trade, most of the slaves being persons captured by pirates.

Algeria in the 19th and 20th cent. In an effort to discourage privateering from Algerian ports, a British fleet bombarded Algiers in 1816. By this time the dey's power was greatly circumscribed by the three beys and by independent-minded Berber groups, and he effectively controlled only a small part of the coastal region. In the 1820s a minor dispute with the French reached a climax that had far-reaching effects: two Algerian merchants had delivered wheat to France in the 1790s but had never been paid for it. The dey unsuccessfully pressed their claim for payment, and, in exasperation, he flicked the French consul in Algeria with a fly whisk during an audience in 1827. To avenge this insult and also to gain glory for his lackluster regime, Charles X of France responded first by instituting a naval blockade of Algeria and then, in June, 1830, by invading the country. The dey capitulated in July, 1830, but most of the country resisted the French, who lapsed into a period of indecision regarding Algeria with the accession of Louis Philippe later in July, 1830. In 1834 the French renewed their drive to occupy Algeria and in 1837 they took Constantine, which had been the last major city to retain its independence. However, the Berber leader, ABD AL-KADIR, whose power was centered in the hinterland of Oran, held out against the French, and it was only in 1847, after a major military campaign against him led by Gen. T. R. BUGEAUD DE LA PICONNERIE, that he capitulated. Until 1910, France faced isolated (but occasionally fierce) resistance, mainly in Kabylia (see KABYLES) and the Sahara region. Colonization by Europeans (half of whom were French and the rest mainly Spanish, Italian, and Maltese) began c. 1840 and accelerated after 1848, when Algeria was declared to be French territory. By 1880 persons of European descent numbered about 375,000, and they controlled most of the better farmland. During the 19th cent. Algeria was usually administered under civil departments in Paris, but there were also short periods of military rule. In 1900 the country was given administrative and financial autonomy and placed under a governor general, who was advised by bodies whose membership was two-thirds European and one-third Muslim. By this time the colonists had started large-scale agricultural and industrial enterprises (introducing, among other things, wine and tobacco production) and had built roads, railroads, schools, and hospitals and modernized the cities. These improvements were intended for the Europeans' own use, and the Muslims benefited little from them, being left with scant political or economic power and with few legal rights. Although the official French policy in Algeria was to encourage the Muslims to adapt to European ways and thus to prepare them for full citizenship, very little was done to implement this policy. There was virtually no mixing between the European and Muslim populations. After World War I two types of protest groups were started by the Muslims. One movement called for a fully independent, Muslim-controlled Algeria, an early exponent was Messali Hadj, who in 1924 founded the Star of North Africa movement (later called, successively, the Party of the Algerian People and the Movement for the Triumph of Democratic Liberties, or MTLD). The other faction sought assimilation with France and the equality of Muslims and Europeans in Algeria; its chief exponent was Ferhat Abbas, who, however, after several rebuffs by the French in the 1930s and early 40s, by the mid-40s was calling for Algerian autonomy and by the early 50s advocated complete independence. In World War II, Algeria at first came under the Vichy regime, but later became (1942) Allied headquarters in North Africa; it also served for a time as the seat of Charles de Gaulle's Free French government. The hopes of the nationalists were buoyed by Allied statements during the war concerning self-determination, but the Muslims' actual status improved little. In May, 1945, a spontaneous nationalist uprising in Sétif resulted in the massacre of about 90 Europeans; the French responded by a sweeping crackdown during which at least 1,500 Muslims (and perhaps as many as 10,000) were killed. In 1947 the French national assembly passed the Statute of Algeria, under which the Muslims were to be given some additional political power. However, most of the statute's provisions were not implemented, and the colonists (in partnership with the French government) continued to control Algerian affairs. Despairing of ever gaining meaningful concessions from the colonists or the French government, a radical group of Muslims in 1954 seceded from Messali's MTLD, formed the National Liberation Front (FLN), its military arm was called the National Liberation Army or ALN), and on Nov. 1 attacked police posts

and other government offices in the Batna-Constantine region. In the following months the revolt gradually spread to other parts of the country. The FLN called for the establishment of an independent Algerian state controlled by the Muslim majority. The MTLD was reorganized into the Algerian Nationalist Movement, which, led by Messali, unsuccessfully competed with—and at times fought against—the FLN. On Aug. 20, 1955, the FLN carried out more extensive attacks on the colonists (especially in the Skikda area), and the French responded with severe reprisals. By 1956 the FLN had the support of virtually all Algerian nationalists except Messali, controlled much of the countryside, and was organizing frequent terrorist actions in the cities (especially Algiers). In 1957 the French successfully used massive measures to rid the cities of most of the terrorists, and the FLN was forced to concentrate on guerrilla activities in the rural areas; the French also constructed electrified barriers along Algeria's borders with Morocco and Tunisia in order to reduce the infiltration of men and materiel. By this time, about 500,000 French troops, including crack paratroopers, were stationed in Algeria. In May, 1958, there were demonstrations in Algeria by colonists and elements of the French army who feared that the government in France might negotiate a settlement with the Muslims that would undermine the Europeans' position, an ensuing political crisis in France resulted in the return to power of De Gaulle and the establishment of the Fifth French Republic. De Gaulle indicated a willingness to talk with the Muslims, but was imprecise as to the future of Algeria beyond a ceasefire. Fighting continued, and in 1959 the FLN established at Tunis the Provisional Government of the Algerian Republic (GPRA), with Ferhat Abbas as prime minister. By 1960, De Gaulle had come to recognize the inevitability of some form of Algerian independence, the main problem concerned the future status of the almost one million European colonists, many of whom had been born in Algeria. Sensing the direction of French policy, the colonists and army (both of whom aimed for the full integration of Algeria with France) staged major protests in Jan., 1960, and April, 1961, but both were put down by De Gaulle. In mid-1961, Ferhat Abbas resigned as prime minister of the GPRA and was replaced by Ben Yusef Ben Khedda. Shortly thereafter, negotiations with the French government began at Evian-les-Bains (in France), and in March, 1962, an agreement was signed. The accord provided for an end to the fighting and for the establishment of an independent Algerian state after a transition period; France and Algeria were to cooperate in economic and social affairs and France was to retain for a limited period military bases and the right to test nuclear devices in the Sahara. The people of France overwhelmingly approved the Evian agreement in a referendum held in early April, 1962. Members of the French army in Algeria, banded together in the Secret Army Organization (OAS), launched a terrorist campaign against Muslims in an attempt to prevent the implementation of the accord. However, in late April their leader, Gen. Raoul Salan, was captured and by late June the army revolt had been ended. Already in April the colonists had begun to leave Algeria in large numbers; by October only about 250,000 remained and most of them as well soon left. As a result of the more than seven years' fighting at least 100,000 Muslim and 10,000 French soldiers had been killed; in addition, many thousands of Muslim civilians and a much smaller number of colonists lost their lives. On July 1, 1962, the people of Algeria voted almost unanimously for independence in a referendum, and on July 3 France recognized Algeria's sovereignty. As a result of the fighting and of the exodus of colonists, the Algerian economy lay in ruins by mid-1962. Ben Khedda, the moderate leader of the GPRA, formed the initial Algerian government, but in Sept., 1962, he was replaced as prime minister by Ahmed BEN BELLA, a leftist radical who had the support of the ALN (led by Houari BOUMEDIENNE). A constituent assembly chosen in late 1962 established a strong presidential government, and in Sept., 1963, Ben Bella was elected president. Ben Bella, who increasingly concentrated power in his hands, followed a left-wing domestic policy that included the confiscation of European-held farms and the nationalization of various parts of the economy. There were border disputes with Morocco in 1963–64 that resulted in sporadic fighting; the disputes erupted again in 1967, but were settled by negotiation in 1972. On June 19, 1965, Ben Bella was deposed in a bloodless coup d'état by Boumedienne, his defense minister, who was angered by the army's

greatly reduced influence and by the deterioration of the economy. Boumedienne suspended the constitution and established a revolutionary council, of which he was president, to run the country. During his first years in power Boumedienne faced resistance from students and regional groups, but by the end of 1968 he had a secure hold on Algeria. Algeria gave strong vocal support to the Arabs in the Arab-Israeli wars of 1967 and 1973 and also contributed some soldiers and matériel (especially aircraft). After an initial slowdown Boumedienne increased the pace of state involvement in the economy. In 1971 he nationalized (with compensation) the French oil and natural gas companies active in Algeria, he planned thereby to increase production and thus to augment Algeria's revenues. By 1972 output had reached record levels, and there was a growing emphasis on the export of liquefied natural gas. Price rises for petroleum and natural gas in 1973-74 resulted in considerably higher export earnings. In the early 1970s, Algeria was on good terms with its North African neighbors, and gave moral support (if not much material aid) to the various movements against white minority rule in Africa. See Stephane Gsell et al., *Histoire d'Algérie* (1929), Edgar O'Ballance, *The Algerian Insurrection 1954-62* (1967), Frantz Fanon, *The Wretched of the Earth* (tr 1968), W. B. Quandt, *Revolution and Political Leadership Algeria, 1954-1968* (1969), David Ottaway and Marina Ottaway, *Algeria: the Politics of a Socialist Revolution* (1970), Charles-Andre Julien, *Histoire de l'Algérie contemporaine, conquête et colonisation, 1827-1871* (1964) and *History of North Africa* (tr 1970), A. A. Heggoy, *Insurgency and Counterinsurgency in Algeria* (1972).

Algerine War, early 19th-century conflict between Algiers and the United States. The TRIPOLITAN WAR (1801-5) had brought a temporary halt to the pirate activities of the Barbary States. However, during the subsequent Napoleonic Wars and the War of 1812 the Barbary pirates renewed their predatory raids on American Mediterranean commerce, and Algiers actually declared war on the United States. In 1815, Stephen DECATUR was sent to Algiers at the head of a squadron of 10 ships. After two minor engagements he sailed into the harbor of Algiers and forced (June 30) the dey of Algiers to sign a treaty renouncing U.S. tribute and agreeing to release all U.S. prisoners without ransom. Decatur then exacted similar guarantees from Tunisia (July 26) and Tripoli (Aug. 5), and the so-called Algerine War was ended.

Algiers (ālġēr'), Fr. *Alger* (ālzhā'), city (1966 pop. 943,142), capital of Algeria, N. Algeria, on the Bay of Algiers of the Mediterranean Sea. It is one of the leading ports of North Africa (wine, citrus fruit, iron ore, cork, and cereals are the major exports), as well as a popular winter resort and a commercial center. Industries include metallurgy, oil refining, automotive construction, machine-building, and the production of chemicals, tobacco, paper, and cement. Founded by the Phoenicians and called Icosium by the Romans, the city disappeared after the fall of the Roman Empire. It was reestablished in the late 10th cent. by the Muslims. Many of the Moors expelled from Spain in 1492 settled in Algiers. In 1511 the Spanish occupied an island in the city's harbor, but they were driven out when BARBAROSSA captured Algiers for the Turks. Algiers then became a base for the Muslim fleet that preyed upon Christian commerce in the Mediterranean (see BARBARY STATES). Under the Ottoman Empire, the city's population reached 100,000. The ruling Turkish official in Algeria, the dey of Algiers, made himself virtually independent of Constantinople in the 18th and 19th cent. As European navies repeatedly attacked Algiers, the city's prosperity, which was based on piracy, declined. When French forces captured the port in 1830, Algiers had less than 40,000 inhabitants. Algiers became headquarters for the Allied forces in North Africa in World War II, as well as for Charles de Gaulle's provisional French government. An anti-French uprising in the city in 1954 provided a major spark in the Algerian armed struggle for independence. In May, 1958, Algiers was the principal scene of a revolt that ended the Fourth French Republic and returned De Gaulle to power. During the final months before Algeria won independence (1962), bombings by the French terrorist Organization of the Secret Army (OAS) damaged industrial and communications facilities in Algiers. In 1973 a major conference of nonaligned nations was held there. The city is divided into the newer, French-built sector, with wide boulevards and modern administrative and commercial buildings, and the original Muslim quarter, with narrow streets, numerous

mosques, and the 16th century casbah (fortress), which was once the residence of the Turkish deys. Other points of interest in Algiers include the observatory, botanical gardens, the national library and museum, the Basilica of Notre Dame, and the Cathedral of Sacre Coeur, which was designed by Le Corbusier. The Univ. of Algiers dates back to 1909. Only a few thousand permanent European residents remain in the city.

Algoa Bay (ālġō'a), arm of the Indian Ocean, indenting SE Cape Province, Republic of South Africa. Discovered by the Portuguese in the late 15th cent., it was used as an anchorage. Port Elizabeth is on the shore of the bay.

Algol (āl'gōl), famous VARIABLE STAR in the constellation PERSEUS, Bayer designation β Persei, 1970 position R.A. 3^h06^m0^s, Dec. +40°50'. Algol's variation in apparent MAGNITUDE, from 2.06 to 3.28, is due to the fact that it is an eclipsing BINARY STAR, with one component revolving about the other with a period of 2 days, 20 hr, 49 min. Because the plane of revolution is almost parallel to the line of sight, the star dims noticeably when the dimmer component passes in front of, or eclipses, the brighter component, and dims again very slightly when the brighter component eclipses the dimmer one (see ECLIPSE), the primary minimum, when the brighter component is eclipsed, lasts about 10 hr. Algol is of SPECTRAL CLASS B8 V. It is about 105 light-years from the earth. The star is actually a quadruple system, with two other components orbiting but not eclipsing the nearby eclipsing pair. The name *Algol* comes from the Arabic *Ras al Ghul*, which means "demon's head," and the star is sometimes called the Demon Star.

Algonquian (ālġōng'kēan, -kwēan), branch of the Algonquian-Wakashan linguistic family of North America. See AMERICAN INDIAN LANGUAGES.

Algonquin Indians (ālġōng'kwīn, -kīn), small group of now extinct North American Indians. The name of the Algonquian branch of the Algonquian-Wakashan linguistic stock (to which they belonged) is derived from their name (see AMERICAN INDIAN LANGUAGES). They were among the first Indians with whom the French formed alliances, and their name was used to designate other tribes in the area. Despite French aid, they were dispersed in the 17th cent. by the Iroquois, and the remnants of the tribe found refuge chiefly near white settlements in Quebec and Ontario. The name is also spelled Algonkin.

algorithm (āl'garīth'm) or **algorism** (-rīz'm) [for al-Khwarizmi, 9th-century Persian mathematician], procedure used in calculations to simplify the operation; it involves direct manipulation of the figures without regard for the underlying principles of the operation. Much of ordinary arithmetic as traditionally taught consists of algorithms involving the fundamental operations of addition, subtraction, multiplication, and division. An example of an algorithm is the common procedure for division, e.g., the division of 1,347 by 8, in which the remainders of partial divisions are carried to the next digit or digits, in this case the remainder of 5 in the division of 13 by 8 is placed in front of the 4, and 8 is then divided into 54.

Algren, Nelson, 1909-, American novelist, b. Detroit. He grew up in Chicago, and much of his fiction is laid in the slums. His novels, such as *Never Come Morning* (1942), *The Man with the Golden Arm* (1949), and *A Walk on the Wild Side* (1956), are brutally realistic. In a lighter vein are the personal sketches collected in *Who Lost an American* (1963), *Notes from a Sea Diary* (1965), and *The Last Carousel* (1973).

Al-Hakam II: see HAKAM II AL-

Alhambra (ālġhām'brā), city (1970 pop. 62,125), Los Angeles co., S. Calif., a suburb NE of Los Angeles, inc. 1903. Its many manufactures include aircraft parts, electronic equipment, oil refinery machinery, airconditioners, and felt products.

Alhambra [Arabic, =the red], extensive group of buildings on a hill overlooking Granada, Spain. They were built chiefly between 1230 and 1354 and they formed a great citadel of the Moorish kings of Spain. After the expulsion of the Moors in 1492, the structures suffered mutilation, but were extensively restored after 1828. The Alhambra is a true expression of the once flourishing Moorish civilization and is the finest example of its architecture in Spain. It comprises remains of the citadel, the so-called palace of the kings, and the quarters once used by officials. The halls and chambers surround a series of open courts, which include the Court of Lions containing arcades resting on 124 white marble col-

umns. The interior of the building is adorned sumptuously with magnificent examples of the so-called honeycomb and stalactite vaulting, its walls and ceilings are decorated with geometric ornamentation of minute detail and intricacy, executed with surpassing skill in marble, alabaster, glazed tile, and carved plaster. See Washington Irving, *Legends of the Alhambra* (1832), A. F. Calvert, *The Alhambra* (1907), Stewart Desmond, ed., *The Alhambra* (1974).

Alhazen: see IBN AL-HAYTHAM.

Al Hillah (al hīl'la), city (1965 pop. 84,717), provincial capital, central Iraq, on a branch of the Euphrates River. It was built (c. 1100) largely of material taken from the nearby ruins of ancient Babylon. It is a port and the main cereal market of the middle Euphrates area.

Al Hudaidah: see HODEIDA, Yemen.

Al Hufuf: see HOFUF.

Alī (alē'), 600?-661, 4th caliph (656-61). He was the son of Abu Talib, Muhammad's uncle, but was more closely related to the Prophet as the husband of FATIMA. One of the Prophet's most faithful followers, he was expected to become caliph on Muhammad's death, but Abu Bakr was chosen. Alī succeeded only on Uthman's death. He was strongly opposed by AL-SHA, who incited a revolt in Iraq. Alī put down the disturbance, but he was never able to suppress MUAWIYA. Alī was murdered at Kufa by fanatics (the Kharijites), and his son HASAN abdicated in favor of Muawiya. The division in Islam between the SUNNI and SHIITES began in the time of Alī. He and his son HUSEIN are the great saints of the Shiites.

Ali, Muhammad (mahām'ad alē'), 1940-, American boxer. Originally named Cassius Marcellus Clay, Jr., he changed his name in 1964 on becoming a Black Muslim. After winning an Olympic gold medal in 1960, he turned professional. In 1964 he defeated Sonny Liston, winning the world heavyweight championship. Although this title was accepted by the public, it was not officially recognized by the World Boxing Association. Nevertheless, Alī twice defended his boxing title in 1965, defeating both Liston and Floyd Patterson. In 1967, however, various state and foreign boxing commissions stripped him of the title when he refused induction into the U.S. armed services on religious grounds. (The U.S. Supreme Court, in June, 1971, upheld Alī's draft appeal on religious grounds.) Prevented from fighting by the professional boxing establishment, he was finally granted a license to fight again in 1970. In 1971 he lost his first fight, it was to Joe Frazier, who was then champion. In 1974, Alī regained the championship by defeating George Foreman in a fight held in Zaïre. See biographies by Jose Torres (1971) and Budd Schulberg (1972).

Aliah (ālī'a) see ALVAH.

Aliakmon (alēak'mōn), longest river of Greece, c. 200 mi (320 km) long, rising in the mountains near Lake Prespa, N. Greece, and flowing SE then NE into the Thermaic Gulf. The river waters an agricultural region, Katoria and Verioia are along its course. The Aliakmon forms the western portion of the extensive Vardar River delta. It is also known as the Vistritsa River.

Alian (ālī'an) see ALVAN.

Alibamu Indians: see ALABAMA INDIANS.

Alibates Flint Quarries and Texas Panhandle Pueblo Culture National Monument: see NATIONAL PARKS AND MONUMENTS (table).

Alī Bey: see BADIA Y LEBLICH DOMINGO.

Alicante (alēkan'tā), city (1971 pop. 184,716), capital of Alicante prov., SE Spain, in Valencia. A Mediterranean port and resort, it has exports of wine, oil, cereals, fruit, and esparto from the fertile surrounding region. Textiles and tobacco and clay products are made. The Romans had a naval base on the site. The town was permanently recaptured from the Moors c. 1250. The Falangist leader Jose Antonio Primo de Rivera was executed by the Republicans in 1936 in Alicante.

Alice, city (1970 pop. 20,121), seat of Jim Wells co., S. Texas, inc. 1910. Long a cow town at a railroad junction, Alice is still a cattle-shipping center. Oil and natural gas are also important to its economy. Manufactures include oil well equipment and cottonseed oil. Nearby are a wildlife refuge, the great King Ranch, and several Gulf Coast resorts.

Alice Springs, town (1971 pop. 11,118), Northern Territory, Australia. It lies in a pastoral area near the center of the continent and at the terminus of the Central Australian RR. The town became important as a telegraph station on the overland route from Adelaide to Darwin. Gold, copper, wolfram, and mica are mined in the area. An aborigine reservation

is nearby Formerly called Stuart, Alice Springs was (1926-31) the capital of Central Australia, a former subdivision of the Northern Territory

alien, in law, person residing in one political community while owing ALLEGIANCE to another A legal procedure known as naturalization permits aliens to become CITIZENS The attitude toward aliens is a matter of custom, usage, and law All modern governments have laws covering the rights and privileges of aliens, and there is a large body of international law on the subject A country has the right to exclude undesirable aliens, and most countries, including the United States, forbid the admission of criminals, paupers, and the diseased A country has the right to exclude completely certain groups and nationalities, but such discrimination is likely to cause friction From the right to exclude aliens proceeds the right to establish the conditions upon which they will be admitted and to make special laws concerning them An alien, while he resides in a country, is subject to the laws of that country and not to those of his own country, except in the case of EXTRATERRITORIALITY jurisdiction A state distinguishes between aliens who are merely traveling or living there temporarily and those who have come to stay or to earn their livelihood, and wider powers are assumed over the second class Such aliens are subject to taxation and may even be drafted to serve in the national defense As a citizen of his own country, an alien may call upon it to intercede if he feels that the country in which he lives has failed properly to protect his person or property The home state usually points out or protests injustice, but it may threaten reprisals Such situations have frequently caused international disputes, and there is controversy as to how far a nation is justified in interfering in behalf of its nationals abroad On the other hand, an alien may find ASYLUM in the country to which he has fled unless treaties of EXTRADITION provide for the DEPORTATION of such refugees A state also has the right to expel an alien who was once admitted As population in a state increases and the competition for livelihood becomes more intense, a country may become less hospitable to aliens This process was seen in the United States in the 20th cent in more restrictive IMMIGRATION laws and more stringent deportation laws In time of war the laws governing aliens are stricter, and special restrictions usually govern enemy aliens Treaties between most governments provide that in case of war a reasonable period should be given enemy citizens in either country to withdraw under supervision After that time the remaining enemy aliens may be expelled or may be permitted to remain under whatever conditions the government chooses to impose Thus, in World War II, enemy aliens in the United States were required to register, were excluded from certain areas, and in some cases were interned Aliens in the United States are required to register each year under the Immigration and Nationality Act of 1952 See NATIONALITY

Alien and Sedition Acts, 1798, four laws enacted by the Federalist-controlled U.S. Congress, allegedly in response to the hostile actions of the French Revolutionary government on the seas and in the councils of diplomacy (see XYZ AFFAIR), but actually designed to destroy Thomas Jefferson's Republican party, which had openly expressed its sympathies for the French Revolutionaries Depending on recent arrivals from Europe for much of their voting strength, the Republicans were adversely affected by the Naturalization Act, which postponed citizenship, and thus voting privileges, until the completion of 14 (rather than 5) years of residence, and by the Alien Act and the Alien Enemies Act, which gave the President the power to imprison or deport aliens suspected of activities posing a threat to the national government President John Adams made no use of the alien acts Most controversial, however, was the Sedition Act, devised to silence Republican criticism of the Federalists Its broad proscription of spoken or written criticism of the government, the Congress, or the President virtually nullified the First Amendment freedoms of speech and the press Prominent Jeffersonians, most of them journalists, such as John Daly Burk, James T. Callender, Thomas COOPER, William DUANE (1760-1835), and Matthew LYON were tried, and some were convicted, in sedition proceedings The Alien and Sedition Acts provoked the KENTUCKY AND VIRGINIA RESOLUTIONS and did much to unify the Republican party and to foster Republican victory in the election of 1800 The Republican-controlled Congress repealed the Naturalization Act in 1802, the others were allowed to expire (1800-1801) See John C. Miller, *Crisis in Free-*

dom (1951, repr 1964), James Morton Smith, *Freedom's Fetters* (1956)

alienation, in property laws see TENURE

Aligarh (alēg'ūr'), city (1971 pop 254,008), Uttar Pradesh state, N central India A district administrative headquarters and an important agricultural trade center, it also has cotton mills Aligarh is famous chiefly for its university, opened in 1875 as Anglo-Oriental College, which is the leading school for Indian Muslims The city, whose native name is Koil, has ancient Buddhist remains and many Muslim buildings

alimentary canal: see DIGESTIVE SYSTEM

alimony, in law, allowance for support that, by court order, a husband pays to his wife if she is not living with him It is based on the COMMON LAW right of a wife to be supported by her husband Alimony is distinct from the husband's duty to contribute to the support of his minor children Temporary alimony is allowed pending the outcome of a suit for DIVORCE, for SEPARATION, or for a decree of NULLITY OF MARRIAGE, whether wife or husband initiated the suit Permanent alimony is the allowance to the wife after the action has been tried and the decree rendered In the United States, laws regulating alimony awards vary greatly among the states Generally it may be granted after separations or divorces, but not after annulments Alimony ceases on the death of the husband, because it is not payable out of his estate unless there are arrears Although remarriage does not necessarily terminate alimony, the amount may be reduced or cut off at the court's discretion if the second husband is able to support the wife In all cases the amount of, and the continuing need for, alimony are questions that can always be reopened in a court having jurisdiction over the parties The rule that the husband cannot obtain alimony from the wife has been changed in a few states but for the most part holds, since the wife generally has no duty to support the husband A decree awarding alimony is a court order issued to the husband personally, and failure to pay constitutes CONTEMPT OF COURT

Alingsås (a'līngsōs'), city (1970 pop 18,761), Alvsborg co, SW Sweden, on Lake Mjörn, chartered 1619 It is an industrial center Manufactures include textiles, leather goods, processed food, candy, beer, and metal goods

Aliotta, Antonio (antō'nyō ālyō'ta), 1881-1964, Italian philosopher, b. Salerno He taught at the universities of Padua and Naples He wrote a critical analysis of contemporary philosophy, *The Idealistic Reaction Against Science* (1912, tr 1914), and then became identified with pragmatism, primarily in opposition to the idealism of Benedetto Croce and Giovanni Gentile His complete works, in Italian, were published in 7 volumes (1949-54)

Ali Pasha (alē' pasha'), 1744?-1822, Turkish pasha [military governor] of Yannina (now Ioannina, Greece), a province of the Ottoman Empire (Turkey) He was called the Arslan [lion] of Yannina His father, governor at Tepelene in S Albania, was murdered, and Ali went to live with the mountain brigands who infested the country He soon rose to leadership among them, came to the attention of the Turkish government, and as its agent put down the rebellion of a governor at Scutari in Albania About 1787 he became governor of Yannina, where his power grew until he ruled as a quasi-independent despot over most of Albania and Epirus He made war on the French along the Adriatic coast and entered an alliance (1814) with Great Britain Valuing Ali's services, the sultan let him do as he wished until, in 1820, Ali ordered the assassination of an opponent in Constantinople Sultan Mahmud II ordered Ali deposed Ali refused to comply, thus keeping Turkish troops engaged against himself while they were needed against the Greeks, who had begun their fight for independence Ali was assassinated by an agent of the Turks, his head was exhibited at Constantinople The wild yet cultured court of Ali was described by French and English visitors, notably by Byron in *Childe Harold*

aliphatic compound (āl'əfāt'ik), any of a large class of organic compounds whose carbon atoms are joined together in straight or branched open chains rather than in rings The hydrocarbons of the ALKANE, ALKENE, and ALKYNE series are aliphatic compounds, as are FATTY ACIDS and many other compounds Most compounds containing rings are AROMATIC COMPOUNDS, compounds that contain a ring but are not aromatic compounds are called alicyclic

Aliquippa (ālīkwīp'a), borough (1970 pop 22,277), Beaver co, W Pa., in a highly industrialized region along the Ohio River N of Pittsburgh, inc 1894 Ali-

quippa grew after the expansion of steel mills in 1909

Alisal, Calif see SALINAS

alizarin (ālīz'arīn), or 1,2-dihydroxyanthraquinone, mordant vegetable dye obtained originally from the root of the madder plant (*Rubia tinctorum*), in which it occurs as a glucoside The term also includes a group of synthetic dyestuffs prepared from coal-tar derivatives A method for the synthesis of alizarin was first discovered (1868) by Karl Graebe and Karl Liebermann, German chemists With salts of metals the compound forms brilliant LAKES, although by itself it is a poor dye Turkey red is produced with an aluminum mordant, other shades of red with calcium and tin salts, dark violet with iron mordants, and brownish red with chromium Purpurin, also used in dyeing, occurs with alizarin in madder and is produced synthetically

Al-Jadida (al-jadē'da), city (1960 pop 40,302), W Morocco, on the Atlantic Ocean Agricultural products are exported from the port It was seized by the Portuguese in 1502 and after 1541 was the only place Portugal held in Morocco Repeatedly besieged by the Moroccans, it was finally captured by them in 1769 The city was formerly called Mazagan

Al Jazirah (al jazē'ra) or **Gazira** (gazē'ra), region, central Sudan, occupying the tract between the White and Blue Niles south of their convergence at Khartoum The Arabic word *Jazira* means "island" or "peninsula" WAD MADANI is the region's chief town The plan to develop the region for irrigated cotton cultivation has made it by far Sudan's leading cotton-producing area Originally operated by a private company in conjunction with the government, the entire project was nationalized in 1950 The Sannar Dam and the irrigation canals built there since 1925 have put more than 1 million acres (400,000 hectares) into cultivation Profits from the cotton crop are divided among the government, the board that supervises the project, and the tenant farmers, who provide the labor The region was under the hegemony of the Funj rulers of Sannar from 1504 to 1821 and later passed to Turco-Egyptian and British control

Aljubarrota (əlzhōbər-rō'ta), village, Leiria dist, W central Portugal, in Beira Litoral On Aug 14, 1385, it was the site of the momentous battle in which the Portuguese, aided by English archers, defeated the forces of the Spanish King John I of Castile, thus assuring Portuguese independence Nun'Álvares Pereira was the Portuguese hero of the battle

alkali (āl'kalī) [Arabic, *al-gili*=ashes of saltwort], HYDROXIDE of an ALKALI METAL Alkalies are readily soluble in water and form strongly basic solutions with a characteristic acrid taste They neutralize acids, forming salts and water Strong alkalies (e.g., those of sodium or potassium) are sometimes called caustic alkalies The term *alkali* originally applied to salts obtained from plant ashes and is sometimes applied to a carbonate of sodium or potassium or to the hydroxide of an ALKALINE-EARTH METAL

alkali metals, metals found in group Ia of the PERIODIC TABLE Compared to other metals they are soft and have low melting points and densities Alkali metals are powerful reducing agents and form univalent compounds All react violently with water, releasing hydrogen and forming hydroxides They tarnish rapidly even in dry air They are never found uncombined in nature In order of increasing atomic number the alkali metals are LITHIUM, SODIUM, POTASSIUM, RUBIDIUM, CESIUM, and FRANCIUM

alkaline dry cell: see CELL, in electricity

alkaline-earth metals, metals constituting group IIa of the PERIODIC TABLE Generally, they are softer than most other metals, react readily with water (especially when heated), and are powerful reducing agents, but they are exceeded in each of these properties by the corresponding alkali metal They form divalent compounds In order of increasing atomic number the alkaline-earth metals are BERYLLIUM, MAGNESIUM, CALCIUM, STRONTIUM, BARIUM, and RADIUM

alkaline earths (āl'kalīn, -līn), oxides of the ALKALINE EARTH METALS, especially of calcium, strontium, and barium They are not readily soluble in water and form solutions less basic than those of alkalies

alkaloid, any of a class of organic compounds composed of carbon, hydrogen, nitrogen, and usually oxygen that are often derived from plants Although the name means alkalilike, some alkaloids do not exhibit alkaline properties Many alkaloids, though poisons, have physiological effects that render them valuable as medicines For example, curarine, found in the deadly extract CURARE, is a powerful muscle relaxant, ATROPINE is used to dilate the pupils of the

eyes, and physostigmine is a specific for certain muscular diseases. Narcotic alkaloids used in medicine include MORPHINE and CODEINE for the relief of pain and COCAINE as a local anesthetic. Other common alkaloids include QUININE, CAFFEINE, NICOTINE, STRYCHNINE, SEROTONIN, and LYSERGIC ACID DIETHYLAMIDE. Aconitine is the alkaloid of ACONITE. Cinchonine and quinine are derived from CINCHONA, coniine is found in poison HEMLOCK, and reserpine is an extract of rauwolfia roots. Emetine is an alkaloid of IPECAC.

alkalosis (āl'kalō'sās) see ACIDOSIS

Alkan, Charles Henri Valentin (shārl aNré'vālaNtān' ālkān'), 1813-88, French pianist and composer, his original surname was Morhange. He began studying piano at the Paris Conservatory at the age of 6. Throughout his career he was admired for his skill as a performer. Alkan wrote mainly for the piano. His most influential works were the technically formidable *Études* (Op. 35 and 39), which greatly enlarged the piano techniques of the day. Much of his music was program music.

alkane (āl'kān), any of a group of aliphatic hydrocarbons whose molecules contain only single bonds (see CHEMICAL BOND). Alkanes have the general chemical formula C_nH_{2n+2} . An alkane is said to have

been cred or expelled in 1910. A 12th-century castle built by the Crusaders at Al Karak is well preserved.

alkene (āl'kēn), any of a group of aliphatic hydrocarbons whose molecules contain one or more carbon-carbon double bonds (see CHEMICAL BOND). Alkenes with only one double bond have the general formula C_nH_{2n} . In the International Union of Pure and Applied Chemistry (IUPAC) system of chemical nomenclature, the name of an alkene is derived from the name of the corresponding ALKANE by replacing the -ane alkane suffix with -ene and, if necessary, adding a prefix to indicate the location of the dou-

ethylene (ethene)

propylene (propene)

butylene (1 butene)

butylene (2 butene)

Alkenes

ble bond in the molecule. The IUPAC name of the simplest alkene, $H_2C=CH_2$, is ethene, which is derived from ethane. Propene is related to propane. Two alkenes, 1-butene and 2-butene, are related to butane, these two compounds, which differ in the location of the double bond in their molecules, are structural ISOMERS. In addition to these IUPAC names, many of the alkenes have common names, e.g., ethene is called ethylene and propene propylene. The alkenes as a group are sometimes called the ethylene series. Since the carbon-carbon double bond is sometimes called an olefinic linkage, the alkenes are sometimes called the olefins. Many of the reactions in which alkenes take part involve the cleavage of half the carbon-carbon double bond and subsequent formation of two single bonds, one to each of the adjacent carbon atoms. Such reactions include hydrogenation, with the formation of an alkane, and hydrolysis, with the formation of an alcohol.

Al-Khowarizmi (al-khōwarēz'mē), fl. 820, Arabian mathematician of the court of Mamun in Baghdad. His treatises on Hindu arithmetic and on algebra made him famous. He is said to have given algebra its name, and the word *algorithm* is said to have been derived from his name. Much of the mathematical knowledge of medieval Europe was derived from Latin translations of his works.

Alkmaar (āl'kām), town (1971 pop. 51,643), North Holland prov., NW Netherlands. It is an important market town and has varied industries. The Edam-cheese market, held weekly in front of the 16th-century weighhouse, is world famous. Alkmaar was chartered in 1254. Its successful defense (1573) against Spanish troops was a turning point in the revolt of the Netherlands.

Al Kufah (āl kōō'fā), town (1965 pop. 30,862), S central Iraq. Founded (638) by Caliph Umar I, it was one of the two Muslim centers (the other was BASRA) of the early Ummayyad caliphs.

Al Kut (āl kōōt), town (1965 pop. 42,116), SE Iraq, on the Tigris River. It is a port and a market center for grains, dates, fruit, and vegetables. Much of the town was destroyed during World War I. Al Kut was taken from the Turks in Sept., 1915, by the British under Gen. Charles Townshend, who then advanced north to attack Baghdad. Defeated by the

Turks, he retreated to Al Kut, his small army withstood siege by the Turks for 143 days before surrendering in April, 1916. The town was recaptured by Gen. S. F. Maude in 1917 in his successful advance on Baghdad. It is also called Kut-al-Amara or Kut-el-Amara.

alkyl group (āl'kīl), in chemistry, group of carbon and hydrogen atoms derived from an ALKANE molecule by removing one hydrogen atom (see RADICAL). The name of the alkyl group is derived from the name of its alkane by replacing the -ane suffix with -yl, e.g., methyl, CH_3 , from methane, CH_4 , and ethyl, C_2H_5 , from ethane, C_2H_6 . In some cases different alkyl groups can be formed from the same alkane by removing different hydrogen atoms, the alkyl groups are then distinguished by adding a prefix, e.g., 1-propyl or n-propyl, $CH_3CH_2CH_2$, and 2-propyl or isopropyl, $CH(CH_3)_2$, both formed from propane, $CH_3CH_2CH_3$. When a FUNCTIONAL GROUP is joined with an alkyl group, replacing the hydrogen that was removed, a compound is formed whose characteristics depend largely on the functional group.

alkyne (āl'kīn), any of a group of aliphatic hydrocarbons whose molecules contain one or more carbon-carbon triple bonds (see CHEMICAL BOND). Alkynes with one triple bond have the general formula C_nH_{2n-2} . In the International Union of Pure and Applied Chemistry (IUPAC) system of chemical nomenclature, the name of an alkyne is derived from the name of the corresponding ALKANE by replacing the -ane alkane suffix with -yne and, if necessary,

acetylene (ethyne)

propyne

1 butyne

Alkynes

adding a prefix to indicate the location of the triple bond in the molecule. The IUPAC name of the simplest alkyne, $HC\equiv CH$, is thus ethyne, which is derived from ethane. Ethyne is more commonly known as ACETYLENE, it is an extremely important starting material in commercial chemical synthesis. The next simplest alkyne is propyne, $CH_3C\equiv CH$. There are two butynes, 1-butyne and 2-butyne, which are structural ISOMERS that differ in the location of the triple bond in their molecule. The alkynes are sometimes referred to as the acetylene series, the higher members of the series being named as derivatives of acetylene, e.g., propyne as methylacetylene, 1-butyne as ethylacetylene, and 2-butyne as dimethylacetylene. The usefulness of the alkynes in chemical synthesis is due both to the reactions of the triple bond itself and to the relative acidity of a hydrogen atom bonded to a triply bonded carbon.

Allah (āl'a, a'la), Arabic name of GOD. It is used not only in ISLAM but also among Arabic-speaking Christians. The name Allah was well known in pre-Islamic Arabia, when religion there was polytheistic. It was the Prophet Muhammad who emphasized the uniqueness of the god Allah and introduced the idea of monotheism to Arabia. See S. M. Zwemer, *The Moslem Doctrine of God* (1905), F. M. Fitch, *Allah, the God of Islam* (1950, repr. 1967), Daud Rahbar, *God of Justice* (1960).

Allahabad (āl'ahābād', -bād'), city (1971 pop. 493,524), Uttar Pradesh state, N central India. On the site of Prayag, an ancient Indo-Aryan holy city, Allahabad is at the junction of two sacred rivers, the Jumna and the Ganges, and is visited by many Hindu pilgrims. The oldest monument is a pillar (c. 242 B.C.) with inscriptions from the reign of ASOKA. The city was the scene of much fighting in the INDIAN

ethane

propane

butane

Alkanes

a continuous chain if each carbon atom in its molecule is joined to at most two other carbon atoms, it is said to have a branched chain if any of its carbon atoms is joined to more than two other carbon atoms. The first four continuous-chain alkanes are METHANE, CH_4 , ETHANE, C_2H_6 , PROPANE, C_3H_8 , and BUTANE, C_4H_{10} . Names of continuous-chain alkanes whose molecules contain more than five carbon atoms are formed from a root that indicates the number of carbon atoms and the suffix -ane to indicate that the compound is an alkane, e.g., alkanes with 5, 6, 7, 8, 9, and 10 carbon atoms in their molecules are pentane, hexane, heptane, octane, nonane, and decane, respectively. The name of a branched-chain alkane is formed by adding prefixes to the name of the continuous-chain alkane from which it is considered to be derived, e.g., 2-methylpropane (called also isobutane) is thought of as being derived by replacing one of the hydrogen atoms bonded to the second (2-) carbon atom of a propane molecule with a methyl (CH_3) group, forming $CH_3CH(CH_3)_2$. Chemically, the alkanes are relatively unreactive. They are obtained by fractional distillation from petroleum and are used extensively as fuels. The alkanes are sometimes referred to as the methane series (after the simplest alkane) or as paraffins.

Al Karak (āl kārāk'), town, W central Jordan. It is also known as Krak. It is a road junction and an agricultural trade center. The ancient Kir Moab (also mentioned in the Bible as Kir Hareseth, Kir Hareh, and Kir Heres), it was the walled citadel of the Moabites. Al Karak played an important role in the Crusades. The lordship of Al Karak and Montreal was one of the chief baronies of the Latin Kingdom of Jerusalem. The brigand Reginald of Châtillon was lord of Al Karak and Montreal when, in 1187, he attacked a caravan led by Sultan SALADIN and thus provoked the events leading to the fall of Jerusalem. Al Karak was taken by Saladin in 1188 after a long siege. The town was an archiepiscopal see from the early Christian era until the Christians were massa-

MUTINY (1857) Allahabad was the capital of the United Provinces from 1901 to 1949. It is a district administrative headquarters and trading center and has a university.

All-American Canal, 80 mi (129 km) long, SE Calif., part of the Federal irrigation system of the Hoover Dam. Built between 1934 and 1940 across the Colorado Desert, the canal is entirely within the United States and replaces the Inter-California Canal, which passes through Mexico. The Imperial Dam, NE of Yuma, Ariz., diverts water from the Colorado River into the All-American Canal, which runs W to Calexico, Calif. Smaller canals move water into the Imperial Valley, the Coachella Canal branches NW to the Coachella Valley. This canal system irrigates more than 630,000 acres (254,961 hectares) and has greatly increased crop yield in the area, problems of drainage and salinity exist, however. The All-American Canal also supplies water to San Diego, Calif.

Allan, Sir Hugh, 1810-82, Canadian financier and shipowner, b. Scotland. He emigrated to Canada in 1826, was employed by a large shipbuilding company in Montreal, and later founded the Allan Line of steamships. He was given the contract to build the Canadian Pacific Railway, but the PACIFIC SCANDAL (1873) led to its cancellation.

Allegheny (ăl'agā'nē, äl'agā'nē), river, 325 mi (523 km) long, rising in N central Pa., and flowing NW into N.Y., then SW through Pa. to the Monongahela River, with which it forms the Ohio River at Pittsburgh, drains 11,580 sq mi (29,992 sq km). Before the railroad era, the river was an important commercial route and is still used to transport coal and other bulky freight. Kinzua Dam (completed in 1965), a federal flood-control project on the river, forms a large lake, there are also dams on the river's tributaries. The Allegheny's basin has coal, oil, and natural gas.

Allegheny College, at Meadville, Pa., United Methodist, coeducational, founded 1815, opened 1816.

Allegheny Mountains, dissected plateau, western part of the Appalachian Mts., extending c 500 mi (800 km) SW from N Pa. to SW Va., rising to c 4,860 ft (1,480 m) at Spruce Knob, the highest peak in West Virginia. The E Alleghenies, with a steep escarpment often called the Allegheny Front (c 1,500-1,600 ft/460-490 m high) are more rugged than the western portion, which is a plateau extending into Ohio and Kentucky. The Alleghenies, formed by the folding of sedimentary rocks, have been subsequently reduced by erosion. The mountains are rich in coal and timber and contain iron ore, petroleum, and natural gas.

Allegheny Portage Railroad National Historic Site: see NATIONAL PARKS AND MONUMENTS (table).

allegiance, formal tie that binds an individual to another individual or institution. The term usually refers to a person's obligation of obedience to a government in return for the protection of that government, although it may have reference to any institution that one is bound to support. Allegiance in strict usage is a legal tie only, but as used in ordinary speech, the term may include supplemental emotional ties that make it loosely synonymous with loyalty. In the United States allegiance is required of both CITIZENS and resident aliens. There are four types of allegiance: natural allegiance, which arises from membership by birth within a political society; express allegiance, which arises from an oath or promise to support a political society and usually results from NATURALIZATION; local allegiance, in which an alien owes temporary allegiance to a government for the protection it offers; and legal allegiance, which arises in certain cases from an oath taken to support a government temporarily, as when a foreign soldier joins its armed forces. Under the customary law of Europe a subject did not have the right to change his allegiance without the consent of his government. In 1868 the United States challenged this notion and declared that it was the right of any citizen to voluntarily expatriate himself, that is, to transfer voluntarily his allegiance to another government. Great Britain provided the same opportunity for its citizens in 1870, and thereafter various other European states followed similar policies. The process of EXPATRIATION, however, is by no means universal.

allegory, in literature, symbolic story that serves as a disguised representation for meanings other than those indicated on the surface. The characters in an allegory often have no individual personality, but are embodiments of moral qualities and other abstractions. The allegory is closely related to the parable, fable, and metaphor, differing from them largely in intricacy and length. A great variety of lit-

erary forms have been used for allegories. The medieval morality play *Everyman*, personifying such abstractions as Fellowship and Good Deeds, recounts the death journey of Everyman. John Bunyan's *Pilgrim's Progress*, a prose narrative, is an allegory of man's spiritual salvation. Spenser's poem *The Faerie Queene*, besides being a chivalric romance, is a commentary on morals and manners in 16th-century England as well as a national epic. Although allegory is still used by some authors, its popularity as a literary form has declined in favor of a more personal form of symbolic expression (see SYMBOLISTS).

allelu (äl'ēl') see GENETICS

Alleluia, Latin form of the expression HALLELUJAH.

Allen, Ethan, 1738-89, hero of the American Revolution, leader of the GREEN MOUNTAIN BOYS, and promoter of the independence and statehood of Vermont, b. Litchfield (?), Conn. He had some schooling and was proud of his deist opinions, which he later incorporated in *Reason the Only Oracle of Man* (1784). After fighting briefly in the French and Indian Wars, he interested himself in land speculation, and in 1770 he appeared as one of the proprietors in the NEW HAMPSHIRE GRANTS. He and his brothers, notably Ira Allen, became the leaders of the New England settlers and speculators in the disputed lands—invertebrate enemies of the Yorkers (settlers under New York patents) and violent opponents of all attempts of New York to exert control in the area. He was active in forming the Green Mountain Boys and became their leader in defying the New York government and harrying the Yorkers. Governor Tryon of New York put a price on the heads of Allen and two of his followers, but Ethan was not captured. After the outbreak of the American Revolution, he made the Green Mountain Boys into an independent patriot organization. Joined by Benedict ARNOLD (with a commission from Massachusetts) and some Connecticut militia, Ethan Allen and his men captured Fort Ticonderoga from the British on May 10, 1775. Legend says that when the British officer asked him under what authority he acted, Ethan Allen roared, "In the name of the Great Jehovah and the Continental Congress!" The story is, however, apocryphal. Allen then urged an expedition against Canada, and the Green Mountain Boys were attached to Gen. P. J. Schuyler's invasion force, but the men chose not Allen, but his cousin Seth WARNER, as leader. Allen went on the expedition and in a rash effort to capture Montreal before the main Continental army arrived was captured (Sept., 1775) by the British. He told his own story of this in the popular *Narrative of Colonel Ethan Allen's Captivity*, which appeared in 1779, a year after he had been exchanged. He returned to Vermont, which had declared its independence but was unrecognized by the Continental Congress. Ethan and his brother Ira then devoted themselves to insuring the new political unit in one way or another. The region remained in danger of British attack, and the British late in 1779 opened negotiations with Ethan Allen in an attempt to attach Vermont to Canada. No conclusion was reached, and the victory at Yorktown ending the American Revolution also ended the talks. Ethan Allen withdrew from politics in 1784. When he died, Vermont was still independent and still dickering with Congress and dealing with internal struggles between the Allen party and their opponents. See biography by C. A. Jellison (1969).

Allen, Frederick Lewis, 1890-1954, American social historian and editor, b. Boston, grad. Harvard (B.A., 1912, M.A., 1913). He is best remembered for his journalistic but nonetheless penetrating works of social history, including *Only Yesterday* (1932), *The Lords of Creation* (1935), *Since Yesterday* (1940), *The Great Pierpont Morgan* (1949), and *The Big Change* (1952). After teaching English at Harvard, he was an assistant editor of the *Atlantic Monthly* (1914-16), then managing editor of *The Century* (1916-17). In 1923 he began working for *Harper's Magazine*, where he remained until 1953, becoming chief editor in 1941.

Allen, Hervey, 1889-1949, American novelist and poet, b. Pittsburgh, grad. Univ. of Pittsburgh, 1915. After service in World War I, he taught English in Charleston, S.C., where, in collaboration with DuBose Heyward, he wrote *Carolina Chansons* (1922), a volume of verse. He wrote other books of poetry but is best known for his excellent biography of Poe, *Israfel* (1926), and the picaresque novel *Anthony Adverse* (1933), which achieved enormous popular success.

Allen, Ira, 1751-1814, political leader in early Vermont, b. Cornwall, Conn. He was the younger brother and the assistant of Ethan ALLEN. Although

he was a member of the GREEN MOUNTAIN BOYS, he took little part in their activities. His cool shrewdness, his adeptness in business matters, and his brilliant planning complemented the colorful vigor and rash violence of his brother. He organized the Onion River Land Company and secured the lands around the Winooski River and Lake Champlain that the Allens worked hard to protect. Ira Allen took part in the conventions at Dorset and Westminster that brought about the independence of VERMONT, and he was a leading figure in its political life in the years following, holding many offices. He was involved in the long negotiations with the British and was accused of treason. After Vermont became a state he was forced out of politics. He helped to establish the Univ. of Vermont. In 1798, Allen published his *Natural and Political History of the State of Vermont*. See biography by J. B. Wilbur (1928).

Allen, James Lane, 1849-1925, American novelist, b. Lexington, Kentucky. Among his stylized, "genteel" novels set in his native region are *A Kentucky Cardinal* (1894), *Aftermath* (1895), and *The Choir Invisible* (1897). See studies by W. K. Bortoff (1964) and G. C. Knight (1935, repr. 1967).

Allen, Richard, 1760-1831, American clergyman, founder of the African Methodist Episcopal Church. He was born a slave in Philadelphia. He became pastor of a Negro group that had seceded from the Methodist Episcopal Church in Philadelphia. When the African Methodist Episcopal Church was organized nationally (1816), Allen was consecrated its first bishop. See biographies by M. M. Mathews (1963) and C. V. R. George (1973).

Allen, William, 1704-80, American jurist, b. Philadelphia. He and his father-in-law, Andrew Hamilton, decided the choice of Philadelphia instead of Chester as provincial capital, and he helped finance the building of Independence Hall. Allen was (1750-74) chief justice of Pennsylvania, secured (1763) postponement of the sugar duties, and helped (1765) Benjamin Franklin in his efforts to have the Stamp Act repealed. He wrote *The American Crisis* (1774), containing a plan for colonial reconciliation with England. When it was not accepted, he made his home in England. Allentown, Pa., was named for him.

Allen, Bog of, area of several peat bogs c 375 sq mi (971 sq km), with patches of cultivable land, in the central lowlands, E Republic of Ireland. The bog is crossed by the Grand and Royal canals. It is a source of fuel and contains peat-fired electrical generating stations.

Allen, Lough (lōkh, lōk), lake, 8 mi (12.9 km) long and 3 mi (4.8 km) wide, Co. Leitrim and Co. Roscommon, N Republic of Ireland. The upper Shannon River flows through the lake.

Allenby, Edmund Henry Hynman Allenby, 1st Viscount (äl'ənbē), 1861-1936, British field marshal. Educated at Sandhurst, he saw active service in Bechuanaland (1884-85) and Zululand (1888) and in the South African War (1899-1902). When World War I broke out (1914), he commanded first the cavalry and then (1915-17) the 3d Army in France. Appointed commander of the Egyptian Expeditionary Force in June, 1917, he waged the last of the great cavalry campaigns by invading Palestine, capturing Jerusalem, and ending Turkish resistance after the battle of Megiddo (Sept. 18-21, 1918). He served as British high commissioner for Egypt and the Sudan (1919-25). He was made viscount in 1919. See A. P. Wavell, *Allenby* (1941) and *Allenby in Egypt* (1945), Brian Gardner, *Allenby of Arabia* (1965).

Allende, Ignacio (ēgna'syō ayān'dā), 1779-1811, Mexican revolutionist. He was a captain in the army when he joined the movement against Spanish domination. He played a prominent part in the revolution and after the great defeat at Calderon Bridge (Jan. 17, 1811) took chief command of the forces. His seizure of power left Miguel HIDALGO Y COSTILLA, with whom he had quarreled, only nominal control. The revolutionists went northward, hoping to reach the United States, but the treachery of one of their leaders led to capture by the royalists. Allende was shot at Chihuahua.

Allende Gossens, Salvador (salvathōr' ayān'dā gō'sāns), 1908-73, president of Chile (1970-73). A physician, he helped found the Chilean Socialist party in 1933 and later served as minister of health (1939-42) and as president of the senate (1965-69). He ran for president several times, and on his fourth try (1970) he won by a narrow plurality, thus becoming the first freely elected Marxist in the Western Hemisphere. Attempting to turn Chile into a socialist state, he nationalized numerous industries (including the giant copper operations) and pushed exten-

sive land reform. However, as a minority president he lacked the popular support necessary for such drastic measures, and much of the nation opposed him. Soaring inflation and widespread shortages sparked a period of crippling strikes and violence, caused at least in part by the undercover activities of the US Central Intelligence Agency. In Sept., 1973, Allende was overthrown in a bloody military coup, during which he apparently committed suicide (his wife asserted that he was murdered). He was succeeded as president by Gen. Augusto Pinochet Ugarte.

Allen Park, city (1970 pop. 40,747), Wayne co., SE Mich., a suburb of Detroit, inc. as a city 1957. Its manufactures include automobiles, tires, liquor, bread, and potato chips. The area was settled in the early 1800s and was named after Lewis Allen, a settler from Detroit.

Allenstein: see OLSZTYN, Poland

Allentown, city (1970 pop. 109,527), seat of Lehigh co., E Pa., on the Lehigh River, inc. as a borough 1811, as a city 1867. Allentown, situated in the agricultural Lehigh valley and in the Pennsylvania Dutch region, is an industrial and commercial city. Cement, truck and bus bodies, clothing, machinery, small appliances, transistors, tubes, air-reduction equipment, gas-generating equipment, pneumatic loading machinery, and beer are the major products. In the city are Muhlenberg College, Cedar Crest College, Allentown College of St. Francis de Sales, Lehigh County Community College, and a campus of Pennsylvania State Univ. Allentown was founded in 1762 by William Allen, Chief Justice of the Commonwealth of Pennsylvania, and was settled by representatives of various German religious groups. First known as Northampton, it was renamed Allentown c.1836. The Liberty Bell was brought there (1777) for safekeeping during the Revolutionary War, and the city became a munitions center for the Continental Army. Points of interest include the Zion Reformed Church (where the Liberty Bell was kept) and an art museum.

Alleppey (äl'pē), town (1971 pop. 160,064), Kerala state, SW India. It is a district administrative center and port on the Arabian Sea. Copra, coir, rubber, and spices are its chief exports. Fishing is a major industry.

allergy, hypersensitive reaction of the body tissues of certain individuals to certain substances that, in similar amounts and circumstances, are innocuous to other persons. Allergens, or allergy-causing substances, can be airborne substances (e.g., pollens, dust, smoke), infectious agents (bacteria, fungi, parasites), foods (strawberries, chocolate, eggs), contactants (poison ivy, chemicals, dyes), or physical agents (light, heat, cold). It is believed that a person who is hereditarily predisposed toward allergy produces, when sensitized, special weak types of antibodies, called reagins, that give little immune protection but cause local tissue damage during the antibody-antigen reaction (see IMMUNITY). Allergens can affect the respiratory system, the reaction manifesting itself as asthma or hay fever, or they can affect the skin, causing wheals and rashes. Allergens may also act on the gastrointestinal tract, causing nausea and vomiting. Allergic reactions to substances injected into the bloodstream can cause violent and sometimes fatal reactions (see ANAPHYLAXIS, SERUM SICKNESS). The best treatment of allergic reactions is prevention, i.e., elimination of the offending substances from the sensitive person's environment. If this is not possible, desensitization (i.e., deliberate production of the allergic reaction by injecting the allergen, after which the sufferer is no longer susceptible) is sometimes helpful. Antihistamine drugs may give temporary relief. See HISTAMINE.

Allerton, Isaac (äl'ärtən), c.1586-1659, Pilgrim settler in Plymouth Colony. Possibly a London tailor, he was a merchant in Leiden before going to America on the *Mayflower*. From 1626 to 1631, acting as the agent of PLYMOUTH COLONY, he was often in England. While there he bought up the rights of merchants in the enterprise and in 1630 secured a new patent for the colony. The terms of the new patent, however, were opposed by William Bradford and other colonists. Allerton was at best incompetent and ran up the debt, even if he was not—as his neighbors accused him of being—dishonest. He probably left Plymouth Colony in 1631 and was later at Marblehead, at New Amsterdam, and in the New Haven colony.

Alleyn, Edward (äl'in), 1566-1626, English actor. He was the foremost member of the ADMIRAL'S MEN, joining the group c.1587, and was the only rival of Richard Burbage. He gained fame for his portrayals

in Marlowe's *Tamburlaine, Jew of Malta*, and *Faustus*. He married the stepdaughter of Philip Henslowe and with Henslowe owned the Rose and Fortune theaters. His popularity brought him wealth, which he employed in the founding of Dulwich College in 1613 and in aiding contemporary writers. After his wife's death, he married a daughter of John Donne.

Alliance, city (1970 pop. 26,547), Mahoning and Stark cos., NE Ohio, on the Mahoning River, in a farm area, inc. 1854. It is an industrial, distributing, and rail center, with manufactures of steel, heavy machinery, electric tubing, chinaware, and farm, railroad, and industrial equipment. It is the seat of Mount Union College, where Clarke Observatory is located.

Alliance for Progress (*Alianza para Progreso*), inter-American program of economic assistance begun in 1961. Conceived as an evolutionary plan to relieve Latin American economic and social problems, it was created, in part, to counter the appeal of revolutionary approaches such as the one adopted by Cuba. It is administered by the Inter-American Committee for the Alliance for Progress (CIAP), a permanent committee within the ORGANIZATION OF AMERICAN STATES. The charter of the Alliance, formulated at the Inter-American Economic and Social Council conference at Punta del Este, Uruguay, in Aug., 1961, envisioned a minimum annual increase of 2.5% in per capita income. To achieve this a capital investment of \$80 billion over a period of 10 years was pledged by the Latin American countries (excluding Cuba), who in turn agreed to carry out tax and land reforms. The United States agreed to supply or guarantee 60% of an additional \$20 billion in outside financing. Private capital was asked to supply a yearly average of \$300 million of this amount. Although the increase of 2.5% in per capita income was not achieved by the early 1970s, the United States had already assured (1967) Latin American leaders that the program would be extended beyond the 1971 terminal date. By the early 1970s, criticism of the program was heard across Latin America and in the United States. In 1971 the United States began a reduction in loans to the program, limiting its prospects for future success. See H. K. May, *The Problems and Prospects of the Alliance for Progress* (1968), Harvey S. Perloff, *Alliance for Progress* (1969), Jerome Levinson and Juan de Onis, *The Alliance That Lost Its Way* (1970).

Allier (äl'yä'), department (1968 pop. 386,533), central France, in BOURBONNAIS MOULINS is the capital.

alligator, large aquatic reptile of the genus *Alligator*, in the same order as the CROCODILE. There are two species—a large type found in the S United States and a small type found in China. Alligators differ from crocodiles in several ways. They have broader, blunter snouts, which give their heads a triangular appearance, also, the lower fourth tooth does not protrude when the mouth is closed, as it does in the crocodile. The American alligator, *Alligator mississippiensis*, is found in swamps and sluggish streams from North Carolina to Florida and along the Gulf Coast. When young, it is dark brown or black with yellow transverse bands. The bands fade as the animal grows, and the adult is black. Males commonly reach a length of 9 ft (2.7 m) and a weight of 250 lbs (110 kg), females are smaller. Males 18 ft (5.4 m) long were once fairly common, but intensive hunting for alligator leather has eliminated the larger individuals (a specimen over 10 ft/3 m long is now unusual) and threatened the species as a whole. The American alligator is now completely protected by law. Alligators spend the day floating just below the surface of the water or resting on the bank, lying in holes in hot weather. They hunt by night, in the water and on the bank. Young alligators feed on water insects, crustaceans, frogs, and fish, as they grow they catch proportionally larger animals. Large alligators may occasionally capture deer and cows as they come to drink, they are not known to attack humans except in self-defense. Alligators hibernate from October to March. In summer the female builds a nest of rotting vegetation on the bank and deposits in it 20 to 70 eggs, which she guards for 9 to 10 weeks until they hatch. The Chinese alligator, *A. sinensis*, which grows to about 6 ft (1.8 m) long, is found in the Yangtze River valley near Shanghai. This species is nearly extinct. Caimans are members of the alligator family found in Central and South America. There are several species, classified in three genera. The largest grow up to 15 ft (4.8 m) long. Unlike alligators, caimans have bony overlapping scales on their bellies. Baby caimans are often sold in the United States as baby alligators. Alligators and caimans are classified in the phylum CHOR-

DATA, subphylum Vertebrata, class Reptilia, order Crocodilia, family Alligatoridae.

alligator pear: see AVOCADO

Alliluyeva, Svetlana (svyēt'läna al-lēlōō'yäva), 1926-, only daughter of the Soviet Communist leader Joseph Stalin and his second wife, Nadezhda Alliluyeva. After her father's death (1953) she was a teacher and translator in the Soviet Union. In late 1966, while in India, she defected to the West. She left a grown son and daughter from two earlier marriages in the Soviet Union. She settled in the United States in April, 1967, and published (1967) her memoirs, *Twenty Letters to a Friend*. She also wrote *Only One Year* (1969), an account of her experiences under diverse Soviet regimes. Becoming a U.S. citizen, she married (1970) an American architect, William Peters, but separated from him after having given birth to a daughter.

Allingham, Margery (äl'ing-əm), 1904-66, English detective-story writer, b. London. Most of her novels feature Mr. Albert Campion, a scholarly detective of noble birth, bespectacled, mild, and believable. Her thrillers are intelligently written and noted for their adroit characterization and literate style. Among her more than 25 books are *The Crime at Black Dudley* (1928), *Flowers for the Judge* (1936), *Black Plumes* (1940), *The Tiger in the Smoke* (1952), and *The Mind Reader* (1965), her last.

Allingham, William, 1824-89, English poet, b. Donegal, Ireland. He is best known for his short lyrics, most notably "The Fairies," beginning "Up the airy mountain, Down the rushy glen." See study by Alan Warner (1972).

Allison, William Boyd, 1829-1908, U.S. Senator from Iowa (1873-1908), b. Ashland co., Ohio. He served (1863-71) in the House of Representatives and entered the Senate in 1873. One of the most influential Republican members of Congress, he spoke for the farmers of the Midwest and was considered a political moderate. Allison opposed high tariffs on goods needed in quantity by the farmers and helped to build compromise tariff bills. He changed the bill for "free and unlimited coinage" of silver to allow specified limited coinage and thus gave his name to the BLAND-ALLISON ACT. See biography by Leland Sage (1956).

alliteration (älit'ərā'shan), the repetition of the same starting sound in several words of a sentence. Probably the most powerful rhythmic and thematic uses of alliteration are contained in *Beowulf*, written in Anglo-Saxon and one of the earliest English poems extant. For example:

Pa com of more under mist-hleopum
Grendel gongan, Godes yre baer
(Then came from the moor, under the misty hills,
Grendel stalking, he God's anger bare)

Beowulf, Book XI

The poet was drawing here on an even older Germanic tradition, just as he was setting a high standard for other poets in Anglo-Saxon, who produced such alliterative works as *Widsith*, *Deor's Lament*, *The Wanderer*, *The Seafarer*, and *The Ruin*. Although the tradition lay dormant for centuries, an alliterative revival occurred in England in the mid-1400s, as evidenced by such masterworks as *Piers Plowman* and *Sir Gawain and the Green Knight* (see LANGLAND, WILLIAM, PEARL, THE). Shakespeare parodies alliteration in Peter Quince's Prologue in *A Midsummer Night's Dream*.

Whereat, with blade, with bloody blameful blade,

He bravely breach'd his boiling bloody breast
Modern poets have continually renewed the possibilities of alliteration, e.g., Gerard Manley Hopkins's "Pied Beauty"

Glory be to God for dappled things
Landscapes plotted and pieced—fold, fallow
and plough,

And all trades, their gear and tackle
and trim

Alliterative Morte Arthure. see ALLITERATION

Alliterative Revival: see ALLITERATION

Alloa (äl'lōä), burgh (1971 pop. 14,110), administrative center of Clackmannanshire, central Scotland, on the Forth River. Coal mining, brewing, and bottle making are the principal industries. A 15th-century tower on Mar's Hill marks the seat of the Erskines, earls of Mar. In 1975, Alloa became part of the new Central region.

Allobroges (äl'ōbrājēz), Celtic tribe in Gaul, inhabiting later Dauphine and Savoy. They were conquered (121 B.C.) by Quintus Fabius Maximus, who was called Allobrogicus in commemoration of the victory. In the time of Julius Caesar they sided with Rome.

Allon-bachuth (āl'an-bāk'əth), place close to Bethel, where they buried Rebecca's nurse Gen 35 8

allotropy (əłō'trəpē) [Gr. = other form] A chemical element is said to exhibit allotropy when it occurs in two or more forms, the forms are called allotropes. Allotropes generally differ in physical properties such as color and hardness, they may also differ in molecular structure or chemical activity, but are usually alike in most chemical properties. Diamond and graphite are two allotropes of the element CARBON. OZONE is a chemically active triatomic allotrope of the element OXYGEN. PHOSPHORUS, SULFUR, and TIN also exhibit allotropy. Many metals have allotropic crystalline forms that are stable at different temperatures. POLYMORPHISM is an analogous phenomenon observed in chemical compounds.

Allouez, Claude Jean (klōd zhaN alwā'), 1622-89, French Jesuit missionary in Canada and the American Midwest. After arriving (1658) in Canada he served at posts in the St. Lawrence region until 1665, when he went to Lake Superior and founded the Chequamegon Bay mission (near present-day Ashland, Wis.). A canoe trip around Lake Superior in 1667 supplied material for the well-known Jesuit map of the lake. Later he founded several missions, including that at De Pere, made his headquarters at Green Bay, and spent his last years as missionary to the Illinois and Miami Indians. His accurate and informed reports made the Great Lakes country known.

Alloway, Scotland see AYR

alloy (āl'oi, əl'oi) [from O Fr. = combine], substance with metallic properties that consists of a metal fused with one or more metals or nonmetals. Most alloys are solid at room temperature. An alloy may be a homogeneous solid solution, a heterogeneous mixture of tiny crystals, a true chemical compound, or a mixture of these. Alloys generally have properties different from those of their constituent elements: they may be poorer conductors of heat and electricity, harder, or more resistant to corrosion. Because of these and other properties, alloys are used more extensively than pure metals. Alloys of iron and carbon are among the most widely used; they include cast iron and steels. Brass and bronze are important alloys of copper. Nickel is often added to alloys to improve their properties. Because pure gold and pure silver are too soft for many uses, e.g., jewelry and tableware, they are often alloyed either with one another or with other metals, e.g., copper or platinum. Amalgams are alloys that contain mercury.

All Saints Bay, Brazil see TODOS OS SANTOS BAY

All Saints' Day, Nov. 1, feast of the Roman Catholic and Anglican churches, the day on which the church glorifies God for all his saints, known and unknown. It is one of the principal feasts of the year in the Roman Catholic Church, all are obliged to hear Mass on it. Its origin probably lies in the common commemoration of martyrs who died in groups or whose names were unknown. In 609, Pope Boniface IV dedicated the Pantheon at Rome to Our Lady and all martyrs, and by 900 All Saints was generally celebrated on Nov. 1. In medieval England the festival was known as All Hallows, hence the name Halloween ('Hallows' eve) for the preceding day (Oct. 31). Halloween is associated, in countries where Celtic influence is strong, with age-old customs peculiar to that night. In certain parts of the British Isles bonfires and fortune-telling like those of midsummer night continue. Elsewhere, especially in America, mumming and masquerading are popular, and jack-o'-lanterns are displayed. Tales of witches and ghosts are told, and in remote communities old superstitions are kept. One of the special games, bobbing for apples, is known to date from the Middle Ages. These pagan survivals of Halloween probably represent old Celtic practices associated with Nov. 1, the beginning of winter. Probably All Saints' Day arose apart from Celtic influence, and the customs of Halloween have survived independently of the Christian feast.

All Souls' Day, Nov. 2 (exceptionally, Nov. 3), feast of the Roman Catholic Church on which the church on earth prays for the souls of the faithful departed still suffering in PURGATORY. The proper office is of the dead, and the Mass is a REQUIEM. General intercessions for the dead (e.g., for those of a parish, a city, or a regiment) are very ancient (2 Mac. 12:43-45), but the modern feast was probably first established by an 11th-century abbot of Cluny for his community and later extended throughout the

church. In Catholic countries there are many customs peculiar to All Souls' Day (e.g., leaving lights in the cemeteries on the night before). These vary from region to region. They should be distinguished from the customs of Halloween, which were apparently an independent development (see ALL SAINTS' DAY).

allspice: see PIMENTO

Allston, Washington, 1779-1843, American painter and author, b. Georgetown co., S.C. After graduating from Harvard (1800), where he composed music and wrote poetry (published in 1813 as *The Sylphs of the Seasons*), Allston went to London and there studied painting with Benjamin West. He then spent four years in Rome studying the old masters and began his ambitious religious and allegorical paintings, which at first he rendered with classical reserve. His greatest years were spent in England (1810-18), where his work revealed a sophisticated and controlled, yet romantic mind. An important work of this period was the portrait of his lifelong friend Coleridge. In England and Europe, Allston was the intimate of intellectuals and in frequent contact with the best of Western art. He returned to the United States, where artistic stimulation was lacking, and, as a result, his own work eventually lost its vitality. His allegorical works and his tragic failure, *Belshazzar's Feast*, over which he labored for more than 20 years, were totally overshadowed by his lyric fantasies—his landscapes and seascapes, of which *Moonlit Landscape* (1819, Mus. of Fine Arts, Boston) and *Ship in a Squall* (before 1837, Fogg Art Mus.) are two of the finest. Although he was his own most perceptive critic, Allston persisted in his nostalgic re-creation of monumental neoclassic figure paintings until his death. Samuel F. B. Morse was one of his numerous pupils. See biographies by J. B. Flagg (1892, repr. 1969) and E. P. Richardson (1948).

Alma (alma', āl'ma), city (1971 pop. 22,622), S. central Que., Canada, on the Saguenay River. In 1954 its name was shortened from St. Joseph d'Alma. There are granite quarries in the region, and the town has pulp and paper and aluminum plants.

Alma-Ata (āl'mā-ā'ta, Rus. āl'mā-ā'ta'), city (1970 pop. 730,000), capital of the Kazakh Soviet Socialist Republic, Central Asian USSR, in the foothills of the Trans-Ili Ala-Tau. A terminus of the Turkistan-Siberia RR, Alma-Ata is the industrial and cultural center of Kazakhstan. Leading industries include motion picture production, fruit canning, meat-packing, tobacco processing, and the repair of railroad equipment. The city was founded in 1854 as a Russian fort and trade center known as Verny. Alma-Ata has a university and is the site of the Kazakh Academy of Sciences.

Almagest: see PTOLEMY

Almagro, Diego de (dyā'gō dā alma'grō), c. 1475-1538, Spanish conquistador, a leader in the conquest of Peru. A partner of Francisco PIZARRO, he took part in the first (1524) and second (1526-28) expeditions and in the bloody subjugation of the Incas after 1532. He aided (1534) BENALCÁZAR in thwarting Pedro de ALVARADO in the conquest of Ecuador. No match for the Pizarro brothers, he lost out in the division of spoils but was granted the lands S. of CUZCO. In 1535, Almagro set out on a march that was incredible in its hardships—south through the freezing cordillera of the Andes, probably as far as Coquimbo in present Chile, and then, after finding no gold, back north through the desert wastes of ATACAMA. He believed CUZCO was within his jurisdiction and so seized (1537) the city from Hernando PIZARRO, whom he injudiciously set free. Civil war ensued, and Almagro's forces were defeated. Almagro begged for his life and was promised it, but he was garroted by orders of Hernando Pizarro. Almagro's half-Indian son, Diego de Almagro (d. 1542), inherited his rights. Later the youth nominally headed the revolt that began with the assassination of Francisco Pizarro, but in 1542 he was captured and executed by the new governor, VACA DE CASTRO.

Al Mahdīyah (al madē'ya) or **Mahdia**, town (1966 pop. 15,900), E. Tunisia, on the Mediterranean Sea. It is a fishing port where olive oil and handicrafts are marketed. The town was founded in 912 by the Fatimids on the site of Phoenician and Roman colonies, and it was the Fatimid capital from 921 to 948.

almanac, calendar with notations of astronomical and other data. Almanacs have been known in simple form almost since the invention of writing, for they served to record religious feasts, seasonal changes, and the like. The Roman *fasti*, originally a list of *dies fasti* (days when legal business might be transacted) and *dies nefasti* (days when legal business should not be transacted), were later elaborated into various lists, some of them resembling

modern almanacs. The almanac did not become a really prominent type of reading matter until the introduction of printing in Western Europe in the 15th cent. Regiomontanus produced one of the famous early almanacs (his *Ephemerides*), incorporating his astronomical knowledge. Most early almanacs were devoted primarily to astrology and predictions of the future. Prediction of the weather has persisted in many modern almanacs, but the crude and sensational magic began to disappear early, to be replaced by more or less scientific information. There appeared late in the 18th cent. truly scientific almanacs—notably the British Nautical Almanac (founded 1767) (see EPHEMERIS), which was the inspiration for the *American Ephemeris and Nautical Almanac* (founded 1855). The popular almanac, however, developed in the 17th and 18th cent. into a full-blown form of folk literature, with notations of anniversaries and interesting facts, home medical advice, statistics of all sorts, jokes, and even fiction and poetry. The first production (except for a broadside) of printing in British North America was an almanac for the year 1639. One of the best colonial almanacs was the *Astronomical Diary and Almanack* begun by Nathaniel Ames in 1725, and this was the *forerunner of the most famous of them all*, Benjamin Franklin's *Poor Richard's Almanack* (pub. by him 1732-57), which in its title recalled one of the most popular and long-lasting of English almanacs, that of "Poor Robin" (founded c. 1662). The most enduring of all American almanacs was first published in 1793 by Robert Baily Thomas; it came later to be called *The Old Farmer's Almanack*. The best types of present-day almanacs are handy and dependable compendiums of large amounts of statistical information. Noteworthy are *The World Almanac and Book of Facts* (first pub. as a booklet in 1868, discontinued 1884, revived 1885), *Information Please Almanac* (first pub. 1947), and the *Reader's Digest Almanac* (first pub. 1965).

Al Manamah (al manam'a), town (1971 pop. 89,728), capital of Bahrain, on the Persian Gulf. It has oil refineries and light industries and is a free port. A causeway links it with the island of Al Muharraq.

Alma-Tadema, Sir Lawrence (āl'mā-tād'īma), 1836-1912, English painter, b. Friesland. He studied in Belgium, where he lived until 1869. In that year he went to England, there he became a citizen and enjoyed a long popularity and many honors. He is best known for his scholarly and meticulous paintings of scenes from Greek and Roman life.

Almeida, Antonio José de (āntō'nyōō zhōōzē' dī almā'dā), 1866-1929, Portuguese statesman. A republican, he was minister of the interior in the provisional government after the overthrow of the monarchy in 1910. As leader of the moderate Evolutionist party, he was premier of a coalition cabinet in World War I and later (1919-23) president of the republic.

Almeida, Francisco de (frānsēsh'kōō), c. 1450-1510, Portuguese admiral, first viceroy of Portuguese India. He was first sent to India in 1503 as captain major of a fleet and helped Portuguese forces defeat the ruler of Calicut. In 1505 he was appointed viceroy and set out from Lisbon with instructions to develop Portuguese commerce by building fortifications on the east coast of Africa, concluding alliances with the Indian rulers, and taking control of the spice trade from the Arabs. In Africa he built forts at Kilwa and Sofala and burned Mombasa. After his arrival in India he built further forts but relied mainly on his fleets to secure control of all sea trade. The Egyptians, seeing their commerce threatened, built a fleet (with the help of Venice) and defeated and killed (1508) Almeida's son at Chaul. However, in 1509, Almeida won a great naval battle against them and their Indian allies off Diu. Almeida at first refused to yield his power to Afonso de ALBUQUERQUE and had Albuquerque imprisoned (1509), but he later gave him command. On his way home to Portugal, Almeida was killed by Hottentots near the Cape of Good Hope. See K. C. Jayne, *Vasco da Gama and His Successors* (1910).

Almeida Garrett, João Batista de (zhwōn bātēsh'tā dī almā'dā garēt'), 1799-1854, Portuguese dramatist, poet, journalist, and orator, leader of the romantic movement in Portugal. After a period in the Azores he returned to graduate from the Univ. of Coimbra. An ardent liberal democrat, he supported the revolution of 1820 and was twice forced into exile (1823-26, 1828-32). Upon his return he abandoned classicism for a romanticism that he expressed most effectively in the plays *Alfama de Santarem* and *Frei Luis de Sousa* (tr. *Brother Luiz de Sousa*, 1909), and the long poems *Camões* and *Dona*

Branca Generally considered the greatest of Portuguese dramatists, he was a significant poet and folklorist as well. Almeida Garrett held numerous political offices, working effectively for the democratic cause. His major works include collections of poetry, *Flores sem fruto* [flowers without fruit] (1844), *Fóllas caídas* [fallen leaves] (1853), a book of folklore, *Romanceiro* (1843), and the prose *Viagens na minha terra* [journeys in my native land] (1846).

Almelo (ál'mälō), city (1971 pop 59,426), Overijssel prov., E Netherlands. It is a manufacturing center and has a large textile industry.

Almería (almärē'a), city (1970 pop 114,510), capital of Almería prov., SE Spain, in Andalusia, on the Gulf of Almería. A busy Mediterranean port, it exports the celebrated grapes of the region, other fruits, esparto, as well as iron and other minerals mined nearby. The city has refineries and processing plants and light industries. Probably founded by Phoenicians, Almería flourished from the 13th to the 15th cent. as the outlet of the Moorish kingdom of Granada. Under the Moors it was an important naval base. It fell to the Christians in 1489. There is a Moorish fort, now in ruins, and a Gothic cathedral. In 1937, during the civil war, the city was shelled by German warships.

Almirante Brown (almērān'tā) or **Adrogué** (adrō-gā'), city (1960 pop 136,924), Buenos Aires prov., E Argentina. It was settled in 1873 by families fleeing a yellow fever epidemic in the city of Buenos Aires.

Almodad (ālmō'dād), descendant of Shem. Gen 10:26, 1 Chron 1:20.

Almohads (āl'mähādz), Berber Muslim dynasty that ruled Morocco and Spain in the 12th and 13th cent. It had its origins in the puritanical sect founded by Ibn Tumart, who stirred up (c 1120) the tribes of the Atlas Mts. area to purify Islam and oust the Almoravids. His successors, ABD AL-MUMIN, Yusuf II, and YAKUB I, succeeded in conquering Morocco and Muslim Spain, and by 1174 the Almohads had completely displaced the Almoravids. With time the Almohads lost some of their fierce purifying zeal, Yakub had a rich court and was the patron of Averroës. Yakub defeated (1195) ALFONSO VIII of Castile in the battle of Alarcos, but in 1212 the Almohad army was defeated, and Almohad power in Spain was destroyed by the victory of the Spanish and Portuguese at Navas de Tolosa. In Morocco they lost power to the Merenid dynasty, which took Marrakesh in 1269. See studies by Abd al-Wahid al-Marrakushi (1881, repr 1968) and Roger Le Tourneau (1969).

Almon: see ALEMETH 2.

almond, name for a small tree (*Prunus amygdalus*) of the family Rosaceae (ROSE family) and for the nutlike, edible seed of its fruit. The "nuts" of sweet-almond varieties are eaten raw or roasted and are pressed to obtain almond oil. Bitter-almond varieties also yield oil, from which the poisonous prussic acid is removed in the extraction process. Almond oil is used for flavoring, in soaps and cosmetics, and medicinally as a demulcent. The tree, native to central Asia and perhaps the Mediterranean, is now cultivated principally in the Orient, Italy, Spain, and (chiefly the sweet varieties) in California. It closely resembles the peach, of which it may be an ancestor, except that the fruit is fleshless. The flowering almonds (e.g., *P. triloba*) are pink- to white-blossomed shrubs also native to central Asia, like the similar and closely related pink-blossomed almond, they are widely cultivated as ornamentals. Several Asian types are known as myrobalan, a name applied also to the cherry plum, with which flowering almonds are sometimes hybridized. The beauty of the almond in bud, blossom, and fruit gave motif to sacred and ornamental carving. In the Middle East the tree breaks into sudden bloom in January, and in Syria and Palestine it came to symbolize beauty and revival. The rod of Aaron in the Bible (see AARON'S-ROD) bore almonds. Almonds are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Almon-diblathaim (āl'man-dīb'lāthā'am), camping place of the Israelites. Num 33:46,47. Called Beth-diblathaim in a denunciation of Moab. Jer 48:22.

Almoravids (ālmō'rāvīdz), Berber Muslim dynasty that ruled Morocco and Muslim Spain in the 11th and 12th cent. The Almoravids may have originated in what is now the Islamic Republic of Mauritania. The real founder was Abd Allah ibn Yasin, who by military force converted a number of Saharan tribes to his own reformed religion and then advanced on Morocco. After his death (c 1059), YUSUF IBN TASHFIN and his brother ABU BAKR came to power. MARRAKESH was founded in 1062 and was the center of a power-

ful empire. Called by the Moors in Spain to help stem Christian reconquest, Yusuf entered Andalusia and defeated (1086) Alfonso VI of Castile. He later subdued the local Muslim rulers and governed Muslim Spain and N Morocco (Abu Bakr ruling over S Morocco). The dynasty also pushed south, destroying the ancient state of GHANA. The Almoravids were rough and puritanical, contemptuous of the luxurious Muslim courts in Spain. Their rule was never entirely stable and in the 12th cent. was attacked by the ALMOHADS, who finally (by 1174) won both Morocco and Muslim Spain.

Almqvist, Carl Jonas Love (karl yōō'nās lōō'və alm'kvist), 1793-1866, Swedish writer. He has been called the only Swedish novelist of note in the period 1830-50. At first a somewhat bizarre romanticist, inclined toward anarchy, he later became more concerned with realism and democracy. This transition is seen in *The Book of the Thorn Rose* (14 vol., 1832-51), which contains most of his novels, stories, plays, and poems. His novel *Sara Videbecke* (1839) appeared in English in 1919. In his varied career he was civil servant, teacher, clergyman, and socialist. Accused of forgery and suspected of murder, he fled to the United States and after 1865 lived in Bremen as Professor Westermann. See Axel Hemming-Sjoberg, *A Poet's Tragedy* (tr 1932).

almug or **algum**, precious wood mentioned in the Bible (2 Chron 2:8, 9:10,11), used in the Temple of Solomon and in his palace, brought from Ophir and Lebanon. It is perhaps a red SANDALWOOD.

Aloadae (ālō'adē) or **Aloidae** (ālōt'dē), in Greek mythology, two giants who warred against the Olympian gods. Their names were Otus and Ephialtes, and they were the sons of Aloeus' wife by Poseidon. They tried to reach heaven to overthrow the gods by piling Mt. Ossa on Mt. Olympus and Mt. Pelion on Mt. Ossa. Some said they were killed by Apollo, others that they killed each other while shooting at a hind sent by Apollo. For their wickedness they were condemned to eternal torture in Tartarus. Thus the phrase "to pile Pelion on Ossa" means to attempt an enormous but fruitless task.

alod (āl'ōd). In feudal tenure, lands held without obligation to any suzerain (overlord) were termed held in alod. Alodial lands existed in England and on the Continent. They became less common as landowners sought protection by turning their lands over to more powerful lords and receiving the holdings back as fiefs. In modern times the distinction between fee simple (see TENURE) and alod has vanished.

aloe (āl'ō) [Gr.], any species of the genus *Aloe*, succulent perennials of the family Liliaceae (LILY family), native chiefly to the warm dry areas of S Africa and also to tropical Africa, but cultivated elsewhere. The juice of aloe leaves contains the purgative aloin. Today the various drug-yielding species, e.g., *A. barbadensis* and *A. chinensis*, are still used for their traditional medicinal properties as well as for X-ray-burn treatment, insect repellent, and a transparent pigment used in miniature painting, cords and nets are made from the leaf fiber. In ancient times the juice was used in embalming. A Muhammadan, on his return from his pilgrimage to Mecca, hangs an aloe above his door. The American and false aloes are agaves, a family Amaryllidaceae (AMARYLLIS family) group that is the American counterpart in habit and general appearance to the true aloes. There is evolutionary evidence that the aloes and the agaves should be considered a single separate family, the Agavaceae. The Scriptural aloe is unrelated. Aloe is classified in the division MAGNOLIOPHYTA, class Liliatae, order Liliales, family Liliaceae.

aloes (āl'ōz), drug obtained from the ALOE, also a biblical name for an aromatic substance of various uses, mentioned in connection with myrrh and spices (Ps 45:8, Prov 7:17, Cant 4:14, John 19:39) and thought to be the fragrant wood of the modern aloeswood (also called eaglewood, agalloch, or agilawood), an *Aquilaria* native to Asia. In the East the aloeswood has been valued for medicinal purposes, as an incense, and for the beautiful grain of its wood, which takes a high polish and was used for setting precious stones. The tree lignaleos of Num 24:6, sometimes thought to be the aloeswood, may have been a different plant. The aloe and the American aloe, or agave (see AMARYLLIS), are not to be confused with the aloes of the Scriptures.

Aloidae: see ALOADAE.

Alompra: see ALAUNGPAWA.

Alonso, Alicia (Alicia Martinez) (ālēs'yā alōn'sō, mār'tē'nās), 1921-, Cuban ballerina and choreographer, b. Havana. Alonso danced in Broadway musi-

cals before becoming a soloist with several leading companies, including the American Ballet Theatre, in 1939. She soon gained acclaim in an enormous variety of starring roles, ranging from classical to modern. She was best known for her work in *Giselle* and in Agnes de Mille's *Fall River Legend*. Her own works include *La Tinaja* (1943), *Ensayos Sinfónicos*, and *Lidia*, all created for her own company in Cuba.

Alonso, Dámaso (da'māsō alōn'sō), 1898-, Spanish philologist, lyric poet, and literary critic, b. Madrid. He is known for his literary sensitivity and the precision and rigor of his critical approach. His critical works include *La lengua poetica de Gongora* [the poetic language of Gongora] (1935) and *Ensayos sobre poesia española* [essays on Spanish poetry] (1944). Among his volumes of poetry are *El viento y el verso* [wind and verse] (1925) and *Hijos de la ira* (1944, tr *Children of Wrath*, 1970).

alopecia (āl'apē'shēā) see BALDNESS.

Alor Setar (a'lōr sē'tar') or **Alor Star** (star), city (1971 pop 66,179), capital of Kedah, Malaysia, central Malay Peninsula, on the Kedah River. It is a major center for trade in rice and rubber. The residence of the Sultan of Kedah is in the city.

Alot: see AALST, Belgium.

Aloth (āl'ōth) see BEALOTH.

Aloysius, Saint (ālōi'shās), 1568-91, Italian Jesuit, b. Luigi Gonzaga, heir to the marchese de Castiglione. Highly devout from childhood, he renounced his title and entered (1585) the Society of Jesus under the tutelage of St. Robert Bellarmine. He died of a fever he caught while ministering to victims of the plague. He is the patron of youth. St. Aloysius has been especially extolled for his purity. Feast: June 21.

alpaca (ālpāk'ə), partially domesticated South American hoofed mammal of the CAMEL family. Like the LLAMA, it is probably a descendant of the guanaco. Although the flesh is sometimes used for food, the animal is bred chiefly for its long, lustrous wool, which varies from black, through shades of brown, to white. Flocks of alpaca are kept by Indians in the highlands of Bolivia, Chile, and Peru. They feed on grasses growing close to the snow line, and they require a pure water supply. The Incas had domesticated the alpaca and utilized its wool before the Spanish Conquest. Exporting of alpaca wool to Europe began after Sir Titus Salt discovered (1836) a way of manufacturing alpaca cloth. The name alpaca is sometimes used for materials such as mohair, which do not contain alpaca wool. Alpacas are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Camelidae.

Alp Arslan (alp arslan'), 1029-72, Seljuk sultan of Persia (1063-72). In 1065 he led the Seljuks in an invasion of Armenia and Georgia and in 1066 attacked the Byzantine Empire. The success of his campaign was crowned (1071) by his brilliant victory over Romanus IV at MANZIKERT. After defeating the Byzantines, he wrested Syria from the Fatimids. In Dec. 1072, while campaigning beyond the Oxus River, he was murdered by one of his captives. He was succeeded by his son Malik Shah, who consolidated the victories his father had won.

Alpena (ālpē'nā), city (1970 pop 13,805), seat of Alpena co., N Mich., on Thunder Bay, an arm of Lake Huron, inc. 1871. Limestone quarried nearby is used to make cement, Alpena's chief manufacture. Other products include hardboard, paper, machinery, and automobile parts. Cement, limestone, and coal are transported on the Great Lakes by way of Alpena's harbor. Alpena lies in a year-round resort area and has an annual winter carnival. Alpena Community College is there.

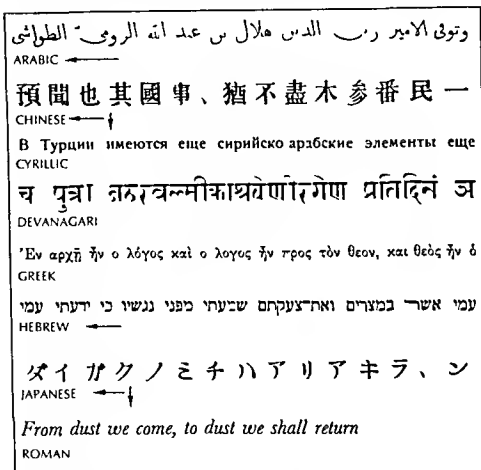

alpenhorn: see ALPHORN.

Alpes-de-Hautes-Provence (alp'-dā-ōt'-prāvāNs'), department (1968 pop 104,813), SE France, formerly Basses-Alpes dept. Digne is the capital.

Alpes-Maritimes (alp-marētēm'), department (1968 pop 722,070), SE France, bounded by Italy on the east and the Mediterranean Sea on the south and surrounding the independent principality of MONACO. Nice is the capital.

alphabet [Gr. *alpha-beta*, like Eng. ABC], system of writing, theoretically having a one-for-one relation between character (or letter) and phoneme (see PHONETICS). Few alphabets have achieved the ideal exactness. A system of writing is called a syllabary when one character represents a syllable rather than a phoneme, such as the kana, used in Japanese to supplement the originally Chinese characters normally used. The precursors of the alphabet were the

iconographic and ideographic writing of ancient man, such as wall paintings, CUNEIFORM, and the HIEROGLYPHIC writing of the Egyptians. The alphabet of

Examples of letters in various alphabets
(arrows indicate the direction of reading)

modern Western Europe is the Roman alphabet, the base of most alphabets used for the newly written languages of Africa and America, as well as for scientific alphabets. Russian, Serbian, Bulgarian, and many languages of the USSR are written in the Cyrillic alphabet, an augmented Greek alphabet. Greek, Hebrew, and Arabic all have their own alphabets. The most important writing of India is the Devanagari, an alphabet with syllabic features, this, invented probably for Sanskrit, is the source of a number of Asian scripts. The Roman is derived from the Greek, perhaps by way of Etruria, and the Greeks had imitated the Phoenician alphabet. The exact steps are unknown, but the Phoenician, Hebrew, Arabic, and Devanagari systems are based ultimately on signs of the Egyptian hieroglyphic writing. This writing was not alphabetic, but in the phonogram it bore the germ of phonemic writing, thus the sign "bear" might (to use an English analogy) mean also the sound *b*, and "dog" *d*. A similar development created the Persian cuneiform syllabary. Two European alphabets of the late Roman era were the RUNES and the OGHAM. An exotic modern system is the Cherokee syllabary created by SEQUOYAH, suggested by, but not based on, the Roman alphabet. Another was the short-lived Mormon Deseret alphabet. See Samuel Mercer, *The Origin of Writing and Our Alphabet* (1959), David Diringer, *The Alphabet* (2 vol., 3d ed. 1968), Oscar Ogg, *The 26 Letters* (rev. ed. 1971).

Alpha Centauri (ā'fə sēntōr'ē), brightest star in the constellation CENTAURUS and 3d-brightest star in the sky, also known as Rigil Kent or Rigil Kentaurus, 1970 position R.A. 14^h37^m6^s, Dec. -60°43'. It is a yellow main-sequence star of the same SPECTRAL CLASS (G2 V) as the sun and of about the same size and mass, its apparent MAGNITUDE is -0.26. Actually, Alpha Centauri is a triple-star system, the components being designated A, B, and C. Alpha Centauri C is also called Proxima Centauri because it is the closest star to the earth (other than the sun), its distance being 4.28 light-years while that of components A and B is 4.34 light-years. Proxima Centauri orbits about the common center of mass of the system with a period of more than 250,000 years, so that in about 125,000 years it will be more distant than A and B.

Alpha Crucis (krō'sis) see ACRUX

Alphæus (ālfē'as) 1 See CLEOPHAS 2 Father of the evangelist Matthew. Mark 2:14

alpha particle, one of the three forms of natural RADIOACTIVITY. Alpha radiation (or alpha rays) was distinguished and named by E. R. Rutherford, who found by measuring the charge and mass of alpha particles that they are the nuclei of ordinary helium atoms, consisting of two protons and two neutrons (see NUCLEUS).

Alpheus (ālfē'as), river god see ARETHUSA

Alpheus (ālfē'as) or **Alfios** (ālfē'as), river, c. 70 mi (110 km) long, rising in the Taygetus mts., 5 Greece. The longest river in the Peloponnesus, it flows northwest through gorges, past Olympia, and onto the Olympia plains before entering the Ionian Sea. In Greek mythology, its waters were said to pass under the sea and to emerge at Syracuse (Italy) in the fountain of Arethusa. Hercules, to clean the stables

of Augeas, turned the Alpheus through them. It is the river Alph of Coleridge's poem *Kubla Khan*. The lower Alpheus was formerly known as Roupia.

Alphonse (ālfōns'), 1220-71, count of Poitiers and of Toulouse, brother of King Louis IX of France. By his marriage to the daughter of RAYMOND VII, count of Toulouse, he inherited Raymond's lands in 1249. An able administrator, he did much to heal the wounds of the crusade against the Albigenses. During the absence of Louis in the Holy Land, Alphonse was coregent (1250-52) with his mother, Blanche of Castile, and later (1252-54) with his younger brother, Charles of Anjou (later Charles I, king of Naples and Sicily). Alphonse left no heir, and at his death his lands were incorporated into the holdings of Philip III, king of France.

Alphonsine tables see ALFONSINE TABLES

Alfonso. For rulers thus named, see ALFONSO

Alphonsus Liguori, Saint (ālfōn'səs ligwō'rē), 1696-1787, Italian churchman, Doctor of the Church. He was named Alfonso Maria de' Liguori. In 1732 he founded the Congregation of the Most Holy Redeemer (the Redemptorists) for religious work among the poor, especially in the country. He refused the archiepiscopal see of Palermo but accepted (1762) a poor country diocese near Capua. He labored incessantly until 1775, when sickness forced him to resign. He worked for his order under great difficulties, caused by an anticlerical government and overzealous monks. Goatherds of the mountains were his especial care. St. Alphonsus was an accomplished musician and wrote many hymns and instrumental pieces. His point of view in CASUISTRY, which has become standard, is called equiprobabilism. St. Alphonsus was unusual, even among Roman Catholics, for his great devotion to the Virgin. Feast Aug. 2. See biography by D. F. Miller and L. X. Aubin (1940).

alporn or alpenhorn [Ger., = Alps horn], wooden horn from 3 ft to 12 ft (91 cm-3.7 m) long, sometimes curved slightly, with conical bore and a cup-shaped mouthpiece. It produces only the natural

Alporn

harmonics of the tube, slightly modified, however, by the material of the horn and its somewhat irregular shape. In Switzerland it is used to call cattle and to entertain tourists. The RANZ DES VACHES is played upon it.

alpine plants, high-altitude representatives of various flowering plants (chiefly perennials) that because of their dwarfed form, profuse blooming, and the preference of many for shady places are cultivated in alpine and ROCK GARDENS. Some species require specially constructed gardens duplicating mountain terrain, including systems for supplying cool water underground, comparable to the melting snows of their natural habitat. Others thrive without special care in favorable conditions (e.g., cool climate, short growing season, and sweet, rocky soil). Alpine species of gentians, saxifrages, and stonecrops are among those most commonly planted. Many garden plants (e.g., roses, irises, and primroses) have alpine representatives. The EDELWEISS is a popular alpine.

Alps, great mountain system of 5 central Europe, c. 500 mi (800 km) long and c. 100 mi (160 km) wide, curving in a great arc from the Riviera coast on the Mediterranean Sea, along the borders of N Italy and adjacent regions of SE France, Switzerland, 5 West Germany, and Austria, and into NW Yugoslavia. MONT BLANC (15,771 ft/4,807 m) is the highest peak. Cut by numerous gaps and passes, the Alps do not form a complete climatic or strategic barrier, as is evidenced by the similarities of air, people, and animals on either side of the system. The Alps form the watershed of many of Europe's rivers, including the

Rhine, the Rhône, the Po, and the Danube. Geologically, the Alps were formed during the Oligocene and Miocene epochs as a result of the pressure exerted on the Tethyan geosyncline as its Mesozoic and Cenozoic strata were squeezed against the stable Eurasian landmass by the northward moving African landmass. The squeezing action formed great recumbent folds (nappes) that rose out of the sea and pushed northward, often breaking and sliding one over the other to form gigantic thrust faults. Crystalline rocks, which are exposed in the higher central regions, are the rocks forming Mont Blanc, the MATTERHORN, and high peaks in the Pennine Alps and Hohe Tauern, limestone and other sedimentary rocks are predominant (but not continuously present) in the generally lower ranges to the north and south. Permanently snowcapped peaks rise above the snowline—located between 8,000 ft and 10,000 ft (2,440-3,050 m)—and glaciers (the longest being Aletsch glacier) form the headwaters of many Alpine rivers. Glaciation (see GLACIER) was more extensive during the Pleistocene epoch and carved a distinctive mountain landscape—characterized as alpine—of arêtes, cirques, matterhorns, U-shaped and hanging valleys, and long moraine-blocked lakes (such as Garda, Como, and Maggiore in the south and Zurich, Geneva, Thun, and Brienz in the north). Below the snowline is a treeless zone of alpine pastures that have for generations been used for the summer grazing of goats and cattle. Agriculture is confined to the valleys and foothills, with fruit growing and viticulture on some sunny slopes. Hydroelectric power, used for industries in the mountains and in nearby regions, is generated from the many waterfalls and swift-flowing rivers. Tourism, based on the scenic attractions of the Alps and the mountaineering and winter sports they provide, is a major source of income, among the more famous resorts are Chamonix (France), Zermatt, Interlaken, St. Moritz, Davos, and Arosa (Switzerland), Sankt Anton, Innsbruck, Kitzbühel, Salzburg, and Bad Gastein (Austria), Berchtesgaden (West Germany), Cortina d'Ampezzo and Bolzano (Italy), and Bled (Yugoslavia). The Alps are divided by rivers and other topographic features into more than 40 subunits for which local names are commonly used. Well-known groups in the W Alps (from the Riviera to the Great St. Bernard Pass) include the Maritime, Ligurian, Cottian, and Graian alps, the Mont Blanc group, and Valle d'Aosta. The highest western peaks are Mont Blanc, Mont Pelvoux, Monte Viso, and the Gran Paradiso, the chief routes across this section are via the Mont Cenis Tunnel and the Great and Little St. Bernard passes. The Central Alps (between the Great St. Bernard and Brenner passes) include, in the south, the Pennine, Lepontine, Phœtian, and Ötztal alps, and, in the north, the Bernina, Glarus, Allgäu, and Bavarian alps. The principal peaks of the Central Alps are Monte Rosa, the Matterhorn, the Finsteraarhorn, the Jungfrau, and the Wildspitze, the chief routes are the Simplon Tunnel and the St. Gotthard, Grimsel, Furka, Splügen, Bernina, and Brenner passes. The E Alps comprise, in the south, the Dolomites, the Carnic Alps, and the Julian Alps, and, in the north, the Hohe Tauern and Niedere Tauern, the principal eastern peak is Grossglockner. The major routes across the E Alps follow the Brenner and Semmering passes. The Alps were the first mountain system to be extensively studied by geologists, and many of the geologic terms associated with mountains and glaciers originated there. The term *alps* has been applied to mountain systems around the world that exhibit similar traits to the Alps of Europe. See C. E. Engel, *Mountaineering in the Alps: An Historical Survey* (new ed. 1971), *The Alps*, prepared by the National Geographic Society, Washington, D.C. (1973), Ronald Clark, *The Alps* (1973).

Alps, Australian: see AUSTRALIAN ALPS

Al Qayrawan (al kīrawān') or **Kairouan** (kīrawān', Fr. kīrwan'), city (1966 pop. 46,199), NE Tunisia. It is a sacred city of Islam. Founded in 670 by Okba, an Arab leader, it was the seat of Arab governors in W Africa until 800. Under the Aghlabid dynasty (800-909) it remained the chief center of commerce and learning. It was the first capital (909-21) of the Fatimids. When the city was ruined (1057) by invaders, it was supplanted by Tunis. Of Al Qayrawan's 150 mosques, the most celebrated is the Grand Mosque, started by Okba and completed in (1057) by invaders. The city is noted for its carpet industry.

Als (als), Ger. *Alsen*, island, 121 sq mi (313 sq km), Sønderjylland co., 5 Denmark, in the Lille Bælt, separated from the mainland by the narrow Als Sund. Sønderborg (partly situated on the mainland) is the main city, other towns include Augustenborg.

and Nordborg Farming (particularly of apples and grain), fishing, and manufacturing (especially of motor vehicle parts) are the main occupations. The island was held by Germany from 1864 to 1920.

Alsace (alzas'), Ger *Elsass*, region and former province, E France. It is separated from West Germany by a part of the Rhine River. It comprises the departments of Bas-Rhin, Haut-Rhin, and the Territory of Belfort (a department created after the Franco-Prussian War when the rest of Alsace was annexed by Germany). Alsace is rich agriculturally (especially in the plain between the Rhine River and the Vosges mts.), geologically (potassium exploitation in the Mulhouse area ranks France third among worldwide producers), and industrially. STRASBOURG is the ancient capital and the leading industrial center. Textile industries are located in the Mulhouse-Colmar area, and wines (notably Riesling) are produced there. Hydroelectric plants are at Kembs and Ottmarsheim. Virtually the whole population speaks French, but a very large majority have also retained their Alemannic dialect. About 75% of the population is Roman Catholic. Of Celtic origin, Alsace became part of the Roman province of Upper Germany (see GAUL). It fell to the Alemanni (5th cent.) and to the Franks (496). The Treaty of Verdun (843, see VERDUN, TREATY OF) included it in Lotharingia, the Treaty of MESEN (870) put it in the kingdom of the East Franks (later Germany). The 10 chief cities of Alsace gained (13th cent.) virtual independence as free imperial cities. The remainder of the region was divided into fiefs with the exception of Upper Alsace, where the HAPSBURG family consolidated its original holdings. Alsace became a center of the Reformation (although the rural areas remained generally Catholic). The Treaty of Westphalia (1648) transferred all Hapsburg lands in Alsace to France. Lower Alsace was conquered (1680-97) by Louis XIV of France, the Treaty of Ryswick (1697) confirmed French possession. The Edict of Nantes (1685), promulgated before the annexation of Alsace, could not be revoked, therefore religious worship remained free. In 1798 the city of Mulhouse voted to join France. In 1871, as a result of the FRANCO-PRUSSIAN WAR, all Alsace (except Belfort) was annexed by Germany. With part of Lorraine, it formed the "imperial land" of Alsace-Lorraine, held in common by all the German states. Many Alsatians emigrated to France rather than submit to a policy of Germanization. Clamor for the return of Alsace-Lorraine became the chief rallying force for French nationalism and was a major cause of the armaments race that led to World War I. France's recovery (1918) of this territory was confirmed by the Treaty of Versailles (1919). After the decline of early enthusiasm over the reunion with France, a strong particularist movement gained ground, demanding cultural and even political autonomy. The movement received impetus from recurrent efforts by the French government to end the CONCORDAT OF 1801, which had remained valid in Alsace-Lorraine although it had been ended in the rest of France in 1905. In 1940, German troops occupied Alsace, a large part of the population had already been evacuated to central France. Alsace was treated as a part of Germany. French and American troops recovered (Jan. 1945) Alsace for France and were generally hailed as liberators. Alsace retains many old customs such as the wine and harvest festivals.

Alsen: see ALS, Denmark

alsike (äl'sik) see CLOVER

Alsip, village (1970 pop. 11,141), Cook co., NE Ill., a suburb of Chicago, inc. 1927

Alsop, Richard (ól'səp), 1761-1815, American author, b. Middletown, Conn. Best remembered as one of the CONNECTICUT WITS, he collaborated with Theodore Dwight and others in writing light satiric verse for the *Political Greenhouse* and the *Echo*. See biography by K. P. Harrington (1939, repr. 1969).

Alta California, term used by the Spanish to refer to their possessions along the entire Pacific coast north of what is now the Mexican state of Baja California. California was often represented on maps as an island some 3,000 mi (4,800 km) long until the 18th-century explorations of the Jesuit father Eusebio Kino proved conclusively that the southern part of the area was a peninsula and the rest of it mainland. Thereafter the peninsula came to be called Baja (Lower) and the mainland Alta (Upper) California.

Altadena (ältädē'nə), uninc. residential city (1970 pop. 42,380), Los Angeles co., 5 Calif., just N of Pasadena, on the slopes of the San Gabriel Mts. and in an orange and avocado area, founded 1887.

Altai or **Altay** (both äl'tī', äl-, äl'tī', Rus äl'tī'), geologically complex mountain system of central Asia,

largely in the Gorno-Altai Autonomous Oblast, and in Kazakh SSR, but extending into W Mongolia (where it is called the Mongolian, or Gobi, Altai), and into N China. In the northeast the Kuznetsk Ala-Tau and the Salair Ridge adjoin the Altai and enclose the KUZNETSK BASIN. The Soviet Altai are bounded by the Sayan range in the west, the Mongolian Altai in the south, and the Tannu-Ola range in the east. The highest sections of the Soviet Altai are the Katun, the Chuya, and the Sailyugem ranges. The highest peak in the Soviet Altai, Belukha (14,783 ft/4,506 m), is in the Katun range. Meltwater from more than 230 sq mi (596 sq km) of glaciers feeds many rivers, the Ob and the Irtysh rise in the Altai Lake Teletskoye, with an area of 90 sq mi (233 sq km) and a depth of 1,066 ft (325 m), is the largest of the Altai's more than 3,000 lakes. Rich deposits of gold, silver, mercury, iron, lead, zinc, and copper are found in the mountains, especially in E Kazakhstan. Located in the center of the great Asian landmass, the Altai have a continental climate with a wide annual temperature range and receive c 40 in (101.6 cm) of precipitation annually. Dense forests on the lower slopes are used for timber. Bears, martens, musk deer, and mountain goats inhabit the mountains. The first Russians entered the area in the 17th cent., settled in the foothills, and mined silver. In the late 19th cent., piedmont agriculture replaced mining as the main occupation. After the Soviet takeover in the early 20th cent., the area became both an important farming and mining region. UST-KAMENOGORSK and LENINGOROSK are principal mining and industrial centers. The Mongolian Altai support little agriculture and are economically undeveloped.

Altaic (ältä'ik), subfamily of the Ural-Altaic family of languages (see URALIC AND ALTAIC LANGUAGES). Some scholars still consider Altaic an independent linguistic family. Spoken by about 70 million people, who occupy parts of a territory that stretches from E Europe across Russia and Asia to the Pacific Ocean, the Altaic languages fall into three subdivisions: TURKIC, Mongolian (see MONGOLIAN LANGUAGES), and Tungusic. It has also been suggested that Korean and Japanese belong to the Altaic subfamily, but this is still disputed. The Tungusic subdivision has an estimated 300,000 speakers. It includes Manchu, the tongue of 200,000 persons in various parts of Manchuria, and Tungus, native to 15,000 people in eastern Siberia. Like the Uralic languages, the Altaic tongues are characterized by agglutination and vowel harmony. The former involves using suffix upon suffix to express grammatical relationships and meanings. Suffixes are also employed to form derived words. With vowel harmony, the vowel in a suffix corresponds to the vowel of the root to which the suffix is added. The Altaic languages lack grammatical gender. See Nicholas Poppe, *Introduction to Altaic Linguistics* (1965).

Altai Kray, administrative division (1970 pop. 2,766,000), c 102,400 sq mi (265,220 sq km), S central Siberian USSR. BARNUL is the capital. It is drained by the Upper Ob River and traversed by the Turksib and South Siberian railroads. In the southeast is a subdivision of the region, the GORNO-ALTAI AUTONOMOUS OBLAST, which contains a large portion of the Altai mountain range. The fertile Kulunda steppe, where spring wheat and sugar beets are grown, is in the western part of the territory. Major cities, besides Barnaul, include BISK and Cheshnokovka.

Altair (äl'tä'ir), brightest star in the constellation AQUILA (Eagle), Bayer designation α Aquilae, 1970 position R.A. 19^h49.3^m, Dec. +8°47'. Its apparent MAGNITUDE is 0.74, making it one of the 20 brightest stars in the sky, and it is of SPECTRAL CLASS A7 IV/V. Altair is one of the nearest bright stars, its distance being 16.8 light-years.

Altamira: see PALEOLITHIC ART

Altamirano, Ignacio Manuel (égna'syō manwēl' altamēra'nō), 1834-93, Mexican novelist and poet. Altamirano came from a poor, wholly Indian background, and after gaining his formal education he joined Benito JUÁREZ in the struggle against Maximilian. Afterward he was a key figure in the reconstruction of the republic. He edited the newspaper *Correo de Mexico*. As a poet Altamirano interpreted the Mexican landscape. He is best known for two novels—*Clemencia* and *La Navidad en las Montañas* [Christmas in the mountains], a story sketching Mexican customs.

Altamira y Crevea, Rafaél (rafaél' altamē'ra ē krāv'a), 1866-1951, Spanish jurist and historian. He was appointed professor of the history of the law in the universities at Oviedo (1897), Madrid (1914), and Mexico City (1945), and he served (1921-45) as a

judge of the Permanent Court of International Justice (the World Court). Among his numerous works on education, social science, literature, law, and history, his *Historia de España y de la civilización española* (5 vol., 1913-29, tr. *A History of Spanish Civilization*, 1930) is the best known, an English adaptation is C. E. Chapman, *A History of Spain* (1931).

Altamont, uninc. town (1970 pop. 15,746), Klamath co., S Oregon, a suburb of Klamath Falls.

Altamura (äl'tamōō'ra), city (1971 pop. 45,865), Apulia, S Italy. It is a commercial and agricultural center. The imposing Romanesque cathedral, with twin campaniles, was begun by Emperor Frederick II in 1232.

altar, table or platform for the performance of religious sacrifice. In its simplest form the altar is a small pile, with a square or circular surface, made of stone or wood. Its features vary according to its purpose. The altar of libation usually has a drain for the liquid, and so does the altar of bloody sacrifice, the altar of burnt offering (including incense) often has a depressed hollow for a fire. Altars in Egypt, in Mesopotamia, in Greece, in Rome, and among the Aztec and the Maya were highly adorned with friezes, cornices, elaborate platforms, and canopies. At Pergamum there was a huge monumental altar 40 ft (12.2 m) high. Altars as a rule were out of doors in the ancient world and in Central America. The Christian altar is the place to celebrate the EUCHARIST, a sacrifice in the traditional view. In the Western Church the altar is a long, narrow table of stone or wood, often reminiscent of a tomb, at its back is a REREDOS, which often bears a canopy. In the Roman rite there are in the middle of the altar a crucifix and a tabernacle to contain the reserved Host, although recent legislation of Roman liturgical reform suggests that the tabernacle be placed elsewhere in the church. There is a recess in each altar containing bones of martyrs, this is even true of tiny portable altars carried by chaplains. In Eastern rites the altar is square and has no backing or reredos, it is away from the wall. Most Protestant denominations have no altar, a typical practice is to have a permanent communion table below and in front of the pulpit.

Alt-taschith: see AIJELETH SHAHAR

Altay: see ALTAI, mountain system, Asia

altazimuth mounting (ältāz'əmath) see TELESCOPE

Altdorf (ält'dōrf), town (1971 pop. 8,647), capital of Uri canton, central Switzerland. Cables and rubber goods are manufactured. Altdorf was the scene of the legendary exploits of William TELL, commemorated by a monument (1895) and by the William Tell theater (1925).

Altdorfer, Albrecht (äl'brēkht ält'dōr'fər), 1480-1538, German painter and engraver. He served as city architect of Regensburg, where much of his life was spent. Although influenced by Dürer, Altdorfer's works are less severe in mood. The forms and lines in his works seem to vibrate with intense movement. These qualities are especially clear in his white-ink drawings of figures and landscapes. Altdorfer may have been the first German to paint pure landscape, of which the *Danube Landscape at Regensburg* (1522-25) is typical. His varied subject matter included allegorical and biblical themes such as *Susannah at the Bath* (1526) and *Birth of the Virgin* (c 1521). The *Battle of Alexander* (1529) displays his penchant for detailed, panoramic vistas. All four works are in the Alte Pinakothek, Munich. Equally skilled at woodcutting and engraving, Altdorfer often executed one subject in a variety of media.

Altenburg (äl'tənboörk), city (1970 pop. 46,737), Leipzig district, E East Germany, on the Pleisse River. Manufactures include sewing machines, machine tools, textiles, and playing cards. "Skat," the popular German card game, originated there in the 19th cent. Lignite is mined nearby. Built on the site of early 9th-century Slavic fortifications, Altenburg became an important trade center and was made an imperial city in the 12th cent. It formally passed in 1329 to the house of Wettin and later was (1603-72, 1826-1918) the capital of the duchy of SAXE-ALTENBURG. Noteworthy structures include an 11th-century church and the tower of the monastery founded (1172) by Emperor Frederick I.

alternating current, abbr. AC, a flow of electric charge that undergoes periodic reverses in direction. There are certain currents, such as pulsating direct currents, that contain both alternating and direct components. See ELECTRICITY, GENERATOR.

alternation of generations see GAMETOPHYTE, REPRODUCTION.

alternator: see GENERATOR.

Altgeld, John Peter (alt'gēlt), 1847-1902, American politician, governor of Illinois (1892-96), b. Germany. He was taken by his immigrant parents to Ohio, where he grew up with little formal schooling. After service in the Union army he spent some years as an itinerant worker on farms, read law, and became county attorney of Savannah, Mo. In 1875 he moved to Chicago, where he wrote *Our Penal Machinery and Its Victims* (1884), arguing that American judicial methods were weighted against the poor. In 1886 he was elected to the Cook co. superior court, and in 1892 he was elected governor. In office he established himself as a champion of labor, reform, and liberal thought. Charging a miscarriage of justice, he pardoned three anarchists imprisoned as parties to the Haymarket riot of 1886. During the PULLMAN STRIKE of 1894, when President Cleveland sent federal troops into Chicago, Governor Altgeld publicly termed the act unconstitutional. His extreme liberalism, coupled with his espousal of free silver, lost him reelection in 1896. Denounced as a radical in his own day, he was later regarded as a defender of the freedom of the individual against entrenched power. See his writings and speeches, ed. by H. M. Christman (1960, repr. 1970), biography by H. Barnard (1938), study by R. Ginger (1958, repr. 1965).

althaea or althea: see MALLOW

Althing (al'thīng) [Icel. = general diet], parliament of Iceland. This assembly, the oldest in Europe, was convened at Thingvellir, SW Iceland, in 930. It was dissolved in 1800, was revived as an advisory body in 1843, and in 1874, when Iceland was granted a constitution, became again a legislative body. Each of the 60 members serves for four years. Its upper house (one third of the members) and lower house (two thirds) sometimes work together in a United Althing. The Althing in 1944 voted the independence of Iceland from Denmark, a decision ratified by popular vote. Since 1959 the Althing has used a complicated system of proportional representation.

Althorp, John Charles Spencer, Viscount: see UNDER SPENCER, GEORGE JOHN SPENCER, 2D EARL

Altichiero da Zevio (altēkyā'rō da tsāv'yō), c. 1330-c. 1395, early Italian painter, follower of Giotto. He worked in Verona and then Padua. His frescoes in the churches of Sant' Antonio and San Giorgio in Padua are notable as early examples of the use of rational proportions in the treatment of figures and space.

altimeter (ältīm'tar, äl'tīmē'tar), device for measuring altitude. The most common type is an aneroid BAROMETER calibrated to show the drop in atmospheric pressure in terms of linear elevation as an airplane, balloon, or mountain climber rises. It shows height above sea level, but not above such land features as hills, mountains, and valleys. The radio altimeter, or terrain-clearance indicator, is an absolute altimeter; it indicates the actual altitude over water or over terrain, however uneven. It operates by first sending either continuous or pulse radio signals from a transmitter in an aircraft to the earth's surface. A receiver in the aircraft then picks up the reflection of the signals from the surface. The time it takes for the signals to travel to the earth and back is converted automatically into absolute altitude that can then be read from a calibrated indicator. The radio altimeter is used in the automatic landing systems of aerospace vehicles, systems developed from radio altimeters can automatically control military aircraft flying at high speeds and low altitudes.

altiplano, high plateau (alt. c. 12,000 ft/3,660 m) in the Andes Mts., c. 65,000 sq mi (168,350 sq km), W Bolivia, extending into S Peru. The altiplano is a sediment-filled depression between the Cordillera Oriental and the Cordillera Occidental. Its lowest point is occupied by Lake Titicaca, the largest high-altitude lake in the world. The lake is drained by the Desaguadero River south across the altiplano into Lake Poopó. The sparsely vegetated region receives little precipitation and has several large salt flats. The bleak plateau has a cool climate throughout the year. Potatoes and hardy grains are the principal crops there. Mining is the chief industry in the mineral-rich plateau. One of the world's most densely populated areas, the altiplano contains most of Bolivia's inhabitants, La Paz, the capital, and Oruro are the largest cities.

altitude, vertical distance of an object above some datum plane, such as mean SEA LEVEL or a reference point on the earth's surface. It is usually measured by the reduction in atmospheric pressure with height, as shown on a barometer or altimeter. In surveying and astronomy, it is the vertical angle of an observed point, such as a star or planet, above

the horizon plane. The altitude of a feature of the earth's surface is usually called its ELEVATION.

altitude, in astronomy, angular distance of a heavenly body above the astronomical horizon. The angle used in measuring is that which a line drawn from the eye of the observer to the heavenly body makes with the plane of the horizon. The reading of the apparent altitude, as determined by a telescope attached to a graduated circle, must be corrected for refraction by the atmosphere and for certain other errors to ascertain the true altitude. The altitude of the north celestial pole, which is approximately that of the star POLARIS, is equal to the observer's latitude. In navigation, observations of altitude are made with a sextant.

altitude sickness: see DECOMPRESSION SICKNESS

alto, singing voice the range of which is lower than the soprano by the interval of a fifth. More generally, the term refers to the register in which this voice sings, i.e., the second highest part in a four-part musical texture, and to instruments utilizing this register. See COUNTERTENOR.

Alto Adige. see TRENTINO-ALTO ADIGE, Italy

Altoaguirre, Manuel (manwēl'ältōägē'rā), 1904-59, Spanish poet, b. Malaga. With his contemporary Emilio PRADOS he founded the literary journal *Litoral*. His poetry is distinguished by its grace, sensitivity, and refinement, treating such themes as love, nature, and solitude. His interest in typography is evident in some of the beautiful editions of his poetry. His works include *Las islas invitadas y otros poemas* [Invited islands and other poems] (1920) and *Fin de un amor* [end of a love] (1949).

altocumulus: see CLOUD

Alton (ōl'tan), city (1970 pop. 39,700), Madison co., SW Ill., on bluffs of the Mississippi River 5 mi (8.1 km) above its confluence with the Missouri, inc. 1837. Alton is a shipping and industrial center, with machine shops, foundries, oil refineries, and a large bottle-making plant. Among its many other manufactures are food products, building materials, and ammunition and explosives. Lewis and Clark built their first camp and spent the winter of 1803-04 just south of what is now Alton. The town was laid out in 1815. During the Civil War it grew as a main supply point for the Union armies. A state penitentiary (built in 1827) served as a prison and hospital for captured Confederate soldiers, many of whom are buried in the Confederate cemetery there. Of interest are a monument to Elijah Lovejoy, who was killed in Alton, a tablet marking the site of the last Lincoln-Douglas debate (1858), and a replica of a huge man-eating bird originally painted by Indians on the face of a bluff above the Mississippi. The Principia (at Elsah) and a state park are nearby.

Altona (al'tōna), part of Hamburg, N West Germany, a port on the Elbe River. Its manufactures include chemicals, textiles, and tobacco products. There are fisheries, and the district is a rail center. Founded as a fishing village in the 16th cent. and later one of the first free ports in N Europe, Altona was incorporated into Hamburg in 1937.

Altoona (ältōō'nā), industrial city (1970 pop. 62,900), Blair co., central Pa., on the eastern slopes of the Allegheny Mts., near the source of the Juniata River, settled c. 1769, laid out (1849) by the Pennsylvania RR as a switching point for locomotives preparing to cross the Alleghenies, inc. as a city 1868. It is still a major railroad center with huge construction and repair shops. The city's great variety of manufactures include foundry products, machinery, electrical equipment, paper items, shoes, clothing, and textiles. Bituminous coal is mined nearby. In 1862, Governor Curtin called a conference of governors at Altoona to pledge support of Lincoln's administration. Nearby tourist attractions are the scenic Horseshoe Curve of the Pennsylvania RR, a world-famous engineering feat, Wopsononock Mt. (2,580 ft/786 m high), which offers a magnificent view of six counties, and Fountain Inn, the historic hotel mentioned by Dickens in his *American Notes*. Pennsylvania State Univ. has a junior college campus in Altoona.

altostratus: see CLOUD

Altrincham (ōl'trīng-əm), municipal borough (1971 pop. 40,752), Cheshire, W central England. A suburb of Manchester, it has a textile-printing industry and engineering works and is also noted for its market gardens. The town's growth was stimulated by the construction of the Bridgewater Canal in 1760. In 1974, Altrincham became part of the new metropolitan county of Greater Manchester.

altruism (äl'trōōiz'm), concept in philosophy and psychology that holds that the interests of others, rather than of the self, can motivate an individual. The term was invented in the 19th cent. by the

French philosopher Auguste Comte, who devised it as the opposite of EGOISM. Herbert Spencer and John Stuart Mill, English contemporaries of Comte, accepted the worth of altruism but argued that the true moral aim should be the welfare of society, rather than that of individuals.

Altus (äl'tās), city (1970 pop. 23,302), seat of Jackson co., SW Okla., inc. 1907. The city's agricultural products include cotton, wheat, and cattle. Altus Air Force Base, a large training facility, also contributes to the economy. The city was founded in 1892 as the town of Fraiser, but after floods forced the moving of the city to its present site it was renamed Altus [Lat. = high place]. Wichita Mountain Wildlife Refuge, which is state-operated, is nearby.

Al Ubayyid (al ōbayīd') or **El Obeid** (ēl ōbād'), city (1969 est. pop. 66,000), central Sudan. It is a rail terminus, a road and camel caravan junction, and the end of a pilgrim road from Nigeria. Al Ubayyid is also a trade and transshipment point. Founded by the Turco-Egyptian pashas in 1821, it fell to the Mahdists in 1883 and was destroyed. Its reconstruction followed the fall of the Mahdist empire in 1898.

alum (äl'əm), any one of a series of isomorphous double salts that are hydrated SULFATES of a univalent cation (e.g., potassium, sodium, ammonium, cesium, or thallium) and a trivalent cation (e.g., aluminum, chromium, iron, manganese, cobalt, or titanium). The name *alum* commonly refers to potassium aluminum sulfate dodecahydrate, or potash alum, $KAl(SO_4)_2 \cdot 12H_2O$, a colorless-to-white, crystalline compound having a sweetish-sour taste. It is used in water purification, leather tanning, mordant dyeing, as an astringent, and in baking powder; it occurs in nature as the mineral kalunite. Sodium aluminum sulfate, or soda alum, $NaAl(SO_4)_2 \cdot 12H_2O$, is also used in baking powder. Ammonium aluminum sulfate, or ammonium alum, $NH_4Al(SO_4)_2 \cdot 12H_2O$, is used in tanning, in dyeing and fireproofing textiles, in vegetable glues and porcelain cements, and in water purification. Chromium potassium sulfate, or chrome alum, $KCr(SO_4)_2 \cdot 12H_2O$, is used as a mordant in dyeing, in tanning, and in photographic fixing baths to harden gelatin films and plates. Aluminum sulfate, $Al_2(SO_4)_3 \cdot 18H_2O$, is also called alum. A pseudalum is a double sulfate salt of a divalent cation (e.g., magnesium or calcium) and a trivalent cation (e.g., aluminum).

alumina (älōō'mīnā) or **aluminum oxide**, Al_2O_3 , chemical compound with m.p. about 2000°C and sp. gr. about 4.0. It is insoluble in water and organic liquids and very slightly soluble in strong acids and alkalis. Alumina occurs in two crystalline forms. Alpha alumina is composed of colorless hexagonal crystals with the properties given above; gamma alumina is composed of minute colorless cubic crystals with sp. gr. about 3.6 that are transformed to the alpha form at high temperatures. Alumina powder is formed by crushing crystalline alumina; it is white when pure. Alumina is widely distributed in nature. Combined with silica and other minerals it occurs in clays, feldspars, and micas. It is the major component of BAUXITE and occurs in an almost pure form as CORUNDUM. Alumina is commercially important. A major use is in the production of ALUMINUM metal. It is also used for abrasives, corundum and emery are widely used, as are artificially prepared alumina abrasives. Trade names for alumina abrasives include Alundum and Aloxite. Alumina is also used in ceramics, in pigments, and in the manufacture of chemicals. Clays containing alumina are used in porcelain, pottery, and bricks. Pure alumina is used in making crucibles and other refractory apparatus. Hydrated alumina is used in mordant dyeing to make lake pigments; it is also used in glassmaking, in cosmetics, and in medicine as an antacid.

aluminum (älōō'mīnām), called in British countries **aluminium** (äl'yōōmīn'ēām), metallic chemical element, symbol Al, at no. 13, at wt. 26.9815, m.p. 660.37°C, b.p. 2467°C, sp. gr. 2.6989 at 20°C, valence +3. Aluminum is a silver-white metal with a face-centered cubic crystalline structure. It is a member of group IIIa of the PERIODIC TABLE. It is ductile, malleable, and an excellent conductor of heat and electricity. The pure metal is soft, but it becomes strong and hard when alloyed. Although less conductive than copper wire of the same diameter, aluminum wire is often used for high-tension power transmission because it is lighter and cheaper. Although it is chemically very reactive, aluminum resists corrosion by the formation of a self-protecting oxide coating. It is rapidly attacked by alkalis (such as lye) and by hydrochloric acid. Although it is the most abundant metal in the earth's crust (about 8% by weight), alu-

minum does not occur uncombined but is an important constituent of many minerals, including clay, BAUXITE, mica, feldspar, alum, CRYOLITE, and the several forms of aluminum oxide (alumina) such as emery, corundum, sapphire, and ruby. Commercially, aluminum is prepared by the Hall-Heroult process, which consists essentially of the electrolysis of alumina prepared from bauxite and dissolved in fused cryolite. In an electric furnace an iron tank lined with carbon serves as the cathode and large blocks of carbon serve as the anode, the electric current generates enough heat to keep the cryolite melted. Molten aluminum collects at the bottom of the tank, and oxygen is liberated at the anode. The anode is consumed as it combines with the oxygen to form carbon dioxide. Aluminum foil is used as a wrapping material. Aluminum powder is used in paints. A mixture of powdered aluminum and iron oxide, called THERMITE, is used in welding because of the large amount of heat liberated when it is ignited. The development of methods for coloring aluminum led to its use in jewelry, on wall surfaces, and in colored kitchenware. Important alloys of aluminum include DURALUMIN, aluminum bronze, and aluminum-magnesium, they are used extensively in aircraft and other industries. Although the metal was not isolated until the 19th cent., use of aluminum compounds originated in antiquity. The Romans used various aluminum compounds as astringents, they called these *alum*. Sir Humphry DAVY and other chemists in the early 19th cent. recognized aluminum as the metal and alumina as its oxide. H. C. OERSTED succeeded in obtaining impure aluminum in 1825, but Friedrich WOHLER had greater success and is usually credited with its first isolation, in 1827. H. E. SAINT-CLAIRE DEVILLE first prepared inexpensive pure metal in 1854 and set about perfecting a process for its commercial production. However, it was not until 1886 that the process by which aluminum is produced today was discovered independently by C. M. Hall, a student at Oberlin College, and Paul Heroult, a French metallurgist. The process depends critically on the availability of cheap hydroelectric power.

Alvarado, Juan Bautista (hwan boutēs'ta alvara'-thō), 1809-82, governor of Alta California (1836-42), b. Monterey, Calif. Out of the chaotic times in the neglected Mexican province of Alta California, Alvarado emerged as a brilliant politician. After a small but successful revolt in 1836, he declared California an independent state with himself as governor. He pacified his opponents in San Diego and Los Angeles, but the southern faction continued to view the northern upstart with suspicion until he secured (1838) regular appointment as Mexican governor. He and his uncle, Mariano Guadalupe Vallejo, who acted as military commander, could not accomplish much, and after they disagreed both men were removed. In 1842 Alvarado was one of the leaders of a new and successful revolt in 1844-45, but the new government was unable to withstand the Bear Flag revolt and the Mexican War.

Alvarado, Pedro de (pā'thrō dā), 1486-1541, Spanish conquistador. He went to Hispaniola (1510), sailed in the expedition (1518) of Juan de Grijalva, and was the chief lieutenant of Hernán CORTÉS in the conquest of Mexico. He commanded at Tenochtitlan in the absence of Cortés, and his brutality provoked a brief Indian rebellion. Sent out by Cortés in 1523, he conquered Guatemala and Salvador. He was governor of Guatemala until his death. He met with much opposition from the audiencia in Mexico, but strengthening his power on two voyages to Spain (1527-28, 1536-39), he exercised absolute control. He founded many cities and developed the colony. An expedition to Ecuador (1534-35), made in an attempt to share in the booty Francisco PIZARRO was taking from the Incan empire, ended in defeat. In 1540, Alvarado, sailing for the Moluccas, stopped in Mexico. While there he was influenced by the viceroy Antonio de MENDOZA and by the tales of MARCOS DE NIZA to begin a search for the fabled Cibola. When the Indians of Nueva Galicia unexpectedly revolted in 1541, Alvarado took part against them in the Mixton War. He led a foolhardy attack

and was accidentally killed in the subsequent retreat. Juan Rodríguez CARRILLO took command of the maritime expedition. Alvarado's wife, Doña Beatriz de la CUEVA, succeeded him as governor of Guatemala. His letters concerning the conquest of Guatemala have been published. See J. E. Kelly, *Pedro de Alvarado* (1932).

Alvarez, A. (Alfred Alvarez), 1929-, English writer and critic, b. London, grad. Oxford (8 A., 1952, M.A., 1956). He has been theater critic for the *New Statesman*, a writer for the British Broadcasting Corp., and poetry editor and critic for the *Observer*. He writes in a brisk, contemporary style, free of pedantry. His works include *The New Poetry* (1962), edited by him, *Beyond All This Fiddle* (1968), collected essays, and *The Savage God* (1972), a study of suicide in which he treats in detail the suicide of Sylvia PLATH and his own failed suicide attempt, and *Samuel Beckett* (1973), a critical work.

Álvarez, Jose (Jose Álvarez de Pereira y Cubero) (hōsā' āl'varēth dā pārā'ra ē kōōbā'rō), 1768-1827, Spanish neoclassical sculptor. He was a follower of Canova. Álvarez was employed on the decoration of the Quirinal Palace in Rome. On returning to Madrid he became director of the Academy of San Fernando and sculptor to Ferdinand VII. He is best known for his portrait statues of Spanish royalty and for his mythological figures in marble (e.g., *Nestor and Antilochus*, 1818, Modern Art Mus., Madrid).

Álvarez, Juan (hwān āl'varās), 1780-1867, Mexican general, president of Mexico (1855). An Indian, he distinguished himself in battle under Morelos y Pavón and was later the first governor of Guerrero. In 1854 he led the liberal Revolution of Ayutla, which overthrew (1855) General SANTA ANNA. After two months he yielded the presidency to Ignacio COMONFORT. Álvarez later fought against Maximilian and the French invaders.

Alvear, Carlos María de (kar'lōs mārē'ā dā ālvāār'), 1789-1852, Argentine general and statesman. After distinguished service with the Spanish army in Europe, he returned to Argentina with his friend SAN MARTÍN and became a leader in the domestic revolution of 1812 and a member of the constituent assembly of 1813. He was in command of the patriot army when the Spanish royalists at Montevideo capitulated (1814). In 1815 Alvear was named supreme director of the United Provinces of the Río de la Plata, but was deposed when he attempted to become a dictator. In the war with Brazil he won the decisive battle of Ituzaingó (Feb. 20, 1827). From 1838 until his death he was minister to the United States.

Alvear, Marcelo Torcuato de (marsā'lō tōrkwa'tō), 1868-1942, Argentine statesman and diplomat, president of the republic (1922-28). A member of the Radical party, he became minister to France after a victory of the Radicals in 1916 placed IRIGUYEN in the presidency. Succeeding Irigoyen in 1922, Alvear secured enactment of some reforms, especially agricultural measures, but largely because of a split with Irigoyen his administration, on the whole, accomplished little. Later the breach was healed, and Alvear became the leader of the Radicals. In 1931 he was barred from the presidential race, and in 1937 he was defeated by Roberto M. Ortiz.

Alvend or Elvend (both ēlvēnd', ēl'vēnd), mountain, c. 11,600 ft (3,540 m) high, W Iran. It bears cuneiform inscriptions of Darius and Xerxes.

alveolus (ālvē'alas) see TUNCS

Alverstone, Richard Everard Webster, 1st Viscount (ōl'varstan), 1842-1915, lord chief justice of England (1900-1913). He served on various international arbitration commissions, including those dealing with the Bering Sea Fur-Seal Controversy (1893) and the Venezuela Boundary Dispute (1898-99). In the Alaska Boundary Dispute (1903), he gave the deciding vote against the Canadian claims. He wrote *Recollections of Bar and Bench* (1914).

Alves, Antônio de Castro see CASTRO ALVES, ANTÔNIO DE

Alvin, city (1970 pop. 10,671), Brazoria co., 5 Texas, inc. 1893. The city is chiefly residential, and many of its citizens work in Houston or at the nearby Lyndon B. Johnson Space Center. There is a petrochemical industry in the city, and a junior college is there.

Alvord, Clarence Walworth (āl'vōrd), 1868-1928, American historian, b. Greenfield, Mass. He became (1901) an instructor in history at the Univ. of Illinois (Ph.D., 1908) and was full professor there (1913-20) and at the Univ. of Minnesota (1920-23). Alvord was general editor (1906-20) of the *Illinois Historical Collections*, and he edited the *Centennial History of Illinois* (6 vol., 1918-24) and wrote its first volume. The principal founder of *The Mississippi Valley His-*

torical Review, Alvord served as its managing editor (1914-23). He also wrote *The Mississippi Valley in British Politics* (1917, repr. 1959).

Alvord, Henry Elijah, 1844-1904, American agriculturist, educator, and specialist in dairy husbandry, b. Greenfield, Mass. He pioneered in developing the cooperative creamery system and served (1886-93) as professor and president of various state agricultural colleges. In 1895 he became first chief of the dairy division of the Bureau of Animal Industry, U.S. Dept. of Agriculture.

Alwar (ūl'var, -'wār), city (1971 pop. 100,791), Rajasthan state, N central India. On the Delhi-Jaipur railroad, Alwar is a market for grain, oilseed, cotton, and marble. There are textile and oilseed mills, iron foundries, and chemical and porcelain factories. Turban-making is an important handicraft. The city was the capital of the former Alwar state and is now a district administrative center. An old RAJPUT fort dominates the city.

Alyattes (ālēā'tēz), d. 560 B.C., king of Lydia. During his reign, Alyattes expanded the kingdom. While he was warring with Cyaxares of Media, an eclipse of the sun occurred (585 B.C.). The two kings interpreted the event as a warning omen and made peace. Alyattes continued Lydian conquest of the Ionian cities of Asia Minor. The remains of his tomb can still be seen N of Sardis. He was the father of CROESUS.

Alypius or Alpius (both āl'pī'ēas), fl. c. 360, Greek author of *Introduction to Music*, chief source of modern knowledge of Greek musical notation.

alyssum (āl'is'am), any species of the genus *Alyssum* of the family Cruciferae (MUSTARD family), chiefly annual and perennial herbs native to the Mediterranean area. A few species, notably the perennial golden tuft (*A. saxatile*), are cultivated as rock-garden or border ornamentals for their masses of yellow or white flowers. The annual sweet alyssum (called *A. maritima* but separated by most botanists as *Lobularia maritima*) is a similar plant with fragrant white or lilac blossoms. The alyssums have been called madwort or heal-bite because of an old belief that they cured hydrophobia. *Alyssum* is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Capparales, family Cruciferae.

Am, chemical symbol of the element AMERICIUM

AM: see MODULATION, RADIO

Amad (ā'mād), unidentified city of Asher, NW Palestine. Joshua 19:26

Amadas or Amidas, Philip (both ām'ədās), 1550-1618, English navigator. With Arthur Barlowe he was sent by Sir Walter Raleigh in 1584 to explore the North American coast. Their favorable report on Roanoke Island, N.C., led to the colonizing expedition (1585) under Sir Richard Grenville and Sir Ralph LANE.

Amadeus VIII (āmadē'ās), 1383-1451, count (1391-1416) and duke (from 1416) of Savoy, antipope (1439-49) with the name Felix V. In 1434 he appointed his son regent of Savoy and retired to the hermitage of Ripaille, on Lake Geneva, which he had founded. In 1439 the Council of Basel (see BASEL COUNCIL OF), which had been pronounced heretical by the pope, declared EUGENE IV deposed and elected Amadeus, much respected for his probity, to the papacy. Although a layman, Amadeus reluctantly accepted, believing that he could bring peace to the church. As Felix V, he received only scattered recognition from the secular powers. When Nicholas V became pope, Felix yielded his claim. He was subsequently made a cardinal. He was the last of the antipopes.

Amadeus, 1845-90, king of Spain (1870-73), duke of Aosta, son of Victor Emmanuel II of Italy. After the expulsion (1868) of Queen ISABELLA II, Juan PRIM urged the Cortes to elect Amadeus as king. He accepted the crown reluctantly. Just before the new king arrived in Spain, PRIM was assassinated. The upper classes were opposed to Amadeus, who belonged to the anticlerical house of Savoy, and repeated attempts were made on his life. When a new rebellion by the CARLISTS began, Amadeus abdicated and returned to Italy. A year later Alfonso XII was proclaimed king.

Amadis of Gaul (ām'adīs), fr. *Amadis de Gaule* (āmādēs' dā gōl), famous prose romance of chivalry, first composed in Spain or Portugal and probably based on French sources. Entirely fictional, it dates from the 13th or 14th cent., but the first extant version in Spanish, a revision by Garcia de Rodriguez de Montalvo, was published in 1508. The original inspired innumerable variations and continuations, as well as several translations. It was immensely

AMADO, JORGE

popular in France and Spain until superseded by Don Quixote, and it was, indeed, a sign of ineluctance not to be acquainted with its code of honor and knightly perfection. Its influence is apparent in Sir Philip Sidney's *Arcadia*. The story became the subject of a lyric tragedy by Philippe Quinault (1684), with music by Lully, and it inspired the opera *Amadigi* (1715) by Handel.

Amado, Jorge (zhōr'zhī ama'dōō), 1912–, Brazilian novelist. Amado's works deal largely with the sufferings of the common man. Marked by grim and violent realism, his major works include *Cacau* [cacao] (1933), *Suor* [sweat] (1934), the epic novel *Terras do sem fim* (1942, tr. *The Violent Land*, 1945), *Gabriela, cravo e canela* (1958, tr. *Gabriela, Clove and Cinna-mon*, 1962), *Doña Flor* (1966, tr. 1969), and *Tent of Miracles* (tr. 1971). Amado's works are collected as *Obras completas* (18 vol., 1961–69).

Amador Guerrero, Manuel (manwēl' amadōr' gārā'rō), 1833–1909, first president of Panama (1904–8), b. Colombia. A physician, he served as medical officer for the Panama RR and was a leader in the movement for Panamanian independence from Colombia. As the emissary (1903) for the revolutionaries to the United States, he helped obtain U.S. aid for the successful revolution. He was unanimously selected president of the new republic by the constitutional convention despite a stipulation in the constitution that the president be born in Panama.

Amagasaki (a'magasa'kē), city (1970 pop. 553,660), Hyogo prefecture, S Honshu, Japan, a port on Osaka Bay. An important industrial center, with iron and steel factories, chemical plants, and textile mills, it lies on the banks of the Yodo River. Amagasaki has a 16th-century castle.

Amager (a'magər), island (1965 pop. 177,818), 25 sq mi (65 sq km), Copenhagen co., E Denmark, in the Øresund. Northern Amager is occupied by a part of Copenhagen city that has important shipbuilding and harbor facilities. Southern Amager includes fishing ports, beach resorts, and farms.

Amagi (a'ma'gē), city (1970 pop. 43,259), Fukuoka prefecture, N Kyushu, Japan. It is an agricultural center and railway terminus. Textiles are produced in the city.

Amakusa Islands (amakōō'sa), archipelago, c. 340 sq mi (880 sq km), Kumamoto and Kagoshima prefectures, in the East China Sea, off W Kyushu, Japan. There are about 70 islands in the group. Shimo, the largest island, is the site of Hondo, which is the chief town. The interior of the islands is rugged, the coastal lowlands are fertile. Rice, camellia oil, fish, porcelain, and coal are the principal products. Amakusa clansmen made the islands a major center of Christianity in the 16th cent. Villages and historical relics of this period are found in Unzen-Amakusa National Park. In 1637, when Christianity was banned in Japan, the islanders, suffering economic hardship, joined in the rebellion at Shimabara. After the revolt was mercilessly suppressed (1638), the islands passed under the control of the Tokugawa shogunate.

Amal (ā'mal), Asherite 1 Chron 7:35.

Amalasuntha (ā'mālasūn'thā), d. 535, Ostrogothic queen in Italy (534–35), daughter of THEODORIC THE GREAT. After her father's death (526) she was regent for her son Athalaric. He died in 534, and she and her husband, Theodahad, became joint rulers of Italy. Her friendly relations with the Byzantine emperor Justinian I alienated her people. In 535 the Ostrogoths revolted, Amalasuntha was exiled and later murdered by order of her husband Justinian used her murder as his pretext for attacking and reconquering Italy.

Amalekites (ām'alākīts), aboriginal people of Canaan and the Sinai peninsula. They waged constant warfare against the Hebrews until dispersed by Saul. Their ancestor, Amalek, for whom they were named, was a duke of Edom and Esau's descendant. Gen 14:7, 36:12, 16, Ex 17:8–16, Num 13:29, 14:25, 24:20, Judges 3:13, 6:3, 33, 7:12, 1 Sam 15:5–8, 30:1–20, 1 Chron 1:36, 4:43.

Amalfi (amal'fē), town (1971 pop. 6,136), in Campania, S Italy, a small fishing port on the Gulf of Sorrento. Built on a mountain slope, it is also a picturesque seaside resort. According to legend, Amalfi was founded by the Romans, it later became (9th cent. AD) an early Italian maritime republic. It rivaled Pisa, Venice, and Genoa in wealth and power and had a population of about 70,000. Amalfi's maritime code, the *Tavole Amalfitane*, had wide influence until the 18th cent. Amalfi reached its zenith in the 11th cent. Thereafter it declined fairly rapidly, it was captured (1131) by the Normans and sacked (1135, 1137) by the Pisans, and in 1343 a storm de-

stroyed much of the town. Of note in Amalfi is the Sicilian-Arab cathedral (11th cent., with numerous later additions), which has an imposing facade, fine bronze doors cast (1066) in Constantinople, and a stunning cloister (*chiostro del Paradiso*). The Amalfi Coast, running from Salerno to Sorrento, is famous for its rugged scenery.

amalgam (āmāl'gām), ALLOY containing MERCURY. The alloy may be liquid or solid, depending on the proportion of mercury, although all naturally occurring amalgams, i.e., those of gold and silver, are solid. Amalgams are widely used. Silver, gold, and copper amalgams are used in dentistry, and tin amalgam is used in making mirrors.

amalgamation process (āmāl'gāmā'shən), method used for the extraction of gold and silver from their ores. The ore is crushed and treated with mercury, in which the metal dissolves. When the resulting amalgam is heated, the mercury evaporates, leaving the pure gold or silver.

Amalia, duchess of Saxe-Weimar: see ANNA AMALIA.

Amalric I (āmāl'rik, ā'māl'rik) or **Amaury I** (āmō'rē, Fr. amō'rē'), c. 1137–1174, Latin king of Jerusalem (1162–74), brother and successor of Baldwin III. He spent his reign in attempts to gain and hold the suzerainty of Egypt, but was balked by the Turkish sultan NUR AD-DIN, one of whose lieutenants finally obtained control of the country and left it at his death to SALADIN. During Amalric's frequent absences in Egypt, Nur ad-Din repeatedly raided the increasingly weak Latin states of the East. Amalric was succeeded by his son, Baldwin IV.

Amalric II or **Amaury II**, c. 1155–1205, Latin king of Jerusalem (1197–1205) and Cyprus (1194–1205), brother and successor (in Cyprus) of GUY OF LUSIGNAN. His title to Jerusalem was established through his marriage with Isabella, eldest daughter of Amalric I (see JERUSALEM, LATIN KINGDOM OF).

Amalric of Bena (bē'nā), d. 1207?, French professor of philosophy. He taught heretical precepts concerning God, a pantheistic universe, and a progressive Trinity. Before he died, he publicly retracted, but his followers in Champagne formed a heretical sect, the Amalricians. They were condemned by Pope Innocent III and by councils held at Paris (1210) and the Lateran (1215). The heresy resulted in a temporary ban on Aristotle and the Arabic philosophers at the Univ. of Paris.

Amalthaea (āmālthē'a), in Greek mythology, shegoat or nymph who nursed the infant Zeus. It was said that Zeus made one of her magnificent horns into the CORNUCOPIA and set her image among the stars as the constellation Capricorn.

Amalthea (ām'althē'a), in astronomy, one of the 12 known moons, or natural satellites, of JUPITER.

Amam (ā'mām), city of Judah. Joshua 15:26.

Aman (ā'mān), the same as HAMAN.

Amana (āmā'nā), unidentified mountains. Cant. 4:8.

Amana Church Society (āmā'nā), corporate name of a group of seven small villages in E central Iowa, clustered around the Iowa River NW of Iowa City, settled 1855 by members of the Ebenezer Society. The society originated in one of the Pietist religious sects of 17th-century Germany. Led by Christian Metz (1794–1867), 800 members emigrated to the United States in 1842 to escape persecution at home. Settling first near Buffalo, N.Y., they developed a communal way of life that reached its flowering in Iowa. Amana became one of the most successful of such communities in America. In 1932 it was made a cooperative corporation, with separation of religious and economic administration. Long famous for the products of their woolen mills (especially blankets) and farms, the quaint villages also attract many visitors. The name Amana is used for a refrigerator and appliance company there, the company is not owned by the society. There are about 700 members of the society today. See B. M. Shambaugh, *Amana That Was and Amana That Is* (1932); Barbara Yambura, *A Change and a Parting: My Story of Amana* (1960).

Amanita (ām'anī'tā) see MUSHROOM.

Ama-no-hashidate see MIYAZU, Japan.

Amanullah (āmānōō'lā), 1892–1960, emir (1919–26) and king (1926–29) of Afghanistan. To win popular support for his rule he invaded India in an attempt to free Afghanistan from British-ruled India. No serious fighting occurred, however, and the Treaty of Rawalpindi was soon signed (1919). He attempted to introduce a number of Western reforms and changed the country from an emirate to a kingdom. His subjects rebelled against his program, and he fled the country in 1929. He remained in exile in

Switzerland until his death. See study by L. B. Poul-lada (1973).

Amapá (āmāpā'), federal territory (1970 pop. 114,687), 53,013 sq mi (137,304 sq km), extreme N Brazil, bounded on the N by French Guiana and the Atlantic Ocean. Macapa is the capital.

Amapala (āmāpā'la), town (1961 pop. 2,368), S Honduras, on Tigre Island, in the Gulf of Fonseca. It is the chief Pacific port of Honduras. Products (coffee, lumber) are shipped from the mainland to Amapala by launch.

Amara (ama'ra), town (1965 pop. 64,847), SE Iraq, on the Tigris River. A marketplace for dates and grains, it was taken by the British during the Mesopotamian campaign in 1915.

amaranth (ām'arānth'') [Gr. = unfading], common name for the Amaranthaceae (also commonly known as the pigweed family), a family of herbs, trees, and vines of warm regions, especially in the Americas and Africa. The genus *Amaranthus* includes several widely distributed species called amaranths, which are characterized by a lasting red

Green amaranth, *Amaranthus retroflexus*

pigment in the stems and leaves. They have been a poetic symbol of immortality from the time of ancient Greece. *Amaranthus* also includes such weeds as the green amaranth, *A. retroflexus*, and various species commonly called TUMBLEWEED and PIGWEED, as well as several cultivated plants—e.g., love-lies-bleeding, or tassel flower, and Joseph's coat. Other ornamentals in the family are the globe amaranth (genus *Gomphrenia*), sometimes called bachelor's button, and the cockscomb (*Celosia*), both originally tropical annuals. They can be preserved dry and are used in EVERLASTING bouquets. *Amaranthus* is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Caryophyllales.

Amarapura (ū'marapōō'ra), town (1962 est. pop. 71,015), Mandalay division, central Burma, on the Irrawaddy River. It is a silk-weaving center and has varied handicraft industries. Amarapura was founded in 1782 and was twice (1783–1823 and 1837–60) the capital of Burma. Its royal palace, great temples, and fortifications are now in ruins.

Amaravati (ū'marāvū'tē), ancient ruined city, Andhra Pradesh state, SE India, near the mouth of the Kistna River. The former capital of the Buddhist Andhra kingdom, it is a well-known archaeological site. Remains include a beautiful Buddhist stupa (1st cent. AD).

Amariah (ām'arī'a) 1 High priest, son of Meraioth 1 Chron 6:7, 52. Perhaps he is the same as 2 and 3. 2 High priest, son of Azariah 1 Chron 6:11. Perhaps he is the same as 1, 3, and 4. 3 Ancestor of Ezra. Ezra 7:3. Perhaps he is the same as 1 and 2. 4 High priest under Jehoshaphat 2 Chron 19:11. Perhaps he is the same as 2. 5 Levite 1 Chron 23:19, 24:23. 6, 7 Contemporaries of Ezra, perhaps the same person. Ezra 10:42, Neh 11:4. 8 A priestly family 2 Chron 31:15, Neh 10:3, 12:2, 13. See IMMER 1 and IMRI 1. 9 Ancestor of the prophet Zephaniah. Zeph 1:1.

Amarillo (āmārīl'ō, -'ā), city (1970 pop. 127,010), seat of Potter co., N Texas, inc. 1899. A commercial, banking, and industrial center of the Texas Panhandle, Amarillo is situated in the midst of treeless plains that are swept by summer duststorms and winter blizzards. The city grew after the coming of the railroad in 1887, and at the turn of the century it was a market for wheat farmers. After the discovery of gas (1918) and oil (1921), Amarillo mushroomed

into an industrial city. In addition to oil and gas, the city's economy is based on cattle ranching, meat-packing, flour milling, zinc smelting, as well as the production of helicopters, synthetic rubber, and farm and dairy items. Nearby are a U.S. government helium plant, Amarillo Air Force Base, which has a Strategic Air Command wing, and an atomic energy project. The city's educational and cultural facilities include Amarillo College, civic and art centers, a symphony orchestra, and a little theater.

Amarna: see TEL EL AMARNA

amaryllis (ām'arīl'is), common name for some members of the Amaryllidaceae, a family of mostly perennial plants with narrow, flat leaves and with lilylike flowers borne on separate, leafless stalks. They are widely distributed throughout the world, especially in flatlands of the tropics and subtropics. Many ornamental plants of this family are mistakenly called lilies; they can be distinguished from members of the LILY family by the anatomical placement of the ovary (see FLOWER) and are considered more advanced in evolution than the lilies. Several fragrant, showy-blossomed species are commonly called amaryllis: the true amaryllis (*Amaryllis belladonna*), or belladonna lily, of S. Africa, and the more frequently cultivated tropical American species of *Sprekelia*, *Lycoreis*, and especially *Hippeastrum* (e.g., the Barbados lily). The large *Narcissus* genus, including jonquils and daffodils, is native chiefly to the Mediterranean region and the Orient, but it has been naturalized and is now widespread in the United States. Although the common names are sometimes used interchangeably, strictly the daffodil is the yellow *N. pseudo-narcissus*, with a long, trumpet-shaped central corona; the jonquil is the yellow *N. jonquilla*, with a short corona, and the narcissus is any of several usually white-flowered species, e.g., the poet's narcissus (*N. poetica*) with a red rim on the corona. The Biblical ROSE OF SHARON may have been a narcissus. Among many others that have become naturalized and are cultivated in Europe and North America are the snowdrops (any species of *Galanthus*), small early-blooming plants of the Old World whose flowers are symbolic of consolation and of promise, and the tuberose (*Polianthes tuberosa*), a waxy-flowered Mexican plant. Economically, the most important plants of the family are of the nonbulbous genus *Agave*, the tropical American counterpart of the African *Aloe* genus of the family Liliaceae (lily family). Different agaves provide soap (e.g., those called amoles—see SOAP PLANT), food and beverages, and hard fiber. Henequen and SISAL HEMP are among the fibers obtained from agaves; fique and Cuban hemp come from other similar genera. Maguey is the Mexican name for various species (chiefly *A. americana*) called American aloe, or century plant, that contain the sugar agavose, sometimes used medicinally but better known as the source of the popular alcoholic beverages PULQUE and MISCAL. The name "century plant" arises from the long intervals between bloomings—from 5 to 100 years. After blooming, the century plant dies back and is replaced by new shoots. The agave cactus (*Leuchtenbergia principis*) is a true CACTUS that resembles the agave. Amaryllis is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Sapindales.

Amasa (ām'asa, amā'sa) 1 Cousin of Absalom, with whom he revolted. Later he became David's commander in chief, he was murdered by Joab. 2 Sam 17:25, 19:13, 20:4-13, 1 Kings 2:5. 2 Ephraimite chief. 2 Chron 28:12.

Amasai (āmās'āi, amās'sāi) 1 Chief of the deserters from Saul to David. 1 Chron 12:18. 2 Priest. 1 Chron 15:24. 3 Levite. 1 Chron 6:25,35. 4 Levite contemporary with Hezekiah. 2 Chron 29:12.

Amashai (amā'shāi), priest contemporary with Nehemiah. Neh 11:13. Amashai is perhaps the same as MAASIAI.

Amasiah (ām'asi'ā), captain in Jehoshaphat's army. 2 Chron 17:16.

Amasis I (amā'sis), d. c. 525 B.C., king of ancient Egypt (c. 570-525 B.C.), founder of the XXVI dynasty. He drove the Hyksos out of the Nile delta and pursued them into Palestine. His name also appears as Ahmose.

Amasis II, d. 525 B.C., king of ancient Egypt (525-520 B.C.), of the XXVI dynasty. In a military revolt he deposed APRIES. He erected temples and other buildings at Memphis and Sais and encouraged Greek merchants and artisans to settle at Naucratis. He also established alliances with Greek leaders and maintained his rule partly with the aid of Greek mercenaries. His revision of the laws is said to have influenced the Athenian lawgiver Solon. Amasis II

died just before the Persian invasion (525 B.C.) under CAMBYSES. The name also appears as Ahmose II. **amateur**, in sports, one who engages in athletic competition solely for the love of sport and without any desire for material gain. Unlike the amateur, a professional athlete is paid for competing. The actual rules governing amateurs differ from sport to sport and from country to country. In the United States, students with athletic scholarships are classified as amateurs, even though they do receive a form of remuneration for their competitive activities. In the Soviet Union a large number of athletes who are classified as amateurs nevertheless receive large subsidies from the state. Such contraventions of the basic amateur rule have generally been disregarded by the International Olympic Committee, sponsor of the quadrennial Olympic Games, the world's most prestigious amateur athletic competitions. Occasionally, however, individuals are punished for violations. Jim THORPE was stripped of his two gold medals from the 1912 Olympics because he had once inadvertently played in a professional baseball league; the Austrian skier Karl Schranz was barred from the 1972 Winter Olympics for his endorsements of a ski manufacturer's products. Critics of the amateur code contend that it is not appropriate to contemporary realities; they point out that it was adopted during an era when amateurs were upper-class gentlemen who could afford to compete without remuneration. The major organizations involved in the supervision of amateur athletics in the United States are the National Collegiate Athletic Association (NCAA), responsible for college and university sports, and the Amateur Athletic Union (AAU), responsible for most other areas of amateur competition.

Amati (amā'tē), Italian family of violinmakers of Cremona. The founder of the Cremona school was Andrea Amati (c. 1520-c. 1578), whose earliest violins date from c. 1564. His labels bore the name Amadus, and he is credited with the basic design of the modern violin. His sons were Antonio Amati and Girolamo or Geronimo Amati, who worked together and followed closely their father's patterns in making violins of graceful shape and sweet tone. The Amati instruments had a characteristic amber-colored varnish. Niccolò Amati (1596-1684), son of Girolamo, brought the Amati violin to its height after c. 1645. Antonio STRADIVARI and Andrea Guarneri were pupils of Niccolò. Niccolò's son, Girolamo (1649-1740), was the last of his line to achieve distinction. The Latin forms of the first names, Andreas, Antonius, Hieronymus, and Nicolaus, were generally used on the violin labels, and the family name was sometimes Latinized as Amatus.

Amato, Giovanni Antonio d' (jōvan'nē āntō'nyō dama'tō), 1475-1555, Neapolitan painter, called Il Vecchio [the elder]. He imitated the style of Pietro Perugino. Paintings by him are in many churches in Naples, among them the *Holy Family* in a chapel of San Domenico Maggiore.

Amatory. For persons thus named, see AMALRIC.

Amaziah (ām'azī'ā) 1 King of Judah, son and successor of Jehoash of Judah. The two incidents of his reign were the conquest of Edom, including the capture of Petra, and an unprovoked attack by Amaziah on King Jehoash of Israel. Jehoash took Amaziah prisoner, entered Jerusalem, and sacked the Temple. Amaziah was assassinated at Lachish, and his son Uzziah succeeded him. 2 Kings 14, 2 Chron 25. 2 Simeonite. 1 Chron 4:34. 3 Levite. 1 Chron 6:45. 4 Priest of Bethel, Amos's enemy. Amos 7:10-15.

Amazon, Port. Amazonas (āmāzō'nās), world's second longest river, c. 3,900 mi (6,280 km) long, formed by the junction in N. Peru of two major headstreams, the UCAYALI and the shorter MARAÑÓN. It flows across N. Brazil before entering the Atlantic Ocean near Belem. The Amazon carries more water than any other river in the world. The gradient of the river is very low. Manaus, c. 1,000 mi (1,610 km) upstream, is only c. 100 ft (30 m) higher than Belem and is an ocean port; ships with a draft of 14 ft (4 m) can reach Iquitos, Peru, c. 2,300 mi (3,700 km) from the sea. Peru, Ecuador, and Colombia have international shipping rights on the Amazon. For most of its course, the river has an average depth of c. 150 ft (50 m). The drainage basin is enormous (c. 2,500,000 sq mi/6,475,000 sq km, c. 35% of South America), gathering waters from both hemispheres and covering not only most of N. Brazil but also parts of Bolivia, Peru, Ecuador, Colombia, and Venezuela. In the lowlands stretching E from the Andes is the largest rain forest (selva) in the world—a wet, green land, rich in plant life. The tropical climate is tempered by the heavy rainfall (exceeding 100 in./254 cm annu-

ally in parts of the upper and lower regions) and by high relative humidity; the average temperature at Santarem, 400 mi (644 km) upriver, is 78°F (26°C). Geologically, the Amazon basin is a sediment-filled structural depression between crystalline highlands of Brazil and Guiana. The river bed (1-8 mi/1.6-12.9 km wide) is in a wide flood plain that is up to 30 mi (48 km) wide. For much of its course, the Amazon wanders in a maze of brownish channels amid countless islands, but is unobstructed by falls. Its headstreams, however, arise cold and clear in the heights of the Andes. They descend northward before turning east to join and form the Amazon (which is, however, occasionally called the Solimões from the Brazilian border to the junction with the Rio Negro). Of the Amazon's more than 500 tributaries, the chief ones are the Negro, Japura (Cacqueta), Putumayo (Iça), and Napo, which enter from the north, and the Javari, Jurua, Purús, Madeira, Tapajos, and Xingu rivers, which enter from the south. The Casiquiare River, a natural canal, links the Amazon basin (through the Rio Negro) with the Orinoco basin. Below the Xingu the river reaches its delta, with many islands formed by alluvial deposit and submergence of the land. Around the largest of these, MARAJÓ, the river splits into two large streams. The northern stream is the principal outlet and threads its way around many islands. The southern channel, called the Para River, receives the Tocantins River and has the important port of Belem. The awesome tidal bore (up to 12 ft/3.7 m high) of the Amazon is called *pororoca*; it travels c. 500 mi (800 km) upstream. The river's immense silt-laden discharge is visible far out to sea. The Amazon was probably first seen in 1500 by the Spanish commander Vicente Yañez Pinzon, who explored the lower part. Real exploration of the river came with the voyage of the Spanish explorer Francisco de Orellana down from the Napo in 1540-41; his fanciful stories of female warriors gave the river its name. Not long afterward (1559) the Spanish conquistador Pedro de Ursua led an expedition down from the Marañón River. In 1637-38 the Portuguese explorer Pedro Teixeira led the voyage upstream that definitively opened the Amazon to world knowledge. The river continued to be of enormous importance to explorers and naturalists, among them Charles Darwin and Louis Agassiz. The valley was largely left to its sparse Indian inhabitants (mostly groups of the Guaraní-Tupi linguistic stock and of meager material culture) until the mid-19th cent., when steamship service was regularly established on the river and when some settlements were made. In the late 19th and early 20th cent., the brief wild-rubber boom on the upper Amazon attracted settlers from Brazil's northeastern states, and since the 1930s Japanese immigrants have developed jute and pepper plantations. But the area still remains largely unpopulated and undeveloped, yielding small quantities of forest products (rubber, timber, vegetable oils, Brazil nuts, and medicinal plants) and cacao. The establishment of a health service (chiefly by launch) in World War II was followed by the creation of a UNESCO research institute in 1948, and several developmental programs, both governmental and private, have been set up in Brazil in recent years to foster the valley's development. Oil and manganese resources are exploited near Manaus and in Amapa. In the 1960s the Amazon region began experiencing increased economic development brought on by tax incentives and construction of the Trans-Amazon Highway, the Belem-Brasília Highway, and two rail lines. See C. R. Marham, ed., *Expeditions into the Valley of the Amazon* (1859), W. L. Herndon, *Exploration of the Valley of the Amazon* (1854, repr. 1952), Robin Furneaux, *The Amazon* (1969), Gaspar De Carvajal, *The Discovery of the Amazon* (tr. 1934, repr. 1970), Brian Blanton, *The Last Great Journey on Earth* (1971), J. R. Holland, *The Amazon* (1972).

Amazon (ām'azōn), in Greek mythology, one of a tribe of warlike women who lived in Asia Minor. The Amazons had a matriarchal society, in which women fought and governed while men performed the household tasks. Each Amazon had to kill a man before she could marry, and all male children were either killed or maimed at birth. It was believed that the Amazons cut off one breast in order to shoot and throw spears more effectively. They were celebrated warriors, believed to have been the first to use cavalry, and their conquests were said to have included many parts of Asia Minor, Phrygia, Thrace, and Syria. Several of the finest Greek heroes proved their mettle against the Amazons. Hercules took the golden girdle of Ares from their queen Hippolyte, Theseus abducted Hippolyte's sister Antiope and

then defeated a vengeful army of Amazons at Athens. A contingent of Amazons fought with the Trojans under PENTHESSILEA.

Amazonas (aməzō'nās), state (1970 pop 955,394), 604,032 sq mi (1,564,445 sq km), NW Brazil. The capital is MANAUS.

amazonite: see FELDSPAR.

Ambala (əm'bālā), town (1971 pop 83,649), Haryana state, N central India. It is a district administrative headquarters, a military station, and a transportation center. Automobile parts, pharmaceuticals, scientific instruments, machinery and iron products, porcelain, and glassware are manufactured.

Ambarvalia (əm'bārvāl'ya), in Roman religion, yearly agricultural rite held at the end of May. To insure fertility and disperse evil, each farmer led members of his household and a sacrificial beast in a procession around the boundaries of his fields.

ambassador: see DIPLOMATIC SERVICE.

Ambato (am'batō), city (1970 est pop 75,300), capital of Tungurahua prov., central Ecuador, in a high Andean valley. A major commercial and transportation center, Ambato is noted for the variety of fruit grown in its outskirts and is called the "Garden of Ecuador." Sugarcane, grains, and cotton are also raised, and hides are processed. Picturesque Ambato is a favorite resort of the rich. Among its fine buildings is an old cathedral. The city has been frequently damaged by volcanic eruptions and earthquakes and in 1949 was almost totally destroyed.

amber, yellow to brown fossil RESIN exuded by coniferous trees now extinct. Capable of being highly polished, it is used in the manufacture of beads, amulets, mouthpieces, cigar and cigarette holders, pipes, and other small ornamental objects. When rubbed with a cloth, amber becomes charged with static electricity. The chief source of the world's amber is the Baltic coast of Germany, some is found off the coasts of Sicily and England. The empirical formula of amber is thought to be $C_{10}H_{16}O$. When destructively distilled, amber yields acetic, butyric, valeric, and other acids, water, and hydrocarbons. Baltic amber also contains succinic acid and is often called succinite. An ESSENTIAL OIL (amber oil) is obtained from amber. The best amber is transparent, but some varieties are cloudy. Bubbles of air, leaves, bits of wood, and insects are frequently found in amber, the insects sometimes being of extinct species. Amber was known in the Bronze Age and to the Greeks and Romans, who used it extensively in jewelry. Thales was familiar with its electrical properties, and Pliny recounts several instances of its artistic uses. It is connected with many superstitions and is believed to be a preventive against disease and bad luck.

amberfish: see POMPANO.

Amberg (am'bĕrk), city (1970 pop 41,522), Bavaria, SE West Germany, on the Vils River, near Czechoslovakia. Its manufactures include precision instruments, machinery, blast furnaces, plastics, and porcelain. Nearby are large iron mines known since the Middle Ages. Until 1810, Amberg was capital of the Upper Palatinate. At Amberg in 1796, Archduke Charles of Austria defeated the French under Marshal Jean Baptiste Jourdan. St. Martin's church (15th cent.) and the town hall (14th-16th cent.) are the city's outstanding buildings.

ambergris (ām'bĕgrĕs), waxlike substance originating as a morbid concretion in the intestine of the sperm whale. Lighter than water, it is found floating on tropical seas or cast up on the shore in yellow, gray, black, or variegated masses, usually a few ounces in weight, though pieces weighing several hundred pounds have been found. Ambergris has been greatly valued from earliest times. It is now used as a fixative in perfumes. Its active principle is ambrein, a crystalline alcohol with the empirical formula $C_{25}H_{50}O$.

amberjack: see POMPANO.

ambidexterity: see HANDEDNESS.

Ambiorix (ām'bī'oriks), fl. 54 B.C., Gallic chieftain of the Eburones (in what is now central Belgium). He had been favorably treated by the Romans, but he joined another tribe in attacking Julius Caesar's legates. When he heard of Caesar's approach, he fled across the Rhine.

ambivalence (ām'bīv'əlāns), coexistence of two opposing drives, desires, feelings, or emotions toward the same person, object, or goal. The ambivalent person may be unaware of either of the opposing wishes. The term was coined in 1911 by Eugen Bleuler to designate one of the four symptoms he considered primary to schizophrenia, the others being autism and disturbances of affect (i.e., emotion) and

of association. As Bleuler explained it, "by ambivalence is to be understood the specific schizophrenic characteristic, to accompany identical ideas or concepts at the same time with positive as well as negative feelings (affective ambivalence), to will and not to will at the same time the identical actions (ambivalence of the will), and to think the same thoughts at once negatively and positively (intellectual ambivalence)." Closely related to ambivalence is Bleuler's concept of ambivalence, in which "a definite tendency to contrary or opposite action is combined with every impulse." Bleuler felt that there were normal instances of ambivalence and ambivalence, such as the feeling, as soon as one has done something, that it would have been better to have done the opposite, but the normal person, unlike the schizophrenic, is not prevented by his opposing impulses from deciding and acting. The psychoanalytic movement, following Freud, imparted a narrower meaning to the term in specifying that the opposing forces were feelings of love and hate toward the same person. This specific meaning has attained common usage by psychiatrists, whether or not they see the conflicting emotions as derived from postulated instinctual sources of sexual and destructive wishes. Many psychiatrists prefer to reserve the term ambivalence for the simultaneous presence in schizophrenia of strong destructive and erotic wishes toward a major family member. Mixed feelings of lesser intensity are generally said to be evidence of conflict rather than ambivalence. For example, the spells of doubting and brooding and the indecision characteristic of a person with an obsessive personality or neurosis have been traced to a conflict between obedience and defiance.

Ambler, Eric, 1909-, English novelist. A successful advertising executive, he turned exclusively to writing after his novels—realistic suspense stories—became popular. His heroes are usually ordinary men who become accidentally or innocently involved in international intrigues. Included among his thrillers are *A Coffin for Dimitrios* (1939), *Journey into Fear* (1940), *Passage of Arms* (1959), *To Catch a Spy* (1964), *The Levanter* (1972), and *Dr. Frigo* (1974).

Amboina: see AMBON, Indonesia.

Amboise, Georges d' (zhōrh' daNbwa'z'), 1460-1510, French statesman, cardinal of the Roman Catholic Church. He became archbishop of Rouen in 1493. In 1498, as an intimate friend of the new king, Louis XII, he became chief minister. Subsequently he was appointed cardinal and papal legate in France. He devoted himself primarily to the furtherance of Louis's ambitions in Italy and was lieutenant general in Italy at the conquest of Milan (1500). His ambitions for the papal crown were disappointed by the election of Pope Pius III (1503), but Pius's successor, Pope Julius II, designated him (1503) papal legate in France for life. He negotiated the treaties of Blois (1504) and helped form the League of Cambrai (1508, see CAMBRAI, LEAGUE OF). His domestic administration was beneficent. By his patronage of artists and writers, he contributed to the promotion of the Renaissance in France.

Amboise, Jacques d' (zhak'), 1934-, American dancer and choreographer, b. Dedham, Mass. D'Amboise became a soloist with the New York City Ballet in 1953. He is best known for his roles in such distinctly American dance works as *Falling Station* and *Western Symphony*. He has also danced in several movies, including *Seven Brides for Seven Brothers* (1954) and *Carousel* (1956). His own ballets include *The Chase* (1963), *Quatuor* (1964), and *Irish Fantasy* (1964).

Amboise (aNbwa'z'), town (1968 pop 8,899), Indre-et-Loire dept., N central France, in Touraine, on the Loire. It is a wine and wool market, and its manufactures include precision instruments, shoes, sporting goods, pharmaceuticals, and film and radio equipment. The town is chiefly famous, however, for its Gothic château, a royal residence from the reign of Charles VIII (who was born and died there) to that of Francis II. Leonardo da Vinci, who probably worked on it, is said to be buried in its chapel. Amboise was the scene (1560) of a Huguenot plot against the Guise family. Other old structures in the town include St. Denis Church (12th, 15th, 16th, and 17th cent.), St. Florentin Church (15th cent.), the town hall (16th cent., restored), and the Clos-Luce (15th cent.), where Francis I spent part of his youth and where da Vinci died.

Amboise, conspiracy of, 1560, plot of the Huguenots (French Protestants) and the house of BOURBON to usurp the power of the Guise family, which virtually ruled France during the reign of the young FRAN-

CIS II. The plan, presumably worked out by Louis I de Bourbon, prince de CONDÉ, provided for a march on the castle of Amboise, the abduction of King Francis II, and the arrest of François, duc de Guise, and his brother Charles, cardinal of Lorraine. The cardinal was forewarned, and the rebels, beaten before they had united their forces, were ruthlessly massacred. For weeks the bodies of hundreds of conspirators were hanging from the castle and from every tree in the vicinity. The Huguenots were enraged. A brief period of conciliation followed under the chancellorship of Michel de L'HÔPITAL, appointed by the king's mother, CATHERINE DE' MEDICI. He temporarily halted Protestant persecution until the outbreak (1562) of the Wars of Religion.

Ambon (am'bŏn), island, c. 1,800 sq mi (4,660 sq km), E Indonesia, one of the Moluccas, in the Banda Sea. It is mountainous, well watered, and fertile. Maize and sago are produced, and hunting and fishing supplement the diet. Nutmeg and cloves, once grown in abundance, are produced in limited quantities, and copra is exported. The chief town and seaport, also called Ambon (1961 pop 56,037), is capital of Moluccas prov. It is the seat of the Univ. of Maluku and a private college, and it has an airport. The island was discovered (1512) by the Portuguese, who made it a religious and military headquarters. It was captured by the Dutch in 1605. An English settlement there was destroyed (1623) by the Dutch in what is called the Ambon massacre. Ambon was temporarily under British rule from 1796 to 1802 and again from 1810 to 1814. The town was the site of a major Dutch naval base captured (1942) by the Japanese in World War II, and it was the scene (1950) of a revolt against the Indonesian government during the short-lived South Moluccan Republic. The majority of the population is Christian. The island and town are also called Amboina.

Ambracia: see ARTA.

Ambridge, industrial borough (1970 pop 11,324), Beaver co., W Pa., on the Ohio River, inc. 1905. Founded by and named for the American Bridge Co. In 1901, it is still the home of the bridge company and of one of the largest structural steel plants in the world. Manufactures include steel, foundry and machine-shop products, and electrical equipment. On the northwest edge of town are 17 restored buildings and homes from the old village of Economy, a communistic colony established by members of the HARMONY SOCIETY in 1825. The most successful of the society's communities, it thrived until 1906.

Ambrogio Stefani da Fossano: see BERGOGNONE.

Ambrose, Saint (ām'brōz), 340?-397, bishop of Milan, Doctor of the Church, b. Trier, of Christian parents. Educated at Rome, he became (c. 372) governor of Liguria and Aemilia—with the capital at Milan. He was highly regarded in that office, and popular demand caused his appointment (374) as bishop, although he was reluctant and lacked religious training. After much study he became the chief Catholic opponent of Arianism in the West. He was adviser to Emperor GRATIAN, whom he persuaded to outlaw (379) all heresy in the West. He firmly refused the demands of Justina and the young Emperor VALENTINIAN II to surrender a church of his diocese to the Arians. "The Emperor," he preached, "is in the Church, not above it." He excommunicated THEODOSIUS I for the massacre at Salonica (390) and imposed a heavy public penance on him before reinstating him. Ambrose's eloquent preaching spurred the conversion of St. Augustine. His writings, mostly homilies based on Scripture, have come down to us largely from his hearers. They reveal wide classical learning, knowledge of patristic literature, and a Roman bent toward the ethical and practical. Of his formal works, *On the Duties of the Clergy* (*De officiis ministrorum*) shows the influence of Cicero, *On the Christian Faith* (*De fide*) was written at Gratian's request. Ambrose's method of biblical interpretation was allegorical, following Philo and Origen. About 386 he arranged hymns and psalms for the congregation to sing antiphonally. A PLAINSONG called Ambrosian chant is attached to his name. His hymns, written in the iambic dimeter that became standard in Western hymnody, were widely imitated. Only a few are extant. The Ambrosian Rite used in Milan today is probably a development of a liturgy Ambrose introduced. Feast Dec. 7. See biography by Angelo Paredi (1964), C. Morino, *Church and State in the Teaching of St. Ambrose* (1969).

ambrosia (āmbrō'zhā), in Greek religion, food with which the Olympian gods preserved their immortality. Extraordinarily fragrant, ambrosia was probably conceived of as an idealization of honey. It was accompanied by nectar, wine of the gods.

Ambrosian Library, founded c 1605 in Milan by Cardinal Federigo Borromeo. It became one of the earliest libraries to be opened to the public. The library's collection is rich in classical manuscripts, notably Homer and Vergil, in incunabula, and in Oriental texts. It also contains Leonardo da Vinci's profusely illustrated *Codex Atlanticus*.

Amchitka (ämchit'kä), island, 40 mi (64 km) long, off W Alaska, one of the Aleutian Islands. It was selected in 1967 by the Atomic Energy Commission (AEC) as the site for underground tests of nuclear weapons, thus arousing much criticism, especially from ecological groups. The AEC financed the transplanting of much of the island's animal life. In 1971 the use of Amchitka for the detonation of atomic devices without specific presidential approval was banned. The first test, sanctioned by President Richard Nixon, was made on Nov. 6, 1971.

ameba or **amoeba**, common name for certain one-celled organisms belonging to the class Sarcodina of the phylum PROTOZOA. The many genera of amebas were given their common name because of their resemblance to the genus *Amoeba* (order Amoebida), which includes several large, common species of which the freshwater *Amoeba proteus* is the most familiar. Amebas constantly change the shape of their bodies as a result of the phenomenon known as amoeboid movement, involving the formation of temporary extensions (pseudopodia, or false feet) of the body. Pseudopodia, used in locomotion and feeding, may be rounded at the tip (lobopodia), pointed (filopodia), branched and fused together (rhizopodia), or somewhat rigid and pointed (axopodia). Most amebas are very small (from 5 to 20 microns in diameter) and contain a single nucleus. *A. proteus* averages 0.25 mm in length. Members of the genus *Pelomyxa*, however, may be well over a millimeter (up to 8 mm) in diameter and may contain hundreds of nuclei. Amebas engulf their prey, or particles of appropriate size, with their pseudopodia, forming food vacuoles. Digestive enzymes, manufactured and secreted by the organism, are then poured into these vacuoles, and the particles are digested. Useful compounds are subsequently absorbed into the ameba's body. Useless residues remain in the vacuoles and are ultimately expelled (egested) as the vacuole comes in contact with the membrane at the body surface. Amebas can distinguish food (e.g., algae, diatoms, bacteria, and other protozoans) from other material and use different tactics in approaching plant and animal food. Freshwater amebas take up water constantly through the process of osmosis, and water content is regulated with a pulsating contractile vacuole. Marine amebas lack a contractile vacuole. Respiration is by diffusion of gases through the cell membrane. Under favorable conditions, amebas divide by binary fission (splitting) to produce two daughter amebas, the nucleus dividing by MITOSIS. When an ameba is divided artificially, the portion containing the nucleus forms a new cell membrane and continues as a whole animal, while the other portion lives only as long as its present food supply lasts, ultimately dying, since it cannot ingest food or reproduce. If conditions are unfavorable, e.g., in the absence of food and water, amebas secrete a firm, protective covering and encyst until conditions are again favorable to active division. Although simple in form, amebas are very successful organisms and are found abundantly in a variety of habitats all over the world. Amebas live in fresh water, the oceans, and in the upper layers of the soil, and many have adapted to a parasitic life on the body surface of aquatic animals or in the internal organs of both aquatic and terrestrial animals. Few animals escape invasion by some type of ameba. Some are harmless, but others are pathogenic and cause serious diseases, e.g., *Entamoeba histolytica* causes amoebic dysentery, which is fatal if untreated. Other amoeboid protozoans of the class Sarcodina include the marine radiolarians, which form silicate skeletons, their freshwater counterparts, the heliozoans, and the shell-bearing FORAMINIFERANS. Amebas are classified in the phylum PROTOZOA, class Sarcodina, order Amoebida.

amebiasis: see DYSENTERY

Amecameca (ämä'kämä'kä), town (1970 pop. 21,753), Mexico state, S central Mexico, at the foot of the Popocatepetl and Ixtachuatl volcanoes. The sanctuary of El Sacro Monte, the most venerated spot in Mexico after the shrine of Guadalupe, stands on a hill above Amecameca. The town's history dates back to 1200.

Amen: see AMON

amendment, in law, alteration of the provisions of a legal document. The term usually refers to the alter-

ation of a STATUTE or a CONSTITUTION, but it is also applied in PARLIAMENTARY LAW to proposed changes of a bill or motion under consideration and in judicial PROCEDURE to the correction of errors. A statute may be amended by the passage of an act that is identified specifically as an amendment to it or by a new statute that renders some of its provisions nugatory. Written constitutions, however, for the most part must be amended by an exactly prescribed procedure. The CONSTITUTION OF THE UNITED STATES, as provided in Article 5, may be amended when two thirds of each house of Congress approves a proposed amendment and three fourths of the states thereafter ratify it. Congress decides whether state ratification shall be by vote of the legislatures or by popularly elected conventions. Only in the case of the Twenty-first Amendment (the repeal of prohibition) was the convention system used. The constitutions of many states require that a proposed constitutional amendment be submitted to the voters in a referendum.

Amenemhet I (ä'mënëm'hët, ä'-), d. 1970 B.C., king of ancient Egypt, founder of the XII dynasty. The son of a powerful Theban family, he seized the kingship c 2000 B.C. The XII dynasty ushered in the Middle Kingdom of Egypt. Amenemhet centralized the government and subjected the long-powerful nobles to a virtually feudal state. His son and successor, SESOSTRIS I, was coregent from 1980 B.C. Amenemhet II, d. 1903 B.C., son and successor of Sesostri I, was coregent with his father (1938-1935 B.C.), then sole ruler (1935-1906 B.C.), finally coregent with his son and successor, Sesostri II (see under SESOSTRIS II). He reopened the mines of Sinai. Amenemhet III, d. 1801 B.C., was the son and successor of Sesostri III (see under SESOSTRIS II), with whom he had been coregent. He extended the irrigation system. Thousands of acres in the Faiyum were reclaimed. Under his successor, Amenemhet IV, d. 1792 B.C., the power of the dynasty declined, and his successor, a woman, Senebkemnef, was last of her family. The dynasty of pharaohs named Amenemhet or Sesostri maintained peace throughout their hegemony, thus enabling the arts and sciences to flourish as they never would again in Egypt.

Amenhotep I (ä'mënhotëp, ä'-) or **Amenophis I** (ä'mënöf'is), fl. 1570 B.C., king of ancient Egypt, of the XVIII dynasty, son and successor of Amasis I. His chief exploits were military. He pushed southward into Nubia and reestablished Egypt's boundary at the Second Cataract of the Nile, as previously fixed by Sesostri III. He invaded Syria as far as the Euphrates. His successor, THUTMOSE I, was not his son. Amenhotep II or Amenophis II, son and successor of Thutmose III (see under THUTMOSE), succeeded (1448 B.C.) as coregent and later ruled alone for 26 years. There are records of his prowess in hunting and horsemanship. He put down a revolt in Syria and maintained his father's conquests. His tomb is at Thebes; he also built extensively at Karnak. On his death (c 1420 B.C.) he was succeeded by his son Thutmose IV (see under THUTMOSE). Amenhotep III or Amenophis III succeeded his father, Thutmose IV, c 1411 B.C. His reign (until c 1372 B.C.) marks the culmination and the start of the decline of the XVIII dynasty. It was the age of Egypt's greatest splendor; there was peace in his Asiatic empire (in spite of incursions by Bedouins and Hittites) and he invaded Nubia only once. This is the period of extreme elaboration in Egyptian architecture and sculpture. Amenhotep III built extensively at Thebes, Luxor, and Karnak. His wife TIY was given an unprecedented position as queen consort and exerted much influence over her husband and his son and successor, IKHNATON. The sources of the "soiar monotheism" of the god Aton, elaborated by Ikhnaton, may be traced to the reign of Amenhotep III. Tablets found at Tel-el-Amarna shed light on the sociopolitical conditions in Egypt and Asia Minor in the 14th cent. B.C.

Amenophis: see AMENHOTEP

America [for Amerigo VESPUCCI], the lands of the Western Hemisphere—North America, Central America (sometimes called Middle America), and South America. In English, *America* and *American* are frequently used to refer only to the United States. Martin Waldseemüller was the first to use the name (1507).

American, river, 30 mi (48 km) long, rising in N central Calif. in the Sierra Nevada near Lake Tahoe and flowing SW into the Sacramento River. Two dams on the river, regulating its flow and generating hydroelectric power, are part of the Central Valley Project. The discovery of gold at Sutter's Mill (see SUTTER, John Augustus) along the river in 1848 led to

the California gold rush of 1849 and played an important part in U.S. history.

Americana, defined as all that has been printed about the Americas, printed in the Americas, or written by Americans, but usually restricted to the formative period in the history of the two continents. The Columbus letter (1493), a two-leaf news-sheet announcing to the Spanish court the discovery of the islands of the Indies, is the earliest known printing about America. Richard Hakluyt's *Divers Voyages touching the Discovery of America* was published in London in 1582. Early American books were printed by Juan PABLOS, Stephen DAYE, and William BRADFORD (1722-91). The John Carter Brown Library, Providence, the New York Public Library, the Newberry Library, Chicago, and the Huntington Library, San Marino, Calif., all have fine collections of Americana. See Charles Evans, *American Bibliography, 1639-1800* (13 vol., 1903-55, repr. 1941-62), Joseph Sabin et al., *Bibliotheca Americana* (29 vol., 1868-1937, repr. 1961-62), M. B. Stilwell, *Incunabula and Americana* (2d ed. 1961), J. C. Oswald, *Printing in the Americas* (1937, repr. 1965).

American Academy in Rome, founded in 1894 as the American School of Architecture in Rome by Charles F. McKim and enlarged in 1897 with the founding of the American Academy in Rome for students of architecture, sculpture, and painting. It was incorporated by act of Congress in 1905. In 1913 its charter was amended to include the American School of Classical Studies in Rome. It annually awards to U.S. citizens competitive fellowships bearing a yearly stipend, a travel allowance, and residence in Rome. Fellowships are granted in architecture, painting, sculpture, music, landscape architecture, and art history.

American Academy of Arts and Letters, founded 1904 to further literature and the fine arts in the United States, located in New York City. Its fifty members, who have made notable achievements in art, literature, or music, are selected from the membership of its parent body, the National Institute of Arts and Letters. It gives awards in art, literature, and music, maintains a library (14,000 volumes) and museum, and holds exhibitions of works of art, manuscripts, books, and scores. It also purchases paintings by American artists for distribution to museums.

American architecture. Each group of settlers in North America brought with it the building techniques and the prevailing forms of its home country and thus gave rise to different types of colonial building. But in all areas the differences between American and European conditions and climates, the fact that available building materials were not those of the home country, the dearth of trained architects and craftsmen, and the general poverty of the settlers produced rapid and profound change. Thus in French America, stone building was rare and was often replaced by a sort of stucco over half timber or, in the St. Lawrence valley, by wood, a characteristic low, rectangular plan with high hipped roofs, however, persisted. Only in New Orleans, where the French government sent skilled architects and engineers, was anything produced that approached the sophistication of building in France. The comparatively short Spanish domination of Florida also produced highly complex structures, including the forts at St. Augustine and Matanzas, the St. Augustine cathedral, and several houses, but that building had little enduring influence. In the Southwest, however, the Spanish impress was more permanent; there the settlers borrowed extensively from the Indian techniques of construction in small stone masonry and in adobe and produced work admirably suited to the environment. Mexican baroque details and church forms appeared in a new and simpler guise, as in the Texas, New Mexico, Arizona, and California missions. The Dutch settling in New Amsterdam, who were traders for the most part, rapidly developed a typical 17th-century Dutch village. But outside the large centers they modified their building types. The English settlements were of two basic types: one, in the South, based on the large mansion house and plantation system, the other, in the North, served small-scale individual activities in farming, fishing, lumbering, and commerce. In both cases the settlers tried first to build as they had at home, they erected many-gabled half-timber houses of late Gothic inspiration. In the South, brick rapidly superseded wood as the chief building material, and the growing formality and classicism of English architecture was almost immediately reflected, as in the official buildings of WILLIAMSBURG, Va. In the North the climate rapidly forced the cov-

ering of half-timber houses, the lowering of roof slopes, and the simplification of plans, poverty (except in space and natural resources) prompted simplicity of detail. A type of residence that became popular in the wilderness and on the Western frontier by the mid-18th cent. was the LOG CABIN. During this time a growing prosperity and widening commerce brought a new influx of well-trained craftsmen, and English architectural books became increasingly available. There was a flowering of native craftsmen and designers who adapted the English precedent to American conditions with great skill. The result can be seen especially well in Charleston (S.C.), Annapolis, Philadelphia, Portsmouth (N.H.), Newburyport, Marblehead, and the earlier buildings of Salem (all Mass.). The same period produced many churches in which the current English types by Christopher Wren and James Gibbs received simple, but elegant, American interpretations (e.g., St. Paul's Chapel, New York). The English Restoration style of Wren was superbly adapted in the Wentworth-Gardner house in Portsmouth, N.H. Toward the end of the colonial period, styles based on a direct study of ancient Roman and Greek structures were beginning to appear in Europe. The Adam trend (see ADAM, ROBERT) was soon translated to American use, especially in interior detail, simplifications of Adam's designs were made popular by the books of Asher BENJAMIN. A more monumental aesthetic, which became known as the Federal Style, is typical of the work of Charles BULFINCH in Boston and of Samuel MCINTIRE in Salem, both among the growing number of native-born designers. Presidents George Washington and Thomas Jefferson gave serious thought to architecture and were deeply involved in the planning and building of WASHINGTON, D.C. Both looked to the ancient classic world as the best source of inspiration, and as a result there evolved an American CLASSIC REVIVAL. Jefferson's conception of Roman ideals of beauty and proportion was elegantly expressed in his own house at Monticello and in the Virginia capitol and the Univ. of Virginia. European architects came to the New World in search of commissions and honor. Benjamin Henry LATROBE initiated the Greek revival in his works in Philadelphia and Washington. The later books of Asher Benjamin and those of Minard Lafever gave impetus to the use of classic detail, examples can be found in Louisiana and Maine, in the Carolinas and Wisconsin. Yet certain regional styles persisted beneath this uniformity. The plantation regions still built great mansions, often with two-story colonnades, and farmhouses of a basic 18th-century type still dominated much of New England. In the port cities classic uniformity was greatest. Temple porticoes decorated churches, banks, and public buildings. In the Southwest the Spanish tradition, occasionally (as in California) modified by Eastern influences, remained supreme until the Mexican War. As early as the end of the 18th cent. romanticism, prevalent in Europe, affected American design. The English "castellated Gothic" style began to have American imitators and became increasingly popular in the United States from 1835 on, especially for churches and cottages, the Gothic work of A. J. Davis, Richard Upjohn, and Minard Lafever won instant acclaim, and the widely distributed books of A. J. DOWNING on domestic architecture and landscape gardening increased the trend. Other historic revivals that won wide popularity at the same time were the Italian villa and the Lombard Romanesque styles. The latter was simple, uncluttered, and relatively inexpensive to produce, major advantages for public building just before and during the Civil War, the writings of John Ruskin began to influence American architects profoundly. An epidemic of elaborate American versions of the Victorian Gothic followed but was short-lived. The two decades following the Civil War produced vastly changed building techniques, primarily through industrialization. A new study of the functional basis of house design brought many experimental forms into being. Westward expansion and growing urbanization forced rapid, often crude, building developments. At the same time newly wealthy patrons dictated building in styles characterized by unbridled ostentation. Typical of such work are the designs of Richard Morris Hunt for the sprawling mansions of Newport, R.I. Americans' increased foreign travel brought acquaintance with all types of European building, overwhelming existing local traditions of taste and technique. Under such conditions the development of eclectic taste was inevitable, and in the United States eclecticism dominated architecture from the late 1880s. Many architects went to Paris, if possible to the école des

Beaux-Arts, to receive the traditional doctrines. Until the period just before the Civil War, architect and engineer had been one person, or two with closely related goals. This unity of purpose was defeated by the rage for borrowed styles. The engineer designed the structural elements which the architect decorated, in the process both ignored the principle of the oneness of visible form and structure. Technical achievements of this chaotic era included construction innovations in the use of cast iron, steel, and reinforced concrete. The art of planning interior spaces for efficient functioning evolved, and the building industry was reorganized to make possible the swift and economical erection of projects of almost any size. Henry Hobson RICHARDSON designed massive, dignified buildings that contrasted sharply with the ornate edifices that reflected the prevailing tastes of his day. He is considered the father of modern American architecture. The craft movement implemented by William MORRIS had enormous, lasting influence in the United States. The trend toward functional design, which had been steadily growing, reached its supreme expression in the works of the so-called Chicago school of architecture and in the designs and writings of its architect, Louis Henry SULLIVAN. Sullivan broke completely with the eclectic aesthetic. He used materials in such a way as to emphasize their function. The commercial buildings of Chicago, built under his influence, were unique in the United States for power and originality. Frank Lloyd Wright, generally acknowledged as one of the greatest architects of the 20th cent., was a student of Sullivan and stands alone in his understanding of Sullivan's concepts and in his ability to grant them the breadth of treatment they warranted. The Columbia World Exposition of 1893, however, further endorsed the neoclassical style and historical eclecticism, and major architectural firms, including that of McKim, Mead, and White, adhered firmly to that tradition. Thus, despite the iconoclastic efforts of Sullivan and Wright, its doctrines remained solidly entrenched for many decades. Not until the end of the 1930s was there general acceptance of the subtle, earthy, and elegant houses of the California school, typified by the works of Richard Neutra, and the pristine New England building of the International school, both types influenced by the designs of the BAUHAUS masters. As a result religious, domestic, and business architecture (including skyscrapers) became streamlined, reflecting innovations in the building methods developed to construct them and an expanded interest in the inherent qualities of texture and color of the materials used. See articles on individual architects, such as Frank Lloyd WRIGHT. See also MODERN ARCHITECTURE. See L. H. Sullivan, *Autobiography of an Idea* (1924), Talbot Hamlin, *The American Spirit in Architecture* (1926) and *Greek Revival Architecture in America* (1944, repr. 1964), J. E. Burchard and Albert Bush-Brown, *The Architecture of America: A Social and Cultural History* (rev. ed. 1966), Edgar Kaufman, Jr., ed., *The Rise of an American Architecture* (1970), S. F. American art. This article deals with the art of the North American colonies and of the United States. There are separate articles on NORTH AMERICAN INDIAN ART, PRE-COLUMBIAN ART AND ARCHITECTURE, MEXICAN ART AND ARCHITECTURE, SPANISH COLONIAL ART AND ARCHITECTURE, and CANADIAN ART AND ARCHITECTURE. The North American colonies in the 17th cent. enjoyed neither the wealth nor the leisure to cultivate the fine arts extensively. The colonial craftsmen working in pewter, silver, glass, or textiles followed closely the European model. The 17th-century LIMNERS, generally unknown by name, turned out crude but often charming portraits in the Elizabethan style, the Dutch baroque manner, or the English baroque court style, with the preferred style depending upon the European background of both the artist and his patron. The portrait painters alternated limning with coach and sign painting or other types of craftsmanship, and even in the 18th cent. it was seldom possible to earn a living by working at art alone. The silversmith Paul Revere turned his talents to commercial engraving and the manufacture of false teeth. The crafts in general followed English, Dutch, and Bavarian models, although in furniture some variations appeared in the work of talented

craftsmen such as Samuel McIntire and Duncan Phyfe. In the first half of the 18th cent. a growing demand for portrait painting attracted such artists as John Smibert, Peter Pelham, and Joseph Blackburn from England, Gustavus Hesselius from Sweden, Jeremiah Theus from Switzerland, and Pieter Vanderlyn from Holland. Joseph Badger, Robert Feke, Ralph Earl, John Trumbull, and Charles Willson Peale did not depart widely from the tradition of 18th-century English portraiture, but while their work is more awkward, it is often more vigorous. In the early work of John Singleton Copley this vigor is combined with a great native talent. Another 18th-century American painter, Benjamin West, set up shop in London and became painter to the king and president of the Royal Academy. Although his training and practice were European, his studio became the mecca of American painters who for half a century came to study under him. His teaching of historical painting did not stand them in good stead on their return to America, where no demand existed for such work. Gilbert Stuart, however, emerged from his tutelage a superb portrait painter and after gaining success in England returned to America, where he executed a long series of famous and charming portraits and set a standard rarely surpassed in the United States. Of all the arts, sculpture was, perhaps, the least cultivated in the colonies. Apart from the anonymous carvers of tombstones and ships' figureheads, William Rush is almost the only known native sculptor to have practiced in pre-Revolutionary and early Federalist times. The period from the birth of the republic to the Civil War did not see much increase in the demand for the fine arts. Such early painters as Washington Allston, Samuel F. B. Morse, John Vanderlyn, and John Trumbull, who sought a market in America for historical painting in the classical manner of Jacques Louis David, were quickly disillusioned. Portrait painting alone could provide the patronage enjoyed by such men as Mather Brown, Henry Benbridge, Edward Savage, Thomas Sully, John Neagle, Chester Harding, and the miniaturists Edward G. Malbone and John Wesley Jarvis. None of these men, with the exception of Allston, produced work equal to that of Stuart or Copley, but all of them created paintings that expressed the energy and self-confidence of the builders of the new American nation. The colonial period saw the gradual rise of a number of excellent GENRE painters—Henry Inman, William Sidney Mount, Richard C. Woodville, David G. Blythe, Eastman Johnson, and George Caleb Bingham. These were the earliest painters of the American scene. J. J. Audubon created an extraordinary, detailed series of paintings of American birds. It is significant that he had to go to England for recognition and publication of his work. John Quidor painted scenes and legendary figures from the works of Fenimore Cooper and Washington Irving. The first half of the 19th cent. witnessed development of the first school of American landscape painting. Thomas Doughty and Thomas Cole led the HUDSON RIVER SCHOOL, which was continued by Asher B. Durand, John F. Kensett, and Frederick E. Church. The land and peoples west of the Mississippi were described in paintings by Frederick Remington, George Catlin, Charles M. Russell, and Seth Eastman; and by the panorama painters of the wilderness Albert Bierstadt and Thomas Moran. Despite this tendency toward the panoramic, the better work of these men showed a direct response to nature which has never ceased to be an important factor in American art. The characteristic American passion for objects realistically portrayed found remarkable expression in the paintings of William Harnett and John F. Peto, as well as in the still-life works of Charles Willson Peale and his children. The strain of primitivism, first evident in the limners, was more pronounced and popular in the early 19th cent. with works by Edward Hicks and Erastus Salisbury Field; it was continued by Grandma Moses in the 20th cent. In sculpture, portraiture provided the main source of patronage. John Frazee and Hezekiah Augur with little training produced forceful and original work in marble and wood. Horatio Greenough began the long tradition of the American sculptor trained in Italy, where he was soon followed by Thomas Crawford, Hiram Powers, and Harriet Hosmer. The American sculptors in Italy were greatly influenced by the Danish neoclassicist A. B. Thorvaldsen. Works of greater originality were produced by Clark Mills, Thomas Ball, and particularly by William Rimmer, whose untutored sculpture was enormously powerful. In painting, the post-Civil War period, one of unprecedented patronage for the arts from government and private sources, produced works of enduring worth

and striking individuality. Much of the more popular work of the period, such as the historical and mural paintings of Leutze and the vistas of Bierstadt, have relatively little aesthetic interest today. But Whistler, Ryder, Eakins, and Winslow Homer produced works that rank among the finest achievements in American art. The four are strikingly dissimilar. James Whistler, an expatriate, cultivated a delicate art of suggestion in his oils and etchings alike. Albert Pinkham Ryder, a hermit, produced a visionary art of profound emotional impact. Thomas Eakins painted sympathetic portraits of extraordinary psychological insight and uncompromising honesty. Winslow Homer's watercolors are among the strongest realistic interpretations of pure landscape and seascape ever painted. This period also saw the development of the romantic landscape painters George Inness, Alexander H. Wyant, Homer D. Martin, and Ralph Blakelock. In Inness, and perhaps even more in William Morris Hunt, the influence of the Barbizon school was brought to America. Although French influence had begun to supplant German, the work of the portrait painters William M. Chase and Frank Duveneck reflected contemporary currents in Munich, as the earlier genre painters had reflected the influence of artists in Düsseldorf. John La Farge, who studied in Paris, did much to widen the American cultural horizon. His religious murals and stained glass set a new standard for these arts. John Singer Sargent, working chiefly in England, excelled in society portraiture, and Elihu Vedder and Edwin Abbey in illustration. At the close of the century John Twachtman, Childe Hassam, Ernest Lawson, and Mary Cassatt worked under the direct influence of French impressionism. Under the same influence, Maurice Prendergast created original, boldly colorful images of passing urban scenes. In sculpture after the Civil War there was an increased demand for commemorative work. In the late 19th cent., John Quincy Adams Ward introduced a strong note of realism into a tradition suffering from the vapid classicism of the Italianates. His student Daniel Chester French also devoted his talents to monumental sculpture. William Rimmer's extensively illustrated *Art Anatomy* (1877) was admired by artists and physicians alike. The workshop of John Rogers produced small figures and genre groups that became popular, and later Frederick Remington's small bronzes extended the subject matter of native realism westward to include the cowboy. Neoclassic tendencies dominated in the work of Olin Warner and Augustus Saint-Gaudens, both of whom studied in Paris. Among the early 20th-century sculptors, Paul Bartlett, Karl Bitter, Frederick MacMonnies, George Barnard, and Lorado Taft exhibited a continuing conflict between naturalistic and idealized modes of representation. A significant cultural development of the era was the founding and expansion of American museums, whose collections were important to the art student and public alike. Museums, together with the rapid growth of art galleries, private collections, and art schools, widened the understanding of the European past and lessened the naivete of earlier periods. Under the impetus of new techniques of reproduction the art of illustration flourished. The work of Edwin Abbey, Arthur Frost, and Howard Pyle was outstanding, appearing in *Harper's* and numerous other illustrated magazines and books. American art turned in the 20th cent. to exploitation of new techniques and new expression. The functional precision of the machine strongly influenced all the arts. The development of PHOTOGRAPHY forced a reevaluation of the representational nature of painting, while the formal and expressive capacities of modern European art opened fresh fields for the artist. In reflecting the radical European tendencies, American art in general maintained a more constant interest in local color and subject matter. Early in the century a vigorous movement toward realism in subject matter and freedom in technique was headed by Robert Henri, John Sloan, and George Luks. With others they formed the EIGHT, a group that sought to communicate something of the reality of everyday life through art. Dubbed the "Ashcan School" they included in their number William Glackens, Everett Shinn, and George Bellows. At his revolutionary 291 Gallery for contemporary photographs and paintings Alfred STIEGLITZ offered America early glimpses of fauve and cubist work and in addition exhibited abstract paintings by such Americans as Max Weber, Marsden Hartley, and John Marin. The full force of European modern art was presented to shocked Americans in the famous ARMORY SHOW of 1913, organized by Arthur B. Davies, Walt Kuhn, and other artists. Under the influence of this exhibition, the early work of such

Americans as Joseph Stella, Yasuo Kuniyoshi, Charles Demuth, and Stuart Davis revealed new abstract tendencies. George Bellows and Rockwell Kent remained popular realists, and Edward Hopper and Charles Burchfield developed a more poignant and intensely personal realism. John Marin caught the imposing breadth of nature in his watercolors, while Georgia O'Keeffe and Charles Sheeler combined realism with varying degrees of precise formal design. Peter Blume, Ivan Albright, and Edwin Dickinson developed differing and complex surrealist styles. A chauvinistic espousal of the American scene flourished under Thomas Hart Benton and Grant Wood in the early 1930s, while the same decade and the 1940s saw the rise of more personally meaningful, socially conscious art in the work of Ben Shahn, Philip Evergood, Reginald Marsh, Jacob Lawrence, Isabel Bishop, and Raphael and Moses Soyer. Several years later this social awareness was given bitter expression in the paintings of Jack Levine. Government sponsorship of the arts during the years of the Great Depression was the chief means by which many artists were able to continue work. Two independent programs, the Dept. of the Treasury's Section of Fine Arts and the Federal Art Project of the Works Progress Administration, were responsible for the embellishment of many public buildings with murals and the creation of smaller works for display in public institutions. The Farm Security Administration supported the photographic documentation of rural America, a project that employed a number of outstanding photographers and resulted in a dreadful and moving portrait of America in crisis. World War II brought an influx of European painters who were to influence the course of American art. They included Joan Miro, Salvador Dali, Max Ernst, and Yves Tanguy. In painting since 1945 the work of all but the most intensive realists, such as Andrew Wyeth, has tended increasingly toward abstraction. Such artists as Arshile Gorky, Irene Rice Pereira, Morris Graves, and Mark Tobey have developed and employed abstraction in works of highly personal symbolic content, whereas painters such as Jackson Pollock, Willem de Kooning, Adolph Gottlieb, and Franz Kline have created a bold and unique imagery that has made American painting a dominant influence in world art (see ABSTRACT EXPRESSIONISM). The POP ART movement of the 1950s and 60s revealed an aesthetic that made use of the mass-produced artifacts of urban culture and rejected the concepts of beauty and ugliness. Its major practitioners include Andy Warhol, Roy Lichtenstein, Jasper Johns, and Robert Rauschenberg. OP ART was an exercise in pure visual sensation, often exploiting techniques that give the illusion of movement. Developments in painting of the late 1960s and 70s include minimalism, POST-PAINTERLY ABSTRACTION, and photo-realism (see MODERN ART). American sculpture in the 20th cent. produced works in the traditional styles, including Gutzon Borglum's Mt. Rushmore monument, the classicizing figures of Paul Manship, and Mahonri Young's naturalistic athletes and laborers. However, the dominant tendency has been toward abstract design and expressive form, a trend to which William Zorach, Gaston Lachaise, and, more recently, Leonard Baskin contributed figurative work. Alexander Calder pioneered in the use of mobile welded metal forms, adding motion as a new dimension in sculpture. In the 1940s and 50s the free play of abstract forms in light and space and the use of new materials were vigorously exploited by David Smith, Theodore Roszak, Herbert Ferber, Isamu Noguchi, and Richard Lippold. Recent styles in sculptural abstraction have been developed in individual directions by John Chamberlain, Eva Hesse, Carl Andre, Louise Nevelson, and Tony Smith. See articles about individual artists, e.g., Thomas EAKINS. See Holger Cahill and A. H. Barr, *Art in America* (1935), A. T. Gardner, *Yankee Stonecutters* (1945), John Baur, *Revolution and Tradition in Modern American Art* (1958), Oliver Larkin, *Art and Life in America* (rev. ed. 1960), J. C. T. Flexner, *First Flowers of Our Wilderness* (1947) and *That Wilder Image* (1962), Lucy Lippard, *Pop Art* (1967), *The Artist in America* (1967, comp. by ed. of *Art in America*), Sam Hunter, *Modern American Painting and Sculpture* (1959), Wayne Craven, *Sculpture in America* (1968), Barbara Novak, *American Painting of the Nineteenth Century* (1969), Irving Sandler, *Triumph of American Painting: A History of Abstract Expressionism* (1970), John K. Howat, *The Hudson River and Its Painters* (1972).

American Association of University Professors (AAUP), organization of college and university teachers. It was founded (1915) for the purpose of defending faculty rights, most notably ACADEMIC

FREEDOM and tenure (see TENURE, in education). Its major activities involve protecting teachers from harassment or arbitrary dismissal for espousing unpopular causes, and assuring due process in those cases where a teacher is charged with incompetence or moral turpitude. See Louis Joughin, *Academic Freedom and Tenure: A Handbook of the AAUP* (1969).

American Ballet Theatre, one of the foremost international dance companies of the 20th cent. It was founded in 1937 as the Mordkin Ballet and reorganized as the Ballet Theatre in 1940 under the direction of Lucia Chase and Rich Pleasant. It became the American Ballet Theatre in 1956. Its repertoire has included newly staged classical ballets and innovative modern dance works, many concerned with specifically American themes. Most of the company's seasons have been presented in New York City, but it has also toured throughout Europe and the Middle East. George Balanchine, Adolph Bolm, Michael Fokine, Leonide Massine, and Bronislava Nijinska have staged works for the company, as has the brilliant British choreographer Antony Tudor, who was introduced to the American public with such works as *Pillar of Fire* (1942) and *Romeo and Juliet* (1943). Agnes de Mille has staged nearly all of her dance works for the company, including *Fall River Legend* (1948). Jerome Robbins's *Fancy Free* (1944) and Michael Kidd's *On Stage* (1945) were also created for the company. Dancers who have gained fame or reached their peak with the American Ballet Theatre include Alicia ALONSO, Alicia MARKOVA, Erik BRUHN, Nora KAYE, and Jenny Workman.

American Bar Association (ABA), voluntary organization of lawyers admitted to the bar of any state. Founded (1878) largely through the efforts of the Connecticut Bar Association, it is devoted to improving the administration of justice, seeking uniformity of law throughout the nation, and maintaining high standards for the legal profession. It is composed of over 25 committees that deal with such diverse legal topics as maritime law, professional ethics, legal education, the judicial system, and legal aid for the indigent. Through its main office in Chicago, the ABA coordinates the activities of state and local bar associations. In 1974 its membership exceeded 170,000. Affiliated organizations include the American Law Student Association, and the American Bar Foundation, a group devoted to legal research and education.

American Civil Liberties Union (ACLU), nonpartisan organization devoted to the preservation and extension of the basic rights set forth in the U.S. Constitution. Founded (1920) by such prominent figures as Jane Addams, Helen Keller, Judah Magnus, and Norman Thomas, the ACLU grew out of earlier groups that had defended the rights of conscientious objectors during World War I. Its program is directed toward three major areas of civil liberties: inquiry and expression, including freedom of speech, press, assembly, and religion, equality before the law for everyone, regardless of race, nationality, political opinion, or religious belief, and due process of law for all. Its most significant and successful activities have involved court tests of important civil liberties issues. Since its founding, the ACLU has participated directly or indirectly in almost every major civil liberties case contested in American courts. Among those are the so-called Scopes monkey trial in Tennessee (1925), the Sacco-Vanzetti case (1920s), the Federal court test (1933) that ended the censorship of James Joyce's *Ulysses*, and the landmark *Brown vs. Board of Education* (1954) school desegregation case. The ACLU has about 130,000 members in its state organizations. The national office, located in Chicago, also supports lobbying and educational activity on behalf of civil liberties issues. See Charles L. Markmann, *The Noblest Cry* (1965).

American Colonization Society, organized Dec. 1816-Jan. 1817, at Washington, D.C., to transport free Negroes from the United States and settle them in Africa. The freeing of many slaves, principally by idealists, created a serious problem in that no sound provisions were made for establishing them in society on an equal basis with white Americans anywhere in the United States. Robert FINLEY, principal founder of the colonization society, found much support among prominent men, notably Henry Clay. Money was raised—with some indirect help from the federal government when (1819) Congress appropriated \$100,000 for returning to Africa Negroes illegally brought to the United States. In 1821 an agent, Eli Ayres, and Lt. R. F. Stockton of the U.S. navy purchased land in Africa, where subsequently Jehudi ASHMUN and Ralph R. Gurley laid the founda-

tions of LIBERIA The colonization movement came under the bitter attack of the abolitionists, who charged that in the South it strengthened slavery by removing the free Negroes The Negroes themselves were not enthusiastic about abandoning their native land for the African coast The colonization society, with its associated state organizations, declined after 1840 More than 11,000 Negroes were transported to Liberia before 1860 From 1865 until its dissolution in 1912, the society was a sort of trustee for Liberia See P J Staudenraus, *The African Colonization Movement* (1961), W L Garrison, *Thoughts on African Colonization* (1832, repr 1968)

American Ephemeris and Nautical Almanac see EPHEMERIS

American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), a federation of autonomous labor unions in the United States, Canada, Mexico, Panama, and U.S. dependencies, formed in 1955 by the merger of the American Federation of Labor (AFL) and the Congress of Industrial Organizations (CIO)

American Federation of Labor In 1881 representatives of workers' organizations, meeting in Pittsburgh, formed the Federation of Organized Trades and Labor Unions in the United States and Canada In 1886 at another conference in Columbus, Ohio, this group reorganized as the American Federation of Labor Opposed to the socialistic and political ideals of the KNIGHTS OF LABOR, the AFL was, instead, a decentralized organization recognizing the autonomy of each of its member national craft unions Individual workers were not members of the AFL but only of the affiliated local or national union, and from its inception it emphasized organization of skilled workers on a craft, or horizontal, basis, as opposed to an industrial, or vertical, basis The AFL's object was to define and protect separate craft jurisdictions, to encourage legislation favorable to its members, and to provide assistance in organizing workers The AFL was against the direct entry of organized labor into politics, and, operating under the precepts developed by Samuel GOMPERS, it was relatively static as a force for social change, although it did secure higher wages, shorter hours, workmen's compensation, and laws against child labor It also helped to secure the 8-hr day for government employees and the exemption of labor from antitrust legislation (see CLAYTON ANTITRUST ACT) Under the leadership of Gompers, that of William GREEN, and then George MEANY, the AFL became the largest labor federation in the United States, with a membership of over 10 million at the time of its merger with the CIO in 1955 Divorced throughout most of its history from the radical element in American labor, the AFL was split in 1935 when dissident elements within the federation protested its conservative organization policies with regard to the mass-production industries The formation of the Committee for Industrial Organization (later the Congress of Industrial Organizations) by the dissidents resulted in the suspension (1936) and then expulsion (1937) from the AFL of 10 affiliates Two of these unions later rejoined—the INTERNATIONAL LADIES GARMENT WORKERS UNION (ILGWU) in 1940 and the UNITED MINE WORKERS OF AMERICA (UMW) in 1946 The UMW left again in 1947 because of a difference with the AFL leadership over the filing of non-Communist affidavits as required by the Taft-Hartley Labor Act The federation maintained its prevailing craft-union philosophy, even in the face of the growth of mass-production industries that made the organization of workers along craft lines more difficult

Congress of Industrial Organizations Within the AFL in the early 1930s a strong minority faction evolved advocating the organization of workers in the basic mass-production industries (such as steel, auto, and rubber) on an industry-wide basis John L LEWIS of the UMW led this faction in forming a Committee for Industrial Organization in 1935 This group (changing its name in 1938 to Congress of Industrial Organizations) immediately launched organizing drives in the basic industries The spectacular success of those drives, particularly in auto and steel, enhanced the CIO's prestige to the point where it seriously challenged the AFL's hegemony within U.S. organized labor After fruitless negotiation the parent body revoked the charters of the 10 dissident international unions The CIO, under the presidency of Lewis until 1940 and of Philip MURRAY thereafter until his death in 1952, followed more militant policies than the AFL The CIO's Political Action Committee, headed by Sidney HILLMAN of the Amalgamated Clothing Workers Union, played an active role in the CIO's attempt to urge its membership into more active political participation The CIO

grew rapidly until its affiliated international unions numbered 32 at the time of the 1955 merger, with an estimated membership of five million Its growth, however, was marked by internal dissension, one such dispute led to the withdrawal in 1938 of one of its original constituent unions, the ILCWU, and that union's reaffiliation with the AFL Another dispute, this time over Lewis's support of Wendell Willkie in the 1940 presidential election, led Lewis to resign the CIO presidency Coolness developed between Lewis and Murray and culminated in the withdrawal (1942) of the UMW from the CIO and its subsequent brief reaffiliation (1946-47) with the AFL In the same period that the AFL was grappling with the problem of gangster-dominated affiliates, the CIO was faced with the problem of the extent to which their affiliates were Communist-dominated In 1948 after a bitter struggle the CIO barred Communists from holding office in the organization, and in 1949-50 it expelled 11 of its affiliated unions, which were said to be Communist-dominated During World War II the CIO (like the AFL) pledged a no-strike policy The CIO joined (1945) the World Federation of Trade Unions (WFTU), exacerbating its relations with the AFL since the latter had refused to participate in the WFTU because of possible Communist domination of that body This obstacle to U.S. labor unity was removed by the CIO's withdrawal from the WFTU in 1949, and relations were further improved by subsequent cooperation of the AFL and the CIO in helping to form the International Confederation of Free Trade Unions

Merger During the entire period of the alienation of the CIO from the AFL, the idea of merger was being considered by elements in both federations By the early 1950s both federations had proved their sustaining power as labor organizations, it had become evident that craft and industrial unions could exist side by side within the labor movement Furthermore, labor's concern over the apparent antiunion policies of President Eisenhower's administration (the first Republican administration in 20 years) gave new impetus to the movement for labor unity The death in 1952 of the presidents of both organizations paved the way for the appointment of leaders more amenable to unity The AFL chose George Meany, and the CIO picked Walter P REUTHER An indication of the possibility of a merger occurred in 1953 when a no-raiding agreement was signed between the two organizations It was followed in 1955 by a merger agreement At its first convention the merged organizations, now called the American Federation of Labor and Congress of Industrial Organizations (AFL-CIO), elected Meany as its president The organization has five operating levels The first is the biennial convention, in which ultimate authority is vested The second level is the executive council, which governs between conventions and is composed of the executive officers (president and secretary-treasurer) and 27 vice presidents (17 from former AFL and 10 from former CIO unions) A general board (the convention in microcosm) acts on the third level as an advisory body to the council On the fourth level the executive officers handle the day-to-day operations of the organization, they are advised on the fifth level by an executive committee consisting of the executive officers and 6 vice presidents (3 from each of the former AFL and CIO organizations) In addition to these levels of authority, the AFL-CIO carried over autonomous departments from the AFL (such as the Building Trades Dept.) and added an Industrial Union Dept. to handle the problems of the former CIO unions The AFL-CIO also created a series of standing committees to handle problems in specific spheres of the federation's interests, the most notable of these is the Committee on Political Education The AFL-CIO supported the Democratic presidential candidates in 1956, 1960, 1964, and 1968 In 1972, however, Meany led the AFL-CIO into a neutral stance, supporting neither major candidate Committed to advancing the welfare of its members, the AFL-CIO has lobbied actively against the so-called right-to-work laws, which outlawed union shops (see CLOSED SHOP), and other legislation deemed inimical to organized labor's interests In 1957 the AFL-CIO adopted antiracket codes, and the convention expelled the INTERNATIONAL BROTHERHOOD OF TEAMSTERS (which under Dave BECK and James R. HOFFA had gained a notorious reputation) for alleged failure to meet the parent organization's ethical standards The AFL-CIO took a major step in 1961 in the direction of settling internal disputes by setting up a mandatory arbitration procedure A submerged dispute between George Meany and Walter Reuther finally erupted in 1968 Reuther,

continuously critical in the 1960s of the AFL-CIO's conservative approach to civil rights and social welfare programs, sought a reorganization of the executive council To apply pressure, he began to withhold the \$1 million annual dues of the United Automobile Workers of America (UAW) For this the UAW was suspended By 1974 the AFL-CIO had 110 national and international unions, with a membership of some 13.5 million See Samuel Gompers, *Seventy Years of Life and Labor* (1925, repr 1967), Arthur Goldberg, *AFL-CIO Labor United* (1956, repr 1964), Philip Taft, *The A F of L from the Death of Gompers to the Merger* (1959, repr 1970), Walter Galenson, *The CIO Challenge to the AFL* (1960), Paul Jacobs, *The State of the Unions* (1963), Len DeCaux, *Labor Radical* (1970)

American Federation of State, County, and Municipal Employees (AFSCME), largest union of public employees in the United States It began as a number of separate locals organized by a group of Wisconsin state employees in the early 1930s By 1935 there were 30 locals that became a separate department within the American Federation of Government Employees In 1936, AFSCME received its charter By 1955, at the time of the AFL-CIO merger, the union had 100,000 members The following year it merged with the 30,000-member Government and Civil Employees Organizing Committee The union has over 500,000 members, about two thirds of whom are blue-collar workers The single largest occupational area is hospital and health workers with about 150,000 members

American Federation of Teachers (AFT), an affiliate of the AFL-CIO It was formed (1916) out of the belief that the organizing of teachers should follow the model of a labor union, rather than that of a professional association In the 1960s and early 70s the AFT experienced a period of rapid growth, expanding from 55,000 to almost 250,000 members This increase in membership was largely due to an increasing willingness on the part of American teachers to use militant labor union tactics, including strikes and the threat of strikes, in contract negotiations In 1973-74 the AFT negotiated unsuccessfully for a merger with the NATIONAL EDUCATION ASSOCIATION See American Federation of Teachers, *Organizing the Teaching Profession* (1955), T M Stinnett, *Turmoil in Teaching* (1968), Stephen Cole, *The Unionization of Teachers* (1970), and R J Braun, *Teachers and Power* (1972)

American Film Institute, nonprofit organization established in Washington, D.C., in 1967 by the National Endowment for the Arts to preserve and catalog American films and to provide work grants for new and established filmmakers The institute operates a movie theater at the John F Kennedy Center for the Performing Arts in Washington, D.C., and provides financial and research assistance to U.S. museums and other organizations that present film programs It maintains the Center for Advanced Film Studies in Beverly Hills, Calif., where it holds professional seminars and workshops, with a library of more than 3,000 books and film scripts The institute also publishes detailed catalogs of feature films produced in the United States after 1921

American foxhound, breed of sturdy, medium-sized HOUND developed in America over 300 years ago It stands about 23 in (58 cm) high at the shoulder and weighs between 60 and 70 lb (27-32 kg) The smooth, hard, "hound-marked" coat is usually black, tan, and white The American foxhound, with its great endurance and keen sense of smell, was once widely used in packs of as many as 15 or 20 dogs to hunt fox and other small game Today, however, it is more commonly bred for field trial competition See DOG

American Fur Company, chartered by John Jacob ASTOR (1763-1848) in 1808 to compete with the great fur-trading companies in Canada—the North West Company and the Hudson's Bay Company Astor's most ambitious venture, establishment of a post at ASTORIA, Oregon, to control the Columbia River valley fur trade, was made under a subsidiary, the Pacific Fur Company His early operations around the Great Lakes were under another subsidiary, the South West Company, in which Canadian merchants had a part The War of 1812 destroyed both companies In 1817, after an act of Congress excluded foreign traders from U.S. territory, the American Fur Company commanded the trade in the Lakes region An alliance made in 1821 with the Chouteau interests of St. Louis gave the company a monopoly of the trade in the Missouri River region and later in the Rocky Mts (see MOUNTAIN MEN) The company was one of the first great American trusts

It maintained its monopoly by the customary early practice of buying out or crushing any small company that threatened opposition. When Astor withdrew in 1834, the company split and the name became the property of the former northern branch under Ramsey Crooks, but popular usage still applied it to succeeding companies. The American Fur Company strongly influenced the history of the frontier, not only by preparing the way for permanent settlement but by opening Great Lakes commercial fishing, steamboat transportation, and trade in lead. See G. L. Nute, *Calendar of the American Fur Company's Papers* (1945), B. DeVoto, *Across the Wide Missouri* (1948), H. M. Chittenden, *The American Fur Trade of the Far West* (3 vol., 1902, repr. 1954), J. U. Terrell, *Furs by Astor* (1963), D. S. Lavelander, *The First in the Wilderness* (1964), P. C. Phillips, *The Fur Trade* (1961, repr. 1967).

American Geographical Society (AGS), oldest geographical society in the United States, founded 1852 in New York City. Its purpose is to advance the science of geography through discussion and publication. The society has the largest private geographical library in the Western Hemisphere. Its archives contain many rare maps and globes, historic letters, and artifacts from explorations. The society is noted for its support of scientific research and exploration, for its research facilities (extensively used by the Federal government during the 1919 Paris Peace Conference and again during World War II), and for its cartographic work. *The Geographical Review* is its quarterly journal. See J. K. Wright, *Geography in the Making: The American Geographical Society 1851-1951* (1952).

American Indian languages, languages of the native peoples of the Western Hemisphere and their descendants. A number of the American Indian languages that were spoken at the time of the European arrival in the New World in the late 15th cent. have become extinct, but many of them are still in use today. The classification "American Indian languages" is geographical rather than linguistic, since those languages do not belong to a single linguistic family, or stock, such as the Indo-European or Hamito-Semitic language families. The American Indian languages cannot be differentiated as a linguistic unit from other languages of the world but are grouped into a number of separate linguistic stocks having significantly different phonetics, vocabularies, and grammars. There is no part of the world with as many distinctly different native languages as the Western Hemisphere. Because the number of American Indian tongues is so large, it is convenient to discuss them under three geographical divisions: North America (excluding Mexico), Mexico and Central America, and South America and the West Indies. It is not possible to determine exactly how many languages were spoken in the New World before the arrival of Europeans, nor how many people spoke these languages. Some scholars estimate that the Western Hemisphere at the time of the first European contact was inhabited by 40 million people who spoke 1,800 different tongues. Another widely accepted estimate suggests that at the time of Columbus more than 15 million speakers throughout the Western Hemisphere used more than 2,000 languages, the geographic divisions within that estimate are 300 separate tongues native to some 1.5 million Indians in America N of Mexico, 300 different languages spoken by roughly 5 million people in Mexico and Central America, and more than 1,400 distinct tongues used by 9 million Indians in South America and the West Indies. Recent studies suggest that some 700 American Indian languages survive, that they are spoken by nearly 12 million people, most of whom live in Central and South America. In the United States no more than 250,000 American Indians currently speak their native languages, which number about 200. By the middle of the 20th cent., as a result of European conquest and settlement in the Western Hemisphere, perhaps two thirds of the many Indian languages had already died out or were dying out, but others flourished. Still other aboriginal languages are only now being discovered and investigated by researchers. Some authorities suggest that about one half of the American Indian languages N of Mexico have become extinct. Of the tongues still in use, more than half are spoken by fewer than 1,000 persons per language, most of the speakers are bilingual. Only a few tongues, like Navaho and Cherokee, can claim more than 50,000 speakers. Mexico and Central America, however, have large Indian populations employing a number of American Indian languages, such as Nahuatl (spoken by 800,000 people) and the Mayan tongues (native to more than one million people).

In South America the surviving Quechuan linguistic family accounts for several million people. Another flourishing language stock of South American Indians is Tupi-Guarani. A language family consists of two or more tongues that are distinct and yet related historically in that they are all descended from a single ancestor language, either known or assumed to have existed. The languages of a family are closely related in phonetics, grammar, and vocabulary. The attempts made to classify American Indian languages into such families have encountered various obstacles. One is the absence of written records of these languages except in the case of Aztec and Maya. Even there the texts are comparatively few in number, the Spanish conquerors destroyed almost all the texts they found. Another problem is that most records of any linguistic value were made after 1850. Also, there are at present insufficient numbers of trained persons able to record many of the American Indian languages and collect data, especially in Mexico and Central and South America. The absence of grammars handed down from the past, owing to either the dearth of writing or the destruction of written texts, has further hampered the study of the American Indian tongues. Linguistic scholars, therefore, have to turn to native informants to gain material for the analysis of these languages. The languages in America N of Mexico are best known, those of Mexico and Central America are less so, and those of South America and the West Indies are the least studied. Systematic investigation has shown the American Indian languages to be highly developed in their phonology and grammar, they are not at all primitive, whether they are the tongues of the sophisticated Aztecs and Incas or of peoples of simpler cultures, such as the Eskimos or Paiutes. There is great diversity among the American Indian languages with respect to phonology and grammar. The tongue of the Greenland Eskimos, for example, has only 17 phonemes, whereas that of the Navahos has 47 phonemes. Some languages have nasalized vowels similar to those of French. Many have the consonant known as the glottal stop. Some American Indian languages have a stress accent reminiscent of English, and others have a pitch accent of rising and falling tones similar to that of Chinese. Still others have both stress and pitch accents. A grammatical characteristic of widespread occurrence in American Indian languages is polysynthesis. A polysynthetic language is one in which a number of word elements are joined together to form a composite word that functions as the sentence does in Indo-European languages. Thus, a sentence or phrase is expressed by one long word unit, each element of which has meaning usually only as part of the sentence or phrase and not as a separate item. In a polysynthetic language, no clear distinction is made between a word and a sentence. For example, a series of words expressing several connected ideas, such as "I am searching for my lost horse," would be merged to form a single word or meaning unit. Edward Sapir, a major scholar in the field of American Indian languages, first presented the following, much-quoted word unit from Southern Paiute: *witokuchumpunkuruganiyugwiv-antümü*, meaning "they-who-are-going-to-sit-and-cut-up-with-a-knife-a-black-female-(or male-) buffalo." It is thought that the numerous aboriginal tongues showing polysynthesis may originally have been the offshoots of a single parent language. The existence of gender as found in Indo-European languages is encountered only infrequently in American Indian tongues. In the Algonquian languages, nouns are classified as animate and inanimate. Noun cases like those of Latin occur in some languages, but a lack of case distinction similar to English usage is more common (at least N of Mexico). A number of American Indian tongues have a form for the plural of the noun that differs from the singular form, but many others have the same form for both, as in the English noun *sheep*. Asia is generally accepted as the original home of the American Indians, although linguistic investigations have not yet established any definite link between the American Indian languages and those spoken in Asia or elsewhere in the Eastern Hemisphere. Some scholars postulate a connection between the Eskimo-Aleut family and several other families or subfamilies (among them Altaic, Paleosiberian, Finno-Ugric, and Sino-Tibetan). Others see a relationship between members of the Nadene stock (to which Navaho and Apache belong) and Sino-Tibetan, to which Chinese belongs, however, such theories remain unproved.

Languages of North America The most widely accepted classification of American Indian languages N of Mexico (although some included are also spo-

ken in Mexico and Central America) is that made by Edward Sapir in 1929. Sapir arranged the numerous linguistic groups in six major unrelated linguistic stocks, or families. There are ESKIMO-ALEUT, Algonquian-Wakashan, Nadene, Penutian, Hokan-Siouan, and Aztec-Tanoan. The Algonquian-Wakashan language family of North America was one of the most widespread of Indian linguistic stocks, in historical times, tribes speaking its languages extended from coast to coast. Today the surviving languages of the Algonquian-Wakashan family are native to some 80,000 Indians in Canada, the Great Lakes region, Montana, Wyoming, Oklahoma, and the NE United States. The Algonquian branch of the family once had some 50 distinct tongues, among them Algonquin, Arapaho, Blackfoot, Cheyenne, Cree, Delaware, Kickapoo, Micmac, Ojibwa (or Chippewa), Penobscot, Sac and Fox, Shawnee, and Yurok. Two other important branches of the Algonquian-Wakashan stock are Salishan and Wakashan. Among the tribes speaking Salishan languages are the Bella Coola, Clallam, Coeur d'Alene, Colville, Flathead, Nisqualli, Okanogan, Pend d'Oreille, Puyallup, Shuswap, Spokane, and Tillamook. The Salishan tongues are spoken in British Columbia, Washington, Oregon, Idaho, and Montana. Tribes speaking Wakashan languages (used along the Pacific Northwest coast) include the Nootka, Nitinat, Makah, Kwakiutl, Bella Bella, and Kitamat. Polysynthesis characterizes the Algonquian-Wakashan languages, which are inflected and make great use of suffixes. Prefixes are employed to a limited extent. The Nadene languages form another linguistic family, its branches include ATHABASCAN, Eyak, Haida, and Tlingit. The Eyak, Haida, and Tlingit tongues are spoken in parts of Canada and Alaska. As a whole, the Nadene languages have tones that convey meaning and some degree of polysynthesis. The verb is characterized by a reliance on aspect and voice rather than on tense. The Penutian linguistic stock includes several branches, such as the Maidu, Wintun, and Yokuts language groups, all of which are native to California. Probably also in the Penutian family are the Sahaplin, Chinook, and Tsimshian languages of the Pacific Northwest coast, as well as other tongues in Mexico and parts of Central America. Penutian languages resemble those of the Indo-European family in several ways (for example, they have true cases for the noun). The Hokan-Siouan family is thought to include a number of linguistic groups, but the classification of some of them is still disputed. Among the groups generally considered branches of the Hokan-Siouan stock are Muskogean, whose languages include such tongues as Choctaw, Chickasaw, Creek, and Seminole and are spoken in Oklahoma and Florida; Caddoan, composed of the Caddo, Wichita, Pawnee, and Arikara languages found in Oklahoma and North Dakota; Yuman, with individual languages (such as Cocopa, Havasupai, Kamia, Maricopa, Mohave, Yavapai, and Yuma) in Arizona and California; Iroquoian, to which belong the Seneca, Cayuga, Onondaga, Mohawk, Oneida, Wyandot, and Tuscarora languages spoken in New York, Wisconsin, and Oklahoma, as well as the Cherokee tongue found in Oklahoma and North Carolina, and Siouan, which includes Catawba (in South Carolina), Winnebago (in Wisconsin and Nebraska), Osage (in Nebraska and Oklahoma), Dakota and Assiniboin (in Minnesota, North Dakota, South Dakota, Montana, and Nebraska), and Crow (in Montana). Languages of the Hokan-Siouan stock are also found in Mexico and parts of Central America. These Hokan-Siouan languages tend to be agglutinative, various word elements, each having a fixed meaning and an independent existence, are merged to form a single word. The two principal branches of the Aztec-Tanoan linguistic stock are Uto-Aztecan and Tanoan, and their languages are spoken in areas extending from the NW United States to Mexico and Central America. Uto-Aztecan has such subdivisions, or groups, as NAHUATLAN, whose languages are spoken in Mexico and parts of Central America, and Shoshonean, to which Comanche, Hopi, Paiute, Shoshone, and Ute belong. Ute and Paiute are found in Utah, Nevada, California, and Arizona; Comanche and Shoshone are spoken in Wyoming, Nevada, Utah, California, and Oklahoma; Hopi is found in Arizona. The languages of the Tanoan branch of Aztec-Tanoan are spoken in the Rio Grande valley, New Mexico, and Arizona. Zuñi (found in New Mexico) may be connected with Tanoan. The Aztec-Tanoan languages show a degree of polysynthesis. They differentiate clearly between the noun and the verb.

Languages of Mexico and Central America Of the languages of Mexico and Central America, about 24

linguistic groups, or stocks, have been identified, it is still not clear which of these can be classified together to reduce the number of groups. Among these groups is Yuman, whose tongues are spoken in Baja California and are related to the Yuman languages found in the United States. In both, Yuman falls within the larger Hokan-Siouan classification, which, in Mexico and parts of Central America, also includes the Coahuiltecan, Guaycuran, and Jicaque stocks, or groups. The Otomian stock (current in central Mexico and including the Otomi language) forms part of the larger Macro-Otomanguean division, in which the Mixtecan and Zapotecan stocks of Mexico are often placed. The Nahuatl group, as indicated earlier, is classified under Uto-Aztecan, some of whose languages are found in Mexico and parts of Central America. Uto-Aztecan is itself a branch of the greater Aztec-Tanoan stock. Nahuatl, or Aztec, is a language of the Nahuatl group. Mayan, which is found in Yucatan and parts of Central America and to which the language Maya belongs, is part of the larger Penutian linguistic stock. The Penutian stock also has as members the Huave, Mixe-Zoque, and Totonacan branches, whose languages are spoken in Mexico and Guatemala. In Mexico and parts of Central America, there are still more than one million speakers of the modern dialects of Maya proper, which was the official language of the ancient Mayan empire before the Spanish conquest of the New World. The languages of two South American stocks, Cariban and Chibchan, can also be found in Central America.

Languages of South America and the West Indies More than 100 distinct linguistic stocks have been proposed for South America, and more than 1,000 separate languages have been discovered on that continent and in the West Indies. The latter had two aboriginal stocks, Arawakan and Cariban, which are also found in South America. When more is known about the South American Indian languages, some of the stocks may turn out to be sufficiently closely related so as to allow linguists to group them together and thus reduce the number of basic stocks. The principal linguistic groups of South America and the West Indies are usually said to be eight: Chibchan, Cariban, Ge, QUECHUA, Aymara, Araucanian, Arawakan, and Tupi-Guarani. Before the European conquest, Chiban flourished in the areas now designated as Colombia, Ecuador, Panama, Costa Rica, and Nicaragua. It belongs to the larger Macro-Chibchan stock. Some Chibchan languages still survive in Colombia and Central America. Cariban and Ge are families of the greater Ge-Pano-Carib linguistic stock. In the aboriginal period the Cariban languages were important in the West Indies, Brazil, Peru, the Guianas, Venezuela, and Colombia. Today a number of them are still found in N South America and in some of the West Indian islands. Ge languages were spoken in E Brazil in pre-conquest times. About 50 of them are still in use in that country. Quechua (also called Kechua or Quichua), Aymara, and Araucanian are linguistic families assigned to the Andean branch of the larger Andean-Equatorial stock. Aymara today consists of 14 languages native to about one million people in Peru and parts of Bolivia, where those languages were also current in pre-conquest times. A number of languages, the most important of which is Mapuche, make up the Araucanian family, which thrives in Chile and Argentina. The Arawakan and Tupi-Guarani families belong to the Equatorial branch of the Andean-Equatorial languages. Arawakan is considered the most extensive South American linguistic stock. In the aboriginal period (before 1500), Arawakan tongues were spoken in the West Indies and 5 Brazil and along the eastern side of the Andes. Some Arawakan languages have died out, particularly in the West Indies, but others still survive there and in South America, especially in Venezuela, Colombia, Brazil, the Guianas, Peru, Paraguay, and Bolivia. The Tupi-Guarani family of languages is next to the Arawakan in extent. The Tupian subdivision reaches from the coast of E Brazil along the Amazon River to the Andes. The Guaranian subdivision is found in Paraguay, Brazil, Argentina, and Bolivia. Some 120 Tupi-Guarani languages have survived. The two dominant members of this large family are Tupi and Guaraní. Tupi serves as a lingua franca for the Indians in Brazil. Guaraní is co-official with Spanish in Paraguay, and it is spoken by one million people in Paraguay and Brazil. The linguistic diversity of South America is unparalleled. There are many other families and hundreds of additional languages that have yet to be researched and definitely classified. Written literature in the usual sense does not exist in the American Indian languages, however, there are folk

literatures. Communication by writing among the American Indians in the aboriginal period was limited to the Maya and the Aztecs. Both cultures used a form of picture writing to represent their ideas. About 800 of the Maya hieroglyphs, or symbols, are known, and in recent years substantial progress has been made in deciphering them. The computer is also expected to be of service in the effort to solve the puzzle of Maya writing. Not many texts of the Maya survive, the most numerous being inscriptions on buildings. The Incas of Peru used a system of knotted cords, ropes, or strings to communicate. Called the quipu, it is considered a form of writing. The color and shape of the knotted cords were the clues to meaning. For instance, green cords signified grain, and red cords, soldiers. One knot stood for the number 10, two knots, 20, a double knot, 100. Among Indians of E North America, beaded wampum belts often contained pictographic symbols for communication. Another means of nonlinguistic communication among many of the North American Indians was SIGN LANGUAGE, consisting of gestures with the hands and arms. One advantage of sign language was that it made communication possible among Indian tribes having different languages. In addition, smoke signals were used by some American Indians to convey information, but they were capable only of giving simple messages, such as "enemies in the area" or some previously agreed-upon message. The American Indian languages have contributed numerous place-names in the Western Hemisphere, especially in the United States, many of whose states have names of Indian origin. The European languages that are official today in countries of the New World, such as English, Spanish, and Portuguese, have borrowed a number of words from aboriginal languages. English, for example, has been enriched by such words as *moccasin*, *moose*, *mukluk*, *raccoon*, *skunk*, *terrapin*, *tomahawk*, *totem*, and *wampum* from North American Indian languages, by *chocolate*, *coyote*, and *tomato* from Mexican Indian tongues, by *barbecue*, *cannibal*, *hurricane*, *maize*, and *potato* from aboriginal languages of the West Indies, and by *coca*, *condor*, *guano*, *jaguar*, *llama*, *maraca*, *pampa*, *puma*, *quinine*, *tapioca*, and *vicuña* from South American Indian languages. Some American Indian languages, among them Navaho, Apache, and Cherokee, have been used for wartime communications by the U.S. military to evade enemy decipherment. Navaho Indians cooperated with the American armed forces during World War II as the transmitters of vital messages in their formidably difficult language. Unfortunately, the outlook for the future of the American Indian languages is not good. Most of them will probably die out, perhaps all of them will. At the present time, the aboriginal languages of the Western Hemisphere are gradually being replaced by the Indo-European tongues of the European conquerors and settlers of the New World—English, Spanish, Portuguese, French, and Dutch. Apparently there is no role for the American Indian languages as languages of world importance. Moreover, because of the almost total absence of writing and the earlier destruction of most of what writing did exist, the American Indian languages lack great literatures, although they do possess rich oral traditions. The investigation of these languages contributes much to a scientific knowledge of language in general, since these tongues possess a number of linguistic features not otherwise known. Some groups of native Americans in the United States are working to revitalize the languages of their peoples as a result of recently increased ethnic consciousness and feelings of cultural identity. See Edward Sapir in *Selected Writings in Language, Culture, and Personality*, ed. by D. G. Mandelbaum (1949), J. A. Mason in *Handbook of South American Indians*, ed. by J. H. Stewart (Vol. 6, 1950), Franz Boas, *Handbook of American Indian Languages* (1911-38, repr. 1969), Jesse Sawyer, ed., *Studies in American Indian Languages* (1971), Esther Matteson et al., *Comparative Studies in Amerindian Languages* (1972).

American Indian Movement (AIM), organization of the American Indian civil rights movement. In 1972, members of AIM briefly took over the headquarters of the Federal Bureau of Indian Affairs in Washington, D.C. They complained that the Bureau had created the tribal councils on reservations in 1934 as a way of perpetuating paternalistic control over Indian development. In 1973, about 200 Sioux, led by members of AIM, seized the tiny village of Wounded Knee, S. Dak., site of the last great massacre of Indians by the U.S. cavalry in 1890. Among their demands was a review of more than 300 treaties between the Indians and the federal govern-

ment that AIM alleges have been broken. Wounded Knee was occupied for 70 days before the militants surrendered. The leaders were subsequently brought to trial, but the case was dismissed on grounds of misconduct by the prosecution.

Americanization, term used to describe the movement during the first quarter of the 20th cent. whereby the immigrant in the United States was induced to assimilate American speech, ideals, traditions, and ways of life. As a result of the great emigration from E and S Europe between 1880 and the outbreak of World War I (see IMMIGRATION), the Americanization movement grew to crusading proportions. Fear and suspicion of the newcomers and of their possible failure to become assimilated gave impetus to the movement. Joined by social workers interested in improving the slum conditions surrounding the immigrants and by representatives of the business and industrial world some of whom feared the source of cheap labor might be subverted by spread of radical social doctrines, organizations were formed to propagandize and to agitate for municipal, state, and federal aid to indoctrinate the immigrants into American ways. Leading the drive were the Daughters of the American Revolution, the North American Civic League for Immigrants (a New England group), the Committee for Immigrants in America, and the National Americanization Committee (both with headquarters in New York City). The coming of World War I with the resultant heightening of U.S. nationalism strengthened the movement. The Federal Bureau of Education and the Federal Bureau of Naturalization joined in the crusade and aided the private Americanization groups. Large rallies, patriotic naturalization proceedings, and Fourth of July celebrations characterized the campaign. When the United States entered into the war, Americanization was made an official part of the war effort. Many states passed legislation providing for the education and Americanization of the foreign-born. The anti-Communist drive conducted by the Dept. of Justice in 1919-20 stimulated the movement and led to even greater legislative action on behalf of Americanization. Virtually every state that had a substantial foreign-born population had provided educational facilities for the immigrant by 1921. The passage of this legislation and the quota system of immigration caused the Americanization movement to subside, private groups eventually disbanded. See John Higham, *Strangers in the Land* (1963), M. M. Gordon, *Assimilation in American Life* (1964).

American Labor party, organized in New York by labor leaders and liberals in 1936, primarily to support Franklin Delano Roosevelt's New Deal and the men favoring it in national and local elections. It gathered strength in New York state and particularly in New York City and had considerable weight there in tipping the scales toward chosen Democratic or Republican candidates. After 1939 it was much torn by strife between left-wing and right-wing factions, chiefly concerning policy toward the USSR. In 1944 an anti-Communist group led by David DUBINSKY, defeated in the primaries, dropped out and formed the Liberal party. In 1948 the party polled over 500,000 votes for Henry A. Wallace for President, but many members withdrew in opposition to his candidacy. Failing to poll 50,000 votes in the 1954 New York state election, it lost its place on the New York ballot. In 1956 the party was voted out of existence by its New York state committee.

American Landrace swine, relatively new breed of swine developed from Danish Landrace hogs imported in 1934 by the U.S. Dept. of Agriculture. They are totally white. Noted for their smoothness, length of body, and lean carcasses, these swine are prolific, fast-growing, and sturdy. They are found primarily in the central Corn Belt area.

American Legion, national association of male and female war veterans, founded (1919) in Paris. Membership is open to veterans of World Wars I and II, the Korean War, and the Vietnam War. The preamble to the organization's constitution, adopted at the convention in St. Louis that same year, expresses its purposes in part as "to uphold and defend the Constitution of the United States, to maintain law and order, to foster and perpetuate a one hundred percent Americanism, to safeguard and transmit to posterity the principles of justice, freedom, and democracy, to consecrate and sanctify our comradeship by our devotion to mutual helpfulness." To achieve these ends the American Legion has done much work in social welfare, particularly in the areas of veterans' benefits and child care. The largest of the veterans' associations, it is organized into a system of 58 state departments and some 16,000 lo-

cal posts. Its national headquarters is in Indianapolis. The annual convention, at which policies are formulated, gains much attention, and the political force of the organization is considerable. The efforts of the American Legion have been bent not only to obtaining benefits for veterans but also to building up the military strength of the United States and to attacking so-called subversive or anti-American teachings and organizations. Although it is organized on a nonpartisan, nonpolitical basis, its policies have been criticized as reactionary by many opponents. There is also a women's auxiliary for the wives, mothers, sisters, and daughters of veterans. See Raymond Moley, *The American Legion Story* (1966).

American Library Association, founded 1876, organization whose purpose is to increase the usefulness of books through the improvement and extension of library services. As the major professional association for librarians and libraries, it seeks to maintain high standards for all branches of library service through functions ranging from the accreditation of library training schools to the recognition of outstanding books. The association was involved in early attempts to expand library services to all people. It supported public access to library shelves, tax-supported libraries, books made available for home loan, and research libraries sponsored by the government and major educational institutions. After the advent of audio-visual equipment, it promoted expansion of library programs to include the new electronic materials. The organization, based in Chicago, consisted of some 37,000 members in the early 1970s.

American literature in English began with the writings of English adventurers and colonists in the New World chiefly for the benefit of readers in the mother country. Some of these works reached the level of literature, as in the robust and perhaps truthful account of his adventures by Captain John Smith and the sober, tendentious journalistic histories of John Winthrop and William Bradford in New England. From the beginning, however, the literature of New England was also directed to the edification and instruction of the colonists themselves, intended to direct them in the ways of the godly. The first work published in the Puritan colonies was the *Bay Psalm Book* (1640), and the whole effort of the divines who wrote furiously to set forth their views—among them Roger Williams and Thomas Hooker—was to defend and promote visions of the religious state. They set forth their visions—in effect the first formulation of the concept of national destiny—in a series of impassioned histories and jeremiads from Edward Johnson's *Wonder-Working Providence* (1654) to Cotton Mather's epic *Magnalia Christi Americana* (1702). Even their poetry was offered uniformly to the service of God. Michael Wigglesworth's *Day of Doom* (1662) was uncompromisingly theological, and Anne Bradstreet's poems, issued as *The Tenth Muse Lately Sprung Up in America* (1650), were pious. The best of the Puritan poets, Edward Taylor, whose work was not published until two centuries after his death, wrote metaphysical verse worthy of comparison with that of George Herbert. Sermons and tracts poured forth until austere Calvinism found its last utterance in the words of Jonathan Edwards. In the other colonies writing was usually more mundane and on the whole less notable, though the journal of the Quaker John Woolman is highly esteemed, and some critics maintain that the best writing of the colonial period is found in the witty and urbane observations of William Byrd, a gentleman planter of Westover, Virginia.

A New Nation and a New Literature. The approach of the American Revolution and the achievement of the actual independence of the United States was a time of intellectual activity as well as social and economic change. The men who were the chief molders of the new state included excellent writers, among them Thomas Jefferson and Alexander Hamilton. They were well supported by others such as Philip Freneau, the first American lyric poet of distinction and an able journalist, the pamphleteer Thomas Paine, later an attacker of conventional religion, and the polemicist Francis Hopkinson, who was also the first American musical composer. The variously gifted Benjamin Franklin forwarded American literature not only through his own writing but also by founding and promoting newspapers and periodicals. Many literary aspirants, such as John Trumbull, Timothy Dwight, Joel Barlow, and the other CONNECTICUT WITS, used English models. The infant American theater showed a nationalistic character both in its first comedy *The Contrast*

(1787), by Royall Tyler, and in the dramas of William Dunlap. The first American novel, *The Power of Sympathy* (1789), by William Hill Brown, only shortly preceded the Gothic romance, *Wieland* (1799), by the first professional American novelist, Charles Brockden Brown. Recognition in Europe, and especially in England, was coveted by every aspiring American writer and was first achieved by two men from New York: Washington Irving, who first won attention by presenting American folk stories, and James Fenimore Cooper, who wrote enduring tales of adventure on the frontier and at sea. William Cullen Bryant had by 1825 made himself the leading poet of America with his delicate lyrics extolling nature and his smooth, philosophic poems in the best mode of romanticism. Even more distinctly a part of the romantic movement were such poets as Joseph Rodman Drake, Fitz-Greene Halleck, and Henry Wadsworth Longfellow. Longfellow won the hearts of Americans with glib, moralizing verse and also commanded international respect. Ralph Waldo Emerson and Henry David Thoreau stood at the center of TRANSCENDENTALISM, a movement that made a deep impression upon their native land and upon Europe. High-mindedness, moral earnestness, the desire to reform society and education, the assertion of a philosophy of the individual as superior to tradition and society—all these were strongly American, and transcendentalists such as Emerson, Thoreau, Margaret Fuller, and Bronson Alcott insisted upon such principles. Men as diverse as James Russell Lowell, Boston "Brahmin" poet, and critic, and John Greenleaf Whittier, the bucolic poet, joined in support of the abolitionist cause, while the more worldly and correct Oliver Wendell Holmes reflected the vigorous intellectual spirit of the time, as did the historians William Hickling Prescott, George Bancroft, Francis Parkman, and John Lothrop Motley. The solemn histories were as distinctly American as the broadly humorous writing that became popular early in the 19th cent. This was usually set forth as the sayings of semiliterate, often raffish, and always shrewd American characters like Hosea Biglow (James Russell Lowell), Artemus Ward (Charles Farrar Browne), Petroleum Vesuvius Nasby (David Ross Locke), Josh Billings (Henry Walker Shaw), and Sut Lovingood (G. W. Harris). Far apart from these was Edgar Allan Poe, whose skilled and emotional poetry, clearly expressed aesthetic theories, and tales of mystery and horror won for him a more respectful audience in Europe than—originally, at least—in America. In the 1850s came Nathaniel Hawthorne's novel *The Scarlet Letter* (1850), depicting the gloomy atmosphere of early Puritanism, Herman Melville's *Moby-Dick* (1851), which infused into an adventure tale of whaling days profound symbolic significance, and the rolling measures of Walt Whitman's *Leaves of Grass* (1st ed. 1855), which employed a new kind of poetry and proclaimed the optimistic principles of American democracy.

The Literature of a Reunited Nation. The rising conflict between the North and the South that ended in the Civil War was reflected in regional literature. The crusading spirit against Southern slavery in Harriet Beecher Stowe's overwhelmingly successful novel *Uncle Tom's Cabin* (1852) was matched by the violent anti-Northern diatribes of William Gilmore Simms. While the Civil War was taking its inexorable course, the case for reunion was set forth in the purest and most exact statement of American political ideals, the Gettysburg Address of President Abraham Lincoln. Once the war was over, literature gradually regained a national identity amid expanding popularity, as writings of regional origin began to find a mass audience. The stories of the California gold fields by Bret Harte, the rustic novel of Edward Eggleston, *The Hoosier Schoolmaster* (1871), the rhymes of James Whitcomb Riley, the New England genre stories of Sarah Orne Jewett and Mary E. Wilkins Freeman, the sketches of Louisiana by George W. Cable, even the romance of the Old South woven by the poetry of Henry Timrod and Sidney Lanier and the fiction of Thomas Nelson Page—all were seized eagerly by the readers of the reunited nation. The outstanding example of genius overcoming any regionalism in scene can be found in *Huckleberry Finn* (1884), by Mark Twain. The connection of American literature with writing in England and Europe was again stressed by William Dean Howells, who was not only an able novelist but an instructor in literary REALISM to other American writers. Though he himself had leanings toward social reform, he did encourage what has come to be called "genteel" writing, long dominant in American fiction. The mold for this sort of writing was broken by the American turned Englishman,

Henry James, who wrote of people of the upper classes but with such psychological penetration, subtlety of narrative, and complex technical skill that he is recognized as one of the great masters of fiction. His influence was quickly reflected in the novels of Edith Wharton and others and continued to grow in strength in the 20th cent. The realism preached by Howells was turned by some writers away from bourgeois milieus, particularly by Stephen Crane in his poetry and in his fiction—*Maggie: A Girl of the Streets* (1893) and the Civil War story, *The Red Badge of Courage* (1895), these were forerunners of NATURALISM, which reached heights in the hands of Theodore Dreiser and Jack London, the latter a fiery advocate of social reform as well as a writer of Klondike stories. Ever since the Civil War, voices of protest and doubt have been heard. Mark Twain (with Charles Dudley Warner) had in *The Gilded Age* (1873) held the postwar get-rich-quick era up to scorn. By the early 20th cent. Henry Adams was musing upon the effects of the dynamo's triumph over man, and Ambrose Bierce literally abandoned a civilization he could not abide. Poetry, meanwhile, had tended to the pretty-pretty—with the startling exception of the Amherst recluse, Emily Dickinson, whose terse, precise, and enigmatic poems, published in 1890, after her death, placed her immediately in the ranks of major American poets. Drama after the Civil War and into the 20th cent. continued to rely, as it had before, on spectacles, on the plays of Shakespeare, and on some of the works of English and Continental playwrights. A few popular plays such as *Uncle Tom's Cabin* and *Rip Van Winkle* were based on American fiction, others were crude melodrama. Realism, however, came to the theater with some of the plays of Bronson Howard, James A. Herne, and William Vaughn Moody. A revolution in poetry was announced with the founding in 1912 of *Poetry: A Magazine of Verse*, edited by Harriet Monroe. It published the work of Ezra Pound and the proponents of imagism (see IMAGISTS)—Amy Lowell, H. D. (Hilda Doolittle), John Gould Fletcher, and their English associates, all declaring against romantic poetry and in favor of the exact word. Other poets moved along their own paths. Edwin Arlington Robinson, who wrote dark, brooding lines on man in the universe, Edgar Lee Masters, who used free verse for realistic biographies in *A Spoon River Anthology* (1915), his friend Vachel Lindsay, Carl Sandburg, who tried to capture the speech, life, and dreams of America, and Robert Frost, who wrote with evocative simplicity and won universal admiration.

The Lost Generation and After. The years immediately after World War I brought a highly vocal rebellion against established social, sexual, and aesthetic conventions and a vigorous attempt to establish new values. Young artists flocked to Greenwich Village, to Chicago, and to San Francisco, determined to protest and intent on making a new art. Others went to Europe, living mostly in Paris as expatriates. They willingly accepted the name given them by Gertrude Stein: the lost generation. Out of their disillusion and rejection, the writers built a new literature, impressive in the glittering 1920s and the years that followed. Romantic clichés were abandoned for extreme realism or for complex symbolism and created myth. Language grew so frank that there were bitter quarrels over censorship, as in the troubles about James Branch Cabell's *Jurgen* (1919) and—much more notably—Henry Miller's *Tropic of Cancer* (1931). The influence of new psychology and of Marxian social theory was strong. Out of this highly active boiling of new ideas and new forms came writers of recognizable stature in the world: Ernest Hemingway, F. Scott Fitzgerald, William Faulkner, Thomas Wolfe, John Dos Passos, John Steinbeck, e. e. Cummings. Eugene O'Neill became the greatest by far of the dramatists the United States has produced. Other writers also enriched the theater with comedies, social reform plays, and historical tragedies. Among them were Maxwell Anderson, Philip Barry, Elmer Rice, S. N. Behrman, Marc Connelly, Lillian Hellman, Clifford Odets, and Thornton Wilder. The social drama and the symbolic play were further developed by Arthur Miller, William Inge, and Tennessee Williams. By the 1960s the influence of foreign movements was much felt with the development of "off-Broadway" theater. One of the new playwrights who gained special notice was Edward Albee. The naturalism that governed the novels of Dreiser and the stories of Sherwood Anderson was intensified by the stories of the Chicago slums by James T. Farrell and later Nelson Algren. Violence in language and in action was extreme in some of the novels of World War II, nota-

bly those of James Jones and Norman Mailer. Not unexpectedly, after World War I, Negro writers came forward, casting off the sweet melodies of Paul Lawrence Dunbar and speaking of social oppression. Countee Cullen, James Weldon Johnson, Claude McKay, and Langston Hughes were succeeded by Richard Wright, Ralph Ellison, James Baldwin, and LeRoi Jones. Poetry after World War I was largely dominated by T. S. Eliot and his followers, who imposed intellectuality and a new sort of classical form that had been urged by Ezra Pound. Eliot was also highly influential as a literary critic and contributed to making the period 1920-60 one that was to some extent dominated by literary analysts and promoters of various warring schools. Among those critics were H. L. Mencken, Edmund Wilson, Lewis Mumford, Malcolm Cowley, Van Wyck Brooks, John Crowe Ransom, Yvor Winters, Lionel Trilling, Allen Tate, R. P. Blackmur, Robert Penn Warren, and Cleanth Brooks. The victories of the new over the old in the 1920s did not mean the disappearance of the older ideals of form even among lovers of the new. Much that was traditional lived on in the lyrics of Conrad Aiken, Sara Teasdale, Edna St. Vincent Millay, and Elinor Wylie. In the later years of the period two poets gained world recognition, though they had been quietly writing before. Wallace Stevens and William Carlos Williams. The admirable novels of Willa Cather did not resort to new devices; the essays of E. B. White were models of pure style, as were the stories of Katherine Anne Porter and Jean Stafford. Humor left the broadness of George Ade's *Fables* (1899) for the acrid satire of Ring Lardner and the highly polished writing of Robert Benchley and James Thurber. The South still produced superb writers, notably Carson McCullers, Flannery O'Connor, and Eudora Welty, whose works, while often grotesque, were also compassionate and humorous. The tension, horror, and meaninglessness of contemporary American life became a major theme of novelists during the 1960s and 70s. While authors such as Saul Bellow, Bernard Malamud, Hortense Calisher, and Philip Roth presented the varied responses of urban intellectuals, usually Jews, and John Updike and John Cheever treated the middle class, William Burroughs and Joyce Carol Oates unsparingly depicted the violence inherent in American life at all levels of society. Irony and so-called "black humor" were the weapons of authors like Roth, Joseph Heller, and Jules Feiffer. However, other writers, notably Donald Barthelme, Jerzy Kosinski, Thomas Pynchon, and Kurt Vonnegut, Jr., expressed their view of the world as unreal, as mad, by writing fantasies that were by turn charming, obscure, exciting, profound, and terrifying. Although the poets Allen Ginsberg, Theodore Roethke, and Lawrence Ferlinghetti gained initial recognition as part of the BEAT GENERATION, their individual reputations were soon firmly established. Writers of "perceptual verse" such as Charles Olson, Robert Creeley, Denise Levertov, and Robert Duncan became widely recognized during the 1960s. One of the most provocative and active poets of the decade was Robert Lowell, who often wrote of the anguish and corruption in modern life. His practice of revelation about his personal life evolved into so-called "confessional poetry," which was also written by such poets as Anne Sexton, Sylvia Plath, and, in a sense, John Berryman. Accomplished poets with idiosyncratic styles were Elizabeth Bishop and James Dickey. The pressure and fascination of actual events during the 1960s intrigued many writers of fiction, and Truman Capote, John Hersey, James Michener, and Norman Mailer wrote with perception and style about political conventions, murders, demonstrations, and presidential elections. For more information, consult the individual entries on any of the authors mentioned in this article. See Robert E. Spiller et al., ed., *Literary History of the United States* (3d ed. 1963), E. H. Emerson, ed., *Major Writers of Early American Literature* (1972), Ihab Hassan, *Contemporary American Literature, 1945-1972* (1973).

American Medical Association (AMA), professional physicians' organization (founded 1847). Its goals are to promote public health, protect the welfare of American physicians, and support the growth of medical science. Among its many activities, the AMA investigates alleged cases of medical quackery, engages in medical research on drugs, foods, cosmetics, and other substances, and sponsors an extensive health education program. The organization helps set standards for American medical schools and in-hospital doctor training programs; it was largely responsible for the upgrading of American medical education that took place in the early

20th cent. The AMA maintains close relationships with the state and county medical societies, and in some areas the societies require all physicians to belong to the AMA. Although the AMA's headquarters is in Chicago, it also maintains an office in Washington, D. C., in order to follow closely legislation that may affect the medical profession. The organization has consistently opposed—since the mid-1930s—proposals for a comprehensive system of national health insurance. The AMA is composed of over 20 different subdivisions that deal with a variety of medical topics, including medical education, maternal and child care, medicolegal problems, and mental health. It also has a section for each of the medical specialties. As of 1974 it had approximately 204,000 members.

American Museum of Natural History, incorporated in New York City in 1869 to promote the study of natural science and related subjects. Buildings on its present site were opened in 1877. Among the buildings since added are the Hayden Planetarium (opened 1935) and the Roosevelt Memorial building (completed 1936). It maintains exhibitions in all branches of natural history, including anthropology and ecology. As a result of its wide explorations and its program of research, the museum has acquired specimens and data of great value. Resources are derived from endowment, grants from the city, and a membership fund. Among the facilities for study are an extension library, illustrated lectures, publications, programs for young people, a special school service whereby the museum cooperates with city schools, circulating exhibits, habitat groups of animals and plants, a mineral and gem collection, an unrivaled assemblage of skeletons of extinct animals, especially dinosaurs, and replicas of invertebrates in glass.

American National Theatre and Academy (ANTA), a tax-exempt, nationwide organization, chartered by Congress in 1935 to encourage outstanding theater in the United States. ANTA relies on money raised by popular subscription. Since 1946 it has concentrated its support on independent touring companies; it maintains an information service, an artist and speaker program, and various other activities. As the U.S. center of the International Theatre Institute, it has sponsored the exchange of foreign productions and artists. See their quarterly *Newsletter*, H. H. Taubman, *The Making of the American Theatre* (rev. ed. 1967).

American Negro spirituals, religious folk songs. Beginning in the late 19th cent., when a celebrated chorus from Fisk Univ. traveled throughout the United States and abroad, wide attention was given to the spirituals of the American Negro. This body of song was long thought to be the spontaneous creation of the Negro and the only original folk music of the United States. Research into its origin centered mainly on the nature and extent of its African ancestry. Because Negro slaves were brought to the United States from many parts of Africa, no single musical source is clear. Elements that African music and American Negro spirituals have in common include syncopation, polyrhythmic structure, the pentatonic scale, and a sort of responsive rendition of text. Audience participation increased the improvisatory nature of the spirituals, with the result that tens and even hundreds of versions of a single text idea exist. Early in the 20th cent. Cecil SHARP explored the extent of American folk-song literature, much of which he demonstrated to be of British ancestry. After that discovery G. P. JACKSON traced the considerable influence of revivalist and evangelist songs from the early 19th-century camp meetings of the Southern white population. Jackson claimed, using hundreds of comparative examples, that many Negro spirituals were adapted from or inspired by these white spirituals. Thus it can be assumed that African musical traditions were amalgamated with the religious songs of the white South, which had many sources, to produce a form of folk music that was distinctly Negro in character. The Negro spiritual is, above all, a deeply emotional song. The words are most often related to biblical passages, but the predominant effect is of patient, profound melancholy, even though the condition of slavery is very seldom referred to. The spiritual was directly related to the sorrow songs that were the source material of the blues (see JAZZ). A number of more joyous spirituals influenced the content of gospel songs (see GOSPEL MUSIC). Collections and arrangements have been made by Rosamond Johnson and J. W. Johnson, R. N. Dett, George L. White, John A. Lomax and Alan Lomax, Roland Hayes, and others. See G. P. Jackson, *White Spirituals in the Southern Uplands* (1933), *Spiritual Folk-Songs of*

Early America (1937), and *White and Negro Spirituals* (1943), LeRoi Jones, *Blues People* (1963), H. A. Chambers, ed., *Treasury of Negro Spirituals* (1963), H. W. Odum and G. B. Johnson, *The Negro and His Songs* (1925, repr. 1964), W. F. Allen, *Slave Songs of the United States* (1857, repr. 1965).

American party: see KNOW-NOTHING MOVEMENT

American Philosophical Society, first scientific society in America, founded (1743) in Philadelphia. It was an outgrowth of the Junto formed (1727) by Benjamin Franklin. Franklin was the first secretary of the society, and Thomas Hopkinson the first president. In 1769 it merged with the American Society for Promoting Useful Knowledge. The combined organization elected Franklin its first president, an office he held until his death. David Rittenhouse and Thomas Jefferson were his immediate successors. The society, which has a notable library located in Philadelphia, takes its members from people of distinction in all fields of intellectual and scientific study.

American Red Cross: see RED CROSS

American Revolution, 1775-83, struggle by which the THIRTEEN COLONIES on the Atlantic seaboard of North America won independence from Great Britain and became the United States. It is also called the American War of Independence. By the middle of the 18th cent., differences in life, thought, and interests had developed between the mother country and the growing colonies. Local political institutions and practice diverged significantly from English ways, while social customs, religious beliefs, and economic interests added to the potential sources of conflict. The British government, like other imperial powers in the 18th cent., favored a policy of MERCANTILISM, the NAVIGATION ACTS were intended to regulate commerce in the British interest. These were only loosely enforced, however, and the colonies were by and large allowed to develop freely with little interference from England. Conditions changed abruptly in 1763. The Treaty of Paris in that year ended the FRENCH AND INDIAN WARS and removed a long-standing threat to the colonies. At the same time the ministry (1763-65) of George GRENVILLE in Great Britain undertook a new colonial policy intended to tighten political control over the colonies and to make them pay for their defense and return revenue to the mother country. The tax levied on molasses and sugar in 1764 caused some consternation among New England merchants and makers of rum, the tax itself was smaller than the one already on the books, but the promise of stringent enforcement was novel and ominous. It was the STAMP ACT, passed by the British Parliament in 1765, with its direct demand for revenue that roused a violent colonial outcry, which was spearheaded by the Northern merchants, lawyers, and newspaper publishers who were directly affected. Everywhere leaders such as James Otis, Samuel Adams, and Patrick Henry denounced the act with eloquence, societies called the SONS OF LIBERTY were formed, and the Stamp Act Congress was called to protest that Parliament was violating the rights of trueborn Englishmen in taxing the colonials, who were not directly represented in the supreme legislature. The threat of boycott and refusal to import English goods supported the colonial clamor. Parliament repealed (1766) the Stamp Act but passed an act formally declaring its right to tax the colonies. The incident was closed, but a barb remained to wound American feelings. Colonial political theorists—not only radicals such as Samuel Adams, Patrick Henry, Josiah QUINCY (1744-75), and Alexander MACDOUGALL but also moderates such as John DICKINSON, John ADAMS, and Benjamin FRANKLIN—asserted that taxation without representation was tyranny. The teachings of 18th-century French philosophers and continental writers on law, such as Emmerich de Vattel, as well as the theories of John LOCKE, were implicit in the colonial arguments based on the theory of NATURAL RIGHTS. The colonials claimed that Parliament had the sovereign power to legislate in the interest of the entire British Empire, but that it could only tax those actually represented in Parliament. Trouble flared when the Chatham ministry adopted (1767) the TOWNSHEND ACTS, which taxed numerous imports, care was taken to levy only an "external" or indirect tax in the hope that the colonials would accept this. The indirect taxes were challenged too, and although the duties were not heavy, the principle was attacked. Incidents came in interrupted sequence to make feeling run higher and higher—the seizure of a ship belonging to John HANCOCK in 1768, the bloodshed of the BOSTON MASSACRE in 1770, the burning of H. M. S. GASPEE in 1772. Even repeal of

the Townshend Acts in 1770 did no more than temporarily quiet the turmoil, for the tax on tea was kept as a sort of token of Parliament's supremacy. Indignation in New England at the monopoly granted to the East India Company led to the BOSTON TEA PARTY in 1773. Despite the earnest pleas of William Pitt the elder (see CHATHAM, WILLIAM PITT, 1ST EARL OF) and Edmund BURKE, Parliament replied with coercive measures. These (and the QUEBEC ACT) the colonials called the INTOLERABLE ACTS, and resistance was prompt. The Sons of Liberty and individual colonials were already spreading statements of the colonial cause to win over merchant and farmer, workman and sailor. Committees of correspondence had been formed to exchange information and ideas and to build colonial unity, and in 1774 these committees prepared the way for the CONTINENTAL CONGRESS. The representatives at this First Continental Congress, except for a few radicals, had not met to consider independence, but wished only to persuade the British government to recognize their rights. A plan of reconciliation offered by Joseph GALLOWAY was rejected. It was agreed that the colonies would refuse to import British goods until colonial grievances were righted, those grievances were listed in petitions to the king, and the congress adjourned. Before it met again the situation had changed. On the morning of April 19, 1775, shots had been exchanged by colonials and British soldiers, men had been killed, and a revolution had begun (see LEXINGTON AND CONCORD, BATTLES OF). On the very day (May 10, 1775) that the Second Continental Congress met, Ethan ALLEN and his Green Mountain Boys, together with a force under Benedict Arnold, took Fort Ticonderoga from the British, and two days later Seth WARNER captured Crown Point. Boston was under British siege, and before that siege was climaxed by the costly British victory usually called the battle of Bunker Hill (June 17, 1775) the Congress had chosen (June 15, 1775) George WASHINGTON as commander in chief of the Continental armed forces. The war was on in earnest. Some delegates had come to the Congress already committed to declaring the colonies independent of Great Britain, but even many stalwart upholders of the colonial cause were not ready to take such a step. The lines were being more clearly drawn between the pro-British LOYALISTS and colonial revolutionists. The time was one of indecision, and the division of the people was symbolized by the split between Benjamin Franklin and his Loyalist son, William FRANKLIN. The Loyalists were numerous and included small farmers as well as large landowners, royal officeholders, and members of the professions; they were to be found in varying strength in every colony. A large part of the population was more or less neutral, swaying to this side or that or else remaining inert in the struggle, which was to some extent a civil war. So it was to remain to the end. Civil government and administration had fallen apart and had to be patched together locally. In some places the result was bloody strife, as in the partisan raids in the Carolinas and Georgia and the Mohawk valley massacre in New York; elsewhere hostility did not produce open struggles. In January, 1776, Thomas Paine wrote a pamphlet, *Common Sense*, which urged the colonial cause. Its influence was tremendous, and it was read everywhere with enthusiastic acclaim. Militarily, however, the cause did not prosper greatly. Delegations to the Canadians had been unsuccessful, and the QUEBEC CAMPAIGN (1775-76) ended in disaster. The British gave up Boston in March, 1776, but the prospects were still not good for the ill-trained, poorly armed volunteer soldiers of the Continental army when the Congress decided finally to declare the independence of the Thirteen Colonies. The DECLARATION OF INDEPENDENCE is conventionally dated July 4, 1776. Drawn up by Thomas Jefferson (with slight emendations), it was to be one of the great historical documents of all time. It did not, however, have any immediate positive effect. The British under Gen. William HOWE and his brother, Admiral Richard Howe, came to New York harbor. After vain attempts to negotiate a peace, the British forces struck. Washington lost Brooklyn Heights (see LONG ISLAND, BATTLE OF), retreated northward, was defeated at Harlem Heights in Manhattan and at White Plains, and took part of his dwindling army into New Jersey. Thomas Paine in a new pamphlet, *The Crisis*, exhorted the revolutionists to courage in desperate days, and Washington showed his increasing military skill and helped to restore colonial spirits in the winter of 1776-77 by crossing the ice-ridden Delaware and winning small victories over forces made up mostly of Hessian mercenaries at Trenton

(Dec. 26) and Princeton (Jan. 3). In 1777 the British attempted to wipe out the flickering revolt by a concerted plan to split the colonies with converging expeditions concentrated upon the Hudson valley. Gen. William Howe, instead of taking part in it, moved into Pennsylvania, defeated Washington in the battle of Brandywine (Sept. 11), took Philadelphia, and beat off (Oct. 4) Washington's attack on Germantown. Meanwhile the British columns under Gen. John BURGEOYNE and Gen. Barry ST. LEGER had failed (see SARATOGA CAMPAIGN), and Burgoyne on Oct. 17, 1777, ended the battle of Saratoga by surrendering to Gen. Horatio GATES. The victory is commonly regarded as the decisive battle of the war, but its good effects again were not immediate. The Continental army still had to endure the hardships of the cruel winter at VALLEY FORGE, when only loyalty to Washington and the cause of liberty held the half-frozen, half-starved men together. Among them were three of the foreign idealists who had come to aid the colonials in their struggle—Johann KALB, Baron von STEUBEN, and the marquis de LAFAYETTE. At Valley Forge, Steuben trained the still-raw troops, who came away a disciplined fighting force giving a good account of themselves in 1778. Sir Henry CLINTON, who had succeeded Howe in command, decided to abandon Philadelphia for New York, and Washington's attack upon the British in the battle of Monmouth (see MONMOUTH, BATTLE OF) was cheated of success mainly by the equivocal actions of Gen. Charles LEE. The warfare in the Middle Atlantic region settled almost to stagnation, but foreign aid was finally arriving. Agents of the new nation—notably Benjamin Franklin, Arthur Lee, Silas DEANE, and later John Adams—were striving to get help, and in 1777 Pierre de BEAUMARCHAIS had succeeded in getting arms and supplies sent to the colonials in time to help win the battle of Saratoga. That victory made it easier for France to enter upon an alliance with the United States, for which Franklin and the comte de Vergennes (the French foreign minister) signed (1778) a treaty. Spain entered the war against Great Britain in 1779, but Spanish help did little for the United States, while French soldiers and sailors and especially French supplies and money were of crucial importance. The warfare had meanwhile shifted from the quiescent North to other theaters. George Rogers CLARK by his daring exploits (1778-79) in the West, climaxed by the second capture of Vincennes, established the revolutionists' prestige on the frontier. Gen. John SULLIVAN led an expedition (1779) against the British and Indians in upper New York. The chief fighting, however, was in the South. The British had taken Savannah in 1778. In 1780, Sir Henry Clinton attacked and took Charleston (which had resisted attacks in 1776 and 1779) and sent Gen. Charles CORNWALLIS off on the CAROLINA CAMPAIGN. Cornwallis swept forward to beat Horatio Gates soundly at Camden (Aug., 1780), and only guerrilla bands under Francis MARION, Andrew PICKENS, and Thomas SUMTER continued to oppose the British in Virginia. Another low point had been reached in American fortunes. Bitter complaints of the inefficiency of the Congress, political conniving, lack of funds and food, and the strains of long-continued war had increased widespread apathy and disaffection, and the British tried to take advantage of the division among the people. In 1780 occurred the most celebrated of the disaffections, the treason of Benedict ARNOLD. Lack of pay and shortages of clothing and food drove some Continental regiments into a mutiny of protest in Jan., 1781. The dark, however, was already lifting. A crowd of frontiersmen with their rifles defeated a British force at Kings Mt. in Oct., 1780, and Nathanael GREENE, who had replaced Gates as commander in the Carolina campaign, and his able assistant, Daniel MORGAN, together with Thaddeus KOSCIUSKO and others, ultimately forced Cornwallis into Virginia. The stage was set for the YORKTOWN CAMPAIGN. Now the French aid counted greatly, for Lafayette with colonial troops held the British in check, and it was a Franco-American force that Washington and the comte de ROCHAMBEAU led from New York to Virginia. The French fleet under Admiral de GRASSE played the decisive part. Previously naval forces had been of little consequence in the Revolution. State navies and a somewhat irregular national navy had been of less importance than Revolutionary privateers. Esek HOPKINS had led a raid in the Bahamas in 1776, John BARRY won a name as a gallant commander, and John Paul JONES was one of the most celebrated commanders in all U.S. naval history, but their exploits were single incidents. It was the French fleet—ironically the same one defeated by the British under Admiral Rodney the next year in

the West Indies—which bottled up Cornwallis at Yorktown. Outnumbered and surrounded, the British commander surrendered (Oct. 17-19, 1781), and the fighting was over. The rebels had won the American Revolution. The Treaty of Paris (see PARIS, TREATY OF) formally recognized the new nation in 1783, although many questions were left unsettled. The United States was floundering through a post-war depression and seeking not too successfully to meet its administrative problems under the Articles of Confederation (see CONFEDERATION, ARTICLES OF). The leaders in the new country were those prominent either in the council halls or on the fields of the Revolution, and the first three Presidents after the Constitution of the United States was adopted were Washington, Adams, and Jefferson. Some of the more radical Revolutionary leaders were disappointed in the turn toward conservatism when the Revolution was over, but liberty and democracy had been fixed as the highest ideals of the United States. The American Revolution had a great influence on liberal thought throughout Europe. The struggles and successes of this youthful democracy were much in the minds of those who brought about the French Revolution, and most assuredly later helped to inspire revolutionists in Spain's American colonies. Naturally the stirring events of the birth of the country have been often represented in U.S. literature. It has given dramatic material to playwrights from William Dunlap to Maxwell Anderson, to novelists from James Fenimore Cooper and William G. Simms to S. Weir Mitchell, Paul Leicester Ford, and Kenneth Roberts. Older histories, still read for their literary value, are those of George Bancroft, John Fiske, and G. O. Trevelyan. Countless excellent studies have been made of particular aspects and incidents, some examples are H. E. Wildes, *Valley Forge* (1938), R. B. Morris, ed., *The Era of the American Revolution* (1939), Carl Van Doren, *Secret History of the American Revolution* (1941) and *Mutiny in January* (1943), Lynn Montross, *Rag, Tag and Bobtail: The Story of the Continental Army* (1952), Carl Berger, *Broadsides and Bayonets: The Propaganda War of the American Revolution* (1961). For works of more general interest, see C. H. McIlwain, *The American Revolution: A Constitutional Interpretation* (1923, repr. 1973), J. F. Jameson, *The American Revolution Considered as a Social Movement* (1926, new ed. 1961), J. C. Miller, *Origins of the American Revolution* (1943, new ed. 1959), C. R. Ritcheson, *British Politics and the American Revolution* (1954), L. H. Gipson, *The Coming of the Revolution* ("New American Nation" series, 1954), E. S. Morgan, *The Birth of the Republic, 1763-89* (1956), Henry Steele Commager and R. B. Morris, ed., *Spirit of Seventy-Six* (1958), Samuel Flagg Bemis, *The Diplomacy of the American Revolution* (rev. ed. 1957), Howard Peckham, *The War for Independence* (1958), R. R. Palmer, *The Age of the Democratic Revolution* (1959), J. B. Mitchell, *Decisive Battles of the American Revolution* (1962), Bernard Bailyn, *The Ideological Origins of the American Revolution* (1967), Richard Morris, *The American Revolution Reconsidered* (1967), J. P. Greene, ed., *The Reinterpretation of the American Revolution* (1968), Merrill Jensen, *The Founding of a Nation* (1968), J. R. Alden, *A History of the American Revolution* (1969), W. C. Stinchcombe, *The American Revolution and the French Alliance* (1969), G. S. Wood, *The Creation of the American Republic, 1776-1787* (1969), Don Higginbotham, *The War of American Independence* (1971), Richard Morris, ed., *The American Revolution, 1763-1783* (1971), Pauline Maier, *From Resistance to Revolution* (1972), S. G. Kurtz and J. H. Hutson, *Essay on the American Revolution* (1973).

American saddle horse, breed of LIGHT HORSE with great beauty, easy gait, and stamina. Also known as the Kentucky saddler, it was developed from the THOROUGHBRED and MORGAN. It is noted for its tremendous showy action in all gaits, its well-formed, swanlike neck with aristocratic arch, and its uplifted tail. It is most popular as a show horse and possesses an exceptional aptitude for training. It has nevertheless been subjected to a variety of cruelties in order to train it to particular gaits. The breed is characterized by a satin coat of brown, black, or chestnut, often with white face and leg markings. It stands 15 to 16 hands (60-64 in./150-160 cm) high and weighs approximately 1,000 lb (450 kg).

American Samoa, unincorporated territory of the United States (1970 pop. 27,159), comprising the eastern half of the SAMOA island chain in the South Pacific. The group (76 sq mi/197 sq km) consists of six major islands: TUTUILA, the MANU'a group (Ta'u, Ofu, and Olosega), Rose and Sand Islands, and SWAINS ISLAND. PAGO PAGO, the capital, is on Tutuila.

Most of the islands are mountainous, heavily wooded, and surrounded by coral reefs. Subsistence agriculture and the export of canned fish, copra, coconuts, and handicrafts became the mainstays of the economy after the U.S. naval base at Pago Pago closed down in 1951. Nearly all the land is owned by the Polynesian natives, who are considered American nationals, although they do not vote in U.S. elections. American Samoa was defined by a treaty in 1899 between the United States, Great Britain, and Germany, which gave the United States control of all Samoan islands east of long 171° W. American Samoa was under the jurisdiction of the U.S. Navy Dept. until 1951, at which time administration was transferred to the Dept. of the Interior. Executive power rests in the territorial governor, who is appointed by the Secretary of the Interior. There is a bicameral legislature, consisting of a senate (18 members chosen by county councils), and a house of representatives (20 members elected by popular vote, plus one nonvoting member from Swains Island, which is privately owned). The 1967 constitution gave the legislature power for the first time to appropriate funds from local revenues. There is also an independent judiciary.

American Society for the Prevention of Cruelty to Animals (ASPCA), founded (1866) in America by Henry Bergh to shelter homeless animals, to assist farmers in caring for their livestock, and to cooperate with law enforcement agencies in the prosecution of game-law violators. The ASPCA is patterned on the English organization, the Royal Society for the Prevention of Cruelty to Animals, founded in 1824 through the efforts of Richard Martin (1754-1834), an Irish member of Parliament. See study by Lloyd Alexander (1964).

American University, at Washington, D.C., United Methodist, founded by Bishop J. F. Hurst, chartered 1893, opened in 1914. It was at first a graduate school, an undergraduate college was opened in 1925. Programs provide for student research at many government institutions.

American University of Beirut, at Beirut, Lebanon, English language, founded 1866 as Syrian Protestant College, rechartered 1920 as the American Univ. of Beirut. It has faculties of arts and sciences, engineering and architecture, and agricultural sciences as well as schools of medicine, nursing, pharmacy, and public health.

American Veterans Committee (AVC), founded in 1943 as an organization of veterans of World War II. It is now open to veterans of the two world wars, the Korean War, and the Vietnam War. The AVC differs from other veterans' groups in its opposition to benefits for veterans beyond those based on service-incurred disabilities or the needs of readjustment to civilian life ("Citizens first, veterans second"). The AVC's interest is not limited to veterans' affairs; it has been active in supporting civil rights legislation and increased government activity to maintain economic prosperity and expand social welfare programs. It is affiliated with the World Veterans Federation, a Paris-based organization concerned with the maintenance of peace and international cooperation.

American Veterans of World War II and Korea (Amvets), founded 1944, organization of veterans of World War II and the Korean and Vietnam wars. The Amvets had posts in every state by 1947, when Congress granted a national charter to the organization. It is mainly concerned with veterans' benefits and rights.

American water spaniel, breed of medium-sized SPORTING DOG developed in the American Midwest. It stands about 17 in. (43.2 cm) high at the shoulder and weighs between 30 and 40 lb (13.6-18.1 kg). Its dense and closely curled coat ranges in color from solid liver to dark chocolate. A sturdy, muscular dog, the American water spaniel is a versatile scent hunter, flushing, or springing, game birds rather than pointing them. It is a strong swimmer and retrieves both on land and water. It is also used for hunting rabbits and other small animals. See DOG.

Americas, University of the, at Cholula, Mexico, founded 1940 as Mexico City College. The school achieved university status in 1963. It publishes several periodicals, including *The Aztec*, *The Mayan*, and *Meso-American Notes*.

America's Cup: see SAILING.

americium (āmā'ī'shēəm), synthetic, radioactive chemical element, symbol Am, at. no. 95, mass no. of most stable isotope 243, m.p. about 1000°C, b.p. unknown, sp. gr. 13.67 at 20°C, valence +2, +3, +4, +5, or +6. Americium is a silver-white metal thought to have either a loose-packed cubic or a

close-packed double hexagonal crystalline structure. The pure metal has been prepared by reduction of americium trifluoride with barium vapor at about 1100°C. It tarnishes slowly in dry air. Americium-243, the most stable isotope, has a half-life of over 7,000 years. Americium-241, which has a half-life of about 460 years, is more often used in chemical investigations since it is easily prepared in a fairly pure form. Americium is a member of the ACTINIDE SERIES in group IIIB of the PERIODIC TABLE. It was discovered in 1944 by G. T. Seaborg, R. A. James, L. O. Morgan, and A. Ghiorso, who bombarded plutonium-239 with neutrons to form plutonium-241, which decays to form americium-241.

Americus (āmē'īkəs), city (1970 pop. 16,091), seat of Sumter Co., SW Ga., inc. 1855. It is a manufacturing city, a livestock market, and a processing center for the area's timber, crops (peanuts, corn, cotton), and minerals (kaolin and bauxite). Charles Lindbergh made his first solo flight from Souther Field there. Georgia Southwestern College is in Americus. ANDERSONVILLE is nearby.

Amersfoort (a'mērsfōrt), city (1971 pop. 78,908), Utrecht prov., central Netherlands. It is a transportation and manufacturing center. Points of interest include a 14th-century water gate, the 15th-century Gate of Our Lady, and the old town, which has medieval houses. Johan van Oldenbarnevelt, the Dutch statesman, was born there in 1547.

Ames, Ezra, 1768-1836, American painter, b. Framingham, Mass. Early in his life he worked as a carriage painter, miniaturist, engraver, and decorator, first in Worcester, Mass., and later in Albany, N.Y., where he settled. His portrait of Governor Clinton of New York (1818, Albany Inst. of History and Art) established his renown as a vigorously realistic portraitist. Among his many skillful likenesses are those of Gouverneur Morris (N.Y. Historical Society) and Stephen van Rensselaer (New York State Historical Association). See monograph by Theodore Bolton and I. F. Cortelyou (1955).

Ames, Fisher, 1758-1808, American political leader, b. Dedham, Mass., son of Nathaniel Ames. Admitted to the bar in 1781, he began political pamphleteering and by a speech in the Massachusetts convention that ratified the Federal Constitution started on the road to becoming a leading Federalist. As a Congressman (1789-97) and after his retirement he was high in party councils, a staunch follower of Hamilton, and a vicious opponent of Jefferson. Of Ames's able speeches perhaps the best known was that made in 1796 when the House was disposed to nullify Jay's Treaty by withholding appropriations, he spoke for the treaty. He was the archetype of the New England conservative of his period, a strong proponent of order and of the rights of property. See biography by W. E. Bernhard (1965).

Ames, James Barr, 1846-1910, American jurist, b. Boston, grad. Harvard Law School, 1873. At Harvard he became associate professor (1873), professor (1877), and dean (1895). A disciple of C. C. LANGDELL, Ames insisted that legal education should require the study of actual cases instead of abstract principles of law. He was instrumental in introducing the case method in the teaching of law, a method in general use by American law schools at the time of his death. Ames's careful historical and legal scholarship is displayed in his *Lectures on Legal History* (1913).

Ames, Joseph, 1689-1759, English bibliographer. He compiled *Typographical Antiquities* (1749), a valuable list of English books printed before 1600.

Ames, Nathaniel, 1708-64, American almanac maker, b. Bridgewater, Mass. His *Astronomical Diary and Almanack*, begun in 1725 and issued annually after c. 1732 from Dedham, Mass., was highly popular and served as a model for Franklin's *Poor Richard's Almanack* and later almanacs. It had a circulation of 60,000 copies. After Ames's death it was continued until 1795 by his son Nathaniel, Jr. The elder Ames was a physician and also after 1750 landlord of the Sun Tavern at Dedham. He was the father of Fisher Ames. See Samuel Briggs, ed., *The Essays, Humor, and Poems of Nathaniel Ames* (1891, repr. 1969).

Ames, Oakes, 1804-73, American manufacturer, railroad promoter, and politician, b. Easton, Mass. With his brother Oliver he managed the family's well-known shovel factory at Easton. The business grew under demands from the expanding Midwest frontier and the Western gold diggings. Active in founding the Republican party in Massachusetts, Ames served in the U.S. House of Representatives from 1863 to 1873. Interested in the construction of the Union Pacific RR, Ames secured control of the CRÉDIT MOBILIER OF AMERICA after ousting T. C. DU-

RANT, its founder. The financial scandals of that company brought upon Ames in 1872 public disgrace and the censure of Congress.

Ames, city (1970 pop. 39,505), Story Co., central Iowa, on the Skunk River, inc. 1870. Its chief manufactures are electronic equipment and water-analysis and water-treatment equipment. Iowa State Univ. of Science and Technology is located in Ames and contributes significantly to the economy. The National Animal Disease Laboratory and the Iowa State Center, a large cultural, educational, and athletic complex, are also in the city.

Amesbury, rural district (1971 pop. 27,611), Wiltshire, S. central England. There are British remains that predate the Roman occupation. In 980 the widow of King Edgar founded Amesbury Abbey, where Queen Guinevere of Arthurian legend is believed to have died. STONEHENGE, the chief megalithic monument in Britain, is nearby.

Amesbury, town (1970 pop. 11,388), Essex Co., NE Mass., on the Merrimack River, inc. 1668. Rubber, metal, and vinyl products are manufactured. John Greenleaf Whittier lived there most of his life, and his house is preserved. Josiah Bartlett was born in Amesbury.

amethopterin (ām'ēthōp'tērīn), drug used in halting the growth of actively proliferating tissues, e.g., the malignant cells associated with several forms of leukemia. By binding to an ENZYME that controls the metabolism of folic acid, amethopterin interferes with synthesis of NUCLEIC ACIDS and therefore with tissue cell reproduction. It is sold under the trade name Methotrexate.

amethyst (ām'āthīst) [Gr., = non-drunkenness], variety of QUARTZ, violet to purple in color, used as a gem. It is the most highly valued of the semiprecious quartzes. It is associated with a number of superstitions, being regarded as a love charm, as a potent influence in improving sleep, and as a protection against thieves and drunkenness. Brazil, Uruguay, Sri Lanka, Siberia, and parts of North America are important sources of supply. The so-called Oriental amethyst, or purple sapphire, is not quartz but a variety of corundum, a much harder and rarer stone.

Amharic (ām'hār'īk), language of Ethiopia belonging to the South Ethiopic group of Ethiopian Semitic languages, which, in turn, belong to the Southeast Semitic subdivision of the Semitic subfamily of the Hamito-Semitic family of languages (see HAMITO-SEMITIC LANGUAGES). The official tongue of Ethiopia since the 14th cent., Amharic is spoken by about 7 million people in that country. Amharic employs a modification of the Ethiopic script (see ETHIOPIC). The earliest extant texts in Amharic go back to the 14th cent. Amharic has been considerably influenced in its grammar and vocabulary by the nearby Cushitic tongues. See Wolf Leslau, *Amharic Textbook* (1968), Charles A. Ferguson, *The Ethiopian Language Area* (1971).

Amherst, Jeffrey Amherst, Baron (ām'ārst), 1717-97, British army officer. He served in the War of the Austrian Succession and in the early part of the Seven Years War. In 1758 he was sent to America as a major general to lead the Louisbourg campaign in the last of the French and Indian Wars. The capture (1758) of the French fortress gave Britain her first important victory in the war, and Amherst replaced James Abercromby as supreme commander in America. The next year (1759), pushing northward from Albany, he took Crown Point and Ticonderoga, but he arrived too late to help General Wolfe take Quebec. He directed (1760) the capture of Montreal and returned (1763) to England. In the American Revolution, Amherst refused to command British troops in New England, but in 1778 he became commander in chief of home defenses. Amherst, for whom Amherst College is named, was created baron in 1776 and was made a field marshal in 1796. See his journal (ed. by J. C. Webster, 1931), biography by J. C. Long (1933).

Amherst, town (1971 pop. 9,966), N. central N.S., Canada. Amherst is an industrial center. Its products include steel, aircraft parts, clothing, luggage, and insulating materials. Nearby are salt beds. Across the border in New Brunswick is Fort Beauséjour National Historic Park. Sir Charles Tupper, the Canadian statesman, was born in Amherst.

Amherst, town (1970 pop. 126,331), Hampshire Co., W. Mass., in a fertile farm area, inc. 1759. Named for Lord Jeffrey Amherst, it is a lovely, tree-lined college town. Emily Dickinson was born and lived there all her life. Helen Hunt Jackson was also born there, and Ray Stannard Baker, Eugene Field, Robert Frost, and Noah Webster lived in the town. It is the seat of

the Univ. of Massachusetts, Hampshire College, and AMHERST COLLEGE

Amherstburg, town (1971 pop 5,169), S Ont., Canada, on the Detroit River. It is the site of Fort Malden National Historic Park. Fort Malden was built (1797-99) to replace the post lost when Detroit was ceded to the United States.

Amherst College, at Amherst, Mass., for men, founded 1821. A liberal arts institution, Amherst maintains a cooperative program with Smith College, Mount Holyoke College, Hampshire College, and the Univ. of Massachusetts.

Ami (ā'mī), servant of Solomon whose descendants came out of exile. Ezra 2:57. Amos. Neh. 7:59.

Amici, Giovanni Battista (jōvān' nē bāt-tēs'tā amē'-chē), 1786-1863, Italian astronomer, mathematician, and naturalist. He became director of the observatory and professor of anatomy at Florence and published papers on various scientific subjects. His most important work was in designing and improving physical and astronomical apparatus, especially the microscope and reflecting telescope.

Amida (ām'ida, amī'da), ancient city, E Asia Minor, on the Tigris River. It became (A.D. 230) a Roman colony and was later (4th cent.) captured by Shapur II of Persia. It is the modern DIYARBAKIR, Turkey.

Amidas, Philip: see AMADAS, PHILIP

amide (ām'id), organic compound formed by reaction of an acid chloride, acid anhydride, or ester with an amine. See AMINO GROUP, CARBOXYL GROUP.

Amidism: see PURE LAND BUDDHISM

Amiel, Henri Frédéric (ānrē' frādārēk' amyēl'), 1821-81, Swiss critic. He was unsuccessful and unnoticed during his life, but the posthumous publication of his *Journal intime* (1883, tr. of augmented ed. 1936) aroused great interest. It is a document of scrupulous self-observation. See Van Wyck Brooks, *Malady of the Ideal* (1913).

Amiens (amyān'), city (1968 pop 122,864), capital of Somme dept., N France, in PICARDY, on the Somme River. It is a rail hub and a large market for the truck farming carried on in the surrounding Somme marshlands. Also an important textile center (since the 16th cent.), it has been particularly famous for its velvet. Other products are chemicals, soap, tires, and electrical equipment. Originally a Gallo-Roman town, it was an episcopal see from the 4th cent. The historic capital of Picardy, it was overrun and occupied by many invaders. It was conquered by Henry IV in 1597. There, in 1802, the treaty of Amiens was signed. It was severely devastated in both World Wars and has been rebuilt since 1945, largely in the medieval style. Of interest is the Cathedral of Notre Dame (begun c. 1220), the largest Gothic cathedral in France. It is 470 ft (143 m) long and has a nave 140 ft (43 m) high, the transept dates from the 14th cent., the spire (370 ft/113 m high) and the large rose window were added in the 16th cent.

Amiens, Treaty of, 1802, peace treaty signed by France, Spain, and the BATAVIAN REPUBLIC on the one hand and Great Britain on the other. It is generally regarded as marking the end of the FRENCH REVOLUTIONARY WAR and setting the stage for the Napoleonic Wars (see NAPOLEON I). By its terms England was to give up most conquests made in the wars and France was to evacuate Naples and restore Egypt to the Ottoman Empire. England retained Ceylon and Trinidad but abandoned its claim to the French throne. The peace, though much acclaimed, lasted barely a year, in 1803, England refused to restore Malta to the Knights Hospitalers, thereby causing a resumption of hostilities.

Amin, Idi (ē'dē amēn'), c. 1925-, Ugandan political leader, president of Uganda (1971-). He advanced in the Ugandan armed forces from private (1946) to commander in chief (1966). He seized political power in 1971, toppling the regime of Milton Obote, and soon established dictatorial control. In 1972 he ordered the expulsion of most of Uganda's Asians. He was often at odds with Uganda's neighbors, accusing them of plotting against him.

Aminadab, variant of AMINADAB

amine (amēn', ām'ēn) see under AMINO GROUP

amino acid (amē'nō), any one of a class of simple organic compounds containing carbon, hydrogen, oxygen, nitrogen, and in certain cases sulfur. These

compounds are distinguished by the presence of two characteristic groups of atoms known as the carboxyl group (COOH) and the amino group

Peptide bond between two molecules of the amino acid alanine

(NH₂) The amino group is said to be α to the carboxyl group when both groups are attached to the same carbon atom. The 22 α-amino acids commonly found in animals are ALANINE, ARGinine, ASPARAGINE, ASPARTIC ACID, CYSTEINE, GLUTAMIC ACID, GLUTAMINE, GLYCINE, HISTIDINE, HYDROXYLYSINE, HYDROXYPROLINE, ISOLEUCINE, LEUCINE, LYSINE, METHIONINE, PHENYLALANINE, PROLINE, SERINE, THREONINE, TRYPTOPHAN, TYROSINE, and VALINE. More than 100 less common amino acids also occur in biological systems, particularly in plants. Every amino acid except glycine can occur as either of two optically active stereoisomers, D or L, the more common ISOMER in nature is the L-form. When the carboxyl carbon atom of one amino acid covalently binds to the amino nitrogen atom of another amino acid with the release of a water molecule, a peptide bond is formed. Two or more amino acids thus linked are known as a peptide. When 2 to 10 amino acids are thus joined in a chain, the resultant molecule is known as an oligopeptide. A chain of more than 10 amino acids can usually be called a polypeptide, and a chain of about 50 or more, a PROTEIN. The chemical and indeed physiological characteristics of a given oligopeptide, polypeptide, or protein are completely determined by the sequence and interactions of its constituent amino acids. Amino acids are released in the intestinal tract by the digestion of food proteins and are then carried in the blood stream to the body cells, where they are used for growth, maintenance, and repair. During cellular anabolism amino acids are linked to form oligopeptides, polypeptides, and proteins, the amino acid sequences of the latter are determined by NUCLEIC ACIDS. Cellular catabolism breaks amino acids down into smaller fragments. Many of the amino acids necessary in metabolism can be synthesized in the human or animal body when needed, these are called nonessential. Others cannot be synthesized in sufficient quantities, these are termed essential and must be provided in the diet.

amino group, in chemistry, FUNCTIONAL GROUP that consists of a nitrogen atom attached by single bonds to hydrogen atoms, ALKYL GROUPS, ARYL GROUPS, or a combination of these three. An organic compound that contains an amino group is called an **amine**. Amines are derivatives of the inorganic compound AMMONIA, NH₃. When one, two, or all three of the hydrogens in ammonia are replaced by an alkyl or aryl group, the resulting compound is known as a primary, secondary, or tertiary amine, respectively. Like ammonia, the amines are weak bases because the unshared electron pair of the nitrogen atom can form a coordinate bond with a proton (see CHEMICAL BOND). Amines will react with a mineral acid to form an amine salt, e.g., with hydrochloric acid to form an amine hydrochloride. A water-insoluble amine can be made to dissolve by adding acid to form its water-soluble amine salt. Amines react similarly with alkyl halides to form alkyl ammonium salts. Amines can be synthesized by reacting ammonia with an alkyl halide and neutralizing the resulting alkyl ammonium salt with an alkali, e.g., sodium hydroxide. This procedure yields a mixture of primary, secondary, and tertiary amines that is easily separated into its three components by fractional distillation. Amines can also be prepared by the reaction of ammonia with an alcohol or by the reduction of any of a variety of compounds containing nitrogen in a higher oxidation state. Amines take part in many kinds of chemical reactions, in particular, they can react with an acid chloride, acid anhydride, or ester to form an amide. All reactions of amines involve bonding of an electron-deficient atom to the amino nitrogen through its unshared electron pair. The most important amine is ANILINE, an aromatic amine.

Aminopterin: see METABOLITE

Amiot, Joseph: see AMYOT, JOSEPH

Amis, Kingsley, 1922-, English novelist. His first and best-known novel, *Lucky Jim* (1953), a brilliant comic satire on academic life, classified him as one of England's ANGRY YOUNG MEN. His cultural and social disillusionment, always well laced with a fine sense of comedy, is also apparent in *That Certain Feeling* (1955), *Take a Girl Like You* (1960), and *Ending Up* (1974). Of Amis's other novels *The Anti-Death League* (1966) and *Colonel Sun: A James Bond Adventure* (1968) are espionage novels, while *The Green Man* (1969) is a ghost story, *Girl, 20* (1971) a comedy, and *The Riverside Villas Murder* (1973), a mystery. In addition to several volumes of poetry, Amis has published numerous nonfiction works, including *Socialism and the Intellectuals* (1957), *What Became of Jane Austen?* (1970), and *On Drink* (1972). Amis's wife, Elizabeth Jane Howard, 1923-, is also a novelist. Among her works are *The Beautiful Visit* (1950), *After Julius* (1965), and *Odd Girl Out* (1971).

amitosis: see MITOSIS

Amittai (āmīt'āi), father of Jonah. Jonah 1:1.

Ammah (ām'ā), hill near Gibeon. 2 Sam. 2:24.

Amman (āmān'), city (1970 est. pop. 570,000), capital of Jordan, N central Jordan, on the Jabbok (Wadi Zerka) River. Jordan's largest city and industrial and commercial heart, it is also a transportation hub, especially for pilgrims en route to Mecca. Amman, which is built on a series of hills and valleys, is noted for its locally quarried colored marble. Industries include the manufacture of textiles, leather and leather goods, cement, marble, tiles, flour, and tobacco products. On a site occupied since prehistoric times, Amman is the biblical Rabbah, or Rabbath-Ammon, capital of the Ammonites. It was conquered by King David in the 11th cent. B.C. but regained independence under Solomon (Deut. 3:11, Joshua 13:25, 15:60, 2 Sam. 11:1, 12:26-29, 17:27, 1 Chron. 20:1, Jer. 49:23, Ezek. 21:20, 25:5, Amos 1:14). The city was taken by Assyria in the 8th cent. B.C. and by Antiochus III c. 218 B.C. Ptolemy II Philadelphus named it Philadelphia, by which it was known throughout the Roman and Byzantine periods. It belonged to the Decapolis, a commercial league of free cities organized in the 1st cent. B.C. It was also a leading city of Rome's Arabian provinces. After the Arab conquest of 635, the city, which then became known as Amman, experienced a steady decline, it was only a small village when Emir Abdullah (later king) made it the capital of newly created Trans-Jordan in 1921. Growth was particularly rapid after World War II, when Amman absorbed refugees from Palestine. The city is the site of the Univ. of Jordan (est. 1962) and a Muslim college. Historical monuments include a Roman amphitheater (1st cent. B.C.), remains of a temple that was probably built by Hercules, and some tombs and a section of wall that date to the 9th or 8th cent. B.C. Amman suffered some damage during the civil war in Jordan in 1970.

Ammanati, Bartolomeo (bartōlōmē'ō ām-mānā'-tē), 1511-92, Italian sculptor and architect. He studied under Bandinelli in Florence and assisted Jacopo Sansovino in his work on the Library of St. Mark's, Venice. Ammanati, whose style was greatly influenced by Michelangelo's Medici tombs, made a colossal statue of Hercules, at Padua. In Rome he collaborated with Vignola and Vasari in their work at the villa of Pope Julius III. His best work here was in the Ruspoli Palace and in the court of the Collegio Romano. Returning to Florence in 1557, he became architect to Cosimo de' Medici. He made the Santa Trinita bridge over the Arno and a number of fountains, among them the Neptune fountain for the Piazza della Signoria. He built the court facade of Pitti Palace, the Guigni Palace, and a cloister of Santo Spirito. Pious in his old age, he wrote a recantation of his secular work and destroyed some of it. The poet Laura Battiferri was his wife.

Ammann, Othmar Hermann (ōt'mār, ō'mōn), 1879-1965, American civil engineer, b. Switzerland, grad. Federal Polytechnic Institute, Zurich, 1902. He came to the United States in 1904 and was naturalized in 1924. He served (1925-39) with the Port of New York Authority and was its director of engineers from 1937 to 1939. An authority on bridges, he participated in either the designing or the construction of Hell Gate, George Washington, Triborough, Bronx-Whitestone, and Verrazano-Narrows (at its opening in 1964, the longest and heaviest suspen-

General formula of an amino acid

sion bridge in the world) bridges in New York City, and San Francisco's Golden Gate Bridge

ammeter (ām'mē'tər), instrument used to measure the magnitude of an electric current in amperes or units that are multiples or fractions of amperes. An ammeter is usually combined with a voltmeter and an ohmmeter in a multipurpose instrument. Most ammeters are based on the d'Arsonval GALVANOMETER and are of the analog type, i.e., they give current values that can vary over a continuous range as indicated by a scale and pointer. However, digital ammeters, which provide current values that are composed of a group of digits, are becoming increasingly common.

Ammi (ām'i), figurative name of Israel after reconciliation with God. Hosea 2:1. See LOAMMI.

Ammianus Marcellinus (āmēā'nās marsīlī'nās), c.330-c.400, Roman historian, b. Antioch. After retiring from a successful military career, he wrote a history of the Roman Empire as a sequel to that of Tacitus, his model. The history, in 31 books, covered the years from A.D. 96 to 378, only Books XIV-XXXI, covering the years A.D. 353-78, survive. Though written in an extremely rhetorical style, his work is reliable and impartial, and his literary ability has been highly esteemed by modern scholars. A pagan and an admirer of Julian the Apostate, Ammianus was not prejudiced against Christianity. See E.A. Thompson, *Historical Work of Ammianus Marcellinus* (his work tr. by J.C. Rolfe 1935, repr. 1963).

Ammiel (ām'ēēl) 1 Spy. Num. 13:12. 2 Father of MACHIR. 2:3. Porter of the Temple. 1 Chron. 26:5. 4 See ELIAM. 1

Ammihud (ām'ihād, āmī'hād) 1 Ancestor of Joshua. Num. 1:10, 2:18, 7:48, 53, 10:22, 1 Chron. 7:26. 2 Simeonite. Num. 34:20. 3 Naphtalite. Num. 34:28. 4 Judahite. 1 Chron. 9:4. 5 Father of a king of Geshur. 2 Sam. 13:37.

Aminadab (āmīn'ādāb) 1 Aaron's father-in-law. Ex. 6:23, Num. 1:7, 2:3, 7:12, 10:14, Ruth. 4:19, 20, 1 Chron. 2:10. Aminadab. Mat. 1:4, Luke. 3:33. 2 Head of a Levitical family. 1 Chron. 15:10-12. 3 The same as IZEHAR.

Ammi-nadib (ām'īnādīb, āmīn'adīb), word of uncertain significance. Cant. 6:12.

Ammishaddai (ām'īshād'āi), Danite, father of AHIEZER. 1 Num. 1:12, 2:25, 7:66, 71, 10:25.

Ammizabad (āmīz'ābād), son of BENAIAH. 1 Chron. 27:6.

Ammon (ām'an), in the Bible, people living E of the Dead Sea. Their capital was Rabbath-Ammon, the present-day Amman (Jordan). Their god was Milcom, to whom Solomon built an altar. 1 Kings 11:5, 2 Kings 23:13. A Semitic people, they flourished from the 13th cent. B.C. to the 8th cent. B.C. and were then absorbed by the Arabs. Excavations in Jordan show that they had a highly developed kingdom. They were hostile to the Hebrews, to whom they were related. The ancestor for whom they were named was Lot's son Ben-Ammi. Gen. 19:38, Deut. 2:19, 20:37, 23:34, Judges 3:13, 1 Sam. 11:2, 2 Sam. 10:12, 2 Chron. 20, Neh. 2:10, 4:7, Jer. 49:1-6.

Ammon, Egyptian god. See AMON.

ammonia, chemical compound, NH₃, colorless gas that is about one half as dense as air at ordinary temperatures and pressures. It has a characteristic pungent, penetrating odor. It is extremely soluble in water, one volume of water dissolves about 1,200 volumes of the gas at 0°C (90 grams of ammonia in 100 cc of water), but only about 700 volumes at room temperature and still less at higher temperatures. The solution is alkaline because much of the dissolved ammonia reacts with water, H₂O, to form ammonium hydroxide, NH₄OH, a weak BASE. The ammonia sold for household use is a dilute water solution of ammonia in which ammonium hydroxide is the active cleansing agent. It should be used with caution since it can attack the skin and eyes. The vapors are especially irritating—prolonged exposure and inhalation cause serious injury and may be fatal. Water solutions of ammonia are also called ammonium hydrate, aqua ammonia, or ammonia water, the solution may contain up to 30% ammonium hydroxide by weight at room temperature and pressure. Ammonia solutions are used to clean, bleach, and deodorize, to etch aluminum, to saponify oils and fats, and in chemical manufacture. Anhydrous (water-free) ammonia gas is easily liquefied under pressure (at 20°C liquid ammonia has a vapor pressure of about 120 lb per sq in.). It is used in REFRIGERATION because the liquid absorbs a relatively large amount of heat when it evaporates. The major use of ammonia and its compounds is as FERTILIZERS. Ammonia is also used in large amounts in the OST-

WALD PROCESS for the synthesis of nitric acid, in the SOLVAY PROCESS for the synthesis of sodium carbonate, in the synthesis of numerous organic compounds used as dyes, drugs, and in plastics, and in various metallurgical processes. Ammonia takes part in many chemical reactions. In some reactions, commonly called ammoniation reactions, a single new compound is formed by the addition of a molecule of some other substance to a molecule of ammonia. Ammonia reacts with strong acids to form stable ammonium salts with hydrogen chloride it forms AMMONIUM CHLORIDE, with nitric acid, AMMONIUM NITRATE, and with sulfuric acid, AMMONIUM SULFATE. Ammonium salts of weak acids are readily decomposed into the acid and ammonia. Ammonium carbonate, (NH₄)₂CO₃·H₂O, is a colorless-to-white crystalline solid commonly known as smelling salts, in water solution it is sometimes called aromatic spirits of ammonia. Ammonia reacts with certain metal ions to form complex ions called amines. Ammonia also reacts with Lewis acids (electron acceptors), e.g., sulfur dioxide or trioxide or boron trifluoride. Another kind of reaction, commonly called ammonolysis, occurs when one or more of the hydrogen atoms in the ammonia molecule is replaced by some other atom or radical. Chlorine gas, Cl₂, reacts directly with ammonia to form monochloramine, NH₂Cl, and hydrogen chloride, HCl. Products of such ammonolyses include amides, amines, imides, imines, and nitrides. Ammonia also takes part in OXIDATION AND REDUCTION reactions. It burns in oxygen to form nitrogen gas, N₂, and water. In the presence of a catalyst (e.g., platinum) it is oxidized in air to form water and nitric oxide, NO. It reduces hot-metal oxides (e.g., cupric oxide) to the metal. Ammonia forms a minute proportion of the atmosphere, it is found in volcanic gases and as a product of decomposition of animal and vegetable matter. Ammonia is prepared commercially in vast quantities. The major method of production is the HABER PROCESS, in which nitrogen is combined directly with hydrogen at high temperatures and pressures in the presence of a catalyst. It is obtained as a by-product of the destructive distillation of coal. Ammonia is also prepared synthetically by the cyanamide process. Nitrogen gas combines with calcium carbide, CaC₂, at high temperatures to form calcium cyanamide, CaCN₂, and carbon, the calcium cyanamide reacts with steam to form calcium carbonate, CaCO₃, and ammonia. For use in the laboratory, ammonia is prepared by heating an ammonium salt with a strong base. It can also be prepared by reacting a metal nitride with water. Liquid ammonia is used in the chemical laboratory as a solvent. It is a better solvent for ionic and polar compounds than ethanol, but not as good as water, it is a better solvent for nonpolar covalent compounds than water, but not as good as ethanol. It dissolves alkali metals and barium, calcium, and strontium by forming an unstable blue solution containing the metal ion and free electrons that slowly decomposes, releasing hydrogen and forming the metal amide. Compared to water, liquid ammonia is less likely to release protons (H⁺ ions), is more likely to take up protons (to form NH₄⁺ ions), and is a stronger reducing agent. Because strong acids react with it, it does not allow strongly acidic solutions, but it dissolves many alkalies to form strongly basic solutions. Because ammonia was formerly obtained by destructive distillation of horns and hooves of animals, its water solution was called spirits of hartshorn. Ammonia has also been called alkaline air and volatile alkali.

ammoniac or **gum ammoniac** (āmō'nēāk'), yellowish substance with a sickening, bitter taste, obtained from the milky exudate of the injured stem of a plant (*Dorema ammoniacum*) found in Iran, India, and S. Siberia. It is a gum resin, soluble in alcohol and ether. It is used in industry in the manufacture of porcelain cements and in medicine as an expectorant. When gum ammoniac is distilled, it yields a liquid, oil of ammoniac.

ammonite (ām'anīt), one of a type of extinct marine CEPHALOPOD mollusk, related to the NAUTILUS and resembling it in having an elaborately coiled and chambered shell. Unlike the interiors of nautilus shells, the chambers of ammonite shells display intricately-shaped septa and sutures. The type included numerous species, which were widely distributed during the Mesozoic era, about 200 million years ago. Ammonites are classified in the phylum MOLLUSCA, class Cephalopoda, subclass Ammonoidea.

ammonium chloride (āmō'nēām klōr'īd), chemical compound, NH₄Cl, a white or colorless, odorless,

water-soluble, cubic crystalline salt with a biting taste, commonly known as sal ammoniac. It is prepared commercially by reacting AMMONIA, NH₃, with hydrogen chloride, HCl, and is used chiefly in the manufacture of electric dry-cell batteries, in soldering fluxes, in textile printing, and in making other compounds. It is also used in certain medical treatments. It occurs in nature in volcanic regions.

ammonium group, in chemistry, a positively charged nitrogen atom joined by single bonds to four other atoms or groups. The simplest ammonium group, NH₄⁺, is formed by PROTONATION of AMMONIA, NH₃, e.g., by its reaction with hydrogen chloride, HCl, to form ammonium chloride, NH₄Cl, an ammonium compound. Organic ammonium compounds are formed by the reaction of an alkyl halide with an amine (see AMINO GROUP), for example, ethyl chloride, C₂H₅Cl, reacts with triethylamine, (C₂H₅)₃N, to form tetraethyl ammonium chloride, (C₂H₅)₄N⁺Cl⁻. They are also formed by reaction of an amine with a mineral acid or by reaction of an alkyl halide with ammonia.

ammonium nitrate, chemical compound, NH₄NO₃, that exists as colorless, rhombohedral crystals at room temperature but changes to monoclinic crystals when heated above 32°C. It is extremely soluble in water and soluble in alcohol and liquid ammonia. It is prepared commercially by reaction of nitric acid and AMMONIA. Major uses are in FERTILIZERS and EXPLOSIVES. For fertilizers it is in the form of small clay-coated pellets. For explosives it is sometimes mixed with other substances, e.g., TNT, so that it is more easily detonated. It is also used in solid-fuel rocket propellants, in pyrotechnics, and in the production of nitrous oxide.

ammonium sulfate, chemical compound, (NH₄)₂SO₄, a colorless-to-gray, rhombohedral crystalline substance that occurs in nature as the mineral mascagnite. It is soluble in water and insoluble in alcohol or liquid ammonia. It is prepared commercially by passing AMMONIA, obtained from destructive distillation of coal, into sulfuric acid and is used as a FERTILIZER, in preparing other ammonium compounds, and for fireproofing.

amnesia [Gr. =forgetfulness], condition characterized by loss of MEMORY for long or short intervals of time. It may be caused by injury, shock, senility, severe illness, or mental disease. Some cases of amnesia involve the unconscious suppression of a painful experience and everything reminding of it including the individual's identity (see DEFENSE MECHANISM). Retrograde amnesia is loss of memory of events just preceding temporary loss of consciousness, as from head injury, it is evidence that memory proceeds in two stages, short term and long term. One form of the condition known as tropic amnesia, or coast memory, affecting white men in the tropics, is probably a variety of HYSTERIA. APHASIA of the amnesic variety is caused by an organic brain condition and is not to be confused with other forms of amnesia. To cure amnesia, attempts are made to establish ASSOCIATIONS with the past by suggestion, and HYPNOTISM is sometimes employed.

amnesty (ām'nāstē), in law, exemption from prosecution for criminal action. It signifies forgiveness and the forgetting of past actions. Amnesties are usually extended to a group of persons during a period of prolonged disorder or insurrection. The criminals are offered a promise of immunity from prosecution if they will abandon their unlawful activities. After a revolution or civil war the victorious side will often extend amnesty to the losers, e.g., the United States granted a qualified amnesty to the Confederate forces after the Civil War. An amnesty is distinguished from a PARDON, which is an act of forgiveness after the criminal has already been convicted.

Amnon. 1 David's eldest son. He raped his half sister Tamar and was killed for it by her brother Absalom. 2 Sam. 3:2, 13. 2 Judahite. 1 Chron. 4:20.

amobarbital (ām'ōbār'bītal), drug that acts as a nervous system DEPRESSANT. See BARBITURATE.

amoeba. See AMEBA.

Amok (ā'mōk), post-Exilic Jewish family. Neh. 12:7, 20.

Amol (āmōl'), city (1966 pop. 40,076), Mazandaran prov., N Iran, near the Caspian Sea. It is an agricultural trade center. Amol was a provincial capital under the Abbasids in the 9th cent.

amole. See SOAP PLANT.

Amon (ā'mōn) 1 King of Judah, son and successor of Manasseh. He was inattentive to the worship of God, and biblical accounts denounce him strongly. Jeremiah was his contemporary. Amon was murdered, and Josiah succeeded him. 2 Kings 21:19-26,

2 Chron 33 20-25 2 Ahab's governor of Samaria 1 Kings 22 26, 2 Chron 18 25 3 See AMI

Amon (ā'mān, ā'-) or **Ammon** (ā'mān) or **Amen** (ā'mēn), Egyptian deity. He was originally the chief god of Thebes, he and his wife Mut and their son Khensu were the divine Theban triad of deities. Amon grew increasingly important in Egypt, and eventually he (identified as Amon Ra, see RA) became the supreme deity. He was identified with the Greek Zeus (the Roman Jupiter). Amon's most celebrated shrine was at Siwa in the Libyan desert, the oracle of Siwa later rivaled those of Delphi and Dodona. He is frequently represented as a ram or as a human with a ram's head.

amontillado (āmōn'tīlā'dō), dry SHERRY noted for its delicate bouquet, resembling the wine of Montilla, Spain, from which it derives its name. A blend of pale, dry sherries of the *palma* type, it assumes in aging a darker color.

Amor: see EROS

Amora'im (āmōrā'īm) [from Heb *amar*=to interpret], term referring to those Jewish scholars, predominantly in Palestine at Caesarea and Tiberias (A.D. c.200-c.350) and in Babylonia at Sura and Pumbedita (A.D. c.200-c.510), who interpreted the MISHNA and other Tanna'itic collections (see TALMUD). They ultimately saw as their chief function the compilation of a final, explanatory text for the HALAKAH. They thus constitute the link between the early tradition of the TANNA'IM and their own successors, the Saboraim, who edited the final compilation of the Talmud in the 6th cent. Their authority did not supersede that of the Tanna'im, but, as expositors, they were able to make additions to the halakah as contemporary conditions necessitated. These discussions constitute the section of the Talmud known as the Gemara. In addition, they were responsible for much of the nonlegal or aggadic material that appears in the Talmud and in the Midrashim (see MIDRASH). See H. L. Strack, *Introduction to the Talmud and Midrash* (1931), Jacob Neusner, *There We Sat Down* (1972).

Amorites (āmō'rīts), a people of Canaan. There is evidence of them also in Babylonia, where in the 18th cent. B.C. they established a dynasty at Babylon, their most powerful king was Hammurabi. At the time of Joshua the Amorites were living both E and W of the Dead Sea. They were subdued and gradually absorbed by the Israelites. Gen 10 16, 14 7, 15 16, Num 13 29, 21 13, 21-32, Deut 1 4-7, 4 47, 48, Joshua 5 1, 10 6.

amortization (ām'örtəzā'shən, āmōr'-), reduction, liquidation, or satisfaction of a debt. The term *amortization* may also refer to the sum used for that purpose. The term is commonly used in ascertaining the investment value of securities. Thus, if a security is bought at more than its face value (i.e., at a premium), a part of the premium is periodically charged off in order to bring the value of the security to par at maturity, if the security is bought at less than its face value, the discount is similarly charged off. Paying off a mortgage or any other debt by installments or by a SINKING FUND is amortization. Amortization by paying off a certain number of bonds each year is practiced by public corporations. National governments of limited credit as well as private companies commonly amortize by sinking funds. Governments with stronger credit usually refund debts by issuing new bonds. The satisfying of a debt by a single payment may be termed amortization. Amortization of a fixed asset refers to the DEPRECIATION of a nonmaterial investment over its estimated average life. See H. A. Finney, *Principles of Financial Accounting* (1968).

Amos (ām'ās), book of the Old Testament. Although it is placed third in order of the books of the Minor Prophets, it is chronologically the earliest. The prophet was a shepherd of Tekoa in the southern kingdom of Judah, but he preached in the northern kingdom of Israel under Jeroboam II (reigned c.753-753 B.C.). Israel was at the peak of its political power but was ridden with social injustices, Amos inveighed especially against hypocritical worship, oppression of the poor, and immorality. The book falls into three parts. God's judgment on various Gentile nations and on Judah and Israel (1-2), three sermons on the doom of Israel (3-6), and five visions of destruction (7-9), of which the last promises redemption. The name of another Amos occurs in the genealogy of Luke 3 25. See studies by Erling Hammershaimb (tr 1970) and H. J. Routenberg (1971), see also bibliography under OLD TESTAMENT.

Amoy (āmōi) or **Hsia-men** (shēā-mūn), city (1970 est. pop. 400,000), S Fukien prov., China, on Amoy island, at the mouth of the Chiu-lung River. It has an

excellent natural harbor and is connected to the mainland by a railroad (built 1957) that crosses on a dike. Fishing, shipbuilding, and food processing are the major industries, machine tools and chemicals are also manufactured. Opposite Amoy proper, across the inner harbor, is the island of Ku-lang Hsü, the former foreign settlement and a fine residential section. Amoy was one of the earliest seats of European commerce in China, with Portuguese (16th cent.) and Dutch (17th cent.) establishments. It was captured (1841) by the British in the OPIUM WAR and became a TREATY PORT in 1842. It was long a Chinese port of emigration, mainly to SE Asia. Amoy Univ. is there.

Amoz (ām'ōz), father of the prophet Isaiah. Isa 1 1.

AMP: see ADENOSINE MONOPHOSPHATE

ampelopsis (ām'pīlōp'sās) [from Gr. =looking like a vine], botanically, name for woody ornamental vines of the genus *Ampelopsis*, but from long association also used in horticultural practice for the VIRGINIA CREEPER, BOSTON IVY, and others of related genera of the family Vitaceae (GRAPE family). Species of *Ampelopsis* native to Asia and North America have showy berries of various colors. The pepper-vine (*A. arborea*) is indigenous to the S United States. *Ampelopsis* is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rhamnales, family Vitaceae.

Ampère, André Marie (ām'pēr, Fr. āndrā' mārē' ānpēr'), 1775-1836, French physicist, mathematician, and natural philosopher. He was professor of mathematics at the École Polytechnique, Paris, and later at the Collège de France. Known for his contributions to electrodynamics, including the formulation of Ampère's law, he confirmed and amplified the work of Oersted on the relationship of electricity and magnetism, and he invented the astatic needle. The ampere was named for him. His writings include *Recueil d'Observations electro-dynamiques* (1822) and *Essai sur la philosophie des sciences* (2 vol., 1834-43, vol. 1 repr. 1838). See his *Correspondance* pub. by L. de Launay (3 vol., 1936-43).

ampere (ām'pēr), abbr. amp or A, basic unit of electric current. It is the fundamental electrical unit used with the MKS SYSTEM of units of the METRIC SYSTEM. The ampere is officially defined as the current in a pair of equally long, parallel, straight wires 1 meter apart that produces a force of 0.000002 newton (2×10^{-7} N) between the wires for each meter of their length. Current meters such as ammeters and galvanometers are calibrated in reference to a current balance that actually measures the force between two wires. Until 1948 the ampere was defined as the flow of 1 COULOMB of charge per second, the coulomb being then considered the fundamental unit. The old (international) ampere equals 0.999835 new (absolute) ampere. The milliamper (mA), equal to one-thousandth of an ampere, and the microampere (μ A), equal to one-millionth of an ampere, are units often used in measuring small currents.

amphetamine (āmfēt'āmēn), any one of a group of drugs that are powerful central nervous system STIMULANTS. Amphetamines have stimulating effects opposite to the effects of DEPRESSANTS such as alcohol, NARCOTICS, and BARBITURATES. They raise the blood pressure by causing the body to release EPINEPHRINE, postpone the need for sleep, and can reverse, partially and temporarily, the effects of fatigue. Amphetamines enhance mental alertness and the ability to concentrate, and also cause wakefulness, euphoria, and talkativeness. They have been used for short periods of time in weight-control programs to suppress appetite, in conjunction with some forms of psychotherapy to treat chronic alcoholism, and to treat narcolepsy and certain psychological disorders such as depression. They were used as vasoconstrictors in inhalant therapy to shrink nasal mucous membranes in such conditions as nasal allergies and asthma, now such inhalants have been banned because of their toxicity. Amphetamines have been thought to have a calming effect on some hyperactive children, the use of these drugs to treat such children has been very controversial. Amphetamines are potent drugs that can produce severe systemic effects, including cardiac irregularities and gastric disturbances. Popularly known as bennies, speed, or uppers, they are also addictive and easily abused. Users can become psychologically dependent on the drugs and, by developing tolerance for them, can require increasingly large doses (see DRUG ADDICTION AND DRUG ABUSE). Chronic use often results in insomnia, hyperactivity, and irritability. Amphetamine-induced psychosis often mimics schizophrenia. Amphetamine addiction has been common

among such diverse groups as truck drivers, students, and athletes, who have used the drugs for increased energy, alertness, or endurance. Addiction to amphetamines can result in psychosis or death from overexhaustion or cardiac arrest. Benzedrine is the trade name for the drug amphetamine, dextro-amphetamine is marketed as Dexedrine. Methamphetamine, a potent stimulant marketed as Desoxyn, is the most rapidly acting amphetamine.

Amphiaras (ām'fēār'ās), in Greek legend, a prophet, one of the ill-fated SEVEN AGAINST THEBES. He foresaw the disaster of the expedition, but his wife, Eriphyle, bribed by Polyneices with the magic necklace of Harmonia, compelled him to go. Before setting out he commanded his sons, Alcmaeon and Amphilocheus, to avenge his death on Eriphyle and to make a second expedition against Thebes. Amphiaras also was one of the Argonauts.

amphibian, in aviation. see SEAPLANE.

amphibian, in zoology, cold-blooded VERTEBRATE animal of the class Amphibia. There are three living orders of amphibians: the FROGS and TOADS (order Anura, or Salientia), the SALAMANDERS and NEWTS (order Urodela, or Caudata), and the CAECILIANS, or limbless amphibians (order Apoda, or Gymnophiona), a little known tropical group. Amphibians, the most primitive of the terrestrial vertebrates, are intermediate in evolutionary position between the FISH and the REPTILES. Typically they undergo a metamorphosis from an aquatic, water-breathing, limbless larva (called a tadpole) to a terrestrial or partly terrestrial, air-breathing, four-legged adult. The eggs are usually deposited in water or in a protected place where their moisture will be conserved, they have neither shells nor the sets of membranes that surround the eggs of reptiles and other higher vertebrates. Some amphibians lay their eggs in dry places, and the young undergo the larval stage within the egg, emerging as small adults, in these the eggs have evolved various protective structures. Adult amphibians differ from reptiles in having moist skins, without scales or with small, hidden scales. All living amphibians are specialized for their way of life, none representing the main amphibian stock from which the reptiles evolved. The salamanders and newts are superficially the most similar to ancestral amphibians, having long tails and front and hind legs of approximately equal size. Frogs and toads are highly modified for jumping, with large, muscular hind legs and no tails, while the caecilians have lost all external traces of limbs.

amphibious warfare (āmfīb'ēās), employment of a combination of land and sea forces to take or defend a military objective. The general strategy is very ancient and was extensively employed by the Greeks, e.g., in the Athenian attack on Sicily in 415 B.C. The term is, however, of modern coinage. It is sometimes applied to the joint operations of the Allied army and naval forces in the disastrous Gallipoli campaign (1915) of World War I. Amphibious warfare was widely employed in World War II. When the Japanese entered the war on a large scale in Dec., 1941, they used combined air, land, and naval operations to capture strategic islands such as the Philippines, Java, and Sumatra. However, the Japanese landings, like the Allied landing in N. Africa (Nov., 1942), encountered little opposition and did not offer a true illustration of the problems of amphibious warfare. The problem faced by the Allies in the reconquest of Europe and the Pacific islands was how to land their forces on a heavily defended coast line. It was solved by the construction of special vessels called landing craft that were seaworthy and yet capable of allowing tanks and infantry to emerge without difficulty into shallow water for landing. The typical Allied amphibious operation consisted of heavy and continued air and naval bombardment of the enemy defenses, followed by a landing of troops with complete equipment from landing craft, the landing forces were supported in the early stages by naval guns until land artillery could come into action. By use of this method the Allies were able to invade heavily defended Pacific islands such as Tarawa (1943) and Saipan (1944), Iwo Jima (1945), and Okinawa (1945). In Europe the Allies made landings on Sicily (1943) and Italy (1943-44), but the most spectacular example of amphibious warfare was the invasion of Normandy by the Allies from England on June 6, 1944 (see NORMANDY CAMPAIGN). That action was a prime example of combined movements of naval craft, land forces, and aircraft (used for offense, protection of other forces, and transport). The U.S. invasion of Inchon (1950) during the Korean War and the British and French invasion of Egypt during the Sinai crisis (1957) utilized the same basic tactics. More recently

research has been conducted to evolve practical amphibious technique for nuclear warfare. See) A Isely and P A Crowl, *The US Marines and Amphibious War* (1951), Bernard Fergusson, *The Watery Maze The Story of Combined Operations* (1961)

amphibole (ām'fəbōl'), any of a group of widely distributed rock-forming minerals, magnesium-iron silicates, often with traces of calcium, aluminum, sodium, titanium, and other elements. The amphibole minerals are closely related in crystal structure, but they crystallize in two different systems, orthorhombic and monoclinic, their close structural relationship is reflected in uniform prism angles of about 56° and 124° and in good cleavages parallel to these prisms. They are commonly green to black, but may be colorless, white, yellow, blue, or brown. The amphibole minerals are found both in igneous and metamorphic rocks. The commonest form is hornblende, other species include anthophyllite, cummingtonite, tremolite, actinolite, riebeckite, and glaucophane. A variety of jade, called nephrite, consists of actinolite in a finely fibrous form.

amphictyony (ām'fīk'tēō'nē, -ō'nē, -ānē'), in ancient Greece, a league connected with maintaining a temple or shrine. There were a number of these, but by far the most important was the Great Amphictyony or Delphic Amphictyony, a league originally of 12 tribes. It had meetings in the spring at the temple of Demeter at Anthela near Thermopylae and in the autumn at Delphi. The Amphictyonic Council passed legislation regarding religious matters and had power to declare a sacred war against an offender. Each tribe had two votes. By the 6th cent. B.C. the religious organization had begun to have political influence. The greater city-states, by using pressure on the lesser, got control of more tribal votes and were able to control laws and policy. The significance of the Amphictyonic Council was shown by Philip II of Macedon, who, after managing to get on the council by securing the votes of the Phocians, used sacred wars as a pretext for furthering his conquests in Greece. This one large unifying organization, therefore, in the end had no real unifying power in divided Greece. The Great Amphictyony continued in existence (but with no power) until late in the Roman Empire.

Amphilochus (ām'fīl'əkəs), in Greek legend, son of AMPHARAUS and ERIPHYLE and brother of Alcmæon. He was one of the EPICURI and with his brother slew Eriphyle for her treachery in bringing about their father's death.

Amphion (ām'fēōn) see ANTIOPE 1

amphioxus see LANCELET

Amphipolis (ām'fī'pālīs), ancient city of Macedonia, on the Strymon (Struma) River near the sea and NE of latē Thessalonikī. The place was known as Ennea Hodoi [nine ways] before it was settled and was of interest because of the gold and silver and timber of Mt. Pangaeus (Pangaion), to which it gave access. Athenian colonists were driven out (c. 464 B.C.) by Thracians, but a colony was established in 437 B.C. Amphipolis became one of the major Greek cities on the N Aegean. This colony was captured by Sparta, and Brasidas and Cleon were both killed in a battle there in 422 B.C. After it was returned to Athens in 421 B.C., it actually had virtual independence until captured (357 B.C.) by Philip II of Macedon. He had promised to restore it to Athens, and his retention of Amphipolis was a major cause of the war with Athens. It was the capital (168-148 B.C.) of Macedonia Prima, one of the Roman republics. Paul, Silas, and Timothy passed through Amphipolis (Acts 17:1). Nearby is the modern Greek village of Amfipolis.

amphitheater, open structure used for the exhibition of gladiatorial contests, struggles of wild beasts, sham sea battles, and similar spectacles. There is no Greek prototype of amphitheaters, which were primarily Roman and were built in many cities throughout the empire. More or less well-preserved examples are at Rome (see COLOSSEUM), Verona, and Capua in Italy, at Nîmes and Arles in France, at Cirencester in England, and at sites in Sicily, Greece, and North Africa. The typical amphitheater was elliptical in shape, with seats, supported on vaults of masonry, rising in many tiers around an arena at the center, corridors and stairs facilitated the circulation of great throngs. The arena itself was usually built over the quarters for gladiators, wild animals, and storage. Until the erection of the Colosseum (A.D. 80), practically all amphitheaters were of wood, the notable exception being that of stone built at Pompeii c. 70 B.C. The word *amphitheater* is now applied to modern structures which may bear little resemblance to their ancient prototypes.

Amphitrite (ām'fītrī'tē), in Greek mythology, queen of the sea, daughter of Nereus. She was the wife of Poseidon and mother of Triton.

Amphitryon (ām'fītrēōn, -ōn'), in Greek mythology, son of Alcaeus. While betrothed to Alcmene, he accidentally killed her father, Electryon. Alcmene and Amphitryon fled to Thebes, but she demanded that he defeat Pterelaos, her father's enemy. This Amphitryon did, but on the night of his return Zeus took Amphitryon's form and came into Alcmene's bed. That night she conceived children by both Zeus and Amphitryon. Hercules was the son of Zeus, Iphicles the son of Amphitryon.

amphotericin B (ām'fātēr'isīn), ANTIBIOTIC that halts the growth of several disease-causing fungi. It is produced by bacteria of the genus *Streptomyces*. It is used in lotion or ointment form to treat fungus infections of the skin and is given internally only to patients with potentially fatal fungus infections. Amphotericin B is not effective against bacterial infections.

amphoterism (ām'fātēr'izēm), in chemistry, the property of certain substances of acting either as acids or as bases depending on the reaction in which they are involved. Many hydroxide compounds are amphoteric. For example, aluminum hydroxide, $Al(OH)_3$, reacts as a base with common acids to form salts, e.g., with sulfuric acid, H_2SO_4 , to form aluminum sulfate, $Al_2(SO_4)_3$. It reacts as an acid with strong bases to form aluminates, e.g., with sodium hydroxide, $NaOH$, to form sodium aluminate, $NaAlO_2$. Organic molecules that contain both acidic (e.g., carboxyl) and basic (e.g., amino) FUNCTIONAL GROUPS are usually amphoteric.

ampicillin (ām'pīsil'īn), ANTIBIOTIC chemically related to PENICILLIN but having a broader spectrum of antibacterial activity. The penicillin antibiotics inhibit the synthesis of bacterial cell wall components.

Amplias (āmp'lēās) or **Ampliatius** (āmplēāt'ās), Christian in Rome to whom Paul sent greetings. Rom. 16:8.

amplifier, device in which a varying input signal controls a flow of energy to produce an output signal that varies in the same way but has a larger amplitude, the input signal may be a current, a voltage, a mechanical motion, or any other signal, and the output signal is usually of the same nature. The most common types of amplifiers are electronic and have ELECTRON TUBES or TRANSISTORS as their principal components. Tube and transistor amplifiers are used in radio and television transmitters and receivers, stereophonic phonographs, and intercoms. Amplifiers in their simplest form have either a single transistor or a single electron tube known as a triode. In the single-triode amplifier, a varying input voltage is fed to the triode, which acts upon the input to produce a larger varying output voltage, the ratio of the output voltage to the input voltage is called the voltage gain. For many purposes a single tube or transistor does not provide the signal with sufficient gain, or amplification, a problem that can be overcome by a cascade, or multistage, amplifier. In a cascade amplifier the output of the first amplifying device (tube or transistor) is fed as input to the second amplifying device, whose output is fed as input to the third, and so on until an adequate signal amplification has been achieved. In a device such as a radio receiver, several amplifiers boost a weak input signal until it is powerful enough to drive a speaker, producing audible sound. Another less common group of electronic amplifiers use magnetic devices as their principal components. There are also many kinds of mechanical amplifiers, e.g., the power steering system of an automobile. See OPERATIONAL AMPLIFIER.

amplitude (ām'plitūd'od'), in physics, maximum displacement from a zero value or rest position. In the HARMONIC MOTION of a pendulum, the amplitude of the swing is the greatest distance reached to either side of the central rest position. Amplitude is important in the description of a wave phenomenon such as light or sound. In general, the greater the amplitude of the wave, the more energy it transmits (e.g., a brighter light or a louder sound).

amplitude modulation see MODULATION, RADIO

amputation, removal of all or part of a limb or other body part. Although amputation has been practiced for centuries, the development of sophisticated techniques for treatment and prevention of infection has greatly decreased its necessity. Surgical amputation is currently performed in cases of bone and tissue cancers, gangrene, and uncontrollable infections of the arm or leg. An amputation is performed as far above the affected area as is necessary to remove all unhealthy tissue and to leave a portion of sound tissue with which to pad the bone stump.

Whenever possible amputations are performed at points on the limb that permit the fitting of prosthetic devices (see ARTIFICIAL LIMB). Ceremonial amputation of finger joints has been practiced in parts of Australia and Africa in conjunction with male initiation rites. In some areas of New Guinea females have finger joints amputated to signify mourning.

Amram (ām'rām) 1 Moses' father, ancestor of a Levitical family. Ex. 6:18,20, Num. 3:19,27, 26:58,59, 1 Chron. 6:2,3,18, 23:12,13, 24:20, 26:23. 2 See HEMDAN 3. Jew who had married a foreign wife. Ezra 10:34.

Amram ben Scheschna (shēsh'nā) or **Amram Gaon** (ga'ōn), d. c. 875, Hebrew scholar, head of the Jewish academy at Sura in Persia. He is chiefly known as the author of the *Seder Rab Amram*, a compilation of the order of prayers, with their context for the whole year and the liturgical laws governing the ceremonial observances of all the holidays. This book is the oldest surviving Jewish prayer book, serving as a basis for later compilations. See David Hedegård, ed., *Seder R. Amram Gaon* (Vol. I, 1951).

Amraphel (ām'rāfēl, āmrā'fāl) see CHEDORLOMER and HAMMURABI

Amravati (ām'ra-vā'tē), town (1971 pop. 193,636), Maharashtra state, central India. The town is a district administrative center. It is the site of the Great Stupa (c. A.D. 200) of the Andhra Dynasty.

Amritsar (ām'rī'tsār), city (1971 pop. 432,663), Punjab state, NW India. It is a district administrative center, as well as a trade and industrial city where carpets, fabrics of goat hair, and handicrafts are made. The center of the SIKH religion, Amritsar was founded in 1577 by Ram Das, the fourth guru [Hindustani, = teacher], on land given by AKBAR. The Golden Temple (refurbished 1802), set in the center of a lake, is especially sacred to Sikhs. The city was the center of a Sikh empire in the early 19th cent., and modern Sikh nationalism was founded there. Khalsa College, a branch of Punjab Univ., is in Amritsar. The Amritsar massacre took place in the Jallianwala Bagh, an enclosed park, in April, 1919, hundreds of Indian nationalists were killed and thousands wounded when they were fired upon by the troops under British control.

Amru al-Kais (ām'rōō al-kīs), fl. 6th cent., Arabic poet. His verse, like much of the poetry of the pre-Islamic period, is intensely subjective and stylistically perfect. He was esteemed by Arabs as the great model for erotic poetry. He is thought to have lived in high favor with the imperial court at Constantinople. Amru al-Kais' work is represented in the MUALLAQAT. His name is also spelled Imru al-Kais.

Amsdorf, Nikolaus von (nē'kōlous fən āms'dōrf), 1483-1565, German Protestant reformer. He became a devoted supporter of Martin Luther. Elector John Frederick I of Saxony appointed Amsdorf bishop of Naumburg in 1541, but after the elector was captured by Holy Roman Emperor Charles V, the office was withdrawn (1547). A zealous defender of Luther's doctrines, Amsdorf attacked all who deviated from them in the slightest, including Melancthon. He took part in the founding of the Univ. of Jena and superintended the Jena edition of the works of Luther.

Amstelveen (ām'stēlvān), town (1971 pop. 70,202), North Holland prov., W Netherlands, a suburb of Amsterdam. Schiphol international airport is there.

Amsterdam (ām'stārdām', Dutch am'stardam'), city (1971 pop. 820,406), constitutional capital and largest city of the Kingdom of the Netherlands, North Holland prov., W Netherlands, on the IJ, an inlet of the IJsselmeer. The city derives its name from the fact that it is situated where the small, bifurcated Amstel River (which empties into the IJ) is joined by a sluice dam (originally built c. 1240). A major port, Amsterdam is also the seat of one of the world's chief stock exchanges, a center of the diamond-cutting industry, and one of the great commercial, intellectual, and artistic capitals of Europe. Its manufactures include food products, clothing, printed materials, and metal goods. Amsterdam is connected with the North Sea by the North Sea Canal (opened in 1876), which can accommodate large oceangoing vessels, and by the older North Holland Canal (opened 1824). The Amsterdam-Rhine Canal connects the city with the Rhine delta and thus with industrial NW Germany, with which there is considerable transit trade. Amsterdam is a major road and rail hub and is served by nearby Schiphol airport. Because of the underlying soft ground, Amsterdam is built on wooden and concrete piles. The city is cut by about 40 concentric and radial canals that are flanked by streets and crossed by some 400 bridges. Because of the canals, the city is sometimes called

the "Venice of the North." The many old and picturesque houses along the canals, once patrician dwellings, are now mostly offices and warehouses. The main streets of Amsterdam are the Dam, on which stand the Nieuwe Kerk (15th-17th cent.) and the 17th-century Dam Palace (formerly the city hall, since 1808 a royal palace), the Damrak, with the stock exchange (completed 1903), and the Kalverstraat and Leidenschestraat, which are the chief shopping centers. Outstanding buildings are the Oude Kerk [old church], built in 1334, the weigh-house (15th cent.), the city hall (16th cent.), and the Beguinage (Dutch *Begijnenhof*), or almshouses, of the 17th cent. Amsterdam was chartered c 1300 and in 1369 joined the Hanseatic League. Having accepted the Reformation, the people of Amsterdam in 1578 expelled their pro-Spanish magistrates and joined the rebellious Netherlands provinces. The commercial decline of Antwerp and Ghent and a large influx of refugees from all nations (notably of Flemish merchants, of Jewish diamond cutters and merchants, and of French Huguenots), contributed to the rapid growth of Amsterdam after the late 16th cent. The Peace of Westphalia (1648), by closing the Scheldt (Escaut) to navigation, further stimulated the growth of Amsterdam at the expense of the Spanish Netherlands. Amsterdam reached its apex as an intellectual and artistic center in the 17th cent., when, because of its tolerant government, it became a center of liberal thought and of book printing. The city was captured by the French in 1795 and became the capital of the Kingdom of the Netherlands, which was ruled by Louis Bonaparte. The constitution of 1814 made it the capital of the Netherlands, the sovereigns are usually sworn in at Amsterdam and now reside in a palace outside the city. However, The Hague is the seat of government. During World War II, Amsterdam was occupied by German troops from 1940 to 1945 and suffered severe hardship, including famine. Most of the city's Jews (c.75,000 in 1940) were deported and killed by the Germans. Rembrandt and the other Dutch masters are best represented in the world famous Rijks Museum, or National Museum, founded in 1808 by Louis Bonaparte. Among the many other notable museums are the municipal museum (with a magnificent Van Gogh collection) and Rembrandt's house. Amsterdam is also famous for the Concertgebouw Orchestra. The Univ. of Amsterdam, which was founded as an academy in 1632 and achieved university status in 1876, is the largest center of learning in the Netherlands. The city is also the site of the Free Univ. (1880, Calvinist). Near Amsterdam is the Bosplan, an enormous man-made national park.

Amsterdam, city (1970 pop. 25,524), Montgomery co., E central N.Y., on the Mohawk River, inc. 1885. It is an industrial city where carpets, rugs, clothing, and novelties are manufactured. The area was settled in 1783 and was named Amsterdam because many of the early settlers were from the Netherlands. Nearby stands Fort Johnson, home of the British colonial leader Sir William Johnson.

Amtrak, federally chartered corporation authorized to operate virtually all intercity passenger railroad routes in the United States. Officially known as the National Railroad Passenger Corporation, Amtrak was created by an act of Congress in Oct., 1970. Its establishment was preceded by more than two decades of continuous operating deficits by privately run passenger railroads. At the time of Amtrak's creation, more than 100 of the nation's 500 passenger railroad lines had filed discontinuation-of-service petitions with the Interstate Commerce Commission. Given an initial funding of \$40 million and \$100 million in federal loan guarantees, Amtrak was designed to be a profit-making enterprise even though it is quasi-public in structure. Its board of directors is composed of three representatives of the railroad industry, four private investors from among those holding the corporation's preferred stock, and eight officers appointed by the President. Amtrak began operation in 1971 and immediately reduced the number of intercity passenger rail routes by one half, retaining service only in areas of high density travel. In its first year Amtrak had over 180 routes serving some 300 cities. The corporation reported increasing travel and decreasing deficits in its early years of operation. Its government funding also increased in these years.

Amu Darya (ä'mōō dār'ya, ämōō' dār'yä'), river, c 1,600 mi (2,580 km) long, formed by the junction of the Vakhsh and Pandj rivers, which rise in the Pamir mts. of central Asia. It flows generally northwest, marking much of the USSR-Afghanistan border before flowing through the Kara-Kum desert of

Turkmenistan and Uzbekistan, Central Asian USSR, and entering the S. Aral Sea through a large delta. The river drains c 180,000 sq mi (466,200 sq km). It flows swiftly until it reaches the Kara-Kum where its course braids into several channels. The Amu Darya is rich in fish and it provides water for irrigation. The Kara-Kum Canal (c.500 mi/800 km long) carries water from the Amu Darya near Kelif across S. Turkmenistan to Ashkhabad and supplements the flow of the Tedzhen and Murgab rivers. The Amu Darya is paralleled by the Trans-Caspian RR, which has lessened the river's importance as a transport route. In ancient times the Amu Darya was called the Oxus and figured importantly in the history of Persia and in the campaigns of Alexander the Great.

amulet (äm'yälit), object or formula that credulity and superstition have endowed with the power of warding off harmful influences. The use of the amulet to avert danger and to dispel evil has been known in different religions and among diverse peoples. Like the talisman and the charm, the amulet is believed to be the source of an impersonal force that is an inherent property of the object rather than the manifestation of a deity working through that object (see **FETTER** and **TABOO**). Although amulets are most often worn on the body, hanging from the neck or strapped to the arm or leg, they may also serve as protective emblems on walls and doorways (e.g., the Jewish mezuzah). Sometimes the amulet consists of a spoken, written, or drawn magic formula, such as **ABRACADABRA** and the **MAGIC SQUARE**, or of a symbolic figure, such as the wheel of the sun god and the Aryan swastika. In many cultures the teeth, claws, and other parts of an animal are believed to communicate their properties to the wearer. Although belief in amulets is very widespread in primitive societies, it has survived in modern civilization. Common superstition has endowed such things as the rabbit's foot with the property of being able to bring good luck. In some modern religious practices, amulets such as the Jewish phylactery and the Christian cross are more strictly related to ritual and serve as personal reminders to the wearers of their relationship to God.

Amundsen, Roald (rō'äl ä'mōōnsən), 1872-1928, Norwegian polar explorer, the first man to reach the South Pole. He served (1897-99) as first mate on the *Belgica* (under the Belgian Adrien de Gerlache) in an expedition to the Antarctic, and he commanded the *Gjøa* in the arctic regions in the first negotiation of the **NORTHWEST PASSAGE** (1903-6), the *Gjøa* was the first single ship to complete the route through the Northwest Passage. His account appeared in English as *Amundsen's North West Passage* (1908). He then purchased Fridtjof Nansen's *Fram* and prepared to drift toward the North Pole and then finish the journey by sledge. The news that Robert E. Peary had anticipated him in reaching the North Pole caused Amundsen to consider going south. He was successful in reaching the South Pole on Dec. 14, 1911, after a dash by dog team and skis from the Bay of Whales (an inlet of Ross Sea). He arrived there just 35 days before Robert F. SCOTT. This story he told in *The South Pole* (tr. 1913). He had added much valuable scientific and geological information to the knowledge of Antarctica. In 1918, back in the arctic regions, he set out to negotiate the Northeast Passage in the *Maud*. After two winters he arrived at Nome, the first after N. A. E. Nordenskjöld to sail along the whole northern coast of Europe and Asia. Amundsen then turned to air exploration. He and Lincoln ELLSWORTH in 1925 failed to complete a flight across the North Pole, but the next year in the *Norge*, built and piloted by Umberto Nobile, they succeeded in flying over the pole and the hitherto unexplored regions of the Arctic Ocean N. of Alaska. A bitter controversy followed with Nobile as to the credit for the success. Yet in 1928 when Nobile crashed in the *Italia*, Amundsen set out on a rescue attempt that cost him his life. The story of the ventures with Ellsworth written by the two of them appear in *Our Polar Flight* (1925) and *The First Crossing of the Polar Sea* (1927). See the autobiographical *My Life as an Explorer* (tr. 1927), biographies by Charles Turley (1935) and J. A. Kugelmass (1955).

Amur (ä'mōōr'), Chin. *Hei-lung Chiang*, river, c 1,800 mi (2,900 km) long, formed by the confluence of the Shilka and Argun rivers, NE Asia, at the Soviet-Chinese border, the Amur-Shilka-Onon system is c.2,700 mi (4,350 km) long. The Amur flows generally southeast, forming for more than 1,000 mi (1,610 km) the border between the Soviet Union and China, then NE through the Far Eastern USSR before entering the Tartar Strait opposite Sakhalin island. Its chief tributaries are the Ussun, Sungari, Zeya,

and Bureya rivers. One of the chief waterways of Asia, the Amur is navigable for small craft for its entire length during the ice-free season (May-Nov.). The chief ports are the Soviet cities of Khabarovsk (the head of large craft navigation), Komsomolsk, and Nikolayevsk.

Amurath, For Ottoman sultans thus named, see **MURAD**.

Amvets: see **AMERICAN VETERANS OF WORLD WAR II AND KOPEA**.

amygdalin (ämig'dälīn) see **BENZALDEHYDE**.

amylase (äm'alās'), ENZYME having physiological, commercial, and historical significance, also called **diastase**. It is found in both plants and animals. Amylase was purified (1835) from malt by Anselme Payen and Jean Persoz. Their work led them to suspect that similar substances, now known as enzymes, might be involved in biochemical processes. Amylase hydrolyzes **STARCH**, **GLYCOGEN**, and **DEXTRIN** to form in all three instances **GLUCOSE**, **MALTOSE**, and the limit-dextrins. Salivary amylase is known as **ptyalin**, although humans have this enzyme in their saliva, some mammals, such as horses, dogs, and cats, do not. Ptyalin begins polysaccharide digestion in the mouth, the process is completed in the small intestine by the pancreatic amylase, sometimes called **amylolysin**. The amylase of malt digests barley starch to the disaccharides that are attacked by yeast in the fermentation process.

amyloplast (äm'älöp'lās'), also called **leucoplast**, a special organelle, or plastid, occurring in the **CYTOPLASM** of plant cells. They are nonpigmented. Amyloplasts have the specific abilities to transform glucose, a simple sugar, into starch through the process of polymerization, and to store one or more starch grains within their stretched membranes. Especially large numbers of amyloplasts occur in subterranean storage tissues of some plants such as those that comprise the tuber of the common potato.

amylopsin (äm'älöp'sīn) see **AMYLASE**.

Amyot, Jacques (zhāk äm'yō'), 1513-93, French humanist, translator of Heliodorus' *Aethiopica* (1547), of Longus' *Daphnis and Chloë* (1559), and particularly of Plutarch's *Lives* (1559).

Amyot or Amiot, Joseph (zhōzēf'), 1718-1794?, French Roman Catholic missionary in China, a Jesuit. He wrote a long treatise on the history, sciences, and customs of the Chinese (15 vol., 1776-89). He was one of the first Europeans to make Chinese literature, antiquities, and customs known to Europe. He was an early authority on the Manchu language.

Amyraut, Moïse (mōēz' ämērō'), or **Moses Amyrault** (ämīrāl'dās), 1596-1664, French Protestant theologian. As pastor of Saumur he won a reputation as a theologian and orator, and he was appointed (1631) to present to Louis XIII the protest of the synod against infractions of the Edict of Nantes. He became professor of theology at Saumur and wrote extensively on theological subjects.

Amytal (äm'töl'), trade name for the drug amobarbital, a **BARBITURATE**.

Amzi (äm'zī) 1 **Levite** 1 **Chron** 6:46 2 One of a priestly family **Neh** 11:12

Anab (ä'nāb), hill town, SW Palestine **Joshua** 11:21, 15:50

Anabaptists (än'äbäp'tists) [from Gr. =rebaptizers], name applied, originally in scorn, to certain Christian sects holding that infant baptism is not authorized in Scripture and that baptism should be administered to believers only. A convert if baptized in infancy must be rebaptized. Anabaptists were prominent in Europe during the 16th cent., forming part of the radical wing of the Reformation. Their principal centers were in Germany, Switzerland, Moravia, and the Netherlands. They are to be distinguished from the **BAPTISTS**, primarily an English group. The religious ideas of the Anabaptists antedate the Reformation. Although they were never united either politically or doctrinally, Anabaptists held certain views in common for which they were persecuted everywhere. Among these were their desire for radical religious, social, and economic reform and their advocacy of the separation of church and state. In their beliefs great stress was placed upon individual conscience and private inspiration. Perhaps their most characteristic and most influential belief was their conception of the church as a voluntary association of believers. Martin Luther regarded them as enemies of the Reformation and added to their persecution. Most of the Anabaptists were peace loving and moderate, but extremists led by Thomas MÜNZER, a Saxon pastor, helped to incite the Peasants' War. Leaders like Melchior Hoffman, a Swabian farmer, spread doctrines of an imminent

return of Christ and the "reign of God," without church or dogma. In Münster c 1533 some of the Anabaptists set up a theocracy, first under the direction of Bernard Rothmann, a preacher, and Jan Matthis, a fanatical Dutch baker, then under Bernhard Knipperdollinck. In 1534 JOHN OF LEIDEN proclaimed himself King David and ruled this theocracy in which communal ownership of property and polygamy were practiced. This extreme form of Anabaptism ended with the execution of the leaders in 1535. Another group of Anabaptists, under the leadership of MENNO SIMONS, became MENNONITES. Others, descendants of the followers of Jacob Hutter, moved in 1874 from Russia to South Dakota (see Hutterian Brethren). See studies by C. P. Clasen (1972) and K. P. Davis (1974).

Anaconda (ānākōn'dā), city (1970 pop. 9,771), seat of Deer Lodge co., SW Mont.; inc. 1887. Marcus Daly chose this place (1883) to build the smelter for the Anaconda Copper Mining Company and in the 1890s tried unsuccessfully to make it the state capital. The present high-stacked smelter (585 ft/178 m high), one of the largest in the world, dominates the life of the city and produces copper, zinc, and manganese.

anaconda: see BOA

Anacreon (anāk'rēon, -ōn), fl. c 521 B.C., Greek lyric poet, b. Teos in Ionia. He lived at Samos and at Athens, where Hipparchus patronized him. His poetry, graceful and elegant, celebrates the joys of wine and love. Little of his verse survives. The Anacreontics were poems in the style of Anacreon written from Hellenistic to late Byzantine times.

Anadyr (anādīr'), river, c 695 mi (1,120 km) long, rising on the Anadyr Plateau, NE Far Eastern USSR, and flowing S then E into Anadyr Bay, an inlet of the Bering Sea. The Anadyr basin, a lowland between the Anadyr and Koryak ranges, is mostly covered by tundra. There are coal and gold deposits near the river's mouth. The town of Anadyr, capital of Chukchi National Okrug, Khabarovsk Krai, is a port on the bay.

anae-, for words beginning thus, see ANE-

anagram [Gr. = something read backward], rearrangement of the letters of a word or words to make another word or other words. A famous Latin anagram was an answer made out of a question asked by Pilate. The question was *Quid est veritas?* [What is truth?], and the answer *Est vir qui adest* [it is the man who is here]. An anagram that reads the same backward as forward is a palindrome, e.g., "Able was I ere I saw Elba."

Anah (ā'nā), name appearing several times in the genealogy of Esau's family. Three persons may be distinguished, but if the genealogy refers to tribes rather than to persons, Anah may be a single tribal name. Gen. 36, 1 Chron. 1.

Anaharath (ān'ahā'rāth), unidentified town of E central Palestine. Joshua 19:19.

Anaheim (ān'āhīm), city (1970 pop. 166,701), Orange co., S Calif., SE of Los Angeles, inc. 1870. Anaheim was founded by Germans in 1857 as an experiment in communal living. Lying in an area of citrus fruit and walnut groves, the city is an important industrial center and one of the great tourist and convention centers in the United States. In Anaheim are Disneyland (opened 1955), a gigantic amusement park, the Anaheim Stadium, home of the American League's California Angels baseball team, and the Anaheim Convention Center. Among the city's manufactures are electronic equipment, guidance systems, paper converters, metal fabricators, greeting cards, and processed foods.

Anahuac (ānā'wāk) [Aztec, =near the water], geographical term used variously in Mexico before the Spanish Conquest. Today it commonly refers to that part of the central plateau of Mexico comprising the Pánuco and Lerma river systems and the lake basin of the Valley of Mexico.

Anaiah (ān'ā'ā, ānā'yā), name of two persons who returned from the Exile. Neh. 8:4, 10:22.

Anak (ā'nāk), in the Bible, ancestor of the Anakim or Anakims, a race of giants inhabiting Hebron and its vicinity at the time of the conquest of Canaan. ARBA is cited as Anak's father, and his sons are given as Ahiman, Sheshai, and Talmai. Joshua and Caleb practically eradicated the race. Num. 13:22, 28, 33, Deut. 1:28, 9:2, Joshua 11:21, 14:15, 15:13, 14, 21:11, Judges 1:20.

analgesic (ān'aljē zīk), any of a diverse group of drugs used to relieve pain. Analgesic drugs include

the nonnarcotics such as the SALICYLATES, the narcotic drugs such as MORPHINE, and synthetic drugs with morphinelike action (see NARCOTIC). ASPIRIN and other salicylates reduce fever and inflammation as well as relieve pain. Salicylate substitutes such as phenacetin or acetaminophen (Tylenol) are often given to individuals sensitive or allergic to salicylates. Phenylbutazone (Butazolidin) and chemically similar drugs reduce pain in diseases associated with inflammation such as rheumatic and arthritic disorders, but these drugs are very toxic and are not used where salicylates alone are effective. Narcotic analgesics depress the central nervous system and alter the perception of pain. They are used to alleviate pain not relieved by the salicylates. Besides morphine and codeine, this group includes the synthetic narcoticlike substances propoxyphene (Darvon) and MEPERIDINE (Demerol).

analog circuit, electronic circuit that operates with currents and voltages that vary continuously with time, having no abrupt transitions between levels. Generally speaking, analog circuits are contrasted with DIGITAL CIRCUITS, which function as though currents or voltages were at one of a set of discrete levels, all transitions between levels being ignored. Since most physical quantities, e.g., velocity and temperature, vary continuously, an analog circuit provides the best means of representing them. However, for rapid calculations in a computer, digital circuits are often preferred. Thus, high-speed converters are required to change the data from one form to another.

analog computer: see COMPUTER

analogy, in biology, the similarities in function, but differences in evolutionary origin, of body structures in different organisms. For example, the wing of a bird is analogous to the wing of an insect, since

Analogy in bird and insect wings

both are used for flight. However, there is no common ancestral origin in the evolution of these structures. While the wings of birds are modified skeletal forelimbs, insect wings are extensions of the body wall. Although insects and birds do have a very remote common ancestry (more than 600 million years ago), the wings of the two groups evolved after their ancestries had separated. See also HOMOLOGY.

analysis, branch of MATHEMATICS that utilizes the concepts and methods of the CALCULUS. It includes not only basic calculus, but also advanced calculus, in which such underlying concepts as that of a LIMIT are subjected to rigorous examination, differential and integral equations, in which the unknowns are FUNCTIONS rather than numbers, as in algebraic equations, complex variable analysis, in which the variables are of the form $z = x + iy$, where i is the imaginary unit, VECTOR analysis and TENSOR analysis, DIFFERENTIAL GEOMETRY, and many other fields.

analysis, chemical: see CHEMICAL ANALYSIS

analysis situs: see TOPOLOGY

analytic geometry, branch of GEOMETRY in which points are represented with respect to a coordinate system, such as CARTESIAN COORDINATES, and in which the approach to geometric problems is pri-

marily algebraic. Its most common application is in the representation of equations involving two or three variables as curves in two or three dimensions or surfaces in three dimensions. For example, the linear equation $ax + by + c = 0$ represents a straight line in the xy -plane, and the linear equation $ax + by + cz + d = 0$ represents a plane in space, where a , b , c , and d are constant numbers (coefficients). In this way a geometric problem can be translated into an algebraic problem and the methods of algebra brought to bear on its solution. Conversely, the solution of a problem in algebra, such as finding the roots of an equation or system of equations, can be estimated or sometimes given exactly by geometric means, e.g., plotting curves and surfaces and determining points of intersection. In plane analytic geometry a line is frequently described in terms of its slope, which expresses its inclination to the coordinate axes, technically, the slope m of a straight line is the (trigonometric) tangent of the angle it makes with the x -axis. If the line is parallel to the x -axis, its slope is zero. Two or more lines with equal slopes are parallel to one another. In general, the slope of the line through the points (x_1, y_1) and (x_2, y_2) is given by $m = (y_2 - y_1) / (x_2 - x_1)$. The conic sections are treated in analytic geometry as the curves corresponding to the general quadratic equation $ax^2 + bxy + cy^2 + dx + ey + f = 0$, where a , b , c , d , e , and f are constants and a , b , and c are not all zero. In solid analytic geometry the orientation of a straight line is given not by its slope but by its direction cosines, λ , μ , and ν , the cosines of the angles the line makes with the x -, y -, and z -axes, respectively, these satisfy the relationship $\lambda^2 + \mu^2 + \nu^2 = 1$. In the same way that the conic sections are studied in two dimensions, the 17 quadric surfaces, e.g., the ellipsoid, paraboloid, and elliptic paraboloid, are studied in solid

analytic geometry in terms of the general equation $ax^2 + by^2 + cz^2 + dxy + exz + fyz + px + qy + rz + s = 0$. The methods of analytic geometry have been generalized to four or more dimensions and have been combined with other branches of geometry. Analytic geometry was introduced by Rene Descartes in 1637 and was of fundamental importance in the development of the CALCULUS by Sir Isaac Newton and G. W. Leibniz in the late 17th cent. More recently it has served as the basis for the modern development and exploitation of ALGEBRAIC GEOMETRY.

Anamim (ān'amīm), unidentified tribe of Egypt. Gen. 10:13, 1 Chron. 1:11.

Anammelech (anām'alēk), god of an otherwise unknown Samaritan cult. 2 Kings 17:31.

Anan (ā'nān), sealer of the covenant. Neh. 10:26.

Anan (an'an), city (1970 pop. 58,467), Tokushima prefecture, E Shikoku, Japan, on the Kii Channel. It is a fishing port and agricultural center.

Anan ben David (ānān'), fl. 8th cent., Babylonian Jewish theologian, founder of the Ananites from whom the KARAITES claim spiritual descent. He is said to have been a descendant of BOSTANAI BEN CHANINAI. Anan rejected the Talmudic tradition and in its place sought a return to Scripture as the sole source for God's Law. It is evident from those writ-

ings attributed to him that he made use of rabbinic methods of scriptural interpretation in the formulation of legal decisions to meet the needs of his age. These decisions often represent a quite ascetic attitude. See Leon Nemoy, *Karaite Anthology* (1952).

Ananda (ā'nandā) see PALI LITERATURE

Anani (ānā'nī), descendant of David 1 Chron 3 24

Ananiah (ā'nānī'ā) 1 Ancestor of AZARIAH 20 2 Benjaminite town, probably just N of Jerusalem Neh 11 32

Ananias (ān'ānī'ās) [Gr, = Heb ANANIAH and HANANIAH] 1 Man who, with his wife Sapphira, held back part of a gift to the church and lied about it. They were rebuked by Peter and fell dead Acts 5 1-11. The name has become a term for liar. 2 High priest at Jerusalem, a Roman sympathizer, hated by most of the Jews for his oppression and his alliance with the Roman interest. He was assassinated between A.D. 60 and 67 Acts 23 2-5, 24. 3 Christian at Damascus who took charge of Paul after his conversion Acts 9 10-22. 4 One of the THREE HOLY CHILDREN.

Ananites: see ANAN BEN DAVID, KARAITES

anaphylaxis (ān'afalāk'sīs), hypersensitive state that may develop after introduction of a foreign protein or other antigen into the body tissues. When an anaphylactic state exists, a second dose of the same protein (commonly an antibiotic such as penicillin, or certain insect venoms) will cause a violent allergic reaction. Anaphylaxis results from the production of specific antibodies in the tissues in very high concentration; the violent reaction is produced by the neutralization of antigens by the antibodies. The histamines released during the reaction are thought to cause the most damage, i.e., severe vasodilation and loss of capillary fluid, resulting in circulatory collapse. Other symptoms include urticaria or edema, choking, coughing, shock, and loss of consciousness. Death may occur within 5 to 10 min if no medical help is available. Anaphylaxis differs from IMMUNITY, in immunity, antibodies circulate in the blood and neutralize antigens without producing a violent reaction. See also ALLERGY, SERUM SICKNESS.

anaplasmosis (ān'aplāzmō'sīs), infectious blood disease in cattle, sheep, and goats, caused by a protozoan of the genus *Anaplasma*. The organism parasitizes red blood cells causing their destruction and producing emaciation, anemia, jaundice, and, occasionally, death. The disease is present in the warmer regions of the world and is most prevalent in the United States in the Gulf states, lower plains, and California. Wild ruminants such as deer and antelope may be asymptomatic carriers. Transmission of the disease occurs mainly by the spread of infected blood through insect vectors, especially ticks and biting flies. The incubation period varies from three to four weeks. Infected animals first show a fever, which may rise to 107°F (62°C) in severe cases, and then jaundice and anemia set in. They are often hyperexcitable and may attack attendants just before death. Pregnant cows will frequently abort. Treatment of anaplasmosis consists of antibiotic therapy and blood transfusions. Control is extremely difficult because of the wide range of insects capable of transmitting the disease, the presence of carriers in wild-animal populations, and the difficulty of detecting infected animals. Continuous feeding of antibiotics, segregation of affected animals, and vaccination are the only effective means of control.

Anarajapura: see ANURADHAPURA, Sri Lanka

anarchism (ān'arkīzəm) [Gr, =having no government], theory that equality and justice are to be sought through the abolition of the state and the substitution of free agreements between individuals. Central to anarchist thought is the belief that society is natural and that men are good but are corrupted by artificial institutions. Also central in anarchism are the belief in individual freedom and the denial of any authority, particularly that of the state, that hinders man's development. Zeno of Citium, founder of Stoic philosophy, is regarded as the father of anarchism. In the Middle Ages the anarchist tradition was closely linked to utopian, millenarian religious movements such as the Brethren of the Free Spirit of the 13th cent. and the Anabaptists of the 16th cent. The philosophy of modern political anarchism was outlined in the 18th and 19th cent. by William GODWIN, P. J. PROUDHON, and others. Mikhail BAKUNIN attempted to orient the First INTERNATIONAL toward anarchism but was defeated by Karl MARX. Bakunin gave modern anarchism a collectivist and violent tone that has persisted despite the revisionary efforts of Piotr Kropotkin and Leo Tolstoy. Political anarchism in Russia was sup-

pressed by the Bolsheviks after the Russian Revolution. Anarchism's only real mass following was in Latin countries, where its doctrines were often combined with those of SYNDICALISM, especially in Spain. In the United States, early anarchists such as Josiah WARREN were associated with cooperatives and with utopian colonies. After the Haymarket riot in Chicago in 1886 and the assassination of President McKinley in 1901 a law was passed forbidding anarchists to enter the country. The SACCO-VANZETTI CASE attests to the fear of anarchism in the United States. As an organized movement, anarchism is almost dead, but it retains importance as a philosophical attitude and a political tendency. See George Woodcock, *Anarchism* (1962), L. I. Krimerman and L. Perry, ed., *Patterns of Anarchy* (1966), Atindranath Bose, *History of Anarchism* (1967), Roderick Kedward, *The Anarchists* (1971), Gerald Runkle, *Anarchism, Old and New* (1972).

Anasazi culture (ān'asa'zē) see BASKET MAKERS, CLIFF DWELLERS, PUEBLO INDIANS

Anastasia, Saint (ānastā'shā), 4th cent., Roman noblewoman, kind to the poor, martyred under Diocletian. She is mentioned in the Canon of the Mass. In the Roman Catholic Church, her feast is Dec 25 and is commemorated in the Christmas Mass at dawn. In the Orthodox Eastern Church her feast is Dec 22.

Anastasia (Anastasia Nikolayevna) (ānastā'shā nyīkalī'āfnā), 1901-1918, youngest daughter of Czar Nicholas II, last of the Russian czars. It is generally believed that she was killed with the rest of her immediate family after the Russian Revolution, however, several women later claimed to be Anastasia. See study by M. Maurette (1955).

Anastasius I (ānastā'shās, -zhas), c. 430-518, Roman emperor of the East (491-518), successor of Zeno, whose widow he married. He broke the power that the Isaurians had enjoyed since Leo I, made peace with Persia, maintained friendly relations with Theodoric the Great, and made Clovis I an ally. He built a wall to protect Constantinople against the Slavs and Bulgars. His reign saw the revision of tax collection and the abolition of gladiatorial contests. His Monophysite inclinations stirred religious unrest throughout the empire. Anastasius was succeeded by Justin I.

Anath (ā'nāth), father of SHAMGAR

anathema (ānā'thīma) [Gr, =set aside, as a devoted object], traditional Christian decree of EXCOMMUNICATION in its severest form. The usual form of a canon of a council is, "If anyone (says such and such or does so-and-so), let him be anathema." References to it appear in 1 Cor 16 22 and Gal 1 8-9.

Anathoth (ān'āthōth, -thōth) 1 Town, NE of Jerusalem, near the modern Anata, Jordan. It was the home of Jeremiah Jer 1 1, 1 Chron 12 3, 1 Kings 2 26, Neh 7 27. Its adjective is Antiothite, Anetothite, Anathothite 1 Chron 27 12, 123. 2 Chief of the people Neh 10 19. 3 Benjamite 1 Chron 7 8.

Anatolia (ān'atō'lēā) [Gr, =sunrise], Asian part of Turkey, usually synonymous with ASIA MINOR.

Anatolian languages (ān'atō'lēān), subfamily of the Indo-European family of languages (see INDO-EUROPEAN, table). The progress made in the identification, decipherment, and analysis of the Indo-European Anatolian languages from extant texts owes much to 20th-century scholarship. These Anatolian languages were spoken in Anatolia, or Asia Minor, from about the 2d millennium B.C. and gradually became extinct during the first few centuries A.D. They include Cuneiform Hittite, Hieroglyphic Hittite, Luwian (also called Luvian or Luish), Palaic, Lycian, and Lydian. The Anatolian languages are the tongues of Indo-European-speaking invaders of Anatolia and became mixed to some extent with indigenous languages of the region. Much of the vocabulary of the Anatolian languages was apparently borrowed from these native tongues, but their grammar continued to be essentially Indo-European. The principal known member of the Anatolian division of the Indo-European family is Hittite, the tongue of the HITTITES, who entered and conquered much of Anatolia early in the 2d millennium B.C. The oldest surviving written records of Hittite, dated at about the 15th or 14th cent. B.C., are among the earliest extant remains of any Indo-European language. From c. 1500 to 1200 B.C., Hittite was written both in CUNEIFORM (a system of writing taken over from Mesopotamia) and in HIEROGLYPHICS (a form of picture writing unrelated to the hieroglyphics of Egypt). After the fall of the Hittite Empire (c. 1200 B.C.) the use of cuneiform ceased, but writing in hieroglyphics continued until the 7th cent.

B.C. Cuneiform and Hieroglyphic Hittite are separate but closely related languages. A near relative of Hittite was Luwian, the Anatolian language of the now extinct Luvian people. Dominant in a large part of S Anatolia during the period of the Hittite Empire, Luwian was written in cuneiform, and its surviving documents go back to the 14th cent. B.C. In areas of N Anatolia, Palaic flourished. Also close to Hittite, it was written in cuneiform. Grammatical features common to Hittite, Luwian, and Palaic include two genders, one of which combines masculine and feminine as a common gender and the other of which is neuter, two moods, indicative and imperative, the first of which has a present and a preterite tense, and two voices, active and middle. Lycian, a language of SW Anatolia for which there are written records dated from about the 5th to 4th cent. B.C., may have been a continuation of Luwian. Lycian was written in a form of the Greek alphabet, as was Lydian. Lydian was spoken in W Anatolia, and the surviving written records date from about the 5th to 4th cent. B.C. The term "Anatolian languages" is also used to refer to all languages, Indo-European and non-Indo-European, that were spoken in Anatolia in ancient times. See E. H. Sturtevant and E. A. Hahn, *A Comparative Grammar of the Hittite Language* (2d ed. 1951), Johannes Friedrich, *Extinct Languages* (tr. 1957, repr. 1971).

anatomy, branch of biology concerned with the study of body structure of plants and animals, including man; the study of plant structures is often called comparative morphology. Comparative anatomy is concerned with the structural differences of various animal forms. The study of similarities and differences in anatomical structures forms the basis for CLASSIFICATION of both plants and animals. Embryology (see EMBRYO) deals with developing plants or animals until hatching or birth (or germination, in plants). CYTOLOGY covers the internal anatomy of the cell, while HISTOLOGY is concerned with the study of aggregates of similarly specialized cells, called tissues. There are four basic types of tissue in the human body: epithelial tissue (see EPITHELIUM), muscular tissue (see MUSCLE), CONNECTIVE TISSUE, and nervous tissue (see NERVOUS SYSTEM). Human anatomy is often studied by considering the individual systems that are composed of groups of tissues and organs, such systems include the skeletal system (see SKELETON), muscular system, cutaneous system (see SKIN), circulatory system (including the LYMPHATIC SYSTEM), respiratory system (see RESPIRATION), DIGESTIVE SYSTEM, REPRODUCTIVE SYSTEM, URINARY SYSTEM, and ENDOCRINE SYSTEM. Little was known about human anatomy in ancient times because dissection, even of corpses, was forbidden. In the 2d cent., Galen, largely on the basis of animal dissection, made valuable contributions to the field that remained authoritative until the 14th and 15th cent., when a limited number of cadavers were made available to the medical schools. A better understanding of the science was soon reflected in the discoveries of Vesalius, William Harvey, and John Hunter.

Anau: see ANNAU, USSR

Anaxagoras (ān'aksāg'aras), c. 500-428 B.C., Greek philosopher of Clazomenae. He is credited with having transferred the seat of philosophy to Athens. He was closely associated with many famous Athenians and is thought to have been the teacher of Socrates. His belief that the sun was a white-hot stone and that the moon was made of earth that reflected the sun's rays resulted in a charge of atheism and blasphemy, forcing him to flee to Lampsacus, where he died. Rejecting Empedocles' four elements (earth, air, fire, and water), Anaxagoras posits an infinity of particles, or "seeds," each unique in its qualities. All natural objects are composed of particles having all sorts of qualities, a preponderance of similar though not identical particles creates the difference between wood and stone. Anaxagoras' universe, before separation, was an infinite, undifferentiated mass. The formation of the world was due to a rotary motion produced in this mass by an all-pervading mind (nous). This led to the separating out of the "seeds" and the formation of things. Although Anaxagoras was the first to give mind a place in the universe, he was criticized by both Plato and Aristotle for only conceiving of it as a mechanical cause rather than the originator of order. See D. E. Gershenson and D. A. Greenberg, *Anaxagoras and the Birth of Physics* (1964).

Anaximander (anāk'sīmān'dār), c. 611-c. 547 B.C., Greek philosopher, b. Miletus, pupil of THALES. He made the first attempt to offer a detailed explanation of all aspects of nature. Anaximander argued

that since there are so many different sorts of things, they must all have originated from something less differentiated than water, and this primary source, the boundless or the indefinite (*apeiron*), had always existed, filled all space, and, by its constant motion, separated opposites out from itself, e.g., hot and cold, moist and dry. These opposites interact by encroaching on one another and thus repay one another's "injustice." The result is a plurality of worlds that successively decay and return to the indefinite. The notion of the indefinite and its processes prefigured the later conception of the indestructibility of matter. Anaximander also had a theory of the relation of earth to the heavenly bodies, important in the history of astronomy. His view that man achieved his physical state by adaptation to environment, that life had evolved from moisture, and that man developed from fish, anticipates the theory of evolution. See C. H. Kahn, *Anaximander and the Origins of Greek Cosmology* (1960), Paul Selegman, *The Apeiron of Anaximander* (1974).

Anaximenes (än'äksim'inēz), Greek philosopher, 6th cent. B.C., last of the Milesian school founded by THALES. With Thales he held that a single element lay behind the diversity of nature, and with ANAXIMANDER he sought a principle to account for diversity. He believed that single element to be air. The principle of diversification he taught was rarefaction and condensation. Different objects were therefore merely different degrees of density of the one basic element. Anaximenes anticipates the spirit of modern scientific practice that seeks to explain qualitative differences quantitatively.

ancestor worship, ritualized propitiation and invocation of dead kin. Closely related to the primitive concept of ANIMISM, ancestor worship is based on the belief that the spirits of the dead continue to dwell in the natural world and have the power to influence the fortune and fate of the living. Ancestor worship has been found in various parts of the world and in diverse cultures. It was a minor cult among the Romans (see MANES). The practice reached its highest elaboration in W. Africa and in the ancient Chinese veneration of ancestors. It is also well developed in the Japanese SHINTO cult and among the peoples of Melanesia. See APOTHEOSIS, TOTEM. See J. G. Frazer, *The Belief in Immortality and the Worship of the Dead* (3 vol., 1913-24, repr. 1968).

Anchieta, José de (zhōōzē' dī ānshēā'ta), 1530-97, Brazilian Jesuit missionary, b. Canary Islands of Spanish parents. A tireless traveler and pioneer, he spread Portuguese control and settlement and was a founder of the city of São Paulo. He wrote in Spanish, Latin, Portuguese, and Tupi and wrote poetry as well as prose tracts on history, philosophy, and religion. He is usually regarded as the first Brazilian writer. See H. G. Dominican, *Apostle of Brazil* (1958).

An-ch'ing (an-ch'ing) or **Anking** (an'king), city (1970 est. pop. 160,000), SW Anhwei prov., China. A port and trading center on the Yangtze River, it was capital of the province until 1949. It was formerly called Huaining.

Anchises (änkī'sēz), in Greek mythology, Trojan shepherd. He was seduced by Aphrodite, and from this union Aeneas was born. When Anchises boasted of the goddess's love, Zeus crippled him.

anchor, device cast overboard to secure a ship, boat, or other floating object by means of weight, friction, or hooks called flukes. In ancient times an anchor was often merely a large stone, a bag or basket of stones, a bag of sand, or, as with the Egyptians, a lead-weighted log. The Greeks are credited with the first use of iron anchors, while the Romans had metal devices with arms similar to modern anchors. The ordinary modern anchor consists of a shank (the stem, at the top of which is the anchor ring), a stock (the crosspiece at the top of the shank, either fixed or removable), a crown (the bottom portion), and arms, attached near the base of the shank at a right angle to the stock and curving upward to end in flat, triangular flukes. Other types of anchors include the patent anchor, which has either no stock at all or a stock lying in the same plane as the arms, the stream, or stern anchor, lighter than the regular anchor and used in narrow or congested waters where there is no room for the vessel to swing with the tide, and the grapnel, a small four-armed anchor used to recover lost objects. A sea anchor is a wooden or metal framework covered with canvas and weighted at the bottom, it is a temporary device used by disabled ships. Modern ships have several anchors, usually there are two forward and two aft. Formerly made of wrought iron, anchors are now usually made of forged steel.

Anchorage (äng'kärj), city (1970 pop. 48,029), Anchorage census div., S central Alaska, a port at the head of Cook Inlet, inc. 1920. It is the largest city in the state, the administrative and commercial heart of S central and W Alaska, one of the nation's key defense centers, and a vital transportation hub. Glenn Highway connects the city to the Alaska Highway, and the international airport there, one of the nation's busiest, is a regular stop on intercontinental and transpolar flights. Adjacent to the city are two huge U.S. military bases, Fort Richardson and Elmendorf Air Force Base, the latter contains the headquarters for the entire Alaska command (including navy and coast guard). Anchorage is also a focus for the state's oil, coal, and natural gas industries, anticipated pipelines from areas where new discoveries have been made are expected to result in the expansion of these industries. Tourism also contributes to the city's economy. Anchorage was founded (1915) as construction headquarters for the Alaska RR and grew as a railroad town. It also became a fishing center, a market and supply point for gold-mining regions to the north, and the metropolis for the coal mining and farming of the Matanuska valley. World War II brought the establishment of the large military bases and the enormous growth of air and rail traffic. The city suffered severe damage in the 1964 earthquake. Points of interest include Earthquake Park and several notable museums. A "Fur Rendezvous" winter carnival is held in Anchorage every year. The city is the seat of Alaska Methodist Univ. Portage Glacier and Lake Hood are nearby, and Mt. McKinley is visible from the city.

anchoret or **anchorite**: see HERMIT

anchovy: see HERRING

anchovy pear: see BRAZIL NUT

Anchoruma (ängkō-dō'ma), mountain, Bolivia. See ILLAMPU.

Ancona (ängkō'na), city (1971 pop. 110,017), capital of Ancona prov., chief city of Marche region, central Italy, on a promontory in the Adriatic Sea. It is a leading Adriatic port and an industrial and commercial center. Manufactures include ships, musical instruments, and refined sugar. There is a fishing industry and an annual fish fair. Late in the 4th cent. B.C., Greeks from Syracuse took refuge in Ancona. The city prospered under the Romans, and its harbor was enlarged (2d cent. A.D.) by Emperor Trajan. In the 9th cent. it became a semi-independent maritime republic under the nominal rule of the popes, to whose direct control it passed in 1532. The city was badly damaged in World War II. Noteworthy buildings include the Romanesque Cathedral of San Ciriaco (11th-13th cent.) and the Venetian-Gothic Merchants' Loggia (15th cent.).

Ancre, Concino Concini, marquis d': see CONCINI

Ancren Riwle (äng'krēn rē'dōlā) or **Ancrene Wisse** (äng'krēnā wī'sā) [Mid. Eng., = anchoresses' rule], English tract written c. 1200 by an anonymous English churchman for the instruction of three young ladies about to become religious recluses. The work, important as a sample of early Middle English prose, is a charming mixture of realism and humor, didacticism and tenderness. It is also important for its depiction of the manners and customs of the time. French and Latin versions of the work are also extant. See edition by J. R. R. Tolkien (1962), study by Arne Zettersten (1965).

Ancus Martius (äng'kās mar'shās), fourth king of ancient Rome (640?-616? B.C.). This semilegendary king is supposed to have enlarged the area of Rome.

Ancyra, Turkey. See ANKARA.

Ändalsnes (ön'dalsnäs"), town (1960 pop. 2,202), Møre og Romsdal co., W Norway, at the head of the Romsdalsfjord. It is a popular tourist resort. In World War II, the town was heavily damaged when the Germans pushed back (1940) an Allied landing.

Andalusia (ändälōō'zhā, -shā), Span. *Andalucía* (än'dalōōthē'a), region (1970 pop. 5,971,277), 33,675 sq mi (87,218 sq km), S Spain, on the Mediterranean Sea, the Strait of Gibraltar, and the Atlantic Ocean. Spain's largest and most populous region, it covers all of S Spain, comprising the provinces of Almería, Cádiz, Córdoba, Granada, Huelva, Jaén, Málaga, and Seville (Sevilla), all named for their chief cities. Andalusia is crossed in the north by the Sierra Morena and in the south by mountain ranges that rise in the snow-capped Sierra Nevada to the highest peak in mainland Spain, Mulhacén (11,417 ft/3,480 m), between the ranges lies the fertile basin of the Guadalquivir River. With its subtropical climate, Andalusia has many affinities with Africa, which it faces. Barren lands contrast with richly fertile regions where cereals, grapes, olives, sugarcane, and citrus and

other fruits are produced. Industries, based generally on local agricultural produce, include wine making, flour milling, and olive-oil extracting. Cattle, bulls for the ring, and fine horses are bred. The rich mineral resources, exploited since Phoenician and Roman times, include copper, iron, zinc, and lead. Mediterranean peoples have been attracted to this region since ancient times, and because of this Andalusia is one of Europe's most strikingly colorful regions. In the 11th cent. B.C., the Phoenicians settled there and founded several coastal colonies, notably Gadir (now Cádiz) and, supposedly, the inland town of Tartessus, which became the capital of a flourishing kingdom (sometimes identified with the biblical TARSHISH). Greeks and Carthaginians came in the 6th cent. B.C., the Carthaginians were expelled (3d cent. B.C.) by the Romans, who included S Spain in the province of Baetica. The emperors Trajan, Hadrian, and Theodosius were born in the region. Visigoths ended Roman rule in the 5th cent. A.D., and in 711 the MOORS, crossing the Strait of Gibraltar, established there the center of their western *emirate* (see CORDOBA). Andalusia remained under Moorish rule until most of it was conquered in the 13th cent. by the kings of Castile, the Moorish kingdom of GRANADA survived, it, too, fell to the Catholic kings in 1492. The Moorish period was the golden age of Andalusia. Agriculture, mining, trade, and industries (textiles, pottery, and leather working) were fostered and brought tremendous prosperity, the Andalusian cities of Córdoba, SEVILLE, and Granada, embellished by the greatest Moorish monuments in Spain, were celebrated as centers of culture, science, and the arts. From the 16th cent. Andalusia generally suffered as Spain declined, although the ports of Seville and Cádiz flourished as centers of trade with the New World. Gibraltar was ceded to Britain in 1713, and in 1833 Andalusia was divided into the present eight provinces. With Catalonia, Andalusia was a stronghold of anarchism during the Spanish republic (est. 1931), however, it fell early to the Insurgents in the SPANISH CIVIL WAR of 1936-39. Despite the natural wealth of the region, poverty is widespread, Andalusian farm laborers are among the poorest in Europe, and many unemployed Andalusians have migrated to other Western European countries. The region has seen recurrent demonstrations against the national government of Francisco Franco. Moorish influence is still strong in the character, language, and customs of the people, which may account for the widespread hostility other segments of the Spanish population feel toward Andalusians. However, Andalusian songs, dances, and festivals, influenced by the large groups of gypsies who live in the region, enjoy great popularity.

Andalusia (ändälōō'shā, -zhā), city (1970 pop. 10,092), seat of Covington co., S Ala., in a farming and forestry area, inc. 1844. Its manufactures include processed peanuts and pecans, meat products, textiles, lumber, and plywood. Lurleen B. Wallace State Junior College is in Andalusia.

Andaman and Nicobar Islands (än'daman, nīk'ōbar), union territory (1971 pop. 115,090), India, in the Bay of Bengal. Port Blair (1971 pop. 26,212), in the Andamans, is the capital. Comprising the Andaman Islands (2,508 sq mi/6,496 sq km) in the south and the Nicobar Islands (707 sq mi/1,831 sq km) in the north, the territory chiefly exports tropical products and lumber. The territory is administered by the home minister in the central Indian government. Known to Europeans since the 7th cent. A.D., the Andamans, consisting of more than 200 islands, were the site of a British penal colony from 1858 to 1945. An earlier attempt by the British to colonize the islands was abandoned in 1796. The population is made up of native Negritos and settlers from the Indian mainland. The Nicobars, which comprise 19 small islands, are separated from the Andamans by a channel that is 90 mi (145 km) wide. The native population is of Mongoloid stock. The Nicobars became a British possession in 1869. See study by Lidio Cipriani (1966).

Andelys, Les (läzaNdälē'), town (1968 pop. 7,438), in Eure dept., N France, Normandy, on the Seine. The twin communities of Grand-Andely and Petit-Andely form a commercial center, with a distillery, metalworks, glassworks, and silk and leather industries. On the border between Normandy proper and the Norman VEXIN, it was of considerable strategic importance in the Middle Ages. The impressive Chateau Gaillard was built (1197) by Richard I of England.

Anderlecht (än'därlicht), commune (1970 pop. 103,796), Brabant prov., central Belgium, on the

Charleroi-Brussels Canal, an industrial and residential suburb of Brussels. Erasmus lived (1517-21) in Anderlecht, and his house is now a museum.

Andermatt (an'dərmāt), village (1970 pop. 1,589), Uri canton, S central Switzerland. It is a road junction, health resort, and sports center. The St. Gotthard Tunnel runs beneath the village. Andermatt has a 12th-century church.

Andernach (an'dərnākh), city (1970 pop. 27,140), Rhineland-Palatinate, W West Germany, a port on the Rhine River. Its manufactures include chemicals, steel, wood products, and construction materials. Drusus founded a Roman frontier garrison there about A.D. 12. In 939 at Andernach, Emperor Otto I defeated the rebellious dukes Geselbert of Lotharinga and Eberhard of Franconia. From 1167 to 1801 the city belonged to the archbishopric of Cologne. In 1815 it passed to Prussia. Andernach has a Romanesque church (13th cent.), a 16th-century town hall, and parts of its medieval city wall.

Andersen, Hans Christian, 1805-75, Danish poet, novelist, and writer of fairy tales. Reared in poverty, he left Odense at 14 for Copenhagen. He failed as an actor, but his poetry won him generous patrons including King Frederick VI. In 1829 his fantasy *A Journey on Foot from the Holmen Canal to the Eastern Point of Amager* was published, followed by a volume of poetry in 1830. Granted a traveling pension by the king, Andersen wrote sketches of the European countries he visited. His first novel, *Improvvisatoren* (1835), was well received by the critics. His sentimental novels were for a time considered his forte. However, with his first book of fairy tales, *Eventyr* (1835), he found the medium of expression that was to immortalize his genius. He produced about one volume a year and was recognized as Denmark's greatest author and as a storyteller without peer. His tales are often tragic or gruesome in plot. His sense of fantasy, power of description, and acute sensitivity contributed to his mastery of the genre. Among his many widely beloved stories are "The Fir-Tree," "The Little Match Girl," "The Ugly Duckling," "The Snow Queen," "The Little Mermaid," and "The Red Shoes." See his *Fairy Tales*, tr. by R. P. Keigwin (4 vol., 1956-60), his autobiography (1855, tr. 1871), *A River—A Town—A Poet*, autobiographical selections by A. Dreslov (1963), biographies by F. Book (tr. 1962), R. Godden (1955), M. Stirling (1965), and S. Toksvig (1934, repr. 1969).

Andersen Nexø, Martin (mārt'ēn an'dərsən nēkso), 1869-1954, Danish novelist. Born one of 11 children in a Copenhagen slum, he spent his impoverished childhood largely on the island of Bornholm. Both locales appear centrally in his novels. His famous proletarian novels *Pelle the Conqueror* (4 vol., 1906-10, tr. in 1 vol., 1930) and *Ditte, Daughter of Man-kind* (5 vol., 1917-21, tr. in 1 vol., 1931) relate the struggles of the poor, focusing attention on conditions of poverty in Denmark. Though admittedly a propagandist for communism and social reform, he transcended that role and created a memorable group of tender human portraits. He also wrote about Russia, where he spent many of his later years. The first two volumes of his four-volume autobiography have been translated as *Under the Open Sky* (1938). See Harry Slochower, *Three Ways of Modern Man* (1937).

Anderson, Carl David, 1905-, American physicist, b. New York City, grad. California Institute of Technology (B.S., 1927, Ph.D., 1930). Associated with the institute's physics department from 1930, he became professor in 1939. For his discovery (1932) of the positron, he shared with V. F. Hess the 1936 Nobel Prize in Physics. The meson (or mesotron) was discovered in cosmic rays in 1936 by Anderson and his associate S. H. Neddermeyer and almost simultaneously by J. C. Street and E. C. Stevenson at Harvard.

Anderson, Elizabeth Garrett, 1836-1917, English physician. A sister of Millicent Garrett Fawcett, Elizabeth also worked for woman suffrage. With difficulty she obtained a private medical education under accredited physicians and in London hospitals. In 1865 she was licensed to practice by the Scottish Society of Apothecaries. In London in 1866 she opened a dispensary, later a small hospital, for women and children, the first in England to be staffed by women physicians. It was known after 1918 as the Elizabeth Garrett Anderson Hospital. Largely as a result of her efforts, British examining boards opened their examinations to women. See biography by Jo Manton (1965).

Anderson, Jack, 1922-, American newspaper columnist, b. Long Beach, Calif. After serving as a Mormon missionary (1941-44) and a term as a war corre-

spondent during 1945, he was hired by Drew Pearson for the staff of his column, "Washington Merry-Go-Round." Anderson took over the column after Pearson's death in 1969. Controversial because of his unorthodox methods of obtaining news stories, Anderson has nonetheless produced vital information, especially concerning the Watergate affair. Anderson and Pearson collaborated on *The Case Against Congress* (1969).

Anderson, John, 1893-1962, Scottish-Australian philosopher, b. Scotland. A graduate of the Univ. of Glasgow, he taught (1918-27) at the universities of Cardiff, Glasgow, and Edinburgh before becoming professor of philosophy at the Univ. of Sydney, Australia (1927-58). His extreme concern for independence of thought led to a controversial academic career because he attacked many institutions (including Christianity, social welfare, and Communism) for encouraging servility. Philosophically he warred against ultimates of every sort, but his philosophy was inclusive rather than negative, stressing the complexity of experience—a complexity not reducible to any ultimate units or wholes—and the limits of any one description of it. His articles were collected in *Studies in Empirical Philosophy* (1962).

Anderson, Dame Judith, 1898-, Australian actress, originally named Frances Margaret Anderson. She made her debut in Sydney in 1915 and by 1924 had become celebrated for her powerful portrayals of classical and modern roles. In 1937 she made her London debut in *Macbeth* with Laurence Olivier. The title role in *Medea* by Robinson Jeffers, which she originated in 1947, was a personal triumph. Anderson's notable films include *Rebecca* (1940) and *Cat on a Hot Tin Roof* (1958). She was made a Dame of the British Empire in 1960.

Anderson, Margaret C., 1886-1973, American author, editor, and publisher, b. Indianapolis, Ind. As editor and publisher of *The Little Review* (1914-29), one of the most famous of the American LITTLE MAGAZINES, she included articles on controversial subjects and pieces by such writers as Vachel Lindsay, William Butler Yeats, Ernest Hemingway, Ezra Pound, and André Breton. From 1917 to 1920, *The Little Review* published excerpts from James Joyce's then unpublished novel *Ulysses* (1922). Because of their alleged obscenity, the U.S. Post Office burned four issues of the magazine containing the excerpts. In 1920, Anderson and her associate Jane Heap were convicted of publishing obscene matter, fined \$100, and fingerprinted. After 1923, Anderson lived in France. See her autobiography (3 vol., 1930, repr. 1971, 1951, repr. 1969, 1969).

Anderson, Marian, 1902-, American contralto, b. Philadelphia. She was the first Negro to be named a permanent member of the Metropolitan Opera Company, and she was also the first Negro to perform at the White House. Anderson first sang in Philadelphia church choirs, then studied with Giuseppe Boghetti. She began her concert career in 1924 and achieved her first great successes in Europe. Her rich, wide-ranged voice was superbly suited to both opera and the Negro spirituals that she included in her concerts and recordings. In 1939 the Daughters of the American Revolution (DAR) forbade her to perform at Constitution Hall in Washington, D.C. Eleanor Roosevelt resigned her DAR membership in protest and sponsored Anderson's concert at the Lincoln Memorial. In 1955 she made her debut with the Metropolitan Opera Company. She was appointed alternate delegate to the United Nations in 1958 and in 1963 was awarded the President's Medal of Freedom. See her autobiography, *My Lord, What a Morning* (1956).

Anderson, Mary, 1872-1964, American labor expert, chief (1919-44) of the Women's Bureau, U.S. Dept. of Labor, b. Sweden. She emigrated to the United States in 1888. After some years as an industrial worker in garment and shoe factories, she became an organizer for the National Boot and Shoe Workers' Union and one of the founders of the National Women's Trade Union League. In 1918 she was appointed assistant to the chief of the Women's Bureau, becoming its chief in 1919. See her autobiography, *Woman at Work* (1951, repr. 1973).

Anderson, Maxwell, 1888-1959, American dramatist, b. Atlantic, Pa., grad. Univ. of North Dakota, 1911. His plays, many of which are written in verse, usually concern social and moral problems. Anderson was a journalist until the successful production in 1924 of *What Price Glory?*, a war drama written with Laurence Stallings. *Winterset* (1935), based on the Sacco-Vanzetti case, is probably Anderson's most successful verse tragedy. He wrote many historical dramas including *Elizabeth the Queen*

(1930), *Mary of Scotland* (1933), *Valley Forge* (1934), *Joan of Lorraine* (1947), *Anne of the Thousand Days* (1948), and *Barefoot in Athens* (1951). Among his other plays are *Both Your Houses* (1933), *High Tor* (1937), *The Star Wagon* (1937), *Key Largo* (1939), and *The Eve of St. Mark* (1942). He also wrote the librettos for Kurt Weill's *Knickerbocker Holiday* (1938) and *Lost in the Stars* (1940). A collection of his poetry, *Notes on a Dream*, was published in 1972. See study by M. D. Bailey (1957), bibliography by Martha Cox (1958, repr. 1974).

Anderson, Robert, 1805-71, American army officer, defender of Fort Sumter, b. near Louisville, Ky., grad. West Point, 1825. He fought in the Black Hawk, Seminole, and Mexican wars and was promoted to major in 1857. In Nov. 1860, he took command of the U.S. force in the harbor of Charleston, S.C., where he distinguished himself in the Fort Sumter controversy. Anderson, made a brigadier general in the regular army (May, 1861), commanded the Dept. of Kentucky (June-Oct.). He retired from active service in Oct., 1863. In Feb., 1865, he was brevetted major general for his gallant service in the defense of Fort Sumter.

Anderson, Sherwood, 1876-1941, American novelist and short-story writer, best known for his novel *Winesburg, Ohio*, b. Camden, Ohio. After serving briefly in the Spanish-American War, he became a successful advertising man and later a manager of a paint factory in Elyria, Ohio. Dissatisfied with his life, however, Anderson abandoned both his job and his family and went to Chicago to become a writer. His first novel, *Windy McPherson's Son* (1916), concerning a boy's life in Iowa, was followed by *Marching Men* (1917), a chronicle about the plight of the working man in an industrial society. In *Winesburg, Ohio* (1919), his greatest novel, he explores the loneliness and frustration of small-town lives. This work contains perhaps the most successful expression of the theme that dominates all Anderson's works—the conflict between organized industrial society and the subconscious instincts of the individual. In his later novels—*Poor White* (1920), *Many Marriages* (1923), and *Dark Laughter* (1925)—he continues to explore, but generally with less skill, the spiritual and emotional sterility of a success-oriented machine age. Anderson's unique talent, however, found its best expression in his short stories. Such collections as *The Triumph of the Egg* (1921), *Horses and Men* (1923), and *Death in the Woods* (1933) contain some of his most compassionate and penetrating writing. In 1927, Anderson moved to Marion, Va., where he bought and edited two newspapers, one Republican and one Democratic. See his autobiographical *Story Teller's Story* (1924) and *Tar: A Midwest Childhood* (1926), memoirs (1942), letters (ed. by H. M. Jones and W. B. Rideout, 1953), biography by Irving Howe (1966), study by W. A. Sutton (1972), P. P. Appel, ed., *Homage to Sherwood Anderson* (1970).

Anderson. 1 City (1970 pop. 70,787), seat of Madison co., E central Ind., on the White River, inc. 1838. It is a manufacturing center in a rich farm area, products include automotive parts, steel tools, and corrugated paper boxes. The city's industrial growth began with the discovery of natural gas in 1887. The automotive industry was established in 1901. Anderson College is there. The city has a fine-arts center and a symphony orchestra. Nearby Mounds State Park has numerous prehistoric mounds. The Moravians operated an Indian mission nearby (1801-6). 2 City (1970 pop. 27,556), seat of Anderson co., NW 5 C., settled in the 17th cent., inc. 1828. The commercial center of a farming and livestock area, its manufactures include textiles, fiberglass products, and sewing machines. A junior college is there.

Anderson, river, c. 465 mi (750 km) long, rising in several lakes in NW Mackenzie dist., Northwest Territories, Canada. It meanders north and west before receiving the Carnwath River and flowing north to Liverpool Bay, an arm of the Arctic Ocean. The village of Staton is at its mouth.

Andersonville, village (1970 pop. 274), 5W Ga., near Americus, inc. 1881. In Andersonville Prison, tens of thousands of Union soldiers were confined during the Civil War under conditions so bad that more than 12,000 soldiers died. It is now a national historic site (see NATIONAL PARKS AND MONUMENTS, table). Andersonville National Cemetery, nearby, contains more than 13,000 soldiers' graves. See study by O. L. Fitch (1968).

Andersson, Dan (dan an'dərsən'), 1888-1920, Swedish poet, novelist, and short-story writer. Although his entire life was lived in extreme poverty, Andersson dealt in his works with religious and

ANDERSSON, KARL JOHAN

metaphysical rather than social problems. He worked as a laborer and achieved no recognition for his writing during his lifetime. Today he is considered one of the foremost Swedish writers. Among his best-known works are *Kolarhistorier* [the charcoal-burner's tales] (1914), *Kolvaktarens visor* [the charcoal-burner's songs] (1915), and the novel *De tre hemlösa* [three homeless ones] (1918).

Andersson, Karl Johan (yōō'hān an'darsōn'), 1827-67, Swedish explorer in Africa. In 1850 he and Francis Galton set out from Walvis Bay (in South West Africa) to explore Damaraland and Ovamboland, but they were able only to reach the Etosha Pan. On a second trip Andersson reached Lake Ngami, for years the goal of explorers, and penetrated for 60 mi (97 km) beyond it. A subsequent journey (1859) took him to the Kubango River in what is now Botswana. He died while seeking out the upper reaches of the Kunene River. He wrote *Lake Ngami* (1855) and *The Okavango River* (1861). *Notes of Travel in South Africa* is a posthumous account of his last trip and was reprinted in 1969.

Anderton shearer: see COAL MINING

Andes (ān'dēz), mountain system, more than 5,000 mi (8,000 km) long, W South America. The ranges run generally parallel to the Pacific coast and extend from Tierra del Fuego northward, across the equator, as the backbone of the entire continent. The Falkland Islands are a continuation of the Andes, and evidence shows that the system is continued in Antarctica. The Andes go through seven South American countries—ARGENTINA, CHILE, BOLIVIA, PERU, ECUADOR, COLOMBIA, and VENEZUELA. A geologically young system, the Andes were originally uplifted in the Cretaceous and Tertiary periods. They are still rising, volcanoes and earthquakes are common. The folded ranges are discontinuous—merging and bifurcating within the system—but as a whole they form one of the world's most important mountain masses. They are loftier than any other mountains except the Himalayas, with many snow-capped peaks more than 22,000 ft (6,700 m) high. Far south in Tierra del Fuego, the mountains run east and west, then turn north between Argentina and Chile. The westernmost of the mountains run into the sea, lining the coast of S Chile with islands. In the Patagonian Andes are high, glacier-fed lakes in both Argentina and Chile. The highest range of the Andes is on the central and northern Argentine-Chilean border, Aconcagua (22,835 ft/6,960 m, highest mountain of the Western Hemisphere) and Tupuncato are there. Between the peaks is Uspallata Pass, with the Transandine Railway and the Christ of the Andes. Other major peaks such as Llullaillaco flank the main range, and in N Chile subandean ranges enclose the high, cold Desert of Atacama. The central Andes broaden out in Bolivia and Peru in multiple ranges (c. 400 mi/640 km wide) with high plateau country (the altiplano) and many high intermontane valleys, where the great civilization of the Inca had its home. High in the mountains on the Peru-Bolivia border is Lake Titicaca. In Bolivia are the notable volcanoes, Illimani and Illampu, and in S Peru is El Misti. The western or coastal range in Peru has lofty peaks (notably Huascarán) and is crossed by the highest railroad of the Andes (from La Oroya to Lima). The ranges approach each other again in Ecuador, where the N Andes begin. Between two volcanic cordilleras (including the cloud-capped Chimborazo and Cotopaxi) are rich intermontane basins. In Colombia the Andes divide again, the western range running between the coast and the Cauca River, the central between the Cauca and the Magdalena rivers, and the eastern running north parallel to the Magdalena River, then stretching out on the coast into Venezuela. The Andes continue in some of the islands of the West Indies, and in Panama N Andean spurs connect with the mountains of Central America and thus with the Sierra Madre and the Rocky Mts. The Andes have an immense influence on the patterns of communication, climate, weather, and life in South America. Andean waters reach the Orinoco, the Amazon, and the Rio de la Plata. The plateaus and valleys of Bolivia, Peru, Ecuador, and Colombia have been peopled since remote times and saw the rise of not only the Inca and the Chibcha but some of the earliest Indian civilizations in the Western Hemisphere. Agriculture was the basis of these cultures (the native llama and alpaca were domesticated later), and the lands there are still tilled mainly for subsistence crops. Commercially the Andes have always been important for great mineral wealth, especially copper, silver, and tin. Oil has been found in the foothills of the N Andes. Certain Andean areas have developed a tourist trade. See Isaiah Bowman, *The Andes of Southern*

Peru (1916), A. G. Ogilvie, *Geography of the Central Andes* (1922), Claude Arthaud and F. Hebert-Stevens, *The Andes Roof of America* (tr. 1956), P. E. James, *Latin America* (1969), Takehide Kazami, *The Andes* (1972).

Andhra Pradesh (ān'drā pra'dāsh), state (1971 pop. 43,394,951), 106,052 sq mi (274,675 sq km), SE India, on the Bay of Bengal. The capital is HYDERABAD. The state was created in 1956 from the Telugu-speaking portions of Madras and Hyderabad states. It includes the northern portion of the Coromandel Coast of the Bay of Bengal. Although mountainous in the Eastern Ghats, Andhra Pradesh is largely on a plain drained by the Penner, the Krishna, and the Godavari rivers. Rice, sugarcane, peanuts, and cotton are raised, coal, chrome, and manganese are mined. The state takes its name from the Andhra dynasty (c. 230 B.C.-A.D. 230), which ruled most of the Deccan plateau. Among the political forces within Andhra Pradesh is a movement advocating separation from India. The state is governed by a chief minister and cabinet responsible to a bicameral legislature with one elected house and by a governor appointed by the president of India.

Andizhan (āndīzhān', Rus. andyēzhān'), city (1970 pop. 188,000), capital of Andizhan oblast, Uzbekistan, Central Asian USSR, in the Fergana Valley, on the Andizhan-Say River. It is an industrial center in an irrigated area that produces cotton and silk. Andizhan's history dates back to the 9th cent.

Andkhui (āndkhō'ē), city (1967 pop. 30,000), N Afghanistan, in Afghan Turkistan, near the USSR border. Wool is its chief product, and it has a noted trade in fruits and karakul (Persian lamb) skins. Andkhui is also known for its handwoven rugs. Legend attributes the city's founding to Alexander the Great (4th cent. B.C.). It was subject to the khanate of Bukhara for some time, until a Russo-Afghan boundary commission assigned it to Afghanistan in 1885.

Andocides (āndōs'īdēz), c. 440-390 B.C., one of the Ten Attic Orators (see ORATORY). In 415 B.C. he was accused of mutilating the hermae (sacred pillars topped by busts of the gods) and, in association with ALCIBIADES, of other sacrilege. He went into exile, and one of his speeches was a plea to be restored to citizenship. After he returned in 403, he was again accused (399) of sacrilege and again successfully defended himself.

Andong (an'dūng'), city (1970 est. pop. 76,000), E South Korea. It is a railroad junction and commercial center in an agricultural area where rice, hemp, cotton, and tobacco are grown.

Andorra (āndōr'a), Fr. *Andorre* (aNdōr'), small state (1970 est. pop. 21,000), 191 sq mi (495 sq km), high in the E Pyrenees between France and Spain, under the joint suzerainty of the president of France and the bishop of Urgel (Spain). It has iron and lead deposits, marble quarries, and extensive pine forests. Drained by the Valira River, Andorra comprises several high mountain valleys that are generally poor in soil but support large flocks of sheep. Livestock raising, the traditional source of livelihood, is being supplemented by a growing tourist trade, the picturesque little state now attracts over 500,000 visitors a year. Smuggling remains an important economic activity. In the 9th cent., Emperor Charles II is reputed to have made the bishop of Urgel overlord of Andorra. The French counts of Foix contested this overlordship, and finally in 1278 an agreement was

reached providing joint suzerainty. The rights of the count passed by inheritance through the house of Albret to Henry IV of France, and from the French kings to the French presidents. In actuality Andorra is independent, it pays homage to France and Spain only through nominal yearly gifts—960 francs and 460 pesetas, respectively. A semifederal state with an ancient communal agrarian organization, Andorra is governed by a council of 24 members, elected by the heads of families and led by a syndic. It has two radio stations, one of them French-controlled. The people, Catalan speaking and Roman Catholic, live in six villages, Andorra la Vella (1971 est. pop. 8,000, Span. *Andorra la Vieja*) is the most important.

Andover (ān'dōvər), town (1970 pop. 23,695), Essex co., NE Mass., inc. 1646. Chiefly a textile producer in the 19th cent., Andover now makes toiletries, electronic equipment, chemicals, rubber products, and other items. Two preparatory schools (Phillips Andover Academy, 1778, for boys, and Abbot Academy, 1829, for girls) are in Andover. The Addison Gallery of American Art and the Robert S. Peabody Foundation archaeological museum are on the Phillips Andover campus. In 1832, Samuel Francis Smith wrote the words for "America" in Andover. Harriet Beecher Stowe lived in the town and is buried there.

Andrada e Silva, José Bonifácio de: see BONIFÁCIO, JOSÉ

Andrássy, Julius, Count (ōn'drāsh-shē), 1823-90, Hungarian politician. One of the leading figures in the 1848-49 Hungarian revolution, he supported the liberal program of Louis KOSSUTH and after the Hungarian defeat he went into exile, mostly in Paris and London, until 1858. With Francis DEAK he then rose to prominence in the negotiations leading to the Ausgleich [compromise] of 1867, which created the AUSTRO-HUNGARIAN MONARCHY. Andrássy was (1867-71) the first constitutional premier of Hungary. He opposed Austrian interference, attained the creation of a separate Hungarian defense force, put down the opposition led by Kossuth's partisans, and established Magyar supremacy at the expense of Slavic and other minorities of the kingdom. In 1870 his influence was largely responsible for keeping Austria-Hungary neutral in the Franco-Prussian War. As foreign minister of the Dual Monarchy (1871-79) he reversed the anti-Prussian policy of his predecessor, Beust, held Austria-Hungary to the THREE EMPERORS' LEAGUE, and signed (1879) the Dual Alliance with Germany (see TRIPLE ALLIANCE AND TRIPLE ENTENTE). His chief program was to limit Russian expansion in the Balkans and to maintain the status quo among the Slavic peoples. At the Congress of Berlin (see BERLIN, CONGRESS OF) in 1878, he obtained for the Dual Monarchy the right to occupy BOSNIA AND HERCEGOVINA. This step provoked much opposition in Hungary because it further increased the Slavic element in the empire, and Andrássy resigned.

Andrássy, Julius, Count, 1860-1929, Hungarian politician, son of the elder Count Andrássy. He occupied several cabinet posts before becoming (1900) minister of the interior of Hungary in the coalition cabinet under WEKERLE. He opposed the Austrian diplomacy of 1914, and as foreign minister (late in 1918) he severed all connections with Germany in the hope of obtaining a separate peace for Austria-Hungary. In 1921 he was involved in the second attempt of King Charles (Emperor CHARLES I) to regain the Hungarian throne, and he later led the royalist opposition to Admiral Horthy and Count Stephen Bethlen. He wrote a number of political and historical studies, notably, in German, *Bismarck, Andrássy, and Their Successors* (1924, tr. 1927).

André, Brother (aNd'rā', an'-), 1845-1937, Canadian Roman Catholic mystic, b. St. Gregoire d'Iberville, Que. His secular name was Alfred Bissette, Bassette, or Bessette. For about 40 years he was a porter at a school in Montreal. His simple, devout life began (c. 1900) to attract attention. Many miraculous cures were attributed to him. Through his efforts the Oratory of St. Joseph was built in Montreal. See biographies by H. P. Bergeron (1938), K. K. Burton (1952), and Alden Hatch (1959).

Andre, Carl, 1935-, American sculptor, b. Quincy, Mass. A student of Patrick Morgan and Frank Stella, Andre produces sculptures of elemental, classic form. His works reflect the quarries, shipyards, and islands of his birthplace and his years spent as a freight-train brakeman. His celebrated floor pieces include *144 Pieces of Lead* (Mus. of Modern Art, New York City).

André, John (āndrā', ān'drē), 1751-80, British spy in the American Revolution. He was captured (1775) by Gen. Richard Montgomery in the Quebec cam-

paign but was exchanged and became adjutant general under Sir Henry Clinton. Major Andre negotiated with Benedict ARNOLD for the betrayal of West Point and was captured (Sept. 23, 1780), when returning to New York, by John Paulding, David Williams, and Isaac Van Wart, near Tarrytown, N.Y. He was tried, condemned, and hanged at Washington's headquarters at Tappan, despite protests from Clinton. Major Andre's charming personality and his talents in the arts had won him many American friends, who mourned him as a romantically tragic young man. See studies by J. T. Flexner (1953) and J. H. Smith (1969).

Andrea del Sarto: see SARTO, ANDREA DEL

Andreanof Islands: see ALEUTIAN ISLANDS

Andrée, Salomon August (sa'lōdmōn ou'gäst āndrā'), 1854-97, Swedish polar explorer. An aeronautical engineer, he was the first to attempt arctic exploration by air. His first attempt by balloon in 1896 was unsuccessful, owing largely to bad weather. In 1897, however, he set out again in a balloon called the *Eagle*. Beset by mishaps from the start, Andree and his party reached as far as 82° 56'N, where insufficient food and clothing halted their progress. All three members of the party died of exposure. Search expeditions failed, and it was not until 1930 that a Norwegian scientific expedition accidentally found the remains and diaries of Andree and his two companions. These diaries are included in *Andree's Story* (tr. 1930). See G. P. Putnam, *Andree the Record of a Tragic Adventure* (1930), and fictionalized life, *The Flight of the Eagle* by P. O. Sundman (1970).

Andreini, Isabella Canali (ē'zabēl'ā āndrēē'nē), 1562-1604, Italian actress. Beautiful, elegant, and well-educated, she was one of the most famous performers of her time. She joined the Gelosi troupe, becoming a leading player, and married the troupe's manager, Francesco Andreini, in 1578. She wrote the pastoral *Mirtilla* (1588), her collected letters appeared in 1607. Andreini was lauded by the poets Tasso and Marini. See Rosamond Gilder, *Enter the Actress* (1931).

Andrew, Saint [Gr. =manly], one of the Twelve Disciples, brother of Peter. Mat. 4:18, 10:2, Mark 3:18, 13:3, Luke 6:14, John 1:40-42, 6:8,9, 12:22, Acts 1:13. According to tradition he was a missionary in Asia Minor, Macedonia, and S. Russia and was martyred at Patras in Greece. He is said to have died on an X-shaped cross (St. Andrew's cross). He is patron saint of Russia and Scotland. Feast Nov. 30.

Andrew II, d. 1235, king of Hungary (1205-35), son of Bela III. He continued his predecessors' policy of transferring crownlands to the magnates, and the lesser nobles forced him to issue a Golden Bull (1222), which served as a charter of feudal privilege. This "Magna Carta" expanded in 1231, extended the old nobility's privileges (immunities from local courts, taxes, and military service abroad) to the lesser nobles, most of whom were freemen in the king's service. It made royal ministers responsible to the diet, which was to meet annually, and gave the right of resistance to the nobles if any of the bull's provisions were violated. Foreigners were not to receive office without consent of the diet, and offices were not to be hereditary. Nobles were also protected against arbitrary arrest or punishment. Andrew took part (1217) in the Fifth Crusade. Initially welcoming the Teutonic Knights to S. Transylvania in 1211, he later became alarmed at their growing power and expelled them in 1225. He was the father of St. Elizabeth of Hungary and of Bela IV, his successor.

Andrew, John Albion, 1818-67, Civil War governor of Massachusetts (1861-66), b. Windham, Maine. He practiced law in Boston, but his antislavery sympathies drew him into politics. He was one of the organizers of the Free-Soil party and later of the Republican party. Soon after taking office as governor, he secured both special legislation placing the militia in readiness and an appropriation for transporting it to Washington. When Lincoln's call came, the 6th Massachusetts regiment was the first to reach the capital. The same spirit characterized Andrew's actions throughout the war, and his zeal was imparted to the people. When peace came, he advocated a policy of friendship and leniency toward the South. See biography by H. G. Pearson (1904), W. B. Hesseltine, *Lincoln and the War Governors* (1948).

Andrewes, Lancelot (ān'drōz), 1555-1626, Anglican divine, bishop of Chichester (1605), of Ely (1609), and of Winchester (1619). One of the most learned men of his time, he was among the first to be selected to create a new English version of the Bible, the Authorized Version. He was royal chap-

lain to Elizabeth, James I, and Charles I. His preaching gained him great favor with King James, who was keenly interested in theology. The great theologian of the High Church party of the 17th cent., Andrewes was opposed to Puritanism, his position being somewhat similar to that of LAUD. His outstanding characteristics were his goodness and piety. His contributions to charity were also noteworthy. His *XCVI Sermons* were edited (1629) by bishops Laud and Buckeridge, his *Private Devotions*, translated (1647) from his noble prayers in Greek and Latin, passed through a number of editions. Richard Crashaw, the poet, paid him a beautiful tribute in "Upon Bishop Andrewes' Picture before His Sermons," and Milton, a Puritan, wrote a Latin elegy on his death. See biographies by M. F. Reidy (1955) and P. A. Welsby (1958), T. S. Eliot, *For Lancelot Andrewes* (1928).

Andrew Johnson National Historic Site. see NATIONAL PARKS AND MONUMENTS (table)

Andrews, Charles McLean, 1863-1943, American historian, b. Wethersfield, Conn. He was associate professor at Bryn Mawr (1889-1907) and professor at Johns Hopkins Univ. (1907-10) and Yale (1910-31). Andrews, a leader in the reinterpretation of British colonial policy in America, studied the colonies in the light of the larger imperial problem, and his seminar in colonial institutions at Yale stimulated much able research in this field. His long, distinguished career reached a climax with *The Colonial Period of American History* (4 vol., 1934-38, Vol. I-III, *The Settlements*, Vol. IV, *England's Commercial and Colonial Policy*). This excellently received work won him the 1935 Pulitzer Prize for history and, in 1937, the gold medal for history and biography awarded only every 10th year by the National Institute of Arts and Letters. His other books include *Colonial Self-Government, 1652-1689* (1904, repr. 1968, in the "American Nation" series), *The Fathers of New England* (1919), and *Colonial Folkways* (1919, both in the "Chronicles of America" series), and *The Colonial Background of the American Revolution* (1924, repr. 1961). He also compiled manuscript and bibliographical guides and wrote works on various historical subjects. See biography by A. S. Eisenstadt (1956).

Andrews, Lorrin, 1795-1868, American missionary to the Hawaiian Islands, b. present-day Vernon, Conn., grad. Princeton Theological Seminary, 1825. He founded (1831) on Maui a training school for teachers, offered courses in printing (which he had himself learned from a book), and began (1834) publishing the first Hawaiian newspaper. After 1841 he had posts in the royal Hawaiian government, becoming (1852) an associate justice of the supreme court. His great cultural contribution was his *Dictionary of the Hawaiian Language* (1865, rev. by H. H. Parker, 1922).

Andrews, Roy Chapman, 1884-1960, American naturalist and explorer, b. Beloit, Wis., B.A. Beloit College, 1906, M.A. Columbia Univ., 1913. Connected with the American Museum of Natural History, New York City, from 1906, he was its director from 1935 to 1942. Between 1908 and 1914 he made several trips to Alaska, along the coast of Asia, and in Malayan seas to study aquatic mammals. He later conducted (1917-30) several expeditions into central Asia to study both fossil and living plants and animals; he discovered some of the world's great fossil fields, which have yielded the remains of many ancient animals (including *Baluchitherium*, the largest known land mammal) and plants previously unknown to science. He described these expeditions in several books and discussed them all in *The New Conquest of Central Asia* (1932). His writings also include *Meet Your Ancestors* (1945), *In the Days of the Dinosaur* (1959), and the autobiographical works *Under a Lucky Star* (1943) and *An Explorer Comes Home* (1947).

Andrews Air Force Base, U.S. military installation, 4,279 acres (1,732 hectares), central Md., est. 1943. It is the chief military airport of Washington, D.C., as well as the headquarters for the air force's high-priority airlift command.

Andreyev, Leonid Nikolayevich (lyānyē't' nyīka-lī'vīch āndrā'yaf), 1871-1919, Russian writer. Andreyev's early stories were realistic studies of everyday life. Gorky was attracted by the note of social protest in his work and used his influence to obtain publication of Andreyev's first volume of short stories. After an enormous initial success Andreyev turned to more metaphysical themes, frequently employing allegory and symbol. He declared his anti-Bolshevism, and his friendship with Gorky was terminated. Andreyev went to Finland at the Bolshe-

vik accession to power and died there. His strongest dramatic works include *The Red Laugh* (1905) and *King Hunger* (1907), an acerbic portrait of Russian society. Besides the popular drama of a circus clown, *He Who Gets Slapped* (1916, tr. 1921), his best-known plays are *Anathema* (1904, tr. 1910), an allegory on the futility of goodness, and *The Pretty Sabine Women* (1912, tr. 1914), a political satire. The pessimism of his later writings cost Andreyev his popularity. His name also appears as Andreev. See *Letters of Gorky and Andreev*, ed. by Peter Yershov (1958), biographical studies by A. S. Kaun (1924, repr. 1969), J. B. Woodward (1969), and J. M. Newcombe (1973).

Andria (ān'drēā), city (1971 pop. 77,514), in Apulia, S. Italy. It is an agricultural market, handling wine, olives, and almonds. Andria was founded in the 11th cent. It was a favorite residence of Emperor Frederick II, who built (13th cent.) nearby the imposing Castel del Monte with eight round towers. There is a restored 12th-century cathedral, which has an 8th-century crypt.

Andric, Ivo (ē'vō an'drīch), 1892-, Yugoslav novelist, b. Bosnia. As a student Andric worked for the independence and unity of the South Slavic peoples, and after the formation in 1918 of the Kingdom of the Serbs, Croats, and Slovenes (later Yugoslavia), he served in diplomatic posts. His best-known work is a historical trilogy (1945) on Bosnia: *The Bridge on the Drina* (tr. 1959), *Bosnian Story* (tr. 1959), and *Young Miss Andric*. His other works include poems and novellas. The misery of man's struggle for existence is his principal theme. Andric was awarded the 1961 Nobel Prize in Literature. His later stories and novellas include *Devil's Yard* (1954, tr. 1962), *Faces* (1960), *Vizier's Elephant* (tr. 1962), cited in the Nobel Prize presentation, and *The Pasha's Concubine* (tr. 1968).

androgen (ān'drəjən) see TESTOSTERONE

Androgeus (āndrōj'ēās) see MINOS

Andromache (āndrō'mākē), Greek legend, Trojan woman, wife of Hector and mother of Astyanax. After the Trojan War she was carried away by NEOPTOLEMUS, whose father, Achilles, had slain her husband Neoptolemus died, and she married Hector's brother Helenus. She is mentioned in the *Iliad*. The plays of Euripides and Racine that bear her name tell of her captivity by Neoptolemus.

Andromeda, in astronomy, northern CONSTELLATION located to the NE of Pegasus and to the S of Cassiopeia. Its brightest star, Alpheratz (Alpha Andromedae), marks the northeast corner of the Great Square in Pegasus. The constellation also contains the bright stars Mirach (Beta Andromedae) and Almach (Gamma Andromedae) and the famous Great Nebula, or ANDROMEDA GALAXY, the only galaxy visible to the naked eye in the Northern Hemisphere. Andromeda reaches its highest point in the evening sky in November.

Andromeda (āndrōm'īdā), in Greek mythology, princess of Ethiopia, daughter of Cepheus, king of Ethiopia, and Cassiopeia. According to most legends Cassiopeia angered Poseidon by saying that Andromeda (or possibly Cassiopeia herself) was more beautiful than the nereids. Poseidon sent a sea monster to prey upon the country; he could be appeased only by the sacrifice of the king's daughter. Andromeda in sacrifice was chained to a rock by the sea, but she was rescued by PERSEUS, who killed the monster and later married her. Cassiopeia, Cepheus, and Andromeda were all set among the stars as constellations.

Andromeda Galaxy, cataloged as M31 and NGC 224, visible to the naked eye as a faint patch in the constellation Andromeda, also known as the Great Nebula in Andromeda. It is the closest spiral galaxy at 2 million light-years distance and is part of the local group of galaxies that includes the Milky Way, which it resembles in shape and composition. The Andromeda Galaxy has a linear diameter of about 120,000 light-years, as compared to about 90,000 light-years for the Milky Way, and contains at least 200 billion stars, or twice as many as the Milky Way. It has a companion satellite galaxy, M32.

Andronicus I (Andronicus Comnenus) (āndrānī'kās kōmnē'nās), 1120?-1185, Byzantine emperor (1183-85), nephew of John II. He acceded to the throne by strangling his cousin ALEXIUS II. Though notorious in his younger years for his scandalous morals, he was a competent, if cruel, ruler. He took strict measures to protect the peasants against the great landowners, enforced honesty on the tax collectors, and was the terror of corrupt officials. His severity and his failure to stop the rapid advance of WILLIAM II of Sicily against the capital led to his overthrow and

the elevation of ISAAC II Andronicus was tortured to death by the rabble. He was the last of the Comneni to hold the throne of Constantinople.

Andronicus II (Andronicus Palaeologus) (pālēōl'ā-gās), 1258-1332, Byzantine emperor (1282-1328), son and successor of Michael VIII. He devoted himself chiefly to church affairs, renewing the schism by renouncing (1282) the union established at the Second Council of Lyons. He made a treaty with the rising kingdom of Serbia. He also made an unsuccessful alliance with ROGER DE FLOR against the Turks but could not prevent their taking most of Asia Minor. His reign, shared from 1295 to 1320 with his son Michael IX, was cut short by his grandson, who forced him into a monastery and became emperor as Andronicus III.

Andronicus III (Andronicus Palaeologus), c 1296-1341, Byzantine emperor (1328-41), grandson of Andronicus II, whom he deposed after a series of civil wars. His chief minister was John Cantacuzene (later Emperor John VI). During his reign the Ottoman Turks gained almost complete control of Asia Minor, while STEPHEN DUSHAN of Serbia conquered part of Macedonia and Albania. He was succeeded by his son, John V.

Andronicus, apostle at Rome. Rom. 16:7.

Andronicus, Livius* see LIVIUS ANDRONICUS

Andropov, Yuri Vladimirovich (yōō'rē vladīyē-mīravīch āndrō'pōf), 1914-, Russian public official. As ambassador to Hungary from 1954 to 1957, he played a major role in the suppression of the 1956 anti-Communist uprising there. In 1957 he was appointed head of liaison between the Communist party of the Soviet Union and its fraternal parties within the Communist bloc. He promoted the idea of regional economic specialization within the bloc and helped to direct the ideological campaign against the Chinese Communists. In 1967 he was appointed chairman of the state security committee, or secret police. In 1973 he was named a member of the Politburo, the ruling body of the Communist party.

Andros, Sir Edmund (ān'drōs), 1637-1714, British colonial governor in America, b. Guernsey. As governor of New York (1674-81) he was bitterly criticized for his high-handed methods, and he was embroiled in disputes over boundaries and duties (see NEW JERSEY), going so far as to arrest Philip CARTERET. When James II, partly influenced by Edward RAN DOLPH, consolidated all the New England colonies into the Dominion of New England, he named (1686) Andros governor. In 1688, New York and the Jerseys were also put under his control. The suppression of charters and colonial assemblies, interference with local customs and rights, and Andros's overbearing ways caused intense friction. After news of the overthrow of James II in 1688 reached the colonies, the colonials in Boston rebelled (1689), seized Andros and other officials, and sent them to England as prisoners. He was soon released and later was governor of Virginia (1692-97) and governor of Guernsey, (1704-6). See V. F. Barnes, *Dominion of New England* (1923).

Andros, island (1971 pop. 10,457), 146 sq mi (378 sq km), SE Greece, in the Aegean Sea, the northernmost and second largest of the CYCLADES. Andros (1971 pop. 1,827) is the capital and chief town. The island produces silk, wine, and lemons and has manganese deposits. Colonized by Athens in the 5th cent. B.C., Andros rebelled in 410 B.C., became a free state, and later passed successively to Macedon, Pergamum, and Rome. Seized (1204) from the Byzantines by Venice and made a principality, it remained almost entirely under Venetian rule until its conquest (1514) by the Turks. In 1829 it passed to Greece.

Androskoggin (āndraskōg'īn), river, c 175 mi (280 km) long, rising in NE N.H., flowing south and east to enter the Atlantic Ocean at Bath, Maine. Hydroelectric plants, using the river's steep gradient, supply power to nearby towns. The area is a major pulp and paper producer, the practice of floating logs downstream has hindered the river's further development for power.

Andros Island see BAHAMA ISLANDS

Androuet du Cerceau (āndrōō-ā' dū sērsō'), family of French architects active in the 16th and 17th cent. It was founded by Jacques Androuet, c 1520-c 1584, surnamed du Cerceau [Fr., = circle], from the emblem of a circle marking his workshop. He is best known for his writings and his fanciful engravings of decorative architectural elements. Attributed to him are designs for two châteaux, Verneuil and Charleval. Of his two sons, who both worked on the Louvre, Baptiste Androuet du Cerceau, c 1545-1590,

designed the Pont Neuf spanning the Seine at Paris and became supervisor of royal construction in Paris, while Jacques Androuet du Cerceau, the younger, c 1556-1614, worked on the Tuileries. Baptiste's son Jean Androuet du Cerceau, c 1585-1650, is known for his mansions in Paris, one of which is the Hôtel de Sully.

Andrusov, Treaty of (ān'drōōsōf', Rus. āndrōō-sāf'), 1667, signed by Poland and Russia at the village of Andrusov, Russia, (present-day Androsovo, RSFSR). It ended the war of Czar ALEXIS of Russia against JOHN II of Poland. Russia gained the Smolensk and Seversk provinces and the Ukraine E of the Dnepr (left-bank Ukraine), including Kiev.

Andújar (andōō'har), city (1970 pop. 31,464), Jaén prov., S Spain, in Andalusia, on the Guadalquivir River. Its pottery and its water-cooling jars made of porous stone are famous. A painting by El Greco hangs in the 12th-century Gothic Church of Santa Maria.

anecdote (ān'tkōt'), brief narrative of a particular incident. An anecdote differs from a SHORT STORY in that it is unified in time and space, is uncomplicated, and deals with a single episode. The literal Greek meaning of the word is "not published," and it still retains some such sense of confidentiality. Sometimes an anecdote is inserted into a novel as an interval in the main plot, as in Laurence Sterne's *Tristram Shandy*. Famous books of anecdotes include the *Deipnosophistae* of Athenaeus and Plutarch's *Lives*.

Anegada* see VIRGIN ISLANDS

Aneirin* see ANEURIN

Anem (ā'nēm), the same as EN GANNIM 2

anemia, condition in which the concentration of hemoglobin in the circulating blood is below normal. Such a condition is caused by a deficient number of erythrocytes (red blood cells), an abnormally low level of hemoglobin in the individual cells, or both these conditions simultaneously. Regardless of the cause, all types of anemia cause similar signs and symptoms because of the blood's reduced capacity to carry oxygen. These symptoms include pallor of the skin and mucous membranes, weakness, dizziness, easy fatigability, and drowsiness. Severe cases show difficulty in breathing, heart abnormalities, and digestive complaints. One of the most common anemias, iron-deficiency anemia, is caused by insufficient iron, an element essential for the formation of hemoglobin in the erythrocytes. In most adults (except pregnant women) the cause is chronic blood loss rather than insufficient iron in the diet, and, therefore, the treatment includes locating the source of abnormal bleeding in addition to the administration of iron. Pernicious anemia causes an increased production of erythrocytes that are structurally abnormal and have attenuated life spans. This condition rarely occurs before age 35 and is inherited, being more prevalent among persons of Scandinavian, Irish, and English extraction. It is caused by the inability of the body to absorb vitamin B₁₂ (which is essential for the maturation of erythrocytes) from food and is treated by repeated injections of vitamin B₁₂. There are several conditions that cause the destruction of erythrocytes, thereby producing anemia. Allergic-type reactions to bacterial toxins and various chemical agents, among them sulfonamides and benzene, can cause hemolysis, which requires emergency treatment. In addition, there are unusual situations in which the body produces antibodies against its own erythrocytes, the mechanism triggering such reactions remains obscure. Any disease or injury to the bone marrow can cause anemia, since that tissue is the site of erythrocyte synthesis. Bone marrow destruction can also be caused by irradiation, disease, or various chemical agents. There are several inherited anemias that are more common among dark-skinned people. SICKLE CELL ANEMIA is inherited as a recessive trait almost exclusively among blacks; the condition is characterized by a chemical abnormality of the hemoglobin molecule that causes the erythrocytes to be misshapen. Thalassemia major (Cooley's anemia) is the most serious of the hereditary anemias that occur more frequently among those of Mediterranean, Middle Eastern, and S. Chinese ancestry. The erythrocytes are abnormally shaped and many are nucleated. Symptoms include enlarged liver and spleen and jaundice. Thalassemia major usually causes death before adulthood is reached.

anemometer. see WIND

anemone (anēm'anē) or windflower, any of the perennial herbs, wild or cultivated, of the genus *Anemone* of the family Ranunculaceae (BUTTERCUP

family). A rich legendary history has gained the anemone many names and attributes. It is said to have sprung from the blood of Adonis, Romans considered it valuable in preventing fever, it has been applied for bruises and freckles, for some it is tainted with evil, and by the Chinese it has been associated with death. The name windflower is accounted for in several ways, one of which is Pliny's statement that anemone blossoms are opened by the wind. Anemones contain an acrid compound called anemonin. It is poisonous but was formerly used medicinally. Best known of the wild kinds are the white- or purplish-flowered wood anemone (*A. quinquefolia*), sometimes known specifically as windflower, and the greenish-white-flowered tall anemone, or thimbleweed (*A. virginiana*), with thimble-shaped fruit. The most common cultivated kinds include the tall, autumn-flowering Japanese anemone (*A. japonica*) for gardens and the florists' poppy anemones (*A. coronaria*), native to the Mediterranean area. Similar to the anemone is the wild rue anemone of another buttercup-family genus (*Anemone* or *Synedemon*). The PASQUEFLOWER is sometimes included in *Anemone*. Anemones are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Aner (ā'nār) 1 Ally of Abraham. Gen. 14:13, 24. 2 Levitical town, E of the Jordan. 1 Chron. 6:70.

aneroid altimeter: see AIR NAVIGATION

aneroid barometer: see BAROMETER

anesthesia (ān'isthē'zhā) [Gr., = insensibility], loss of sensation, especially that of pain, induced by drugs. General anesthetics, usually employed in surgical operations of long duration, cause unconsciousness and are usually inhalation anesthetics. These inhalant gases include ether, halothane, and cyclopropane. Anesthesia of short duration may be induced by intravenous injection of sodium pentothal, a procedure used to initiate unconsciousness in most surgical operations. Rectal anesthetics such as tribromoethanol (Avertin) are also used in this manner, usually supplemented later by inhalation anesthetics. Nitrous oxide is used when deep unconsciousness is not required. Local anesthetics (e.g., novocaine and ethyl chloride) are used in dentistry and in minor surgery and affect sensation only in the region of application. Spinal anesthesia is produced by injecting the anesthetic beneath the membrane of the spinal cord. This method is often used in surgery of the abdomen and legs. Caudal anesthesia, used in obstetrics, is produced by injecting the anesthetic into the sacral canal. Muscle relaxants, such as curare and its derivatives, are used to reduce the amount of conventional anesthetic required. Body temperature may be lowered in conjunction with the use of anesthetics. Extensive heart and brain surgery can be carried out at body temperatures which are 10° F or more below normal. The metabolic rate is so much reduced that cells are not damaged by the lack of circulating blood. The various forms of anesthesia are frequently used in combination, in the United States, a skilled anesthesiologist is present at all major operations. Anesthetics are also used in the treatment of certain types of mental illness. Early experimenters with nitrous oxide (laughing gas) were Sir Humphry Davy of England and Horace Wells of the United States. Ether was used as a general anesthetic in the United States by Crawford W. Long in 1842, but more general use of ether came after a demonstration at the Massachusetts General Hospital in Boston by William T. G. Morton in 1846. Sir James Y. Simpson in 1847 was the first to employ a general anesthetic in obstetrics. Safer and more efficient anesthetics are continually discovered, as anesthesiologists perfect new ways of combining and administering them. See ACUPUNCTURE. See T. E. Keys, *History of Surgical Anesthesia* (rev. ed. 1963), Frederick Prescott, *The Control of Pain* (1965).

anesthesiology (ān'tisthē'zēōl'ajē), branch of MEDICINE concerned primarily with procedures for rendering patients insensitive to pain, and for supporting life systems under the strains of ANESTHESIA and surgery. The anesthesiologist will induce unconsciousness for various clinical purposes and will perform cardiac and respiratory resuscitation when necessary.

Aneto, Pico de (pē'kō dā anā'tō), Fr. *Pic de Nethou* or *Pic d'Anethou*, peak, 11,168 ft (3,404 m) high, NE Spain, in the Maladetta group near the French border. It is the highest peak of the Pyrenees.

Anetothite (ān'tiōthīt) see ANATHOTH

Aneurin (ā'nyōōrīn, ā'-) or **Aneirin** (ā'nīrēn), fl. c 600, Welsh bard whose reputed writings are con-

tained in a 13th-century manuscript, *Book of Aneirin*. Included in this manuscript is *Gododin*, a 900-line elegiac poem of a defeat of the Welsh by the Saxons. The poem is one of the oldest extant works of Welsh literature and contains probably the earliest explicit allusion to King Arthur.

aneurysm (än'yöörizəm), localized dilatation of a blood vessel, particularly an artery. Dilatation of an artery, and therefore weakness of that portion of the arterial wall, may be congenital, or it may be caused by syphilis, high blood pressure, arteriosclerosis, bacterial and fungus infections, or penetrating injury as from a bullet or knife. An aneurysm may be asymptomatic, or it may cause varying symptoms depending upon its location and on whether the expanding mass is pressing on adjacent nerves or vital organs. The weakened arterial walls of an aneurysm are always in danger of sudden rupture, with resulting hemorrhage and death. Aneurysms occur most commonly in the large arteries, the aorta, the largest vessel in the body, is the one most often affected. They also occur in the arteries within the skull and in other areas of the body. The only treatment is surgical, where feasible, i.e., excision of the dilated saclike portion of the affected artery. This may require replacement by an arterial graft, a portion of vessel similar in size. There has also been successful replacement with tubes made of synthetic material.

ANFO, ammonium nitrate and fuel oil. See EXPLOSIVE.

Angara (äng'gärä, Rus ün'gärä'), river, c 1,150 mi (1,850 km) long, SE Siberian USSR, the outlet of Lake Baykal. After leaving the southwestern end of Lake Baykal, it flows north past Irkutsk and Bratsk, then turns west after receiving the Ilim River and flows into the Yenisei River near Strelka. Below its junction with the Ilim River the Angara is known also as the Upper Tunguska (Rus Verkhnyaya Tunguska). The Angara is navigable between Irkutsk and Bratsk, below Bratsk there are many rapids. At Bratsk is a large dam with one of the world's largest hydroelectric power plants (c 4.5 million kw), a smaller hydroelectric station is at Irkutsk. Iron, coal, and gold deposits are found in the Angara basin. The Upper Angara River (Rus Verkhnyaya Angara), c 200 mi (320 km) long, rises NE of Lake Baykal and flows SW through the Buryat Autonomous Republic into the lake, it is partly navigable.

Angara Shield, Asia. See SIBERIAN PLATFORM.

angel [Gr, =messenger], bodiless, immortal spirit, limited in knowledge and power, accepted in the traditional belief of Judaism, Christianity, and Islam. Angels appear frequently in the Bible, often in critical roles, e.g., visiting Abraham and Lot (Gen 18, 19), wrestling with Jacob (Gen 32:24-32), and guiding Tobit (Tobit 5). In the Gospels an angel announced the Incarnation to the Virgin Mary (Luke 1), and an angel at the empty tomb revealed the Resurrection (Mat 28:1-7). The Bible also speaks of guardian angels, protecting individuals or nations (Dan 10:10-21, Mat 18:10). The hierarchy of angels in three choirs appears early in the Christian era, the classes are, from the highest: seraphim, cherubim, thrones, dominations, virtues, powers, principalities, arch-angels, angels. Eph 1:21, Col 1:16. From these two passages Dionysius the Areopagite fixed the number and order of angels in *The Celestial Hierarchy*. Roman Catholics and the Orthodox venerate angels, and the cult of guardian angels is especially extensive in the West (feast of Guardian Angels Oct 2). Protestants have generally abandoned the cult of angels. The angels of Hell, or dark angels, or devils, are the evil counterpart of the heavenly host, the chief of them, Satan (or Lucifer), was cast out of heaven for leading a revolt. They are often viewed as the initiators of evil temptations (Job 1-2, Isa 14:4-23, Mat 25:41, Luke 10:18, Eph 6:12, Jude 9). Famous literary treatments of angels are those of John Milton's *Paradise Lost* and Dante's *Divine Comedy*. See ARCHANGEL, CHERUB, SERAPH, GABRIEL, MICHAEL, RAPHAEL, SATAN.

Angel Fall, waterfall, Sp. *Salto Ángel*, 3,212 ft (979 m) high, SE Venezuela, in the Guiana Highlands. Springing from Auyan-Tepui Mesa, it is the highest uninterrupted waterfall in the world.

angelfish: see BUTTERFLY FISH.

Angelholm (äng'älhöl'm), city (1970 pop. 18,364), Kristianstad co., SW Sweden, on Skålderviken Bay (an arm of the Kattegat), chartered 1516. It is a beach resort and has tanneries. The city is also known as Engelholm.

angelica (änjē'līkə), any species of the genus *Angelica*, plants of the family Umbelliferae (CARROT family), native to the Northern Hemisphere and New

Zealand, valued for their potency as a medicament and protection against evil spirits and the plague, which probably accounts for the name, angelica is a poetic symbol for inspiration. The roots and fruits yield angelica oil, which is used in perfume, confectionery, medicine, and for flavoring liqueurs (such as angelica). The species most often used for these purposes is *A. archangelica*, a subarctic and alpine plant of the Old World once extensively grown but now seldom cultivated outside Germany. This and a few other species are sometimes used as ornamentals. Angelica is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Umbellales, family Umbelliferae.

Angelico, Fra (fra anjē'līkō), c 1400-1455, Florentine painter, b. Vicchio, Tuscany. He was variously named Guido (his baptismal name), or Guidolino, di Pietro, and Giovanni da Fiesole. After his death he was called Il Beato Fra Giovanni Angelico, although he was never officially beatified. Angelico's style is remarkable for its purity of line and color and its spiritual expressiveness. He took his vows c 1425 in the Dominican order. The first painting of certain date (1433) by Angelico is his *Madonna of the Linen Guild* (St. Mark's convent, Florence). It is supposed that his activity began at least 10 years earlier, and that he first painted small pictures, such as *St. Jerome Penitent* (Princeton Univ.) and miniatures. Other works suggested for this period (1423-33) are *Virgin and Child Enthroned with Twelve Angels* (Staedel Inst., Frankfurt), *Virgin and Child with Angels* (National Gall., London), *Madonna of the Star and Naming of the Baptist* (both St. Mark's convent). It is thought that Angelico was first influenced by Gentile da Fabriano, and that he soon adopted Masaccio's advances in spatial conception. Critics have assigned to the 1430s such works as the *Annunciation* (Cortona), *Coronation of the Virgin* (Louvre), *Deposition* and *Last Judgment* (both St. Mark's convent). In 1436, under the protection of Cosimo de' Medici, the Dominicans of Fiesole moved to St. Mark's convent in Florence. Fra Angelico supervised the fresco decoration of the building. Among the works considered to be by his hand are the *Crucifixion with St. Dominic* (cloisters) and the great *Crucifixion* (chapter house). In the convent also are frescoes *Noli mi Tangere*, *Annunciation*, *Transfiguration*, *Mocking of Christ*, *Presentation in the Temple*, *Virgin and Child with Saints*, and others. In 1445 he was summoned to Rome by Pope Eugenius IV to decorate the Cappella del Sacramento in the Vatican. In 1447 he visited Orvieto, where, assisted by his pupil Benozzo Gozzoli, he painted *Christ as Judge* and the *Prophets* in the Cappella Nuova of the cathedral. Returning to Rome, he designed in the following year his greatest and most unified scenes—episodes from the lives of St. Stephen and St. Lawrence. However, the execution of this project was probably carried out mainly by pupils. Fra Angelico treated none but religious subjects. Adapting the artistic innovations of his time (e.g., sculptural clarity of form and spatial depth), he interpreted them in terms of the greatest spirituality. Angelico endowed the new forms with his own incomparable sense of coloring and unity. In the United States he is represented by the *Crucifixion* (Fogg Mus., Cambridge), *Assumption and Dormition of the Virgin* (Gardner Mus., Boston), *Temptation of St. Anthony Abbot* (Mus. of Fine Arts, Houston, Texas), and *Crucifixion and Nativity* (both Metropolitan Mus.).

Angel Island, largest island in San Francisco Bay, W Calif. Discovered by the Spanish in 1775, it came under U.S. control in 1851. The U.S. army used the island as a base from 1863 to 1946, in 1952 a radar and missile site was established. During World War II, enemy prisoners of war were confined on Angel Island. Part of the island is now a state park.

Angell, James Burrill, 1829-1916, American educator, editor, and diplomat, b. Scituate, R.I., grad Brown, 1849, and studied abroad. He became professor of modern languages at Brown. Resigning in 1860, he served as editor of the *Providence Journal*. Later, as president of the Univ. of Vermont (1866-71) and of the Univ. of Michigan (1871-1909), Angell became known as an administrator. In this period he served also as minister to China (1880-81) and to Turkey (1897-98). See his *Reminiscences and Selected Addresses* (1912, repr. 1971), biography by S. W. Smith (1954).

Angell, James Rowland, 1869-1949, American educator and psychologist, b. Burlington, Vt., grad Univ. of Michigan (B.A. 1890, M.A. 1891), M.A. Harvard, 1892, son of James B. Angell. After study abroad, he taught at the Univ. of Minnesota, then at the Univ. of Chicago (1894-1920), where he became

professor and head of the psychology department (1905), dean of the university faculties (1911), and acting president (1918-19). He served as president of Yale from 1921 until his retirement in 1937, in his administration the physical facilities of Yale were greatly expanded. In 1937 he became educational counselor of the National Broadcasting Company. His writings include several standard psychology textbooks, *Chapters from Modern Psychology* (1912), *American Education* (1937), and articles on psychology and education.

Angell, Sir Norman, 1872?-1967, British internationalist and economist, whose name originally was Ralph Norman Angell Lane. He came to fame with *The Great Illusion* (1910, rev. ed. 1933), in which he posited that the common economic interests of nations make war futile. At the close of World War I he worked for a generous peace and international cooperation. In *Peace with the Dictators?* (1938) he attacked the British Conservative party's policy of condoning Japanese and Italian aggression. After World War II he urged unity among the Western democracies in such works as *Defence and the English-speaking Role* (1958). Knighted in 1931, Norman Angell was awarded the 1933 Nobel Peace Prize. See his autobiography (1951).

Angelus (än'jələs), family name and dynasty of three Byzantine emperors (1185-1204). See ISAAC II, ALEXIUS III, ALEXIUS IV.

Angelus [Lat, =angel], daily prayer of the Roman Catholic Church, said usually three times daily, as announced by a bell, traditionally at six in the morning, at noon, and at six in the evening. It is said in honor of the Incarnation and consists of three repetitions of the Hail Mary together with verses and a prayer. It takes its name from the opening word of the Latin version: *Angelus Domini nuntiavit Mariae* [the angel of the Lord declared unto Mary].

Angelus Silesius (än'jələs silē'zhəs), pseud. of Johannes Scheffler (yö'hän'əs shēf'lar), 1624-77, German poet. He is best known for his pastoral lyric cycles *Heilige Seelenlust* (1657-68) and *Cherubinischer Wandersmann* (1674-75), which can be interpreted as Christian as well as pantheistic. Scheffler's mysticism strongly influenced 18th-century PIETISM. See study by J. L. Sammons (1967).

Ängermanälven (öng'ärmanäl'vən), river, c 280 mi (450 km) long, rising in Vasterbotten prov., W central Sweden, and flowing generally southeast through narrow lakes and past Sollefteå and Kramfors to the Gulf of Bothnia at Harnösand. The Faxälven is its chief tributary. The river is used to float logs downstream to sawmills. There are numerous hydroelectric power plants on the river. Sando bridge (866 ft/264 m long, opened 1943), one of the world's longest concrete arch bridges, spans the river.

Angers (änzhä'), city (1968 pop. 134,959), capital of Maine-et-Loire dept., W France, in Anjou, on the Maine River. A business and trade center, it is known for its wine. It also has glassworks, printing plants, and factories making electronic and photographic equipment, textiles, food, paper products, and tiles. On its outskirts are the largest slate quarries in France. Of pre-Roman origin, Angers became the seat (870-1204) of the powerful counts of ANJOU and the historic capital of the province. There is a fine cathedral (12th-13th cent.) and a museum containing 14th-century tapestries and a large collection of the sculpture of David d'Angers. The 13th-century castle was among the buildings damaged in World War II. Schools of fine arts and medicine are located there.

Angevin (än'jəvīn) [Fr, =of Anjou], name of two medieval dynasties originating in France. The first ruled over parts of France and over Jerusalem and England, the second ruled over parts of France and over Naples, Hungary, and Poland, with a claim to Jerusalem. The older house issued from one Fulk, who became count of ANJOU in the 10th cent. Fulk V (see FULK) of Anjou, one of his descendants, became (1131) king of Jerusalem. A younger son inherited the kingship of Jerusalem as Baldwin III and was succeeded by Almaric I, Baldwin IV, and Baldwin V, with whom the branch ended (1186). Fulk V's elder son, GEOFFREY IV (Geoffrey Plantagenet), inherited Anjou. He married Matilda of England, daughter of King Henry I of England, and conquered Normandy. Their son became (1154) the first Angevin (or Plantagenet) king of England as Henry II. His successors were Richard I, John, Henry III, Edward I, Edward II, Edward III, and Richard II, after whom the English branch split into the houses of Lancaster and of York. A nephew of Richard I and John became (1196) duke of Brittany as Arthur I. From his sister

and her husband, Peter of Dreux, a Capetian noble who became Duke PETER I of Brittany, the subsequent rulers of Brittany issued The Breton line of the Angevins came to an end with the marriages of Anne of Brittany and her daughter to the kings of France. The second house of Anjou was a cadet branch of the Capetians and originated with Charles, a younger brother of King Louis IX of France. Charles was made count of Anjou by Louis, acquired Provence by marriage, and in 1266 was invested by the pope with the kingdom of Naples and Sicily as Charles I. Charles lost Sicily but retained Naples. His successors were Charles II, Robert, and Joanna I of Naples and Provence. On the death (1382) of Joanna I the succession to Naples was contested by two cadet branches, both descended from Charles II of Naples. The first was represented by Charles of Durazzo (Charles III of Naples), a great-grandson through the male line, and by his children, Lancelot and Joanna II. They retained, for the most part, actual possession of the kingdom, despite the efforts of the rival line, issued from Margaret, a daughter of Charles II. Margaret married Charles of Valois, their son and grandson were kings Philip VI and John II, respectively, of France. John made his younger son, Louis, duke of Anjou, Joanna I of Naples adopted Louis as heir, Louis thus became Louis I of Naples and Provence. His successors were Louis II, Louis III, and Rene. Although the last two were successively designated as heirs by Joanna II, Naples was seized by King Alfonso V of Aragon and eventually remained in Spanish hands. Rene became duke of Lorraine by marriage. His nephew and heir, Charles, count of Maine, died in 1481 without issue, and Anjou, Maine, Provence, and the Angevin claim to Naples all passed to the French crown. The theoretical claim to Jerusalem stemmed from Charles I of Naples, whom Pope John XXI invested (c 1276) with the title. Rene's claim to the title was transmitted to the house of Lorraine. The Hungarian branch of Anjou began (1308) with Charles Robert (King Charles I of Hungary), a grandson of Charles II of Naples. Charles I's son became king of Hungary and Poland as Louis I. Hungary passed to Louis's daughter Mary and to her husband Sigismund (later Holy Roman emperor), and Poland passed to Ladislaus II of Poland, husband of Louis's daughter Jadwiga.

Angilbert, Saint (äng'gīlbärt), d. B14, Frankish statesman and courtier under Charlemagne, abbot of Centula (now Saint-Riquier), near Amiens. He was highly regarded in the Carolingian revival as a writer of Latin poetry. Feast Feb. 18.

angina pectoris (äng'jēnā pēk'tarīs), condition characterized by chest pain and caused by occlusion (closure) of the coronary arteries, resulting in insufficient supply of oxygen to the heart muscle, in rare cases, it occurs in the absence of coronary artery disease. The pain is usually experienced under or to the left of the sternum (breastbone) and radiates to the left shoulder and down the upper arm, less frequently, it spreads to the right shoulder. The attack usually subsides without residual discomfort and, when precipitated by physical exertion, is quickly halted when the subject rests. Angina pectoris occurs usually after the age of 50, more often in men than women, and frequently follows exertion, excitement, eating, or exposure to cold. Associated symptoms are faintness and difficulty in breathing. Drugs (e.g., amyl nitrite or nitroglycerine) that dilate the blood vessels of the heart are used in treatment.

angiosperm (äng'jēspūrm'), term used for any flowering plant in which the ovules, or young seeds, are enclosed within the ovary (that part of the pistil specialized for seed production), in contrast to the gymnosperms, in which the seeds are exposed during all stages of development. The angiosperms constitute the division MAGNOLIOPHYTES and include all our agricultural crops (including the cereal grains and other grasses), all garden flowers and horticultural plants, all the common broad-leaved shrubs and trees, and all the usual field, garden, and roadside weeds. The angiosperms are the best known and most economically important of all plants.

Angkor (äng'kôr), site of several capitals of the KHMER EMPIRE, N of Tônlé Sap, NW Cambodia, for five and a half centuries the heart of the empire. Extending over an area of 40 sq mi (104 sq km), the ruins contain some of the most imposing monuments in the world. The first capital was founded by Yasovarman I (889-900) and was centered around the pyramidal temple of Phnom Bak Kheng. To the southeast of the original capital, a new temple com-

plex, Angkor Wat [Angkor temple], was created under Suryavarman II (1113-50). Planned as a sepulcher and a monument to the divinity of the monarch, it is probably the largest religious structure in the world. Surrounded by a vast moat, the temple is approached by means of an extensive causeway bordered on either side by balustrades in the form of giant Nagas (divine serpents). This avenue leads to a magnificent entrance gate. The temple proper is reached through three series of galleries separated by paved courts. The middle series has four corner towers, above it, the highest series also has four corner towers and is joined to the central sanctuary by colonnades. The architecture of Angkor Wat, derived from the stupa form, is enormously impressive, but the most remarkable feature of the temple compound is its sculptural ornament, covering thousands of feet of wall space. The decoration is in the form of low relief of impeccable craftsmanship, illustrating scenes from the legends of Vishnu and Krishna, with some historical events from the life of the king. More delicate in proportions than their Indian prototypes, many of the figures, in their elegance of gesture and stateliness of pose, bear a resemblance to modern Cambodian dancers. In 1177, Angkor was sacked by the Chams, and Angkor Wat fell into ruins. Jayavarman VII (1181-c 1218) established a new capital, Angkor Thom [the great Angkor], N of Phnom Bak Kheng. The buildings of an already existing city were used as residential palaces and governmental buildings, an excellent system of moats and canals was constructed. At the four entrances of the capital, there are gateways, they open onto four avenues that meet at the Bayon, the temple in the center of the city. Before each gateway is a bridge decorated with a balustrade in the shape of a giant Naga, supported on each side by 27 carved figures. Above the gates are carved imposing stone faces, generally thought to symbolize the Bodhisattva Lokeshvara. Under Jayavarman VII the Bayon was used as a Buddhist sanctuary, but it underwent alterations during a later Hindu period. The central tower bears a giant image of Buddha, which has been interpreted as the incarnation of Jayavarman VII. Surrounding the main structure is a forest of more than 50 smaller towers studded with multiple heads of the king as a Buddhist god. The buildings are covered with elaborate decoration, more spontaneously and realistically rendered than that at Angkor Wat and again illustrating historical episodes from the king's life. Angkor was raided in the 14th and 15th cent by the Thai. It was abandoned in 1434 for Phnom Penh. Overgrown by the jungle, the ruins were discovered by the French in 1861. Many of the monuments were subsequently restored to their former glory. See Madeleine Giteau, *Khmer Sculpture and the Angkor Civilization* (1966), Bernard Groslier and

Jacques Arthaud, *The Arts and Civilization of Angkor* (rev. ed 1966), Jan Myrdal and Gun Kessle, *Angkor: An Essay on Art and Imperialism* (1971), John Audric, *Angkor and the Khmer Empire* (1972).

angle, in mathematics, figure formed by the intersection of two straight lines, the lines are called the sides of the angle and their point of intersection the vertex of the angle. Angles are commonly measured in degrees (°) or in radians. If one side and the vertex of an angle are fixed and the other side is rotated about the vertex, it sweeps out a complete circle of 360° or 2 π radians with each complete rotation. Half a rotation from 0° or 0 radians results in a straight angle, equal to 180° or π radians, the sides of a straight angle form a straight line. A quarter rotation (half of a straight angle) results in a right angle, equal to 90° or $\pi/2$ radians, the sides of a right angle are perpendicular to one another. An angle less than a right angle is acute, and an angle greater than a right angle is obtuse. Two angles that add up to a right angle are complementary. Two angles that add up to a straight angle are supplementary. One of the GEOMETRIC PROBLEMS OF ANTIQUITY is the trisection of the angle.

angler, common name for a member of the family Ceratidae, European and American bottom-dwelling predaceous fishes. The angler lies on the bottom and lures its prey with a long, wormlike appendage that extends forward and dangles over its mouth. When the lure is touched, the huge mouth opens automatically. The deep-sea anglers are fantastic fishes, many with luminescent lures, that live at depths of 200 to 600 fathoms. The various species grow from 6 to 40 in (15-500 cm) long. The parasitic males attach themselves to the females and do not develop eyes and digestive organs. The sargassum fishes, less than 6 in (15 cm) long, have armlike pectoral fins and mottled coloration adapted to merge with the seaweed in which they live, they are found in warm Atlantic waters, as are the B- to 12-in (20-30 cm) batfishes, named for their jointed pectoral fins. The goosefish, the largest angler, reaches 4 ft (120 cm) and 50 lb (23 kg) and is capable of swallowing fish as big as itself. Angler fish are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Lophiiformes, family Ceratidae.

Angles· see ANGLO-SAXONS

Anglesey or Anglesea (both äng'gälsē), island (1971 pop. 59,705), 275 sq mi (712 sq km), NW Wales. Beaumaris is the chief town. It is a region of low, rolling hills. The principal industries are agriculture and stock raising. Two bridges over the Menai Strait connect the island to the mainland. The town of Menai Bridge has long been a stock-trading center for NW Wales. Anglesey is said to have been the last refuge of the druids from the Romans in Britain. Penrynnydd, at the center of the island, was the home of Owen Tudor, founder of the house of

Life cycle of an angiosperm

Tudor In 1974, Anglesey became part of the new nonmetropolitan county of Gwynedd

anglesite (äng'gläsīt), pale green, blue, yellow-to-white, or colorless mineral, a sulfate of lead, $PbSO_4$, that is formed by oxidation of GALENA, crystallizing in the orthorhombic system and occurring also in granular or massive form It is widely distributed and commonly associated with galena and other lead minerals It is a minor lead ore

Anglican Communion, the body of churches in all parts of the world that are in communion with the Church of England (see ENGLAND, CHURCH OF) The Communion is composed of regional churches, provinces, and separate dioceses bound together by mutual loyalty as expressed in the Lambeth Conference of 1930 There are 20 national member churches, including the Protestant Episcopal Church of America (see EPISCOPAL CHURCH, PROTESTANT), the Scottish Episcopal Church, the Church in Wales, the Church of Ireland (see IRELAND, CHURCH OF), and the Nippon Sei Ko Kai (Japan) There are separate dioceses in Jerusalem and Egypt There are over 46 million baptized members Worship is liturgical and is regulated by the BOOK OF COMMON PRAYER See Stephen Neill, *Anglicanism* (3d ed 1965), C E Simcox, *The Historical Road of Anglicanism* (1968)

angling: see FISHING

Anglo-Catholic movement: see OXFORD MOVEMENT

Anglo-Norman literature, body of literature written in English, in the French dialect known as Anglo-Norman, from c 1100 to c 1250 Initiated at the court of Henry I, it was supported by the wealthy, French-speaking aristocracy who controlled England after the Norman conquest The dominant literary forms were histories, sacred and secular biographies, and homilies, romance and fiction were relatively scarce Perhaps the most important historian was Geoffrey Gaimar, whose two-part history of England, *Histoire des Bretons* and *Estorie des Engles*, was written in verse Philippe of Thaün, the earliest known Anglo-Norman poet, was noted for the moral allegory the *Bestiaire* Of secular works, Thomas's *Tristan* (c 1170) is notable both artistically and as an early source for the Tristram and Isolde legend See M D Legge, *Anglo-Norman Literature and Its Background* (1963)

Anglo-Saxon Chronicle, collective name given several English monastic chronicles in Anglo-Saxon, all stemming from a compilation made from old annals and other sources c 891 Although the work was thought for some time to have been commissioned by King Alfred, there is no positive evidence to substantiate this claim, his encouragement of learning, however, undoubtedly inspired the compilation of the chronicle The original chronicle was later edited with additions, omissions, and continuations by monks in various monasteries The account begins with the start of the Christian era and extends to 1154 Much of the very early material is drawn from Bede's history From the period of the wars between Saxons and Danes onward, most of the annals are original and are the sole source for information about certain events The writing is generally in sparse prose, but some poems are inserted, notably the stirring "Battle of Brunanburh" (see BRUNANBURH) The four chronicles recognized as distinct are called the Winchester Chronicle, the Abingdon Chronicle, the Worcester Chronicle, and the Peterborough Chronicle See Charles Plummer, ed., *Two of the Saxon Chronicles Parallel* (1892-99), Dorothy Whitelock et al., ed., *The Anglo-Saxon Chronicle* (1962), Cecily Clark, ed., *The Peterborough Chronicle* (2d ed 1970)

Anglo-Saxon literature, the literary writings in Old English (see ENGLISH LANGUAGE), composed between c 650 and c 1100 There are two types of Old English poetry: the heroic, the sources of which are pre-Christian Germanic myth, history, and custom, and the Christian Although nearly all Old English poetry is preserved in only four manuscripts—indicating that what has survived is not necessarily the best or the most representative—much of it is of high literary quality Moreover, the Old English heroic poetry is the earliest extant in all of Germanic literature It is thus the nearest we can come to the oral pagan literature of Germanic culture, and it is also of inestimable value as a source of knowledge about many aspects of Germanic society WIDSITH, a 7th-century Old English poem, is one of the earliest and thus of particular historic and linguistic interest BEOWULF, a complete epic, is the oldest surviving Germanic epic as well as the longest and most important poem in Old English It originated as a pa-

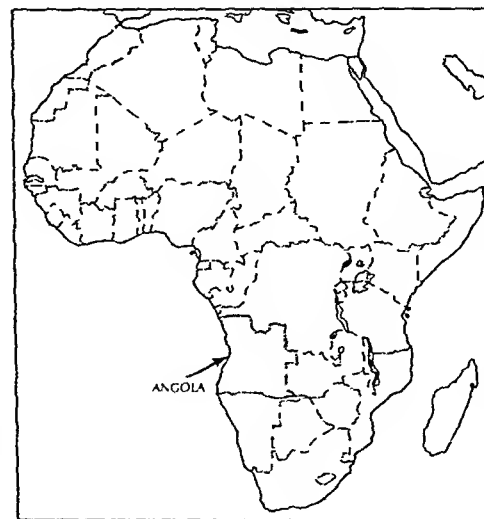

gan saga transmitted orally from one generation to the next, court poets known as scopos were the bearers of tribal history and tradition The version of *Beowulf* that is extant was composed by a Christian poet probably early in the 8th cent However, intermittent Christian themes found in the epic, although affecting in themselves, are not integrated into the essentially pagan tale The epic celebrates the hero's fearless and bloody struggles against monsters and extols courage, honor, and loyalty as the chief virtues in a world of brutal force The elegaic theme, a strong undercurrent in *Beowulf*, is central to *Deor*, *The Wanderer*, *The Seafarer*, and other poems In these works, a happy past is contrasted with a precarious and desolate present The *Finnsburgh* fragment, *The Battle of Maldon*, and *The Battle of Brunanburh* (see MALDON and BRUNANBURGH), which are all based on historical episodes, mostly celebrate great heroism in the face of overwhelming odds In this heroic poetry, all of which is anonymous, greatness is measured less by victory than by perfect loyalty and courage in extremity Much of the Old English Christian poetry is marked by the simple belief of a relatively unsophisticated Christianity, the names of two authors are known CAEDMON—whose story is charmingly told by the Venerable BEDE, who also records a few lines of his poetry—is the earliest known English poet Although the body of his work has been lost, the school of Caedmon is responsible for poetic narrative versions of biblical stories, the most dramatic of which is probably Genesis B CYNEWULF, a later poet, signed the poems *Elene*, *Juliana*, and *The Fates of the Apostles*, and no more is known of him The finest poem of the school of Cynewulf is *The Dream of the Rood*, the first known example of the dream vision, a genre later popular in MIDDLE ENGLISH LITERATURE Other Old English poems include various riddles, charms (magic cures, pagan in origin), saints' lives, gnomic poetry, and other Christian and heroic verse The verse form for Old English is an alliterative line of four stressed syllables and an unfixed number of unstressed syllables broken by a caesura and arranged in one of several patterns Lines are conventionally end-stopped and unrhymed The form lends itself to narrative, there is no lyric poetry in Old English A stylistic feature in the heroic poetry is the kenning, a figurative phrase, often a metaphorical compound, used as a synonym for a simple noun, e.g., the repeated use of the phrases *whale-road for sea* and *twilight-spoiler for dragon* (see OLD NORSE LITERATURE) Old English literary prose dates from the latter part of the period Prose was written in Latin before the reign of King ALFRED (reigned 871-99), who worked to revitalize English culture after the devastating Danish invasions had ended As hardly anyone could read Latin, Alfred translated or had translated the most important Latin texts He also encouraged writing in the vernacular Didactic, devotional, and informative prose was written, and the Anglo-Saxon Chronicle, probably begun in Alfred's time as an historical record, continued for over three centuries Two preeminent Old English prose writers were AELFRIC, Abbot of Eynsham, and his contemporary WULFSTAN, Archbishop of York Their sermons (written in the late 10th or early 11th cent) set a standard for homiletics A great deal of Latin prose and poetry was written during the Anglo-Saxon period Of historic as well as literary interest, it provides an excellent record of the founding and early development of the church in England, and reflects the introduction and early influence there of Latin-European culture See also ENGLISH LITERATURE See G P Krapp and E V K Dobbie, ed., *The Anglo-Saxon Poetic Records* (6 vol., 1932-53), G K Anderson, *The Literature of the Anglo-Saxons* (1949, repr 1962), S B Greenfield, *A Critical History of Old English Literature* (1965), C I Wrenn, *A Study of Old English Literature* (1967)

Anglo-Saxons, name given to the Germanic-speaking peoples who settled in England after the decline of Roman rule there The Angles (Lat *Angli*), who are mentioned in Tacitus' *Germania*, seem to have come from what is now Schleswig in the later decades of the 5th cent Their settlements in the eastern, central, and northern portions of the country were the foundations for the later kingdoms known as EAST ANGLIA, MERCA, and NORTHUMBRIA The SAXONS, a Germanic tribe who had been continental neighbors of the Angles, also settled in England in the late 5th cent after earlier marauding forays there The later kingdoms of SUSSEX, WESSEX, and ESSEX were the outgrowths of their settlements The Jutes, a tribe about whom very little is known except that they probably came from the area around the mouths of the Rhine, settled in Kent (see KENT, KING-

DOM OF) and the Isle of Wight The term "Anglo-Saxons" was first used in Continental Latin sources to distinguish the Saxons in England from those on the Continent, but it soon came to mean simply the "English" The more specific use of the term to denote the non-Celtic settlers of England prior to the Norman Conquest dates from the 16th cent In more modern times it has also been used to denote any of the people (or their descendants) of the British Isles See P Hunter Blair, *An Introduction to Anglo-Saxon England* (1954, repr 1962), F M Stenton, *Anglo-Saxon England* (3d ed 1971), D M Wilson, *The Anglo-Saxons* (rev ed 1971), D J V Fisher, *The Anglo-Saxon Age, 400-1042* (1973)

Angmagssalik (angmag'salik), settlement and trading post (1969 pop 2,530), E Greenland, on the Denmark Strait just S of the Arctic Circle It was founded in 1894 Its radio-meteorological station (est 1925) is the oldest on Greenland

Angola (äng-gō'la) or **Portuguese West Africa**, Portuguese territory (1973 est pop 5,850,000), including the exclave of Cabinda, 481,351 sq mi (1,246,700 sq km), SW Africa LUANDA is the capital, other important cities are NOVA LISBOA, LOBITA, BEN GUELA, and MOSSAMEDES Angola is bounded by the Atlantic Ocean on the west, by Zaïre on the north and northeast, by Zambia on the east, and by South West Africa on the south The Bie Plateau, which forms the central region of the territory, has an average altitude of 6,000 ft (1,830 m) Rising abruptly from the coastal lowland, the plateau slopes gently eastward toward the Congo and Zambesi basins and forms one of Africa's major watersheds The uneven topography of the plateau has resulted in the formation of numerous rapids and waterfalls, which are used for the production of hydroelectric power The territory's principal rivers are the Cuanza and the Cunene Rainfall in Angola is generally low, and nearly all the land is desert or savanna The northeast, however, has densely forested valleys that yield hardwoods, and palm trees are cultivated along a narrow coastal strip where precipitation is heavy Its mineral, power, and agricultural resources make Angola, which is nearly 14 times the size of metropolitan Portugal, the most valuable Portuguese possession in Africa Diamond mining is the principal industry Oil has been produced and refined near Luanda since the 1950s, and the exploitation of large reserves off Cabinda began in 1968 Angola's important deposits of copper, iron, and manganese ores remain largely undeveloped Livestock, notably sheep and goats, is raised in much of the savanna region Coffee is the most important cash crop of Angola, which is one of the world's major producers Europeans own most of the coffee plantations Maize, sisal, and some sugarcane are also raised for export Fishing is important along the coast Among Angola's industries are railroad shops, foundries, cereal mills, fish and palm oil processing plants, meat and fish canneries, and enterprises that manufacture jute, cotton textiles, and paper An important source of revenue is the Benguela railroad, which carries metals from the mines of Zaïre and the Zambian Copperbelt, the railroad extends from Beira, Mozambique, to Angola's port of Lobito Angola also has several shorter rail lines and a fairly good road network Luanda and Lobito are among the best shipping ports in Africa Angola's population is overwhelmingly black African, and most of the people speak a Bantu language, the Mbundu are the

largest ethnic group. The number of Europeans has greatly increased since 1951, when immigration was officially encouraged, there is also a sizable mixed (*mestiço*) population. Most of the Europeans live in urban areas. All Angolans are citizens of Portugal. Although Roman Catholicism is the state religion, Protestant missionaries are active, and various tribal religions are practiced. The Portuguese first explored Angola in the late 15th cent., and except for a short occupation (1641-48) by the Dutch, it has always been under Portugal's control. Although they failed to discover the gold and other precious metals they were seeking, the Portuguese found in Angola an excellent source of slaves for their colony in Brazil. Portuguese colonization of Angola began in 1575, when a permanent colony was founded at Luanda. By this time the Mbundu dynasty had established itself in central Angola. Portugal's attempts to subjugate the Mbundu ended in 1902, when Portuguese troops finally broke the back of the kingdom and captured the 81e Plateau. Construction of the Benguela railroad followed, and white settlers arrived in the Angolan highlands. The modern development of Angola began only after World War II. In 1951 the colony was designated an overseas province, and Portugal initiated plans to develop industries and hydroelectric power. Although the Portuguese professed the aim of a multiracial society of equals in Angola, many Africans still suffered repression. Inspired by nationalist movements elsewhere, they rose in revolt in 1961. When the uprising was quelled by the Portuguese army, many native Angolans fled to Zaire and other neighboring countries. In 1962 a group of refugees in Zaire, led by Holden Roberto, organized the Revolutionary Government of Angola-in-Exile (GRAE). It maintains supply and training bases in Zaire, wages guerrilla warfare in Angola, and, while developing contacts with both Western and Communist nations, obtains its chief support from the Organization of African Unity (OAU). Angola's fragmented liberation movement comprises two other guerrilla groups as well. The Movimento Popular de Libertação de Angola (MPLA) has headquarters in Zambia and is most active among educated Angolan Africans and *mestiços* living abroad. The third rival group is the União Nacional para a Independência Total de Angola (UNITA), which was established in the mid-1960s. In 1972, with Zambian mediation, the heads of GRAE and MPLA assumed joint leadership of a newly formed Supreme Council for the Liberation of Angola, but their military forces did not merge. As a result of the guerrilla warfare, Portugal was forced to keep more than 50,000 troops in Angola by the early 1970s. The four main areas of military activity were along the Zaire frontier in the north, along the Zambian and South West African borders in the southeast, in the area around Luanda, and in the Cabinda exclave. In 1972 the Portuguese national assembly changed Angola's status from an overseas province to an "autonomous state," with the authority to elect its own governing bodies, draft its own budget, collect its own taxes, and pass legislation concerning internal affairs. Portugal was to retain responsibility for defense and foreign relations and to exercise a supervisory role over the Angolan economy and administration. In 1973 elections were held for a legislative assembly. In April, 1974, the Portuguese government was overthrown in a military uprising. In May of that year the new government proclaimed a truce with the guerrillas in an effort to promote peace talks. By later in the year Portugal seemed intent on granting Angola independence, but not as soon as Mozambique (which was scheduled to become independent in June, 1975). The Angolan situation was complicated by the large number of whites (estimated at 500,000) resident there, by continued conflict among the black African liberation movements, and by the desire of some Cabindians for their oil-rich region to become independent as a separate nation. See David Birmingham, *The Portuguese Conquest of Angola* (1965); D. L. Wheeler and Rene Pelissier, *Angola* (1971); Basil Davidson, *In the Eye of the Storm: Angola's People* (1972).

Angora, Turkey. See ANKARA.

angora cat. See CAT.

Angostura: see CIUDAD BOLIVAR.

angostura bark (äng gäst'ōr'a -styōō'r'a), bitter bark of a South American tree (*Cusparia trifoliata*) of the Rut family. Formerly valued as a tonic and quinine substitute, it is now used in angostura bitters, an aromatic appetizer often added to cocktails.

Angoulême, Charles de Valois, comte d'Auvergne, duc d' (sharl də välvä' kōnt dövērn'yä duk dā'gōōlēm'), 1573-1650. Illegitimate son of King Charles IX of France. He turned against King Henry

IV, conspired with Henriette d'Entragues, his half sister, and was imprisoned until 1616. After his release he held military commands. He left memoirs.

Angoulême, Margaret of or Marguerite d': see MARGARET OF NAVARRE.

Angoulême, Marie Thérèse Charlotte, duchesse d' (marē' tārēz'sharlōt'dushēs'), 1778-1851, wife of Louis Antoine d'Angoulême, daughter of Louis XVI and Marie Antoinette. She was imprisoned (1792-95) during the French Revolution. Energetic and ambitious, she exerted considerable political influence after the restoration of the French monarchy during the reigns of Louis XVIII and Charles X. She died in Frohsdorf, Austria.

Angoulême (aNgōōlēm'), city (1968 pop. 50,883), capital of Charente dept., W France, on the Charente River. A former river port, it is now a major road and rail center. Its paper industry dates from the 15th cent., and it has copper foundries, and plants making electric motors, soap, and shoes. It was an early episcopal see and became (9th cent.) the seat of the counts of ANGOUMOIS. Ceded (1360) to England, it was reconquered (1373) by Charles V. Its remarkable Cathedral of St. Pierre was begun c.1110.

Angoumois (aNgōōmwa'), region and former province, W France, now coextensive with most of Charente dept. ANGOULÊME is the historic capital and chief city. In the region is the Charente valley, with its excellent vineyards, the brandy made from their grapes is named for Cognac, the chief distillery center. In pre-Roman times the region was occupied by the Santones and Pictones, two Gallic peoples. Part of the kingdom of AQUITAINE under Charlemagne's empire, Angoumois became a county in the 9th cent. and was united with the French crown in 1307. Under the Treaty of Bretigny (1360) Angoumois, then ruled by the counts of Angoulême, was recognized as English territory, but in 1371 it became a fief of the dukes of Berry, a branch of the French royal family. When Francis I, formerly the count of Angoulême, became king in 1515, Angoumois was definitively incorporated into the French crown lands.

Angra do Heroísmo (äng'grä döō ärdōēzh'mōō), town (1960 pop. 13,929), capital of Angra do Heroísmo dist., Portugal, in the Azores, on Terceira island. It is a port and was until 1832 capital of the Azores. There is an old castle in the town.

Angren (än-gryēn'), city (1969 est. pop. 94,000), Uzbekistan, Central Asian USSR. The largest lignite-mining center in Soviet Central Asia, it was developed during and after World War II.

angry young men, term applied to a group of English writers of the 1950s whose heroes share certain rebellious and critical attitudes toward society. This phrase, which was originally taken from the title of Leslie Allen Paul's autobiography, *Angry Young Man* (1951), became current with the production of John Osborne's play *Look Back in Anger* (1956). The word *angry* is probably inappropriate, *dissident* or *disgruntled* perhaps is more accurate. The group not only expressed discontent with the staid, hypocritical institutions of English society—the so-called Establishment—but betrayed disillusionment with itself and with its own achievements. Included among the angry young men were the playwrights John Osborne and Arnold Wesker and the novelists Kingsley Amis, John Braine, John Wain, and Alan Sillitoe. In the 1960s these writers turned to more individualized themes and were no longer considered a group.

Ångström, Anders Jons (än'därs yōns öng'ström), 1814-74, Swedish physicist. He was educated at the Univ. of Uppsala and in 1839 became a member of its faculty. He is particularly noted for his study of light, especially spectrum analysis. He mapped the solar spectrum, discovered hydrogen in the solar atmosphere, and was the first to examine the spectrum of the aurora borealis. A unit of length used to measure light waves is named for him.

ångström (äng'sträm), abbr. Å, unit of length equal to 10⁻¹⁰ METER (0.0000000001 meter), it is used to measure the wavelengths of visible light and of other forms of ELECTROMAGNETIC RADIATION, such as ultraviolet radiation and X rays. The ångström is named in honor of Swedish physicist Anders J. Ångström.

Anguier, François (fran'swa' aNgä'y'), 1604-69, French sculptor. He is noted for the monuments of the Longuevilles and of Jacques Souvire (Louvre). His most ambitious work is probably the mausoleum of Henri II, duc de Montmorency, in Moulins. His brother Michel Anguier, 1614-86, collaborated in this project. The works of both brothers reflect the

classical baroque influence of Algardi, with whom they studied in Rome. In Paris, Michel executed the marble group *The Nativity*, now in the Church of Saint-Roch. He also made decorations for the apartments of Anne of Austria in the Louvre and worked on reliefs for the triumphal arch at Porte Saint-Denis. A third brother, Guillaume Anguier, 1628-1708, a painter, was director of the Gobelins tapestry factory.

Anguilla (äng-gwī'l'a), island (1971 est. pop. 6,000), 35 sq mi (91 sq km), British West Indies, one of the Leeward Islands. Salt mining, fishing, and stock raising are the mainstays of the economy. In 1967 the British possessions of Anguilla, St. Kitts, Nevis, and Sombroero were united in the self-governing state of St. Kitts-Nevis-Anguilla, associated with Great Britain. Anguilla, claiming political and economic discrimination, seceded in 1967 and returned to British colonial rule in 1971. See SAINT KITTS-NEVIS.

angular momentum: see MOMENTUM.

Angus, earls of: see DOUGLAS, ARCHIBALD.

Angus, county (1971 pop. 97,312), 874 sq mi (2,264 sq km), NE Scotland, formerly (until 1928) called Forfarshire. FORFAR is the county town. The terrain varies from wild rugged mountains (the Sidlaw Hills and part of the Grampians) to the fertile valleys of the North and South Esk and the Isla rivers. Oats, barley, and root crops are grown, cattle, sheep, and horses are raised. The coastal towns engage in fishing and boat building. Angus is a center of the Scottish textile industry, jute and linen are processed at DUNDEE, ARBROATH, BRECHIN, and MONTROSE. Many relics of early Pictish and Roman occupation and the famous Glamis Castle are in Angus. Under the Local Government Act of 1973, Angus became part of the Tayside region.

Angus cattle (äng'gäs), breed of black polled (hornless) beef cattle, originated in Scotland and introduced in 1873 to the United States, where they have become well established. Often called Black Angus or Aberdeen Angus cattle, they have low, compact bodies and are noted for the fine quality of their flesh. As a breed, they lack the size of Shorthorn and Hereford cattle. In recent years, the Red Angus breed of cattle has been derived from red cattle born in registered black herds.

angwantibor: see LORIS.

Anhalt (än'hält), former state, c. 900 sq mi (2,330 sq km), central Germany, surrounded by the former Prussian provinces of Saxony and Brandenburg, located in what are now the Halle and Magdeburg districts of East Germany. Dessau, the capital, and Köthen were the chief cities. A level area except for the outliers of the lower Harz mts. in the west, it was drained by the Elbe, Mulde, and Saale rivers. Until 1918, Anhalt was ruled by one of the most ancient houses of Germany, issued from a son of Albert the Bear (12th cent.), it was divided, at most times, into several principalities held by various branches of the family. Reunited into a single duchy in 1863, it joined the German Empire in 1871, became a republic in 1918, and joined the Weimar Republic. Celebrated members of the house of Anhalt were Leopold I, prince of Anhalt-Dessau, and Sophie of Anhalt-Zerbst, who was empress of Russia as Catherine II.

Anhui (än'hwä') or **An-hui** (än-hwē), province (1968 est. pop. 35,000,000), c. 55,000 sq mi (142,450 sq km), E central China. HO FEI is the capital. Anhwei may be divided into two climatic areas. The northern half, within the N China plain and watered by the Huai and its tributaries (flooding is a common problem), is cold in winter and dry throughout the year. It has a single harvest annually, the chief crops being wheat, kaoliang, corn, soybeans, and cotton. The southern half, through which the Yangtze River flows, is mountainous and has a relatively moist, warm climate. It is a major rice-producing region, two thirds of the cultivated area is double-cropped. Wheat, sweet potatoes, cotton, barley, and tobacco are also grown, and tea is produced in the south east. Fish culture is important. Coal and iron are abundant throughout the province. Three of China's 34 leading industrial centers are in Anhwei. Ho-fei, the capital, which has textile mills and new iron and steel works, HUAI NAN, a large coal-mining center, with important chemical manufactures, and Ma-an-shan, a major industrial complex with huge steel works. Railroad building has not had high priority because of the excellent waterways—the Yangtze is open to ocean vessels in the summer, the Huai and its affluents are navigable by junk, and an intricate canal system connects the two rivers. Some single line tracks have been built to link the industrial centers with Ho-fei, and there are rail connections with other provinces, generally radiating from Ho-fei, the

railroad connecting Nanking and Shanghai crosses the province. Road building has been accomplished at the local level, linking marketing and industrial centers. Anhwei Univ. is in Ho-fei.

anhydride (änhī'drīd, -drīd) [Gr. =without water], chemical compound formed by removing water, H_2O , from another compound, the anhydride can also react with water to form the original compound. An acid anhydride reacts with water to form an acid, e.g., sulfur trioxide, SO_3 , reacts with water to form sulfuric acid, H_2SO_4 . A basic anhydride reacts with water to form a base, e.g., calcium oxide, CaO , reacts with water to form calcium hydroxide, $Ca(OH)_2$. Anhydrides of organic acids have many uses. They react with alcohols to form esters, e.g., acetic anhydride, $(CH_3CO)_2O$, reacts with ethanol, C_2H_5OH , to form ethyl acetate, $CH_3COOC_2H_5$, a useful solvent. They also react with ammonia and primary or secondary amines to form amides. Other important acid anhydrides include maleic anhydride and phthalic anhydride.

anhydrous ammonia, liquefied ammonia that contains 82% nitrogen and is used as an agricultural fertilizer. It is stored under pressure and must be added to the soil at a depth of several inches in order that the ammonia may be absorbed by the soil. See FERTILIZER.

ani (ä'nē), bird. See CUCKOO.

Aniakchak (änēäk'chäk), volcano, 4,420 ft (1,347 m) high, in the Aleutian Range, SW Alaska. Its crater is c. 6 mi (9.7 km) in diameter. Aniakchak was thought to be extinct until it erupted on May 1, 1931.

Aniam (än'äm), Manassite. 1 Chron. 7:19.

Aniene (anyä'nä), Lat. Anio, river, 61 mi (98 km) long, rising in Latium, central Italy, and flowing generally southwest to empty into the Tiber River near Rome. Two aqueducts have carried water from the Aniene to Rome since ancient times, and now the river also supplies several hydroelectric plants. Below Tivoli, where it forms a celebrated waterfall, it is also called the Teverone.

aniline (än'älīn), $C_6H_5NH_2$, colorless, oily, basic liquid organic compound, chemically, a primary aromatic amine whose molecule is formed by replacing one hydrogen atom of a benzene molecule with an AMINO GROUP. Aniline boils at $184^\circ C$ and melts at $-6^\circ C$. It is of great importance in the dye industry, being used as the starting substance in the manufacture of many dyes—e.g., indigo—and as an aid in the manufacture of others. For this reason many dyes have the word *aniline* in their common name, such as aniline black (one of the best black dyes known), aniline red, yellow, blue, purple, orange, green, and others. Today these synthetic dyes have largely replaced the natural ones. Aniline is prepared commercially by the reduction of nitrobenzene, a product of coal tar, or by heating chlorobenzene with ammonia in the presence of a copper catalyst. Sulfonation of aniline yields sulfanilic acid, the parent compound of the sulfa drugs. Aniline is also important in the manufacture of rubber-processing chemicals and antioxidants.

Anim (ä'nīm), town of Palestine, SW of Hebron. Joshua 15:50.

animal, any member of the animal kingdom (Kingdom Animalia) as distinguished from the plant kingdom (Kingdom Plantae). Demarcation between animals and plants is usually based on a fundamental difference in their method of obtaining food. Plants characteristically manufacture their food from inorganic substances (usually by photosynthesis). Animals, on the other hand, must secure food already organized into organic substances. In addition, most animals have specialized means of locomotion, possess nervous systems and sense organs, and are adapted for securing, ingesting, and digesting their food. In all but the simpler forms there is a distinct alimentary canal or digestive system. Almost all animals, unlike most plants, possess a limited scheme of growth, that is, the adults of a given species are nearly identical in their characteristic form and are similar in maximum size. It is easy to distinguish between plants and animals of the higher groups, but among the simpler and microscopic forms it is often difficult. Some single-celled organisms, such as *Euglena*, possess chlorophyll and carry on photosynthesis but have a flexible cell membrane rather than the cellulose wall characteristic of plant cells and swim actively by means of flagella. Such forms are probably descended from the common ancestors of plants and animals that existed in the early stages of evolution. They are classified by zoologists as one-celled animals and by botanists as ALGAE, or simple plants. They may also be classified in a third kingdom, the PROTISTA. Ani-

mals and plants are interdependent—green plants provide oxygen as a by-product of photosynthesis and are the ultimate source of all food for animals. Animals (as well as plants) provide carbon dioxide through respiration and the decomposition of their dead bodies (see CARBON CYCLE, NITROGEN CYCLE). In zoological classification the animal kingdom is divided into the two subkingdoms of PROTOZOA (one-celled animals) and Metazoa (many-celled animals). The Metazoa comprise numerous INVERTEBRATE phyla and the phylum CHORDATA. The distinguishing characteristics of the chordates are a NOTOCHORD (a dorsal stiffening rod) in the embryo, a dorsal, hollow SPINAL CORD, and GILL slits (sometimes present only during embryonic stages, e.g., in the frog and man). The chordates include two primitive subphyla of a few species each, in which these features are present only at certain stages of the life cycle. The fourth and major chordate subphylum is the Vertebrata (see VERTEBRATE), in which the embryonic notochord is replaced by the SPINAL COLUMN of the adult. The scientific study of animals is called ZOOLOGY, the study of their relation to their environment and of their distribution is animal ECOLOGY. For specific approaches to the study of animals and plants, see BIOLOGY.

animal husbandry, domestication of animals especially as a source of food, fuel, power, or raw materials. Maintenance of control over an animal species for several generations has often led to man's dependence upon that animal for his well-being. Domestic animals have functioned as symbols of wealth, prestige, or religious belief, or as accessories to acts of aggression and defense. The domestication of animals influenced settlement patterns, architecture, and equipment, as well as the value placed on the animals and the elaboration of rules governing property rights concerning them. They have also figured importantly in the verbal symbolism of myths and songs, and in the idiomatic vocabularies of the societies possessing them. The first domesticated animal seems to have been the sheep, which was tamed around 9000 B.C. in N. Iraq. Around 6500 B.C., domestic goats were kept in the same region, about 6000 B.C. the pig was domesticated in Iraq, about 5500 B.C. there were domesticated cattle in SW Iran, and around 3000 B.C. the horse was domesticated in Russia.

animal jelly: see GELATIN.

animated cartoon: see MOTION PICTURES.

animism, belief that within every object dwells an individual spirit or force that governs its existence. It has been said that upon this concept rests the historic structure of religion. Since primitive man did not distinguish between animate and inanimate objects or between physical and mental processes, everything in the universe was thought to have its own individuality. Men, animals, plants, stones, as well as emotions, dreams, and ideas alike, were regarded as having indwelling spirits. More generalized is the idea of mana, which originated among Melanesians of the South Seas. A kind of transcendental force, mana is thought to be the spirit that pervades all objects and things and is responsible for the good and evil in the universe. In philosophy, the term animism is applied to the doctrine that the principle of life, called the vital force, cannot be reduced to the mechanistic laws of physics and chemistry, but is separate and distinct from matter. See FETISH, TABOO, TOTEM, IDOL, SHAMAN, ANCESTOR WORSHIP, AMULET. See J. G. Frazer, *The Golden Bough* (1890, repr. 1966), E. B. Tylor, *Religion in Primitive Culture* (1871, repr. 1970).

Anio, river. See ANIENE.

anion (än'tī'ən), atom or group of atoms carrying a negative charge. The charge results because there are more electrons than protons in the anion. Anions can be formed from nonmetals by reduction (see OXIDATION AND REDUCTION) or from neutral acids (see ACIDS AND BASES) or polar compounds by ionization. Anionic species include Cl^- , SO_4^{--} , and CH_3COO^- . Highly colored intermediates in organic reactions are often radical anions (anions containing an unpaired electron). SALTS are made up of anions and CATIONS. See ION.

anise (än'ts), annual plant (*Pimpinella anisum*) of the family Umbelliferae (CARROT family), native to the Mediterranean region but long cultivated elsewhere for its aromatic and medicinal qualities. It has flat-topped clusters of small yellow or white flowers that become seedlike fruits—the aniseed of commerce, used in food flavoring. Anise oil is derived from the seeds and sometimes from the leaves; it is also obtained from the star anise, an unrelated woody plant. The oil, composed chiefly of anethole,

is used in medicinals, dentifrices, perfumes, beverages, and, in drag hunting, to scent a trail for dogs in the absence of a fox. The anise of the Bible (Mat. 23:23) is dill, a plant of the same family. Anisette is an anise-flavored liqueur. Anise is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Umbellales, family Umbelliferae.

Anjo (änjō'), city (1970 pop. 94,307), Aichi prefecture, S. central Honshu, Japan. It is an agricultural and poultry center with cotton textile mills and food canneries. There are agricultural and forestry schools in the city.

Anjou (änzhō'), region and former province, W. France, coextensive roughly with Maine-et-Loire and parts of Indre-et-Loire, Mayenne, and Sarthe. Depts. ANGERS, the historic capital, and SAUMUR are the chief towns. A fertile lowland, Anjou is traversed by the Loire, Mayenne, Sarthe, Loir, and Maine rivers. It is chiefly an agricultural area with excellent vineyards that produce the renowned Vouvray and Saumur sparkling wines. Occupied by the Andecavi, a Gallic people, the region was conquered by Caesar. Anjou fell to the Franks in the 5th cent. and became a countship under Charlemagne in the 9th cent. By the 10th cent. it was in the hands of the first line of the counts of Anjou (see ANGEVIN dynasty), who expanded their holdings vigorously. Fulk Nerra, who founded the Angevin dynasty, acquired Saumur from the counts of BLOIS. His successor, Geoffrey Martel, won Touraine from Blois (1044) and Maine from Normandy (1051). FULK (d. 1143), the grandson of Fulk Nerra, after protracted wars with Henry I of England over the possession of Maine, married his son Geoffrey (Geoffrey Plantagenet) to Henry's daughter Matilda. Geoffrey ruled Anjou (1129-51) and conquered Normandy, of which he was crowned duke in 1144. His son, later Henry II of England, married Eleanor of Aquitaine and with her inheritance ruled most of W. France. When Henry II's grandson, Arthur I, duke of Brittany, rebelled against his uncle, John of England, he won the support of Philip II of France, to whom he paid homage (1199) for Anjou, Maine, and Touraine. After Arthur's death, Philip II seized (1204) all Anjou. In 1246, Louis IX of France gave Anjou in appanage to his brother Charles, count of Provence, who later also became king of Sicily and Naples (see CHARLES I). Charles II of Naples gave Anjou as dowry to his daughter Margaret when she married Charles of Valois, son of Philip III of France. When their son became (1328) King Philip VI of France, Anjou was again reunited to the French crown. John II of France, however, made Anjou a duchy (1360) and gave it to his son Louis (later Louis I of Naples). Louis XI of France inherited Anjou after the death (1480) of René, grandson of Louis I, and the death (1481) of Charles of Maine, René's nephew, the last of the Angevin line. Anjou was definitively annexed to France in 1487. In the 16th cent. Anjou was held as appanage at various times, the last duke was Francis of Alençon and Anjou. The region was devastated during the Wars of Religion (see under RELIGION WARS OF) (1562-98). During the French Revolution the rising of the VENDEE, the Royalist revolt against the revolution, occurred in Anjou.

Ankara (äng'kärə, Turk. ang'kara), city (1970 pop. 1,208,791), capital of the Republic of Turkey and its Ankara province, W. central Turkey, at an elevation of c. 3,000 ft (910 m). Turkey's largest city after Istanbul, Ankara is an administrative, commercial, and cultural center. Grains, vegetables, and fruit are grown nearby. Manufactures of the city include food products, farm machinery, and cement. Known in ancient times as Ancyra and later as Angora, the city was an important commercial center at least as early as Hittite times (18th cent. B.C.). In the 1st cent. A.D. it became the capital of a Roman province. It flourished under Augustus, in the ruins of a marble temple dating from his reign (31 B.C.-A.D. 14) was found the *Monumentum Ancyranum*, a set of inscribed tablets valuable as a record of Augustan history. The city was conquered by the Ottoman Turks in the mid-14th cent., and in 1402 Tamerlane defeated and captured Sultan Bayezid I there. In the late 19th cent. Ankara declined and by the early 20th cent. was a small town known only for the production of mohair. In 1920, Kemal Atatürk made the city the seat of his Turkish Nationalist government. In 1923 it replaced Istanbul as the capital of all Turkey, partly to break with tradition and partly to take advantage of its central location. The city grew rapidly from the 1920s, in the 1960s its population almost doubled. There are few historic remains. Ankara's leading modern monument is the Atatürk mausoleum, completed in 1953. The city has numerous

museums and is the seat of the Ankara, Hacettepe, and Middle East Technical universities

Anking: see AN-CH'ING, China

An Lu-shan (an lōō-shan), d 757, Chinese general of the T'ang dynasty. Of mixed Sogdian and Turkish birth, he was appointed regional commander on the northeastern frontier. In 755 he led c 200,000 troops in revolt against the T'ang central government. Emperor Hsuan Tsung fled the capital Ch'ang-an for Szechuan, and on the way he was forced by discontented soldiers to execute his concubine YANG KUEI FEI, who was blamed for demoralizing the court and was even rumored to have had a secret affair with An Lu-shan. An Lu-shan was killed by his son in 757. The rebellion lasted until 763, when foreign troops helped restore the T'ang dynasty to power.

Ann, Cape, NE Mass., N of Massachusetts Bay. It is noted for its old fishing villages, resorts, and artists' colonies, especially Gloucester and Rockport.

Anna (Anna Ivanovna) (an'na i'va'nōvna), 1693–1740, czarina of Russia (1730–40), daughter of Ivan V and niece of Peter I (Peter the Great). On the death of her distant cousin, Peter II, she was chosen czarina by the supreme privy council, which thus hoped to gain power for itself. Anna signed articles limiting her power, but she soon restored autocratic rule, with support from the lesser nobility and the imperial guards. She made minor concessions to the nobles but restored the security police and terrorized opponents. Distrusting the nobility, she excluded Russians from high positions and surrounded herself with Baltic Germans. Her favorite, Ernst Johann von Biron, had the greatest influence. Allied with Holy Roman Emperor CHARLES VI, Anna intervened in the War of the Polish Succession (1733–35), installed Augustus III as king of Poland, and attacked Turkey in 1736. Charles's separate peace with the Turks at Belgrade forced Russia to make peace in turn, at the price of all recent conquests except Azov. During Anna's reign began the great Russian push into central Asia. She was succeeded by her grandnephew, Ivan VI.

Anna [Gr., = Heb. HANNAH], 1. Aged prophetess who hailed Jesus' presentation at the Temple. Luke 2:36–38. 2. In Tobit, the mother of young Tobias.

Anna Amalia, duchess of Saxe-Weimar (ama'lyā, zak'sa-vī'mar), 1739–1807, German patron of letters and science, niece of Frederick II of Prussia and mother of CHARLES AUGUSTUS, duke of Saxe-Weimar. As regent for her son (1757–75) she fostered German culture by her patronage of such authors as Herder, Wieland, Goethe, and Schiller. She wrote the music for Goethe's *Erwin und Elmire*.

Annaba (ān-nab'a), formerly **Bône** (bōn), city (1966 pop 168,790), capital of Annaba dept., extreme NE Algeria, a port on the Mediterranean Sea. One of the country's leading ports, the city is also an important administrative, commercial, and industrial center. The large El Hadjar ironworks, built with French and Soviet financial and technical aid, constitutes the chief industry; others include chemical (superphosphate) manufacturing, food canning, cork production, and railway construction. Founded by the Carthaginians, the city became a favorite residence of the Numidian kings. Under the Romans, it was called Hippo Regius and was a center of early Christianity, the episcopal see of St. Augustine. The city was captured by the Vandals in 431. After the Arab conquest of Algeria in the 7th cent., Annaba became an important Muslim city and port. Spanish forces occupied it in the 16th cent. During the 17th and 18th cent., Annaba was a busy center for European trade. The French took the city in 1832. Landmarks include the Great Mosque and the Cathedral of St. Augustine.

Anna Comnena (kōmnē'nā), b. 1083, d. after 1148, Byzantine princess and historian, daughter of Emperor Alexius I. She plotted, during and after her father's reign, against her brother, JOHN II, in favor of her husband, Nicephorus Bryennius, whom she wished to rule as emperor. Having failed, she retired to a convent. There she wrote the *Alexiad* (finished in 1148), one of the outstanding Greek historical works of the Middle Ages. Covering the reign of Alexius I and the First Crusade, it tends to glorify her father and his family, however. Anna's familiarity with public affairs and her access to the imperial archives give her work great value. There is an English translation by Elizabeth A. Dawes (1928, repr 1967). See biography by Georgina Buckler (1929).

Anna Ivanovna: see ANNA, czarina of Russia

An Najaf (an nā'jāf), city (1965 pop 128,096), 5 central Iraq on a lake near the Euphrates River. The city is also called Mashad Ali, after the tomb (in a mosque) of Ali, son-in-law of Muhammad the

Prophet. The tomb is an object of pilgrimage by Shiite Muslims and a starting point for the pilgrimage to Mecca.

Annaka (an-na'ka), city (1970 pop 40,092), Gumma prefecture, central Honshu, Japan. It is an agricultural and tourist center, noted for its mineral springs.

Anna Leopoldovna (lyā'āpōl'davnā) or **Anna Karlovna** (kar'lavnā), 1718–46, duchess of Brunswick-Wolfenbützel, regent of Russia (1740–41), daughter of Charles Leopold, duke of Mecklenburg-Schwerin, and of Catherine, sister of Czarina Anna of Russia. She married the prince of Brunswick-Wolfenbützel, and their son, IVAN VI, succeeded (1740) Anna as czar. After the deposition of Ivan by Czarina ELIZABETH, Anna Leopoldovna and her husband were imprisoned. She died in childbirth.

Annam (anām', ā'nām), historic region (c 58,000 sq mi/150,200 sq km) and former state, in central Vietnam, SE Asia. The capital was HUE. In 1954, when Vietnam was divided on a line approximating the 17th parallel, Annam went largely to South Vietnam. The region extended nearly 800 mi (1,290 km) along the South China Sea between Tonkin (now in North Vietnam) on the north and Cochinchina (now part of South Vietnam) on the south. The ridge of the Annamese Cordillera separated N and central Annam from Laos on the west, the ridge then swung southeastward and ran along the coast of S Annam, which included the plateaus that stretched to the borders of Cambodia and Cochinchina. The narrow coastal plains of N and central Annam were interrupted by spurs of mountains that almost reached the sea, as at Porte d'Annam, a pass important in Annamese history. In addition to Hue, the principal cities in the region were DA NANG (the chief seaport), An Nhon, Quang Tri, and VINH (now in North Vietnam). The origins of the Annamese state may be traced to the peoples of the Red River valley in North Vietnam. After more than 2,000 years of contact with the Chinese, they fell under Chinese rule as the result of a Han invasion in 111 B.C. The region, to which the Chinese gave the name Annam ("Pacified South", a name resented by the people), comprised all of what later became N Annam and Tonkin. Southern Annam was occupied by the kingdom of the Chams, or Champa, from the late 2d cent. A.D. In 939 the Annamese drove out the Chinese and established their independence, which they maintained, except for one brief period of Chinese reoccupation (1407–28), until their conquest by the French in the 19th cent. Le Loi, who defeated the Chinese in 1428, established the Le dynasty. A long series of wars against the Chams ended in 1471 when the Chams were defeated and the Annamese kingdom was extended southward to the vicinity of Da Nang. The power of the Le dynasty declined, and in 1542, after several rebellions, the dynasty was defeated. By 1558 the kingdom was in effect divided between two great families: the Trinh line, which reinstalled a puppet Le emperor and ruled from Hanoi (then called Tonkin) as far south as Porte d'Annam (this area was called Tonkin by the Europeans who arrived in the 16th cent.), and the Nguyens, who ruled from Hue over the territory extending from Porte d'Annam south to the vicinity of Qui Nhon. In the 17th cent. the lords of Hue pushed further southward into the Cambodian provinces on the lower Mekong. The early 18th cent. saw their control extended into parts of Laos and, at the expense of Cambodia, to the shores of the Gulf of Siam. The ruling dynasties of Hue and Tonkin were overthrown in 1778 and 1786 respectively, and the two domains were reunited (1802) as the empire of Vietnam by Nguyen-Anh, a Hue general, who had procured French military aid by ceding (1787) to the French the port of Da Nang and the Con Son islands. Nguyen-Anh established himself as emperor, his authority was formally recognized by the Chinese in 1803. In 1807 the Vietnamese extended a protectorate over Cambodia, which led in succeeding years to frequent wars against Siam. After the death of Nguyen-Anh, his successor, attempting to withdraw into isolation, mistreated French nationals and Vietnamese Christian converts. This provided an excuse for French military operations, which began in 1858 and resulted in the seizure of southern Vietnam (Cochinchina) and the establishment of protectorates (by 1884) over northern Vietnam (Tonkin) and central Vietnam (Annam). The French, who abolished the name Vietnam, received recognition for their protectorates from the Chinese emperor. In 1887, Annam became part of the Union of Indochina. In World War II, Indochina was occupied by the Japanese, who set up the autonomous state of Vietnam, comprising Tonkin, Annam, and Cochinchina.

China, Bao Dai, the last emperor of Vietnam, was established as ruler. After the war Annamese and Tonkinese nationalists demanded independence for the new state of Vietnam, and the region was plunged into a long and bloody conflict (see VIETNAM).

Annamese Cordillera (an'namēz' kōr'dīlyā'a) or **Chaine Annamitique** (shēn anamētik'), principal mountain range of Southeast Asia, extending c 700 mi (1,130 km) from N central Laos SE to S central South Vietnam, Ngoc Linh (8,524 ft/2,598 m) in N South Vietnam is the highest peak. The range forms the divide between rivers draining into the Mekong basin and those flowing into the South China Sea. An igneous massif, the range has a steep eastern face and a gently sloping western section. The Tran Ninh Plateau in the north and the Moi plateaus in the south are extensions of the range.

Annapolis (anāp'ālīs), city (1970 pop 29,592), state capital and seat of Anne Arundel co., central Md., on the south bank of the Severn River. Annapolis is a port of entry and the business and shipping center for the fruit and vegetable farmers of S Maryland. Local industries include the packaging of seafood and the manufacture of small boats and plastics. Annapolis was settled in 1649 by Puritans fleeing Virginia. Hostility between the Puritans and the Roman Catholic governors of Maryland resulted in the battle of the Severn River in 1655, in which the Puritans successfully revolted, only to lose control after the RESTORATION in England. The settlement, originally called Providence, was later known as Anne Arundel Town, after the wife of the 2d Lord Baltimore. In 1694 it became the provincial capital of Maryland and was renamed Annapolis for Princess (later Queen) Anne of England. During the 1700s the city prospered, largely because of its tobacco exports and trade with the West Indies and Europe; it rapidly became an important social and commercial center for the colonies. In 1783–84, Annapolis served as the capital of the United States when the Congress met there. The city was the site of the Annapolis Convention (1786), which led to the FEDERAL CONSTITUTIONAL CONVENTION. Still standing is the statehouse where George Washington resigned as commander in chief of the Continental Army in 1783 and where the treaty that ended the Revolutionary War was ratified in 1784 (see PARIS, TREATY OF). Other notable landmarks are the Old Treasury (c 1695), the oldest original building in Maryland, the library (1737), St. John's College, and St. Anne's Church (1858–59) and graveyard, where the former royal governor of Annapolis Sir Robert Eden (an ancestor of Anthony Eden) is buried. Much 18th-century architecture is preserved in the city. Annapolis is also the site of the United States Naval Academy, founded in 1845.

Annapolis, river, c 75 mi (120 km) long, rising in W Nova Scotia, Canada, and flowing SW past Annapolis Royal to Annapolis Basin, an arm of the Bay of Fundy. The entrance to the basin, bordered by cliffs 500 ft (152 m) high, is known as Digby Gut. The Annapolis valley, an important agricultural area noted for its apples, was the site of Nova Scotia's first successful farming colony.

Annapolis Convention, 1786, interstate convention called by Virginia to discuss a uniform regulation of commerce. It met at Annapolis, Md. With only 5 of the 13 states—Delaware, New Jersey, New York, Pennsylvania, and Virginia—represented, there could be no full-scale discussion of the commercial problems the nation faced as a result of the weak central government under the Articles of Confederation. The main achievement of the convention was the decision to summon a new meeting for the express purpose of considering changes in the Articles of Confederation to make the union more powerful. An address was drawn up by Alexander Hamilton and was sent to all the states, asking them to send delegates to Philadelphia in May, 1787. The move was extraconstitutional, but Congress passed a resolution urging attendance. The call from Annapolis was heeded and delegates from 12 states met. From that Federal Constitutional Convention was to emerge the Constitution of the United States.

Annapolis Royal, town (1971 pop 758), W N.S., Canada, on the Annapolis River. Founded as Port Royal by the sieur de MONTS in 1605, the settlement was destroyed (1613) by English colonists under Samuel ARGALL but was rebuilt by the French. The fort changed hands between the French and the English five times from 1605 to 1710, when it capitulated to a force of New Englanders under Francis Nicholson. The name was then changed in honor of Queen Anne. Annapolis Royal was the capital of Nova Scotia from 1713 to 1749. Fort Anne Historic

National Park includes the ruins of the fort. The officers' quarters (built 1797-98) have been restored as a museum.

Annapurna (ən-nəpōr'nə), massif of the Himalayas, N central Nepal, forming a ridge 35 mi (56 km) long, including two of the highest peaks in the world. Having four snow-covered peaks, it rises to Annapurna I (26,502 ft/8,078 m) in the west and Annapurna II (26,041 ft/7,938 m) in the east. Annapurna I was first climbed in 1950 by a French expedition led by Maurice Herzog.

Ann Arbor, city (1970 pop. 99,797), seat of Washtenaw co., S Mich., on the Huron River, inc. 1851. It is a research and educational center, with a large number of government and industrial research and development firms, the huge Univ. of Michigan, and two junior colleges. Products include lasers, computers, hospital and laboratory equipment, scientific instruments, automotive parts, and precision machinery. The city is also a medical center, in addition to the university hospitals and medical school, it has a community hospital, a veterans' hospital, and a neuropsychiatric hospital. There are Indian mounds in the region.

Annas (ān'əs) [Gr. = Heb. HANANIAH], Jewish high priest who examined Jesus. Nonbiblical sources say that he was retired high priest. His son-in-law was Caiaphas. John 18:13, 24, Acts 4:6-22.

An Nasiriyah (an nāsīrī'ya), city (1965 pop. 60,405), provincial capital, SE Iraq, on the Euphrates River. It is the center of a date-growing region. Founded in 1870, the city was captured by the British in 1915. Nearby are the ruins of Ur.

Annau or **Anau** (both ənəu'), village, Central Asian USSR, in Turkmenistan, 5 mi (8 km) SE of Ashkhabad, near the Iranian border. It has a 15th-century mosque, a citadel, ancient burial mounds, and other remains. At Annau, Raphael Pumpelly discovered (1903) traces of habitation dating back to c. 3000 B.C. There are indications of ancient cultivation of grain, and beautifully designed pottery has been found. The discovery has been related to other excavations throughout central Asia. See Raphael Pumpelly, *The Prehistoric Civilization of Anau* (1908).

Anne, Saint, in tradition, mother of the Virgin and wife of St. Joachim. She is not mentioned in Scripture, but her cult is very old. In the West she has been especially popular since the Middle Ages. She is patroness of Quebec prov., and Ste Anne de Beaupre is one of the most visited of New World shrines. Brittany, also under her patronage, has the renowned shrine of Ste Anne d'Auray, with its annual pilgrimage. St. Anne is invoked by women in childbirth. In art, she is usually an elderly veiled woman and often appears teaching her daughter to read. Her name also appears as Anna. Feast: July 26.

Anne, 1665-1714, queen of England, Scotland, and Ireland (1702-7), later queen of Great Britain and Ireland (1707-14), daughter of James II and Anne Hyde, successor to William III. Reared as a Protestant and married (1683) to Prince George of Denmark (d. 1708), she was not close to her Catholic father and acquiesced in the GLORIOUS REVOLUTION (1688), which put William III and her sister, Mary II, on the throne. She was soon on bad terms with them, however, partly because they objected to her favorite, Sarah Jennings (later Sarah Churchill, duchess of MARLBOROUGH), who was to exercise great influence in Anne's private and public life. Of Anne's many children the only one to live much beyond infancy—the duke of Gloucester—died at the age of 11 in 1700. Since neither she nor William had surviving children and support for her exiled Catholic half brother rose and fell in Great Britain (see STUART, JAMES FRANCIS EDWARD, JACOBITES), the question of succession continued after the Act of SETTLEMENT (1701) and after Anne's accession. The last Stuart ruler, she was the first to rule over Great Britain, which was created when the Act of Union joined Scotland and England in 1707. Her reign, like that of William III, was one of transition to parliamentary government. Anne was, for example, the last English monarch to exercise (1707) the royal veto. Domestic and foreign affairs alike were dominated by the War of the SPANISH SUCCESSION, known in America as Queen Anne's War (see FRENCH AND INDIAN WARS). In the actual fighting on the Continent, Sarah Churchill's husband, the duke of MARLBOROUGH, won a series of spectacular victories. At home the costs of the fighting were an issue between the Tories, who were cool to the war, and the Whigs, who favored it. Party lines were slowly hardening, but party government and ministerial responsibility were not yet established, intrigues and the favor of the queen still made and unmade cabinets, though the influence

of public opinion, shaped by an increasingly powerful press, and elections was growing. Thus it was at least partly through the pressure of the Marlboroughs that Anne was induced, despite her Tory sympathies, to oust Tory ministers in favor of Whigs. The Marlboroughs were even able to force the dismissal of Robert HARLEY in 1708, though the scolding duchess had already lost much of her power to Anne's new favorite, the quiet Abigail MASHAM, kinswoman and friend of Harley. When the unpopularity of the war and the furor over the prosecution of Henry SACHEVERELL showed the power of the Tories (who won the elections of 1710) and made the move feasible, Anne recalled Harley to power, and the Marlboroughs were dismissed. Harley, created earl of Oxford, was political leader until 1714, when he was replaced by his Tory colleague and rival, Viscount Bolingbroke (see ST. JOHN, HENRY). Soon afterward the queen died, and Jacobite hopes were dashed by the succession of GEORGE I of the house of Hanover. Queen Anne was a dull, stubborn, but conscientious woman, devoted to the Church of England and within it to the High Church party. She supported the act (1711) against "occasional conformity" and the Schism Act (1714), both directed against dissenters and both repealed in 1718. She also created a trust fund, known as Queen Anne's Bounty, for poor clerical benefices. During Anne's reign such thinkers as George Berkeley and Sir Isaac Newton and such scholars and writers as Richard Bentley, Swift, Pope, Addison, Steele, and Defoe were at work, while Sir Christopher Wren and Sir John Vanbrugh were at the same time setting in stone and brick the rich elegance of the period. See biographies by M. R. Hopkinson (1934) and David Green (1970), G. M. Trevelyan, *England under Queen Anne* (3 vol., 1930-34), G. N. Clark, *The Later Stuarts* (2d ed. 1955).

Anne (Anne Elizabeth Alice Louise), 1950-, British princess, daughter of Queen Elizabeth II and Prince Philip, duke of Edinburgh. She was educated at Benenden School. An accomplished horsewoman, she represented Britain in various international show-jumping events. In 1973 she married a British army officer, Mark Phillips.

annealing (ənēl'ng), process in which glass, metals, and other materials are treated to render them less brittle and make them more workable. Annealing consists of heating the material and then cooling it very slowly and uniformly, the time and temperatures required in the process are set according to the properties desired. Annealing increases ductility and lessens the possibility of a failure in service by relieving internal strains.

Anne Boleyn, queen of England. See BOLEYN, ANNE.

Anncy (ansē'), town (1968 pop. 56,689), capital of Haute-Savoie dept., SE France, in SAVOY in the N Alps, on beautiful Lake Annecy. A popular tourist resort, it also has printing plants and factories making jewelry and wood and leather products. The center of the city, traversed by narrow canals, is picturesquely medieval. St. Francis of Sales, who was born in Annecy, was bishop from 1602 to 1622. The city has many fine churches, monasteries, and seminaries. The castle of the counts of Geneva (12th-14th cent.) dominates Annecy from a hill.

Anne de Beaujeu (də bözhō'), c. 1460-1522, regent of France, daughter of the French king Louis XI. With her husband, Pierre de Beaujeu, duc de Bourbon, she acted as regent for her brother, Charles VIII, after the death (1483) of Louis XI. Preserving the royal authority, she put down the rebellious great nobles and subdued Brittany. In 1491 she and her husband arranged the marriage of Charles VIII to ANNE OF BRITAIN, and soon afterward their influence declined.

Annelida (ənēl'īdā) (Lat. *anellus* = a ring), phylum of soft-bodied, bilaterally symmetrical (see SYMMETRY, BIOLOGICAL) segmented animals, known as the segmented, or annelid, worms. The approximately 8,600 known species are grouped in three classes: the EARTHWORMS and freshwater worms (oligochaetes), the LEECHES (hirudineans), and the marine worms (polychaetes). Annelids are found throughout the world, from deep ocean bottoms to high mountain glaciers. They live in protected habitats such as mud, sand, and rock crevices, and in and among other invertebrate animals, such as sponges. Many live in tubes they secrete around themselves. The fundamental characteristic of the phylum is the division of the body into a linear series of cylindrical segments, or metameres. Each metamere consists of a section of the body wall and a compartment of the body cavity with its internal organs. The external divisions, which may be seen in the common earth-

worm, correspond to the internal divisions. The annelid body consists of a head, a trunk, made up of metameres, and an unsegmented terminal region. In the more primitive members of the phylum the metameres are identical, or very similar to one another, each containing the same structures, in more advanced forms there is a tendency toward a consolidation of some segments and a restriction of certain organs to particular segments. The body wall is covered with epidermis overlaid with a thin, pliant cuticle secreted by the epidermal cells. The body wall consists of well-developed, segmentally arranged muscles, used for crawling and swimming movements. Most annelids possess short external bristles called setae, or chaetae, composed of chitin. Chaetae are used to grip the soil, to hold the animal in a tube, or to increase the surface areas of appendages for swimming. The digestive system of annelids consists of an unsegmented gut that runs through the middle of the body from the mouth, located on the underside of the head, to the anus, which is on the terminal region. The details of the digestive tract are characteristic of each class within the phylum. The gut is separated from the body wall by the body cavity, called the COELOM. The compartments of the coelom are separated from each other by thin sheets of tissue, called septa, which are perforated by the gut and by blood vessels. Except in the leeches, the coelom is filled with an incompressible fluid that serves as a skeleton, providing the animal with rigidity and with the resistance necessary for muscular movement. If the worm is punctured, it loses its ability to move properly, since functioning of the body muscles is dependent on the maintenance of the fluid volume in the coelom. In primitive annelids each compartment of the coelom is connected to the outside by ducts for the release of sex cells, and by paired excretory organs, or nephridia. These openings are closed except when functioning, thus preventing the loss of coelomic fluid. In more advanced species both excretory and reproductive functions are sometimes served by a single type of duct, and ducts may be absent in certain segments. Characteristics of the circulatory system vary within the phylum. The blood usually contains hemoglobin, a red oxygen-carrying pigment, some annelids have a green oxygen-carrying pigment, and others have unpigmented blood. The circulatory system is usually closed, i.e., confined within well-developed blood vessels, in some leeches the circulatory system is partly open, with blood and coelomic fluid mixing directly in the sinuses of the body cavity. Blood flows toward the head through a contractile vessel above the gut and returns to the terminal region through vessels below the gut, it is distributed to each body compartment by lateral vessels. Some of the lateral vessels are contractile and serve as hearts, i.e., pumping organs for driving the blood. Some aquatic annelids have thin-walled, feathery gills, through which gases are exchanged between the blood and the environment. However, most annelids have no special organs for gas exchange, and respiration occurs directly through the body wall. The nervous system typically consists of a primitive brain, or ganglionic mass (see GANGLION), located in the head, connected by a ring of nerves to a ventral nerve cord which runs the length of the body, the cord gives rise to lateral nerves and ganglia in each segment. Sense organs of annelids generally include eyes, taste buds, tactile tentacles, and organs of equilibrium called statocysts. Reproduction is sexual or asexual. Asexual reproduction is by fragmentation, budding, or fission. Among sexually reproducing annelids hermaphrodites are common, but many species have separate sexes. Fertilized eggs of marine annelids develop into free-swimming larvae. Eggs of terrestrial forms are enclosed in cocoons and hatch as miniature versions of the adults. The ability to regenerate lost body parts is highly developed in all annelids except the leeches. Because of the soft nature of the annelid body, there are few fossils of the phylum. Fossils of tube-dwelling polychaetes have been found, but there is scarcely any fossil record for earthworms and none for leeches. The Annelida may be divided on the basis of their anatomical structure into three classes: Polychaeta (marine worms), Oligochaeta (earthworms and freshwater worms), and Hirudinea (leeches).

Class Polychaeta The vast majority of the 5,300 known species of polychaete worms are marine, a few, however, are found in fresh or brackish water. They are most abundant from the low-tide line to a depth of about 150 to 200 ft (50 m) but some occur in deeper water and many in the intertidal zone. The polychaetes, so-named because of the numerous setae (chaetae) they bear, range in length from

less than $\frac{1}{8}$ in. to more than 9 ft (2 mm to 3 m), but most are from 2 to 4 in. (5–10 cm) long. Their colors are often brilliant and some species are iridescent.

ized feeding habits. Many are adapted for feeding on organic matter deposited on the ocean floor. For example, the lugworms have a simple, thin-walled,

A The earthworm, *Lumbricus terrestris*, representative of the phylum Annelida

B Internal anatomy of an earthworm

The class is usually divided on the basis of mode of existence into two subclasses, the Errantia and the Sedentaria. Members of the Errantia, or errant polychaetes, include actively crawling or swimming forms, which may, however, also spend time in burrows or crevices, or under rocks on the seashore. The Sedentaria, or sedentary polychaetes, are adapted to living permanently in tubes or burrows, some attach themselves to rocks or piers. A familiar errant polychaete is the CLAMWORM, *Nereis*, widely used as bait. Errant polychaetes swim, crawl over the ocean bottom, or tunnel through surface sediments. Most are predators on small invertebrates, some are scavengers. In most, the first few body segments bear sensory projections called cirri, while the remaining body segments bear conspicuous leglike appendages called parapodia. The parapodia, along with undulations of the body, propel the worm in crawling and swimming; they are tipped with bundles of setae, usually made of chitin. Most errant polychaetes have well-developed heads, which bear eyes, sensory tentacles, and a specialized organ, the nuchal organ, thought to detect chemicals. The anterior end of the gut forms a protrusible structure, the proboscis, equipped with strong chitinous jaws and used in feeding. The setae of some polychaetes, e.g., the tropical fireworm, are hollow and contain calcium carbonate rather than chitin. These setae are easily broken off and contain a toxin that produces a painful reaction in humans. In the scaleworms, a series of overlapping scales form an armor on the animal's upper surface. In the SEA MOUSE this armor is completely covered by a feltwork of long slender setae projecting from the parapodia. Many sedentary polychaetes, like the LUGWORM, *Arminicola*, live in burrows in sand or mud. The majority, however, are tube builders. Tubes of different species vary greatly in their composition and structure. They may be built of sand, shell, or other particles held together with mucus, or made entirely of organic substances secreted by the worm, that harden on contact with water. The tubes may be straight, branched, spiraled or U-shaped. Most are permanently attached to a substrate and the worm seldom or never ventures outside; however, the tube worm *Cistenides* moves about the sea floor, dragging along its delicate tube of sand grains. Sedentary polychaetes have greatly modified heads for special

jawless proboscis, which is used to draw sand into the gut, where organic matter is removed. Other worms have feeding tentacles that extend from the tube opening and creep along the mud or sand, picking up organic deposits. Still others of the Sedentaria are filter feeders: the beautiful feather-duster worms have a crown of feathery, ciliated tentacles that extend from the tube opening to sweep small planktonic organisms from the water. The tentacles are quickly withdrawn if the animal is startled. The parapodia are reduced in the sedentary polychaetes, and the setae of many tube-dwelling forms are hooked, to help the worm hold itself to the wall of its tube. The structure of the digestive tract of polychaetes is variable, reflecting the diversity of feeding types. Respiration is entirely through the body wall in some polychaetes, and partially so in most. Many species have thin-walled extensions of the body surface, i.e., gills, used for gas exchange, most commonly the gills are extensions of the parapodia. The tentacles of feather-duster worms are used for respiratory exchange as well as for feeding. A polychaete may have a single pair of excretory tubes, or a pair in each segment. Sedentary polychaetes have various modifications to insure that wastes will be deposited near the mouth of the tube or burrow, where they are washed away. Most polychaetes reproduce sexually, and the sexes are separate. Sex cells develop from masses of tissue in the metamereres and leave by way of tubules or by rupture of the body wall. In most cases fertilization of the eggs by sperm occurs externally in seawater, and results in the formation of free-swimming larvae. Variations include internal fertilization, laying of egg masses that are attached to objects with mucus, and brooding of developing eggs in the worm's body. Some errant polychaetes, including the clamworm, undergo extreme changes in appearance and become active swimmers at the time of year that the sex cells mature, males and females swarm to the surface of the sea to spawn. In some of these species the portion of the body containing the sex cells breaks free and engages in swarming and spawning, leaving the asexual portion behind to regenerate its lost parts. Swarming generally occurs at night and is correlated with particular phases of the moon. Some species perform a kind of nuptial dance, swimming in circles as they spawn. In some species the worms

liberate a luminous secretion, which produces circles of light on the ocean surface as they dance. The most famous swarming polychaete is the tropical palolo worm, a name sometimes applied to all swarming polychaetes. Two groups of polychaetes that are sometimes regarded as separate classes are the Archiannelida and the Myzostomaria. The former group includes a variety of minute marine worms living in surface mud, in tide pools near the high-tide line, and in the interstitial spaces of mud and sand in some subtidal areas. All archiannelids are scavengers. They have a ciliated epidermis and only a few body segments, many resemble the larvae of other polychaetes. The Myzostomaria are a small group of marine worms parasitic on certain echinoderms (crinoids, starfish, and brittle stars). They are disk-shaped and flattened, with a series of reduced parapodia with hooked setae; they often match the color pattern of the host.

Class Oligochaeta This class includes about 3,000 species of earthworms and freshwater worms. The members of the class range in length from about $\frac{1}{2}$ in. to 10 ft (0.5 mm–3 m) but most are comparable to the polychaetes in size. Oligochaetes occur in a variety of habitats throughout the world. Most are burrowers in the soil, but the class also includes worms that inhabit wells, marshes, and swamps. Other species live under rocks on the seashore, in the leaves of tropical trees and vines, on the surface of glaciers, or on the gills of freshwater crayfish. Like the polychaetes, oligochaetes have bodies divided into segments. However, they lack parapodia and, with a few exceptions, have relatively few and in conspicuous setae. The setae are usually arranged in four bundles on each segment; those of aquatic forms are longer than those of land forms. The setae of an earthworm may be felt as a roughness if one rubs a finger along its side. Oligochaetes are less varied in their external form than the polychaetes, but are much more numerous. As many as 4,000 oligochaetes have been counted in one square meter of lake bottom, and about 9,000 in one square meter of meadow soil. In almost all oligochaetes, the head is a simple cone-shaped structure without sensory appendages. Light is detected by photoreceptor cells in the skin, usually concentrated toward the front of the animal. The mouth, located under the head, leads to a relatively simple, straight digestive tract consisting of a pharynx, an esophagus, and an intestine, terminating in an anal opening. Terrestrial oligochaetes tunnel through the ground, swallowing soil as they go. The digestive tract of such a worm is specially modified for this rough diet. Typically it has a thin-walled storage area, or crop, and a muscular gizzard for grinding the soil to remove the organic matter that is the actual food of the worm. Specialized calciferous glands remove excess calcium, magnesium, strontium, and phosphate and regulate the level of these ions in the blood. Solid wastes are egested and plastered against the burrow wall, or ejected from the mouth of the burrow; the ejected material is called castings. Earthworms, through their burrowing and digestive processes, are largely responsible for the mixing and aeration of the soil. Not all oligochaetes have soil diets, some of the small aquatic worms are active predators on other small invertebrates. The circulatory system is that typical of the annelids and has many contractile vessels, or hearts. Although a few aquatic forms have gills for respiration, most oligochaetes lack such specialized structures and use the capillaries of their body walls for respiratory exchange. Oxygen dissolved in the soil water diffuses through the moist epidermis of the worm. If earthworms are forced to the surface, as when their burrows are filled with rainwater, they suffocate as a result of desiccation. Excretion is typically carried out by a pair of tubules in each segment. All oligochaetes are hermaphroditic and nearly all cross-fertilize by copulation. Male and female reproductive organs are located in separate segments. The copulating pair exchange sperm, which are stored in the body of the recipient worm until its eggs are mature. The worm then secretes a cocoon into which it deposits the eggs and the sperm, fertilization and development of the eggs occurs in the cocoon. When the young emerge they are miniatures of the adults. The cocoon is secreted by a glandular region, the clitellum, consisting of several thickened segments. The clitellum of an earthworm is a conspicuous saddle-shaped region near its front end.

Class Hirudinea This class includes the 300 species of leeches: flattened, predacious or parasitic annelids equipped with suckers used for creeping. Leeches range in length from about $\frac{1}{2}$ in. to 8 in. (1 cm–20 cm), most are under 2 in. (5 cm) long. They are com-

monly black, brown, green, or red, and may have stripes or spots. The majority of leeches are predators on small invertebrates, most swallow their prey whole, but some suck the soft parts from their victims. Some leeches are parasites rather than predators, and suck the body fluids of their victims without killing them. The distinction is not sharp, as many predatory leeches take blood meals on occasion. Leeches are primarily freshwater annelids, but some live in the ocean and some in moist soil or vegetation. These are the only annelids with a fixed number (34) of body segments, each segment has secondary subdivisions known as annuli. A clitellum, less conspicuous than that of oligochaetes, is present, there are no parapodia. A leech has a small anterior sucker and a larger posterior one, the leech crawls by moving the anterior sucker forward, attaching it, and drawing up the posterior sucker. Most leeches can swim by rapid undulations of the body, using well-developed muscles of the body wall. The coelom differs from that of other annelids in that it is largely filled with tissue. Coelomic fluid is contained in a system of sinuses, which in some leeches functions as a circulatory system, there is a tendency in this group toward the loss of true blood vessels. The blood of some leeches is red. In others the blood lacks oxygen-carrying pigments and is therefore colorless, the oxygen dissolved directly in the blood is sufficient for respiration. Gas exchange occurs through the body surface of most leeches, although many fish-parasitizing leeches have gills. The sense organs consist of sensory cells of various types, including photoreceptor cells, scattered over the body surface. There are also from 2 to 10 eyes, consisting of clusters of photoreceptor cells and located toward the front of the body. Many leeches have a proboscis used for swallowing the prey or for sucking its fluids, others have jaws for biting. Many parasitic leeches are able to parasitize a wide variety of hosts. Most of the marine and some of the freshwater leeches are fish parasites. The medicinal leech, *Hirudo medicinalis*, is one of a group of aquatic bloodsucking leeches with jaws. Another group of jawed bloodsuckers is terrestrial, these leeches live in damp tropical vegetation and drop onto their mammalian prey. Most parasitic leeches attach to the host only while feeding, a single meal may be 5 or 10 times the weight of the leech and provide it with food for several months. The digestive tract of bloodsuckers produces an anticoagulant, hirudin, which keeps the engorged blood from clotting. A few leeches attach permanently to the host, leaving only to reproduce. Predatory leeches are active at night and hide by day. Like the oligochaetes, leeches are hermaphroditic and cross-fertilizing, although fertilization is internal. In some species the sperm are enclosed in sacs, called spermatophores, that are attached to the outside of the partner, the sperm pass through the body wall to the ovaries, where the eggs are fertilized. In other species, the sperm are not enclosed and are transferred directly into the body of the partner by copulation. A courtship display is seen among some leeches at the time of mating. The fertilized eggs are deposited in a cocoon, secreted by the clitellum, the cocoon is buried in mud or affixed to submerged objects. The young emerge as small copies of the adults.

Annensky, Innokenty Feodorovich (ĕnĕkĕn'tyĕ fyŏ'darŏvĭch ănyĕn'skĕ), 1856–1909, Russian poet. A classical scholar, he translated Euripides before he began to publish verse in 1904. His highly metrical lyrics concern death, suffering, and beauty. Annensky's scant output is collected in *Quiet Songs* (1904) and *The Cypress Chest* (1910).

Anne of Austria, 1601–66, queen of France, daughter of King Philip III of Spain. Married to the French king Louis XIII (1615), she was neglected by her husband and sought the society of the court intriguer, Mme de CHEVREUSE. Anne's indiscretion, especially her flirtation with the duke of Buckingham, injured her reputation. Her loyalty to Spain and her strong Roman Catholic background made her suspect after France's alliance (1635) with the Protestant nations in the Thirty Years War, she was accused by the French minister of state, Cardinal Richelieu, of treasonable correspondence with Spain but was pardoned (1637). Contrary to the express wish of her husband before his death she was granted (1643) by PARLEMENT full powers as regent for her son LOUIS XIV. She entrusted the government to Cardinal MAZARIN, whom she supported during the wars of the Fronde in France. After Mazarin's death (1661), her son excluded her from participation in affairs of state. Anne of Austria is a central figure of Alexandre Dumas's *Three Musketeers*.

Anne of Bohemia, 1366–94, queen consort of Richard II of England, daughter of Holy Roman Emperor Charles IV. She was married to Richard early in 1382 and quickly gained popularity in England. It was probably through her entourage that the writings of John Wyclif were introduced into Bohemia, where they gained much prominence through the teachings of John HUSS.

Anne of Brittany, 1477–1514, queen of France as consort of CHARLES VIII from 1491 to 1498 and consort of LOUIS XII from 1499 until her death. The daughter of Duke FRANCIS II of Brittany, she was heiress to his duchy. Shortly before her father's death (1488), a French army under Louis de La Tremoille successfully invaded Brittany and secured the duke's promise that Anne would marry only with the consent of the French crown. Upon becoming duchess, the young Anne's hand and her duchy were eagerly sought. To prevent France from swallowing up the duchy, a coalition including Archduke Maximilian of Austria (later Holy Roman Emperor MAXIMILIAN I), King HENRY VII of England, and King FERDINAND II of Aragon sent forces to Anne's aid. Nevertheless, Anne's situation was perilous and she appealed (1489) directly to Maximilian for protection. In 1490, Maximilian married Anne by proxy but failed to assist her with armed strength. Besieged at Rennes in 1491, Anne was forced by the French to annul her marriage and was quickly married to Charles VIII. It was agreed that if Charles died before Anne without issue, she was to marry his successor. Accordingly, in 1499, she married Louis XII, who had previously obtained a divorce from his first wife. The marriage (1514) of Claude, Anne's daughter by Louis XII, to Francis of Angoulême (later Francis I of France) led to the eventual incorporation (1532) by France of Brittany, which had previously remained theoretically separate. See biography by H. J. Sanborn (1917).

Anne of Cleves (klĕvz), 1515–57, fourth queen consort of HENRY VIII of England. The sister of William, duke of Cleves, one of the most powerful of the German Protestant princes, she was considered a desirable match for Henry by those English councilors, most notably Thomas CROMWELL, who wished to ally England with the SCHMALKALDIC LEAGUE. The marriage was agreed upon in 1539, and although Henry tried to break the contract after seeing his bride, they were married in Jan. 1540. Henry found Anne dull and unattractive, and the marriage was never consummated. This and the fact that Anne had previously contracted to marry the duke of Lorraine's son were used as grounds for divorce in July, 1540. Anne gave her consent and, by agreement, lived the rest of her life in England. See biography by M. C. Barnes (1958).

Anne of Denmark, 1574–1619, queen consort of James I of England (James VI of Scotland), daughter of Frederick II of Denmark and Norway. She married James in 1589. Brought up a Lutheran, she became a Roman Catholic some time in the 1590s and at James's English coronation (1603) refused to take Anglican communion. James appeared devoted to her at first, but her extravagance and shallowness came to annoy him, and her Catholicism was an embarrassment to him in England. They lived apart after c. 1606. See biography by E. C. Williams (1968).

annexation, in international law, formal act by which a state asserts its sovereignty over a territory previously outside its jurisdiction. Many kinds of territory have been subject to annexation, chief among them those inhabited by settlers of the annexing power, those which already have had the status of protectorates of the annexing state, and those conquered by the force of arms. The consent of other interested powers must be obtained in order that the annexation be generally recognized in international law. Efforts to establish the self-determination of inhabitants as the only grounds for the transfer of territory have been realized in the Charter of the United Nations, which does not recognize annexation as an instrument of national policy. The term *annexation* is also used in municipal government to describe the process by which an incorporated local government may extend its legal control over surrounding areas. Usually this type of annexation requires the consent of the other communities concerned.

Anniston, city (1970 pop. 31,533), seat of Calhoun co., NE Ala., in a mining region of the Appalachian foothills, inc. 1873. Its many varied manufactures include soil pipes, textiles, microwave ovens, factory-built homes, and vaccines. Founded (1872) as an iron-manufacturing "company town," it was opened to the public in 1883. A local landmark is the beautiful Church of St. Michael and All Angels

(Episcopal, 1887). Nearby are the huge Anniston Army Depot and U.S. Fort McClellan, headquarters of the Women's Army Corps (WAC) and of the Chemical Corps Training Command.

annual, plant that germinates from seed, blossoms, produces seed, and dies within one growing season. Annuals propagate themselves by seed only, unlike many biennials and perennials. They are thus especially suited to environments that have a short growing season. Cultivated annuals are usually considered to be of three general types: tender, half-hardy, and hardy. Tender and half-hardy annuals do not mature and blossom in one ordinary temperate growing season unless they are started early under glass and are set outdoors as young plants. Hardy annuals are usually sown where they are expected to bloom. Quite often they reseed themselves year after year. Blooming is prolonged by cutting the flowers before the seeds can form. Typical annual flowers are cosmos, larkspur, petunia, and zinnia; annual vegetables include corn, tomatoes, and wheat. See H. G. W. Fogg, *Dictionary of Annual Plants* (new ed. 1972).

annual rings, the growth layers of WOOD that are produced each year in the stems and roots of trees and shrubs. In climates with well-marked alternation of seasons (either cold and warm or wet and dry) the wood cells that are produced when water is easily available and growth is rapid (in the spring or wet season) are usually noticeably larger and have thinner walls than those produced later in the season when the supply of water has diminished and growth is slower. There is thus a sharp contrast between the small, thick-walled late-season wood cells produced one year, and the large, thin-walled cells of the spring wood of the following year. Where the climate is uniform and growth continuous, as in wet, tropical forests, there is little or no visible contrast between the annual rings, although differences exist. When rings are conspicuous, they may be counted to give a reasonably accurate approximation of the age of the tree. They are also reflective (by their range of thickness) of the climatic and environmental factors that influence growth rates. The science of dendrochronology is based upon the phenomenon of variability in the thickness of annual rings.

anointing of the sick, SACRAMENT of the Orthodox Eastern Church and the Roman Catholic Church, formerly known as extreme unction. In it a sick or dying person is anointed on eyes, ears, nostrils, lips, hands, feet, and sometimes, in the case of men, the loins, by a priest while he recites absolutions for sins committed. The Roman Catholic Church teaches that through the sacrament the sick and dying receive remission of sins, health of soul, and, if God wills, health of body. The sacrament may be shortened, and it may be given conditionally, as when there is doubt as to whether the recipient is living or as to whether he is baptized. Anointing of the sick is given only to persons seriously ill and in danger of death from internal causes, hence, it is not given before operations or in battle before attack. Anointing of the sick, the last confession, and the VIATICUM are the last rites of the church. The chief biblical text for anointing of the sick is James 5:14,15. In the Eastern churches it is normally given by three priests, and it may be given to the healthy to prevent sickness, it is not so widely used in the Eastern churches as in the West.

Anoka (ănŏ'ka), city (1970 pop. 13,489), seat of Anoka co., E Minn., on the Mississippi at the confluence of the Rum, inc. 1878. Originally a trading post and lumber town, it grew as a farm trade center. Ammunition and metal products are among its manufactures. A state mental hospital is there.

anole: see CHAMELEON

anomalistic year (ănŏm'ălis'tik), time required for the earth to go from the perihelion point once around the sun and back to the perihelion point. It is 365 days, 6 hr, 13 min, 53.0 sec of MEAN SOLAR TIME. The anomalistic year is longer than the SIDEREAL YEAR and the TROPICAL YEAR because of the eastward motion of the line of apsides (see APSIS), which is caused by the slow rotation of the earth's orbit as a whole.

Anopheles: see MOSQUITO

anorthite (ănôr'thīt) see FELDSPAR

Anouilh, Jean (zhāN anwē'ya), 1910–, French dramatist. Anouilh's many popular plays range from tragedy to sophisticated comedy. His first play, *L'hermine*, was published in 1932. During the Nazi regime he wrote plays about resistance to oppression in terms of subjects from classical mythology. *Antigone* (1944, tr. 1946) is the most celebrated of these. Several of his later plays have contemporary and historical settings. Anouilh's works frequently contrast the worlds of romantic dreams and harsh reality. His later plays include *The Waltz of the Toreadors* (1952, tr. 1957), *Poor Bits* (1958, tr. 1964), *The Lark* (1953, tr. 1955), *Becket* (1959, tr. 1960), *The Rehearsal* (1963), and *Dear Antoine* (1969, tr. 1971). See studies by L. C. Pronko (1961), John Harvey (1964), E. O. Marsh (1968), Marguerite Archer (1971), and A. Lenski (1973).

Anquetil-Duperron, Abraham Hyacinthe (abram'yāsāNt' anKātēl' dupērōN'), 1731–1805, French Orientalist. He gave up studying for the priesthood to pursue his deep interest in Eastern languages. In India (1755–61) he learned Persian, Sanskrit, Zend, Avestan, and Pahlavi. After studying with the PARSIS, he was forced to return to France as a result of the British conquests in India. He took with him 180 manuscripts, which he gave to the Royal Library. His three-volume translation of the *Zend-Avesta* (1771) introduced Zoroastrian texts to Europe. Anquetil-Duperron also translated the *Upanishads* into Latin (1804) and wrote several works on India.

Ansbach (ans'bakh), city (1970 pop. 30,603), capital of Middle Franconia, Bavaria, S. West Germany, on the Rezat River. Its manufactures include machine tools, electrical products, and chemicals. The city developed around an 8th-century Benedictine abbey. It became the residence of the Franconian branch of the Hohenzollern family in 1331. Ansbach passed to Prussia in 1791 and to Bavaria in 1806. Noteworthy buildings include the 12th-century Romanesque Church of St. Gumbertus, which was redone in baroque style in the 18th cent., and an 18th-century castle.

Anschluss (an'shlōös), German term designating the incorporation of Austria into Germany. Prohibited by the 1919 peace treaty of St. Germain in order to prevent a resurgence of a strong Germany, the Anschluss was favored by German nationalists, and by Austrians dissatisfied with their country's diminished status after World War I. Under the threat of military force, Adolf Hitler occupied Austria on March 11, 1938, and incorporated it into Germany as the province of Ostmark. In 1943, the Moscow Declaration of the United States, Great Britain, and the Soviet Union annulled the Anschluss, recognizing Austria's right to independence, an independent government was not set up until the end of World War II.

Anselm, Saint (ān'sēlm), 1033?–1109, Italian prelate, archbishop of Canterbury, Doctor of the Church (1720), b. Aosta, Piedmont. After a carefree youth of travel and schooling in Burgundy he became a disciple and companion of LANFRANC, the famed theologian and prior of the monastery at BEC, which Anselm soon joined (1060). Anselm became prior (1063) and abbot (1078) and brought widespread fame to the school there. Monastic holdings in England threw him into English public life, and he won the esteem of William the Conqueror. He was a frequent visitor to Lanfranc at Canterbury, and when the latter died, Anselm succeeded him as archbishop (1093). He disputed the right of WILLIAM II to invest him, reserving this for Pope URBAN II, whom William refused to recognize. Anselm momentarily overcame the king's intransigence and took the pallium from Urban's legate. Anselm's further reform-minded efforts to free the church from secular control met stiff resistance. When he went to Rome for support, William banished him and confiscated the diocesan properties. At the Council of Bari (1098) Anselm ably defended the *Filioque* of the CREED in the East-West controversy on the procession of the Holy Spirit. The new king HENRY I, recalled Anselm, who proved valuable in arranging Henry's marriage to Matilda of Scotland and in gaining the support of the barons for the king in his dispute with Robert of Normandy. Conflict over lay INVESTITURE again broke out, however, and Anselm refused to consecrate bishops and abbots nominated by the king. He was again banished while appealing in Rome. Anselm eventually won (1107) Henry's agreement to surrender the right of investiture in exchange for homages from church revenues—a compromise that in effect established papal supremacy in the English church. Many consider this Anselm's most important

achievement. His writings mark him as the founder of SCHOLASTICISM. A strict Augustinian, operating from the formula *fides quaerens intellectum* (faith seeking understanding), he believed in an essential harmony between revelation and reason. He was the first to incorporate successfully the rationalism of Aristotelian dialectics into theology. Although he wrote no great summa, his precision together with his mystical insight give permanent value to such works as *Cur Deus Homo?* (1094–98), on the ATONEMENT. He constructed rational proofs for God's existence in *Monologium* (c. 1070), and in the sequel *Proslogium* he advanced his famous ontological proof, which deduces God's existence from man's notion of a perfect being in whom nothing is lacking. In *De Fide Trinitatis* he defended universals against the nominalist ROSCELIN. He taught the Immaculate Conception of Mary in *De Conceptu Virginali* and is said to have instituted that feast in England. Feast April 21. See Eadmer's *Life of St. Anselm*, Archbishop of Canterbury (tr. by R. W. Southern, 1962), biographies by R. W. Church (1884), A. C. Welch (1901), and Joseph Clayton (1933), studies by R. W. Southern (1963), Charles Hartshorne (1965), and D. P. Henry (1967).

Ansermet, Ernest (ěrněst' anSěrmě'), 1883–1969, Swiss conductor. For several years he was a high-school mathematics teacher. He began his conducting career in Germany and toured with Diaghilev's Ballets Russes from 1915 to 1923. In 1918 he founded the Orchestre de la Suisse Romande in Geneva and remained its director until 1967. Ansermet was noted for his interpretations of modern French and Russian music and made many concert tours. He also composed several short pieces.

An-shan or Anshan (both an-shan), city (1970 est. pop. 1,500,000), central Liaoning prov., China, on a branch of the South Manchurian RR. Its huge integrated iron and steel complex is the largest in China and one of the ten largest in the world. It comprises iron and coal mines and numerous blast furnaces, open hearths, and finishing facilities. Many varieties of steel and steel products (including rails and cables) are produced. Other manufactures in An-shan include chemicals, tractors, machinery, alarm clocks, and cement. An-shan was developed as a metallurgical center largely by the Japanese, who occupied the region during World War II. The Soviet Union dismantled much of the steel mill between 1944 and 1946, but by 1956 the facilities had been rebuilt. The city has a mineral-spray sanitarium for the treatment of arthritis and joint diseases.

An-shun or Anshun (both an-shōn), town, W. central Kweichow prov., SW China. A flourishing town during the opium traffic days, it is known for its green tea. Other industries include sugar refining and machine building. Coal deposits are there.

Ansky, Shloime (shlōi'mə an'skē) or **Solomon Seinwil Rapoport**, 1863–1920, Russian author who wrote in Yiddish. His last name is also spelled Anski. He extensively researched regional Jewish folklore and incorporated folk elements into his realistic stories of peasant life and Hasidism. His most famous work is *Tavishn Tsvet Veln, oder der Dibuk* (1916, tr. *The Dybbuk*, 1926), a story of demonic possession, which he later adapted into a play. It was turned into an opera by Lodovico Rocca (1934) and again by David and Alex Tankin (1949). A modernized version of the play, adapted by Paddy Chayefsky, appeared in New York City in 1960.

Ansley, Clarke Fisher, 1869–1939, American teacher and editor, b. Swedona, near Springfield, Ill., grad. Univ. of Nebraska, 1890. After teaching English at Nebraska, he was professor of English at the State Univ. of Iowa (1899–1917) and dean of its College of Fine Arts (1911–15). Having turned to editing, he conceived the idea of a one-volume general encyclopedia, compact enough and simply enough written to serve as a guide to the "young Abraham Lincoln." This work was started in 1928 as *The Columbia Encyclopedia* with Ansley as its editor in chief. The first edition (1935) and the first supplement (1938) were completed under his direction.

Anson, Adrian Constantine, 1851–1922, American baseball player-manager, known usually as "Cap" Anson, b. Marshalltown, Iowa. For most of his career he played with the Chicago club of the National League and was four times league batting champion. As manager (1879–97), he led the team to five pennants. In 1939 he was elected to the National Baseball Hall of Fame, his lifetime batting average was .339.

Anson, George Anson, Baron, 1697–1762, British admiral. In his famous voyage (1740–44) around the world, Anson, in spite of shipwrecks and scurvy, inflicted great damage on Spanish shipping and re-

turned to England with a rich prize. He was raised to the peerage after his popular naval victory (1747) off Cape Finisterre. Appointed then as first lord of the admiralty, he assisted William Pitt, Lord Chatham, in reorganizing naval administration. See *A Voyage round the World* (comp. by Richard Walter, rev. ed. 1911), biographies by M. V. Anson (1912) and S. W. C. Pack (1960), L. A. Wilcox, *Anson's Voyage* (1970).

Anson, Sir William Reynell, 1843–1914, English jurist. He was a founder of the school of law at Oxford Univ. From 1899 to his death he sat in Parliament as a member for Oxford. His *Principles of the English Law of Contract* (1879) and *The Law and Custom of the Constitution* (2 vol., 1886–92) are frequently consulted standard works. See memoir ed. by H. H. Henson (1920).

Ansonia, city (1970 pop. 21,160), New Haven co., SW Conn., on the Naugatuck River, inc. as a city 1893. Its manufactures include brass and copper products, iron castings, foundry products, plastics, and electronic devices. Settled in 1651 as part of Derby, Ansonia was founded (1844) as an industrial community by Anson G. Phelps, a metals merchant and philanthropist. Ansonia's historical landmarks include the birthplace of David Humphreys, who accepted Gen. Charles CORNWALLIS's sword in surrender after the YORKTOWN CAMPAIGN (1781), and "Pork Hollow," where Revolutionary patriots hid food stores from British raiders.

Anstey, Christopher, 1724–1805, English poet and satirist. He is known chiefly for *The New Bath Guide* (1766), a series of poetical episodes humorously depicting contemporary life at Bath. This work was widely read in its time and may have influenced Tobias Smollet's *Humphrey Clinker*.

Anstey, F., pseud. of **Thomas Anstey Guthrie**, 1856–1934, English author. He relinquished his law practice to write humorous fiction. His best and most successful works are marked by an atmosphere of fantasy and include *Vice Versa* (1882), *The Tinted Venus* (1885), and *The Brass Bottle* (1900). Besides translating several comedies of Moliere, he wrote the play *The Man from Blankley's*, successfully produced in 1901. See his autobiography, *A Long Retrospect* (1936).

ant, any of the 2,500 INSECT species constituting the family Formicidae of the order Hymenoptera, to which the bee and the wasp also belong. Like most members of the order, ants have a "wasp waist," that is, the front part of the abdomen forms a narrow stalk, called the waist, or pedicel, that attaches to the thorax. The wings, when present, are also typical of the order, the small hind pair of wings is attached to the rear edge of the front pair. The head has two bent antennae, used both as organs of touch and as chemosensory organs. In most species there are two compound eyes. The jaws are of the biting type and in some species are used for defense. Some ants have stings, and some can spray poison from the end of the abdomen. Most ants are black, brown, red, or yellow. METAMORPHOSIS is complete. A soft, legless, white larva hatches from the egg, in most species it is completely helpless and must be fed and carried by adults. In some species pupation occurs within a cocoon. Ants are cosmopolitan in distribution. All species show some degree of social organization, many species nest in a system of tunnels, or galleries, in the soil, often under a dome, or hill, of excavated earth, sand, or debris. Mound-building ants may construct hills up to 5 ft (1.5 m) high. Other species nest in cavities in dead wood, in living plant tissue, or in papery nests attached to twigs or rocks, some invade buildings or ships. Colonies range in size from a few dozen to half a million or more individuals. Typically they include three castes: winged, fertile females, or queens; wingless, infertile females, or workers; and winged males. Those ordinarily seen are workers. In some colonies ants of the worker type may become soldiers, or members of other specialized castes. Whenever a generation of queens and males matures it leaves on a mating flight, shortly afterward the males die, and each fecundated queen returns to earth to establish a new colony. The queen then bites off or scrapes off her wings, excavates a chamber, and proceeds to lay eggs for the rest of her life (up to 15 years), fertilizing most of them with stored sperm. Females develop from fertilized and males from unfertilized eggs. The females become queens or workers, depending on the type of nutrition they receive. The first generation larvae are fed by the queen with her saliva, all develop into workers, which enlarge the nest and care for the queen and the later generations. It is thought that the produc-

tion of males by the queen and the rearing of new queens by the workers may be controlled by hormonal secretions of all the members of the colony. There are many variations on the basic pattern of new colony formation. In some species the queen cannot establish a colony herself and is adopted by workers of another colony. Slave-making ants raid the nests of other ant species and carry off larvae or pupae to serve as workers, in a few slave-making species the adults cannot feed themselves. Different species differ widely in their diets and may be carnivorous, herbivorous, or omnivorous. Members of some species eat honeydew from plants infested with APHIDS and certain other insects, others, called dairying ants, feed and protect the aphids and "milk" them by stroking. Harvester ants eat and store seeds, these sometimes sprout around the nest, leading to the erroneous belief that these ants cultivate their food. However, cultivation is practiced by certain ants that feed on fungi grown in the nest. Some of these, called leaf-cutter, or parasol, ants, carry large pieces of leaf to the nest, where the macerated leaf tissue is used as a growth medium for the fungus. Most leaf cutters are tropical, but the Texas leaf-cutting ant is a serious crop pest in North America. The army ants of the New World tropics and the driver ants of tropical Africa are carnivorous, nomadic species with no permanent nests. They travel like armies in long columns, overrunning and devouring animals that cannot flee their path, the African species even consume large mammals. House pests among the North American ants include the yellowish Pharaoh ant, the little black ant, the odorous house ant, the Argentine ant of warm climates, and the black carpenter ant. Carpenter ants tunnel in wood, but do not feed on it. The TERMITES are often mislabeled "white ant," but belongs to a different insect order. Ants as a group are beneficial to humans. Their tunneling mixes and aerates the soil, in some places replacing the activity of earthworms. Many species feed on small insects that are serious pests of crops. Ants are classified in the phylum ARTHROPODA, class Insecta, order Hymenoptera, family Formicidae. See publications of the U.S. Dept. of Agriculture, P. P. and M. W. Larson, *All about Ants* (1965), L. H. Newman, *Ants from Close Up* (1967), C. L. Hogue, *The Armies of the Ant* (1972).

ANTA* see AMERICAN NATIONAL THEATER AND ACADEMY

Antabuse (án'tabyōōs), trade name for the drug tetraethylthiuram disulfide, used in the treatment of ALCOHOLISM. Also called sulfinam, Antabuse is non-toxic, but it alters the metabolism of alcohol in the body, making it impossible for one who is taking the drug to drink without experiencing severe discomfort. When alcohol is present the drug increases the concentration of acetaldehyde in the body, causing symptoms resembling those of a bad hangover. The individual feels hot, the face becomes flushed, the neck and head throb, and nausea, vomiting, and headache may follow. Small quantities of alcohol, such as from food sauces and cough medicines, and even inhaled traces from shaving lotions and varnishes, may induce the same symptoms. The drug Temposil, or citrated calcium carbamide, has the same function as Antabuse, but is weaker and safer. The therapeutic use of Antabuse was discovered in the 1930s when workers exposed to tetraethylthiuram disulfide, a chemical used in the rubber industry, became ill after drinking alcoholic beverages.

antacid, any one of several basic substances that counteract stomach acidity (see STOMACH). Antacids are used by physicians to treat peptic ulcers and hyperchlorhydria, i.e., the excessive production of hydrochloric acid by the parietal cells lining the stomach. Commonly used antacid preparations, most sold without prescription, contain sodium bicarbonate, magnesium hydroxide, or aluminum hydroxide. Some preparations contain substances such as magnesium trisilicate that reduce the formation of gas.

Antaeus (ántē'ās), in Greek mythology, giant, son of Poseidon. He became stronger whenever he touched the earth, his mother, Gaea. He killed everyone with whom he wrestled until Hercules overcame him by lifting him in the air.

Antakya: see ANTIOCH, Turkey

Antalcidas, Peace of: see CORINTHIAN WAR

Antalya (ántäl'yä), city (1970 pop. 95,185), capital of Antalya prov., SW Turkey, a seaport on the Mediterranean Sea. Its manufactures include textiles and ships. Nearby are deposits of chrome and manganese. Founded in the 2d cent. B.C. by Attalus II, king of Pergamum, the city was known as Attaleia or At-

talia, and later as Adalia. It is mentioned in Acts 14:25 as the port from which Paul and Barnabas sailed to Antioch. It passed under the control of the Seljuk Turks in the 13th cent. and in the 15th cent. was annexed by the Ottoman Empire. Situated on a steep cliff, Antalya is a picturesque city surrounded by an old wall. The city is a popular resort. Nearby are numerous ancient ruins.

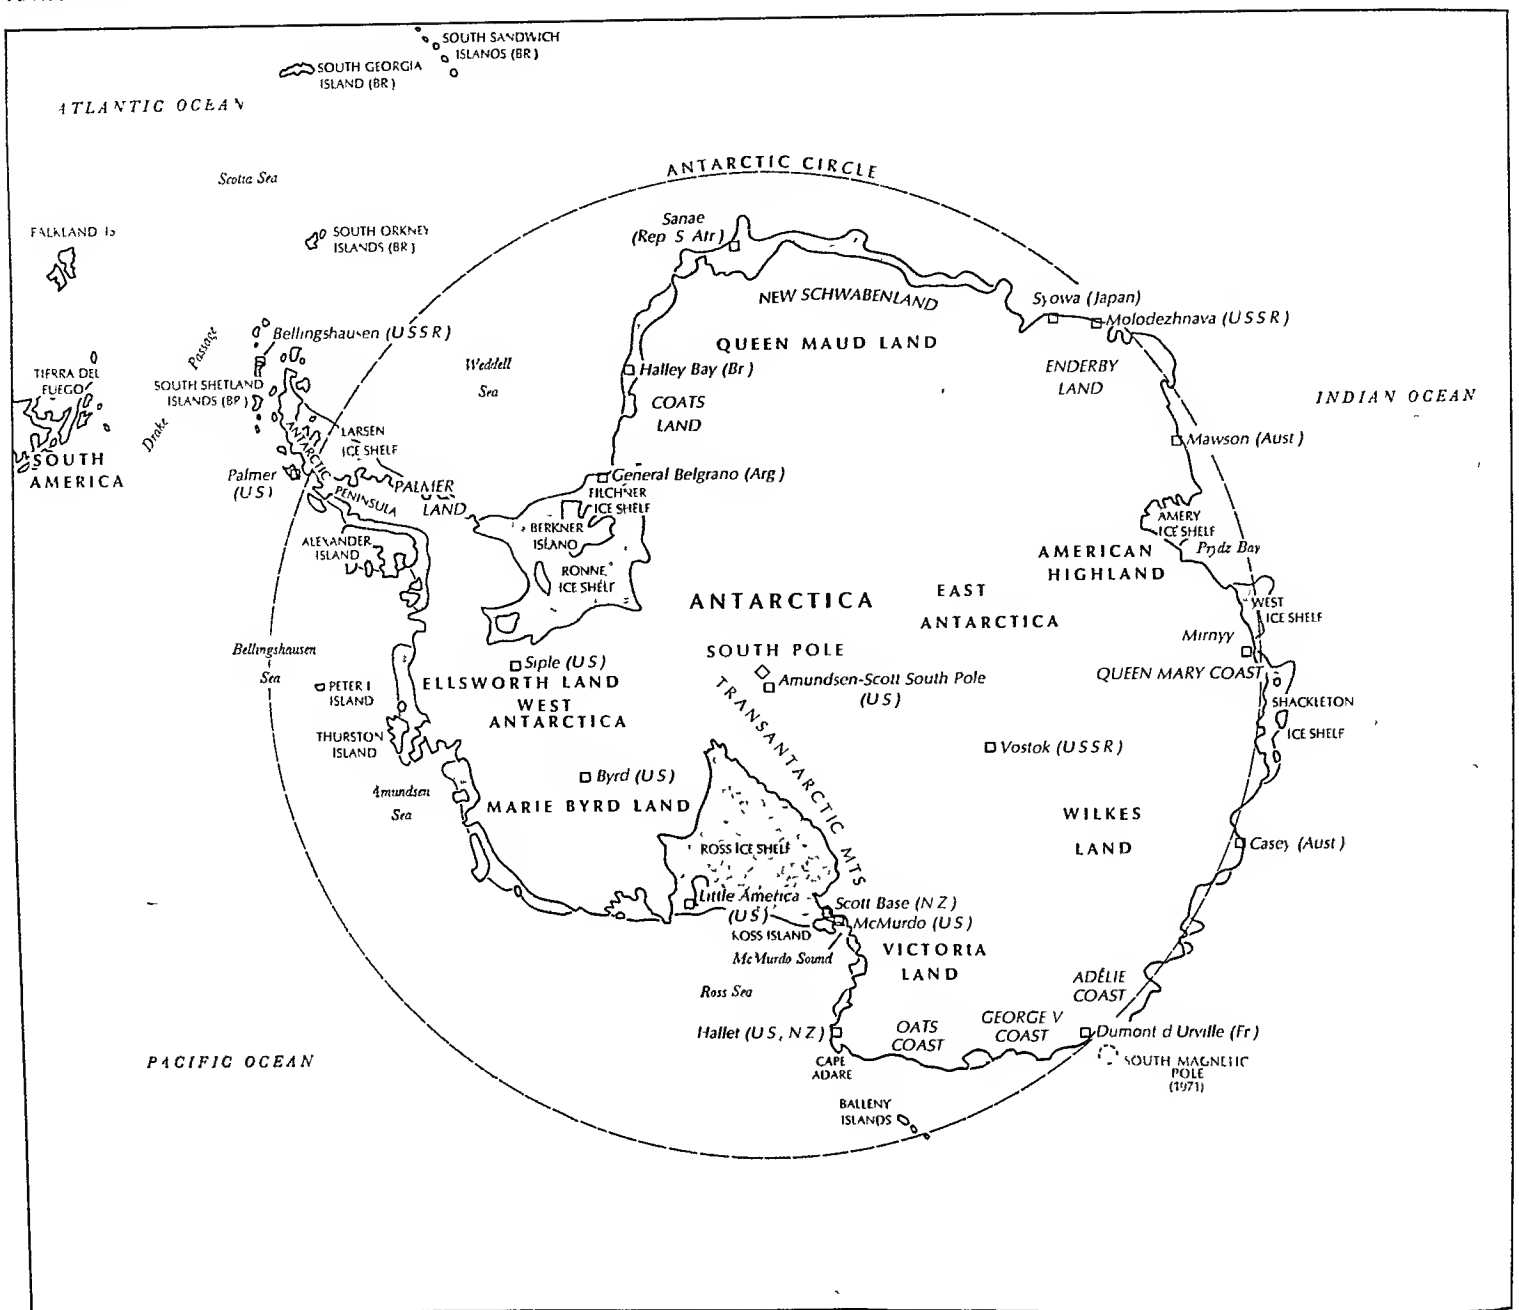

Antananarivo: see TANANARIVE, Malagasy Republic

Antara (ántär'ä), fl. 600, Arabian warrior and poet, celebrated in his own day as a hero because he rose from slave birth to be a tribal chief. His poetry is represented by one poem in the MUALLAQAT. His greatness gave rise to many legends over the centuries, and he became the hero of the popular Arabic epic *Sirat Antar*. In it he represents the ideal of a Bedouin chief, rich, generous, brave, and kind. His name also appears as Antar.

Antarctica (ánt'ärk'tikä), the 5th largest continent, c.5,500,000 sq mi (14,245,000 sq km), asymmetrically centered on the South Pole and almost entirely within the Antarctic Circle. It consists of two major regions: W Antarctica (c.2,500,000 sq mi/6,475,000 sq km), a mountainous archipelago that includes the Antarctic Peninsula, and E Antarctica (c.3,000,000 sq mi/7,770,000 sq km), geologically a continental shield. They are joined into a single continental mass by an ice cap thousands of feet thick. The seaward margins of the ice cap are steeply sloping, masses of ice break off and float away as icebergs, leaving ice cliffs. Where the outward creep of the ice is channeled into ice streams (zones of more rapid flowage), great floating ice tongues project into the sea, where mountains retard outward movement, the flow is channeled into great valley glaciers. The two major coastal indentations are the Ross Sea, facing the Pacific Ocean, and the Weddell Sea, facing the Atlantic Ocean. At the head of each sea are great ice shelves, the Ross and the McMurdo ice shelves in the Ross Sea and the Ronne and the Filchner ice shelves in the Weddell Sea. Partly aground but mostly afloat, these nearly level ice shelves are from 600 to 4,000 ft (180-1,220 m) thick. They move steadily toward the sea and are fed by valley glaciers, ice streams, and surface snow accumulations. Smaller ice shelves are found all along the coast. Except for mountain ranges, much of E Antarctica's rock surface is near sea level, however, the continent's domed, snow-covered glacial surface rises to about 13,000 ft (4,000 m). In W Antarctica there is great variation in the subglacial relief, suggesting mountainous islands or submerged ranges separated by deep sounds beneath the ice cover. Less than 5% of Antarctica is free of ice, these areas include mountain peaks, small coastal areas, and islands. The Transantarctic Mts. (c.3,500-14,300 ft/1,100-4,400 m high), which extend from the east side of the Filchner Ice Shelf to the western portal of the Ross Sea, form the inner margin of E Antarctica. Primarily formed by block faulting (see MOUNTAINS), the lower slopes have a complex structure of late Precambrian and early Paleozoic metamorphic rocks. These are overlaid by essentially horizontal sedimentary rock, mainly of continental or near-shore origin and ranging in age from the Devonian period to the early Jurassic, which are similar to rocks found in Australia, S. Africa, and E. South America, coal-bearing Permian strata are also found there. Distinctive plant, insect, fish, and animal fossils in the Triassic and Jurassic strata strongly indicate that the continents of the Southern Hemisphere are parts of a hypothetical supercontinent, Gondwanaland, which broke up in the late Mesozoic era. The continents have since drifted to their present positions. The ice-drowned, mountainous archipelago of W Antarctica is related to the Andes Mts. of South America and is structurally connected to them by way of the Antarctic Peninsula and the Scotia Arc (South Georgia and the South Orkney and South Sandwich islands). The complex structure consists of highly folded metasedimentary strata from Paleozoic to Pliocene epochs. There has been much volcanism down to the present. Mountains of the Antarctic Peninsula rise to c.11,000 ft (3,350 m), the mountains of Marie Byrd Land have comparable heights. The Ellsworth Mts., at the head of Ronne Ice Shelf, are the highest in Antarctica, Vinson Massif (16,860 ft/5,140 m) is the continent's highest peak. A variety of mineral deposits have been discovered in Antarctica, but the extent of the deposits is largely unknown and their relative inaccessibility makes their utility doubtful. Antarctica is surrounded by the world's stormiest seas. A belt of pack ice surrounds the continent, only a few areas are ice-free at the end of most summers. The physical boundary most widely accepted today for the antarctic region

is the Antarctic Convergence, a zone c.25 mi (40 km) wide encircling the earth roughly between the 50th and 60th parallels of latitude. Within this zone the colder and denser north-flowing antarctic surface waters sink beneath warmer and saltier subantarctic waters, the difference in temperature and chemical content of the water on the two sides of the zone is reflected in noticeable differences in air temperature and in marine life. Antarctic climate is characterized by low temperature, high wind velocities, and frequent blizzards. Rapidly changing weather is typical of coastal locations, where temperatures for the warmest month average around freezing. Winter minimums drop as low as -40°F (-40°C). High altitude and continuous darkness in winter combine to make the interior of Antarctica the coldest place on earth. Summer temperatures are unlikely to be warmer than 0°F (-18°C), winter mean temperatures are -70°F (-57°C) and lower. The lowest temperature ever recorded on earth was -126.9°F (-88.3°C) at Vostok, a Russian station. Precipitation is in the form of snow, the annual water equivalent in the interior is c.2 in. (5 cm) and c.10 in. (25 cm) in coastal areas. In the dry, dust-free air one can see for miles in clear weather, distances are deceptive, and mirages are common. Refraction of light on blowing snow or low clouds causes "whiteouts" in which the sky blends with the snow-covered surface, eliminating the horizon, no condition is more feared by aviators. There is no native human population in Antarctica, nor are there any large land animals. Few species are adapted to the antarctic environment, but individuals of these few species are numberless. Life that depends completely on the land is limited to microscopic life in summer melt-water ponds, tiny wingless insects living in patches of moss and lichens, and two types of flowering plants (both in the Antarctic Peninsula). Birds and seals that spend part of their time on land (e.g., emperor and Adélie penguins and the brown skua—the most southerly bird and a notorious predator—and Weddell, crabeater, and Ross seals) are dependent on the surrounding sea for food. Antarctic waters are rich in plankton, which serves as food for krill—small shrimplike crustaceans that are the principal food of baleen whales, crabeater seals, Adélie penguins, and several kinds of fish. Fur and elephant seals, which spend the summers on islands north of lat. 65°S were the basis for 19th-century commercial activity in Antarctica. In the 20th cent., commercial interest shifted to baleen whales. Fur seals, thought to be extinct, have only a few small rookeries but they are recovering from the slaughter of the 19th cent., as are the elephant seals. Whaling has been declining since the peak year of 1930-31 when the Norwegians dominated the industry, since 1967 only the Japanese and the Russians have continued whaling. International efforts to regulate whaling to preserve the stock have been ineffective, and the baleen whales that spend the summer in a zone up to 300 mi (480 km) north of the pack ice are now in danger of extinction.

History of Exploration Although there was for centuries a tradition that another land lay south of the known world, attempts to find it were defeated by the ice. Antarctica's frigid nature was revealed by the second voyage (1772-75) of the English explorer Capt. James Cook. He did not see the continent as he circumnavigated the world, but he was the first to cross the Antarctic Circle. British and U.S. seal hunters followed him to South Georgia, an island in the S. Atlantic. In 1819 the British mariner William Smith discovered the South Shetland Islands. Returning in 1820, he and James Bransfield of the British navy explored and roughly mapped the Shetlands and part of the shore of the Antarctic Peninsula. Searching for rookeries, sealers explored the coastal and offshore regions of the Antarctic Peninsula. Most notable were the British captains James Weddell, George Powell, and Robert Fildes and the Americans Nathaniel B. Palmer, Benjamin Pendleton, Robert Johnson, and John Davis. Davis made the first landing on the antarctic continent (Feb. 7, 1821) at Hughes Bay on the Antarctic Peninsula. First to spend the winter in Antarctica, on King George Island in 1821, were 11 men from the wrecked British vessel *Lord Melville*. After 1822 fur sealing declined, but in 1829-30 Palmer and Pendleton led a sealing and exploring expedition that included Dr. James Eights, the first U.S. scientist to visit Antarctica. John Biscoe, a British navigator circumnavigated Antarctica from 1830 to 1832, sighting Enderby Land in 1831 and exploring the western side of the Antarctic Peninsula in 1832. John Balleny and Peter Kemp were other British sealers who made discoveries in E. Antarctica in the 1830s. Four naval

exploring expeditions visited Antarctica in the first half of the 19th cent. Capt T. T. Bellingshausen was the leader of a Russian expedition that circumnavigated Antarctica (1819-21). He apparently was the first to see (1820) the part of the continent that is now called Queen Maud Land. In W. Antarctica he discovered (1820) Peter I Island and Alexander Island. Admiral J. S. C. Dumont d'Urville led a French expedition to the Pacific Ocean that made two visits to Antarctica. He explored in the area of the Antarctic Peninsula in 1838 and in 1840 discovered Clarie Coast and Adélie Coast in E. Antarctica. In 1840, Lt. Charles Wilkes, leader of the U.S. Exploring Expedition to the Pacific (1838-42), sailed along the coast of E. Antarctica for 1,500 mi (2,400 km), sighting land at nine points. British Capt. James C. Ross commanded two vessels on an expedition (1841-43) that discovered Victoria Land in E. Antarctica, the Ross Sea, and the Ross Ice Shelf and explored and mapped the western approaches of the Weddell Sea. In the 1890s, after a half-century of neglect, interest in Antarctica was revived. Norwegian and Scottish whaling firms sent ships (1892-93) to investigate the possibilities of whaling around the Antarctic Peninsula and a Norwegian vessel examined the Ross Sea area, where a landing was made (1895) on Cape Adare. C. A. Larsen began whaling at South Georgia island in 1904-5, and the seas of the Scotia Arc became the center of Antarctic whaling until after 1926. The 1890s also marked the beginning of a period of extensive Antarctic exploration, during which 16 exploring expeditions from nine countries visited the continent. For the first time, many of them were financed by private individuals and

sponsored by scientific societies. It was a period of innovation and hardship in an extremely harsh, little-known environment. The Belgian expedition under Lt. Adrien de Gerlache was beset in the pack ice in March, 1898, and the ship drifted west across the Bellingshausen Sea for a year before it was released. A British expedition led by C. E. Borchgrevink was the first to establish a base for wintering on the continent (Cape Adare, 1899) and the first to make sledge journeys. Different parts of the Antarctic Peninsula and the islands of the Scotia Arc were explored by de Gerlache (1897-98), a Swedish expedition under Dr. Otto Nordenskjöld (1901-4), the Scottish National Antarctic Expedition led by W. S. Bruce (1902-4), and two French expeditions led by Dr. Jean B. Charcot (1903-5 and 1908-10). Nordenskjöld spent two winters in Antarctica before being rescued after his ship was crushed by ice. Exploration in the Ross Sea area during this period was characterized by long inland journeys. Four British expeditions had bases on Ross Island at McMurdo Sound. British Capt. R. F. Scott headed two expeditions (1901-4 and 1910-13), E. H. Shackleton led another expedition (1907-9), and A. E. Mackintosh headed the Ross Sea Party of Shackleton's unsuccessful Trans-Antarctic Expedition (1914-17). Roald Amundsen, a Norwegian, set up his base at the Bay of Whales, an indentation in the front of the Ross Ice Shelf, and a Japanese expedition (1911-12) was ship-based. The British expeditions carried out extensive exploration and scientific investigation of Victoria Land. Shackleton and scientific investigation of the South Pole (Jan. 1, 1909), but it was Amundsen who reached the Pole first, on Dec. 14,

1911. Scott reached it on Jan. 17, 1912, but he and four companions perished on the return trip. The Weddell Sea border of E. Antarctica was seen first by Bruce (1904), and it was later explored by the German expedition of Dr. Wilhelm Filchner, discoverer of the Filchner Ice Shelf, whose ship was beset and drifted in the Weddell Sea through the winter of 1912 before being released. Shackleton reached the Weddell Sea in Jan. 1915. He had planned to sledge to McMurdo Sound, via the South Pole, but his ship was beset and crushed in the ice, and his party lived on ice floes until they finally reached Elephant Island in boats. From there Shackleton made his epic voyage of c. 800 mi (1,290 km) to South Georgia in an open boat. Two other expeditions explored E. Antarctica during the early 20th cent.—Dr. Erich von Drygalski's well-equipped German expedition (1901-3) was cut short on the Wilhelm II Coast when the ship was beset, and Douglas Mawson, leader of the Australasian Expedition (1911-14) established bases at Commonwealth Bay on the George V Coast and on the Queen Mary Coast. Five major sledge journeys were made from Commonwealth Bay, two men perished and Mawson barely survived. In the period following World War I, scientific and technological advances were applied to further Antarctic exploration. The first airplane flight in Antarctica (Nov. 26, 1928) was by Sir Hubert Wilkins, an Australian who later flew down the eastern side of the Antarctic Peninsula. However, it was U.S. explorer Richard E. Byrd who most successfully coordinated radios, tractors, airplanes, and aerial cameras for the purposes of exploration. On his first expedition Byrd established his base, Little America,

near the site of Amundsen's old base at the Bay of Whales. From Little America he made the first flight over the South Pole on Nov. 29, 1929. On this expedition Marie Byrd Land was discovered and explored from the air. On his second expedition (1933-35) Byrd successfully integrated flights with long sledge and tractor journeys in a more complete exploration of Marie Byrd Land. In 1929-30 three other expeditions were also using aircraft for short flights over the coast. Sir Hubert Wilkins in 1929-30 operated in the Bellingshausen Sea. A Norwegian captain, Hjalmar Riiser-Larsen, explored (1929-30) the coast of E Antarctica from Enderby Land to Coats Land, the area was later claimed by Norway as Queen Maud Land. In Nov., 1935, U.S. explorer Lincoln Ellsworth made the first transantarctic flight, from Dundee Island at the tip of the Antarctic Peninsula to the Bay of Whales, landing four times en route. The British Graham Land Expedition explored the Antarctic Peninsula by sea, air, and dog team from 1935 to 1937, using a different base each winter. Germany made a calculatedly spectacular effort at aerial surveying when two aircraft flying from a catapult ship photographed approximately 135,000 sq mi (350,000 sq km) of Queen Maud Land. The Norwegians had done considerable exploration and mapping during the first two decades of antarctic whaling in the Scotia Arc. In 1925-26 they introduced pelagic whaling with factory ships that could operate in the open sea. Between 1927 and 1937, Lars Christensen led an extensive program of aerial exploration and mapping of the coast of E Antarctica from the Weddell Sea to the Shackleton Ice Shelf. Also allied to whaling were the investigations in physical oceanography, marine biology, and coastal mapping carried out by the Discovery Committee of the British Colonial Office from 1925 to 1939. Their major achievement was the discovery of the Antarctic Convergence. The 1930s were a period of international rivalry in Antarctica, and the map was cut into wedge-like territorial claims that often overlapped. Although the U.S. government did not make a claim nor recognize those of other nations, it supported antarctic exploration. The U.S. Antarctic Service Expedition (1939-41), directed by Byrd, introduced the concept of continuously occupied bases, one of which was set up at the Bay of Whales and another on Stonington Island W of the Antarctic Peninsula. The onset of World War II forced the evacuation of the bases, but before the war ended Great Britain, in order to offset claims by Chile and Argentina, had established permanent bases on the Antarctic Peninsula and off-lying islands. Interest in Antarctica intensified after the war, and several governments established permanent agencies to direct antarctic affairs. Great Britain, Argentina, and Chile continued the system of scientific bases in the Antarctic Peninsula and Scotia Arc. Australia established bases on Heard and Macquarie islands, and France founded one on the Adélie Coast. From 1945 to 1957 the U.S. navy conducted Operation Highjump, the largest expedition ever sent to Antarctica. It involved c. 5,000 men, 13 ships including 2 icebreakers, 6 seaplanes, 6 airplanes, 2 small amphibian planes, and 3 helicopters. About 60% of the coastline was photographed, of which about 25% was reported as sighted for the first time. Much of the interior bordering the Ross Ice Shelf was also photographed. The navy's Operation Windmill (1947-48), a part of the larger operation, consisted of two icebreakers equipped with helicopters; it was sent to get ground control for Highjump photography on the coast of Wilkes Land. After World War II, most expeditions were again government-financed. The Ronne Antarctic Research Expedition (1947-48), led by Finn Ronne, was the last privately sponsored U.S. expedition. Using the old U.S. Antarctic Service Expedition Base on Stonington Island, Ronne closed the unexplored gap at the head of the Weddell Sea. Some work was done as a joint effort with the British party that also had a base on the island. A portent of the international cooperation soon to follow, the Norwegian-British-Swedish Antarctic Expedition was organized by the respective governments and scientific societies for exploration and scientific investigation in Queen Maud Land. Although geophysical exploration of the Ross Ice Shelf had been carried out by the Second Byrd Expedition, the Norwegian-British-Swedish Expedition was the first to use geophysical methods inland on a very extensive scale. The International Geophysical Year (IGY), from July 1, 1957, to Dec. 31, 1958, was planned to correspond with a period of maximum sunspot activity. Organized as a cooperative venture by a special committee of the International Council of Scientific Unions, the IGY involved scientists from 56 nations at ap-

proximately 2,000 stations on five meridian belts from pole to pole. In a cooperative program, planned and coordinated to avoid duplication and achieve maximum results, 12 nations maintained 65 stations and operational facilities in Antarctica. World data centers were established to collect and organize information and make it available to all scientists. The more difficult logistical problems of establishing inland bases were undertaken by the United States and the USSR. The American effort, beginning in 1955-56, was carried out by Naval Task Force 43 (Operation Deep Freeze). A major base of operations was built on Ross Island, and an airfield was established on the ice. Five other U.S. stations were established, including one at the South Pole that was entirely supplied by air. The Russians concentrated on E Antarctica, building Mirnyy, a station on the Queen Mary Coast, and two relay stations and three bases inland: Komsomolskaya, Vostok (at the Geomagnetic South Pole), and Sovetskaya. There were 14 British stations, 8 Argentine stations, and 6 Chilean stations. France reoccupied the station opened in 1950 on the Adélie Coast and set up another inland near the Magnetic South Pole. Australia, Belgium, Japan, Norway, South Africa, and New Zealand also participated and occupied either insular or coastal sites. From 1951 to 1958, Dr. Vivian Fuchs led the British Commonwealth Trans-Antarctic Expedition's traverse with tractors from the Weddell Sea to McMurdo Sound via the South Pole, conducting a seismic and magnetic profile en route. Although mapping was not part of the IGY program, long-distance flights by U.S. planes covered c. 2,000,000 sq mi (5,180,000 sq km) in 1955-56, half of which had never been seen before. These and later support flights, the tractor journeys to build bases, and geophysical traverses by tracked vehicles during the IGY left little of the continent that had not been seen. So outstanding were the results that before the IGY ended it was proposed to continue and broaden the program after 1958. The International Council of Scientific Unions in 1957 established SCAR (Scientific Committee on Antarctic Research) to plan and coordinate the programs that would be carried out in a manner similar to the IGY. Of the 12 nations involved in the IGY, some have dropped their programs, others have suspended and then renewed operations, those that have been continually involved have reduced the size of their programs. Some stations have been closed, new ones have been opened, and old ones have had to be replaced by buildings designed for permanence and comfort. At McMurdo the United States has built a scientific village where people may be housed in summer and winter. The village is heated and lighted by a small atomic power plant that uses waste heat to distill sea water. From McMurdo other U.S. bases are supported by air. Since the IGY the National Science Foundation (NSF) has financed the U.S. program. Logistical support is in the hands of the U.S. navy, and mapping is done by the U.S. Geological Survey. Since 1962, when the NSF introduced a research ship, work on various branches of oceanography in the 5 Pacific and 5 Atlantic has been done. In 1968-69 the NSF added a wooden trawler-type vessel especially designed for marine biological investigations in the area of the Antarctic Peninsula. The success of the IGY effort led to the signing (1959) of the Antarctic Treaty by representatives of the 12 nations that had been involved in the IGY. The treaty applied to the area south of lat. 60°S, exclusive of the high seas, and it provided for cooperation and freedom of movement for scientific investigation as well as for the exchange of observers and scientific data. It prohibited military operations, nuclear explosions, and the disposal of radioactive wastes. Previous territorial claims were not prejudiced, nor was any activity during the life of the treaty to be construed as supporting territorial claims. By 1971 six consultative conferences had been held, resulting in amendments relative to cooperation in scientific research, conservation of living resources, contamination of the environment, development of telecommunications, and preservation of historic areas and buildings. In the early 1970s fossil finds and geological studies gave further support to the theory of continental drift. These studies concluded that Antarctica has been frozen for at least 20 million years (not 7 million years as previously thought) and that a tropical environment existed there 250 million years ago. Antarctic Circle, imaginary circle on the surface of the earth at 66½°S lat., i.e., 23½°N of the South Pole. It marks the southernmost point at which the sun can be seen at the summer SOLSTICE (about June 22) and the northernmost point of the southern polar regions at which the MIDNIGHT SUN is visible.

Antarctic Peninsula, glaciated mountain region of W ANTARCTICA, extending c. 1,200 mi (1,930 km) N toward South America, in the south, volcanic peaks rise to c. 11,000 ft (3,350 m). It is surrounded by numerous islands, including the South Shetlands and the Palmer Archipelago. The tip of the peninsula, 670 mi (1,078 km) from Cape Horn, is Antarctica's farthest point from the South Pole. The continent's only flowering plants are found on the peninsula. The northwest coast of the peninsula was mapped by the British navigator James Bransfield in Jan., 1820, and was explored by sealers in 1820-21. First considered to be part of the continent, the peninsula was later (1928) thought to be a group of islands; the John Rymill expedition (1934-37) proved its peninsularity. It was originally named Palmer Peninsula by Americans for Nathaniel Palmer, a U.S. captain who explored the area in Nov., 1820. In 1832, Britain claimed it and called it Graham Land and Trinity Peninsula. Argentina claimed it in 1940 as San Martin Land and Chile in 1942 as O'Higgins Land. In 1964, by international agreement, the entire feature was called the Antarctic Peninsula, Graham Land, Trinity Peninsula, and Palmer Land are used as local names.

Antares (āntār'ēz), brightest star in the constellation SCORPIUS, Bayer designation Alpha Scorpii, 1970 position R.A. 16h27m, Dec. -26°22'. A red supergiant of SPECTRAL CLASS M1, Antares has an apparent MAGNITUDE of about 0.9, making it one of the 20 brightest stars in the sky. Its name is from the Greek meaning "rival of Mars," referring both to its color and to its brightness. Antares is a binary star and a semi-regular variable, with magnitude ranging from 0.86 to 1.02. Its distance from the earth is about 500 light-years.

ant bear: see AARDVARK

anteater, name applied to various animals that feed on ants, termites, and other insects, but more properly restricted to a completely toothless group of the order EDENTATA. There are three genera, all found in tropical Central and South America. The great anteater, or ant bear (*Myrmecophaga*), has an elongated, almost cylindrical head and snout, a long sticky tongue, a coarse-haired body about 4 ft (1.2 m) long, and a long, broad tail. The large, sharp claws on the forefeet are weapons of defense and are used to open the hard earth mounds of termites and ants, which are then picked up on the saliva-coated tongue. The tongue extends to a length of about 2 ft (60 cm). The collared, or lesser, anteater (*Tamandua*), less than half the size of the great anteater, is a short-haired yellowish and black arboreal creature. The arboreal two-toed anteater (*Cyclops*) is the size of a squirrel and has a prehensile tail and silky yellow fur. Other animals called anteater are members of other groups. The banded anteater of Australia is a marsupial, the spiny anteater, also of Australia, is related to the PLATYPUS. For the scaly anteater, see PANGOLIN. True anteaters are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Edentata, family Myrmecophagidae.

Antelami, Benedetto (bānādēt'tō antālā'mē), c. 1150-c. 1225, Italian sculptor. Considered the most important sculptor of the late Romanesque period in N Italy, Antelami was an aesthetic forebear of Nicola and Giovanni PISANO. His relief carvings emphasize rhythmic design by means of drapery details on elongate figures and tight compositions. The faces of his figures are profoundly expressive. Antelami's style, as in his doors for the baptistry at Parma (begun 1196), suggests that he was trained in S France. It is clear that his late work was influenced by French Gothic style.

antelope, name applied to a large number of hoofed, ruminant mammals of the CATTLE family

(Bovidae), which also includes the sheep and goats. The North American PRONGHORN is sometimes called an antelope, but belongs to a separate, related family (Antilocapridae). True antelopes are found only in Africa and Asia. They range in size from pygmy antelopes, 12 in (30 cm) high at the shoulder, to the giant ELAND, with a shoulder height of over 6 ft (180 cm). Most types stand 3 to 4 ft (90-120 cm) high. The horns of antelopes, unlike the antlers of deer, are unbranched, consist of a chitinous shell with a bony core, and are not shed. Africa is the home of most antelopes. The spiral-horned antelopes are the BUSHBUCKS, (including the nyala and the sitatunga), KUDU, eland, and BONGO. These oxlike animals have patterns of light and dark stripes on the body, and most have them on the face as well. The DUKERS are a group of small, straight-horned antelopes of forest and thick brush country. MARSH ANTELOPES are deerlike animals of marshes and reedbeds, they include the waterbuck, kob, puka, lechwe, reedbuck, and rhebok. The GNU (or wildebeest) and the closely related HARTEBEEST and DAMALISK are horselike antelopes of the grasslands. The name ORYX is applied to smaller horselike animals of the desert and scrublands, including the gemsbok and the beisa, the ADDAX is a related desert antelope. The sable antelope and the closely related roan antelope have enormous, backward-curved, scimitar-shaped horns. GAZELLE is the name for a number of small, delicate antelopes with spreading horns, inhabiting deserts and grassy plains. The largest of these is the pale brown IMPALA, the kind of antelope best known from motion pictures. The gazelle tribe also includes the gerenuk, dibatag, springbok, and BLACKBUCK, as well as the so-called true gazelles (genus *Gazella*). The blackbuck, found in India, was the first antelope to be described by zoologists, and has the generic name *Antelope*. The delicate pygmy antelopes include the royal antelope, beira, klipspringer, onibi, grysbok, steinbok, dik-dik, and suni. Males have tiny, straight horns. The nilgai and the four-horned antelope are found in SE Asia. More closely related to the goats than to any of the above-named animals, but often called antelopes, are the saiga of central Asia and the chiru of Tibet. Antelopes are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

antelope brush, low, deciduous shrub (*Purshia tridentata*) of the family Rosaceae (ROSE family), widely distributed in the W United States where it is a characteristic constituent of the vegetation on arid slopes and desert ranges. One of the most important Western browse plants, it provides abundant forage throughout the year for both cattle and deer. Antelope brush is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

antenna (āntē'nā), in electronics, system of wires or other conductors used to transmit or receive radio or other electromagnetic waves (see RADIO), popularly called an aerial. The idea of using an antenna was developed by Guglielmo Marconi (c 1897). In a transmitting antenna, the signal from an electronic circuit causes electrons in the antenna to oscillate, these moving electric charges generate electromagnetic radiation, which is transmitted through space. Distribution of the waves depends on the design of the antenna, the transmitting antennas of radio stations are designed to emit waves in all directions, while those used for RADAR focus the waves in a single direction. In a receiving antenna electromagnetic waves cause the electrons to oscillate, inducing a signal that can be detected by an electronic circuit. The antenna has a characteristic frequency that depends on the relationship between its physical dimensions and the wavelength of the signal, a wire of a given length is inherently tuned to radio waves whose wavelengths are simple fractions of the length of the wire. In general, a longer antenna is used to transmit or receive signals of longer wavelength. Theoretically, the same antenna can be used both for sending and for receiving signals, but in practice, transmitting antennas are designed differently from receiving antennas, since they must be able to handle higher power loads. Any straight vertical conductor may serve as an antenna and will transmit to or receive from all directions. A horizontal antenna radiates or intercepts energy principally at right angles to itself, the use of horizontal antennas enables transmitters to concentrate or beam their signals into desired areas and enables receivers to select one of several signals having the same frequency but arriving from different directions. Developments in radio circuitry and antenna design have culminated the need, in most locations, for an

external antenna for AM radio reception, however, external antennas are usually needed for FM radio and television reception. Special antennas are employed in transmitting and receiving radar and microwaves and in satellite communications. The radio telescopes used in astronomy are specially designed receiving antennas.

Antenor (āntē'nōr), fl last half of 6th cent B C, Greek sculptor who executed the bronze statues of the tyrannicides Harmodius and Aristogiton. In 480 B C, Xerxes carried these statues away from Athens, but they were discovered later at Susa by Alexander and sent back. A marble figure of a woman, signed on the base by Antenor, was found in the ruins of the Acropolis at Athens. See also CRITIUS.

Antenor, in Greek mythology, wise elder of Troy who urged that Helen be returned to Menelaus. The Greeks spared him and his family when they sacked Troy. A later myth portrays Antenor as a traitorous spy who opened the door of the wooden horse. Agenor was his son.

Antequera (āntāk'āra), city (1970 pop 40,908), Malaga prov, S Spain, in Andalusia. At the foot of the Sierra de los Torcales, it is the center of a fertile agricultural region. The Cueva de Menga, a large prehistoric burial chamber, possibly Celtic, was discovered in the vicinity in 1842. Similar finds were made in 1903 and 1904.

Antequera y Castro, José de (hōsā' dā āntāk'āra ē ka'strō), 1690-1731, Peruvian lawyer, leader of a revolt in Paraguay. A prosecutor of the audiencia of Charcas, he was sent to Asuncion to probe charges against the governor of Paraguay, Diego de los Reyes. Antequera sided with the opposition, became governor himself, and upheld the celebrated doctrine that "the authority of the people is superior to that of the king." He led the uprising of the COMUNEROS in a war against the authority of the viceroy and was finally captured and beheaded in 1731. This first struggle for freedom was the forerunner of the Spanish American revolts against Spain.

Anteros: see EROS.

Antheil, George (ān'tīl), 1900-59, American composer, b Trenton, NJ. He went to Europe in 1920 and became known for his iconoclastic approach to music. In 1927 a performance of his *Ballet mécanique*, scored for player piano, car horns, airplane propellers, and the like, caused a great stir among critics and concertgoers in New York City. Much of his early work, such as the opera *Transatlantic* (1930), reveals the influence of jazz. Antheil's later compositions include more traditional symphonies and sonatas.

antheion: see HALO.

anthem [ultimately from ANTIPHON], short nonliturgical choral composition used in Protestant services, usually accompanied and having an English text. The term is used in a broader sense for "national anthems" and for the Latin motets still used occasionally in Anglican services. A full anthem is entirely choral, while a verse anthem includes parts for solo singers. The anthem arose in the Anglican Church, as the English counterpart of the Latin motet, through the work of Christopher Tye (c 1500-1573), Thomas TALIS, and William BYRD (1543-1623). Early anthems were often in the style of Latin motets, sometimes being merely an English text set to well-known motets. In the late 17th cent composers such as Henry Purcell and John Blow, under Italian influences, wrote verse anthems with several movements, as in cantatas. George F Handel's anthems, in the tradition of the full anthem, are, like those of Purcell and Blow, too elaborate for ordinary church use. Since the 19th cent extracts from oratorios, masses, passions, etc., are commonly used as anthems, but these pieces are not anthems in the original sense of the term. See R T Daniel, *The Anthem in New England before 1800* (1966), M B Foster, *Anthems and Anthem Composers* (1901, repr 1970).

anthemion (ānthē'mēan), commonly called a palmette, a radiating, fan-shaped ornament or motif suggestive of a palm leaf or of honeysuckle and found in Egyptian, Assyrian, and Aegean art. It was widely used by the Greeks and Romans on their buildings and on many kinds of decorative objects.

Anthemius of Tralles (ānthē'mēas, trāl'ēz), fl 6th cent, Greek architect, engineer, and mathematician. By order of Emperor Justinian and with the aid of Isidorus of Miletus, he built (532-37) the Church of HAGIA SOPHIA in Constantinople.

anther, pollen-bearing structure of the stamen of a flower, usually borne on a slender stalk called the filament. Each anther generally consists of two pollen sacs, which open when the pollen is mature. The

method of opening, or dehiscence, is uniform in any single species of plant.

anthology, collection of selected literary pieces of varied authorship. The name derives from the Greek word *anthologia*, which means "gathered flowers," and it was first given to the GREEK ANTHOLOGY. Whereas in the past an anthology usually contained short, select poems or epigrams, in modern times an anthology has come to include all forms of literary composition.

Anthony, Saint (ān'tanē, ān'thanē), 251?-c 350, Egyptian hermit, called St Anthony of Egypt and St Anthony the Abbot. At the age of 20 he gave away his large inheritance and became a hermit. At 35 he went into seclusion and at that time he experienced, says tradition, every temptation the devil could devise, but he repelled them. A colony of hermits grew up about him, and after 20 years he emerged to rule them in a community, the monks being in solitude except for worship and meals. After a few years he went away to the desert near Thebes, where he lived most of the rest of his long life. St Anthony was the father of Christian MONASTICISM, his community became a model, particularly in the East, but he did not write the rule ascribed to him. His type of community is seen in the West among the Carthusians. He is a patron of herdsmen. St ATHANASIUS wrote his life. The temptation of St Anthony has inspired works of literature, particularly a novel by Flaubert, and became a popular theme early in the history of Western art. Feast Jan 17.

Anthony, Marc: see ANTONY.

Anthony, Susan Brownell, 1820-1906, American reformer and leader of the woman-suffrage movement, b Adams, Mass., daughter of Daniel Anthony, Quaker abolitionist. From the age of 17, when she was a teacher in rural New York state, she agitated for equal pay for women teachers, for coeducation, and for college training for girls. When the Sons of Temperance refused to admit women into their movement, she organized the first woman's temperance association, the Daughters of Temperance. At a temperance meeting in 1851 she met Elizabeth Cady Stanton, and from that time until Stanton's death in 1902 they were associated as the leaders of the woman's movement in the United States and were bound by a warm personal friendship. Susan B Anthony lectured (1851-60) on woman's rights and on abolition, and, with Stanton, secured the first laws in the New York state legislature guaranteeing to women rights over their children and control of property and wages. In 1863 she was a coorganizer of the Women's Loyal League to support Lincoln's government, especially his emancipation policy. After the Civil War she opposed granting suffrage to freedmen without also giving it to women, and many woman-suffrage sympathizers broke with her on this issue. She and Stanton organized (1869) the National Woman Suffrage Association. In 1890 this group united with the American Woman Suffrage Association to form the National American Woman Suffrage Association, of which Anthony was president from 1892 to 1900. In 1872 she led a group of women to the polls in Rochester, N Y, to test the right of women to the franchise under the terms of the Fourteenth Amendment. Her arrest, trial, and sentence to a fine (which she refused to pay) were a cause celebre, other women followed her example until the case was decided against them by the US Supreme Court. From 1869 she traveled and lectured throughout the United States and Europe, seeing the feminist movement gradually advance to respectability and political importance. The secret of her power, aside from her superior intellect and strong personality, was her unswerving singleness of purpose. With Elizabeth Cady Stanton and Matilda Joselyn Gage, she compiled Volumes I to III of the *History of Woman Suffrage* (1881-86), using a personal legacy to buy most of the first edition and present the volumes to colleges and universities in the United States and Europe. The *History* was completed by Ida Husted Harper (Vols IV-VI, 1900-1922, Susan B Anthony contributed to Vol IV). See *The Life and Work of Susan B Anthony*, ed by Ida Husted (3 vol., 1908, repr 1969), *biographies* by K S Anthony (1954) and R C Dorr (1928, repr 1970).

Anthony of Padua, Saint, 1195-1231, Portuguese Franciscan, Doctor of the Church, b Lisbon. He was renowned for his eloquence. According to tradition, in a vision he received the child Jesus in his arms and is usually thus represented in art. He was known as a preacher and for his holy life and was canonized the year after he died in Padua. Anthony has a reputation as a miracle worker and is popularly invoked by Roman Catholics to find lost articles. Feast June 13. See biography by Mary Purcell (1960).

anthophyllite (ăn'thəfil'it) see AMPHIBOLE

anthracene (ăn'thrāsēn), $C_{14}H_{10}$, solid organic compound derived from coal tar. It melts at 218°C and boils at 354°C . When pure it is colorless and has a violet fluorescence, it darkens when exposed to sunlight. Anthracene is insoluble in water but is

quite soluble in carbon disulfide and somewhat soluble in ethanol, methanol, benzene, chloroform, and other organic solvents. It is readily oxidized to form anthraquinone, the parent compound of the ALIZARIN series of dyes. The molecular structure of anthracene consists of three benzenelike rings joined side by side, it is thus an AROMATIC COMPOUND. It is the first member of the anthracene series, a group of aromatic hydrocarbons that are structurally related to it and have the general formula C_nH_{2n-10} .

anthracite (ăn'thrāsīt') see COAL

anthrax (ăn'thrāks), acute infectious disease of animals that can be secondarily transmitted to humans. It is caused by a bacillus (*Bacillus anthracis*) that primarily affects sheep, horses, hogs, cattle, and goats and is almost always fatal in animals. Transmission to humans normally occurs through contact, but can also occur by breathing air laden with the spores of the bacilli. The disease is almost entirely occupational, i.e., restricted to individuals who handle hides of animals (e.g., farmers, butchers, and veterinarians) or sort wool. In the cutaneous form of the disease, which is not usually fatal to humans, pustules occur on the hands, face, and neck, pulmonary anthrax causes lesions in the lungs and brain. Pure cultures of the anthrax bacillus were obtained in 1876 by Robert Koch, who demonstrated the relationship of the microbe to the disease, confirmation of the bacillus as the cause of anthrax was provided by Louis Pasteur, who also developed a method of vaccinating sheep and cattle against the disease. Anthrax is now relatively uncommon in the United States because of widespread vaccination of animals and disinfection of animal products such as hides and wool.

anthropology, classification and analysis of humans and their society, descriptively, historically, and physically. Its unique contribution to studying the bonds of human social relations has been the distinctive concept of CULTURE. It has also differed from other sciences concerned with human social behavior (especially sociology) in its emphasis on data from nonliterate peoples and archaeological exploration. Emerging as an independent science in the late 18th and early 19th cent., anthropology was associated from the beginning with various other emergent sciences, notably biology, geology, linguistics, psychology, and archaeology. Its development is also linked with the philosophical speculations of the Enlightenment about the origins of human society and the sources of myth. A unifying science, anthropology has not lost its connections with any of these branches, but has incorporated all or part of them and often employs their techniques. It is divided primarily into physical anthropology and cultural anthropology. Physical anthropology focuses basically on the problems of human evolution, including human paleontology and the study of RACE and of body build or constitution (somatology). It uses the methods of ANTHROPOMETRY, as well as those of genetics, physiology, and ecology. Cultural anthropology includes ARCHAEOLOGY, which studies the material remains of prehistoric and extinct cultures, ETHNOGRAPHY, the descriptive study of living cultures, ETHNOLOGY, which utilizes the data furnished by ethnography, the recording of living

cultures, and archaeology, to analyze and compare the various cultures of humanity, social anthropology, which evolves broader generalizations based partly on the findings of the other social sciences, and LINGUISTICS, the science of language. Applied anthropology is the practical application of anthropological techniques to areas such as industrial relations and minority-group problems. In Europe the term anthropology usually refers to physical anthropology alone. See A. L. Kroeber, *Anthropology* (1948, repr. in 2 vol., 1963), Clyde Kluckhohn, *Mirror for Man* (1949, repr. 1963), M. J. Herskovits, *Cultural Anthropology* (1955, repr. 1963), Margaret Mead and R. L. Bunzel, ed., *The Golden Age of American Anthropology* (1960), B. C. Loring, *The Stages of Human Evolution* (1967), J. O. Brew, ed., *One Hundred Years of Anthropology* (1968), G. M. Foster, *Applied Anthropology* (1969), A. H. Smith and J. L. Fisher, ed., *Anthropology* (1970), Marvin Harris, *The Rise of Anthropological Theory* (1968) and *Culture, Man, and Nature* (1971).

anthropometry (ăn'thrəpōm'etrē), technique of measuring the human body in terms of dimensions, proportions, and ratios such as those provided by the CEPHALIC INDEX. Once the standard approach to racial classification and comparing humans to other primates, the technique is now used for deciding the range of clothing sizes to be manufactured, and determining the nutritional status of people. See Ashley Montagu, *A Handbook of Anthropometry* (1960), Robert McCammon, *Human Growth and Development* (1970).

anthropomorphism (ăn'thrəpōmōr'fīzəm) [Gr. = having human form], in religion, conception of divinity as being in human form or having human characteristics. Anthropomorphism also applies to the ascription of human forms or characteristics to the divine spirits of things such as the winds and the rivers, events such as war and death, and abstractions such as love, beauty, strife, and hate. As used by students of religion and anthropology the term is applied to certain systems of religious belief, usually polytheistic. Although some degree of anthropomorphism is characteristic of nearly all polytheistic religions, it is perhaps most widely associated with the Homeric gods and later Greek religion. Anthropomorphic thought is said to have developed from three primary sources: ANIMISM, legend, and the need for visual presentation of the gods.

antiballistic missile: see GUIDED MISSILE

Antibes (āntēb'), resort town (1968 pop. 48,013), in Alpes-Maritimes dept., SE France, on the RIVIERA. It is a seaport and the center of a great flower-growing region, a school of horticulture is there. Nearby is the fashionable resort Cap d'Antibes. The town was founded as a Greek colony in the 4th cent. B.C. A fortified port, it still has the 16th-century Fort Carré. Also of interest is a Grimaldi château (14th and 16th cent.) housing a museum that includes numerous works of Picasso. Roman ruins are to the south.

antibiotic, any of a variety of substances, usually obtained from microorganisms, that inhibit the growth of or destroy certain other microorganisms. Although for centuries preparations derived from living matter were applied to wounds to destroy infection, the fact that a microorganism is capable of destroying one of another species was not established until the latter half of the 19th cent. when Pasteur noted the antagonistic effect of other bacteria on the anthrax organism and pointed out that this action might be put to therapeutic use. Meanwhile the German chemist Paul Ehrlich developed the idea of selective toxicity that certain chemicals that would be toxic to some organisms, e.g., infectious bacteria, would be harmless to other organisms, e.g., humans. In 1928, Sir Alexander Fleming, a Scottish biologist, observed that *Penicillium notatum*, a common mold, had destroyed staphylococcus bacteria in culture, and in 1939 the American microbiologist Rene Dubos demonstrated that a soil bacterium was capable of decomposing the starch-like capsule of the pneumococcus bacterium, without which the pneumococcus is harmless and does not cause pneumonia. Dubos then found in the soil a microbe, *Bacillus brevis*, from which he obtained a product, tyrothricin, that was highly toxic to a wide range of bacteria. Tyrothricin, a mixture of the two peptides GRAMICIDIN and tyrocidine, was also found to be toxic to red blood and reproductive cells in humans but could be used to good effect when applied as ointments on body surfaces. PENICILLIN was finally isolated in 1939, and in 1944 Selman Waksman and Albert Schatz, American microbiologists, isolated STREPTOMYCIN and a number of other antibiotics from *Streptomyces griseus*. The

mass production of antibiotics began during World War II with streptomycin and penicillin. Now most antibiotics are produced by staged fermentations in which strains of microorganisms producing high yields are grown under optimum conditions in nutrient media in fermentation tanks holding several thousand gallons. The mold is strained out of the fermentation broth, and then the antibiotic is removed from the broth by filtration, precipitation, and other separation methods. In some cases new antibiotics are laboratory synthesized, while many antibiotics are produced by chemically modifying natural substances, many such derivatives are more effective than the natural substances against infecting organisms or are better absorbed by the body, e.g., some semisynthetic penicillins are effective against bacteria resistant to the parent substance. The great number of diverse antibiotics currently available can be classified in different ways, e.g., by their chemical structure, their microbial origin, or their mode of action. They are also frequently designated by their effective range. TETRACYCLINES, the most widely used broad spectrum antibiotics, are effective against both Gram-positive and Gram-negative bacteria, as well as against rickettsias and psittacosis-causing organisms (see GRAM'S STAIN). The medium spectrum antibiotics BACITRACIN, the ERYTHROMYCINS, penicillin, and the CEPHALOSPORINS are effective primarily against Gram-positive bacteria, although the streptomycin group is effective against some Gram-negative and Gram-positive bacteria. Polymixins are narrow spectrum antibiotics effective against only a few species of bacteria. Antibiotics are either injected, given orally, or applied to the skin in ointment form. Many, while potent anti-infective agents, also cause toxic side effects. Some, like penicillin, are highly allergenic and can cause skin rashes, shock, and other manifestations of allergic sensitivity. Others, such as the tetracyclines, cause major changes in the intestinal bacterial population and can result in superinfection by fungi and other microorganisms. CHLORAMPHENICOL, which is now restricted in use, produces severe blood diseases, and use of streptomycin can result in ear and kidney damage. Many antibiotics are less effective than formerly because antibiotic-resistant strains of microorganisms have emerged (see DRUG RESISTANCE). Antibiotics have found wide nonmedical use. Some are used in animal husbandry, along with vitamin B₁₂, to enhance the weight gain of livestock. However, some authorities believe the addition of antibiotics to animal feeds is dangerous because continuous low exposure to the antibiotic can sensitize humans to the drug and make them unable to take the substance later in the treatment of infection. In addition low levels of antibiotics in animal feed encourage the emergence of antibiotic-resistant strains of microorganisms. Drug resistance has been shown to be carried by a genetic particle transmissible from one strain of microorganism to another, and the presence of low levels of antibiotics can actually cause an increase in the number of such particles in the bacterial population and increase the probability that such particles will be transferred to pathogenic, or disease-causing, strains. Antibiotics have also been used to treat plant diseases such as bacteria-caused infections in tomatoes, potatoes, peppers, and fruit trees. The substances are also used in experimental research. Other antibiotics discussed in this volume are ACTINOMYCIN, AMPHOTERICIN B, AMPICILLIN, LINCOMYCIN, NEOMYCIN, RIFAMPIN, and VANCOMYCIN. See H. M. Bottcher, *Wonder Drugs* (1964), Tadeusz Korzybski, *Antibiotics* (2 vol., 1967), L. P. Garrod et al., *Antibiotics and Chemotherapy* (3d ed. 1971).

antibody, specific protein produced by lymphocyte cells in response to the presence in the body of a foreign agent. Foreign substances, or antigens, may be bacteria, bacterial toxins, viruses, or other cells or proteins. The body is capable of making thousands of different antibodies, each specific to a different antigen. Each specific antibody is made by one particular lymphocyte cell and its clone, or descendant cells (see IMMUNITY).

Antichrist (ăn'tikristī), in Christian belief, a person who will represent on earth the powers of evil by opposing Christ, glorifying himself, and causing many to leave the faith. He will be destroyed by Christ at the time of the Second Coming. 1 John 2:18-22, 4:3, 2 John 7, and Rev. 13. Similar ideas are expressed in Judaism (e.g., Ezek. 38:1-39:29), and in Zoroastrianism. Christians have often identified enemies of their faith with the Antichrist, e.g., with early Christians it was Nero, with some Protestants the pope.

anticline: see FOLD

anticoagulant (ăn'tēkōāg'yālānt), any of several substances that inhibit blood clot formation (see BLOOD CLOTTING). Some anticoagulants, such as the coumarin derivatives bishydroxycoumarin (Dicumarol) and warfarin (Coumadin) inhibit synthesis of prothrombin, a clot-forming substance, and other clotting factors. The coumarin derivatives compete with vitamin K, which is a necessary substance in prothrombin formation (see VITAMIN). They are only effective after the body's existing supply of prothrombin is depleted. Another anticoagulant, heparin, is a POLYSACCHARIDE found naturally in many cells. It acts in several ways by preventing prothrombin formation, by preventing formation of fibrin, another clotting substance, and by decreasing the availability of a third clotting factor, thrombin. Heparin is obtained by extracting it from animal tissues. Anticoagulants are used to treat blood clots, which appear especially frequently in veins of the legs and pelvis in bedridden patients. Therapy helps to reduce the risk of clots reaching the lung, heart, or other organs. Heparin causes an instantaneous increase in blood-clotting time, and its effect lasts several hours.

Anti-Comintern Pact: see COMINTERN and AXIS

Anti-Corn-Law League, organization formed in 1839 to work for the repeal of the English CORN LAWS. It was an affiliation of groups in various cities and districts with headquarters at Manchester and was an outgrowth of the smaller Manchester Anti-Corn-Law Association. Richard COBDEN and John BRIGHT were its leading figures. The league won over Sir Robert Peel to its views, and the corn laws were repealed in 1846.

Anticosti (ăntikōs'tē), low, flat island (1971 pop. 419), 135 mi (217 km) long and 10 to 30 mi (16-48 km) wide, E Que., Canada, at the head of the Gulf of St. Lawrence. The island was discovered by Cartier in 1534. Louis XIV granted it to Jolliet as a reward for his discovery of the Mississippi. Jolliet's heirs held it until 1763, when it was annexed to Newfoundland (then a separate colony). It was returned to Canada in 1774 and has been privately owned since 1895. Lumbering for pulpwood is the chief occupation on the island.

anticyclone, region of high atmospheric pressure; anticyclones are commonly referred to as "highs." The pressure gradient, or change between the core of the anticyclone and its surroundings, combined with the CORIOLIS EFFECT, causes air to circulate about the core in a counterclockwise direction in the Northern Hemisphere and a clockwise direction in the Southern Hemisphere. Near the surface of the earth the frictional drag of the surface on the moving air causes it to spiral outward gradually toward lower pressures while still maintaining the rotational direction. This outward movement of air is fed by descending currents near the center of the anticyclone that are warmed by compression as they encounter higher pressures at lower altitudes. The warming, in turn, greatly reduces the relative humidity, so that anticyclones, or "highs," are generally characterized by few clouds and low humidity. Such weather characteristics may extend over an area from a few hundred to a few thousand miles wide. Many low-level anticyclones are swept generally eastward by the prevailing west-to-east flow of the upper atmosphere, usually traversing some 500 to 1,000 mi (800-1,600 km) per day. Other anticyclones are permanent or seasonal features of particular geographic regions. The term *anticyclone* is derived from the fact that the associated rotational direction and general weather characteristics of an anticyclone are opposite to those of a CYCLONE.

antidiabetic drug, any of several drugs that control blood sugar level in the treatment of DIABETES. See INSULIN, ORINASE, PHENFORMIN.

antidiuretic hormone (ăn'tēdī'ōrēt'ik), polypeptide hormone secreted by the posterior PITUITARY GLAND. Its principal action is to regulate the amount of water excreted by the kidneys. Antidiuretic hormone (ADH), known also as vasopressin, causes the kidneys to resorb water directly from the renal tubules, thus concentrating the salts and waste products in the liquid, which will eventually become urine. ADH secretion by the pituitary is regulated by neural connections from the hypothalamus, which is believed to monitor either the volume of blood passing through it or the concentration of water in the blood. Dehydration or body stress will raise ADH secretion and water will be retained. Alcohol inhibits ADH secretion. Failure of the pituitary to produce ADH results in diabetes insipidus. In pharmacological doses ADH acts as a vasoconstrictor. The structure and chemical synthesis of ADH was

announced (1953) by nobel laureate Vincent Du Vigneaud and others.

Antietam campaign (ăntē'tām), Sept., 1862, of the Civil War. After the second battle of BULL RUN, Gen. Robert E. LEE crossed the Potomac to invade Maryland and Pennsylvania. At Frederick, Md., he divided (Sept. 10) his army, sending Stonewall Jackson to capture the large Union garrison at Harpers Ferry and thus clear his communications through the Shenandoah valley. With the remainder, Lee marched NW toward Hagerstown. Gen. George B. MCCLELLAN learned of this division of forces and moved to attack. In the battle on South Mt. (the Blue Ridge N. of the Potomac, 12 mi/19 km W. of Frederick) on Sept. 14, 1862, McClellan defeated Lee's rear guard and took the passes of that range. Lee then fell back to Sharpsburg (c. 9 mi/14.5 km W. of South Mt.), where his position lay behind Antietam Creek. On Sept. 15 the Harpers Ferry garrison capitulated to Jackson, who, with part of his command, joined Lee before McClellan attacked. The battle of Antietam (or Sharpsburg) opened on the morning of Sept. 17. Early assaults on Lee's left were bloody but indecisive, and McClellan failed to press the slight Union advantage with his available reserves. In the afternoon Burnside's corps crossed the Antietam over the bridge on Lee's right and drove the Confederates back, but A. P. Hill's division arrived from Harpers Ferry and repulsed the attack. The battle was not renewed. On Sept. 18-19, Lee recrossed the Potomac into Virginia unhindered. The fighting at Antietam was so fierce that Sept. 17, 1862, is said to have been the bloodiest single day of the war with some 23,000 dead and wounded, evenly divided between the sides. It was a Union victory only in the sense that Lee's invasion was stopped. McClellan has been blamed for not pursuing Lee with his superior forces. The scene of the battle of Antietam has been set aside as a national battlefield site (est. 1890). See K. P. Williams, *Lincoln Finds a General* (Vol. II, 1950), J. Murfin, *The Gleam of Bayonets* (1965).

Antietam National Battlefield Site. see ANTIETAM CAMPAIGN

Antietam National Cemetery see NATIONAL PARKS AND MONUMENTS (table)

Anti-Federalists, in American history, opponents of the adoption of the Federal Constitution. Leading Anti-Federalists included George Mason, Elbridge Gerry, Patrick Henry, and George Clinton. Later, many of the Anti-Federalists opposed the policies of the FEDERALIST PARTY and of Alexander HAMILTON. See M. Borden, ed., *The Antifederalist Papers* (1965), C. M. Kenyon, ed., *The Antifederalists* (1966).

antifreeze, substance added to a solvent to lower its freezing point. The solution formed is called an antifreeze mixture. Antifreeze is typically added to water in the cooling system of an internal combustion engine so that it may be cooled below the freezing point of pure water (32°F or 0°C) without freezing. Any substance that dissolves will cause freezing-point depression (see COLLAGATIVE PROPERTIES), a desirable antifreeze also should not corrode metal parts, attack rubber, become viscous at low temperatures, or evaporate readily at the ordinary engine operating temperature. It should be chemically stable, a good conductor of heat, and a poor conductor of electricity. Ethylene GLYCOL is the most widely used automotive cooling-system antifreeze, although methanol, ethanol, isopropyl alcohol, and propylene glycol are also used. Substances that inhibit corrosion are usually added, antifoaming agents are sometimes added as well. In automotive windshield-washer fluids, an alcohol (e.g., methanol) is usually added to keep the mixture from freezing; it also acts as a solvent to help clean the glass. The brine used in some commercial refrigeration systems is an antifreeze mixture; it is typically a water solution of calcium chloride or propylene glycol.

antifriction metal, ALLOY used in plain BEARINGS. Antifriction metals such as BABBITT METAL and white metal are made of tin, lead, antimony, zinc, and copper in various combinations and proportions.

antigen see IMMUNITY

Antigone (ăntig'ōnē), in Greek legend, daughter of Oedipus. She followed her father in his banishment and disgrace. When her brothers Eteocles and Polyneices killed each other in the war of the SEVEN AGAINST THEBES, Creon, King of Thebes, forbade the burial of the rebel Polyneices. Antigone disobeyed his command and performed the funeral service. In Sophocles' *Antigone* she hangs herself in the tomb where Creon ordered her buried alive. In another

version of the story, she is rescued by Creon's son and sent to live among shepherds.

Antigonish (ăn'tigōn'ish'), town (1971 pop. 5,489), N. central N.S., Canada, on an inlet of St. Georges Bay. The town was founded in 1784 by disbanded British soldiers and later settled by Highland Scots. It is known for the Antigonish Movement, a cooperative movement promoted in the 1920s and 30s by St. Francis Xavier Univ.

Antigonus I (Antigonus Cyclops) (ăntig'ōnās sī'klōps), 382?-301 B.C., general of ALEXANDER THE GREAT and ruler in Asia. He was made (333 B.C.) governor of Phrygia, and after the death of Alexander he was advanced by the friendship of ANTIPATER, who with PTOLEMY I and Craterus, supported Antigonus in 321 against PERDICCAS and EUMENES. In the wars of the DIADOCHI, Antigonus was the leading figure because he seems to have had the best chance to re-create Alexander's empire. He had control of Asia Minor, Syria, and Mesopotamia at the time (316) when Eumenes was murdered. His great power, however, ultimately caused LYSIMACHUS, SELEUCUS I, and Ptolemy I to unite against him. Antigonus' son, Demetrius Poliorcetes (later DEMETRIUS I of Macedon), was an able agent in the bid to build the empire by invading Greece. Antigonus defeated (306) Ptolemy, but both Antigonus and Ptolemy were conquered at the battle at Ipsus (301). Antigonus was killed.

Antigonus II (Antigonus Gonatas) (gōnā'tās), c. 320-239 B.C., king of Macedon, son of Demetrius I. He took the title king on his father's death (283) but made good his claim only by defeating the Gauls in Thrace and by taking Macedon in 276. His rule was very troubled, PYRRHUS attacked him, and so did Ptolemy II. A confederation of Greek cities headed by Athens waged (c. 266-c. 262 B.C.) the so-called Chremonidean War against him. Antigonus won the war, captured Athens, and restored the Macedonian state. However, the Achaean League, under Aratus, gained power c. 251. Nevertheless Antigonus maintained himself and for a brief period united Greece. He was himself a scholar and a patron of philosophy and poetry. Upon his death he was succeeded by his son, DEMETRIUS II.

Antigonus III (Antigonus Doson) (dō'sōn,-sōn), d. 221 B.C., king of Macedon. On the death of Demetrius II he became regent for Demetrius' son Philip (Philip V). He married the widow of Demetrius, and in 227 he proclaimed himself king. The attacks of CLEOMENES III on the ACHAEAN LEAGUE caused its leader, Aratus, to request help from Antigonus, who led his troops south in 224. In 222, Antigonus crushed Cleomenes at Sellasia in Laconia and took Corinth as his reward. Meanwhile he had reconstituted the Hellenic League, and when he died he left power in Greece as well as Macedon to Philip.

Antigua (ăntē'gwā, Span. antē'gwa) or **Antigua Guatemala** (gwatāma'la, Span. gwatāma'la) [Span. = Old Guatemala], town (1964 pop. 21,984), S. central Guatemala. Founded in 1542 by survivors from nearby Ciudad Vieja, which had been destroyed by flood and earthquake, Antigua became the capital of Spanish Guatemala. In the 17th cent. it flourished as one of the richest capitals of the New World, rivaling Lima and Mexico City, by the 18th cent. its population had increased to c. 100,000. Its university was a center of the arts and learning, and its churches, convents, monasteries, public buildings, and residences were characterized by massive luxury. Antigua, dominated by the volcanoes Agua (12,310 ft/3,752 m high), Acatenango (12,982 ft/3,957 m high), and Fuego (12,854 ft/3,918 m high), was continually subject to disaster from volcanic eruptions, flood, and earthquake. In 1773 two earthquakes leveled the city. The Spanish captain general ordered (1776) the removal of the capital to a plain supposedly free from earthquakes and there founded GUATEMALA city. Antigua is now a major tourist center with many fine Spanish colonial buildings. It is also the commercial center of a rich coffee-growing region.

Antigua (ăntē'ga, -gwā), island (1971 pop. 70,000), 108 sq mi (280 sq km), British West Indies, in the Leeward Islands. SAINT JOHN'S is the capital. With its dependencies of Barbuda and Redonda, Antigua is an associated state of Great Britain and enjoys full internal self-government, with the British responsible for foreign affairs and defense. Hilly, with a much indented coast, Antigua has farms that grow mainly sugarcane and cotton. Tourism is a major industry; the island provides many hunting and fishing resorts. Discovered by Columbus in 1493, Antigua was named for a Spanish church in Seville. Unsuccessful Spanish and French settlements on the island were followed by a fruitful British effort in

1632, when sugarcane was introduced from St. Kitts. After a brief French occupation in 1666, Antigua passed permanently to Britain. The abolition of slav-

ery in 1834 hurt the sugar industry, in the early 19th cent. cotton was introduced. The United States has a military base on the island.

Antigua, Guatemala see ANTIGUA

anti-hero, principal character of a modern literary or dramatic work who lacks the attributes of the traditional protagonist or hero. The anti-hero's lack of courage, honesty, or grace, his weaknesses and confusion, often reflect modern man's ambivalence toward traditional moral and social virtues. Literary characters that can be considered anti-heroes are Leopold Bloom in James Joyce's novel *Ulysses* (1922), Willy Loman in Arthur Miller's play *Death of a Salesman* (1949), the bombardier Yossarian in Joseph Heller's novel *Catch-22* (1961), and the protagonists of many of Philip Roth's and Kurt Vonnegut's novels.

antihistamine (ăn'tih's'tāmēn), any one of a group of compounds having various chemical structures and characterized by the ability to antagonize the effects of HISTAMINE. Their principal use in medicine is in the control of allergies such as hay fever and hives. The antihistamines are also useful as sedatives and for the prevention of motion sickness.

Anti-Lebanon, ancient *Anti-Libanus*, Arabic *Jabal al Sharq*, mountain range between Syria and Lebanon, rising to Mt. Hermon, 9,232 ft (2,814 m) high. Once noted for its forests of oak, pine, cypress, and juniper, the range is now largely barren and stony. Its name also appears as Anti-Liban.

Antilles see WEST INDIES

Antiochus (ăntil'ōkəs), in Greek mythology, young hero of the Trojan War, a favorite of Achilles. While protecting his father, Nestor, he was killed by Memnon. He was buried with Achilles and Patroclus.

Anti-Masonic party, American political organization that rose after the disappearance in W. New York state in 1826 of William Morgan. A former Mason, Morgan had written a book purporting to reveal Masonic secrets. The Masons were said, without proof, to have murdered him, and in reaction local organizations arose to refuse support to Masons for public office. In New York state Thurlow Weed and William H. SEWARD attempted unsuccessfully to use the movement, which appealed strongly to the poorer classes, to overthrow Martin VAN BUREN and the ALBANY REGENCY. Anti-Masonry spread from New York to neighboring states and influenced many local and state elections. At Baltimore, in 1831, the Anti-Masons held the first national nominating convention of any party and issued the first written party platform—innovations followed by the older parties. The vote for their presidential candidate, William WIRT, mostly hurt Henry Clay. Usually the Anti-Masons in national politics acted with the NATIONAL REPUBLICAN PARTY in opposition to Jacksonian democracy, and in 1834 they helped to form the WHIG PARTY. See W. B. HESSLETINE, *The Rise and Fall of Third Parties* (1948), Lorman Ratner, *Antimasonry* (1969).

antimatter see ANTIPARTICLE

antimetabolite see METABOLITE

antimony (ăn'timō'nē) [from Lat. *antimonium*], semimetallic chemical element, symbol Sb [from Lat. *stibium*, = a mark], at no. 51, at wt. 121.75, m.p. 630.5°C, b.p. 1440°C, sp. gr. (metallic form) 6.69 at 20°C, valence 0, +3, -3, or +5. Antimony exists in two allotropic forms (see ALLOTROPY), the more common is silvery blue-white and has a rhombohedral crystalline structure. It is a poor conductor of heat and electricity and is brittle and easily powdered. It is primarily used in alloys and chemical compounds. It is a member of group Va of the PERIODIC TABLE. Antimony rarely occurs free in nature,

but its ores are widely distributed. The principal ore is STIBNITE, a sulfur compound known since early times; there are extensive deposits in China. Antimony is often found in other ores as well, e.g., silver, copper, and lead. The pure element antimony is produced from the ore by roasting it to form the oxide, then reducing the oxide with carbon or iron, often a flux of sodium sulfate or sodium carbonate is used to prevent loss of molten antimony by evaporation. Antimony does not react with air or water at room temperature; it does react with fluorine, chlorine, or bromine, and is soluble in hot nitric or sulfuric acid; at higher temperatures, antimony will ignite and burn in air. It unites with hydrogen to form stibine, a poisonous gas. In combination with metals antimony forms alloys that are hard and brittle and have low melting points. The alloys of antimony include BRITANNIA METAL, TYPE METAL, BABBITT METAL, and sometimes PEWTER; these alloys expand on cooling, thereby retaining fine details of a mold. Alloys and compounds of antimony are used in bearings, storage batteries, safety matches, and as a red pigment in paint. Although antimony and many of its compounds are toxic, TARTAR EMETIC (potassium antimonyl tartrate) is used as a medicine. Small concentrations of antimony can be detected by a method similar to the MARSH TEST for arsenic. Antimony is mixed with soot and other substances to make kohl, used for centuries by women in some countries as an eye cosmetic. A method for the extraction of antimony from stibnite was first described c. 1600 by Basilus Valentinus. Although known to the ancients, the element was first adequately described by Nicolas Lemery in 1707.

antinomianism (ăntinō'mēanizəm) [Gr. = against the law], the belief that Christians are not bound by the moral law, particularly that of the Old Testament. The idea was strong among the Gnostics, especially MARCION. Certain heretical sects in the Middle Ages practiced sexual license as an expression of Christian freedom. In the Protestant Reformation theoretical antinomian views were maintained by the Anabaptists and Johann Agricola, and in the 17th cent. Anne Hutchinson was persecuted for supposed antinomianism. Rom. 6 is the usual refutation for antinomianism.

Antinous (ăntin'ōs), c. 110-130, favorite of Emperor Hadrian, b. Bithynia. He was with the emperor constantly until on a journey in Egypt he was drowned in the Nile—some say in saving Hadrian's life. His beauty was legendary, and Hadrian mourned him greatly, had him deified, founded the city of Antinopolis in Egypt in his honor, and seems to have renamed the youth's birthplace Antinopolis. A cult was inaugurated in his honor, coins were struck with Antinous' head on them, and many busts and statues were made.

Antioch (ăn'tiōk), ancient town of Phrygia, near the Pisidian border. The site is north of the present-day Antalya, Turkey. It was founded by Seleucus I and became a center of Hellenistic influence. It was visited by St. Paul (Acts 13:14, 14:21, 2 Tim. 3:11).

Antioch (ăn'tiōk') or **Antakya** (antak'ya), city (1970 pop. 66,400), capital of Hatay prov., S. Turkey, on the Orontes (Asi) River, near the Mediterranean Sea, at the foot of Mt. Silpius. It is the trade center for a farm region where grains, cotton, grapes, olives, and vegetables are grown. The city's few manufactures include processed foods, textiles, and leather goods. Antioch was founded c. 300 B.C. by Seleucus I, king of ancient Syria, and named for his father Antiochus, a Macedonian general. Situated at the crossing of north-south and east-west trade routes, the city soon became a rich commercial center. Antioch was occupied by Pompey in 64 B.C. and quickly became an important Roman military, commercial, and cultural center. The Romans built great temples, a forum, a theater, baths, aqueducts, and other public buildings. The two main streets, at right angles to each other, were lined with marble colonnades and adorned with temples, palaces, and statues. Antioch was an early center of Christianity; Peter and Paul preached there. It was in Antioch that the followers of Jesus were first called Christians after having severed themselves from the synagogue about 20 years after Jesus' death (Acts 11:26, 13:1). Antioch is one of the three original patriarchates (see PATRIARCH). Aurelian, who recovered the city from Shapur I of Persia, erected (3d cent.) more magnificent buildings and churches. The city was a great center of Christian learning and played a significant role in the theological controversies of the early Christian church (see CHRISTIANITY). St. John Chrysostom estimated its population (4th cent.) at 200,000, excluding children and slaves. In 526 the city suffered a severe earthquake and in 540 it was captured by Per-

sia. In 637, Antioch was conquered by the Arabs. Nicephorus II reconquered it (969) for the Byzantine Empire, but in 1085 it fell, through treason, to the Seljuk Turks. The army of the First Crusade (see CRUSADES) captured Antioch in 1098, after a half-year siege. Bohemond I was made prince of Antioch. His principality, which extended from Iskenderun (Alexandretta) southward beyond Latakia, was one of the most powerful of the Crusaders' states. In 1268 the Mamelukes captured and sacked the city; it was further damaged by Tamerlane in 1401. In 1516, Antioch, by then an unimportant city, was taken by the Ottoman Empire. The city was held (1832-40) by Muhammad Ali of Egypt, and in 1872 it was badly disrupted by an earthquake. After World War I, Antioch was incorporated into the French Syria League of Nations mandate. In 1939 it was restored to Turkey as part of the sanjak of ALEXANDRETTA. Modern Antioch occupies only a fraction of the area of the ancient city, most of which is buried under alluvial deposits. Numerous important archaeological finds have been made in and near Antioch. They include the Great Chalice of Antioch (see CHALICE), held by some to be the Holy Grail, and, at Daphne, Antioch's ancient suburban resort, splendid mosaics (1st-6th cent. A.D.), which are mostly copies of lost paintings. The city has an archaeological museum.

Antioch, city (1970 pop. 28,060), Contra Costa co., W. Calif., on the San Joaquin River near the mouth of the Sacramento, inc. 1872. It is a processing and shipping center for the agricultural products of the fertile islands in the delta area between the rivers.

Antioch College, at Yellow Springs, Ohio, coeducational, chartered 1852, opened 1853. Horace Mann, Antioch's first president, envisioned a program stressing the development not only of the intellect but of the whole personality, especially the individual's social conscience and competence. The cooperative work-study program, adopted (1921) during the presidency of Arthur E. Morgan, has been developed in an attempt to achieve this goal. The college years are divided between off-campus work and on-campus study, both full-time. This system usually requires five years. Students are given a voice in community government, college policy formulation, and other administrative affairs. Also, Antioch maintains its own foreign study program. In conjunction with the Universities of Guanajuato (Mexico), Besançon (France), and Tübingen (Germany), Antioch Centers for University Education have been established. Antioch students in different programs, however, attend other foreign schools. On campus the Fels Research Institute for studies in human development, the Charles F. Kettering Research Laboratory for studies in biological science, and other experimental and research centers employ scientists, students, and teachers unaffiliated to the college.

Antiochia Margiana see MERV

Antiochus I (Antiochus Soter) (ăntil'ōkəs sō'tər), b. c. 324 B.C., d. c. 262 or 261 B.C., king of Syria (280-261? B.C.), son of SELEUCUS I. He did not, like his father, seek to expand in Europe. The Seleucid holdings were greatly reduced, particularly by the Egyptians under Ptolemy II. Antiochus was famous as a founder of cities.

Antiochus II (Antiochus Theos) (thē'ōs), d. 247 B.C., king of Syria (261?-247 B.C.), son and successor of Antiochus I. In warfare with Ptolemy II he had sporadic successes, but his marriage to Ptolemy's daughter Berenice sealed the peace, and most of the Syrian possessions his father had lost were restored to Antiochus. On the death of Antiochus, his son by an earlier marriage, SELEUCUS II, and Berenice in behalf of her infant son struggled for the throne, a long war with Ptolemy III ensued.

Antiochus III (Antiochus the Great), d. 187 B.C., king of Syria (223-187 B.C.), son of Seleucus II and younger brother of Seleucus III, whom he succeeded. At his accession the Seleucid empire was in decline. Although Antiochus did not succeed in totally restoring the greatness of the Seleucid dynasty, he did much to revive its glory. He led an expedition (212-205 B.C.) to the eastern provinces and went as far as India. Although he was defeated earlier by the Egyptians at Raphia (modern Rafā), he and Philip V of Macedon undertook (202 B.C.) to wrest Egyptian territories from the boy king, Ptolemy V. Antiochus did not properly appreciate the growing power of Rome. While Philip V was engaged by the Roman armies, Antiochus recovered S. Syria and Asia Minor. In 199 he won a decisive victory over the Egyptians, Palestine then reverted to Syria, having been under Egyptian rule for almost a century. In 196 he seized the Thracian Chersonese and thus alarmed the Greeks. They as well as the Egyptians sought the aid

of the Romans Antiochus, who disregarded the advice of Hannibal in 193, waited and then challenged Rome by accepting the invitation of the Aetolian League to interfere in Greece in 192. The Romans crushed him (191) at Thermopylae and again at Magnesia (190). He also lost a number of naval engagements, and in 188 he was forced to give up all his territory W of the Taurus. Thus the Seleucid empire became a purely inland Asiatic state, and dreams of reviving Alexander's empire died.

Antiochus IV (Antiochus Epiphanes) (ἐπιφανής), d. 163 B.C., king of Syria (175 B.C.–163 B.C.), son of Antiochus III and successor of his brother Seleucus IV. His nephew (later Demetrius I) was held as a hostage in Rome, although still claiming the throne. Antiochus is best known for his attempt to Hellenize Judaea and extirpate Judaism—a policy that instigated the rebellion of the MACCABEES. Antiochus invaded Egypt, which was torn by strife between Ptolemy VI and his brother (later Ptolemy VII), and would probably have conquered that region if the Romans had not intervened in his siege of Alexandria (168). Antiochus was briefly succeeded by his son, Antiochus V, a boy king who was overthrown by Demetrius I.

Antiope (ἀντιόπη), in Greek mythology 1 Theban princess, daughter of Nycteus. She was seduced by Zeus and bore him twin sons, Zethus and Amphion. Fleeing to Sicyon to escape the wrath of her father, she was forced to abandon her infants on Mt. Cithaeron, where they were raised by shepherds. After Nycteus committed suicide, Antiope was pursued and captured by her uncle Lycus, then king of Thebes, and his wife Dirce, who treated her with great cruelty. Later the sons of Antiope revenged their mother; they dethroned Lycus and punished Dirce by tying her to the horns of a bull. They then erected a wall around Thebes with stones which moved of their own will to the music of Amphion's lyre. Zethus married the nymph Thebe, and after she died he married AEDON. Amphion married Niobe. 2 A queen of the Amazons, sister of Hippolyte. According to one legend she was abducted by Theseus and became the mother of Hippolytus.

antiparticle, ELEMENTARY PARTICLE corresponding to an ordinary particle such as the PROTON, NEUTRON, or ELECTRON, but having the opposite electrical charge and magnetic moment. Antiparticles are also known as charge-conjugate particles. Every elementary particle has a corresponding antiparticle, the antiparticle of an antiparticle is an ordinary particle. In a few cases, such as the PHOTON and the neutral PION, the particle is its own antiparticle, but most antiparticles are distinct from their ordinary counterparts. When a particle and its antiparticle collide, both are annihilated and other particles such as photons or pions are produced. In some cases this represents the total conversion of mass into energy. For example, the collision between an electron and its antiparticle, a positron, results in the conversion of their combined masses into the energy of two or three photons. A proton-antiproton annihilation usually results in several pions. The reverse process, pair production, is the simultaneous creation of a particle and its antiparticle from the combination of the same products that result from their mutual annihilation. The existence of antiparticles was predicted in 1928 by P. A. M. Dirac's relativistic QUANTUM THEORY of the electron. According to the theory both positive and negative values are possible for the total relativistic energy of a free electron. A vacuum is assumed to consist of a sea of electrons that fill all available negative energy levels. These electrons are not detectable by ordinary experiments. However, the absorption of energy by one of the electrons could excite it out of the negative-energy sea to a positive energy level, where it could be observed. The process would result in the appearance of a "hole" in the sea of negative-energy electrons, and the hole would have all the physical properties of a positively charged electron (positron). Thus, the absence of an electron in a negative energy state could be observed as a positron. In 1932, Carl D. Anderson, while studying COSMIC RAYS, discovered the predicted positron, the first known antiparticle. About 23 years passed before the discovery of the next antiparticles—the antiproton was discovered by Chamberlain and Segrè in 1955, and the antineutron was discovered the following year—but the existence of antiparticles for all known particles was by then firmly established in theory. The existence of antiparticles makes possible the creation of antimatter, composed of atoms made up of antiprotons and antineutrons in a nucleus surrounded by positrons. A very simple type of "atom" incorporating antiparticles is positronium, a brief pairing of a positron

and an electron that may occur before their annihilation. A few simple nuclei of antimatter have been created in the laboratory, such as the antideuteron (see DEUTERIUM), but any antimatter in our part of the universe is necessarily very short-lived because of the overwhelming preponderance of ordinary matter by which the antimatter is quickly annihilated. Nevertheless, there is no reason in theory why atoms or even entire galaxies of antimatter could not have evolved in a part of the universe far removed from our own. There would be no way to tell from the photons of light and other radiation reaching us from such a galaxy whether the source of the energy was composed of ordinary matter or antimatter, since the same physical laws governing the production of energy apply equally to matter and antimatter and the photon is its own antiparticle.

Antipas (ἀντίπαῦς) 1 See HEROD. 2 Martyr at Pergamum, traditionally its first bishop. Rev. 2:13.

Antipater (ἀντίπατρος), d. 319 B.C., Macedonian general. He was one of the ablest and most trusted lieutenants of PHILIP II and was a friend and supporter of ALEXANDER THE GREAT. When Alexander went on his Asiatic campaign, Antipater was left as regent (334–323 B.C.) in Macedon. He resisted the attempt of Olympias to gain the regency and governed ably except that his policy of supporting tyrants and oligarchs made him unpopular in Greece. After the death of Alexander he put down a rebellion of many of the Greek cities in the Lamian War and punished Athens. By imposing a more oligarchic form of government on Athens, he drove Demosthenes to commit suicide. Antipater was a leading opponent of the regent, Perdiccas, and after Perdiccas was defeated in 321 by Ptolemy I, Antigonus I, and Craterus, it was Antipater who held the kingdom together. After his death it fell violently apart in the wars of the DIADOCHI.

Antipater, in the Bible. See HEROD.

Antipatris (ἀντίπατρίς), city of Roman Palestine, founded by Herod the Great and named after his father. It was c. 10 mi (16.1 km) NE of Joppa, on the north-south road. Paul was taken there on the way to Caesarea. Acts 23:31.

Antiphrilos (ἀντίφριλος), fl. 4th cent. B.C., Greek painter, of Alexandrian origin. He invented a grotesque called gryllos, a creature part man, part animal or bird. It is known that he painted portraits of Philip of Macedon and Alexander the Great, though none of his many works have survived.

Antiphon (ἀντίφῶν, -fōn), c. 479–411 B.C., Athenian orator. He rarely spoke in public but wrote defenses for others to speak. Of his 15 extant orations 3 were for use in court, the rest for the instruction of his pupils. A few fragments of other speeches survive, but some may be the work of Antiphon the Sophist, who also lived in Athens in the 5th cent. B.C. Antiphon did much to advance Attic prose writing. His position in politics was with the conservative aristocrats, and he was instrumental in setting up the Four Hundred in 411 B.C. When they fell, Antiphon was among the first to be executed before ALCEBIADES returned.

antiphon (än'tifōn), in liturgical music, generally a short text sung before and after a psalm or canticle. The main use is in group singing of the Divine Office in a monastery. However, introit, offertory, and Communion of the Mass were originally antiphons that later were used independently. Certain festival chants, sung preparatory to the Mass itself, are called antiphons. There are also the four antiphons of the Blessed Virgin Mary, which are in the nature of office hymns and are sung by alternating choirs (i.e., antiphonally), each one belonging to a certain portion of the year. The best known of these is *Salve Regina*, of whose text there are many polyphonic settings. Modern antiphons are set to composed music rather than PLAINSONG. These are independent choral works for which the English term ANTHEM was derived from antiphon.

Antipodes (äntip'ädēz), rocky uninhabited islands, 24 sq mi (62 sq km), South Pacific, c. 450 mi (720 km) SE of New Zealand, to which they belong. The Antipodes were discovered by British seamen in 1800 and are so named because they are diametrically opposite Greenwich, England.

antipodes [Gr., =having feet opposite], people or places diametrically opposite on the globe. Thus antipodes must be separated by half the circumference of the earth (180°), and one must be as far north as the other is south of the equator, midnight at one is noonday at the other. For example, New Amsterdam and St. Paul, small islands nearly midway between S. Africa and Australia, are more nearly

antipodal to Washington, D.C., than is any other land.

antipope [Lat., =against the pope], person elected pope whose election was later declared uncanonical and in opposition to a canonically chosen legitimate pontiff. Important antipopes were NOVATIAN, Clement III (see GUIBERT OF RAVENNA), Nicholas V (see RAINALDUCCI, PIETRO), Clement VII (see ROBERT OF GENEVA), Benedict III (see LUNA, PEDRO DE), John XXIII (or by a different count, John XXII, see COSSA, BALDASSARRE), and Felix V (see AMADEUS VIII), who was the last antipope.

antique. The term is used collectively to designate classical Greek and Roman works of art, particularly sculptures, as an adjective to indicate an object, a period, or a style of ancient or early times, and as a noun, for objects of art, furniture, rugs, pottery, metalwork, costumes, jewelry, and household goods of early production. The demand and prices paid for antiques have led to the widespread making of reproductions and reconstructions, some with spurious marks of age. See ANTIQUE COLLECTING for a description of the characteristics of various styles, see DIRECTOIRE, EMPIRE, LOUIS PERIOD, and RÉGENCE styles.

antique collecting. The term *antique* initially referred only to the pre-classical and classical cultures of the ancient world. It is now applied to old artifacts of all cultures that have historic, aesthetic, and usually monetary value. In 1952 the Florence agreement, sponsored by the United Nations Educational, Scientific, and Cultural Organization, was drawn up to "facilitate the free flow of educational, scientific, and cultural materials." In 1966 the United States tariff regulations were altered to permit duty-free importation of antiques, defined as objects being more than 100 years old at the time of entry. More than 50 countries now have similar regulations. Antique collecting has a venerable history dating from the preservation of valued religious objects in antiquity. By the 16th cent. English and European private collections of rarities flourished. But it was the 18th cent. with its development of the art and science of archaeology that produced the impetus for public and private collecting in earnest. In the United States, collectors, seriously active since the 18th cent., first concentrated on old books, manuscripts, the possessions and mementoes of famous people, and classical antiquities. State historical societies encouraged the growing interest in colonial history and its artifacts. In the late 1850s an association was founded to restore and preserve MOUNT VERNON, the first of the country's many house museums. Finely crafted household articles such as pewterware and furniture claimed collectors' attention with the opening of the Centennial Exposition of 1876 in Philadelphia, in which reconstructed colonial rooms were exhibited. During the next century many sorts of objects in addition to paintings, books, and furniture excited the collector's lust. Specialty collections grew in such items as quilts, bedspreads, jewelry, glass, coins, postage stamps, china, porcelain, silver and other metalcraft, needlework (including needlepoint, embroidery samplers, lace, and hooked rugs), bottles, stoneware, pill boxes, scrimshaw (expertly carved teeth and bones of sperm whale and walrus tusks of the 18th cent.), snuffboxes, fans, watches, clocks, periodicals, badges, Daguerreotypes, postcards, photographs, toys, posters, military and political souvenirs, objects reminiscent of many forms of public transport (including railroad and ship bells, whistles, lamps, and models), buttons, and many varieties of folk art and memorabilia symbolic of the recent past. Frequently the only value a popular object can claim is that of scarcity. Certain objects (e.g., comic books and fruit-crate labels), more properly called curios, have become collector's items by virtue of nostalgic association or content rather than intrinsic value. Antique dealers, whose number had increased to nearly 20,000 in the United States by 1965, also acquire for sale objects that are characteristic of a particular stylistic current (e.g., ART NOUVEAU and ART DECO) that is experiencing a revival of interest. The sources of many valuable antiques include attics, cellars, barns, and other storage rooms. The objects are sold or traded at auctions, antique fairs, rummage sales, flea markets, and garage sales, all increasing in attendance yearly. The great pleasures of antique collecting are counted as bargain finding, the discovery, after a long search, of a much-desired item, the showing off of a special treasure to others, and, above all, the discovery that an object one has acquired is rarer and of greater worth than one had suspected. The elegant Parke-Bernet auction house in New York City offered in 1974 a week of free appraisals to the public, stimu-

lating 3,500 people to bring possible heirlooms out of their trunks and attics. The estimated ratio of trash to treasure during this week was four to one. With the tremendous growth of interest in antiques, a critical expertise in historical styles and construction methods has developed of necessity for the care and identification of precious objects. Dealers publish extensive directories to provide a basis for consistent appraisal, the fantastic bargain, as a result, has become rarer and rarer. At the same time, museums and private institutions have built up outstanding antique collections. Among the finest of these in the United States are to be seen at the Metropolitan Museum of Art, the Museum of American Folk Art, New York City, the Museum of Fine Arts, Boston, the Yale University Art Gallery, New Haven, Conn., the Philadelphia Museum of Art, the Winterthur (Delaware) Museum, and the restoration of Williamsburg, Va. See L. G. G. Ramsay, ed., *The Complete Encyclopedia of Antiques* (rev. ed. 1967), Mary Durant, *The American Heritage Guide to Antiques* (1970), M. D. Schwartz and Betsy Wade, *The New York Times Book of Antiques* (1972).

Antirent War, in U.S. history, tenant uprising in New York state. When Stephen Van Rensselaer, owner of Rensselaerswyck, died in 1839, his heirs attempted to collect unpaid rents. Tenants on the estate resisted and an angry mob forcibly turned back a sheriff's posse that tried to evict them. Resistance to landlord authority quickly spread to landed estates throughout the Hudson valley, tenants disguised as Indians harassed landlord agents and sheriffs. When a deputy sheriff of Delaware co., N.Y., was killed (1845), Gov. Silas Wright declared a state of insurrection and called out the state militia. Armed resistance ended and the antirenters turned to politics. They helped elect a Whig, John Young, as governor of New York, the legislature passed ameliorative measures, and the 1846 state constitution outlawed future long-term leases. The Antirent War hastened the breaking up of the large landed estates as worried landlords began selling their holdings. See E. P. Cheyney, *The Anti-Rent Agitation in the State of New York, 1839-46* (1887), Henry Christman, *Tin Horns and Calico* (1945, repr. 1961), D. M. Ellis, *Landlords and Farmers in the Hudson-Mohawk Region, 1790-1850* (1946, repr. 1967).

Anti-Saloon League, U.S. organization working for prohibition of the sale of alcoholic liquors. Founded in 1893 as the Ohio Anti-Saloon League at Oberlin, Ohio, by representatives of temperance societies and evangelical Protestant churches, it came to wield great political influence. Vigorously led by James Cannon, Jr., a Methodist bishop, the League played an important role in securing the passage of the Eighteenth Amendment. Its influence waned, however, especially after the repeal (1933) of prohibition. In 1950 it merged with the National Temperance League. See P. H. Odegard, *Pressure Politics: Story of the Anti-Saloon League* (1928, repr. 1966), biography of Bishop Cannon by Virginius Dabney (1949).

anti-Semitism, form of prejudice against the Jews, ranging from antipathy to violent hatred. Before the 19th cent., anti-Semitism was largely religious, based on dislike for the Jews who had allegedly crucified Jesus Christ, and was expressed in the later Middle Ages by sporadic persecutions and expulsions—notably the expulsion from Spain under Ferdinand and Isabella—in severe economic and personal restriction (see GHETTO), and in fantastic legends, such as those of ritual murder by Jews of Christian children. However, since the Jews were generally restricted to the pursuit of occupations that were unpopular or taboo, such as moneylending, hence the sentiment was also economic in nature. After the emancipation of the Jews, brought about by the Enlightenment of the 18th cent. and by the French Revolution, religious and economic resentments were gradually replaced by feelings of racial prejudice stemming from the notion of the Jews as a distinct race. This development was due not only to the rising nationalism of the 19th cent. but also to the conscious preservation, especially among Orthodox Jews, of cultural and religious barriers that isolated the Jewish minorities from other citizens. Jewish reaction to the phenomenon of anti-Semitism found political expression in ZIONISM. The unpopularity of the Jews, on whom all evils could be blamed with impunity, was exploited by demagogues, such as Edouard DRUMONT in France, to stir the masses against an existing government, and by reactionary governments, as in Russia, to find an outlet for popular discontent. The millions of Russian and Polish Jews who, after the assassination (1881) of Alexander II, fled the POGROMS and found refuge in oth-

er countries contributed to the popular feeling that Jews were aliens and intruders. In addition, a spurious document, the "Protocols of the Wise Men of Zion," purporting to outline a Jewish plan for world domination, emerged in Russia early in the 20th cent. and was subsequently circulated throughout the world. After the Russian Revolution of 1917, the Jews were accused of plotting to dominate the world by their international financial power or by a Bolshevik revolution. Pseudoscientific racial theories of so-called Aryan superiority directed against the Jews emerged in the 19th cent. with the writings of Joseph Arthur GOBINEAU and Houston Stewart CHAMBERLAIN and found their climax in those of Alfred Rosenberg. These theories were incorporated in the official doctrine of German NATIONAL SOCIALISM by Adolf Hitler. Hitler's persecution of the Jews during World War II was unparalleled in history. It is estimated that between 5 and 6 million European Jews were exterminated between 1939 and 1945 (see CONCENTRATION CAMP). The end of persecution did not mean the end of anti-Semitism, as the sporadic attacks on synagogues in many countries since the end of World War II indicate. In the Soviet Union and the countries of Eastern Europe, where anti-Semitism is officially outlawed, it has reappeared in new forms. From the late 1940s until Joseph Stalin's death in 1953, anti-Semitic persecution took the form of deportations, jailings, and the suppression of Jewish publications and cultural institutions. Although anti-Semitism in these countries receded during the 1950s, it reappeared in the 60s and 70s, when synagogues were periodically closed, particularly in the upsurge of anti-Semitism that followed the Arab-Israeli War of 1967. In the 1970s, citizens of the Soviet Union, but particularly Jews, found it increasingly difficult to emigrate to Western countries. In the United States, although anti-Semitism has not been an instrument of national policy, it exists nevertheless, Jews are regularly excluded from membership in certain private clubs, from some schools, and from the rental of certain housing. The problem of anti-Semitism has been analyzed by numerous psychologists and social scientists, most of whom view it as an irrational form of behavior based on the need for a scapegoat to justify aggression or relieve guilt. See Jean Paul Sartre, *Anti-Semite and Jew* (tr. 1948, repr. 1960), E. J. Long, *Two Thousand Years: A History of Anti-Semitism* (1953), Leon Poliakov, *The History of Anti-Semitism* (1965, repr. 1974), Rose Feitelson and George Salomon, *The Many Faces of Anti-Semitism* (1967), Leonard Dinnerstein, *Anti-Semitism in the United States* (1971), Arnold Forster and B. R. Epstein, *The New Anti-Semitism* (1974).

antiseptic, agent that kills or inhibits the growth of microorganisms on the external surfaces of the body. Antiseptics should generally be distinguished from drugs such as antibiotics that destroy microorganisms internally, and from disinfectants, which destroy microorganisms found on nonliving objects. Germicides include only those antiseptics that kill microorganisms. Some common antiseptics are alcohol, iodine, hydrogen peroxide, and boric acid. There is great variation in the ability of antiseptics to destroy microorganisms and in their effect on living tissue. For example, mercuric chloride is a powerful antiseptic, but it irritates delicate tissue. In contrast, silver nitrate kills fewer germs but can be used on the delicate tissues of the eyes and throat. There is also a great difference in the time required for different antiseptics to work. Iodine, one of the fastest-working antiseptics, kills bacteria within 30 sec. Other antiseptics have slower, more residual action. Since so much variability exists, systems have been devised for measuring the action of an antiseptic against certain standards. The bacteriostatic action of an antiseptic compared to that of phenol (under the same conditions and against the same microorganism) is known as its phenol coefficient. Joseph Lister was the first to employ the antiseptic phenol, or carbolic acid, in surgery, following the discovery by Louis Pasteur that microorganisms are the cause of infections. Modern surgical techniques for avoiding infection are founded on asepsis, the absence of pathogenic organisms. Sterilization is the chief means of achieving asepsis.

antislavery movement: see SLAVERY, ABOLITIONISTS. **Antisthenes** (āntis'thēnēz), b. 444? B.C., d. after 371 B.C., Greek philosopher, founder of the CYNICS. Most of his paradoxical views stemmed from his early Sophist orientation, even though he became one of Socrates' most ardent followers. He believed that man's happiness lay in cultivating virtue for its own sake. To attain virtue, man must reduce his dependence on the external world to a minimum, disregard social convention, shun pleasure, and live in

poverty. Antisthenes, like Xenophanes, repudiated polytheism, substituting one god, whom he described as unlike anything known to man. His view that each individual is unique had implications for ethics and for a theory of knowledge.

Anti-Taurus: see TAURUS.

antithesis (āntith'īsīs), a figure of speech involving a seeming contradiction of ideas, words, clauses, or sentences, within a balanced grammatical structure. Parallelism of expression serves to emphasize opposition of ideas. The familiar phrase "Man proposes, God disposes" is an example of antithesis, as is John Dryden's description in "The Hind and the Panther": "Too black for heaven, and yet too white for hell."

antitoxin, any of a group of antibodies formed in the body as a response to the introduction of poisonous products, or TOXINS. By introducing small amounts of a specific toxin into the healthy body, it is possible to stimulate the production of antitoxin so that the body's defenses are already established against invasion by the bacteria or other organisms that produce the toxin. See IMMUNITY.

Antitrust Act: see CLAYTON ANTITRUST ACT, SHERMAN ANTITRUST ACT.

Antium: see ANZIO, Italy.

antler: see HORN.

Antofagasta (āntōfāgā'stā), city (1970 pop. 126,252), capital of Antofagasta prov., N. Chile, a port on the Pacific Ocean. Antofagasta was founded by Chileans in 1870 to exploit nitrates in the Desert of Atacama, then under Bolivian administration. Its occupation by Chilean troops in 1879 sparked the War of the Pacific (see PACIFIC WAR OF THE), and after the war the city and province were ceded to Chile. Antofagasta has depended primarily on nitrates and copper exports, and its economy has often been affected by sharp fluctuations in world demands. The city is an international commercial center and a major industrial hub with large foundries and ore refineries. Backed by desert hills, Antofagasta enjoys a fine climate but has little rainfall. Water is piped in from the San Pedro River, 280 mi (451 km) away.

Antoine, André (āndrā' āntwān'), 1858-1943. French theatrical director, manager, critic. In opposition to the teachings of the Paris Conservatory, he formed his own company, the THÉÂTRE LIBRE, in 1887. There he presented, by means of private subscriptions, the foremost works of the naturalistic school. Financial failure forced him to relinquish the theater in 1894. In 1897 he founded the Théâtre Antoine where he continued the tradition of his Théâtre Libre for 10 years. From 1906 to 1914 he was director of the Odeon in Paris, and after World War I he became a drama critic and the dean of French theatrical writers.

Antoine, Pere (pēr āntwān'), 1748-1829, Spanish priest in New Orleans, a Capuchin friar. His family name was Mareno, and the Spanish name given to him by the church was Antonio de Sedella. Through many years of service at St. Louis Cathedral under Spanish, briefly French, and then U.S. rule, he won great love and respect from his French congregation, who had previously regarded his harshness with distaste. He was almost constantly at war with the authorities. The Spanish colonial rulers once sent him back as a prisoner to Spain, and U.S. officials were later highly incensed at his secret dealings with the Spanish. The legend that he was empowered to introduce the Inquisition to Louisiana but refrained from doing so is apparently based on fact.

Antonelli, Giacomo (jā'kōmō āntōnēl'ē), 1806-76. Italian cardinal and statesman of the Roman Catholic Church, adviser to Pope PIUS IX. He received the red hat of the cardinalate in 1847, presided over the council drafting the constitution for the Papal States, and became the premier of the pope's first constitutional cabinet. After returning (1850) from exile in Gaeta, Pius IX made him secretary of state. His vigorous diplomacy was directed against Italian national unification.

Antonello da Messina (āntōnēl'ō dā mās-sē'nā), c. 1430-1479, Italian painter, b. Messina. Antonello appears to have had early contact with Flemish art. In his deft handling of the oil medium—his rendering of transparent surfaces and minute landscape details—a strong Northern influence can be seen. About 1475 he went to Venice. There he painted the *San Cassiano Altarpiece*, of which only fragments now exist (Vienna). His style affected the art of Bellini and other Venetians. He was also an excellent portrait painter, examples of his portraiture are in the Metropolitan Museum, the Philadelphia Museum, the Louvre, and in Berlin. Other paintings by him are *Ecce Homo* (Metropolitan Mus.), *Madonna*

and *Child* (National Gall. of Art, Washington, D.C.), *Pieta* (Venice), *Crucifixion* (Antwerp) See Stefano Bottari's study (1956)

Antonescu, Ion (yōn antōnēs'kōō), 1882-1946, Rumanian marshal and dictator. He served in World War I and later became chief of staff, but he fell into disfavor with King Carol II because of his pro-Nazi attitude and his suspected intrigues with the IRON GUARD. In World War II, on Sept. 4-5, 1940, Carol, threatened with revolution and German intervention, appointed Antonescu premier with dictatorial powers. On Sept. 6, Antonescu forced the king to abdicate in favor of Carol's son, MICHAEL. In Nov., 1940, Rumania joined the Axis Powers, and Antonescu gave Adolf Hitler virtual control over Rumanian economy and foreign policy, tolerated violent pogroms against the Jews, and declared (June 22, 1941) a "holy war" on the Soviet Union. With two Soviet armies deep in Rumania, King Michael in Aug., 1944, had Antonescu and his cabinet arrested in a dramatic coup. Antonescu was tried (1946) for war crimes, sentenced, and executed.

Antonines (ān'tōnīnz), collective name of certain Roman emperors of the 2d cent., usually listed as ANTONINUS PIUS, his adopted sons, MARCUS AURELIUS and VERUS, and COMMODOUS.

Antoninus, Saint (āntōnī'nas), 1389-1459, Italian churchman, b. Antoninus Pierozzi. He was a Dominican and became archbishop of Florence. He ruled well and was renowned for his charitable work in the city. His *Summa moralis* is a pioneering work in moral theology, of interest for its treatment of commercial ethics and the morality of banking. It is a valuable record of the effect the new economic changes were having on everyday life. Feast May 10. See Bede Jarrett, *St. Antonino and Medieval Economics* (1914).

Antoninus, Wall of, ancient Roman wall extending across N Britain from the Firth of Forth to the Firth of Clyde. It was built by the Roman governor Lullius Urbicus in the reign of Emperor Antoninus Pius—probably in A.D. 140-42. Intended as a defense against the peoples to the north, it was built out of turf, with a ditch on the north and 19 forts along its southern side. The wall was 37 mi (60 km) long. It was abandoned c. 185. See Sir George Macdonald, *The Roman Wall in Scotland* (2d ed., 1934).

Antoninus Pius (Titus Aurelius Fulvus Boionius Arrius Antoninus) (pī'as), A.D. 86-A.D. 161, Roman emperor (138-161). After a term as consul (120) he went as proconsul to Asia, where he governed with distinction. He was adopted by the emperor Hadrian and, on succeeding him, administered the empire with marked ability and integrity. Italy was embellished with fine buildings, and the provinces were eased of much of their financial burden. During his reign the Wall of Antoninus was built in Britain. His wife was Faustina, aunt of his successor, MARCUS AURELIUS.

Antonioni, Michelangelo (mekālan'jālō antōnyō'nē), 1912-, Italian film director and scriptwriter, b. Ferrara, Italy. In the 1940s he made documentaries that contributed to the development of Italian Neo-Realism. His later films deal with the alienation and loveless eroticism of modern life, with plot and dialogue often subordinate to visual and aural images. His films include *Le Amiche* (1955), *L'Avventura* (1959), *La Notte* (1960), *L'Eclisse* (1961), *The Red Desert* (1964), *Blow-Up* (1966), and *Zabriskie Point* (1969). See study by Ian Cameron and Robin Wood (rev. ed. 1971).

Antony or Marc Antony, Lat. *Marcus Antonius*, c. 83 B.C.-30 B.C., Roman politician and soldier. He was of a distinguished family, his mother was a relative of Julius CAESAR. Antony was notorious from his youth for riotous living, but even his enemies admitted his courage. Between 58 B.C. and 56 B.C. he campaigned in Syria with Aulus Gabinius and then in Gaul with Caesar, who made a protégé of him. In 52 B.C. he became quaestor and in 49 B.C. tribune. When the situation between POMPEY and Caesar became critical, Antony and Quintus CASSIUS LONGINUS, another tribune, vetoed the bill to deprive Caesar of his army and fled to him. Caesar crossed the Rubicon, and the civil war began. At the battle of Pharsala, Caesar took the right wing, and Antony gave distinguished service as the leader of the left. After Caesar's assassination (44 B.C.), Antony, then consul, aroused the mob against the conspirators and drove them from the city. When Octavian (later AUGUSTUS), Caesar's adopted son and heir, arrived in Rome, Antony joined forces with him, but they soon fell out. Antony went to take Cisalpine Gaul as his assigned proconsular province, but Decimus BRUTUS would not give it up, and Antony besieged

him (43 B.C.) at Mutina (modern Modena). The senate, urged by CICERO, who had excoriated Antony in the *Philippics*, sent the consuls Aulus HIRTIUS and Caius Vibius Pansa to attack Antony. The consuls fell in battle, but Antony retired into Transalpine Gaul. Octavian now decided for peace and arranged with Antony and Marcus Aemilius LEPIDUS the Second Triumvirate, with Antony receiving Asia as his command. In the proscription following this treaty Antony had Cicero killed. Antony and Octavian crushed the republicans at Philippi, and the triumvirate ruled the empire for five years. In 42 B.C. Antony met CLEOPATRA, and their love affair began. While Antony was in Egypt, his wife, Fulvia, became so alienated from Octavian that civil war broke out in Italy. At about the time Antony arrived in Italy, Fulvia died (40 B.C.) and peace was restored between Octavian and Antony, who married Octavian's sister Octavia, she became, thereafter, Antony's devoted partisan and the strongest force for peace between the two. In 36 B.C., Antony undertook an invasion of Parthia. The war was costly and useless, and Antony succeeded only in adding some of Armenia to the Roman possessions. In 37 B.C., Antony settled in Alexandria as the acknowledged lover of Cleopatra. He gave himself up to pleasure, caring neither for the growing ill will in Rome nor for the increasing impatience of Octavian. In 32 B.C. the senate deprived Antony of his powers, thus making civil war inevitable. In 31 B.C., Antony and his fleet met Marcus Vipsanius Agrippa with Octavian's fleet off Actium, and Antony found his large, cumbersome galleys were no match for the swift small craft that Octavian had built. In the middle of the battle Cleopatra retired with her boats, and Antony followed her. His navy surrendered to Octavian. The situation of the two lovers was desperate. Returning to Alexandria, they set about fortifying Egypt against Octavian's arrival. When at length Octavian did come (30 B.C.), Antony committed suicide, under the impression, it is said, that Cleopatra had died already. She killed herself soon afterward. Of the many dramas on the tragedy the best known by far is Shakespeare's *Antony and Cleopatra*. The name also appears as Marc Anthony. See A. E. Weigall, *The Life and Times of Cleopatra* (1968).

Anthothijah (āntōthī'jā), descendant of Benjamin 1 Chron. 8:24.

Antothite (ān'tōthīt) see ANATHOTH.

Antrim (ān'trīm), county (1971 pop. 352,549), 1,098 sq mi (2,844 sq km), NE Northern Ireland. BELFAST is the county town. The eastern and seaward area of the county is a picturesque region of mountains and glens, to the west, where Antrim borders on Lough Neagh, lie the fertile valleys of the Bann and the Lagan rivers. On the northern coast is the extraordinary basaltic formation known as the GIANT'S CAUSEWAY. The region is chiefly agricultural (oats, flax, potatoes). Fishing and cattle breeding are also important occupations, and there is a significant tourist trade. Belfast is a major British port and the chief industrial center of Northern Ireland. Antrim, BALLYMENA, and CARRICKFERGUS have textile industries, other urban centers include Larne and Lisburn.

Antsirane: see DIEGO SUAREZ, Malagasy Republic.

ANTU (ān'tōō) see PESTICIDE.

Antung (ān'tōōng), former province (c. 24,000 sq mi/62,160 sq km), NE China. The capital was T'ung-hua (Tunghwa). It was bordered on the SE by the Yalu River, which separated it from Korea, and by the Bay of Korea. A part of Manchuria, it was included in Manchukuo and was created a province in 1945. In 1954, Antung became part of Liaoning prov.

Antung: see TAN-TUNG, China.

Antwerp (ān'twūrp), Flemish *Antwerpen*, Fr. *Anvers*, province (1970 pop. 1,533,249), 1,104 sq mi (2,859 sq km), N Belgium, bordering on the Netherlands in the north. ANTWERP (the provincial capital) and MECHELEN are the chief cities. The province is largely a flat, cultivated plain, drained by the Scheldt River and its tributaries and served by the Albert Canal. It is mostly Flemish-speaking and was part of the duchy of BRABANT.

Antwerp, Flemish Antwerpen, Fr. *Anvers*, city (1970 pop. 224,543), capital of Antwerp prov., N Belgium, on the Scheldt River. It is one of the busiest ports in Europe, a commercial, industrial, and financial center, and a rail junction. The city is linked with industrial E Belgium (especially Liege) by the ALBERT CANAL and also has a large transit trade to and from West Germany (especially the Ruhr district). Manufactures of Antwerp and its surrounding region include refined petroleum, petrochemicals, dyes, photographic supplies, motor vehicles, leather goods, and

processed food. In addition, the city is a major international center of the diamond trade and industry, has large shipyards, and is the seat of the world's first stock exchange (founded 1460). Antwerp was a small trading center by the early 8th cent. It was destroyed by the Normans in 836, but by the 11th cent. it was a fairly important port. The city was chartered in 1291. Antwerp was held (13th to mid-14th cent.) by Brabant and then became an early seat of the counts of Flanders. In the 15th cent. it rose to prominence as Bruges and Ghent declined. In 1446 the English Merchant Adventurers and other traders gave the port great impetus by moving their operations from Bruges to Antwerp. By the middle of the 16th cent. Antwerp was Europe's chief commercial and financial center. The diamond industry, established in the 15th cent., had expanded considerably after the arrival (early 16th cent.) of Jewish craftsmen expelled from Portugal. The city's prosperity suffered greatly in 1576 when it was sacked and about 6,000 of its inhabitants killed by Spanish troops (the "Spanish fury") and again in 1584-85 when the city was captured by the Spanish under Alessandro de Farnese after a 14-month siege. Under the Peace of Westphalia (1648), the Scheldt was closed to navigation (as a means of favoring Amsterdam), and Antwerp declined rapidly. The city revived with the opening of the Scheldt by the French in 1795 and with the expansion of its port facilities by Napoleon I. The incorporation (1815) of Belgium in the Netherlands again hindered Antwerp's economic development, a situation that was continued by the Dutch-Belgian treaty of separation (1839), which gave the Netherlands the right to collect tolls on Scheldt shipping. The expansion of Antwerp as a major modern port dates only from 1863, when, by a cash payment, Belgium ended Dutch restrictions on traffic on the Scheldt. Antwerp was seriously damaged in World War I when it was captured (Oct., 1914) by the Germans after a 12-day siege. In World War II, it was again taken (May, 1940) by the Germans, who bombarded it heavily after it had been recaptured (Sept., 1944) by the Allies. The artistic fame of Antwerp dates from the rule (15th cent.) of Philip the Good of Burgundy, who founded an academy of painting there. The painters Quentin Massys and P. P. Rubens resided in the city, and Sir Anthony Van Dyke was born there. Many of their works are in the museums and churches of Antwerp. Christophe Plantin made (16th cent.) the city a center of printing, his house is now a museum. Among Antwerp's many splendid structures are the large Gothic Cathedral of Notre Dame (14th-16th cent.), with a spire c. 400 ft (122 m) high, the churches of St. James (containing the tomb of Rubens) and of St. Paul (both 16th cent.), the Renaissance-style city hall (mid-16th cent.), Rubens's house (now a museum), and old guildhalls lining the Groote Markt [market place]. Antwerp is the site of a famous zoological garden and a noted school of music.

Anu (ā'nōō), ancient sky god of Sumerian origin, worshiped in Babylonian religion. The son of Apsu (the underworld ocean) and Tiamat (primeval chaos), Anu was king of the great triad of gods, which included the earth god Enlil and the water god Ea.

An Uaimh, Republic of Ireland see NAVAN.

Anub (ā'nəb), Judahite 1 Chron. 4:8.

Anubis (ənoō'bīs), Egyptian god of the dead. He presided over the embalming of the dead, and is represented as a dog-headed or jackal-headed man.

Anuradhapura (ənoō'radəpōō'ra) or **Anarajapura** (əna'raja-), town (1968 est. pop. 30,000), capital of the North Central prov., Sri Lanka (Ceylon), on the Aruvi River. Rice plantations and vegetable gardens surround the town, which is famous chiefly for its vast Buddhist ruins and as a pilgrimage center. Founded in 437 B.C., it was the capital of a Sinhalese kingdom and a Buddhist center until the 8th cent. A.D., when, after a Tamil invasion, it was abandoned in favor of Pollonnaruwa. Ruins include several colossal stupas (some larger than the pyramids of Egypt), a temple hewn from rock, and the Brazen Palace (so called from its metal roof). A sacred bo tree at Anuradhapura was grown from a slip of the tree at Bodhi Gaya, India, under which Buddha reputedly attained enlightenment.

Anvers see ANTWERP, Belgium.

Anville, Jean Baptiste Bourguignon d' (zhān bātēs' bōōrgēnyōn' dānvēl'), 1697-1782, French geographer and cartographer. His maps of ancient geography, characterized by careful, accurate work and based largely on original research, are especially valuable. He left unknown areas of continents blank.

and noted doubtful information as such, compared to the lavish maps of his predecessors, his maps looked empty. Anville became cartographer to the king, who purchased his maps, atlases, and other geographical material (the largest collection in France). Anville himself made more than 200 maps.

anxiety, anticipatory tension or vague dread persisting in the absence of a specific threat. In contrast to fear, which is a realistic reaction to actual danger, in anxiety the true source of distress is concealed from the individual. Anxiety is characterized physiologically by increased pulse rate, heightened breathing and blood pressure, palpitations, perspiration, muscular tension, dryness of the mouth, and sometimes an increased need to urinate or defecate. Freud first believed that anxiety was the result of repressed, pent-up sexual energy but later viewed it as a danger signal, alerting the ego to excessive stimulation and causing repression. It has been defined as the tension resulting from a sense of failure or disapproval in interpersonal relations, and as an apprehensive reaction to unresolved conflicts or experiences that threaten the personality. DEFENSE MECHANISMS are personality responses to anxiety resulting from frustration and conflict.

An-yang or **Anyang** (both an-yāng), city (1970 est. pop. 225,000), N Honan prov., China, on the Peking-Canton RR, in a cotton-growing area. It has textile mills, coal mines, and a medium-sized iron and steel complex. An-yang was once a capital of the Shang dynasty and one of the earliest centers of Chinese civilization. Excavations, begun there in 1928, have revealed a rich Bronze Age culture.

Anza, Juan Bautista de (hwan boutēs'tā dā ān'sa), 1735-88, Spanish explorer and official in the Southwest and the far West, founder of San Francisco, b. Mexico. Accompanied by Father F. T. H. Garcés and a small expedition, he opened (1774) an overland road from Sonora through present-day Arizona to California, reaching San Gabriel and Monterey. Viceroy A. M. Bucareli, alarmed by the threatened encroachments of the Russians and the British on the Pacific coast, sent (1775) Anza on a new expedition to establish a colony. In 1776 he chose the site of San Francisco, where a presidio was founded by one of his lieutenants and a mission was founded by Father Francisco Palou under the direction of Father Junipero Serra. Later, as governor of New Mexico (1777-88), Anza built up Spanish frontier defenses and established order. Journals of men on his California journey are in Anza's *California Expeditions* (ed. by H. E. Bolton, 5 vol., 1930, repr. 1966). For his diaries and a study of his administration, see A. B. Thomas, *Forgotten Frontiers* (1932, repr. 1969). See F. Thurman, *The Cahuillas and White Men of San Carlos and Coyote Canyon* (1970).

Anzengruber, Ludwig (lōōt'vīkh an'tsəngroō'bar), 1839-89, Austrian writer. An actor and a clerk in the imperial police, Anzengruber had little success as a writer until the production (1870) of his anticlerical play *Der Pfarrer von Kirchfeld* [the parish priest of Kirchfeld]. It was the first of a series of folk plays and was followed by *Der Meineidbauer* (1871, tr. *The Farmer Forsworn*, 1913-15) and *Die Kreuzschreiber* (1872, tr. *The Crossmakers*, 1958). *Das vierte Gebot* (1878, tr. *The Fourth Commandment*, 1912) is an early example of NATURALISM. Anzengruber also wrote short stories and two novels.

Anzhero-Sudzhensk (anzhē'ra-sōō'jēnsk), city (1970 pop. 106,000), SW Siberian USSR, on the Trans-Siberian RR. One of the oldest and largest coal-mining centers of the Kuznetsk Basin, the city was developed as a source of coal for the railroad. Mining equipment, chemicals, and pharmaceuticals are manufactured there.

Anzio (ān'tsyō), Lat. Antium, town (1971 pop. 23,092), in Latium, central Italy, on the Tyrrhenian Sea. It is a seaside resort with a fishing industry. A Volscian town, it was captured by Rome in 341 B.C. and became a favorite resort of the Romans. Nero and Caligula were born there, among the ruins of Nero's villa two famous statues, the Apollo Belvedere and the *Girl of Anzio*, were found. Anzio declined in the Middle Ages, but it revived c. 1700 and became a residence of the popes. During World War II, Allied troops landed (Jan., 1944) at Anzio and nearby Nettuno to draw German forces from Cassino, thus effecting a breakthrough (May, 1944) to Rome.

Anzus Treaty, defense agreement signed in 1951, by Australia, New Zealand, and the United States. The name Anzus is derived from the initials of the three signatory nations. As a result of the reestablishment of peace between Japan and the United States in 1951, Australia and New Zealand asked for a treaty

making it clear that an attack on any of the three signatory countries would be considered an attack upon all. It is also known as the Pacific Security Treaty.

Aomori (āōmō'rē), city (1970 pop. 240,041), capital of Aomori prefecture, extreme N Honshu, Japan, on Aomori Bay. First opened to foreign trade in 1906, Aomori is now the chief port of N Honshu. Rice, textiles, and tobacco are among its exports, many of which are shipped to Hokkaido. A modern city, it was rebuilt after a disastrous fire in 1910 and again after severe air raids in 1945. Aomori prefecture (1970 pop. 1,427,430, 3,719 sq mi (9,632 sq km), has rich timber lands and famous apple orchards. Aomori, Hachinohe, and Hirosake are the major cities.

aorist: see TENSE

aorta (āōr'ta), primary artery of the CIRCULATORY SYSTEM in mammals, delivering oxygenated blood to all other arteries except those of the lungs. The human aorta, c. 1 in (2.54 cm) in diameter, originates at the left ventricle of the HEART. After supplying the coronary arteries that nourish the heart itself, the aorta

Aorta

extends slightly toward the neck to feed branches serving the head and arms. It then arches down toward the waist, directing blood into the arterial system of the chest. Entering the abdomen through the aortic hiatus, an opening in the diaphragm, the aorta next supplies the stomach, kidneys, intestines, gonads, and other organs through extensive arterial networks. It finally divides into the two iliac arteries carrying blood to the legs. The elasticity of the aorta wall permits it to pulse in rhythm with the heartbeat, thus helping to propel blood through the body.

Aosta, Emmanuel Philibert of Savoy, duke of (āō'sta, -sta), 1869-1931, Italian general, son of King Amadeus of Spain and cousin of Victor Emmanuel III of Italy. In World War I he held the Piave front after the Italian defeat at Caporetto and later occupied Friuli. He became a marshal in 1926. His son Amadeus (1898-1942), who succeeded to his title, was viceroy of Ethiopia (1937-41). He surrendered to the British during World War II after a valiant defense.

Aosta (āō'stā), city (1971 pop. 36,961), capital of Valle d'Aosta and of Aosta prov., NW Italy, near the junction of the Great and Little St. Bernard roads. Aosta is an industrial and tourist center. Manufactures include iron and steel, aluminum, and chemicals. Emperor Augustus there founded (c. 25 B.C.) a colony called Augusta Praetoria, on the site of an older settlement. In the 11th cent. Aosta was given as a fief to Count Humbert I, the founder of the Savoy dynasty, the cadet line of the house bore the title of duke of Aosta. Roman remains in Aosta include walls and gates, a majestic triumphal arch honoring Augustus, a theater, and an amphitheater. There is also a fine cathedral (12th-19th cent.).

Aosta, Valle d' (vāldāō'stā), region (1971 pop. 111,239, 1,260 sq mi (3,263 sq km), NW Italy, bordering on France in the west and on Switzerland in the north. AOSTA is the capital of the region and of its only province. A high Alpine country, the Valle d'Aosta includes the Italian slopes of Mont Blanc, the Matterhorn, and Monte Rosa, its highest peak is the Gran Paradiso. The population, much of which is French-speaking, is concentrated in the pictur-

esque valleys of the Dora Baltea River and its tributaries. The Great and the Little SAINT BERNARD roads join in the upper Aosta valley. Farming is the main occupation, cereals and grapes are grown, and dairy cattle are raised. Iron and steel and textiles are the leading manufactures, and there are major hydroelectric facilities. The region has several fashionable resorts, notably Champoluc, Courmayeur, and Cervinia-Breuil. A long vehicular tunnel through Mont Blanc, connecting France and Italy, was opened in 1965, highways feeding it were built in Valle d'Aosta, thus markedly improving the region's transportation network. Rome conquered the region from the Salassi people c. 25 B.C. It later was held by the Goths, the Lombards, and the dukes of Burgundy. After passing (11th cent.) to the counts of Savoy, the Valle d'Aosta shared the history of PIEMONTE. Under the Italian constitution of 1947 it was made a region with considerable autonomy, particularly in administrative and cultural affairs. The feudal system long prevailed in the region, and more than 70 castles are still standing.

Apache Indians, North American Indians of the Southwest composed of six culturally related groups. They speak a language that has various dialects and belongs to the ATHABASCAN branch of the Nadene linguistic stock (see AMERICAN INDIAN LANGUAGES), and their ancestors entered the area about 1100. The NAVAHO INDIANS, who also speak an Athabaskan language, were once part of the Western Apache, other groups E of the Rio Grande along the mountains were the Jicarilla, the Lipan, and the Mescalero groups. In W New Mexico and Arizona were the Western Apache, including the Chiricahua and the Coyotero. The Kiowa Apache in the early southward migration attached themselves to the Kiowa, whose history they have since shared. Subsistence in historic times consisted of wild game, cactus fruits, seeds of wild shrubs and grass, livestock, grains plundered from settlements, and a small amount of horticulture. The social organization involved matrilineal residence, a rigorous mother-in-law avoidance pattern, and working for the wife's relatives. The Apache are known principally for their fierce fighting qualities. They successfully resisted the advance of Spanish colonization, but the acquisition of horses and new weapons, taken from the Spanish, led to increased intertribal warfare. The Eastern Apache were driven from their traditional plains area when (after 1720) they suffered defeat at the hands of the advancing COMANCHE INDIANS. Relations between the Apache and the settlers gradually worsened with the passing of Spanish rule in Mexico. By mid-19th cent. when the United States acquired the region from Mexico, Apache lands were in the path of the American westward movement. The futile but strong resistance that lasted until the beginning of the 20th cent. brought national fame to several of the Apache leaders—COCHISE, GERONIMO, MANGAS COLORADAS, and VICITRIO. Remnants of the Apaches now live in reservations in Arizona, where they number some 11,500. See G. C. Baldwin, *The Warrior Apaches* (1965), D. I. Thrapp, *The Conquest of Apache* (1967), Keith Basso and Morris Opler, ed., *Apachean Culture and Ethnology* (1971), J. U. Terrell, *Apache Chronicle* (1972).

Apalachee Indians, extinct tribe of North American Indians once centered about Apalachee Bay, NW Florida, belonging to the Muskogean branch of the Hokan-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). Prosperous agriculturalists, they fought off the raids of the Creek Indians until early in the 18th cent. Combined Indian and British forces then conquered them, wiping out their villages along with Spanish missions and garrisons. More than 1,000 Apalachee were sold into slavery.

Apalachicola, river: see CHATTAHOOCHEE, river

APA-Phoenix: see ASSOCIATION OF PRODUCING ARTISTS—PHOENIX

Aparri (apar'rē), city (1969 est. pop. 45,700), Cagayan prov., on Luzon, the Philippines. Situated on the mouth of the Cagayan River on the Babuyan Channel, it is the port for the rich Cagayan valley, the Philippines's leading tobacco-producing area.

apartheid (apar'thit) [Afrik. = apartness], system of racial segregation peculiar to the Republic of South Africa. Racial segregation and the supremacy of whites had been traditionally accepted in South Africa prior to 1948, but in the general election of that year, Daniel F. MALAN included the policy of apartheid in the Afrikaner Nationalist party platform, bringing his party to power for the first time. While most whites have continued to acquiesce in the policy, there has been bitter and sometimes bloody strife over the degree and stringency of its imple-

mentation The purpose of apartheid is separation of the races not only of whites from nonwhites, but also of nonwhites from each other, and, among the Africans (known as Bantu), of one group from another In addition to the Africans, who constitute about 70% of the total population, those regarded as nonwhite include the Coloured (mulatto) and Asiatic (mainly of Indian ancestry) populations Initial emphasis was on restoring the separation of races within the urban areas A large segment of the Asiatic and Coloured populations was forced to relocate out of so-called white areas African townships that had been overtaken by (white) urban sprawl were demolished and their occupants removed to new townships well beyond city limits Between the passage of the Group Areas Acts of 1950 and 1968, about 500,000 Africans were moved from the cities to rural reservations Under the prime ministership of Hendrik VERWOERD, apartheid developed into a policy known as "separate development," whereby each of the nine Bantu groups was to become a nation with its own homeland, or Bantustan An area totaling about 14% of the country's land was set aside for these homelands, the remainder, including the major mineral areas and the cities, being reserved for the whites The basic tenet of the separate development policy is that within the confines of his designated homeland the black African shall have quite extensive rights and freedoms, the corollary being that outside it his position is akin to that of an alien His movement to and between other parts of the country is strictly regulated, the location of his residence or employment (if permitted to work) is restricted, and he is not allowed to vote or own land Thus African urban workers, including those who are third- or fourth-generation city dwellers, are seen as transients, their real homes being the rural reservations from which they or their forefathers migrated Only those holding the necessary labor permits, which are granted according to the current requirements of the labor market, are allowed to reside within urban areas Such permits do not automatically include the spouse or family of a permit holder, a fact that has contributed greatly to the breakup of family life among the Africans Most African urban dwellers must live in the townships on a city's perimeter (an exception is made for domestic servants, who are permitted to live within city limits on the premises of their employers) All Africans living outside the Bantustans are subject to strict curfew regulations and passbook requirements, especially in the cities, if unable to produce these when challenged, they are subject to arrest In 1962 the South African government established the first of the Bantustans, the Transkei, as the homeland of the Xhosa tribe, and granted it limited self-government in 1963 Since then none of the other tribal groups has succeeded in gaining even this degree of self-government The reserves are, in general, made up of broken tracts of poor quality land, riddled with erosion and incapable of supporting their large designated populations Opportunities for employment are few, as there is little or no industry in these areas Urban wage-earners attempt to contribute to the support of their families in the reserves, but the level of African wages is so low as to make this barely feasible In 1972, African wages in manufacturing were one fifth or one sixth of those of whites, and in other fields, such as mining, the ratio of discrepancy in cash wages was 20 or more to 1 Despite public demonstrations against apartheid, UN resolutions, and opposition from international religious societies, the policy has been applied with increased rigor, extending to rigid enforcement in the churches and universities In 1961, South Africa withdrew from the British Commonwealth rather than yield to pressure over its racial policies, and in the same year the three South African denominations of the Dutch Reformed Church left the World Council of Churches rather than abandon their advocacy of apartheid Although the policy of apartheid was continued under Prime Minister John VORSTER, there are signs of change After South Africa was barred from the Olympic Games in 1964 and 1968, there were some alterations in the government's policy, so that by the early 1970s international sports events held in South Africa were being viewed and participated in by both blacks and whites In 1972, a series of antiapartheid protests occurred in both nonwhite and white universities Probably the most forceful pressures, both internal and external, eroding the barriers of apartheid are economic African wages are gradually increasing as awareness grows of the market potential of a more highly paid African labor force There is a chronic shortage of skilled labor, so, over the

protests of the white trade unions, an increasing number of more highly rated jobs are being opened up to Africans (for whom trade union membership is illegal) In addition, there are the pressures, political and economic, being exerted by the independent countries of black Africa Nevertheless there are many who feel that apartheid will only be toppled by force—by political upheaval from within or by violent assault from without See A L Sachs, *South Africa The Violence of Apartheid* (1969), Jim Hoagland, *South Africa Civilizations in Conflict* (1972), United Nations Educational, Scientific, and Cultural Organization, *Apartheid Its Effects on Education, Science, Culture, and Information* (2d rev ed 1972)

apartment house, building having three or more dwelling units Numerous early examples of this form of dwelling have been found in remains of Roman and medieval cities and the 17th-century Pueblo Indian villages of North America Its most important development came with the Industrial Revolution After 1850 crowded slums began to develop in the cities of Europe and the United States Few good, low-cost multiple dwellings were built before World War I, but great progress was made in the development of more luxurious apartment buildings, particularly in Paris and Vienna In the 1880s fireproof steel-frame construction, the improvement of the elevator, and the introduction of electric lighting made possible the rapid evolution of the apartment building In 1901 New York City put into effect a tenement-house law, its purpose was to protect occupants against fire hazards and unsanitary and unsafe conditions Between 1919 and 1934 there appeared in Europe many commendable low-cost housing developments Important examples are the project by Gropius at the Siemensstadt in Berlin, J J P Oud's group at the Hook in Holland, and H P Berlage's apartments in Amsterdam There has been government-subsidized public housing in the United States since 1937 A phenomenal increase in the building of apartments has taken place since 1921 in all the larger cities, reaching its peak in New York City, where apartments largely replaced private houses The cooperative apartment is a building in which the tenants belong to a corporation that owns the building In the condominium each apartment unit is owned separately and owner-tenants generally form an association to provide for apartment maintenance The apartment hotel combines the accommodations of an apartment, including cooking space, with the services characteristic of a hotel Apartment houses have now spread to the suburbs of the larger cities, where they often include gardens, tennis courts, and children's playgrounds Numerous apartment houses are constructed as living complexes for retired persons A radical experiment in multiple dwellings called Habitat was designed for the Montreal Expo 67 by Moshe SAFDIE Concrete units were stacked like boxes but in a random-appearing fashion to create a visually exciting housing complex See F R S Yorke and Frederick Gibberd, *Masterworks of International Apartment Building Design* (1959), Samuel Paul, *Apartment Their Design and Development* (1967)

apastron (əpās'trən) see APSIS

apatite (āp'atīl), mineral, a calcium phosphate containing chlorine, fluorine, or both It is transparent to opaque in shades of green, brown, yellow, white, red, and purple The yellow-green variety, called asparagus stone, and the blue-green manganapatite are used to a limited extent in jewelry Large deposits of apatite are mined for use in making phosphatic fertilizers Apatite is a minor constituent in many types of rock Commercial deposits are mined in Florida, Tennessee, and Montana, and in N Africa and the USSR

Apaturia (āpachōō'rēā, -tyōō'rēā), in Greek religion, annual festival celebrated by the Ionians and the Athenians It was held in October or November, in the season when various phratries (clans) met to induct new members, register children born since the previous festival, and pay homage to the gods

ape, any primate of the family Pongidae (also called Simiidae), closely related to the human family (Hominiidae) The small apes, the GIBBON and the siamang, and the smallest of the great apes, the ORANGUTAN, are found in SE Asia The other great apes, the GORILLA and the CHIMPANZEE, are found in Africa The term *ape* was formerly applied to certain tailless monkeys as well, and the Pongidae were distinguished as the anthropoid, or manlike, apes *Ape* and *anthropoid ape* are now used synonymously, although the common names of certain monkeys

still contain the word *ape*, for example, the N African macaque is called the Barbary ape True apes vary in size from the 3-ft (90-cm), 15-lb (6.8-kg) gibbon to the 6-ft (1.8-m), 500-lb (227-kg) gorilla All apes are forest dwellers and spend at least some of the time in the trees They are able, like monkeys, to run along branches on all fours, unlike monkeys, they are also able to move about by brachiation, or arm-over-arm swinging Gibbons (including siamangs) and orangutans are particularly adept at this type of locomotion and spend most of the time in trees Gorillas are the most terrestrial of the apes, and chimpanzees also spend much of the time on the ground The skeleton of an ape is quite similar to that of a human in the structure of the chest and shoulders Apes have broad, flat chests and arms capable of reaching up and backward from the shoulder, this construction is associated with brachiation The pelvis, on the other hand, is more like that of a monkey, designed for walking on all fours Most apes are able to walk on two feet, but only for short distances The ground-living gorillas and chimpanzees normally walk on the hind feet and knuckles of the hands, with the fingers of the hands curled under The arms of an ape are longer than the legs The hands are similar to human hands, but with fingers and thumb of more equal length, the feet are hand-like grasping structures Apes have neither tails nor the cheek pouches found in Old World monkeys, gibbons are the only apes that have the buttock callosities found in Old World monkeys The face of an ape is quite flat, like that of many monkeys and of humans The vision is highly developed, with a stereoscopic color image The brain is similar in structure to the human brain, although smaller, and is capable of fairly advanced reasoning Apes are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Pongidae See Vernon Reynolds, *The Apes* (1967), R M Yerkes and A W Yerkes, *The Great Apes* (1929, repr 1970), G H Bourne, *The Ape People* (1971)

Apeldoorn (a'pəldōrn), city (1971 pop 126,266), Gelderland prov., central Netherlands Its varied manufactures include paper and paint The city is a transportation center and attracts many tourists Nearby is Het Loo, a royal palace and the residence of former Queen Wilhelmina from the time of her abdication in 1948 until her death in 1962

Apelles (əpēl'ēz), fl 330 B.C., Greek painter, the most celebrated in antiquity but now known only through descriptions of his works He is supposed to have studied under Ephorus of Ephesus and under Pamphilus of Amphipolis at Sicily He was court painter to Philip II of Macedon and to Alexander the Great His portraits of Alexander included one in the Temple of Diana at Ephesus that showed Alexander wielding the thunderbolts of Zeus Apelles excelled in painting horses, and according to Pliny the portrait of Antigonos Cyclops on horseback was his masterpiece Most famous, perhaps, was the painting of Aphrodite rising from the sea A painting made by Botticelli from Lucian's description of Apelles' *Calumny* is in the Uffizi Apelles is said to have been the first to recognize the talents of PROTOGENES

Apelles, Christian at Rome Rom 16 10

Apennines (āp'ənīnz), Ital *Appennino*, mountain system, running the entire length of the Italian peninsula It extends south c 840 mi (1,350 km) from the Cadibona Pass in Liguria, NW Italy, where the Apennines join with the Ligurian Alps, to the Strait of Messina, the mountains of Sicily are a southwest continuation of the system The Apennines are widest (c 80 mi/130 km) in the central section, which also contains the highest peaks, Mt Corno (9,560 ft/2,914 m high) and Mt Amaro (9,170 ft/2,795 m high) However, in general the peaks are much lower The central and southern Apennines have mineral springs, crater lakes, fumaroles, and volcanoes (two, Vesuvius and Etna, are still active) The southern section also experiences many earthquakes Of the many rivers rising in the Apennines, the few important ones (Arno, Tiber, and Volturno) all flow W into the Tyrrhenian Sea The N and central Apennines are rich in a great variety of minerals There are many hydroelectric plants in the mountains The once heavily forested slopes of the system have been greatly reduced by man through the centuries, attempts at conservation and reforestation have been made The greatest population concentrations are found in the valleys and the fertile basins Extensive pasturelands are used for sheep and goat grazing The Apennines are pierced by many railroad tunnels and highway passes, and by the Apennian, Cassian, Flaminian, and Salarian ways (see ROMAN ROADS)

Apharsachites (əfər'sākīts) or **Apharsathchites** (əfər'sāthkīts), Assyrian colonists settled in Samaria Ezra 4 9, 5 6, 6 6 The Apharsites apparently were another group of colonists Ezra 4 9

aphasia (əfá'zhə), language disturbance caused by a lesion of the brain, making an individual partially or totally impaired in his ability to speak, write, or comprehend the meaning of spoken or written words It is distinguished from functional disorders such as stammering or stuttering, and from impaired speech due to physical defects in the organs used for speaking Treatment consists of reeducation, the oral and lip-reading methods employed in the education of deaf and mute children have been found to be of assistance in therapy

Aphek (ā'fēk) 1 Canaanite royal town, the modern Ras el-Ain or Rosh Hayim (Israel) Herod called it Antipatris It is mentioned in Egyptian documents dating from the 19th cent B C Joshua 12 18 See APHEKAH 2 Canaanite city in Asher. Joshua 13 4, 19 30 Aphik Judges 1 31 3 Place where Ahab defeated Benhadad 1 Kings 20 26–30, 2 Kings 13 17 4, 5 Two places where the Philistines encamped, perhaps the same as 1 1 Sam 4 1, 29 1

Aphekah (āfē'kə), unidentified place, probably the same as APHEK 4 Joshua 15 53

aphelion (āfē'lēən, āp'hē'-), point farthest from the sun in the orbit of a body about the sun See APSIS

Aphiah (āfī'ə), ancestor of King Saul 1 Sam 9 1

aphid or **plant louse**, tiny, usually green, soft-bodied, pear-shaped insect, injurious to vegetation It is also called greenfly and blight Aphids are mostly under 1/4 in (6 mm) long Some are wingless, others have two pairs of transparent or colored wings, the front pair longer than the hind pair In typical aphids (family Aphididae), two tubes called cornicles project from the rear of the abdomen and exude protective substances Aphids feed by inserting their beaks into stems, leaves, or roots, and sucking the plant juices Usually they gather in large colonies Their life cycle is complex and varies in different species In a typical life cycle, several generations of wingless females, which reproduce asexually (see PARTHENOGENESIS) and bear live offspring, are followed by a generation of winged females, which bears a sexually reproducing, egg-laying generation of males and females Mating usually occurs in fall and the eggs are laid in crevices of the twigs of the host plant, the first generation of wingless females hatches in spring Different host plants and different parts of the plant may be used at different stages of the life cycle Many kinds of aphid secrete a sweet substance called honeydew, prized as food by ants, flies, and bees This substance consists of partially digested, highly concentrated plant sap and other wastes, and is excreted from the anus, often in copious amounts Certain aphid species have a symbiotic relationship with various species of ants that resembles the relationship of domestic cattle to humans, hence the name "ant cows" for aphids The ants tend the aphids, transporting them to their food plants at the appropriate stages of the aphids' life cycle and sheltering the aphid eggs in their nests during the winter The aphids, in turn, provide honeydew for the ants Some aphids (e.g., the woolly apple aphid) secrete long strands of waxy material from wax glands, forming a conspicuous woolly coating for their colonies Gall-making aphids live in GALLS, or swellings of plant tissue, formed by the plant as a reaction to substances secreted by the insects, galls of different aphid species are easily identified (e.g., the cockscomb gall of elm leaves) One group of aphids lives only on conifers (e.g., the eastern spruce gall aphid) The PHYLLOXERA, notorious for its damage to vineyards, is closely related to the aphids The damage done by aphids is due to a number of causes, including loss of sap, clogging of leaf surfaces with honeydew, and growth of molds and fungi on the honeydew Leaf curl, a common symptom of aphid infestation, occurs when a colony attacks the underside of a leaf, causing its desiccation The downward curl provides protection for the colony, but the leaf becomes useless to the plant Some species also transmit viral diseases of plants Many larger insects feed on aphids, including ladybird beetles and lacewings Fungus infection and damp weather also help limit the number of aphids Among the aphids causing serious damage to food crops are the grain, cabbage, cornroot, apple, woolly apple, and hickory aphids and the alder and beech tree blights Aphids are classified in several families of the phylum ARTHROPODA, class Insecta, order Homoptera

Aphik (āfīk) see APHEK 2

aphorism (āf'arīz'am), short, pithy statement of an evident truth concerned with life or nature, distinguished from the axiom because its truth is not capable of scientific demonstration HIPPOCRATES was the first to use the term for his *Aphorisms*, briefly stated medical principles Note his famous opening sentence "Life is short, art is long, opportunity fleeting, experimenting dangerous, reasoning difficult"

aphotic zone: see OCEAN

Aphrah (āf'ra), in the punning passage of Micah 1 10, apparently the name of a town The name meant "dust" in Hebrew or sounded like a word meaning "dust," hence probably the use of the name

Aphrodite (āf'rādī'tē), in Greek religion, goddess of love and of beauty Although Homer designated her the child of Zeus and Dione, Hesiod's account of her birth, in which she emerges from the foam of the sea, is more popular She supposedly rose where Uranus' genitals had fallen after he had been mutilated by Cronus Although Zeus gave Aphrodite in marriage to Hephaestus, she bestowed her affections on many others She loved Ares, by whom she bore not only Harmonia but, in some myths, Eros and Anteros She was the mother of Hermaphroditus by Hermes and of Priapus by Dionysus Zeus caused her to love the shepherd Anchises, by whom she bore Aeneas Adonis, in whose legend Aphrodite appears as a goddess of fertility, also won her favors It was to Aphrodite that Paris awarded the apple of discord, which caused the dispute leading ultimately to the Trojan War Worshipped throughout Greece, the goddess differed in representation according to her various attributes As Aphrodite Urania, she was a celestial goddess, the embodiment of pure or spiritual love, as Aphrodite Pandemos, she was a goddess of marriage and family life, the essence of earthly or sensual love She was also worshipped as a war goddess, as at Sparta, and as a sea goddess and patroness of sailors Aphrodite had important cults at Cythera on Crete, at Paphos and Amathas on Cyprus, at Corinth, and at Mt Eryx in Sicily Probably of Eastern origin, she was similar in many of her attributes to the Oriental goddesses Ashtar and Ishtar The Romans identified Aphrodite with VENUS

Aphses (āf'sēz), head of a priestly course 1 Chron 24 15

Apia (apē'a), town (1971 est pop 30,600), capital of WESTERN SAMOA, on the northern coast of UPOLU island The economic, social, and political center of Western Samoa, Apia is the nation's only port and city Through its harbor bananas, copra, and cocoa are exported, and cotton goods, motor vehicles, meats, and sugar are imported At the western end of the harbor is Mulinu'u, the old ceremonial capital of a Samoan kingdom Robert Louis STEVENSON is buried on a hill overlooking the city, his former home, Vailima, served as the residence of the New Zealand high commissioner

Apianus, Petrus (pē'tras āpē'nās), Latinized from **Peter Bienewitz** or **Bennewitz** (pā'tar bē'nāvits, bē'nāvits), 1495–1552, German cosmographer and mathematician He was professor of mathematics at Ingolstadt and was noted for his knowledge of astronomy and his general learning Best known among his writings is the *Cosmographia* (1524), which has some of the earliest maps of America

Apicius, Marcus Gabius (apīsh'ās), 1st cent., Roman gourmet He squandered most of his large fortune on feasts and then, anticipating a need to economize, committed suicide The cookbook called *Apicius* probably dates from a century later

Apis (āpīs), in Egyptian religion, sacred bull of Memphis, said to be the incarnation of Osiris or of Ptah His worship spread throughout the Mediterranean world and was particularly important during the time of the Roman Empire See also SERAPIS

Apo, Mount (ā'pō), active volcano, 9,690 ft (2,953 m) high, on S Mindanao island, the Philippines It is the highest peak of the islands Mt Apo has a snow-capped appearance but is actually covered with white sulfur Mt Apo National Park (281 sq mi/728 sq km, est 1936) is there

apocalypse (əpōk'ālīps) [Gr, =uncovering], type of ancient Hebrew and Christian literature dealing with the end of the world The writing, mostly in the form of visions, is characterized by rich imagery and obscure symbols In the New Testament the book of REVELATION is often called the Apocalypse In the Old Testament apocalyptic elements appear extensively in Isaiah, Ezekiel, Daniel, Joel, and Zechariah The book called 4 ESDRAS is one of the chief Jewish apocalypses, other PSEUDEPIGRAPHAS are also apoca-

lyptic Modern books of this sort are seen among the works of Emmanuel SWEDENBORG See also FOUR HORSEMEN OF THE APOCALYPSE

apocrine gland: see SWEAT

Apocrypha (əpōk'rīfə) [Gr, =hidden things], appendix to the Authorized (or King James) Version of the Old Testament containing the following books and parts of books First and Second ESDRAS, TOBIT, JUDITH, ESTHER 10 4–16 24, WISDOM, ECCLESIASTICUS, BARUCH, Dan 3 24–90 (see DANIEL and THREE HOLY CHILDREN), Dan 13 (see SUSANNA 1), Dan 14 (see BEL AND THE DRAGON), the Prayer of Manasses (see MANASSEH 2), First and Second MACCABEES The Western canon includes all these except First and Second Esdras and the Prayer of Manasses, which are often given in an appendix to editions of the Vulgate (where the First and Second Esdras of the Apocrypha are called Third and Fourth Esdras) Protestants follow Jewish tradition in treating these books as uncanonical (see OLD TESTAMENT) For Jewish and Christian works resembling biblical books but not included in the Western or the Hebrew canon—sometimes called apocryphal—see PSEUDEPIGRAPHAS See Manuel Komroff, ed., *The Apocrypha* (1936, repr 1972), E J Goodspeed, *The Story of the Apocrypha* (1939, repr 1962), B M Metzger, *An Introduction to the Apocrypha* (1957), L H Brockington, *A Critical Introduction to the Apocrypha* (1961)

Apodaca, Juan Ruiz de (hwan rōōēth' dā āpōthā'-kā), 1754–1835, Spanish viceroy and military leader He was sent to London by the Central Junta of Seville to gain English support against Napoleon After service as governor of Cuba (1812–15), Apodaca, as viceroy of New Spain (1816–21), devoted himself to repressing revolutionary movements The royalist cause was at first successful, but with the defection of the royalist commander ITURBIDE it failed Feeling that Apodaca was not making sufficient effort to put down the revolution, a group in Mexico City, headed by the Masons, forced him to surrender his authority He returned (1821) to Spain where he held various offices He had the title visconde de Venadito

apogee (āp'ājē), point farthest from the earth in the orbit of a body about the earth See APSIS

Apollinaire, Guillaume (gēyōm' apōlēnār'), 1880–1918, French poet He was christened Wilhelm Apollinaris de Kostrowitzky Apollinaire was a leader in the restless period of technical innovation and experimentation in the arts during the early 20th cent Influenced by the symbolist poets of the previous generation, he developed a casual, lyrical poetic style characterized by a blend of modern and traditional images and verse techniques His best-known lyrical poems are collected in *Alcools* (1913) and *Calligrammes* (1918) A friend of many avant-garde artists, including Picasso and Braque, Apollinaire is credited with introducing CUBISM with his book *Les Peintres cubistes* (1913, tr *The Cubist Painters*, 1949) *Les Mamelles de Tiresias* (1918), his only play, was one of the earliest examples of SURREALISM See biographies by Francis Steegmuller (1963, repr 1971) and Margaret Davies (1964), studies by Scott Bates (1967) and L C Breunig (1969)

Apollinarianism (apōlīnār'ēnīzəm), heretical doctrine taught by Apollinaris or Apollinarius (c 315–c 390), bishop of Laodicea, near Antioch A celebrated scholar and teacher, author of scriptural commentary, philosophy, and controversial treatises, he propounded the theory that Christ possessed the LOGOS in place of a human mind, and hence, while perfectly divine, he was not fully human Apollinarianism was popular in spite of its repeated condemnation, particularly by the First Council of Constantinople It anticipated MONOPHYTISM

Apollinaris Sidonius (Caius Sollius Apollinaris Sidonius) (apōlīnār'is sīdō'nēās, sīdō'-), fl 455–75, Latin writer, b Lyons He had a minor role in imperial politics and was bishop of Clermont Although his panegyric poetry is of little consequence, his letters are an interesting historical source Canonized by the Roman Catholic Church, he is called St Sidonius

Apollo (apōl'ō), in Greek religion, one of the most important Olympian gods, concerned especially with prophecy, medicine, music and poetry, archery, and various bucolic arts, particularly the care of flocks and herds He was a moral god, frequently associated with the higher developments of civilization, such as law, philosophy, and the arts As patron of music and poetry he was often connected with the Muses Apollo may have been first worshipped by primitive shepherds as a god of pastures and flocks, but it was as a god of light, Phoebus or Phoebus

Apollo, that he was most widely known. After the 5th cent B.C. he was frequently identified with Helios, the sun god. Although Apollo was the father of Aristaeus, Asclepius, and, in some legends, Orpheus, his amorous affairs were not particularly successful. Daphne turned into a laurel rather than submit to him, and Marpessa refused him in favor of a mortal. The cult of Apollo was Panhellenic, and the prophecies of his oracles bore great authority. His chief oracular shrine was at Delphi, which he was said to have seized, while still an infant, by killing its guardian, the serpent Python. This event was celebrated every eight years in the festival of the *Stepheria*, in which a youth impersonating Apollo set fire to a hut (called the palace of Python) and then went into exile to Tempe, where he was purified of his deed. At Delphi, Apollo was primarily a god of purification. He had other notable shrines at Branchidae, Claros, Patara, and on the island of Delos, where, it was said, he and his twin sister, Artemis, were born to Leto and Zeus. In Roman religion, in which he was also known as Apollo, he was worshipped in various forms, most significantly as a god of healing and of prophecy. In art he was portrayed as the perfection of youth and beauty. The most celebrated statue of him is the *Apollo Belvedere*, a marble statue in the Belvedere of the Vatican, Rome; it is a Roman copy, dating from the early empire, of a Greek original in bronze. The right forearm and the left hand were restored by a pupil of Michelangelo. The statue represents the god as a vigorous and triumphant youth, naked except for the chlamys draped over his extended left arm.

Apollo Belvedere: see APOLLO, in Greek religion

Apollodorus (apōl'ōdōr'as), fl. 430–400 B.C., Athenian painter, called the Shadower, said to have introduced the use of light and shade to model form. Among his few known works are *Ajax Struck by Lightning* and *Priest in the Act of Devotion*, both were at Pergamum in the time of Pliny the Elder, none has survived.

Apollodorus (of Athens), fl. 2d cent. B.C., Greek grammarian and historian. He wrote many works on grammar, history, and mythology. His best-known books, only fragments of which survive, are *On the Gods*, a prose treatise, and *Chronicle*, a verse work treating Greek history from the fall of Troy. He may also have written the *Library*, a valuable work on Greek mythology that may be an abridgment of *On the Gods*.

Apollodorus of Damascus, Roman architect and engineer, fl. late 1st to early 2nd cent. A.D., b. Syria. Apollodorus was responsible for nearly all buildings designed under Trajan, for whom he was official architect. Known for his use of symmetry and axial organization, Apollodorus produced his greatest achievement in the Forum of Trajan (see FORUM) and Trajan's Column (see ROMAN ART), in which he expressed simple grandeur and preserved a marked Hellenic spirit. His treatise *Engines of War* survives.

Apollonia (āpālō'nēā) [Gr., = of Apollo], name of several ancient Greek towns. The most important was a port in Illyria on the Adriatic. It was founded by Corinthians and was later a Greek and a Roman intellectual center. Julius Caesar used it as a base. Octavian (later AUGUSTUS) received news of Julius Caesar's death while stationed at Apollonia. Among the other towns of this name, there was one in Thrace on the Aegean (a town famous for a large statue of Apollo), one in N. Sicily, and another in Chalcedice (Khalkidhiki), which was visited by Paul on his way to Salonicia (Acts 17:1).

Apollonius (āp'ālō'nēās) 1 Governor of Coele-Syria and Phoenicia for Seleucus IV. He oppressed the Jews and was killed by Judas Maccabaeus. 1 Mac 3:10–24, 2 Mac 4:4, 5:24. 2 Governor of Coele-Syria under Alexander Balas. 1 Mac 10:69.

Apollonius of Perga, fl. 247–205 B.C., Greek mathematician of the Alexandrian school. He produced a treatise on conic sections that included, as well as his own work, much of the work of his predecessors, among whom was Euclid. Apollonius introduced the terms *parabola*, *hyperbola*, and *ellipse*. In his works Greek mathematics reached its culmination.

Apollonius of Tralles: see FARNESE BULL

Apollonius Rhodius (rō'dēās), fl. 3d cent. B.C., epic poet of Alexandria and Rhodes. He became librarian at Alexandria. His extant work, the *Argonautica*, is a Homeric imitation in four books on the story of the Argonaut heroes. He and CALLIMACHUS carried on a famous literary quarrel.

Apollo (apōl'ōs), Alexandrian Jew who became a Christian missionary. Acts 18:24–19:1, 1 Cor 11:2, 3:4–6, 4:6.

Apollo space program: see SPACE EXPLORATION

Apollyon (apōl'yan), Greek name of the destroying angel. Rev 9:11. See SATAN, HELL.

apology [from Gr., = defense], literary work that defends, justifies, or clarifies an author's ideas or point of view. Unlike the ordinary use of the word, the literary use neither implies that wrong has been done nor expresses regret. The most famous ancient example, Plato's *Apology* (3d cent. B.C.), presents Socrates' defense of himself at his trial before the Athenian government. Sir Philip Sidney's *Apologie for Poetrie* and *Defense of Poesie* (both 1580), which examine the art of poetry and its condition in England, apparently were written to justify the poets' craft after it had been attacked by critics. A third famous example, Cardinal Newman's spiritual autobiography *Apologia pro Vita sua* (1864), was written to clarify the Cardinal's views after they had been misrepresented in an essay by Charles Kingsley.

apoplexy or stroke, destruction of brain tissue as a result of intracerebral hemorrhage, THROMBOSIS (clotting), or embolism (obstruction in a blood vessel caused by clotted blood or other foreign matter circulating in the blood stream). Cerebral hemorrhage or thrombosis usually occurs in elderly persons with constricted arteries (see ARTERIOSCLEROSIS) although either may also be caused by inflammatory or toxic damage to the cerebral blood vessels. Cerebral embolism may occur at any age, even in children. Symptoms of stroke develop suddenly. In cases of severe brain damage there may be deep coma, paralysis of one side of the body, and loss of speech, followed by death or by permanent neurological disturbances after recovery. If the brain damage sustained has been slight, there is usually complete recovery. When the stroke has been caused by thrombosis or by an EMBOLUS, anticoagulants are helpful in certain cases, sometimes surgical removal of the clot is possible.

apostle (apōs'al) [Gr., = envoy], one of the prime missionaries of Christianity. The apostles of the first rank are saints PETER, ANDREW, JAMES (the Greater), JOHN, THOMAS, JAMES (the Less), JUDE (or Thaddaeus), PHILIP, BARTHOLOMEW, MATTHEW, SIMON, and MATTHIAS (replacing JUDAS ISCARIOT). Traditionally the list of the Twelve Disciples includes Judas and not Matthias, and the list of the Twelve Apostles includes Matthias and not Judas. St. PAUL is always classed as an apostle, and so sometimes are a few others, such as St. BARNABAS. The principal missionary to any country is often called its apostle, e.g., St. Patrick is the apostle of Ireland, and St. Augustine of Canterbury the apostle of England. For the Apostles' Creed, see CREED, for the *Teaching of the Apostles*, see DIDACHE, for the earliest account of their activities, see ACTS OF THE APOSTLES. See E. J. Goodspeed, *The Twelve: The Story of Christ's Apostles* (1957, repr. 1962).

Apostle Islands, group of more than 20 wooded islands, in Lake Superior, off N. Wis. Madeline, 13 mi (21 km) long, is the largest island and has the group's only settlement, La Pointe. Noted for their wave-eroded cliffs and abundant wildlife, the islands are visited by tourists and hunters. The islands, along with an 11 mi (18 km) strip of the adjacent shoreline, make up Apostle Islands National Lakeshore (see NATIONAL PARKS AND MONUMENTS, table).

Apostolic Constitutions: see CONSTITUTIONS, APOSTOLIC

apostolic delegate: see LEGATE

apostolic succession, in Christian theology, the doctrine asserting that the chosen successors of the apostles enjoyed through God's grace the same authority, power, and responsibility as was conferred upon the apostles by Christ. Therefore present-day bishops, as the successors of previous bishops, going back to the apostles, have this power by virtue of this unbroken chain. For the Orthodox, Roman Catholic, and Anglican churches, this link with the apostles is what guarantees for them their authority in matters of faith, morals, and the valid administration of sacraments. Essential to maintaining the apostolic succession is the right consecration of bishops. Apostolic succession is to be distinguished from the Petrine supremacy (see PAPACY). Protestants (other than Anglicans) see the authority given to the apostles as unique, proper to them alone, and hence reject any doctrine of a succession of their power. The Protestant view of ecclesiastical authority differs accordingly. See ORDERS HOLY, CHURCH.

apostrophe: see PUNCTUATION, ABBREVIATION

apostrophe, figure of speech in which an absent person, a personified inanimate being, or an abstraction is addressed as though present. The term is derived from a Greek word meaning "a turning

away," and this sense is maintained when a narrative or dramatic thread is broken in order to digress by speaking directly to someone not there, e.g., "Envy, be silent and attend!"—Alexander Pope, "On a Certain Lady at Court."

apothecaries weight: see ENGLISH UNITS OF MEASUREMENT

apotheosis (apōth'ēō'sis), the act of raising a person who has died to the rank of a god. Historically, it was most important during the later Roman Empire. In an emperor's lifetime his genius was worshipped, but after he died he was often solemnly enrolled as one of the gods to be publicly adored. Apotheosis is closely related to ANCESTOR WORSHIP.

Appaim (āp'āim), Jerahmeelite. 1 Chron 2:30, 31.

Appalachia, region. See APPALACHIAN MOUNTAINS.

Appalachian Mountains (āpālā'chān, -chēān, -lāch'-), mountain system of E. North America, extending in a broad belt c. 1,600 mi (2,570 km) SW from the St. Lawrence valley in Quebec prov., Canada, to the Gulf coastal plain in Alabama. Main sections in the system are the White Mts., Green Mts., Taconic Mts., Catskill Mts., Allegheny Mts., Black Mts., Great Smoky Mts., the Blue Ridge, and the Cumberland Plateau. The Appalachian Mts., much-eroded remnants of a great mountain mass formed by folding (see MOUNTAINS), consist largely of sedimentary rocks. In general the eastern portions are more rugged than the western, which are mainly of horizontal rock structure. Mt. Mitchell (6,684 ft/2,037 m) in the Black Mts. is the highest peak. The Great Appalachian Valley is a chain of lowlands extending along most of the system's length, its main segments are the St. Lawrence Lowland, Lake Champlain Lowland, Lebanon Valley, Cumberland Valley, Shenandoah Valley, the Valley of Virginia, and the Valley of East Tennessee. The Great Valley has long been an important north-south highway and is one of the most fertile areas in the E. United States. The Appalachians themselves are rich in mineral resources, including coal, iron, petroleum, and natural gas. The scenic ranges also abound in resorts and recreation areas, Shenandoah and Great Smoky Mts. national parks are in the region, and the APPALACHIAN TRAIL winds 2,050 mi (3,299 km) along the Appalachian crest from Mt. Katahdin, Maine, to Springer Mt., Georgia. Crossed by few passes, the Appalachians, especially their central portion, were a barrier to early westward expansion and played an important role in U.S. history, major east-west routes followed river valleys and gaps (see CUMBERLAND GAP). See N. M. Fenneman, *Physiography of the Eastern United States* (1938), R. H. Brown, *Historical Geography of the United States* (1948), I. R. Ford, ed., *The Southern Appalachian Region* (1962), Eliot Porter, *Appalachian Wilderness* (1970), H. M. Caudill, *Night Comes to the Cumberlands* (1963) and *My Land is Dying* (1971).

Appalachian Trail, world's longest continuous hiking path, 2,050 mi (3,299 km) long, passing through 14 states, E. United States. Conceived in 1921 by Benton Mackaye, forester and regional planner, and completed in 1937, the trail extends along the ridges of the Appalachian Mts. from Mt. Katahdin, Maine, to Springer Mt., Ga. It passes through eight national forests and two national parks, but the greatest part of its length is on private property. Hiking and trail clubs maintain shelters and campsites along the path. The trail was designated a national scenic trail in 1968 (see NATIONAL PARKS AND MONUMENTS, table).

Appaloosa horse, breed of LIGHT HORSE developed in the United States by the Nez Perce Indians of Idaho from a horse that originated in Asia and was popular in Europe during the Middle Ages. Lewis and Clark found the breed in the possession of the Nez Perce in 1805. The Appaloosa is characterized by a spotted pattern of markings, it most commonly has solid-colored foreparts and small, dark, round or oval spots over the loin and hips. Famed for its intelligence, speed, stamina, and endurance, it is an outstanding stock and show horse of great popularity. It stands just over 14 hands (56 in./140 cm) and weighs about 1,100 lb (500 kg).

apparent magnitude: see MAGNITUDE

apparent solar time: see SOLAR TIME

apparition, spiritualistic manifestation of a person or object in which a form not actually present is seen with such intensity that belief in its reality is created. The ancient and widespread belief in apparitions and ghosts (specters of dead persons) is based on the idea that the spirit of a man, or of any object, is endowed with volition and motion of its own. Apparitions, especially particular shapes attached to certain legends or superstitions, are often

considered as premonitions or warnings. They may appear in any form and may manifest themselves to any or all the senses. The most evil apparitions are said to be those of persons who have died violent or unnatural deaths, those with guilty secrets, and those who were improperly buried. However, not all apparitions are believed to be dangerous, many, especially those associated with a particular religion, are thought to be signs of divine intervention. Summoning apparitions by means of incantations, crystal gazing, polished stones, hypnotic suggestion, and various other ways is one of the oldest practices of DIVINATION. See SPIRITISM. See also Andrew MacKenzie, *A Gallery of Ghosts* (1973).

appeal, in law, hearing by a superior court to consider correcting or reversing the judgment of an inferior court, because of errors allegedly committed by the inferior court. The party appealing the decision is known as the appellant, the party who has won the case in the lower court as the appellee. The term is also sometimes used to describe the review by a court of the action of a government board or administrative officer. Appellate procedure is set by statute. There are two types of errors, of fact and of law. An error of fact is drawing a false inference from evidence presented at the trial. An error of law is an erroneous determination of the legal rules governing PROCEDURE, EVIDENCE, or the matters at issue between the parties. Ordinarily, only errors of law may be reviewed in appeal. In an appeal from an action tried in EQUITY, however, the appellate court passes on the entire record, both as to facts and law. Should the appeals court conclude that no error was committed, it will affirm the decision of the lower court. If it finds that there was error, it may direct a retrial or grant a JUDGMENT or DECREE in favor of the party who lost in the lower court. The determinations of appeals courts are usually printed, often with an opinion indicating the basis for the court's decisions. Such opinions are of great utility in guiding the inferior courts and are often cited as precedents in future cases.

Appel, Karel (kă'ral ap'al), 1921–, Dutch painter. A member of CoBrA, the European group allied with ABSTRACT EXPRESSIONISM, Appel reacted against the austerity of earlier Dutch abstraction. Characterized by informal brush work, bright, bold color, and a slashing line, Appel's paintings often possess a childlike quality. Examples of his work are in the Boymans-Van Beuningen Museum, Rotterdam.

appendix, small, worm-shaped blind tube, about 3 in (7.6 cm) long and ¼ in to 1 in (6.4–2.54 cm) thick, projecting from the cecum (large intestine) on the right side of the lower abdominal cavity. The structure, also called the vermiform appendix, has no function in man and is considered a vestigial remnant of some previous organ or structure, having a digestive function, that became unnecessary to man in his evolutionary progress (see DIGESTIVE SYSTEM). Infection of accumulated and hardened waste matter in the appendix may give rise to appendicitis, the symptoms of which are severe pain in the abdomen, nausea, vomiting, fever, abdominal tenderness, and muscle spasm. A blood count usually shows a rise in the number of white corpuscles. Appendicitis may occur at any age, although it is more prevalent in persons under 40 years of age. The danger in appendicitis is that the appendix can rupture, either spontaneously or because the patient has in judiciously been given laxatives or an enema, and that the infection can spread to the peritoneum (see PERITONITIS). Surgery is indicated in appendicitis, preceded and followed by antibiotic therapy.

Appenzell (ä'pentsël), canton, NE Switzerland. A rural and sparsely populated region, it is mainly a meadowland dotted with small farms. Appenzell retains many ancient customs and has been famous for centuries as a textile and embroidery center. It was ruled after the 11th cent. by the abbots of St. Gall, against whom it revolted in 1403. In 1411, Appenzell allied itself with the Swiss Confederation, which had helped defeat the abbots. It became a Swiss canton in 1513, and in 1597 it was split into two independent half cantons: Ausser-Rhoden or Outer Rhodes (1970 pop. 49,023), 94 sq mi (243 sq km), with its capital at HERISAU, accepted the Reformation; Inner-Rhoden or Inner Rhodes (1970 pop. 13,124), 67 sq mi (174 sq km), with its capital at the town of Appenzell (1970 pop. 5,217), remained Catholic.

Appert, Nicolas (nêkôlâ' äpär'), also known as François Appert (frä'nswä'), 1750–1841, French originator of a method of CANNING. In 1795 the French government offered a prize of 12,000 francs for a method of preserving food, especially for use

by the army and navy. Appert, already an experienced chef, began to experiment in his workshop at Massy, near Paris, and in 1810 was awarded the prize for his method. The method, based on the idea that heat destroys or neutralizes the ferments that cause food spoilage, involved cooking foods in corked jars. Appert published several editions of his results (*The Art of Preserving*, tr. 1920) and with his prize money opened the first commercial cannery in the world.

Apphia (äf'ëä), Christian woman associated with Philemon. Philemon 2.

Appia, Adolphe (adôlf' äp'pyä), 1862–1928, Swiss theorist of modern stage lighting and decor. In interpreting Wagner's ideas in scenic designs for his operas, Appia rejected painted scenery for the three-dimensional set, he felt that shade was as necessary as light to link the actor to his setting in time and space. His use of light, through intensity, color, and mobility, to set the atmosphere and mood of a play created a new perspective in SCENE DESIGN AND STAGE LIGHTING. See his *Work of Living Art and Man Is the Measure of All Things*, in a single volume, ed. by Barnard Hewitt (tr. 1960), study by W. R. Volbach (1968).

Appian (äp'ëän), fl. 2d cent., Roman historian. He was a Greek, born in Alexandria. His history of the Roman conquests from the founding of Rome to the reign of Trajan is strongly biased in favor of Roman imperialism, but it reproduces many documents and sources that otherwise would have been lost. Of the 24 books, written in Greek, only Books VI–VII and Books XI–XVII have been fully preserved.

Appiani, Andrea (andrë'a äp-pyän'ë), 1754–1817, Italian neoclassical painter and Italian court painter of Napoleon I, active in Lombardy. His frescoes include work in churches and palaces of Milan. In his portraits his style anticipated the romantic approach. Portraits of Napoleon (1796, Bellagio) and Canova are among his oils.

Appian Way (äp'ëän), Lat. *Via Appia*, most famous of the ROMAN ROADS, built (312 B.C.) under Appius Claudius Caecus. It connected Rome with Capua and was later extended to Beneventum (now Benevento), Tarentum (Taranto), and Brundisium (Brindisi). It was the chief highway to Greece and the East. Its total length was more than 350 mi (563 km). The substantial construction of cemented stone blocks has preserved it to the present. Branch roads led to Neapolis (Naples), Barium (Bari), and other ports. On the first stretch of road out of Rome are interesting tombs and the Church of St. Sebastian with its catacombs. In 1784, Pope Pius VI built the new Appian Way from Rome to Albano, parallel with the old.

Appii forum (äp'ëi) [Lat. = Appius' market], important stop on the Appian Way, c. 40 mi (64 km) E of Rome. It was at the head of a canal through the Pontine Marshes. When Paul arrived here on his way to Rome, he was met by Christians from the city (Acts 28:15). The modern Italian successor is Foro Appio.

Appius Claudius: see CLAUDIUS, Roman gens.

apple, any tree (and its fruit) of the genus *Malus* of the family Rosaceae (ROSE family). Apples were formerly considered species of the pear genus *Pyrus*, with which they share the characteristic pome fruit. The common apple (*M. sylvestris*) is the best known and is commercially the most important temperate fruit. Apparently native to the Caucasus mts. of W Asia, it has been under cultivation since prehistoric times. According to ancient tradition the forbidden fruit of the Garden of Eden was the apple (Gen. 3). In religious painting, the apple represents the fruit of the tree of knowledge of good and evil, as do occasionally the pear and the quince. It was sacred to Aphrodite in classical mythology. The apple is now widely grown in thousands of varieties, e.g., the Golden Delicious, Winesap, Jonathan, and McIntosh. The tree is hardy in cold climates, and the firm fruit is easy to handle and store. Most apples are consumed fresh, but some are canned or used for juice. Apple juice (sweet cider) is partly fermented to produce hard cider and fully fermented to make vinegar. Wastes from fermenting processes are a major source of PECTIN. APPLEJACK is a liquor made from hard cider. Western Europe, especially France, is the chief apple-producing region, in North America, also with an enormous total output, Washington is the leading apple-growing state, but very many areas grow crops at least for local consumption. The tree is subject to several insect and fungus pests, for which the orchards are sprayed. The hardwood is used for cabinetmaking and fuel. The crab apples are wild North American and Asiatic species

of *Malus* now cultivated as ornamentals for their fragrant white to deep pink blossoms—e.g., the American sweet, or garland, crab apple (*M. coronaria*), the prairie crab apple (*M. ioensis*), and the Siberian crabapple (*M. baccata*). The small, hard, sour crabapple fruits are used for preserves, pickles, and jelly, in growth and culture these trees are similar to the common apple. Apples are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Rosaceae.

Applegarth, Robert, 1834–1924, English trade union leader, a carpenter by trade. A charter member of the Amalgamated Society of Carpenters and Joiners, he became in 1862 its general secretary. Under his leadership the society, with other unions, pressed the fight for legalization of unions and for protection of their funds. The fight was successfully concluded in 1871. See biography by A. W. Humphrey (1913), John Bowditch and Clement Ramsland, *Voices of the Industrial Revolution* (1961).

Applegate, Jesse, 1811–88, American pioneer in Oregon, b. Kentucky. With his family he moved (1821) to Missouri, and there in 1843 he joined the "great emigration" of more than 900 people over the Oregon Trail—a trek pictured in his *Day with the Cow Column* in 1843 (ed. by Joseph Schafer, 1934, pub. with *Recollections of My Boyhood* by Applegate's nephew). A leader on the westward journey, he was elected (1845) a member of the legislative committee of the provisional government that ruled Oregon until it became (1849) a U.S. territory. Later he helped organize the new government and, as surveyor general, did much exploring and opened a wagon route to California.

applejack, brandy made by distilling hard cider or fermented apple pomace. Another method of making applejack, now rarely used, is to let fermented cider freeze and then to remove the ice. It was one of the most popular drinks among the early settlers of North America and remained so for a long time in rural areas.

apple maggot, larva of a FRUIT FLY, *Rhagoletis pomonella*.

apple of discord: see PARIS, in Greek mythology.

Applesseed, Johnny: see CHAPMAN, JOHN.

Appleton, Daniel, 1785–1849, American publisher, b. Haverhill, Mass. The owner of a general store in Boston, he moved to New York in 1826, where he established one of the largest publishing houses in the country. The firm was continued by his sons under the name D. Appleton & Company. It eventually was renamed Appleton-Century-Crofts, Inc.

Appleton, Sir Edward Victor, 1892–1965, English physicist, grad. St. John's College, Cambridge. After returning from active service in World War I he became assistant demonstrator in experimental physics at the Cavendish Laboratory in 1920. He was professor of physics at the Univ. of London (1924–36) and professor of natural philosophy at Cambridge Univ. (1936–39). From 1939 to 1949 he was secretary of the Dept. of Scientific and Industrial Research. Knighted in 1941, he received the 1947 Nobel Prize in Physics for his contributions to the knowledge of the ionosphere, which led to the development of radar. See study by R. W. Clark (1971).

Appleton, city (1970 pop. 57,143), seat of Outagamie co., E. Wis., on the Fox River near its exit from the northern end of Lake Winnebago, in a dairying and stockraising region, inc. 1857. Waterfalls provide power for the city's industries, which produce paper, wood, metal, concrete, knitted goods, and dairy products. Appleton had the nation's first hydroelectric plant (1882) and the state's first electric streetcar (1886). The city is the seat of Lawrence Univ. Harry Houdini was born there.

apple worm: see CODLING MOTH.

appliqué, see EMBROIDERY, NEEDLEWORK.

Appomattox (äpämät'äks), town (1970 pop. 1,400), seat of Appomattox co., central Va., inc. 1925. Confederate general Robert E. Lee surrendered to Union general Ulysses S. Grant at nearby Appomattox Courthouse on April 9, 1865. After Gen. Philip Sheridan's victory over the Confederates at Five Forks on April 1, Lee abandoned Petersburg and Richmond and retreated westward, planning to unite with the army of Gen. Joseph Johnston near Danville, Va. Grant pursued, pressing Lee's flank and rear, while Sheridan cut off further retreat at Appomattox Courthouse. Severed from supplies and surrounded by Union forces, Lee surrendered the remnants of the Army of Northern Virginia to Grant at the McLean House on April 9. The surrender marked the virtual end of the war, as the remaining Confederate armies, on hearing of Lee's act, followed suit. The

site of the surrender has been made a national historical park (see NATIONAL PARKS AND MONUMENTS, table)

Apponaug, RI see WARWICK

apprenticeship, system of learning a craft or trade from one who is engaged in it and of paying for the instruction by a given number of years of work. The practice was known in ancient Babylon, Egypt, Greece, and Rome, as well as in modern Europe and to some extent in the United States. Typically, in medieval Europe, a master craftsman agreed to instruct a young man, to give him shelter, food, and clothing, and to care for him during illness. The apprentice would bind himself to work for the master for a given time. After that specified time he would become a journeyman, working for a master for wages, or he might set up as a master himself. The medieval guilds supervised the relation of master and apprentice and decided the number of apprentices in a given guild. The Industrial Revolution, with its introduction of machinery, put an end to most of these guilds, but apprenticeship continues in highly skilled trades, at times competing with technical schools. The terms of apprenticeship are regulated by many trade unions, as well as by law. The apprenticeship programs in Europe today differ from those in Great Britain and the United States by providing training in areas other than the skilled crafts. In Great Britain apprenticeship programs sometimes include outside schooling at company expense. In the United States, Wisconsin in the early 1900s established a system of apprenticeships, it proved so successful that the U.S. Congress adopted a similar system in 1937. After a lapse in the 1950s, Congress passed (1962) the Manpower Development and Training Act to encourage apprenticeship programs. See Andrew Beveridge, *Apprenticeship Now* (1963), N. F. Duffy, ed., *Essays on Apprenticeship* (1967).

appropriation, in constitutional law, allotment by a legislature of money for a particular purpose. In the United States, for example, the Constitution provides that no money may be drawn from the Treasury except under appropriations made by law and that no appropriations shall be made for more than two years. In the United States a general appropriation bill is passed at the beginning of each session of Congress. In England, at the end of sessions of Parliament. See also BUDGET.

APRA (a'pra), or the *Alianza Popular Revolucionaria Americana*, also called the *Partido Aprista*, reformist political party in Peru. Founded (1924) by Victor Raul Haya de la Torre while in exile, the party's Peruvian activities were led by Jose Carlos Mariategui until Haya de la Torre's return to Peru in 1931. The party's program advocates social reform, particularly the emancipation of the Indian, the betterment of agrarian conditions, and the socialization of some industries. Originally committed to revolutionary change, the party gradually assumed a less radical stance, so that by the late 1960s it was a moderately reformist group, rather than a revolutionary organization. Characterized as rabble rousers and implicated in acts of political terror, the Apristas were outlawed from 1931 to 1945. During the early part of that period the Apristas engaged in continual gun battles with the military, thus creating an enduring enmity between the two groups. In 1945 the party was legalized, and it joined in a coalition government under Jose Luis Bustamante. In 1948, following an abortive revolt of dissident Apristas in the port city of Callao and with the country on the verge of civil war, a military junta headed by General Manuel Odría took power, and the party was again outlawed. Gradually becoming less radical, the APRA party was again legalized (1956) when Manuel Prado, a conservative, was elected president with its support. In the 1962 presidential election, Haya de la Torre won a slight plurality, but the military, remembering its earlier feuds with the party and still distrustful of it, immediately seized the government. Civilian rule was restored in the next year, and the Apristas were allowed to function freely. However, the military coup of 1968 led to the outlawing of all political activity, including that of the Apristas. Since the coup, Aprista groups are allowed to meet as social clubs, but they are not permitted to engage in any political organizing. The party continues to enjoy widespread popularity throughout Peru.

Apra Harbor (a'pra) or **Port Apra**, port on the west coast of the island of GUAM, W Pacific, in the MARIANAS ISLANDS. The only good harbor on the island, it is a port of entry closed to foreign vessels except by permit. There is a large U.S. naval base used for maintenance of the Seventh Fleet and Polaris submarines.

Apraksin, Feodor Matveyevich (fyó'dər mätvyä'vich aprak'syín), 1671-1728, Russian admiral. He helped Peter I (Peter the Great) create the Russian navy and won several naval battles in Peter's wars against Sweden. He was made a count in 1709.

apricot [Arabic from Lat., =early ripe], tree, *Prunus armeniaca*, and its fruit, of the plum genus of the family Rosaceae (ROSE family), native to temperate Asia and long cultivated in Armenia. The fruit is used raw, canned, preserved, and dried. California is the chief place of cultivation in the United States, although by selecting suitable varieties the apricot can be grown in most regions where the peach is hardy. Apricots are used in the making of a cordial and also for apricot brandy. Apricots are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Apries (ä'prē-ē), king of ancient Egypt (588-569 B.C.), of the XXVI dynasty, successor of Psamtik II. Apries sought to recover Syria and Palestine. He attacked Tyre and Sidon but failed (586 B.C.) to relieve the siege of Jerusalem by NEBUCHADNEZZAR. A revolt in Egypt caused him to seek assistance from AMASIS II, who assassinated him and seized the throne. Apries is called Pharaoh-hophra in the Bible (Jer 44:30).

April see MONTH

April Fool's Day or **All Fool's Day**, holiday of uncertain origin, consecrated to practical joking and celebrated on the first of April. Prior to the adoption of the Gregorian calendar in 1564, the date was observed as New Year's Day by cultures as varied as the Roman and the Hindu. The holiday is considered to be related to the festival of the vernal equinox, which occurs on March 21. The English gave April Fool's Day its first widespread celebration during the 18th cent.

apse, the termination at the sanctuary end of a church, generally semicircular in plan but sometimes square or polygonal. The apse appeared early in Roman temples and basilicas; it was originally a semicircular recess with a half dome as ceiling and contained the monumental statue of the deity. The motif was adopted in the early Christian churches, in these the apse occupied the eastern end of the building where the altar, the bishop's throne, and the seats of the clergy were placed. A fine example of this early form is in the cathedral of Torcello near Venice. Because of its location and function in the church services, the apse became the architectural climax of the church interior and was richly ornamented. In the early churches, the half-dome ceiling was incrustured with handsome mosaics, the walls were veneered with fine marbles, and the altar and pulpits were also richly decorated. As the apse steadily increased in liturgical and architectural emphasis, chapels were added to it. In English Gothic architecture the apse was in most cases a square termination, and in Italy its form remained a simple semicircle, as the chapels were in another part of the church. In France the entire choir—composed of apse, ambulatory, and radiating chapels (the whole termed a *chevet*)—attained, in the 12th and 13th cent., its great splendor.

Apscheron (əpshēr'ŋ), peninsula, c 40 mi (60 km) long, extending into the Caspian Sea, E Azerbaijan, SW USSR. It is a dry, hilly area at the eastern end of the Greater Caucasus mts and is underlain by rich oil-bearing rock strata. The oil industry developed there in the 1870s, although the presence of oil was known long before. The peninsula, with its Baku oil fields, was once the USSR's chief oil-producing region but now accounts for a small portion of Soviet production. Natural gas wells, salt lakes, mineral springs, and mud volcanoes are also found on Apscheron. BAKU is the region's chief city, and the peninsula falls within the boundaries of Greater Baku.

apsides (äp'sidēz) see APSIS

apsis (pl apsides), point in the ORBIT of a body where the body is neither approaching nor receding from another body about which it revolves. Any el-

Apsis points, or apsides, in the earth's orbit. At perihelion the earth is closest to the sun and at aphelion it is farthest from the sun.

liptical orbit has two apsides. At the perigee the moon or other satellite is as close as it ever gets to the earth, and it begins to move away, at the apogee it is as far away as it gets, and it begins to move closer. Similarly, in the orbit of the earth or another planet around the sun, the perihelion is the point of closest approach and the aphelion is the point of farthest recession. In the orbit of the stars in a BINARY STAR system, the periastron is the point of closest approach and the apastron the point of farthest recession. A line connecting the two apsidal points of an elliptical orbit (e.g., the aphelion and perihelion) is called the line of apsides; it is the major axis of the ellipse. This line may precess because of gravitational influences of other bodies or relativistic effects.

apteryx (äp'tariks) see KIWI

Apuleius, Lucius (ä'pyölē'əs), fl. 2d cent., Latin writer, b. Hippo (now 80ne, Algeria). His romance *The Golden Ass* or *Metamorphoses* is the only Latin novel to survive in entirety. It tells the story of Lucius of Corinth, who is transformed into an ass by a Thessalian woman and undergoes a series of strange and exciting adventures before he is restored to human form. *The Golden Ass* has been tremendously popular, influencing strongly the history of the novel, e.g., the works of Boccaccio, Cervantes, Fielding, and Smollett. Other works by Apuleius include *The Apology* or *On Magic*, his defense in a suit brought by his wife's family for gaining her affections by magic, *Florida*, an anthology from his own works, and *On the God of Socrates*, *On the Philosophy of Plato*, and *On the World*, philosophical treatises. See study by H. E. Butler and A. S. Owen (1914).

Apulia (əpyō'lēə), Ital. *Puglia*, region (1971 pop. 3,562,377), 7,469 sq mi (19,345 sq km), S Italy, bordering on the Adriatic Sea in the east and the Strait of Otranto and Gulf of Taranto in the south. Its southern portion, a peninsula, forms the heel of the Italian "boot." BARI is the capital of the region, which is divided into Bari, Brindisi, Foggia, Lecce, and Taranto provs. (named for their capitals). Apulia is mostly a plain, its low coast, however, is broken by the mountainous Gargano Peninsula in the north, and there are mountains in the north central part of the region. Farming is the chief occupation, but industry is expanding. Farm products include olives, grapes, cereals, almonds, figs, tobacco, and livestock (sheep, pigs, cattle, and goats). Manufactures include refined petroleum, chemicals, plastics, fertilizer, and wine. There are saltworks in the north and bauxite mines in the south. Fishing is pursued in the Adriatic and in the Gulf of Taranto. The scarcity of water has long been an acute problem in Apulia, and it is necessary to carry drinking water by aqueduct across the Apennines from the Sele River in Campania. In ancient times only the northern part of the region was called Apulia; the southern peninsula was known as Calabria, a name later used to designate the toe of the Italian boot. The region was settled by several Italic peoples and by Greek colonists before it was conquered (4th cent. B.C.) by Rome. After the fall of Rome, Apulia was held successively by the Goths, the Lombards, and the Byzantines. In the 11th cent. it was conquered by the Normans, ROBERT GUISCARD set up the duchy of Apulia in 1059. After the Norman conquest of Sicily (late 11th cent.), Palermo replaced MELFI (just west of present-day Apulia) as the center of Norman power, and Apulia became a mere province, first of the kingdom of Sicily, then of the kingdom of Naples. From the late 12th to early 13th cent. Apulia was a favorite residence of the Hohenstaufen emperors, notably Frederick II. The coast later was occupied at times by the Turks and by the Venetians. In 1861 the region joined Italy. The feudal system long prevailed in the rural areas of Apulia, social and agrarian reforms proceeded slowly from the 19th cent. and accelerated in the mid-20th cent. The characteristic Apulian architecture of the 11th-13th cent. reflects Greek, Arabic, Norman, and Pisan influences. There are universities at Bari and Lecce.

Apure (əpō'rā), river, c 500 mi (800 km) long, rising in the Andes, N Colombia, and flowing E across W central Venezuela to the Orinoco River. It drains much of the western portion of the Orinoco basin and is navigable by river steamers for c 400 mi (640 km) during the rainy season. There is extensive livestock ranching along the Apure. The Portuguesa River is the chief tributary.

Apurimac (əpōrē'mak), river, c 550 mi (885 km) long, rising in the Andes, S Peru. It flows generally northwest in a narrow valley to join the Urubamba River and form the Ucayali, which is one of the main headstreams of the Amazon.

Aqaba (a'kaba), town (1964 est. pop. 10,000), SW Jordan, at the head of the Gulf of Aqaba, on the border with Israel. It is the only Jordanian port with direct access to the Red Sea. Phosphates are the chief export. Aqaba is also a popular winter seaside resort. Since at least 1000 B.C., a port has existed continuously on the site to handle trade between Palestine and Syria. Aqaba stands on or near the biblical Elath (Elat). The Roman military post of Aelana later occupied the site. A great road built under Emperor Trajan linked the area with Damascus and Egypt. Occupied and fortified by the Crusaders in 1115, Aqaba was retaken by SALADIN in 1187. During the 19th cent. the town became a staging point on the pilgrim route to Mecca. T. E. Lawrence (Lawrence of Arabia) captured Aqaba for the Allies in World War I; it later became part of the Hejaz but was ceded to Trans-Jordan in 1924. The town's name is sometimes spelled Akaba.

Aqaba, Gulf of, northern arm of the Red Sea, 118 mi (190 km) long and 10 mi (16.1 km) wide, between the Sinai and Arabian peninsulas, a part of the Great Rift Valley. The gulf, which is entered through the Straits of Tiran, has played a major role in the tensions between Israel and the Arab states (Egypt, Jordan, Saudi Arabia) bordering it. Aqaba, with the Israeli port of Elat at its head, has been Israel's only direct access to E. Africa, Asia, and Australia since it was barred by Egypt from using the Suez Canal. The Gulf of Aqaba was blockaded by the Arabs from 1949 to 1956 and again in 1967, although it was declared (1958) an international waterway by the United Nations. In the wake of the 1967 Arab-Israeli war, Israel occupied strategic points along the Straits of Tiran to insure open passage of its shipping.

aquaculture see HYDROPONICS

aqua fortis (ak'wā fōr'tīs) see NITRIC ACID

aquamarine (āk'wəmə'rēn') [Lat., = sea water], transparent BERYL with a blue or bluish-green color. Sources of the gems include Brazil, Siberia, Burma, the Malagasy Republic, and parts of the United States. Oriental aquamarine is a transparent crystalline corundum with a bluish tinge. The emerald is similar in composition, differing only in color.

aqua regia (rē'jēa) [Lat., = royal water], corrosive, fuming yellow liquid prepared by mixing one volume of concentrated nitric acid with three to four volumes of concentrated hydrochloric acid. It was so named by the alchemists because it dissolves gold and platinum, the "royal" metals, which do not dissolve in nitric or hydrochloric acid alone. Its fumes and yellow color are caused by reaction of nitric acid, HNO₃, with hydrogen chloride, HCl, to form nitrosyl chloride, NOCl, chlorine, Cl₂, and water, both chlorine and nitrosyl chloride are yellow-colored and volatile. The nitrosyl chloride further decomposes to nitric oxide, NO, and chlorine. Nitric acid is a powerful oxidizing agent (see OXIDATION AND REDUCTION), but the CHEMICAL EQUILIBRIUM for its reaction with gold, Au, only permits formation of a tiny amount of Au³⁺ ion, so the amount of gold dissolved in pure nitric acid is undetectable. The presence of chloride ion, Cl⁻, allows formation of the stable chloraurate COMPLEX ION, AuCl₄⁻. Because of the high concentration of chloride ion in aqua regia, the Au³⁺ is reacted almost as soon as it is formed, keeping its concentration low, this allows oxidation of more Au to Au³⁺, and the gold is dissolved. The gold may also react directly with the free chlorine in aqua regia, since chlorine is a powerful oxidizing agent.

aquarelle (āk'wārēl') see WATERCOLOR PAINTING

Aquarids see METEOR SHOWER

aquarium, name for any supervised exhibit of aquatic animals and plants. Aquariums are known to have been constructed in ancient Rome, Egypt, and the Orient. Goldfish have been bred in China for several hundred years and are still the most commonly kept fish in home aquariums, although tropical toy fish, such as guppies, have become increasingly popular. Large public aquariums have been made possible by the development of glass exhibit tanks, capable of holding over 100,000 gal (378,500 liters) of water. The first aquarium known to have been constructed with glass is in Regent's Park, London (1853). The maintenance of an aquarium of any size requires the careful regulation of water flow, temperature, light, food, and oxygen, removal of injurious debris, and attention to the special requirements of the individual species kept. Green aquatic plants are often used in aquariums since, through the process of photosynthesis, they utilize waste carbon dioxide from the animals' respiration and in turn provide oxygen. An aquarium in which the dis-

solved gases are kept at the proper concentrations by the physiological activities of the plants and animals is called a balanced aquarium. Certain mollusks, such as snails and mussels, are useful as scavengers, as are some species of fish. Large freshwater and saltwater aquariums are often maintained for research and breeding purposes by universities, marine stations, and wildlife commissions, e.g., those in Naples, Italy, Monaco, Plymouth, England, La Jolla, Calif., and Woods Hole, Mass. There are also many aquariums throughout the world for public exhibition. Among those in the United States are the Fish and Wildlife Service Aquariums at Washington, D.C., and Woods Hole, Mass., the John G. Shedd Aquarium at Chicago, Marine Studios, Inc., at Marineland, Fla., the New York Aquarium at Brooklyn, Scripps Institute of Oceanography at La Jolla, Calif., the Steinhart Aquarium at San Francisco, and the Waikiki Aquarium at Honolulu. See H. R. Axelrod, *Tropical Fish as a Hobby* (rev. ed. 1972), Arne Schiøtz, *A Guide to Aquarium Fishes and Plants* (tr. 1972).

Aquarius (āk'wār'ēəs) [Lat., = water carrier], large CONSTELLATION located on the ECLIPTIC (the sun's apparent path through the heavens) between Capricornus and Pisces; it is one of the constellations of the ZODIAC. Aquarius is sometimes represented as a man pouring water from a jar. Although it contains no stars of first or second magnitude, it does contain a recurrent nova observed in 1907 and again in 1962. Aquarius reaches its highest point in the evening sky in October.

aquatint (a'kwā'tīnt'), ETCHING technique. The plate is covered with a porous ground, or resist, through which acid bites many tiny pockmarks in the metal. The tones produced resemble those of a wash drawing. The technique is said to have been invented in the 1760s by J. B. Le Prince (1734-84). It is often used in combination with other types of etching. Goya's series of mixed aquatint etchings, *Los Caprichos*, *Desastres de la Guerra*, *Tauromaquia*, and *Proverbios*, are considered the supreme examples of this technique. See B. F. Morrow, *The Art of Aquatint* (1935), J. R. Abbey, *Life in England in Aquatint and Lithography, 1770-1860* (1953).

Aquaviva, Claudio (klou'dyō akwāvē'va), 1543-1615, Italian Jesuit. He was (1581-1615) fifth general of the Society of Jesus and composed the *Ratio*, the basis of Jesuit education.

aqueduct (āk'wədūkt) [Lat., = conveyor of water], channel or trough built to convey water, chiefly for providing a densely populated region with a supply of fresh water. The flow in aqueducts is ordinarily by means of gravity, although pumps are often used. Some aqueducts consist of tunnels cut through rock, while others are conduits made of some sturdy material. For example, the conduit may consist of steel pipe, concrete, wooden staves, sheet-metal flume, or any of these in combination, the flow being controlled by slide gate and needle valves. Aqueducts enable many cities in the United States to obtain water from a considerable distance. Los Angeles, for example, draws much of its water from the Owens River by means of an aqueduct more than 230 mi (370 km) long. Most of the supply for New York City is conducted through the Catskill Aqueduct and the CROTON AQUEDUCT. The topography of the land influences the design of the aqueduct, usually part of the structure is above ground and part below. Where feasible, an aqueduct may generate hydroelectric power as a byproduct of its operation. Typical of such use is the aqueduct system for Springfield, Mass., which generates power at the foot of Cobble Mt. in addition to supplying the city with water. Aqueducts were employed from early times, probably first in Mesopotamia. Their construction reached a peak of skill in Roman times in those around Rome and in Gaul, Spain, and other parts of the empire. Portions of some of the original Roman aqueducts are still standing.

aquifer (āk'wīfər) see ARTESIAN WELL

Aquila (āk'wīlə, ākwīl'ə), Christian of Jewish origin from Pontus who lived at Rome. He and his wife, Prisca or Priscilla, were friendly to Paul. Acts 18:2,18,26, Rom 16:3, 1 Cor 16:19.

Aquila [Lat., = the eagle], equatorial CONSTELLATION located N. of Sagittarius and Capricornus, lying partly in the Milky Way. It is sometimes depicted as an eagle. It contains the bright star ALTAIR (Alpha Aquilae) and the pulsating variable star Eta Aquilae. The brightest nova ever seen occurred in Aquila in 1918. Other novas were observed in Aquila in 389 and 1899, two were observed there in 1936. Aquila reaches its highest point in the evening sky in late August.

Aquila Ponticus (pōn'tīkəs), 2d cent., Jewish translator of the Old Testament from Hebrew into Greek. The characteristic feature of Aquila's version was its extremely literal rendering of the Hebrew. It was much used by Jews, even in the synagogues. No complete specimen exists. Aquila is said to have been a convert from Christianity and a disciple of Akiba ben Joseph.

Aquilegia: see COLUMBINE

Aquileia (akwēlē'ya), town (1971 pop. 1,938), in Friuli-Venezia Giulia, NE Italy, near the Adriatic Sea. Founded in 181 B.C. by the Romans, it was a stronghold against the barbarians and a trade center. Later, the town was destroyed several times by invaders, notably by Attila (A.D. 452). In the 6th cent. Aquileia became the see of a patriarch. Fleeing the Lombards in 568, the patriarch took refuge in Grado, the island port of Aquileia, and remained there while Aquileia elected its own patriarch. The pope recognized (7th cent.) both patriarchates, in 1445 that of Grado was transferred to Venice. From the 11th cent. Aquileia flourished under the temporal rule of its patriarchs, who acquired Friuli, Carniola, and Istria. Decline began in the 14th cent., and in 1420 Venice occupied Aquileia and Friuli. Aquileia was under Austrian rule from 1509 to 1918, when it passed to Italy. The patriarchate was abolished in 1751. Of particular note in the town is the Romanesque basilica (11th cent., partly restored in the 14th cent.), with an interesting and well-preserved mosaic floor and with frescoes of the 12th and 13th cent. There are also Roman ruins and an archaeological museum. Grado, now joined to the mainland by a bridge, is a popular beach resort as well as a port.

Aquinas, Saint Thomas see THOMAS AQUINAS, SAINT

Aquitaine (āk'wītān, akētēn'), Lat. *Aquitania*, former duchy and kingdom in SW France. Julius Caesar conquered the Aquitani, an Iberian people of SW Gaul, in 56 B.C. The province that he created occupied the territory between the Garonne River and the Pyrenees, under Roman rule it was extended northward and eastward almost as far as the Loire River. It had been thoroughly Romanized when it was occupied (5th cent.) by the VISIGOTHS, and the persistence of Latin culture made it a rich but indigestible addition to the Frankish realm after the defeat (507) of the Visigoths by the Frankish ruler Clovis I. In the chaotic strife among Clovis's successors, much of Aquitaine escaped Frankish control. After the separation of GASCONY from Aquitaine (7th cent.), the area N. of the Garonne was considered Aquitaine proper. From 670, Aquitaine was ruled by semi-independent native dukes, but an Arab invasion (718) forced the Aquitanian duke Eudes to seek the protection of the Frankish ruler Charles Martel, who defeated (732) the Arabs. In 781, CHARLEMAGNE, who subdued the native nobles, made Aquitaine into a kingdom for his son Louis (later emperor of the West LOUIS I). After the death (838) of Louis's son Pepin I, Louis added Aquitaine to the West Frankish kingdom of Neustria (France) and granted it to his youngest son Charles the Bald (CHARLES II, emperor of the West). A group of Aquitanian nobles made Pepin's young son, Pepin II, king, and a struggle for control ensued between Charles and the Aquitanians (840-52, 862-65). Charles was the eventual victor. During this period Aquitaine was subject to attacks by both Normans and Muslims. The repeated invasions, combined with the civil wars, weakened Carolingian control over Aquitaine, despite Charles the Bald's victory over Pepin II. Charles's successors were forced to recognize the hereditary rights of a number of independent noble families, and during the 10th cent. royal influence virtually disappeared. After 973 the counts of Poitou bore the title of duke of Aquitaine, their control beyond Poitou, however, was not realized for many years. In the 11th cent. the dukes of Aquitaine expanded at the expense of their weaker neighbors, establishing themselves over all Aquitaine and Gascony. The new duchy of Aquitaine was one of the most powerful states in western Europe. The marriage (1137) of ELEANOR OF AQUITAINE to the French king Louis VII joined Aquitaine to France. Eleanor's subsequent marriage to Henry II, duke of Normandy, who became king of England in 1154, initiated a long struggle between France and England for possession of Aquitaine. Henry and his successors held Aquitaine in vassalage from the kings of France. Over the years, however, France regained various parts of Aquitaine from England, and in the HUNDRED YEARS WAR France recovered all of Aquitaine. After its recovery, Aquitaine was constituted as the French province of Guienne, a name that had been used interchangeably with Aquitaine for many years.

Ar (ar), city of Moab, probably one of the important centers E of the Dead Sea. The Greeks called it Areopolis, and later it was called Rabbath Moab. Num 21:15,28, Deut 2:9,18,29, Isa 15:1. It is the namesake city of Num 22:36, Deut 2:36, and Joshua 13:9.

Ar, chemical symbol of the element ARGON.

Ara (ā'ra), Asherite. 1 Chron 7:38.

Arab (ā'rāb), hill town of S Palestine, near Hebron. Joshua 15:52.

Arabah or **Araba** (both ā'rāba, ā'rāba), depression, on the Israel-Jordan border, extending c 100 mi (160 km) from the Dead Sea S to the Gulf of Aqaba, part of the Great Rift Valley complex. Limestone, salt, and potash are mined near the Dead Sea. In the Old Testament, Arabah is variously called a wilderness, a plain, and a desert.

arabesque (ārabēsk') [Fr, = Arabian], in art, term applied to any complex, linear decoration based on flowing lines. In Moorish art it was often exploited to cover entire surfaces. The arabesque in modern usage derives from a Renaissance design which was Greco-Roman in inspiration.

Arabia, peninsula (1970 est. pop. 17,000,000), c 1,000,000 sq mi (2,590,000 sq km), SW Asia, called Arabistan in Persian. It is bordered on the W by the Gulf of Aqaba and the Red Sea, on the S by the Gulf of Aden and the Arabian Sea, on the E by the Gulf of Oman and the Persian Gulf, and on the N by Iraq and Jordan. Politically, Arabia consists of Saudi Arabia (the largest and most populous state), Yemen, Southern Yemen (People's Democratic Republic of Yemen), Oman, the United Arab Emirates, Qatar, Bahrain, Kuwait, and several neutral zones. Arabia is mainly a great plateau of ancient crystalline rock, covered with limestone and sandstone. It rises steeply from the narrow Red Sea coastal plain, achieving its greatest height (c 12,000 ft/3,700 m) in SW Arabia, and slopes gently E to the Persian Gulf, the Oman Mts, SE Arabia, rise to c 10,000 ft (3,000 m). The coastal mountains catch what little moisture is carried by the dry winds that cross Arabia, making the interior so arid (4 in/10 cm annual precipitation) that there is not a single perennial stream and large areas lack water. The basin-shaped interior consists of alternating steppe and desert landscape, the Nafud desert in the north is connected with the great Rub al Khali in the south (one of the world's largest sand deserts) by the Dahna, a narrow sand corridor. There is extensive and varied agriculture (coffee, grains, fruits) only in SW Arabia, particularly Yemen [Arabia Felix, = fortunate Arabia], where high coastal mountains intercept the moist southwest monsoon winds during the summer. The northeast coast of Oman has a climate similar to that of Yemen, but in most of Arabia rainfall is cyclonic and occurs only in winter. The coastal lands, however, are much more humid than the interior, fog and dew are common. Except for the inland cities of Riyadh and Hail, in Saudi Arabia, most of Arabia's large urban centers are on or near the coast. Principal cities are Jidda, Mecca, and Medina (Saudi Arabia), Sana (Yemen), Aden and Mukalla (Southern Yemen), Abu Dhabi (United Arab Emirates), Muscat (Oman), Al Manamah (Bahrain), and Kuwait city (Kuwait). Because of their dependence on isolated sources of water, about four fifths of the Arabian population is sedentary, concentrated around oases, notably in the Nejd (central Arabia) and the Hejaz (along the northeast coast of the Red Sea). Agriculture is the main occupation, with dates, grains, and fruits the chief crops. Pastoral nomads raise goats and sheep. Until the mid-20th cent., when oil was discovered in E Arabia, the peninsula's main exports were hides, wool, coffee, spices, and the famed, highly bred Arabian horses. With the exception of Aden, Arabia did not have a good port until after World War II, when modern port facilities were constructed, especially along the Persian Gulf. Arabia has an estimated one third of the earth's petroleum reserves, Kuwait and Saudi Arabia are among the world's leading producers. Europe is the principal customer of Arabian petroleum, consuming more than 50% of the output, the Far East (especially Japan), the United States, and Canada are also large consumers. Until the early 1970s, firms from the United States, Britain, and, to a lesser extent, Japan had a monopoly on drilling concessions. However, the Arabian nations now have much greater control over oil exploration and production and receive far higher payments. Modern technology and the huge wealth generated by oil resources have profoundly altered traditional life in Arabia. Flourishing private enterprise, new transportation links rapidly growing cities, and rising education and living standards now characterize much of the peninsula. Archaeological evidence points to very

early trade between Yemen and the NE African coast. From time to time ancient peoples of Arabian origin invaded and settled the inviting regions of the E Mediterranean basin, possibly they included the HYKSOS, conquerors of Egypt (18th cent. B.C.), and the Israelites who seized Palestine. However, little is definitely known of Arabian history in the period preceding the oldest inscriptions discovered—those dating from c 1000 B.C. In ancient times much of SW Arabia was divided among the domains of Ma'in, SHEBA, and Himyarite. Political unity in Sheba seems to have been hastened by Darius's conquest of N Arabia. No ancient power ever attempted the complete conquest of Arabia, because of the formidable obstacles of crossing the deserts. Rome invaded (24 B.C.) N Arabia but soon withdrew, although for a long period it held N Hejaz. Ethiopia, during its great expansion under the Aksumite kings (see AKSUM), twice (A.D. 300-378 and 525-70) held Yemen and the HADHRAMAUT. In 570, the Sassanids of Persia drove out the Ethiopians and established a short-lived hegemony over the peninsula. Arabia was briefly unified after the founding of ISLAM by MUHAMMAD, the prophet of Mecca, in the 7th cent. His dynamic faith, furthered by his successors, reconciled the warring Arab tribes and soon sent them out on a career of conquest. They subjugated N Africa and SW Asia and gained control of Spain and S France until they were stopped in the west by the Frankish ruler CHARLES MARTEL in 732 and in the east by the Byzantine Empire c 750. However, the tremendous territorial expansion of Islam deprived the religion of its exclusively Arabic character, and the need for a more convenient administrative center led to the transfer of the seat of the CALIPHATE from Medina to Damascus. Arabia was again left without political cohesion, and independent emirates arose in Yemen, Oman, and elsewhere. In the 10th cent. a semblance of unity was imposed by the KARMATHIANS, a Muslim sect, but in the 11th cent. anarchic conditions again prevailed. After the discovery of the route to India around the Cape of Good Hope in 1498, European powers were attracted to Arabia as a site for trading bases. The Portuguese seized Oman in 1508 but were driven out in 1659 by the Ottoman Empire, which attempted, but never with complete success, to control all Arabia. Great Britain established a physical presence in Arabia in 1799 by occupying Perim Island in the Bab el Mandeb, and in 1839 the Ottoman Empire lost Aden to the British. In 1853, Britain and the E Arabian sheikhs signed the Perpetual Maritime Truce by which the Arabs agreed not to harass British shipping in the Arabian Sea and recognized Britain as the dominant foreign power in the Persian Gulf. The truce confirmed the temporary truces of 1820 and 1835, the sheikhdoms were thus called the Trucial States. Arab nationalist opposition to the Ottoman Turks was aroused in the mid-19th cent. by a rekindling of the WAHABI, a reform movement within Islam, it waned toward the end of the century. Just before World War I, IBN SAUD revived the Wahabi, and during the war he signed a military pact with Britain against the Turks. His strongest rival, HUSAYN IBN ALI of the influential Hashemite family, led a successful revolt against the Turks in the Hejaz and set up an independent state there. After the war, however, the Saud family prevailed in a violent struggle against Husayn and other Arab families and founded (1925) Saudi Arabia, which absorbed the state in the Hejaz. Between the World Wars, Britain was the dominant foreign power in Arabia, holding protectorates over the Arab sheikhdoms. The post-World War II era witnessed a gradual decline of Britain's presence, culminating in the withdrawal of British military forces E of Suez in the late 1960s. Both the United States and the USSR sought to fill the vacuum created by Britain's withdrawal from the oil-rich, strategically important peninsula, but in the early 1970s the Arab nations were asserting their independence with growing success. The countries were only peripherally involved in the Arab-Israeli Wars. See D. G. Hogarth, *Arabia* (1922), T. E. Lawrence, *Revolt in the Desert* (1927), C. M. Doughty, *Travels in Arabia Deserta* (new ed. 1936, repr. 1968), Richard H. Sanger, *The Arabian Peninsula* (1954, repr. 1970), Philip K. Hitti, *History of the Arabs* (10th ed. 1970), William B. Fisher, *The Middle East: A Physical, Social and Regional Geography* (6th ed. 1970).

Arabian art and architecture: see ISLAMIC ART AND ARCHITECTURE.

Arabian Desert or **Eastern Desert**, c 86,000 sq mi (222,740 sq km), E Egypt, bordered by the Nile valley in the west and the Red Sea and the Gulf of Suez in the east. It extends along most of Egypt's eastern

border and merges into the Nubian Desert in the south. The Arabian Desert is sparsely populated, most of its inhabitants are based around wells and springs. Since ancient times Egypt has used the porphyry, granite, and sandstone found in the desert mountains as building materials. Oil is produced in the north. The name Arabian Desert is also commonly applied to the desert of the Arabian Peninsula.

Arabian Gulf: see PERSIAN GULF.

Arabian horse, breed of LIGHT HORSE developed in Mesopotamia and N Africa, and probably the first true domesticated breed. Prized since earliest times for its superior beauty, spirit, speed, grace of movement, stamina, and intelligence, the Arabian has served as parental stock for such light-weight horses as the AMERICAN SADDLE HORSE, QUARTER HORSE, STANDARD BRED HORSE, and the THOROUGHBRED. Inter-crossings of these and other light and DRAFT HORSE breeds with Arabians is still common. The Arabian's most characteristic color is bay with white markings, grays, chestnuts, and browns are also common. It averages 14 to 15 hands (56-60 in./140-150 cm) high and weighs about 1,000 lb (450 kg).

Arabian music, the music of all the Islamic peoples in Arabia, N Africa, and Persia. Little is known of Arabian music before the Hegira (A.D. 622), but afterwards under the Omayyad caliphs (661-750) a consolidation of Persian and Syrian elements with the native musical style took place in Arabia. Ibn Misjah (d. c. 715) devised a system of modal theory that lasted throughout the golden age under the first Abbasid caliphs (750-847). In the 9th cent. at Baghdad many treatises on music theory and history were written by such men as the philosopher Al-Kindi (9th cent.) and the illustrious Al-Farabi (c. 870-c. 950), who wrote the most important treatise on music up to his time. In the 11th cent. under the last Abbasid caliphs a strong Turkistan influence was brought into Arabian music by the Seljuks, and a gradual decay began in the Arabian art. With the destruction of Baghdad in 1258 came the end of specifically Arabian musical culture, and only a few late examples of this music are extant. The style was preserved in Egypt and Syria because the Arabic language was spoken there, but it had lost its vitality, and even this vestige died when the Ottoman Turks overran Egypt in 1517. The chief characteristics of Arabian music are modal homophony, florid ornamentation, and modal rhythm. The melodic modal system of Ibn Misjah contained, in its final form, eight modes. This system lasted until the 11th cent., when the modes were increased to 12, which were called *maqamat* by the 13th cent. Until this time the Arabian gamut had consisted of 12 tones roughly equal to the chromatic scale of Western music. But in the 13th cent. five more tones were added, each a quarter tone below each diatonic whole tone, i.e., below d, e, g, a, b. A new tuning of the gamut was adopted in the 16th cent., and not only the tones but also the nature of the *maqamat* were changed. Instead of scales within which melodies were composed, they became melodic formulas to be used in composition, a system much like the ragas of HINDU MUSIC. Ornamentation in Arabian music consisted of shakes and trills, grace notes, appoggiaturas, and the *tarkib*, which was the simultaneous striking of certain notes with their fourth, fifth, or octave. The rhythmic modes were primarily the vocal meters of poetry until the development of instrumental music in the 10th cent. In vocal music often a short melody is repeated for each stanza or verse, each repetition being elaborately ornamented. The principal form of Arabian music is the *nauba*, a "suite" of vocal pieces with instrumental preludes, probably originated at the Abbasid court. The principal Arabian instruments, other than those borrowed from older Semitic cultures, were the short-necked lute called *ud*, from which the European lute derived its form and name, and the long-necked lute called *tanbur*. The introduction of the lute into Europe by the Moors in Spain is a certainty, the extent to which Arabian music has exerted greater influence on the West is still a matter of controversy. See H. G. Farmer, *A History of Arabian Music to the 13th Century* (1929) and *Historical Facts for the Arabian Musical Influence* (1930).

Arabian Nights: see THOUSAND AND ONE NIGHTS.

Arabian Sea, ancient *Mare Erythraeum*, northwest part of the Indian Ocean, lying between Arabia and India. The Gulf of Aden, extended by the Red Sea, and the Gulf of Oman, extended by the Persian Gulf, are its principal arms. The submarine Carlsberg ridge, SE of Socotra Island, is the sea's southern boundary. The Indus River is the largest stream flowing into the sea. The Arabian Sea has long been an

important trade route between India and the West, its chief ports are Aden, People's Republic of Yemen, Karachi, Pakistan, and Bombay, India

Arabic languages, members of the South Semitic group of the Semitic subdivision of the Hamito-Semitic family of languages (see HAMITO-SEMITIC LANGUAGES). The Arabic languages comprise North Arabic (or simply Arabic), which represents the Southwest branch of the South Semitic tongues, and South Arabic (or Himyaritic), which belongs to the Southeast branch of the South Semitic group. South Arabic differs sufficiently from North Arabic to be considered a separate language. North Arabic, or Arabic, was confined largely to the Arabian peninsula until the 7th cent. A.D. Thereafter the spread of Islam took the Arabic language into the Fertile Crescent and across North Africa. Today Arabic is spoken throughout the Arabian peninsula and also in Iraq, Syria, Jordan, Lebanon, Israel, Morocco, Tunisia, Algeria, Libya, Egypt, Sudan, Mauritania, Chad, and Malta. The official language of 17 countries in Africa and Asia and co-official in two other states (Israel and Malta), it is the mother tongue of approximately 100 million people in these two continents. In addition, Arabic reaches the peoples of all countries professing the Muslim religion, for it is the sacred language of Islam and its holy book, the Koran. Thus, Arabic can be considered the most important living Semitic tongue. A great literature has been written in Arabic as well. The Arabic of the Koran and of subsequent Arabic literature is called classical or literary Arabic. It is uniform and standardized. Classical Arabic is still employed today as the written language, but it is restricted to formal usage as a spoken tongue. It differs considerably from its descendant, the modern colloquial Arabic that is the medium of general conversation. Modern colloquial Arabic has three principal groups of dialects: Eastern, Western, and Southern, but the language is becoming standardized owing to the influence of the mass media. Grammatically, Arabic has that distinctive feature of Semitic languages, the tri-consonantal root consisting of three consonants separated by two vowels. The basic meaning of the root is furnished by the consonants and is altered by changes in, or omission of, the vowels and by the addition of various affixes. Gender is found in the Arabic verb, as well as in the noun, pronoun, and adjective. The modern Arabic dialects have considerably simplified classical Arabic, as by discarding the declension of the noun and other inflections. Arabic has its own alphabet, which is composed of 28 consonants. Most of the characters have four different forms, one for beginning a word, another for ending a word, still another for a medial position, and a fourth for a letter used by itself. Vowels are shown by symbols above or below the consonants, but they are optional and are often not written. The direction of writing is from right to left. The Arabic alphabet evolved from the Nabataean script, which is a descendant of the Aramaic writing (see ARAMAIC). There are two major styles of the Arabic script, the angular Kufic (well-suited for decorative uses) and the cursive Nashkī. Arabic writing is also the basis of a number of scripts used by non-Arab peoples following the Muslim religion and has been adapted for the Persian, Pushtu, Urdu, Malay, Hausa, and Swahili languages, among others. South Arabic in ancient times was the language of people living in the southern Arabian peninsula. It had several known dialects and is closely related to the ETHIOPIAN of Ethiopia. Ancient South Arabic had its own South Semitic alphabet, the origin of which is still not clear, although it is generally thought to have had the same source as the North Semitic writing. Surviving inscriptions in ancient South Arabic date from the 8th cent. B.C. or earlier. The coming of Islam in the 7th cent. A.D. brought with it North Arabic, which displaced the ancient South Arabic. Modern South Arabic, which has several dialects, is spoken by about 50,000 people in the southern Arabian peninsula. Its ancestor is probably ancient South Arabic, although not all linguists agree. For grammars see G. W. Thatcher (4th ed. 1942), F. J. Ziadeh and B. W. Winder (1957), and C. P. Caspari (3d ed. 1967), A. G. Cheyne, *The Arabic Language, Its Role in History* (1969).

Arabic literature. Numerous peoples have shared in forming the great body of Arabic literature, they include Turks, Persians, Syrians, Egyptians, Indians, Africans, Jews, and Asians, in addition to the Arabs themselves. The first significant Arabic literature was produced during the medieval golden age of lyric poetry, from the 4th to the 7th cent. The poems are strongly personal qasida, or odes, often very short,

some longer than 100 lines. They treat the life of the tribe and themes of love, fighting, courage, and the chase. The poet speaks directly, not romantically, of nature and the power of God. The qasida survive only through collections, chiefly the MUALLAQAT, HAMASA, MUFADDAIYAT, and KITAB AL-AGHANI. The most esteemed of the poets are AMRU AL-KAIS, ANTARA, and ZUHAIR. The Prophet Muhammad was not interested in poetry, so Arabic poetry fell into a decline from which it recovered only in far different form. The KORAN supplanted poetry by becoming the chief object of study of the Muslim world. Poetry regained some prestige under the Umayyads, when al-Akhtal (c. 640–c. 710) and al-Farazdaq (c. 640–732) wrote their lyric works. The next great period of Arabic literature was a result of the rise of the new Arabic-Persian culture of Baghdad under the Abbasids in the 8th and 9th cent. Philosophy, mathematics, law, Koranic interpretation and criticism, history, and science were cultivated, and to this period is owed the collections of early Arabic poetry. During the 7th and part of the 8th cent., Arabic poetry had become entirely artificial, refined, and nearly totally inaccessible to the average reader without a scholarly background. At the end of the 8th cent. in Baghdad a group of young poets arose who established a new court poetry. Two of these were ABU AL-ATAHIYA and ABU NUWAS. Typical of the time is the precise, formal, yet exaggerated work of Mutanabbi (murdered in 965). Among the most popular of Arabic poets, he is considered one of the greatest masters of poetic technique. The poet HARRIRI (11th cent.) sought to combine "refinement with dignity of style, and brilliancies with jewels of eloquence." ABU AL-ALA MAARRI (d. 1057) was an outstanding Syrian poet of great originality. The greatest mystic poet of the age was Omar Ibn al-Faridh (1181–1235). The influence of India and Persia is seen in Arabic prose romance, which had become the principal literary form. The greatest collection is the THOUSAND AND ONE NIGHTS. The major writers of historical and geographical works in Arabic include BUKHARI, AL-TABARI, MASUDI, IBN KHALDUN, Ibn al-Athir (d. 1234), and IBN BATUTA. The foremost Arab philosopher was AL-GAZEL AVICENNA, the great physician, wrote on medicine. In the field of belles lettres, essays and epistles of great wit and erudition known as risalas were composed on subjects as diverse as science, mysticism, and politics. Chief practitioners of the genre include Ibn al-Muqaffa (d. 757), the unsurpassed al-Jahiz (d. c. 869), and Ibn Qutayba (d. 889). The Western center of Arabian culture was Spain, especially Cordoba under the Umayyads. The Spanish Arabs produced fine poets and scholars, but they are dwarfed by the great philosophers—AVEMPACE, AVERROES, and IBN TUFAYL. Their works became known in Europe chiefly through the Latin translations of Jewish scholars. Since 1200 in Spain and 1300 in the East, there has been little Arabic literature of wide interest. After 1870, with the growth of Western influence on the East, a vernacular literature arose in Syria and in Egypt, which aimed to rouse Arabic national consciousness in literature either by a return to classical models or by an imitation of Western forms. While there has been a reaction to Western models in modern Arabic literature, the novel and the drama, forms never before used, have developed. Notable 20th-century writers in Arabic include the novelist Najib Maftuz, the playwrights Ahmad Shawqi and Tawfiq al-Hakim, the poets Hafiz Ibrahim, Badr Shakir as-Sayyab, and Nazik al-Malaikah, and the short-story writer Mahmud Tiyum. See H. A. Gibb, *Arabic Literature, an Introduction* (2d ed. 1963), A. J. Arberry, *Modern Arabic Poetry* (1950, repr. 1967), R. A. Nicholson, *A Literary History of the Arabs* (2d ed. 1969), J. A. Haywood, *Modern Arabic Literature, 1800–1970* (1972).

Arab-Israeli Wars, conflicts in 1948–49, 1956, 1967, and 1973–74 between Israel and the Arab states. Tensions between Israel and the Arabs have been complicated and heightened by the political, strategic, and economic interests in the area of the great powers. Although Israel's independence on May 14, 1948, triggered the first full-scale war, armed conflicts between Jews and Arabs had been frequent since Great Britain received the League of Nations mandate for PALESTINE in 1920. From 1945 to 1948 Zionists waged guerrilla war against British troops and against Palestinian Arabs supported by the ARAB LEAGUE, and they had made substantial gains by 1948. The 1948–49 War reflected the opposition of the Arab states to the formation of the Jewish state of Israel in what they considered to be Arab territory. As independence was declared, Arab forces from Egypt, Syria, Transjordan (later Jordan), Lebanon, and Iraq invaded Israel. The Egyptians gained

some territory in the south and the Jordanians took Jerusalem's Old City, but other Arab forces were soon halted. In June the United Nations succeeded in establishing a four-week truce. This was followed in July by significant Israeli advances before another truce. Fighting erupted again in August and continued sporadically until the end of 1948. An Israeli advance in Jan., 1949, isolated Egyptian forces and led to a cease-fire (Jan. 7, 1949). Protracted peace talks resulted in armistice agreements between Israel and Egypt, Syria, and Jordan by July, but no formal peace. In addition, about 400,000 Palestinian Arabs had fled from Israel and were settled in refugee camps near Israel's border, their status became a volatile factor in Arab-Israeli relations. From 1949 to 1956 the armed truce between Israel and the Arabs, enforced in part by the UN forces, was punctuated by raids and reprisals. Among the world powers, the United States, Great Britain, and France sided with Israel, while the Soviet Union supported Arab demands. Tensions mounted during 1956 as Israel became convinced that the Arabs were preparing for war. The nationalization of the Suez Canal by Egypt's Gamal Abdal NASSER in July, 1956, resulted in the further alienation of Great Britain and France, which made new agreements with Israel. On Oct. 29, 1956, Israeli forces, directed by Moshe DAYAN, launched a combined air and ground assault into Egypt's Sinai peninsula. Early Israeli successes were reinforced by an Anglo-French invasion along the canal. Although the action against Egypt was severely condemned by the nations of the world, the cease-fire of November 6, which was promoted by the United Nations with US and Soviet support, came only after Israel had captured several key objectives, including the Gaza strip and Sharm el Sheikh, which commanded the approaches to the Gulf of Aqaba. Israel withdrew from these positions in 1957, turning them over to the UN emergency force after access to the Gulf of Aqaba, without which Israel was cut off from the Indian Ocean, had been guaranteed. After a period of relative calm, border incidents between Israel and Syria, Egypt, and Jordan increased during the early 1960's, with Palestinian guerrilla groups actively supported by Syria. In May, 1967, President Nasser, his prestige much eroded through his inaction in the face of Israeli raids, requested the withdrawal of UN forces from Egyptian territory, mobilized units in the Sinai, and closed the Gulf of Aqaba to Israel. Israel (which had no UN forces stationed on its territory) responded by mobilizing, and escalation of threats and provocations continued until June 5, 1967, when Israel launched a massive air assault that crippled Arab air capability. With air superiority protecting its ground forces, Israel controlled the Sinai peninsula within three days and then concentrated on the Jordanian frontier, capturing Jerusalem's Old City (subsequently annexed), and on the Syrian border, gaining a hold on the strategic Golan Heights. The war, which ended on June 10, is known as the Six-Day War. The Suez Canal was closed by the war, and Israel declared that it would not give up Jerusalem and that it would hold the remaining captured territories until significant progress had been made in Arab-Israeli relations. The end of active fighting was followed by frequent artillery duels along the frontiers and by clashes between Israelis and Palestinian guerrillas. During 1973 the Arab states, believing that their complaints against Israel were going unheeded (despite the mounting use by the Arabs of threats to cut off oil supplies in an attempt to soften the U.S. pro-Israel stance), quietly prepared for war, led by Egypt's President Anwar SADAT. On Oct. 6, 1973, on the Jewish holiday Yom Kippur, a two-pronged assault on Israel was launched. Egyptian forces struck eastward across the Suez Canal and pushed the Israelis back, while the Syrians advanced from the north. Iraqi forces joined the war and, in addition, Syria received some support from Jordan, Libya, and the smaller Arab states. The attacks caught Israel off guard, and it was several days before the country was fully mobilized. Israel then forced the Syrians and Egyptians back and, in the last hours of the war, established a salient on the west bank of the Suez Canal, but these advances were only achieved with a high cost in men and equipment. Through US and Soviet diplomatic pressures and the efforts of the United Nations, a tenuous cease-fire was implemented by October 25. Israel and Egypt signed a cease-fire agreement in November, but Israeli-Syrian fighting continued until a cease-fire was negotiated in 1974. Largely as a result of the diplomatic efforts of U.S. Secretary of State Henry KISSINGER, Israel was prevailed upon to withdraw from the west bank of the canal and to

withdraw a further several miles on the east bank (which it had previously controlled) behind a UN-supervised cease-fire zone. On the Syrian front too, territorial gains made in the war were given up. These setbacks, which were attributed largely to Israel's unpreparedness, led to a crisis of leadership that resulted in the retirement in 1974 of Prime Minister Golda MEIR and removal of Dayan as chief of the army. The Arab states had strengthened their political position and gained in military confidence, for the first time they had successfully combined economics with politics, using a petroleum embargo to influence world opinion. After the war Egyptian and Syrian diplomatic relations with the United States, broken since the 1967 war, were resumed, and clearance of the Suez Canal began. The 1973-74 War brought about a major shift of power in the Middle East, but it still failed to resolve the basic problems confronting the area. Arabistan: see ARABIA

Arab League, popular name for the League of Arab States, formed in 1945, in an attempt to give political expression to the Arab nations. The original charter members were Egypt, Syria, Lebanon, Trans-Jordan (later Jordan), Iraq, Saudi Arabia, and Yemen. A representative of Palestinian Arabs, although he did not sign the charter because he represented no recognized government, was given full status and a vote in the Arab League. Members later joining the league included Algeria, Bahrain, Kuwait, Libya, Morocco, Oman, Qatar, the Sudan, Tunisia, the Union of Arab Emirates, and the Yemen Arab Republic. The league is organized into a council, special committees, and a permanent secretariat, the secretariat has headquarters in Cairo. The constitution of the league provided for coordination among the signatory nations on education, finance, law, trade, and foreign policy, and it forbade the use of force to settle disputes among members. In 1945 the league supported Syria and Lebanon in their disputes with France and also demanded an independent Libya. The league early announced opposition to the formation of a Jewish state in Palestine and demanded that Palestine as a whole be made independent, with the majority of its population Arab. When the state of ISRAEL was created in 1948 the league countries jointly attacked it, but Israel resisted successfully. The league continued to maintain a boycott of Israel and of companies trading with Israel. Throughout the history of the league, closer political unity has been hampered by a division between pro-Western member countries and neutralist or pro-Soviet ones. On occasion, the league unites, e.g., in 1950 members signed a joint defense treaty, and in 1961 they supported Tunisia in a conflict with France. Typically, however, it is divided. The summit conferences of 1964-65 failed to establish a joint Arab command, and the league has been highly criticized by Arab leaders for failing to redress grievances arising from the Arab-Israeli War of 1967. Among the most important activities of the Arab League have been its attempts to coordinate Arab economic life, efforts toward this aim include the Arab Telecommunications Union (1953), the organization of the Arab Postal Union (1954), and the Arab Development Bank (1959, later known as the Arab Financial Organization). The Arab Common Market was established in 1965 and is open to all Arab League members, by 1973, Iraq, Jordan, Syria, and Egypt had joined. The common market agreement provides for the eventual abolition of custom duties on natural resources and agricultural products, free movement of capital and labor between member countries, and coordination of economic development.

Arabs, name originally applied to the Semitic peoples of the Arabian Peninsula. It now refers to those persons whose primary language is Arabic. They constitute most of the population of Algeria, Bahrain, Egypt, Iraq, Jordan, Kuwait, Lebanon, Libya, Morocco, Oman, Qatar, Saudi Arabia, Sudan, Syria, Tunisia, the United Arab Emirates, the People's Democratic Republic of Yemen, and Yemen. Arab communities are also found elsewhere in the world.

The term does not usually include Arabic-speaking Jews (found chiefly in North Africa and formerly also in Yemen and Iraq), Kurds, Berbers, Copts, and Druses, but it does include Arabic-speaking Christians (chiefly found in Syria, Lebanon, Israel, and Jordan). Socially, the Arabs are divided into two groups: the settled Arab (*fellahin*=villagers, or *hadar*=townspeople) and the nomadic *BEDOUIN*. The derivation of the term Arab is unclear, and the meaning of the word has changed several times through history. Some Arab scholars have equated Joktan (Gen. 10:25) with the ancient Arab patriarch Qahtan whose tribe is thought to have originated in S Arabia. The Assyrian inscriptions (9th cent. B.C.) referred to nomadic peoples inhabiting the far north of the Arabian peninsula, the sedentary population in the south of the peninsula was not called Arab. In classical times the term was extended to the whole of the Arabian peninsula and to all the desert areas of the Middle East, and in the Middle Ages the Arabs came to be called *SARACENS*. It was the Muslims from Arabia, nomads and settled people alike, whose invasions in the 6th and 7th cent. widely diffused both the Arabic language and ISLAM. They founded a vast empire, which at its height stretched from the Atlantic Ocean on the west, across North

state of Israel, created out of former Arab territory, hostility between them has resulted in four Arab-Israeli wars. See J. B. Glubb, *A Short History of the Arab Peoples* (1969), P. K. Hitti, *History of the Arabs* (10th ed. 1970), Majid Khadduri, *Political Trends in the Arab World* (1972), Menahem Mansoor, *Political and Diplomatic History of the Arab World, 1900-67* (7 vol., 1972), Z. N. Zeine, *The Emergence of Arab Nationalism* (3d ed. 1973), W. F. Abboushi, *The Angry Arabs* (1974).

Aracaju (a'ra-kazhō'), city (1970 pop. 183,333), capital of Sergipe state, E central Brazil, a port on the Sergipe River near the Atlantic Ocean. Mainly a commercial center, the city has cotton-spinning and weaving industries. Aracaju was founded in 1855, when it replaced São Cristovão as state capital.

Arachne (arāk'nē), in Greek mythology, woman of Lydia who challenged Athena to a trial of skill in weaving. Angered at such presumption, the goddess destroyed Arachne's work, whereupon the woman hanged herself. Athena then turned her into a spider.

arachnid (arāk'nīd), mainly terrestrial arthropod of the class Arachnida, including the SPIDER, SCORPION, MITE and tick, DADDY LONGLEGS, and a few minor groups. The body is divided into a cephalothorax

Internal anatomy of a spider, representative of the class Arachnida

Africa and the Middle East, to central Asia on the east. The Arabs became the rulers of many different peoples, and gradually a great Arab civilization was built up. Although many of its cultural leaders were not ethnically Arabs (some were not even Muslims, but Christians and Jews), the civilization reflected Arab values, tastes, and traditions. Education flourished in the Islamic lands, and literature, philosophy, medicine, mathematics, and science were particularly developed by the Arabs. At the same time in all the provinces of the huge empire, except in Persia, Arabic became the chief spoken language. The waves of Arab conquest across the East and into Europe widened the scope of their civilization and contributed greatly to world development. In Europe they were particularly important in Sicily, which they held from the 9th to the late 11th cent., and the civilization of the MOORS in Spain was part of the great Arabic pattern. Christian scholars in those two lands gained much from Islamic knowledge, and scholasticism and the beginnings of modern Western science were derived in part from the Arabs. The emergence of the Seljuk Turks in the 11th cent. and of the Ottoman Turks in the 13th cent. ended the specifically Arab dominance in Islam, though Muslim culture still remained on the old Arab foundations. In the 20th cent., Arab leaders have attempted to form an Arab nation, which would unite the whole Arabic-speaking world from Morocco on the west, across the Middle East, to the borders of Iran and Turkey. Since 1945 most of the Arab nations have combined to form the ARAB LEAGUE, its purpose being to consider matters of common interest, such as policy regarding Israel and colonialism. With 18 member states in the Arab League by the early 1970s (over 120 million people), attempts to forge a unity among the Arabs have continued. Perhaps the most significant economic factor for the Arabs has been the discovery and development of the petroleum industry, two thirds of the world's oil reserves are thought to be in the Middle East. Since World War II a continual problem for the Arab states has been their relations with the Jewish

with six pairs of appendages, and an abdomen. The first two pairs of appendages are used to kill and crush prey (most arachnids being carnivorous), the remaining four pairs are walking legs. Arachnids have simple eyes and no antennae but are equipped with sensory bristles. Some respire with air tubes, but most possess primitive respiratory organs called BOOK LUNGS. Arachnids are classified in the phylum ARTHROPODA, class Arachnida.

Arad (ārād) 1 Benjaminite 1 Chron. 8:15, 2 Royal town in the Negev, the modern Tell Arad (Israel), 5 of Hebron. Joshua 12:14, Judges 1:16. The "king Arad" of Num. 21:1 and 33:40 is a mistranslation for "king of Arad." It is the only tell (mound) in the Negev and indicates the existence of a fortified town in the Bronze Age.

Arad (arad'), city (1969 est. pop. 115,000), W Rumania, in the Banat, on the Mureșul River, near the Hungarian border. It is an important railroad junction and a leading regional commercial and industrial center. Distilling, sawmilling, and the manufacture of textiles, machine tools, locomotives, electrical goods, and leather products are the chief industries. Long (c. 1551-1685) under Turkish rule, Arad passed in 1685 to the Austrians and in 1849 to the Hungarians, who made it the headquarters of their insurrection against the Hapsburg Empire. In 1920, Arad became part of Rumania. The city's educational and cultural institutions include a theological seminary, a teacher training school, a state theatre, a philharmonic orchestra, and a museum containing exhibits on the Hungarian revolution of 1848-49. The 18th-century citadel was built by Empress Maria Theresa. Arad has sizable Hungarian, Serbian, and German minorities.

Aradus (ārādas), islet and town of ancient Phoenicia, the modern Arwad, N of Tripoli off the Syrian coast. It was the most northerly of the important Phoenician centers. In the Old Testament it is Arvad (Gen. 10:18, 1 Chron. 1:16, Ezek. 27:8, 11, 1 Mac. 15:23).

Arafat, Yasir (yasēr' ar'afat), 1929-, leader of the Palestine Liberation Organization (PLO), the coordi-

nating body for anti-Israeli Arab commando groups, and head of Al Fatah, the largest group in the PLO. He was born in Jerusalem. After smuggling arms to Arab forces during the 1948 Arab-Israeli war, Arafat entered Cairo University, where he became chairman of the Palestine Student Federation. He served in the Egyptian Army during the Suez campaign (1956) and the following year moved to Kuwait, where he trained Palestinian commandos and edited *Our Palestine*, an anti-Zionist magazine. Sometime during that period, he joined the Al Fatah commando group, and in 1965, Arafat returned to Egypt to head Al Assifa, the military arm of Al Fatah. He went on to become leader of Al Fatah, and when the group gained control of the PLO (1969), Arafat was named the larger body's chairman. At the 1974 Arab summit conference the Arab leaders unanimously endorsed Arafat as the "sole legitimate" spokesman for the Palestinians.

Arafat (ārāfāt') or **Arafa** (arafa'), granite hill, Saudi Arabia, near Mecca. The hill was an ancient pagan sanctuary and is shrouded in many legends. It is now a site for prayers during the annual pilgrimage to Mecca. Atop the hill is a minaret, reached by broad stone steps. On the 60th step is a platform with a pulpit from which the *khuṭba* (pilgrimage address) is delivered on the Day of Arafa. The hill is also called Jabal ar Rahm [Arabic, =mountain of mercy].

Arafura Sea (arāfūrā'), shallow part of the Pacific Ocean, between the Timor and Coral seas, separating Australia from New Guinea. It contains several islands of Indonesia. The Torres Strait to the east is a treacherous passage. See CARPENTARIA, GULF OF.

Aragats, Mount (ārāgāt's, Rus. arāgāt's') or **Mount Alagez** (alāgyōs'), extinct volcano, 13,435 ft (4,095 m) high, N Armenia, S European USSR, in the Lesser Caucasus. It is the highest peak in Armenia.

Arago, Dominique François (dōmēnēk' fraŋswā' arāgō'), 1786-1853, French physicist and astronomer. He is noted for his discoveries in magnetism and optics as well as for his astronomical observations. Arago was an ardent supporter of the wave theory of light. In 1811 he invented the polariscope and later developed a polarimeter. His collected works (1854-62) include his well-known *Astronomie populaire* (4 vol.).

Aragon, Louis (lūwē arāgōn'), 1897-, French writer. Aragon is considered one of the founders of SURREALISM in literature and a major spokesman for Communism in the West. After a trip to the USSR in 1931, Aragon abandoned surrealism for Marxism. He was a leader of the Resistance during World War II, and he edited the radical Paris daily *Ce Soir* and later the Communist weekly *Les Lettres françaises*. Aragon's early works include the volume of poems *Feu de joie* (1920) and the surrealist novel *Le Paysan de Paris* (1926, tr. *Nightwalker*, 1970). His cycle of social novels concerning political responsibility are translated as *The Bells of Basel* (1934, tr. 1941), *Residential Quarter* (1936, tr. 1938), *The Century Was Young* (1941, tr. 1941), and *Aurelien* (1945, tr. 1947). *Les Communistes*, the first of his five-volume cycle of realistic novels, appeared in 1949. His later works include a novel about Napoleon, *Holy Week* (1958, tr. 1961), a history of the USSR from 1917 to 1960, *Histoire parallèle* (1962, tr. 1964), the novel *La Mise à mort* (1965), and a two-volume memoir of Matisse (1972). His major works of poetry include *Le Creve-cœur* (1941), war poems, the series of love poems to his wife, the novelist TRIOLET, *Les Yeux d'Elsa* (1954), *Elsa* (1959), and *Le Fou d'Elsa* (1963), and *Les Chambres* (1969). See *Louis Aragon, Poet of the French Resistance* (ed. by Hannah Josephson and Malcolm Cowley, 1945), study by L. F. Becker (1971).

Aragón (ārāgōn, Span. arāgōn'), region (1971 pop. 1,152,708), 18,382 sq mi (47,609 sq km), and former kingdom, NE Spain, bordered on the N by France. Comprising the provinces of Huesca, Teruel, and Zaragoza (Saragossa), Aragón includes the southern slopes of the Pyrenees, where the mountains reach their greatest height, a central plain drained by the Ebro River, and the western fringe of the central plateau of Spain. Much of the region is sparsely populated and desertlike. Irrigation works, started by the Moors, were resumed in the 16th cent., the two lateral canals of the Ebro are the most important. In the oases and irrigated areas cereals, grapes, olives, and sugar beets are grown. Sheep are raised throughout Aragón, and cattle in the Pyrenees. There are iron, sulfur, and lignite deposits, but sugar refining is the only important industry. The Aragonese, mostly poor and deeply religious, have remained secluded in their small towns, jealously preserving the ancient traditions of a region inhabited since prehistoric times. The city of ZARAGOZA was founded by the

Roman emperor Augustus. Visigoths conquered the area in the late 5th cent. and Muslims in the early 8th cent. Carolingians pushed out the Muslims (c. 850), and Aragon came under the rule of Navarre. At the death (1035) of Sancho III of Navarre, his western territories were organized as the kingdom of Aragon for his illegitimate son, Ramiro I. He and his successors, notably Alfonso I, extended their dominions southward at the expense of the Moorish emirate of Zaragoza, and in the 12th cent. Zaragoza replaced Huesca as the capital. In 1076, Aragon annexed Navarre, and in 1137 it became united, through personal union, with CATALUNYA. Both regions preserved their own cortes, laws, languages, and customs and evolved along separate lines, their deep historical, social, and cultural differences at times caused great friction. With the expansion of the house of Aragon (see separate article), the name Aragon came to signify a confederation of its Spanish possessions (Aragon, Catalonia, MAJORCA, and VALENCIA) and several French fiefs. In the bitter struggles (12th-15th cent.) between kings and nobles, the nobles gained more and more privileges until Peter IV defeated them in 1348. The justiciar, a type of magistrate created in the 12th cent., acted as a sort of intermediary between king and nobles, after 1348 he lost most of his political power but gained more juridical importance. Aragon played only a minor role in the expansionist policy of its kings in the Mediterranean. United with Castile after 1479 through the marriage of Ferdinand V (Ferdinand the Catholic) with Isabella, Aragon preserved its cortes and its city privileges. These, however, were gradually limited by the centralizing policies of the Spanish monarchy, and in 1716 Philip V abolished most of the remaining political privileges to punish the Aragonese for siding with Archduke Charles (later Emperor Charles VI) in the War of the Spanish Succession. The passionate attachment of the Aragonese to their liberties was illustrated by the episode of Antonio Perez under Philip II and by the heroic defense of Zaragoza in the PENINSULAR WAR. In 1833 the administrative unit of Aragón was divided into the three present provinces.

Aragón, house of, family that ruled in Aragon, Catalonia, Majorca, Sicily, Naples, Sardinia, Athens, and other territories in the Middle Ages. It was descended from RAMIRO I of Aragón (1035-63), natural son of SANCHE III of Navarre. Under Ramiro's successors—SANCHE I, PETER I, and ALFONSO I—Navarre was temporarily (1076-1134) united with Aragon. During that period considerable territory was wrested from the Moors. Ramiro II (1134-37) was succeeded by his daughter, Petronilla, and her husband, RAYMOND BERENGAR IV, count of Barcelona. Aragon and CATALUNYA (see also BARCELONA) remained united under their descendants—ALFONSO II, PETER II, JAMES I, PETER III, ALFONSO III, JAMES II, ALFONSO IV, PETER IV, JOHN I, and MARTIN, after a brief interregnum (1410-12) they passed to Martin's nephew, FERDINAND I, and from him to ALFONSO V, JOHN II, and FERDINAND II, who after his marriage with Isabella of Castile became joint king of Castile as Ferdinand V or Ferdinand the Catholic. His grandson, Charles I (later Holy Roman Emperor CHARLES V) succeeded him and merged the houses of Aragon and Castile with that of Hapsburg. Through its merger of 1137 with the house of Barcelona, the house of Aragon had acquired various fiefs in S. France, notably Roussillon, Provence, and Montpellier, and suzerainty over others. It lost most of these between 1213 and 1246, mainly because Peter II intervened in the ALBIGENSIAN CRUSADE and was defeated (1213) at Muret. In the same period (1229-38), however, James I won the BALEARIC ISLANDS and the region of VALENCIA from the Moors. In 1282, Peter III became king of SICILY, and in the 14th cent., after a long struggle, Alfonso IV conquered SARDINIA. The duchies of ATHENS and Neopatra were under the nominal rule of the family in the 14th cent., and in 1442 the kingdom of Naples (see NAPLES, KINGDOM OF) was conquered by Alfonso V. Only rarely were these possessions united under a single ruler, for the most part they were held by various branches of the house, often at war with each other as well as with other rulers in Spain. The kingdom of MAJORCA, with ROUSSILLON and Cerdagne, was separate from 1276 to 1343, that of Sicily, from 1296 to 1409, and that of Naples, from 1458 to 1501. Even when united under one ruler as they were under Alfonso V, the various possessions retained their distinct institutions, which continued to be important in diminished and varying degrees after the union of the crowns of Aragon and Castile. See NAVARRE. See study by J. L. Shneidman (2 vol., 1971).

Araguaia (arāgwī'ā), river, c. 1,300 mi (2,090 km) long, rising in the Serra das Araras, at the border of

Goiás and Mato Grosso states, 5 central Brazil. It flows generally northward into the Tocantins River, forming most of the border between Goiás and the states of Mato Grosso and Para. Diamonds are washed along its upper tributaries. There are numerous falls on the Araguaia. The island of Bananal (c. 200 mi/320 km long, 35 mi/56 km wide), separating the river into two arms, is one of the largest freshwater islands in the world. It is also a national park. The Araguaia region has been made accessible by new highways.

Arah (ā'ra) 1 Asherite 1 Chron 7 39 2 Family in the return from the Exile Neh 7 10

arahant or **arhat**: see BUDDHISM

Araish, Al: see LARACHE

Arak (arāk'), city (1966 pop. 71,925), Tehran prov., W central Iran. A center for agricultural trade as well as for road and rail, the city is also known for its rugs and carpets. Founded c. 1800, Arak was formerly known as Sultanabad.

Arakan (ārākān', arākān'), division (1969 est. pop. 1,847,000), 14,194 sq mi (36,762 sq km), W Burma, extending along the Bay of Bengal. It lies at the foot of the Arakan Yoma mountain range, which rises to 10,050 ft (3,063 m) at Victoria Peak. The capital is SITTWE. The Arakanese, who are of Burmese stock with strong Indian influences, are mostly engaged in intensive rice cultivation. There is also a large minority of Bengali Muslims. The region, which is geographically isolated, was the seat of a powerful kingdom (after the 15th cent.), famous for a colossal image of Buddha. At various times under Burmese rule, it finally was absorbed into Burma in 1783, it was the first Burmese territory ceded (1826) to the British after the first Anglo-Burmese war. In the 1950s there was a movement in Arakan for secession from Burma. See Maurice Collis, *The Land of the Great Image* (1959).

Arakcheyev, Aleksey Andreyevich (ālīksyā' āndrā'yevich arakchā'yēf'), 1769-1834, Russian general, adviser to Czar Alexander I. An exacting officer, he helped organize the bodyguard of Czar Paul I, who made him a count and gave him high offices. Under ALEXANDER I he was made (1808) minister of war and was one of the czar's most powerful advisers. He virtually ruled Russia during Alexander's frequent trips abroad. Although a martinet and cruel, he was an efficient administrator and made valuable military reforms. See biography by Michael Jenkins (1968).

Araks, river, USSR see ARAS

Aral Kara-Kum, desert, USSR see KARA-KUM

Aral Sea (ār'əl), Rus. *Aralskoye More*, inland sea and the world's fourth largest lake, c. 26,000 sq mi (67,300 sq km), SW Kazakhstan and NW Uzbekistan, Central Asian USSR, E of the Caspian Sea. It is c. 260 mi (420 km) long and c. 175 mi (280 km) wide. Generally very shallow, it attains a maximum depth of c. 220 ft (70 m). The Aral Sea is fed by the Syr Darya and Amu Darya rivers but has no outlet. Because of its geologically recent separation from the Caspian Sea, the Aral Sea's water is only slightly saline. The sea's western and northern shores are the edges of the arid Ustyurt Plateau, the Kyzyl-Kum desert stretches to the southeast. There are many small islands in the sea. Navigation is possible only from Muynak to Aralsk. The sparse population of the region, concentrated mainly near the mouths of the Syr Darya and Amu Darya, engages in fishing (carp, perch, and pike), there is a cannery at Aralsk. Sodium and magnesium sulfate are mined along the shore. Mentioned by the Arabs in the 10th cent., the Aral Sea was called the Khorezm Sea or Khwarazm Sea by later Arab geographers. It was reached by the Russians in the 17th cent. and was known as the Sine (Blue) Sea.

Aram (ārām) 1 Ancient people and their country, roughly identifiable with Syria. The Bible records constant contacts between Hebrews and Aram, mentioning states of Damascus, Beth-rehob, Geshur, Maachah, and Zoba. Their language was a form of Aramaic. Gen 10 22, Num 13 21, Judges 18 28, 2 Sam 8 5, 6, 10-19, 1 Kings 11 23-25, 1 Chron 19 6, Ps 60 2. Descendant of Nahor. Gen 22 21 3 Asherite 1 Chron 7 34 4 In the Gospel genealogy see RAM 1.

Aram, Eugene (ārām), 1704-59, English philologist, b. Yorkshire. A self-taught linguist, Aram was the first to identify the Celtic languages as Indo-European. In 1758, while at work on an Anglo-Celtic lexicon, he was arrested and later hanged for the murder—14 years earlier—of his friend Daniel Clark. The story of his crime inspired Thomas Hood's poem *The Dream of Eugene Aram*, and Bulwer-Lytton's novel *Eugene Aram*.

Aramaic (āramā'īk), language belonging to the Northwest Semitic subdivision of the Semitic subfamily of the Hamito-Semitic family of languages (see HAMITO-SEMITIC LANGUAGES). At some point during the second millennium B.C., the Aramaeans abandoned their desert existence and settled in Syria, bringing their language, Aramaic, with them. By the beginning of the 7th cent. B.C., Aramaic had spread throughout the Fertile Crescent as a lingua franca. Still later the Persians made Aramaic one of the official languages of their empire. After the Jews were defeated by the Babylonians in 586 B.C., they began to speak Aramaic instead of Hebrew, although they retained Hebrew as the sacred language of their religion. Although Aramaic was displaced officially in the Near East by Greek after the coming of Alexander the Great, it held its own under Greek domination and subsequent Roman rule. Aramaic was also the language of Jesus. Following the rise of Islam in the 7th cent. A.D., however, Aramaic began to yield to Arabic, by which eventually it was virtually replaced. In the course of its long history the Aramaic language broke up into a number of dialects, one of the most important of which was SYRIAC. Parts of the books of Ezra and Daniel in the Old Testament were written in an Aramaic dialect, as were major portions of the Palestinian and Babylonian Talmuds. Nabataean (the form of Aramaic current among the Nabataean Arabs), Samaritan, and Palmyrene were other significant ancient dialects of Aramaic. Modern forms of the language (including Syriac) are still spoken today, though not by more than a few hundred thousand people scattered in the Near and Middle East. Grammatically, Aramaic is very close to HEBREW. The Aramaic alphabet is a North Semitic script that is first attested in the 9th cent. B.C. After c.500 B.C. its use became widespread in the Middle East. Descended from the Aramaic alphabet are the Square Hebrew alphabet, which is the ancestor of modern Hebrew writing, the Nabataean, Palmyrene and Syriac scripts, and the Arabic alphabet among others. It is believed that the alphabetic writing systems of India and Southeast Asia also have the Aramaic script as their source. See Franz Rosenthal, ed., *An Aramaic Handbook* (4 vol., 1967).

Aramburu, Pedro Eugenio (pā'thro ãððā nyð ārāmbōō'rō), 1903-70, president of Argentina (1955-58). An army general, he participated in the overthrow of Juan PERÓN in Sept., 1955, and that November he replaced Gen. Eduardo Lonardi as provisional president. With the vice president, Admiral Isaac Rojas, he ruled by decree, suppressing strikes and revolts and vigorously driving the Peronists from business, government, and military posts. He later returned the country to constitutional democracy and scheduled free elections, in which he ruled out military figures (including himself) as presidential candidates. After Arturo Frondizi was elected president in Feb., 1958, Aramburu retired from the army. He ran unsuccessfully for president in 1963. In May, 1970 he was kidnapped by a Peronist guerrilla group and murdered, allegedly for his part in the execution of 27 Peronist leaders after an unsuccessful coup attempt in 1956.

Aram-naharaim (ā'rām-nā'hārā'īm), the same as PADAN-ARAM.

Aram-zobah (ā'rām-zō bā), the same as ZOBA.

Aran (ārān), descendant of Seir the Horite. Gen. 36:28, 1 Chron. 1:42.

Aran (ārān), island (1971 pop. 3,705), 165 sq mi (427 sq km). Buteshire, W. Scotland, in the Firth of Clyde. It is largely granitic and is wild and rocky, it rises to 2,866 ft (874 m). Its scenery and its hunting and fishing have made it a resort. Brodick is the chief town. Robert I. died on Aran in 1306-7 and launched his invasion of the mainland from there.

Arana Osorio, Carlos (kār iōs ārā'nā ōsō'ryō), 1918-, president of Guatemala (1970-74). A conservative army colonel noted for his successes during an antiguerrilla campaign (1966-68), he was elected president on a law-and-order platform. He declared (Nov., 1970) a state of siege, which remained in effect for one year, and directed a vigorous campaign that brought a decline in guerrilla-terrorist activities. He instituted a five-year development plan (1971-75) and promoted social, economic, and land reform, with an emphasis on modernizing and diversifying agriculture.

Aranda, Pedro Pablo Abarca de Bolea, conde de (pā'thro pā'biō ābār'ā thā bōlā'ā kōn'dā thā ārān'dā), 1718-98, Spanish statesman. He distinguished himself at first as a military commander, serving as director general of artillery and captain general of Valencia and later of Aragon. His aristocratic background and advocacy of enlightened

despotism made him ideally suited to play a reforming role in the administration of Charles III. In 1766 he became president of the council of Castile, a position he held until 1773 when he was dismissed because of his failure to hold the Falkland Islands for Spain. Ambassador to France (1773-87), he was one of the signatories to the Treaty of Paris (1783), which recognized the independence of the United States. Under Charles IV he served briefly as foreign minister (1792), but fell into disfavor because of disapproval of war with France following the French invasion of Spain in 1794. Exiled for a short time, he was later permitted to retire to his Aragon estate.

Aranguren, Jose Luis (hōsā iōōēs' ārāngōō'rān), 1909-, Spanish philosopher, theologian, and essayist, b. Ávila. A professor of ethics and sociology at the Univ. of Madrid, he is concerned with philosophical problems. His works include *La filosofía de Eugenio D'Ors* [the philosophy of Eugenio D'Ors] (1945), *Protestantismo y catolicismo como formas de existencia* [Protestantism and Catholicism as forms of existence] (1952), *La juventud europea y otros ensayos* [European youth and other essays] (1961) and *Human Communication* (tr. 1967).

Aran Islands, 18 sq mi (47 sq km), Co. Galway, W. Republic of Ireland, in Galway Bay. The three islands are Inishmore (the largest), Inishkeer, and Inishmaan. The islands are barren, and living is primitive, farming and fishing are important. Gaelic is the everyday language of most islanders. There are many early Christian and prehistoric remains. The islands are a tourist attraction.

Aranjuez (ārānghwāth'), town (1970 pop. 29,548), Madrid prov., central Spain, in Nev. Castile, on the Tagus River. A market town (the region is known for asparagus and strawberries, horses are bred), it was once a royal residence. The palace burned several times in the 17th cent. but was rebuilt (1727) by Philip V. The Jardin de la Isla is the finest of the several palace gardens.

Arany, János (yā'nōsh ō'rōnyā), 1817-82, Hungarian poet. Arany was considered one of the founders of modern Hungarian poetry. He was an actor, notary, editor and professor of Hungarian literature at the Nagy-Koros college. His satirical poem *The Lost Constitution* (1845) was followed by his epic *Toldi* (1846 tr. 1914), to which he added *Toldi's Eve* (1854) and *Toldi's Love* (1879). Among his other works are an epic trilogy, *King Buda's Death* (tr. 1936), *Ildiko*, and *Prince Csaba* (both unfinished), and the ballads that are perhaps his finest works. His style, simple and often reminiscent of folk song, is compelling and powerful.

Arao (ārā ō) city (1970 pop. 55,452), Kumamoto prefecture, W. Kyushu, Japan, on Ariake Bay. It is a port and is part of the Omota-Arao industrial region. Here cement, chemicals, fertilizers, and plastics are produced.

Arapaho Indians (ārāp'āhō), North American Indians whose language belongs to the Algonquian branch of the Algonquian-Wakashan linguistic stock (see AMERICAN INDIAN LANGUAGES). Their own name was Inuna-ina (our people), but they were referred to as "dog eaters" (for the obvious reason) by other Indians. Tradition places their early home in N. Minnesota in the Red River valley, but nothing is known of the date or circumstances of their separation from other Algonquian peoples. They are thought to be most closely related to the Cheyenne and to the Blackfoot. However, it is known that the Arapaho divided into two groups after they migrated to the plains. One group, the Northern Arapaho, continued to live on the North Platte River in Wyoming, while the Southern Arapaho moved south to the Arkansas River in Colorado. Traditionally the Southern Arapaho were allied with the Cheyenne against the Pawnee. The Arapaho stressed membership in age-graded societies, mainly for ceremonial purposes. Their annual sun dance was a major tribal event, and later the Arapaho adopted the GHOST DANCE religion. There are three major divisions—the Atsina or GROS VENTRE INDIANS, who were allied with the Blackfoot Indians and now live with the Assiniboin Indians on the Fort Belknap Reservation in Montana, the Southern Arapaho, now living with the Cheyenne in Oklahoma, and the Northern Arapaho, who retain all of the sacred tribal stone articles and are considered by the Indians to represent the parent group. Since 1876 they have lived on the Wind River Reservation in Wyoming with their former enemies, the Shoshone. See G. A. Dorsey and A. L. Kroeber, *Traditions of the Arapaho* (1903, repr. 1974), V. C. Trenholm, *Arapahoes, Our People* (1970).

arapaima (ār'āpī mā), tropical fish, *Arapaima gigas*, of the Amazon basin. It is perhaps the largest of the strictly freshwater fishes, reportedly reaching a length of 15 ft (4.5 m), but averaging 7 to 8 ft (2-2.4 m) in length and 200 lb (90 kg) in weight. The dorsal and anal fins of the arapaima are placed so far back that they appear to be part of the tail fin, giving a massive appearance to the posterior region. The scales are olive-green, turning increasingly reddish in the tail region and becoming crimson near the tail fin. The SWIM BLADDER, as in all members of the order Clupeiformes, is open to the pharynx, in the arapaima it is rich in blood vessels and serves as a lung. The arapaima uses its fins to hollow out a nest in clear, shallow, sandy-bottomed areas. It is a graceful swimmer despite its bulk, and it is valued as an aquarium fish as well as for food. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Clupeiformes, family Osteoglossidae.

Ararat (ār'ārāt), Turkish Ağrı Dağı, name of two mountains, Little Ararat (12,877 ft/3,925 m) and Great Ararat (16,945 ft/5,165 m), E. Turkey, near the Iranian and Soviet borders. The tradition that Mt. Ararat is the resting place of Noah's ark is based on a misreading of Gen. 8:4, which properly reads "upon the mountains of Ararat," indicating a country or region. The land or the kingdom of Ararat (fl. c. 9th-7th cent. B.C.), called in Assyrian Urartu, was situated between the river Araks and the lakes Van and Rezaizeh. It included all the land later called ARMENIA. Its language, written in cuneiform, has no relation to any known language except perhaps to the Horite (2 Kings 19:37, Isa. 37:38, Jer. 51:27).

Aras (ārās), Rus. Araks, river, c. 600 mi (970 km) long, rising in the Transcaucasus mts., NE Turkey. It flows generally east, forming parts of the Turkey-USSR and USSR-Iran borders, before entering the Azerbaijan Republic, USSR, where it joins the Kura River at Sabirabad. Much of its upper and middle courses are rapid and tumultuous, and its waters are used for irrigation. The Aras is the chief river of Soviet Armenia, and its valley contains Armenia's greatest concentration of people and industries. The Aras is the Araxes of the ancients.

Arason, Jon: see APESSON, JON.

Aratus (arā'tas), fl. 3d cent. B.C., Greek court poet, from Soli in Cilicia. He wrote an astronomical treatise, *Phaenomena*, which was quoted by Ptolemy at Athens (Acts 17:28).

Aratus, d. 213 B.C., Greek statesman and general of Sicyon, prime mover and principal leader of the Second ACHAEAN LEAGUE. His objective at first was to free the Peloponnesus from Macedonian domination, and he is credited with bringing into the confederation many of the principal cities of Greece. But he was blamed for the subsequent Macedonian domination of the Peloponnesus, for while fighting Cleomenes III of Sparta and the Aetolian League he changed his policy towards Macedonia and called in ANTIGONUS III. See F. W. Walbank, *Aratos of Sicyon* (1933).

Araucanian Indians (aroukān'ēan), South American people, occupying most of S. central Chile at the time of the Spanish conquest (1540). The Araucanians were an agricultural people living in small settlements. They are classified into three major cultural subdivisions, the Huilliche, the Picunche, and the Mapuche, the last being the largest group. The known history of the Araucanians begins with the Inca invasion (c. 1448-c. 1482) under Tupac Yupanqui, but Inca influence was never strong. Against the Spanish under Pedro de VALDIVIA the Araucanians offered resistance, notably under LAUTARO and CAUPOLICÁN, and their stout fight was immortalized in the epic by Alonso de ERCILLA Y ZÚÑIGA. They were successful in protecting S. Chile and by 1598 had destroyed almost all Spanish settlements S. of the Bio-Bio River. Their struggle continued intermittently in the 17th and 18th cent. in the uprisings of 1723, 1740, and 1766. White immigration southward brought on the war of 1880-81, which ended with Araucanian submission. Earlier, especially at the beginning of the 18th cent., Araucanians fleeing white encroachment had gone across the Andes into Argentina. Capturing wild horses, they became wanderers on the plains and absorbed the PUELCHÉ. Gen. Julio A. Roca subjugated them in his campaigns (1879-83). There are many tribes and languages, which make up a separate linguistic family. The Araucanians continue to influence Chilean life, and number over 200,000. See L. C. Faron, *Hawks of the Sun* (1964) and *The Mapuche Indians of Chile* (1968), M. I. Hilger, *Huenun Namku* (1966), E. H. Korth, *Spanish Policy in Colonial Chile* (1968).

Araunah (ārō'nā), Jebusite who sold his threshing floor to David so that an altar might be erected there. This site, on Mt. Moriah, was afterward used for the Temple. 2 Sam 24:15-25. Ornan 1 Chron 21:14-30, 2 Chron 3:1.

Arawak (a'rawak), linguistic stock of American Indians who, at the time of the Spanish Conquest, occupied the islands of the Greater Antilles, the Bahamas, and Trinidad. It is believed that the tribes came from South America. Before the arrival of the Spanish they were driven from the Lesser Antilles by the Carib. Most of the Arawak of the Antilles died out after the Spanish conquest. In South America, Arawakan-speaking Indian groups are widespread, from SW Brazil and Paraguay to Colombia and Venezuela, representing a wide range of cultures. They are found mostly in the tropical forest areas N of the Amazon. Contact with white settlement has led to culture change and depopulation among these groups.

Araxes, river, Turkey and the USSR. see ARAS.

Arba or **Arbah** (both ar'bā), eponym of Kirjath-arba, "the city of Arba," usually called HEBRON. Arba is called the father of ANAK. Gen 35:27, Joshua 14:15, 15:13, 21:11.

Arbela (arbē'lā), town of ancient Assyria. Its name is sometimes given to the battle fought at Gaugamela, some 60 mi (100 km) away, in which Alexander the Great defeated (331 B.C.) Darius III. Arbela is the modern Irbil (Iraq).

arbitrage: see FOREIGN EXCHANGE.

arbitration, industrial, method of settling disputes between employer and employees by seeking and accepting a decision by a third party. Such arbitration may be compelled by the government, as in New Zealand (since 1894), Australia (since 1904), Canada (since 1907), Italy (since 1926), and Great Britain (since World War II). In other cases, it may be by voluntary agreement, as is often the case in the United States, where the government is occasionally forced to intervene in the case of a strike affecting the public welfare (see TAFT-HARTLEY LABOR ACT) by persuading the parties concerned to accept the decision handed down by the arbitrator. Machinery for that purpose has been set up at both federal and state levels in the form of mediation and arbitration boards. The American Arbitration Association, founded in 1926, provides the services of over 20,000 skilled arbitrators to help settle labor disputes. In voluntary arbitration a formal agreement is usually made to abide by the decision. See Kurt Braun, *Labor Disputes and Their Settlement* (1955), W. H. McPherson, *Grievance Mediation Under Collective Bargaining* (1956), Frank Elkouri, *How Arbitration Works* (1960).

arbitration, international, judicial process by which international disputes, usually between states, are settled peacefully, generally through the use of a tribunal acting as a court of law. Such a tribunal may consist of an individual (e.g., an impartial monarch, the pope, the secretary general of the United Nations), a neutral country, or an organization such as the United Nations International Court of Justice. The parties to the dispute pick the arbitrating body themselves and are obligated to accept the terms of settlement. If the parties do not agree in advance to follow the decision reached by a third party, but merely agree to consider it, the process is termed conciliation (see MEDIATION). Arbitration was practiced by the Greek city-states, and in the Middle Ages high ecclesiastical authorities were called upon to settle controversies. With the development of the modern system of nation-states, however, arbitration was less frequently used until the 19th cent. when the settlement by arbitration of the famous ALABAMA CLAIMS case between the United States and Great Britain brought this practice back into general use. Great advances have been made since then, most notably in the establishment of a Permanent Court of Arbitration by the HAGUE CONFERENCES. Functions analogous to arbitration were performed by the Permanent Court of International Justice (see WORLD COURT) under the League of Nations and have now been transferred to its successor, the INTERNATIONAL COURT OF JUSTICE. Today many treaties contain clauses providing for arbitration or conciliation of disputes, the most notable of these is the Charter of the United Nations (Article 33). See J. H. Ralston, *International Arbitration from Athens to Locarno* (1929), C. M. Bishop, *International Arbitral Procedure* (1930), Kenneth S. Carlston, *The Process of International Arbitration* (1946), H. W. Briggs, *The Law of Nations* (2d ed. 1952), J. L. Brierly, *The Law of Nations* (6th ed. 1963), Arthur Cox, *Prospects for Peacekeeping* (1967).

Arblay, Madame d': see BURNEY, FANNY.

Arboga (ar'bō'ga), town (1970 pop. 11,932), Västmanland co., S Sweden, on the Arboga River, near Lake Hjälmaren. It is a transportation, industrial, and tourist center. Manufactures include metal goods and processed food. Of great importance in the Middle Ages, Arboga was the site of several parliaments, including Sweden's first (1435), and numerous church assemblies. St. Bridget was proclaimed patron saint of Sweden there in 1396. The city has a Franciscan monastery (founded 1285).

Arboleda, Julio (hōō'lyō arbōlā'tha), 1817-61, Colombian poet and politician. A powerful political force, he was for a time imprisoned and then exiled. He returned to lead a revolt (1860) against MOSQUERA, was named president, but shortly thereafter was assassinated. He is best known as the author of the unfinished poem *Gonzalo de Oyón*, an epic of the Spanish conquest.

Arbor Day, in the United States, day specifically designated for the planting of trees. It was first suggested by Julius Sterling MORTON of Nebraska in 1872. It is celebrated at different times in different states because planting seasons vary. The planting of trees by school children is a usual method of celebrating Arbor Day.

arboretum: see BOTANICAL GARDEN.

arborvitae (ar'borvī'tē) [Lat. = tree of life], aromatic evergreen tree of the genus *Thuja* of the family Cupressaceae (CYPRESS family), with scalelike leaves borne on flattened branchlets of a fanlike appearance and with very small cones. Some of the numerous cultivated varieties are dwarf forms. There are several species, two native to North America, the remainder native to Asia but sometimes cultivated in the United States. *T. occidentalis*, of E. North America, called arborvitae, white cedar, or Northern white cedar, has many garden forms and is popular for hedges. The leaves were once used as a remedy for rheumatism, and their oil as a vermifuge. *T. plicata* of W. North America, called giant arborvitae, red cedar, or Western red cedar, is much larger and of considerably more importance as lumber; it is primarily used for making shingles and shakes. The wood of both of these species is soft but quite resistant to decay, hence its popularity for fence posts. Arborvitae are classified in the division PINOPHYTES, class Pinopsida, order Coniferales.

Arbroath (arbrōth') or **Aberbrothock** (āb'ərbrā-thōck'), burgh (1971 pop. 22,585), Angus, E. central Scotland, on the North Sea at the mouth of the Brothock River. A seaport, it is known for its smoked haddock, shipbuilding, and the processing of flax and jute. There are engineering works, breweries, an iron foundry, and diverse small industries. Arbroath Abbey was founded by WILLIAM THE LION c. 1178 and contains his tomb. The Scottish estates met in the abbey in 1320 and called for independence from England. In 1975, Arbroath became part of the new Tayside region.

Arbuckle Mountains, range of low, rolling hills, rising c. 700 ft (210 m) above the prairie, S. Okla., remnant of mountains formed in the Precambrian era. Interesting geological formations have resulted from the varying erosional rates of the different rock types found in the area. Platt National Park contains many cold mineral springs. Arbuckle National Recreation Area, southwest of the park, surrounds Lake of the Arbuckles, a 2,350-acre (951-hectare) reservoir formed behind Arbuckle Dam (see NATIONAL PARKS AND MONUMENTS, table).

Arbus, Diane, 1923-71, American photographer, b. New York City. For nearly 20 years Arbus operated a successful fashion photography studio with her husband. She studied with Lisette Model and began, in the 1950s, to make the intimate record of life on the freakish margins of society for which she became renowned. Her acceptance of what she saw set her work apart and gave her access to the unapproachable transvestites, dwarves, prostitutes, nudists, and the everyday ugly. She died a suicide at 48. See *aperture* monograph, *Diane Arbus* (1972).

Arbuthnot, John (arbūth'nat, ar'bathnōt), 1667-1735, Scottish author and scientist, court physician (1705-14) to Queen Anne. He is best remembered for his five "John Bull" pamphlets (1712), political satires on the Whig war policy, which introduced the character John Bull, the typical Englishman. With his friends, Swift, Pope, and Gay, Arbuthnot was a member of the SCRIBLERUS CLUB, organized to ridicule false tastes in learning, and was the principal author of the "Memoirs of Martinus Scriblerus," first published in the quarto edition of Pope's works (1741). He was also the author of several progressive medical works. Greatly admired in his time,

Arbuthnot was called an unusual genius by Samuel Johnson, and Pope addressed to him the famous "Epistle to Dr. Arbuthnot." See edition of his works by G. A. Aitken (1892), study by L. M. Beattie (1935).

Arbutus, uninc. town (1970 pop. 22,745), Baltimore co., NE Md., a suburb of Baltimore. A state hospital is nearby.

arbutus, trailing: see TRAILING ARBUTUS.

arc, in electricity, highly luminous and intensely hot discharge of electricity between two electrodes. The arc was discovered early in the 19th cent. by the English scientist Sir Humphry Davy, who so named it because of its shape. An arc is characterized by a high current, low voltage, and indefinite duration. It is usually started when two electrodes carrying an electric current are drawn apart. At the instant the electrodes are parted, strong electric forces draw electrons from one electrode to the other, initiating the arc. The discharge consists of a current composed of these electrons and charged gas particles, called ions, that form between the electrodes. The first practical electric light, the arc lamp, made use of the arc formed between two carbon rods (see LIGHTING). Today the use of the arc lamp is limited to special purposes, e.g., in searchlights and in research applications. The principle of the electric arc is employed in WELDING (as in the hydrogen arc, where hydrogen is introduced between tungsten electrodes) and also in generating heat in the electric furnace. A spark, like an arc, is a discharge of electricity between two points, but it has a high voltage and a short duration. Lightning is an example of a spark.

arc, in geometry, a curved line or any part of it, in particular, a portion of the circumference of a circle. The length s of an arc of a circle of radius r and subtending a central angle of θ radians is $s = r\theta$, if θ is measured in degrees, then the arc is given by $s = 2\pi r\theta/360^\circ$.

Arca: see ARKITE.

arcade, series of arches supported by columns or piers. An arcade may stand free, if it is attached to a wall it is called a wall arcade or a blind arcade. The earliest-known arcades were in Roman architecture, in which piers, ornamented with engaged columns carrying an entablature, formed the arch supports. However, in Diocletian's palace at Spalato there are arches supported by columns and resting directly upon their capitals, of the type which was given full development in Romanesque and Gothic architec-

Arcade

ture. In the early Christian basilica columnar arcades separated the nave and side aisles and supported the wall of the clerestory. From this beginning the rich system of bays used in Romanesque and Gothic church interiors was developed, in which lofty arcades extended the full length of the nave. Both freestanding and blind arcades were used in Romanesque facades (notably in N. Italy) and in the west fronts of English and French Gothic cathedrals, where the arches were often filled with statues of saints. Richly designed arcades surrounded the enclosed cloisters of the medieval and Renaissance monasteries; they were similarly used in the courts of houses in Italy and Spain and in the courtyards of Muhammadan mosques. The Romanesque structures of Spain, Sicily, and S. Italy made frequent use of arcades composed of interlacing arches, in which the arch rings overlap to alternate columns or piers. Continuous arcades, extending over sidewalks, are common in Italian cities, notably in Bologna.

Arcadelt, Jacob (ya'kōp ar'kadēlt), c. 1505-c. 1560, Flemish composer, b. Liege. He spent much of his time at the Papal court in Rome. After 1555 he was in Paris in the service of the duke of Guise. Arcadelt belonged to the so-called Netherlands school of composition. He wrote madrigals, French chansons, and church music, including several important books of masses.

Arcadia (arkā'dēā), region of ancient Greece, in the middle of the Peloponnesus, without a seaboard, and surrounded and dissected by mountains. The Arcadians, relatively isolated from the rest of the world, lived a proverbially simple and natural life. By far the largest city was MEGALOPOLIS, founded by Epaminondas. It had some political power, especially in the Arcadian League, but Arcadia as a whole was of little political significance. The independent mountaineers periodically fought against Spartan power, but did not cooperate well. Other cities were Mantinea, Tegea, Orchomenus, and Heraea.

Arcadia, city (1970 pop. 42,868), Los Angeles co., S Calif., a residential suburb of Los Angeles, at the foot of the San Gabriel Mts., inc. 1903. The city has electronic, aerospace, optical, and camera industries. The Santa Anita racetrack and an arboretum are in Arcadia.

Arcadius (arkā'dēās), c. 377–408, Roman emperor of the East (395–408), son and successor of Theodosius I. His brother, HONORIUS, inherited (395) the West. Henceforth the division between the Eastern and Western empires became permanent. A weak ruler, Arcadius entrusted the government successively to RUFINUS, EUTROPIUS (d. 399), and other ministers and was later greatly influenced by his Frankish wife, EU DOXIA. During his reign, Greece was invaded (395) by ALARIC I who was induced to leave in 397 by STILICHO. Arcadius put down a temporarily successful revolt (399–400) of the Gothic officials and mercenaries in Constantinople. He exiled (404) the patriarch St. JOHN CHRYSOSTOM. His son, Theodosius II, succeeded him.

Arcagnolo. see ORCAGNA

Arcaro, George Edward (Eddie Arcaro), 1916–, American jockey, b. Cincinnati, Ohio. He began riding at the age of 15, and in his 31-year career he finished first in 4,779 races, a total exceeded in the United States only by Johnny Longden and Willy Shoemaker. Arcaro was one of the two jockeys (Bill Hartack was the other) to win the Kentucky Derby five times (on Lawrin in 1938, Whirlaway in 1941, Hoop Jr. in 1945, Citation in 1948, and Hill Gail in 1952). He also has the exclusive distinction of twice having swept the Triple Crown of racing—the Kentucky Derby, the Preakness, and the Belmont Stakes. Arcaro's mounts won a record \$30,039,543 in purses. He retired from racing in 1962.

Arcas. see CALLISTO

Arc de Triomphe de l'Étoile (ark də trēōn' də lātwa'), imposing triumphal arch in Paris standing on an elevation at the end of the Avenue des Champs Élysées and in the center of the Place de l'Étoile, which is formed by the intersection of 12 radiating avenues. It commemorates the victories of Napoleon I, under whose decree it was built. Construction was begun in 1806 by J. F. CHALGRIN from his own designs and was carried on after his death by L. Goust, J. N. Huyot, and G. A. Blouet successively, who brought the arch to completion in 1836. It is 164 ft (50 m) high, 148 ft (45 m) wide, and 72 ft (22 m) deep, with colossal symbolic groups flanking the arch. The principal sculpture, *La Marseillaise*, was executed by François Rude. In 1920 the body of an unknown French soldier of World War I was interred beneath the arch, and a perpetual flame was lighted.

Arcesilaus (arsēs'īlās), c. 316–c. 241 B.C., Greek philosopher of Pitane in Aeolis. He was the principal figure of the Middle Academy. Despite his position in the ACADEMY, his teachings diverged from Platonic doctrine. By emphasizing the doubt expressed by Socrates as to the possibility of gaining knowledge, he took a position comparable to that of the SKEPTICS (see SKEPTICISM). As an intellectual agnostic, he taught that knowledge and opinion could not be distinguished from each other. As to behavior in practice, Arcesilaus held that we act on ideas rather than on certain knowledge. Arcesilaus indirectly influenced Carneades and his school. Arcesilaus was, in his day, the great opponent of Stoicism. See M. M. Patrick, *The Greek Sceptics* (1929).

Arch, Joseph, 1826–1919, English labor leader, a Primitive Methodist preacher. He founded the National Agricultural Labourers Union in 1872 and became its president. In 1873, Arch visited Canada and the United States to study labor and immigration problems. He served (1885–86, 1892–1900) as one of the first labor members in Parliament and was instrumental in enfranchising agricultural workers. See his autobiography (ed. by the countess of Warwick, 1898), biography by Pamela Horn (1971).

arch, the spanning of a wall opening by means of separate units (such as bricks or stone blocks) assembled into an upward curve that maintains its

shape and stability through the mutual pressure of a load and the separate pieces. The weight of the supported load is thus converted into downward and

Arches

outward lateral pressures called thrusts, which are received by the solid piers (abutments) flanking the opening. The blocks, called voussoirs, composing the arch usually have a wedge shape but they can be rectangular with wedge-shaped joints between them. The underside of the arch is the intrados or soffit and the upper surface above the crown block (keystone) of the arch is the extrados. The point where the arch starts to curve is the foot of the arch, and the stones there are the springers. The surface above the haunch (just below the beginning of the curve) contained within a line drawn perpendicular to the springing line (from which the arch curves), and another drawn horizontal to the crown is the spandril. In modern fireproof construction the word arch is also used for the masonry that fills the space between steel beams and acts as a floor support. The arch was used by the Egyptians, Babylonians, and Greeks, chiefly for underground drains, and also by the Assyrians in the construction of vaulted and domed chambers. In Europe the oldest known arch is the Cloaca Maxima, the huge drain at Rome built by Lucius Tarquinius Priscus c. 578 B.C. The Romans developed the semicircular arch, modeled on earlier Etruscan structures, in the vaults and domes of their monumental buildings. Its use was continued in early Christian, Byzantine, and Romanesque architecture. In the 13th cent. the pointed arch (used as early as 722 B.C. in Assyrian drains) came into general use. The contact of Europeans with Saracenic architecture during the Crusades is offered among other theories for its introduction into Europe. But it is likely that the pointed arch may have been independently rediscovered in Europe in the Middle Ages as a device for solving many of the mechanical difficulties of vault construction. Its adoption was an essential element in the evolution of the Gothic system of design. With the Renaissance there was a return to the round arch, which prevailed until the 19th-century invention of steel beams for wide spans relegated the arch to a purely decorative function. Although the circular and pointed forms have predominated in the West, the Muslim nations of the East developed a variety of other arched shapes, including the ogee arch used in Persia and India, the horseshoe arch used in Spain and North Africa, and the multifoil or scalloped arch used especially in the Muslim architecture of Spain. In the 20th cent. arches often take a parabolic shape. They are usually constructed with laminated wood or reinforced concrete, materials that give greater lightness and strength to the structure. See TRIUMPHAL ARCH.

archaeology (arkēōl'ajē) [Gr., = study of beginnings], scientific study of the material remains of human cultures found in deposits dating from the beginnings of human life to the era of modern his-

tory. Archaeology provides the material evidence for establishing the history of prehistoric times and supplements documentary evidence in the study of historic periods. To locate, excavate, interpret, record, preserve, and, if necessary, restore finds, the present-day archaeologist requires skilled assistance from a wide variety of experts, including historians, anthropologists, linguists, geologists, chemists, physicists, botanists, architects, engineers, photographers, and climatologists. Materials have been collected since ancient times, notably in the classic period and during the Renaissance. Research into the life and culture of the past was initiated in the 15th cent. in Italy after the introduction of a knowledge of ancient Greece inspired the excavation of Greek sculpture. In the 18th cent. the progress of Greek and Roman archaeology was advanced by Johann Winckelmann and Ennio Visconti and by excavations at HERCULANEUM and POMPEII, in the 19th, by the acquisition of the ELGIN MARBLES. The study of ancient cultures in the Aegean region was stimulated by the excavations of Heinrich Schliemann at Troy and in Greece, and of Arthur Evans at Crete. The work of Martin Nilsson, Alan Wace, and John Pendlebury was also significant in this area, and the decipherment of the Minoan script by Michael Ventris raised new speculations about the early Aegean cultures. The foundations of Egyptology, a prolific branch of archaeology because of the antiquity of Egyptian culture and the wealth of material preserved in the dry Egyptian climate, were laid by the recovery of the Rosetta stone (see under ROSETTA) and the work of French scholars who accompanied Napoleon Bonaparte to Egypt. Investigations that have reconstructed ancient life in the Nile valley and rewritten Egyptian history were carried on in the 19th cent. by Karl Lepsius, Auguste Mariette, and Gaston Maspero, and in the 19th and 20th cent. by W. M. Flinders Petrie, James Breasted, and other scholars. Interest in the Middle East was stimulated by the work of Edward Robinson (1794–1863) on the geography of the Bible and by the decipherment of a cuneiform inscription of Darius I, which was copied (1835) by Henry Rawlinson from the Behistun rock in Iran. The finding of the Dead Sea Scrolls aroused new interest in Biblical studies. Archaeology in Mesopotamia was notably advanced in the 19th cent. by Jules Oppert, Paul Botta, and Austen Layard, in the 20th, by Charles Woolley, Henri Frankfort, and Seton Lloyd. The scientific explanation of prehistoric finds began with the conclusion advanced in 1832 by the Danish archaeologist Christian Thomsen that human industrial culture may be divided into stages of progress based on the principal materials used for weapons and implements. His three-age theory (see STONE AGE, BRONZE AGE, IRON AGE) was essentially based on prehistoric materials from Scandinavia and France. Concerted investigations began in the mid-19th cent. with the stratigraphic excavation of such remains as the LAKE DWELLING, BARROW, and KITCHEN MIDDEN. At first, the sequences of culture change uncovered in Western Europe were generalized to include all of world history, but improved techniques of field excavation and the expansion of archaeological discoveries in Africa, Asia, and the Americas challenged the universality of such rigid classifications. Technological traditions ceased to be regarded as inevitable concomitants of specific cultural stages. Later interpretations of prehistoric human life emphasize cultural responses to particular environments (see ECOLOGY). Thus the PALEOLITHIC, MESOLITHIC, and NEOLITHIC periods are evaluated in terms of food production. Developments in the methods of DATING archaeological remains resulted in many new hypotheses regarding prehistoric migrations and the diffusion of culture. The study of past times was enhanced by the investigation of the life and customs of existent aboriginal groups. Advanced indigenous cultures were ignored until John Stephens published an account of his travels (1839) in Central America, which excited the interest of archaeologists in the MAYA. In the 19th cent. fruitful studies began of the TOLTEC and of the AZTEC who followed them in Mexico and of the INCA in South America. In 1926, discovery of human cultural remains associated with extinct fauna near Folsom, N. Mex., established a depth of prehistory for the New World that is now believed to be at least 25,000 years, and perhaps over 40,000. Among the most important work done in the mid-20th cent. was that of Louis Leakey, who located the skeletal remains of humans in East Africa dating back 17 million years. Other significant excavations were conducted in the Americas and in China. Important efforts were made to promote systematic research and the scientific study of archaeological ma-

terials and to preserve them. Museums with valuable collections include the Metropolitan Museum and the American Museum of Natural History in New York City, the British Museum, the Louvre, national museums in Denmark, Norway, and Sweden, rich in remains of the Iron Age, the Vatican and Capitoline museums, Rome, collections from Pompeii and Herculaneum at Naples, and museums in Athens, Cairo, and Jerusalem. Many universities have established schools and museums of archaeology. Organizations such as the National Science Foundation, the Smithsonian Institution, and the National Geographic Society in the United States promote archaeological studies. See also MAN, PREHISTORIC and STRATIGRAPHY. See Glyn E. Daniel, *A Hundred Years of Archaeology* (1950), Grahame Clark, *Archaeology and Society* (3d ed. 1957, repr. 1968), R. J. Braidwood, *Prehistoric Man* (1961), G. E. Daniel, *The Origins and Growth of Archaeology* (1967), James Deetz, *Invitation to Archaeology* (1967), H. P. Eydoux, *History of Archaeological Discoveries* (1967), Massimo Pallottino, *The Meaning of Archaeology* (1968), Edward Bacon, *Archaeology* (1971), K. W. Marek, *Gods, Graves, and Scholars* (2d ed. 1967) and *The First American* (1971).

archaeopteryx (ar'kēōp'tērīks) [Gr. *archaeo* = primitive, *pteryx* = wing], primitive bird, two incomplete fossils of which were discovered in the 19th cent. in the late Jurassic limestone of Solnhofen, Bavaria. To date four fossil specimens have been found. Classified as a bird because of the presence of feathers and the structure of the legs and wings, it nevertheless had many characteristics now found only in reptiles or in bird embryos. It was smaller than a crow.

Archangel, see ARKHANGELSK, USSR.

archangel (ar'kājəl), chief ANGEL, differing from other angels only in importance. Three are best known, MICHAEL, GABRIEL, and RAPHAEL, they have set functions. According to Tobit 12:15 there are seven archangels, but only Raphael, companion of Tobias, is given a name.

Archelaus (ar'kēlās) see HEROD.

Archeozoic era, see PRECAMBRIAN ERA.

Archer, William, 1856–1924, English author, critic, and translator, b. Scotland. Throughout his life he worked as drama critic on several London newspapers, establishing a reputation for integrity and discernment. He influenced the direction of English and American drama through his active interest in the work of the great Norwegian playwright Henrik Ibsen. He translated Ibsen's *Pillars of Society*, and largely through his efforts the play was the first Ibsen play to be produced (1880) in London. Archer subsequently translated several other Ibsen plays, and in 1906–8 he edited Ibsen's collected plays. Archer's writings include *Masks or Faces* (1888), *America To-day* (1900), *Real Conversations* (1904), *The Old Drama and the New* (1923), and several plays, including the highly successful melodrama *The Green Goddess* (1923). His critical reviews for the *London World* were collected and published annually as *The Theatrical "World"* (1893–97). See biography by his brother, Charles Archer (1931).

Archer, The, English name for SAGITTARIUS, a CONSTELLATION.

archerfish, laterally compressed fish, genus *Toxotes*, which catches insects by spitting at and disabling them. The archerfish has a groove in the roof of its mouth that forms a long narrow tube when the tongue is placed against it, the fish propels drops of water along the tube by compressing its gill covers. Some archerfishes can shoot as far as 12 ft (3.5 m), with reasonable accuracy up to about 4 ft (1.2 m). Apparently they are able to correct the trajectory after missing a target. Shooting down insects is an auxiliary method of food-getting for the archerfish, which feeds mostly on insects floating in the water. The five archerfish species inhabit fresh and brackish coastal water in India and SE Asia. The species most often displayed in aquariums is *T. jaculator*, a silver fish with black stripes, which grows as long as 8 in. (20 cm). Archerfishes are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Toxotidae.

archery, sport of shooting with BOW AND ARROW. An important military and hunting skill before the introduction of gunpowder, it was revived as a sport in England by Charles II. It was introduced into North America in the late 17th cent. Archery became popular in the United States after 1879, when the National Archery Association was formed. Although archery competitions were held in the 1908 and 1920 Olympic Games, it was not until 1972 that it

became a certified Olympic event. World championships are held under the auspices of the Federation Internationale de Tir à l'Arc (FITA, est. 1930). There are four main types of archery competition: target, field, flight, and crossbow shooting. The object in target shooting is to score the highest total of points with a specified number of arrows aimed at the inner circle—the "bull's-eye"—of five concentric colored circles on a padded mat—the target. The value of hits decreases from the bull's eye to the outermost circle. The world's oldest continuous archery tournament is the Ancient Scorton Arrow Contest, established (1673) by King Charles II of England. See D. W. Campbell, *Archery* (1971), E. G. Heath, *The Grey Goose Wing* (1971).

Arches National Park, 82,953 acres (33,571 hectares), E. Utah, est. as a national park 1971. Located in red-rock country and overlooking the gorge of the Colorado River, this area contains a vast and unusual array of natural rock formations. Water, frost, and wind have carved giant but graceful arches, windows, spires, and pinnacles.

archetype (ar'kitip) [Gr. *arch* = first, *typos* = mold], term whose earlier meaning, "original model," or "prototype," has been enlarged by C. G. JUNG and by several contemporary literary critics. A Jungian archetype is a thought pattern that finds worldwide parallels, either in cultures (for example, the similarity of the ritual of Holy Communion in Europe with the *tecquale* in ancient Mexico) or in individuals (a child's concept of a parent as both heroic and tyrannical, superman and ogre). Jung believed that such archetypal images and ideas reside in the unconscious level of the mind of every human being and are inherited from the ancestors of the race. They form the substance of the collective unconscious. Literary critics such as Northrop FRYE and Maud Bodkin use the term archetype interchangeably with the term MOTIF, emphasizing that the role of these elements in great works of literature is to unite readers with otherwise dispersed cultures and eras.

Archivites (ar'kēvīts), colonists sent into Samaria by the Assyrian government. They were probably natives of Erech. Ezra 4:9.

Archil (ar'kil) see ARCHITE.

archil (ar'kil, -chīl) or **orchil** (ōr-), blue, red, or purple dye extracted from several species of LICHEN, also called orchella weeds, found in various parts of the world. Commercial archil is either a powder (called cudbear), a pasty mass (called archil), or a drier paste (called persis).

Archilochus (arkil'akās), fl. c. 700 or c. 650 B.C., Greek poet, b. Paros. As an innovator in the use and construction of the personal lyric, his language was intense and often violent. Many fragments of his verse survive.

Archimedes (arkimē'dēz), 287–212 B.C., Greek mathematician, physicist, and inventor. He is famous for his work in geometry (on the circle, sphere, cylinder, and parabola), physics, mechanics, and hydrostatics. He lived most of his life in his native Syracuse, where he was on intimate terms with the royal family. Few facts of his life are known, but tradition has made at least two stories famous. In one story, he was asked by Hiero II to determine whether a crown was pure gold or was alloyed with silver. Archimedes was perplexed, until one day, observing the overflow of water in his bath, he suddenly realized that since gold is more dense (i.e., has more weight per volume) than silver, a given weight of gold represents a smaller volume than an equal weight of silver and that a given weight of gold would therefore displace less water than an equal weight of silver. Delighted at his discovery, he ran home without his clothes, shouting "Eureka," which means "I have found it." He found that Hiero's crown displaced more water than an equal weight of gold, thus showing that the crown had been alloyed with silver (or another metal less dense than gold). In the other story he is said to have told Hiero, in illustration of the principle of the lever, "Give me a place to stand, and I will move the world." He invented machines of war (Second Punic War) so ingenious that the besieging armies of Marcus Claudius Marcellus were held off from Syracuse for three years. When the city was taken, the general gave orders to spare the scientist, but Archimedes was killed. Nine of Archimedes' treatises, which demonstrate his discoveries in mathematics and in floating bodies, are extant. They are *On the Sphere and Cylinder*, *On the Measurement of the Circle*, *On the Equilibrium of Planes*, *On Conoids and Spheroids*, *On Spirals*, *On the Quadrature of the Parabola*, *Arenarius* [or sand-reckoner], *On Floating Bodies*, and *On the Method of Mechanical Theorems*. Archimedes' many contributions to

mathematics and mechanics include calculating the value of π , devising a mathematical exponential system to express extremely large numbers (he said he could numerically represent the grains of sand that would be needed to fill the universe), developing ARCHIMEDES' PRINCIPLE, and inventing ARCHIMEDES' SCREW. See studies by T. L. Heath (1953) and E. J. Dijksterhuis (1956).

Archimedes' principle, principle that states that a body immersed in a fluid is buoyed up by a force equal to the weight of the displaced fluid. The principle applies to both floating and submerged bodies and to all fluids, i.e., liquids and gases. It explains not only the buoyancy of ships and other vessels in water but also the rise of a balloon in the air and the apparent loss of weight of objects underwater. In determining whether a given body will float in a given fluid, both weight and volume must be considered, that is, the relative DENSITY, or weight per unit of volume, of the body compared to the fluid determines the buoyant force. If the body is less dense than the fluid, it will float or, in the case of a balloon, it will rise. If the body is denser than the fluid, it will sink. Relative density also determines the proportion of a floating body that will be submerged in a fluid. If the body is two thirds as dense as the fluid, then two thirds of its volume will be submerged, displacing in the process a volume of fluid whose weight is equal to the entire weight of the body. In the case of a submerged body, the apparent weight of the body is equal to its weight in air less the weight of an equal volume of fluid. The fluid most often encountered in applications of Archimedes' principle is water, and the SPECIFIC GRAVITY of a substance is a convenient measure of its relative density compared to water. In calculating the buoyant force on a body, however, one must also take into account the shape and position of the body. A steel rowboat placed on end into the water will sink because the density of steel is much greater than that of water. However, in its normal, keel-down position, the effective volume of the boat includes all the air inside it, so that its average density is then less than that of air, and as a result it will float.

Archimedes' screw, a simple mechanical device believed to have been invented by Archimedes in the 2d cent. A.D. It consists of a cylinder inside of which a continuous screw, extending the length of the cylinder, forms a spiral chamber. By placing the lower end in water and revolving the screw, water is raised to the top. The principle is applied in machines used for drainage and irrigation, and also in some types of high-speed tools. It can also be applied for handling light, loose materials such as grain, sand, and ashes.

Archipelago (arkipēl'agō) [Ital., from Gr. = chief sea], ancient name of the AEGEAN SEA, later applied to the numerous islands it contains. The word now designates any cluster of islands.

Archipenko, Alexander (arkhipēn'kō), 1887–1964, Ukrainian-American sculptor. As a youth in Paris he began to adapt cubist technique to sculpture. In 1910 he opened his own art school there and later opened schools in Berlin (1921) and New York City (1923). In 1912, Archipenko introduced sculpto-painting, an attempt to unite form and color via mixed media. However, his major contribution to 20th-century sculpture was his realization of negative form. Archipenko recognized the aesthetic value of the void—the hollowed-out shape or perforation as a complement to the bulging mass—as exemplified by his *Madonna* in marble and the bronze *Woman Combing Her Hair* (Mus. of Modern Art, New York City). Archipenko also worked in carved plastic lighted from within. His nearly abstract figures gained him international renown, among them are *Torso in Space* (Whitney Mus., New York City), *Walking Girl* (Honolulu Mus.), and *White Torso* (examples in the Chicago Arts Club and in the Fine Art Association, Phoenix, Arizona). Archipenko was also an engineer, ceramist, and teacher. See his *Archipenko: Fifty Creative Years 1908–1958* (1960), cataloged by D. H. Karshan (1969).

Archipelago de Colon, see GALÁPAGOS ISLANDS.

Archippus (arkip'as), Colossian Christian. Col. 4:17.

Archite (ar'kit) or **Archi** (ar'ki), clan that owned Ataroth between Bethel and Beth-horon, on the boundary between Ephraim and Benjamin. Joshua 16:2. HUSHAI, David's friend, was a member of the clan. 2 Sam. 15:32.

architecture, art of building in which human requirements and construction materials are related so as to furnish a practical and aesthetic solution, thus differing from the pure utility of engineering.

construction. Modern architecture, however, often approaches actual engineering in its mechanical completeness, and modern works of engineering—airplane hangars, for example—often achieve an undeniable beauty. As an art, architecture is abstract and nonrepresentational and involves the manipulation of the relationships of spaces, volumes, planes, masses, and voids. Time is also an important factor in architecture, since a building is usually comprehended in a succession of experiences rather than all at once. In most architecture there is no one vantage point from which the whole structure can be understood. The use of light and shadow, as well as surface decoration, can greatly enhance a structure. The analysis of architectural types provides an insight into past cultures and eras. The course of architecture has often been considered merely a succession of more or less arbitrary styles. In fact, behind each of the greater styles lies not a casual trend or vogue but a period of serious and urgent experimentation directed toward answering the needs of a specific way of life. Climate, methods of labor, available materials, and economy of means impose their dictates. Each of the greater styles has been given its impetus by the discovery of a new construction method and has arrived laboriously at adequate employment of it. Once developed, it survives tenaciously, giving way only when social changes or new building techniques have reduced it finally to total anachronism. That evolutionary process is exemplified by the history of modern architecture, which developed from the first uses of structural iron and steel in the mid-19th cent. Until the 20th cent. there were three great developments in architectural construction—the post-and-lintel, or trabeated, system, the ARCH system, either the cohesive type, employing plastic materials hardening into a homogeneous mass, or the thrust type, in which the loads are received and counterbalanced at definite points, and the modern steel-skeleton system. In the 20th cent. new forms of building have been devised, with the use of reinforced concrete and the development of geodesic and stressed-skin (light material, reinforced) structures. In Egyptian architecture, to which belong some of the earliest extant structures entitled to be designated as architecture (erected before 3000 B.C.), the post-and-lintel system was employed exclusively and produced the earliest stone columnar buildings in history. The architecture of W Asia from the same era employed the same system, however, arched construction was also known and used. The Chaldeans and Assyrians, dependent upon clay as their chief material, built vaulted roofs of damp mud bricks that adhered to form a solid shell. After generations of experimentation with buildings of limited variety the Greeks gave to the simple post-and-lintel system the purest, most perfect expression it was to attain (see PARTHENON, ORDERS OF ARCHITECTURE). Roman architecture, borrowing and combining the columns of Greece and the arches of Asia, erected a wide variety of monumental buildings throughout the Western world. Their momentous invention of CONCRETE enabled the imperial builders to exploit successfully the VAULT construction of W Asia and to cover vast unbroken floor spaces with great vaults and domes, as in the rebuilt Pantheon (2d cent. A.D.). The Romans and the early Christians also used the wooden truss for roofing the wide spans of their BASILICA halls. Neither Greek, Chinese, nor Japanese architecture used the vault system of construction. However, in the Asiatic division of the Roman Empire, vault development continued, Byzantine architects experimented with new principles and developed the PENDENTIVE, used brilliantly in the 6th cent. for the Church of HAGIA SOPHIA in Constantinople. The Romanesque architecture of the early Middle Ages was notable for strong, simple, massive forms and vaults executed in cut stone. In Lombard Romanesque (11th cent.) the Byzantine concentration of vault thrusts was improved by the device of ribs and of piers to support them. The idea of an organic supporting and buttressing skeleton of masonry, here appearing in embryo, became the vitalizing aim of the medieval builders. In 13th-century Gothic architecture it emerged in perfected form, as in the Amiens and Chartres cathedrals. The birth of Renaissance architecture (15th cent.) inaugurated a period of several hundred years in Western architecture during which the multiple and complex buildings of the modern world began to emerge, while at the same time no new and compelling structural conceptions appeared. The forms and ornaments of Roman antiquity were resuscitated again and again and were ordered into numberless new combinations, and structure served chiefly as a convenient tool for at-

taining these effects. The complex, highly decorated baroque style was the chief manifestation of the 17th-century architectural aesthetic. The GEORGIAN STYLE was among architecture's notable 18th-century expressions. The first half of the 19th cent. was given over to the CLASSIC REVIVAL and the GOTHIC REVIVAL. The architects of the later 19th cent. found themselves in a world being reshaped by science, industry, and speed. The needs of a new society pressed them, while steel, reinforced concrete, and electricity were among the new technical means at their disposal. The imitation of dead styles became yearly more futile, and individual architects began the conscious search for adequate new structural and artistic formulas. After more than a half-century of assimilation and experimentation, MODERN ARCHITECTURE has produced an astonishing variety of daring and original structures. See articles under countries, e.g., AMERICAN ARCHITECTURE, styles, e.g., BAROQUE, individual architects, e.g., Andrea PALLADIO, individual stylistic and structural elements, e.g., TRACERY, ORIENTATION, specific building types, e.g., PAGODA, APARTMENT HOUSE. See Talbot Hamlin, *Architecture through the Ages* (rev. ed. 1953); Nikolaus Pevsner, *An Outline of European Architecture* (16th ed. 1960); Banister Fletcher, *A History of Architecture* (17th ed. 1961); F. M. Simpson et al., *History of Architectural Development* (4 vol., rev. ed. 1954-61); H. A. Millon, *Key Monuments of the History of Architecture* (1964); A. E. Richardson and H. O. Corfianto, *The Art of Architecture* (3d ed. 1972); S. F. Kimball and G. H. Edgell, *A History of Architecture* (1946, repr. 1972); John Fleming et al., *The Penguin Dictionary of Architecture* (rev. ed. 1973).

architrave (ar'kītrāv), in architecture, principal beam and lowest member of the classical entablature, the other main members of which are the FRIEZE and the CORNICE. Its position is directly above the columns, and it extends between them, thus carrying the upper members of the order (see ORDERS OF ARCHITECTURE). The term also applies to molding around the sides and top of a door or window frame or around a wainscot or other panel.

archons (ar'kōnz, -kantz) [Gr., = leaders], in ancient Athens and other Greek cities, officers of state. Originally in Athens there were three archons: the *archon eponymos* (so called because the year was named after him), who was the chief officer of the state, the *archon basileus*, who was primarily connected with sacred rites, and the *archon polemarchos* (the polemarch, or military commander), who—theoretically, at least—had military leadership. Six more archons, the *thesmothetae* (thesmothetes), were later added; they were junior officers, generally in charge of the courts. The archons were elected, and after they had served and their records had been approved, they entered the AREOPAGUS. Solon, Hippas, and Themistocles were archons. After 487 B.C. the archons were chosen by lot, the office, which had previously been limited to the two upper classes, was opened to the third class. Thereafter the archontate declined greatly in importance. The lists of eponymous archons kept after the 7th cent. B.C. are a valuable source of history.

Arcimboldo, Giuseppe (jōzēp'pā archēmbōl'dō), 1537-93, Italian painter. Court painter to the Hapsburg kings, Arcimboldo is celebrated for his grotesque, realistically rendered symbolic portraits constructed from fruits, vegetables, animals, etc. His *Winter* (1563) is in the Vienna Kunsthistorische Museum. Arcimboldo's fanciful mannerist works were frequently imitated.

Arciniegas, Germán (hērman' arsenyā'gas), 1900-, Colombian historian and diplomat. A leading Latin American intellectual, he gained prominence as a journalist and publisher. He lived in exile in the United States (1942-60) and taught at Columbia. He was appointed Colombian ambassador to Italy in 1960 and later became ambassador to Venezuela. Among his works are *The Knight of El Dorado*, *The Tale of Don Gonzalo Jimenez de Quesada* (tr. 1942), *The State of Latin America* (tr. 1952), and *Latin America: A Cultural History* (tr. 1967). He edited *The Green Continent* (1944), an interpretation of Latin America by its leading writers.

Arcole (ar'kōlā), village (1971 pop. 4,009), Venetia, N. Italy. There, in Nov., 1796, Napoleon Bonaparte defeated the Austrians in a three-day battle.

Arcos de la Frontera (ar'kōs dā la frōntā'ra), town (1970 pop. 25,966), Cadiz prov., S. Spain, in Andalusia, on a rocky hill above the Guadalete River. A Gothic church and the palace of the duke of Arcos are at the summit. Wine and olive oil are produced. The Moors were driven out in 1250.

Arcot (ar'kōt), town (1971 pop. 30,229), Tamil Nadu state, SE India, on the Palar River. It is an agricultural

market and has a weaving industry. It became the capital of the Muslim Nawab of Carnatic in 1712. Arcot was the first important fortified town captured (1751) by Robert Clive in the British-French struggle for S. India.

Arctic Archipelago, group of more than 50 large islands, Franklin dist., Northwest Territories, N. Canada, in the Arctic Ocean. The southernmost members of the group include Baffin (the archipelago's largest island), Victoria, Banks, Prince of Wales, and Somerset islands, N. of Viscount Melville and Lancaster sounds are the Queen Elizabeth Islands, of which Ellesmere is the largest. Tundra and permanent ice cover the islands, on which oil and coal have been discovered. Frobisher Bay, on Ellesmere, is the largest settlement.

Arctic Circle, imaginary circle on the surface of the earth at 66½°N latitude, i.e., 23½° south of the North Pole. It marks the northernmost point at which the sun can be seen at the winter SOLSTICE (about Dec. 22) and the southernmost point of the northern polar regions at which the MIDNIGHT SUN is visible.

Arctic North Slope or **Arctic Slope**, Alaska. see ALASKA NORTH SLOPE.

Arctic Ocean, the smallest ocean, c. 5,400,000 sq mi (13,986,000 sq km), located entirely within the Arctic Circle and occupying the region around the North Pole. Once called the Frozen Ocean, it is covered with ice (2-14 ft/6-4 m thick) throughout the year except in fringe areas. Nearly landlocked, the Arctic Ocean is bordered by Greenland, Canada, Alaska, the USSR, and Norway. The Bering Strait connects it with the Pacific Ocean and the Greenland Sea is the chief link with the Atlantic Ocean. The principal arms of the Arctic Ocean are the Beaufort, Chukchi, East Siberian, Laptev, Kara, Barents, and Greenland seas. The floor of the Arctic Ocean is divided by three submarine ridges—Alpha Ridge, Lomonosov Ridge, and the Arctic Mid-Oceanic Ridge, other submarine ridges, such as the Faeroe-Icelandic Ridge, act to separate the Arctic Ocean from the Atlantic. Svalbard, the Franz Josef group, and Severnaya Zemlya are examples of the islands that are exposed tops of the submarine ridges. The Arctic Ocean has the widest continental shelf of all the oceans, it extends c. 750 mi (1,210 km) seaward from Siberia. From the shelf rise numerous islands, including the Arctic Archipelago, Novaya Zemlya, the New Siberian Islands, and Wrangel Island. The continental shelf encloses a deep oval basin (average depth 12,000 ft/3,658 m) that stretches between Svalbard and the Bering Strait, E. of Greenland the ring of the continental shelf is broken by the Greenland Sea. The greatest depth (17,850 ft/5,441 m) in the Arctic Ocean is found just N. of the Chukchi Sea. Since the Arctic's connection with the Pacific Ocean is narrow and very shallow, its principal exchange of water is therefore with the Atlantic Ocean through the Greenland Sea. Even there, though surface waters communicate freely and a strong subsurface current brings warm water from the Atlantic into the Arctic basin, exchange of deeper waters is barred by submarine ridges. Thus a near stagnant pool of very cold water is found at the bottom of the Arctic basin. Because several major rivers in Siberia (Lena, Yenisei, Ob) and Canada (Mackenzie) bring in much water, and because evaporation is only slight, the outflow through the Greenland Sea is important. It creates the cold East Greenland Current, which flows south along the coast of E. Greenland. A weaker current goes through Smith Sound and Baffin Bay and is known as the Labrador Current. Another weak current flows out of Bering Strait. The water that does not flow out by the Greenland Sea seems to be deflected by N. Greenland and forms the current that gives rise to a circular current in the Arctic basin itself. This circular current causes the relatively light ice of the Siberian seas, which contrasts with the heavy-pressure ice phenomenon off Greenland and Ellesmere Island (in the Arctic Archipelago). The drift of ice southward and westward has been noted and utilized by explorers. Some of the ice pack remains in the Arctic basin, and some, carried out by the East Greenland Current, melts before going far enough south to reach the regular Atlantic shipping lanes, the icebergs that harass ships are generally brought from the fjords of W. Greenland by the Labrador Current. The cold Arctic currents give the shores of NE North America and NE Asia a much colder climate than the northwest shores of Europe and North America, which are warmed by the North Atlantic Drift and the Japan Current. The Arctic currents are also less saline and lighter than these warmer currents, and therefore the Arctic water is at the surface and the Atlantic current beneath,

where they are exchanged in the Greenland Sea. It was long thought that no life could exist in the Arctic, however, despite drifting ice, ice packs, vast ice floes, and winter temperatures to -60°F (-51°C), there are hares, polar bears, seals, gulls, and guillemots as far north as 88° and plankton in all Arctic waters. The Arctic basin was almost wholly unexplored until the Amundsen-Ellsworth flight over it in 1926. Arctic research was stimulated when it was recognized that the shortest air routes between the great cities of the Northern Hemisphere cross the Arctic Ocean. Improved technology has also facilitated research, with the development of aerial photography and photogrammetry for precise mapping, radar and the fathometer for measuring ocean depths, and radio to maintain contact with the rest of the world. Detailed knowledge of drifts and ice floes, water depths, and the ocean floor has been vastly increased. Soviet polar scientists investigated (1948-49) the Lomonosov Ridge, an undersea mountain range that influences the pattern of ice drift and the circulation and exchange of water in the Arctic Ocean. American scientists in 1959 discovered the existence of a submarine plateau rising 8,100 ft (2,469 m) from the ocean floor. One fact of great potential importance is now being studied—the Arctic Ocean is warming. Recorded temperatures, glacial regressions, and the appearance of observed species of fish in larger numbers, at higher latitudes, at earlier seasons, and for long periods prove that over the decades a “climatic improvement” has taken place. Similar changes have been reported in sub-Arctic latitudes. Whether the warming is a phase in a cycle or a permanent development cannot yet be said. For an account of exploration and for bibliography, see ARCTIC REGIONS.

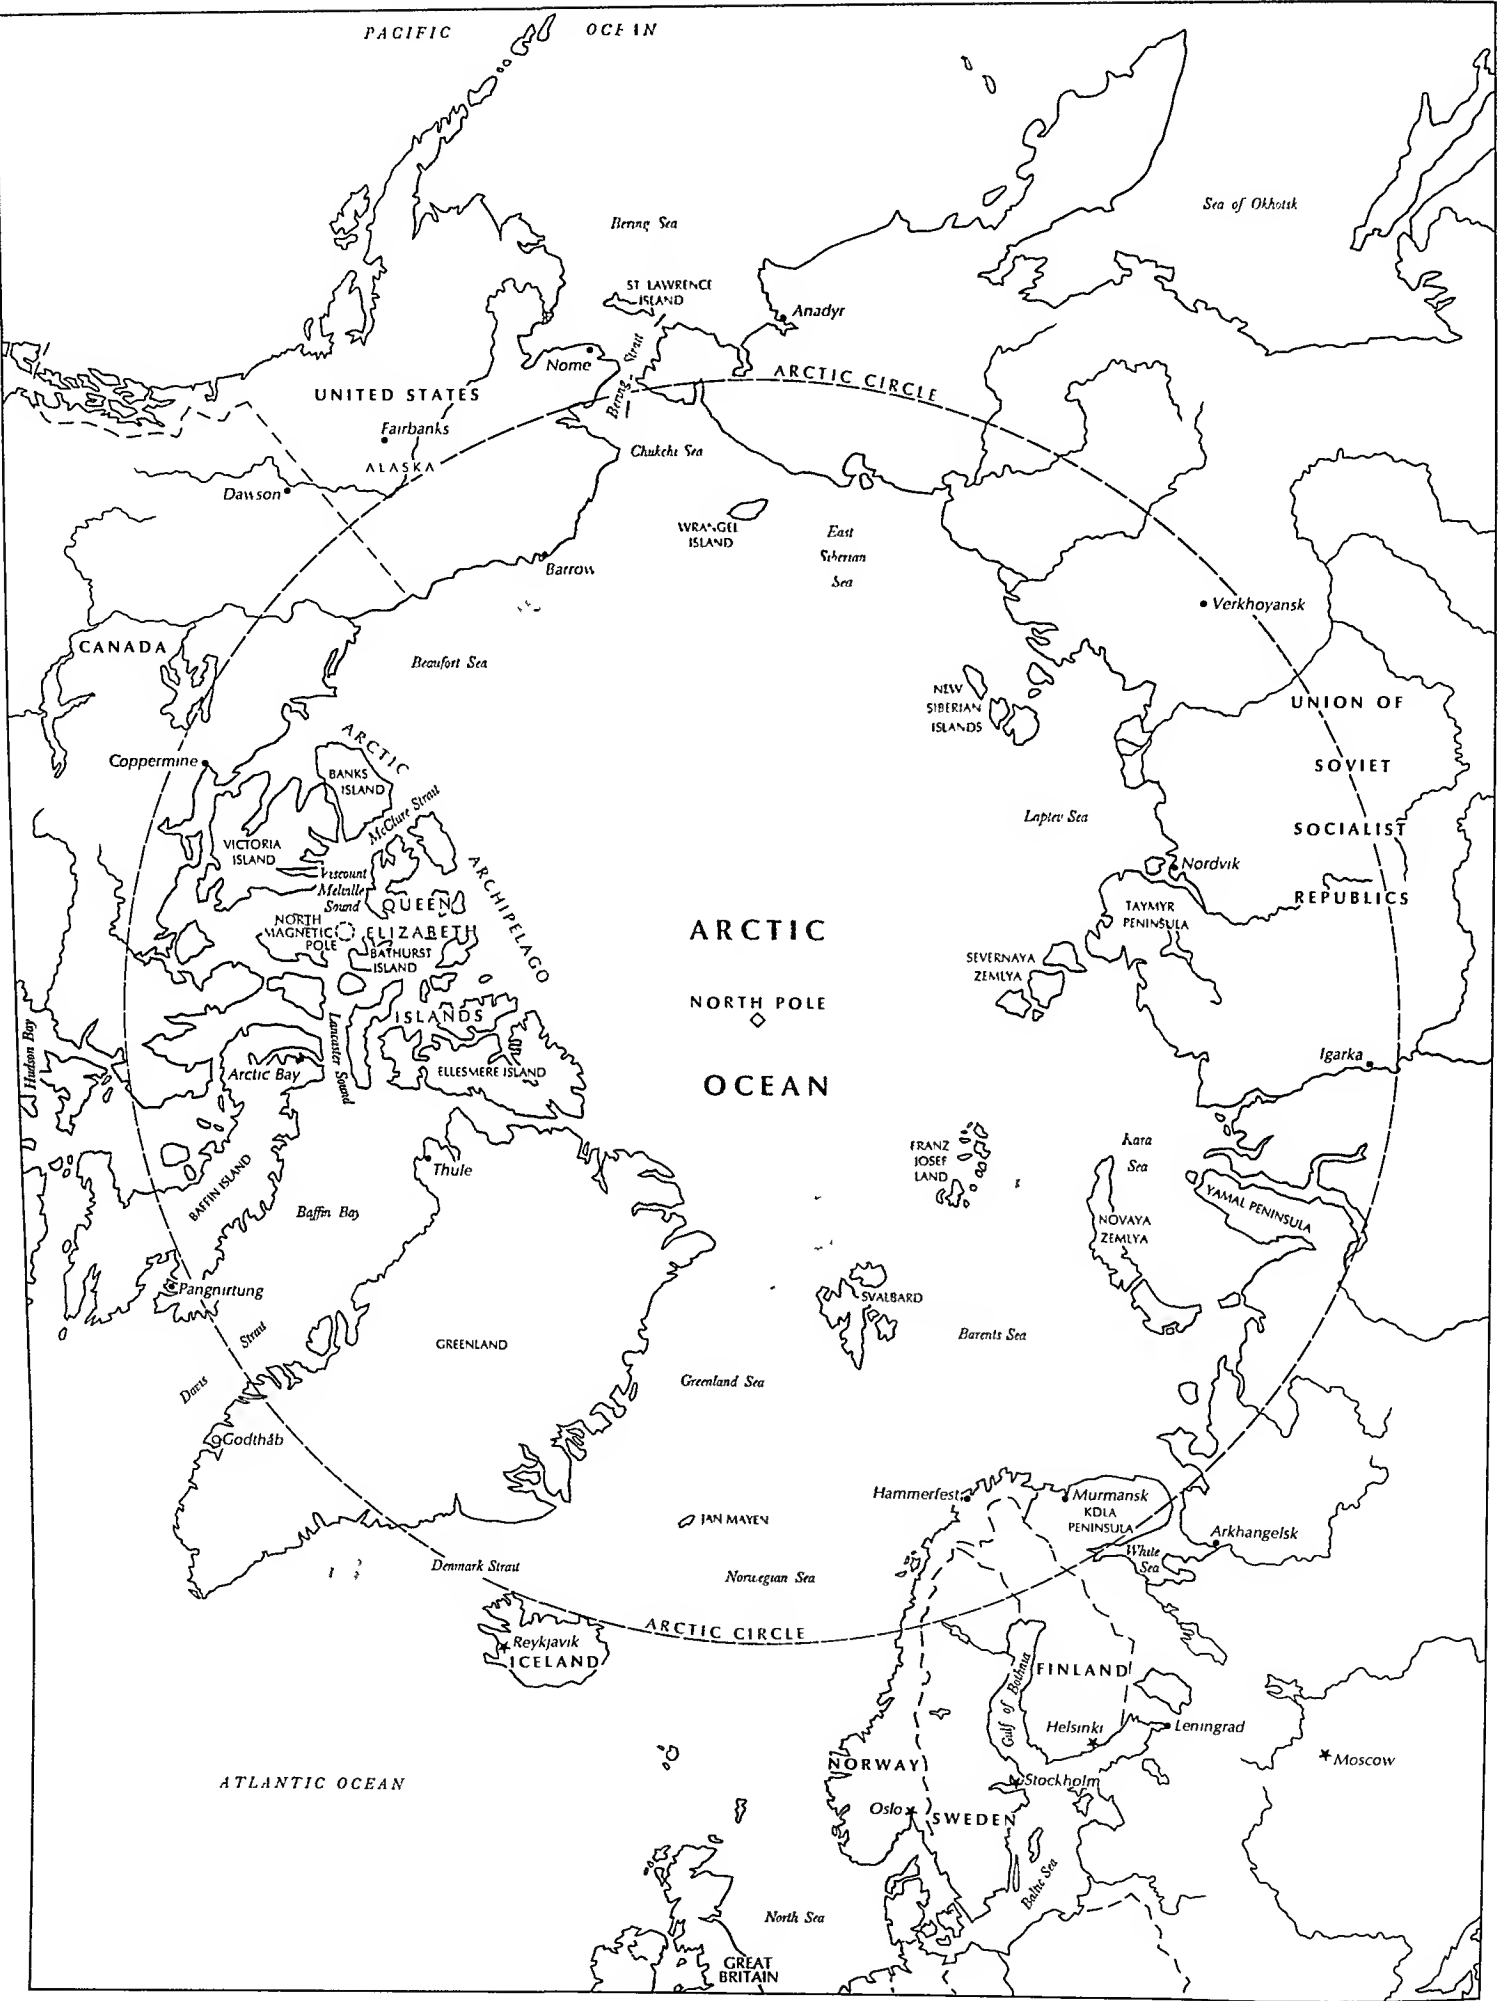

Arctic Red River, c 310 mi (500 km) long, rising in the Mackenzie Mts. of Mackenzie dist., W Northwest Territories, Canada, and flowing generally NW to the Mackenzie River. At its mouth are a post of the Royal Canadian Mounted Police and the village of Arctic Red River.

arctic regions or the Arctic, northernmost area of the earth, centered on the NORTH POLE. The arctic regions are not coextensive with the area enclosed by the ARCTIC CIRCLE (lat $66^{\circ} 31'\text{N}$) but are usually defined by the irregular and shifting 50°F (10°C) July isotherm that closely corresponds to the northern limit of tree growth and that varies both N and S of the Arctic Circle. The regions therefore include the ARCTIC OCEAN, the northern reaches of Canada, Alaska, the USSR, Norway, and the Atlantic Ocean, SVALBARD, most of Iceland, GREENLAND, and the Bering Sea. In the center of the arctic regions is a large basin occupied by the Arctic Ocean. The basin is nearly surrounded by the ancient continental shields of North America, Europe, and Asia, with the geologically more recent lowland plains, low plateaus, and mountain chains between them. Surface features vary from low coastal plains (swampy in summer, especially at the mouths of such rivers as the Mackenzie, Lena, Yenisei, and Ob) to high ice plateaus and glaciated mountains. TUNDRAS, extensive flat and poorly drained lowlands, dominate the regions. The most notable highlands are the Brooks Range of Alaska, the Innuitians of the Canadian ARCTIC ARCHIPELAGO, the Urals, and the mountains of E USSR. Greenland, the world's largest island, is a high plateau covered by a vast ice sheet except in the coastal regions. The climate of the Arctic, classified as polar, is characterized by long, cold winters and short, cool summers. Polar climate may be further subdivided into tundra climate (the warmest month of which has an average temperature below 50°F / 10°C but above 32°F / 0°C) and ice cap climate (all months average below 32°F / 0°C and there is a permanent snow cover). Precipitation, almost entirely in the form of snow, is very low, with the annual average precipitation for the regions less than 20 in (51 cm). Persistent winds whip up fallen snow to create the illusion of constant snowfall. The climate is moderated by oceanic influences, with regions abutting the Atlantic and Pacific oceans having generally warmer temperatures and heavier snowfalls than the colder and drier interior areas. However, except for along its fringe, the Arctic Ocean remains frozen throughout the year. Great seasonal changes in the length of days and nights are experienced N of the Arctic Circle, with variations that range from 24 hours of constant daylight (“midnight sun”) or darkness at the Arctic Circle to six months of daylight or darkness at the North Pole. However, because of the low angle of the sun above the horizon, insolation is minimal throughout the regions, even during the prolonged daylight period. A famous occurrence in the arctic night sky is the AURORA BOREALIS, or northern lights. Vegetation in the Arctic, lim-

ited to regions having a tundra climate, flourishes during the short spring and summer seasons. The tundra's restrictive environment for plant life increases northward, with dwarf trees giving way to grasses (mainly mosses, lichen, sedges, and some flowering plants), the ground coverage of which becomes widely scattered toward the permanent snow line. There are about 20 species of land animals in the Arctic, including the squirrel, wolf, fox, moose, caribou, reindeer, polar bear, and musk ox, and about six species of aquatic mammals such as the walrus, seal, and whale. Most of the species are year-round inhabitants of the Arctic, migrating to the southern margins as winter approaches. Although generally of large numbers, some of the species, especially the fur-bearing ones, are in danger of extinction. A variety of fish is found in arctic seas, rivers, and lakes. The Arctic's bird population increases tremendously each spring with the arrival of migratory birds (see MIGRATION OF ANIMALS). During the short warm season, a large number of insects breed in the marshlands of the tundra. In parts of the Arctic are found a variety of natural resources, but many known reserves are not exploited because of their inaccessibility. The arctic region of the USSR, the most developed of all the arctic regions, is a vast storehouse of mineral wealth, including deposits of nickel, copper, coal, gold, uranium, tungsten, and diamonds. The North American Arctic yields uranium, copper, nickel, iron, natural gas, and oil. Inaccessibility made the Arctic a relatively unknown area until the wide-scale use of airplanes and snow vehicles in the 20th cent. The arctic region of Europe (including W USSR) benefits from good overland links with southern areas and ship routes that are open throughout the year. The arctic regions of the Asian USSR and North America depend on isolated overland routes, summertime ship routes, and air transportation. Transportation of oil by pipeline from arctic Alaska was highly controversial in the early 1970s, with strong opposition from environmentalists. Because of the extreme conditions of the arctic regions, the delicate balance of nature, and the slowness of natural repairs, the protection and preservation of the Arctic has been a major goal of conservationists who fear irreparable damage to the natural environment from local temperature increases, the widespread use of machinery, the interference with wildlife migration, and oil spills. The Arctic is one of the world's most sparsely populated areas. Its inhabitants, basically of the Mongoloid race, are thought to be descendants of a people who migrated northward from central Asia after the Ice Age and subsequently spread W into Europe and E into North America. The chief groups are now the Lapps of Europe, the SAMOYEDS (Nentsy) of W USSR, the Yakuts, TUNGUS, Yukaghirs, and Chukchis of E USSR, and the ESKIMO of North America. There is a sizable Caucasian population in Siberia, and the people of Iceland are nearly all Caucasian. In Greenland, the Greenlanders, a mixture of Eskimos and northern Europeans, predominate. Because of their common background and the general lack of contact with other peoples, arctic peoples have strikingly similar physical characteristics and cultures, especially in such things as clothing, tools, techniques, and social organization. The arctic peoples, once totally nomadic, are now largely sedentary or seminomadic. Hunting, fishing, reindeer herding, and indigenous arts and crafts are the chief activities. The arctic peoples are slowly being incorporated into the society of the country in which they are located. With the Arctic's increased economic and political role in world affairs, the regions have experienced an influx of personnel charged with building and manning such things as roads, mineral extraction sites, weather stations, and military installations.

History of Exploration. The first explorers in the arctic regions were the Norsemen, the VIKINGS. Much later the search for the NORTHWEST PASSAGE and the NORTHEAST PASSAGE to reach the Orient from Europe spurred exploration to the north. This activity began in the 16th cent. and continued in the 17th, but the hardships suffered and the negative results obtained by early explorers—among them Martin FROBISHER, John DAVIS, Henry HUDSON, Willem BAFFIN, and William BARENTZ—caused interest to wane. The fur traders in Canada did not begin serious explorations across the tundras until the latter part of the 18th cent. Alexander MACKENZIE undertook extensive exploration after the beginnings made by Samuel Hearne, Philip Turnor, and others. Already in the region of NE Asia and W Alaska the Russian explorations under Vitus BERING and others and the activities of the *promyshlenniki* [fur traders] had begun to make the arctic coasts known. After 1815, British

naval officers—including John FRANKLIN, F. W. BEECHY, John ROSS, James ROSS, W. E. PARRY, P. W. DEASE, Thomas SIMPSON, George BACK, and John RAE—inspired by the efforts of John BARROW, took up the challenge of the Arctic. The disappearance of Franklin on his expedition between 1845 and 1848 gave rise to more than 40 searching parties. Although Franklin was not found, a great deal of knowledge was learned about the Arctic as a result, including the general outline of Canada's arctic coast. Otto SVERDRUP, D. B. MACMILLAN, and Vilhjalmur STEFANSSON added significant knowledge of the regions. Meanwhile, in the Eurasian Arctic, FRANZ JOSEF LAND was discovered and NOVAYA ZEMLYA explored. The Northeast Passage was finally navigated in 1879 by Nils A. E. NORDENSKIÖLD. Roald AMUNDSEN, who went through the Northwest Passage (1903-6), also went through the Northeast Passage (1918-20). Greenland was also explored. The race to be first at the North Pole was won by Robert E. PEARY in 1909. Although Fridtjof NANSEN, drifting with his vessel *Fram* in the ice (1893-96), failed to reach the North Pole, he added enormously to the knowledge of the Arctic Ocean. Air exploration of the regions began with the tragic balloon attempt of S. A. ANDRÉE in 1897. In 1926, Richard E. BYRD and Floyd Bennett flew over the North Pole, and Amundsen and Lincoln ELLSWORTH flew from Svalbard (Spitsbergen) to Alaska across the North Pole and unexplored regions N of Alaska. In 1928, George H. WILKINS flew from Alaska to Spitsbergen. The use of the “great circle” route for world air travel increased the importance of arctic regions, while new ideas of the agricultural and other possibilities of arctic and subarctic regions led to many projects for development, especially by the USSR. In 1937 and 1938 many field expeditions were sent out by British, Danish, Norwegian, Soviet, Canadian, and American groups to learn more about the Arctic. The Soviet group under Ivan Papanin set down and wintered on an ice floe near the North Pole and drifted with the current for 274 days. Valuable hydrological, meteorological, and magnetic observations were made, by the time they were taken off the floe, the group had drifted 19° of latitude and 58° of longitude. Arctic drift was further explored (1937-40) by the Soviet icebreaker *Sedov*, and the existence of Sannikov Island was proved a myth. In 1938 air photographs by Laue KOCH over N Greenland proved the much-sought Peary Channel to be only a fjord. Before World War II, the USSR had established many meteorological and radio stations in the arctic regions. Soviet activity in practical exploitation of resources also pointed the way to the development of arctic regions. Between 1940 and 1942 the Canadian vessel *St. Roch* made the first west-east journey through the Northwest Passage. In World War II, interest in transporting supplies gave rise to considerable study of arctic conditions. After the war interest in the Arctic was keen. The Canadian army in 1946 undertook a project that had as one of its objects the testing of new machines (notably the snowmobile) for use in developing arctic regions. There was also a strong impulse to develop Alaska and N Canada, but no consolidated effort, like that of the Soviets, to take the natives into partnership for a full-scale development of the regions. Since 1954 the United States and the USSR have established a number of drifting observation stations on ice floes for the purpose of intensified scientific observations. In 1955, as part of joint U.S.-Canadian defense, construction was begun on a c 3,000-mi (4,830-km) radar network (the Distant Early Warning line, commonly called the DEW line) stretching from Alaska to Baffin Island and, subsequently, across Greenland. With the continuing development of northern regions (e.g., Alaska, N Canada, and the USSR), the Arctic is assuming greater importance in the world. During the International Geophysical Year (1957-58) more than 300 arctic stations were established by the northern countries interested in the arctic regions. The Arctic Institute of North America has been prominent in sponsoring studies of the arctic regions. In 1960 the institute set up a permanent year-round station on Devon Island. Atomic-powered submarines have been used for penetrating the arctic regions. In 1958 the *Nautilus*, a U.S. navy atomic-powered submarine, became the first ship to cross the North Pole undersea. Two years later the *Skate* set out on a similar voyage and became the first to surface at the Pole. In the 1960s the Arctic became the scene of an intense search for mineral and power resources. The discovery of oil on the Alaska North Slope (1968) and on Canada's Ellesmere Island (1972) led to a great effort to find new oil fields along the edges of the continents. In the summer of 1969 the SS *Manhattan*, a specially designed oil tanker with ice

Cross-references are indicated by SMALL CAPITALS

breaker and oceanographic research vessel features, successfully sailed from Philadelphia to Alaska by way of the Northwest Passage in the first attempt to bring commercial shipping into the region. In 1971 the Arctic Ice Dynamics Joint Experiment (AIDJEX) began an international effort to study over a period of years arctic pack ice and its effect on world climate. Practically all parts of the Arctic have now been photographed and scanned (by remote sensing devices) from aircraft and satellites. From these sources accurate maps of the arctic regions have been compiled. Classic narratives of arctic exploration include Fridtjof Nansen, *Farthest North* (tr., 2 vol., 1897, repr. 1968) and *In Northern Mists* (tr. 1911), R. E. Amundsen, *The North West Passage* (tr., 2 vol., 1908), R. E. Peary, *The North Pole* (1910, repr. 1969), Vilhjalmur Stefansson, *My Life with the Eskimo* (1913) and *The Friendly Arctic* (1921). For history and geography, see L. P. Kirwan, *A History of Polar Exploration* (1960), P. D. Baird, *The Polar World* (1964), Farley Mowat, comp., *The Polar Passion: The Quest for the North Pole* (1968), Ragnar Thoren, *Picture Atlas of the Arctic* (1969), Richard Perry, *The Polar Worlds* (1973), L. H. Neatby, *Conquest of the Last Frontier* (1966) and *Discovery in Russian and Siberian Waters* (1973).

Arcturus (ārktōōr'ās), brightest star in the constellation BOOTES and 4th-brightest star in the entire sky, Bayer designation Alpha Boötis, 1970 position RA 14^h14^m3^s, Dec +19°20'. An orange giant of SPECTRAL CLASS K2 III, it has an apparent MAGNITUDE of -0.06, its diameter is about 10 times that of the sun and its luminosity about 100 times that of the sun. Arcturus is one of the nearest giant stars, at a distance of about 36 light-years, and has one of the largest PROPER MOTIONS (annual angular shift in position) of the bright stars. Its name is from the Greek meaning "guardian of the bear," and it can be found by following the extension of the curve of the handle of the Big Dipper (Large Bear).

Ard (ard) 1 Son of Benjamin Gen 46:21 2 Benjamite, perhaps the same as 1. Num 26:40 Addar 1 Chron 8:3

Ardashir I (ardāshēr') [another form of Artaxerxes], d. 240, king of Persia (226?-240). He overthrew the last Parthian king, Artabanus IV, entered Ctesiphon, and reunited Persia out of the confusion of Seleucid decline. He established the strong SASSANID or Sassanian dynasty and reconquered the old eastern territories. Ardashir established ZOROASTRIANISM as the state religion and gave much power to the priestly caste. His move against Mesopotamia, Armenia, and Cappadocia caused the Roman emperor ALEXANDER SEVERUS to campaign against him. A great battle in 232 cost both armies heavy losses. It was Alexander who had to retire, and though Alexander celebrated a triumph in Rome, Ardashir took Armenia, and Persian power was firmly established. He is sometimes called Ardashir Papakan, for his father, Papak Shapur I succeeded him.

Ardashir II, king of Persia (379-83), of the SASSANID, or Sassanian, dynasty. A provincial governor under SHAPUR II, he succeeded to the throne. He earned popularity by remitting taxes, but his rule was weak, and he was deposed in favor of his nephew, Shapur III.

Ardebil (ardēbēl'), town (1971 est. pop. 88,000), NW Iran, near the USSR border. It is a market center for a fertile agricultural region. Carpets and rugs are produced in the town. Ardebil was probably founded in the 5th cent. A.D. It became (10th cent.) the capital of Azerbaijan but was soon superseded by Tabriz. In 1220 it was destroyed by the Mongols. The town quickly regained its importance as the home of Safi ad-Din, the founder of a celebrated Sufi order. The Safavids erected a beautiful shrine there, and the town became a center of pilgrimage. Ardebil also contains the tomb of Shah Ismail. The town was occupied by the Turks in 1725 and by the Russians in 1828. Its fine library was taken to St. Petersburg by the Russians. The name is also spelled Ardabil.

Ardeche (ārdēsh'), department (1968 pop. 256,927) in VIVARAIS, S. France. Privas is the capital.

Arden, John, 1930-, English playwright, b. Barnsley, Yorkshire, educated at Cambridge and at Edinburgh College of Architecture. Although his plays often treat moral problems, Arden does not postulate absolutes, nor does he provide answers to the questions he raises. His plays combine poetry and realism and have had critical rather than commercial success. They include *Sergeant Musgrave's Dance* (1959), *The Workhouse Donkey* (1963), *Armstrong's Last Goodnight* (1967), and two autobiographical plays, *The Ballygombeen Bequest* (1972) and *The Island of the Mighty* (1972).

Arden, uninc. city (1970 pop. 82,492 including Arcade), Sacramento co., N. central Calif.

Arden, Forest of, well-wooded area, formerly very extensive, in Warwickshire, central England. It is the setting for Shakespeare's *As You Like It*.

Ardennes (ārdēn'), department (1968 pop. 309,380), NE France, in Champagne. The capital is CHARLEVILLE-MÉZIÈRES.

Ardennes, wooded plateau, from 1,600 to 2,300 ft (488-701 m) high, in SE Belgium, N. Luxembourg, and Ardennes dept., N. France, E and S of the Meuse River. The plateau is cut into wild crags and ravines by rapid rivers. Agriculture and cattle raising are the main occupations of this sparsely populated region. Peat bogs are found in shallow depressions. In Germany, the Ardennes is continued by the Eifel. The chief cities (Liege, Namur) are in the Meuse valley. A traditional battleground, the Ardennes saw heavy fighting in both World Wars, notably in the BATTLE OF THE BULGE (Dec., 1944-Jan., 1945).

Ardennes, Battle of the: see BATTLE OF THE BULGE

Ardigo, Roberto (rōbēr'tō ardēgō'), 1828-1920, Italian positivist philosopher. His early life was spent in the priesthood, from which he withdrew in dissatisfaction at the age of 43. Later he was a professor at the Univ. of Padua (1881-1909) and defended his conviction that human knowledge originated in sensation against the philosophical idealism then popular in Italy. Most of his writings were collected in *Opere filosofiche* (12 vol., 1882-1912), he also wrote *La scienza della educazione* (3d ed. 1909).

Ardmore, city (1970 pop. 20,881), seat of Carter co., S. Okla., inc. 1898. It is the commercial center of a rich oil and farm area. Its industries include oil refining, cotton and food processing, and the manufacture of tires, telephone equipment, and electronic and plastic parts. The Goddard Center for the Visual and Performing Arts, the Southern Oklahoma Area Vocational-Technical Center, and Carter Seminary for Indian children are in Ardmore. Adjacent Lake Murray State Park and the nearby Arbuckle Mts. offer recreation.

Ardon (ar'dan), Caleb's third son 1 Chron. 2:18

area, measure of the size of a surface region, usually expressed in units that are the square of linear units, e.g., square feet or square meters. In elementary geometry, formulas for the areas of the simple plane figures and the surface areas of simple solids are derived from the linear dimensions of these figures. Examples are given in the accompanying table.

Plane figures	Area*
triangle	$ab/2$
parallelogram	ab
rectangle	ab
square	s^2
circle	πr^2
Solids	Total surface area*
right circular cylinder	$2\pi r(r+a)$
right circular cone	$\pi r(r+l)$
sphere	$4\pi r^2$

* The abbreviations used are: b = base (length of any side of a plane figure), a = altitude (perpendicular distance from the farthest point of the figure to the extended base), s = side, r = radius (of the base circle in the case of the cylinder or cone), l = slant height (distance from vertex to base of a cone measured on its surface).

The areas of irregular figures, plane or solid, can be computed or closely approximated by the use of integral calculus.

Arecibo (ārasē'bō), city (1970 pop. 35,484), N. Puerto Rico, a port on the Atlantic Ocean at the mouth of the Rio Grande de Arecibo. It is the commercial and industrial center of a region producing coffee, tobacco, sugarcane, and pineapples. Arecibo was founded in 1616.

Arecibo Ionospheric Observatory (ār'isē'bō), RADIO-ASTRONOMY facility located at Arecibo, Puerto Rico. It was completed in 1963 and is operated by Cornell Univ. under contract with the U.S. National Science Foundation. The principal instrument is a fixed antenna of spherical section, 1,000 ft (305 m) in diameter, that can be pointed at a source of radio waves by moving the aberration-corrected line feeds to the antenna's focus. As a result of resurfacing of the antenna completed in 1974, observations are possible up to a frequency of 4,000 MHz. A 100-ft (30-m) satellite antenna can be used in conjunction with the large antenna for interferometer observations. In addition there is a wide range of instrumentation for measuring ionospheric

conditions. Principal research programs include pulsars, spectral-line and continuous radio emissions, very-long-baseline interferometry, radar studies of planet orbits and surfaces, and a variety of ionospheric studies.

Arel (ārē'lī), son of Gad Gen 46:16, Num 26:17

Arendal (a'rēndal), city (1970 pop. 11,769), capital of Aust-Agder co., SE Norway, a port on the Skagerrak. Manufactures include forest products and electric light bulbs. Chartered in 1723, Arendal has had one of Norway's largest merchant fleets since 1880.

Arendt, Hannah (han'ä ār'ant), 1906-, German-American political theorist, b. Hanover, Germany, 8 A. Königsberg, 1924, Ph.D. Heidelberg, 1928. She emigrated (1941) to the United States and was naturalized in 1950. Arendt was a lecturer and Guggenheim fellow, 1952-53, visiting professor at the Univ. of California at Berkeley, 1955, the first woman appointed to a full professorship at Princeton, 1959, and visiting professor of government at Columbia, 1960. From 1963 to 1967 she was professor at the Univ. of Chicago, and in 1967 she became university professor at the New School for Social Research. With the publication of *Origins of Totalitarianism* (1951) her status as a major political thinker was firmly established. In this book she examined the major forms of 20th-century totalitarianism—National Socialism (Nazism) and Communism—and attempted to trace their origins in the anti-Semitism and imperialism of the 19th cent. Her second major American publication, *The Human Condition* (1958), likewise received wide acclaim. *Eichmann in Jerusalem* (1963), her analysis of the Nazi war crimes based on observation of the trial of Adolf Eichmann, stirred considerable controversy. Arendt also served as research director of the Conference on Jewish Relations (1944-46) and executive director of Jewish Cultural Reconstruction, New York City (1949-52). Her other writings include *On Revolution* (1963), *Men in Dark Times* (1968), *On Violence* (1969), and *Crisis of the Republic* (1972).

Arensky, Anton Stepanovich (āntōn' styāpā'nāvich ārēn'skē), 1861-1906, Russian composer, pupil of Rimsky-Korsakov at the St. Petersburg Conservatory. After 1882 he taught at the Moscow Conservatory and became (1895) conductor of the Imperial Chapel Choir. He wrote operas, including *A Dream on the Volga* (Moscow, 1890), chamber and symphonic music, songs, and piano works.

Areopagite: see DIONYSIUS THE AREOPAGITE SAINT

Areopagus (ārēōp'āgus) [Gr., =hill of Ares], rocky hill, 370 ft (113 m) high, NW of the Acropolis of Athens, famous as the sacred meeting place of the prime council of Athens. This council, also called the Areopagus, represented the ancient council of elders, which usually combined judicial and legislative functions from the beginning. The Areopagus represented in the 5th and 6th cent. B.C. the stronghold of aristocracy. Jurisdiction in murder cases had probably been given to it by Draco. Solon gave it various censorial powers over the officers of the state. The change in the method of choosing the archons in 487 B.C. caused the beginning of the decline of the Areopagus. In 480 B.C. the Areopagus enabled the manning of the fleet for the battle of Salamis, and it recovered much of its influence in the war years. But c. 462 B.C. a series of attacks began and eventually the august council was reduced to the status of a court of homicide only, although it maintained its religious character. Pericles was a leader in this democratizing movement, Aeschylus was an opponent, and he brought his trilogy of dramas to a close (in *The Eumenides*) with an appeal for the preservation of the ancient traditions of the Areopagus.

Arequipa (ārākē'pā), city (1970 est. pop. 194,700), alt. c. 7,800 ft (2,380 m), capital of Arequipa dept., S. Peru, on the Chili River. One of Peru's largest cities, it is the commercial center of S. Peru and N. Bolivia. Leather goods, textiles, and foodstuffs are the chief products. Alpaca wool is graded, sorted, and shipped out through the port of MOLLEND. Founded in 1540 on the site of an Inca town, Arequipa stands on an oasis in an arid plain and grows crops for local consumption. Although the city was almost totally destroyed by an earthquake in 1868, its lovely examples of Spanish colonial architecture have been restored. The light-colored building stone, sillar, has given Arequipa the name "white city." It has a university and several other institutions of higher education.

Ares (ār'ēz), in Greek mythology, Olympian god of war. He is usually said to be the son of Zeus and Hera, but in some legends he and Eris, his twin sister, were born when Hera touched a flower. A fierce warrior, he loved battle and often took part in con-

flicts between mortals. Ares killed Halirrhothios, son of Poseidon, when the youth violated his daughter, Alcippe. For this crime Ares was judged by a tribunal of the 12 Olympians and acquitted. The hill on which the trial took place, the Areopagus, was named for him. The worship of Ares was not as important as that of Mars, with whom he was identified by the Romans.

Aresson, Areson, or Arason, Jon (all yōn a'rēsōn), 1484?-1550, Icelandic churchman. The last Roman Catholic bishop in Iceland before the Reformation, he was executed together with his sons, Ara and Bjorn, for resisting the new religious ordinances brought about by the Reformation in Denmark. Aresson established the first Icelandic printing press at Holar in 1528. His poetry, secular and sacred, has been preserved.

Aretas (ār'itās, -tās), dynastic name of the Nabataean kings of Petra. The best-known Aretas was **Aretas IV**, 9 B.C.-A.D. 49, ruler of S. Palestine, most of Trans-Jordan, N. Arabia, and Damascus. His daughter was married to Herod Antipas, who put her away in favor of Herodias. Aretas attacked (A.D. 36) Antipas and defeated him, but Rome took Antipas' part. Tiberius' death (A.D. 37) saved Aretas from the Roman army. He is mentioned in the Bible (2 Cor. 11:32).

Arethusa (ār'ithō'sā), in Greek mythology, nymph favored by Artemis and loved by the river god Alpheus. While Arethusa was bathing in his stream, Alpheus rose up and tried to abduct her, but she fled under the ocean to the isle of Ortygia. There Artemis changed her into a fountain. But Alpheus followed her, was himself changed into a river and united with her. In ancient times it was believed that the waters of the Alpheus River flowed beneath the sea from Greece and reappeared in the fountain of Arethusa in the harbor of Syracuse.

Arethusa see ORCHID

Aretino, Pietro (pyē'trō arētē'nō), 1492-1556, Italian satirist. He led a life of adventure and wrote abusive works for hire. His derisive wit was so feared that the gifts of those who sought either to buy him or buy him off made him very wealthy. He was a friend of Titian, who painted his portrait. His comedies, such as *La cortigiana* and *La talenta*, are lacking in plot and form but are singular, if exaggerated, portraits of his time. His letters, in spite of their impudent coarseness, are full of verve. Ariosto called him the "scourge of princes." See biography by James Cleugh (1966).

Aretinus, Guido see GUIDO D'AREZZO

Arezzo (arēt'sō), city (1971 pop. 87,128), capital of Arezzo prov., Tuscany, central Italy. It is an agricultural trade center and has machine and textile industries. Arezzo was an Etruscan town, later became a Roman military station and colony, and was made (11th cent.) a free commune. Siding with the Ghibellines, it was defeated (1289) at Campaldino by Florence, to which it passed definitively in 1384. In Roman times the famous red-clay Arretine vases were made there. Arezzo was a center of learning and the arts in the Middle Ages. Guido d'Arezzo, Petrarch, Aretino, and Vasari were born there. The city retains much of its medieval character. Noteworthy buildings include the Gothic cathedral (1286-1510), the Gothic Church of San Francesco (14th cent.), with frescoes of the Legend of the Holy Cross executed (1452-66) by Piero della Francesca, the Romanesque Church of Santa Maria della Pieve (1330), Bruni Palace (15th cent.), which now houses an art gallery and museum, and Vasari's mansion (decorated by Vasari in 1540).

Argall, Sir Samuel (ar'gəl), d. 1626?, English ship captain, prominent in the early settlement of Virginia. He commanded a ship sent to Jamestown in 1609 and had charge of one of the ships Baron De la Warr brought to the failing colony in 1610. He made voyages—supposedly to Bermuda, Cape Cod, and Canada—to get needed supplies for the colonies. In 1613 on a voyage up the Potomac, Argall kidnapped POCAHONTAS. He commanded the Virginia Company expedition that destroyed the rival French colonial settlement on MOUNT DESERT ISLAND in 1613, and in 1614 he led an expedition against Port Royal (now Annapolis Royal, N.S.). As deputy governor of Virginia (1617-18), he governed autocratically, and the accusations of his opponents in the colony that he was unduly harsh with the poor have been credited by most, but not all, modern historians. He was knighted in 1623 and in 1625 as an admiral commanded a fleet off the Spanish coast.

Argelander, Friedrich Wilhelm August (frē'drīkh vīl'hēlm ou'gōöst ar'gäländər), 1799-1875, German astronomer. He became director of the observatory at the Univ. of Bonn in 1837 and continued there the work of determining the positions of stars that

F. W. Bessel had begun at Königsberg. The results of his observations appear in the *Bonner Durchmusterung* (1862), which records the positions and brightness of more than 324,000 stars (up to the ninth magnitude) in the northern heavens.

Argenson, Marc Pierre de Voyer de Paulmy, comte d', 1696-1764, French statesman and patron of literature, younger brother of René Louis d'Argenson. As secretary of state for war (1743-57), he assisted Maurice de Saxe in reforming the army, especially the artillery, and founded the École militaire. He was also charged with administrative control of the city of Paris. The Champs Élysées and the Place de la Concorde were planned by him. He was a friend and patron of the philosophes, and Denis Diderot and Jean le Rond d'Alembert dedicated the *Encyclopédie* to him.

Argenson, René Louis de Voyer de Paulmy, marquis d', 1694-1757, French foreign minister (1744-47), brother of Marc Pierre d'Argenson. Well intentioned but impractical, he sought to form a federation of Italian states and to make France the disinterested arbiter of international affairs. After committing numerous blunders he was dismissed and appointed president of the Academy of Inscriptions. A friend of François Marie de Voltaire and the Encyclopedists, he spent the rest of his life in study and in literary pursuits. He left memoirs.

Argenteuil (arzhāntō'yā), city (1968 pop. 90,929), Val-d'Oise dept., N. France, on the Seine, a suburb of Paris. It has important metalworks and factories making furniture, railroad and airplane parts, and chemicals. It is also famous for its asparagus and grapes. It grew around a convent founded in the 7th cent.; there Heloise was educated and, after her misfortune, became prioress. The convent (later a monastery) was destroyed in the French Revolution, the famous relic, the Seamless Tunic, said to have been worn by Christ, was given by Charlemagne to the convent and is now enshrined in Saint-Denis Basilica (1866).

Argentina see PLACENTIA BAY

Argentina (arjēntē'nā, Span. arhāntē'nā), republic (1970 pop. 23,364,443), 1,072,157 sq. mi. (2,776,889 sq. km), S. South America. The second largest nation of South America, Argentina is composed of 22 prov-

inces, one national territory, and one federal district that is the site of BUENOS AIRES, the country's capital and largest city. Argentina is triangular in shape and stretches c. 2,300 mi. (3,700 km) from its broad northern region near the Tropic of Capricorn to S. TIERRA DEL FUEGO, an island shared with Chile. On the northeast, Argentina fronts on the Rio de la Plata (an estuary and one of the major waterways of the Western Hemisphere), which separates Argentina from S. Uruguay, its tributaries also act as international boundaries—the Uruguay River, with W. Uruguay and S. Brazil, and the Parana and Pilcomayo rivers, with Paraguay. The northwest boundary with Bolivia lies in the GRAN CHACO and the Andes mts. The western boundary with Chile follows the crest line of the Andes. The Atlantic Ocean borders Argentina on the east, there, off S. Argentina, are the FALKLAND ISLANDS, and the South Georgia, South Sandwich, and South Orkney islands, all claimed by Argentina but administered by Great Britain. Argentina also claims a sector of Antarctica. The climate of Argentina varies from subtropical in the north to cold and windswept in the south, with temperate and dry areas found throughout much of the country. Precipitation, lowest along the E. Andean slopes, increases markedly N and E across Argentina. The chief rivers of Argentina are the Parana with its tributary, the Salado, the Colorado River, and the Rio Negro. Argentina may be divided into six geographical regions—the Parana Plateau, the Gran Chaco, the Pampa (see under PAMPAS), the Monte, PATAGONIA, and the Andes mts. The Parana Plateau in the extreme northeast is an extension of the highlands of S. Brazil. It is the wettest part of Argentina and has a dense forest cover, tobacco, timber, and yerba mate are the chief products there. The spectacular IGUAZU FALLS are in a national park located at the point where Argentina, Brazil, and Paraguay meet. In N. Argentina the Gran Chaco, with the physiographically similar Mesopotamia (between the Parana and Uruguay rivers), is a predominantly flat alluvial plain with a subtropical climate. The region is seasonally flooded, and marshlands remain for long periods during the year because of poor drainage. Livestock, cotton, and quebracho are the main products. South of the Gran Chaco is the Pampa, a vast, monotonous natural grassland that extends to the Colorado River (roughly from lat. 30°S to 40°S) and is c. 400 mi. (640 km) wide from the Atlantic Ocean to the Andean foothills. The Pampa's deep, rich soil is the basic wealth of the country. The "Wet Pampa," the more humid eastern part of the region, is Argentina's principal agricultural area and produces most of the nation's exports. It is the granary of South America, with wheat, alfalfa, corn, and flax the principal crops. Cattle ranching is prevalent throughout the Pampa and especially in the southeast and north, sheep are also raised there. Dairying is important in the vicinity of Buenos Aires. The Pampa has the densest transportation network of roads and railroads in South America. Most of the principal cities of Argentina (containing a majority of the nation's population) and most of its industry are found in the region. Buenos Aires, a port city on the Rio de la Plata, is one of the largest cities of South America and the chief industrial center and transportation hub of S. South America, it is surrounded by smaller industrial cities. Elsewhere on the Pampa are LA PLATA, the capital of Buenos Aires prov. and a meat-packing and oil-refining center, ROSARIO, the second largest city of Argentina, an iron and steel and oil-refining center, and a huge grain port on the Parana River, SANTA FE, a northern commercial and industrial center and a major port at the junction of the Salado and Parana rivers, MAR DEL PLATA, a resort and fishing center on the Atlantic Ocean, and BAHIA BLANCA, the largest Argentine port directly on the Atlantic Ocean, a gateway to the S. Pampa and the oil fields of Neuquen prov. and a meat-packing, oil-refining, and wool-processing center. On the western edge of the Pampa is CORDOBA, the nation's third largest city, which reflects the transition from the "Dry Pampa" to the Monte, the desolate Andean foothills. The Monte, an arid region in the rain shadow of the Andes, has natural vegetation varying from short grasses in the east to cacti in the west. Scattered throughout the great and stretches are small but highly productive oases such as JUJUY, SALTA, TUCUMÁN, SAN JUAN, and MENDOZA, which were settled from Peru and Upper Peru (Bolivia) in the second half of the 16th cent. The oases, whose growth and importance greatly increased after they were linked by railroad to the east coast, produce wine, sugar, fruits, and corn, stock raising is also carried on there. The varied mineral deposits of this region (especially oil, lead, zinc, tin, copper, and salt) are being exploited. Mendoza and Tuc-

mán are major industrial areas engaged in food processing, oil refining, and chemical production. Occupying the southern part of Argentina is Patagonia, a vast, bleak, and windswept dissected plateau. Several large rivers flow in deep valleys eastward across Patagonia to the sea. Sheep raising (chiefly for wool) and oil and natural gas production (the area around COMODORO RIVADAVIA is the chief oil-producing region of Argentina) are the principal economic activities of Patagonia, the region also yields coal. The poor soils of Patagonia and its cool and dry climate do not favor cultivation, although irrigated agriculture is practiced in the Negro and Colorado river valleys. Patagonia is sparsely populated and largely undeveloped, with a few small river-mouth ports on the Atlantic coast such as Viedma, Rawson, Puerto Deseado, and Río Gallegos. USHUAIA, S Tierra del Fuego, on Canal Beagle, is the world's southernmost town. The Andes mts. region of Argentina, broad in the north, where it is similar to the Bolivian altiplano, and becoming narrower toward the south, extends along the length of Argentina's western border. The region, which contains some of the world's highest elevations outside of Asia—including Aconcagua (22,835 ft/6,960 m high, the highest point of South America), Bonete, Tupungato, Mercedario, and Lullailaco—acts as a barrier to the moist westerly winds, thus giving the eastern slopes of the Andes a desert condition that contrasts with the heavy snowfall on the higher elevations. There are timber and mineral resources, but they are not readily exploitable because of the region's inaccessibility. Cattle are raised on the grassy Andean foothills. There are many beautiful lakes in the region, especially where it merges with the Patagonian plateau, Lake NAHUEL HUAPI in Nahuel Huapi National Park, adjoining the Chilean lake district, is an attractive resort area. Argentina, unlike most Latin American nations, has a population that is overwhelmingly of European descent, especially of Italian and Spanish origin. The mestizo portion of Argentina's population is very small because there has been little mixture between European and Indian peoples. The Indian population, which has steadily declined since the coming of the Europeans, is still strong only in parts of the Gran Chaco and the Andean highlands. Only in NW Argentina was there an Indian population with a material culture. They were an agricultural people (recalled today by ruins N of Jujuy), but their importance was eclipsed later by the Araucanian Indians from Chile. Elsewhere there were strong and fierce Indian tribes who did much to hamper white settlement but disappeared under European warfare and pressure. Italian, Spanish (including Basque), French, German, British, Swiss, and East European immigrants came to Argentina during the 1880s, other large in-migrations of Europeans occurred in the 1930s and following World War II. The influx of Chileans into Argentina has been historically tied to boundary disputes between the two nations. The GAUCHO, or Argentine cowboy, the nomadic herdsman of the Pampas—depicted in *Martín Fierro*, the great Argentine folk epic by José Hernández—is still a legendary national symbol. By the 1970s, Argentina had a predominantly urban population with nearly three quarters of its people living in places with 2,000 or more inhabitants, nearly a third of the total population lives in and around Buenos Aires. Argentina is overwhelmingly Christian, with about 90% of the population at least nominally Roman Catholic. Spanish is the country's official language. Argentina has one of South America's lowest population growth rates (1.5%) and one of its highest literacy rates (90%). It has a fine education system that is strongly controlled at all levels by the federal government. Argentines have one of the highest per capita incomes in South America, and the wealth is fairly well distributed. However, high inflation rates in the early 1970s cut into the nation's buying power and necessitated sharp cutbacks in imports in order to bring about a more favorable balance of trade. Argentina's economy is based on agriculture, with grains and livestock (cattle and sheep) the bulwark of its wealth. As an exporter of wheat, corn, flax, oats, beef, mutton, hides, and wool, Argentina has traditionally rivaled the United States, Canada, and Australia. Its cattle herds are among the world's finest. Argentina is the world's largest source of tannin and linseed oil. The Pampa is the nation's chief agricultural area, however, since the 1930s there has been a great rise in production in other areas, especially in the oases of the Monte and the irrigated valleys of N Patagonia. Argentina is nearly self-sufficient in its agricultural needs. Although Argentina has a variety of minerals, they are of local importance and are not completely adequate to support the country's industries. Domestic

oil and gas production supplies most of the nation's energy, pipelines connect the oil and gas fields with Buenos Aires and other major refining centers. The large coal field of S Patagonia has low-grade coal. All mining operations in the country have been under federal control since 1954. Argentina has a highly developed industrial base. Developed after World War I and protected by a strong nationalistic policy, Argentine industry has made the country virtually self-sufficient in the production of consumer goods and many types of machinery. Food processing (in particular meat packing, flour milling, and canning) is the chief manufacturing industry of Argentina, leather goods and textiles are also major products. Argentina's principal imports are machinery, metals, and manufactured goods. The chief trading partners are the United States, Italy, Brazil, West Germany, and Great Britain. Argentina is governed by the 1853 constitution as modified in 1898 and subsequently amended. It has a federal system of government. The president and the vice president are elected for four-year terms by popular vote. The popularly elected bicameral national congress is composed of 69 senators (three from each province and three from the federal district), who serve four-year terms, and 243 deputies (from each province and the federal district based on proportional representation), who also serve four-year terms. The supreme court of justice, the nation's highest court, has five members. Each province has its own elected governor and legislature and its own judicial system. The chief political parties of Argentina are the Frente Justicia-Lista de Liberación (Peronista) and the Unión Cívica Radical.

History. The Europeans probably first arrived in the region in 1502 in the voyage of Amerigo Vespucci. The search for a Southwest Passage to the Orient brought Juan Díaz de Solís to the Río de la Plata in 1516. Ferdinand Magellan entered (1520) the estuary, and Sebastian CABOT ascended (1536) the Paraná and Paraguay rivers. His delight in native ornaments may be responsible for the names *Río de la Plata* [silver river] and *Argentina* [of silver]. Pedro de Mendoza in 1536 founded the first settlement of the present Buenos Aires, but Indian attacks forced abandonment of the settlement, and Asunción became the unquestioned leading city of the Río de la Plata region. Buenos Aires was refounded in 1580 by Juan de GARAY. His son-in-law, Hernando ARIAS DE SAAVEDRA (Hernandarias), secured the division of the Río de la Plata territories, and Buenos Aires achieved (1617) a sort of semi-independence under the viceroyalty of Peru. The mercantilist system, however, severely hampered the commerce of Buenos Aires, and smuggling, especially with Portuguese traders in Brazil, became an accepted profession. While the cities of present W and NW Argentina grew by supplying the mining towns of the Andes, Buenos Aires was threatened by Portuguese competition. By the 18th cent., cattle (which were introduced to the Pampas in the 1550s) roamed wild throughout the Pampas in large herds and were hunted by gauchos for their skins and fat. In 1776 the Spanish government made Buenos Aires a free port and the capital of a viceroyalty that included present Argentina, Uruguay, Paraguay, and (briefly) Bolivia. From this combination grew the idea of a Greater Argentina to include all the Río de la Plata countries, a dream that was to haunt many Argentine politicians after independence was won. A prelude to independence was the British attack on Buenos Aires, Admiral Sir Home POPEHAM and Gen. William Carr BERESFORD in 1806 took the city after the Spanish viceroy fled. An Argentine militia force under Jacques de LINIERS ended the British occupation and beat off a renewed attack under Gen. John Whitelocke in 1807. On May 25, 1810 (May 25 is the Argentine national holiday), revolutionists, acting nominally in favor of the Bourbons dethroned by Napoleon (see SPAIN), deposed the viceroy, and the government was controlled by a junta. The result was war against the royalists. The patriots under Manuel BELGRANO won (1812) a victory at Tucumán. On July 9, 1816, a congress in Tucumán proclaimed the independence of the United Provinces of La Plata. Other patriot generals were Mariano MORENO, Juan Martín de PUEYRREDÓN, and José de SAN MARTÍN. URUGUAY and PARAGUAY went their own ways despite hopes of reunion. In Argentina, a struggle ensued between those who wanted to unify the country and those who did not want to be dominated by Buenos Aires. Independence was followed by virtually permanent civil war, with countless coups d'état by regional, social, or political factions. Rule by the strong man, the caudillo, alternated with periods of democratic rule, too often beset by disorder. Anarchy was not ended by the election of Bernardino

RIVADAVIA in 1826. The unitarians, who favored a centralized government dominated by Buenos Aires, were opposed to the federalists, who resented the oligarchy of Buenos Aires and were backed by autocratic caudillos with gaucho troops. The unitarians triumphed temporarily when Argentinians combined to help the Uruguayans repel Brazilian conquerors in the battle of Ituzaingó (1827), which led to the independence of Uruguay. The internal conflict was, however, soon resumed and was not even quelled when Juan Manuel de ROSAS, the most notorious caudillo, established a dictatorship that lasted until 1852. Ironically, this federalist leader, who was nominally only the governor of Buenos Aires, did more than the unitarians to unify the country. Ironically, too, this enemy of intellectuals stimulated his political opponents to write in exile some of the finest works of the Spanish American romantic period, among the writers were Domingo F. SARMIENTO, Bartolomé MITRE, José MÁRMOL, and Esteban ECHEVERRÍA. Rosas was overthrown (1852) by Justo José de URQUIZA, who called a constituent assembly at Santa Fe. A constitution was adopted (1853) based on the principles enunciated by Juan Bautista ALBERDI. Mitre, denouncing Urquiza as a caudillo, brought about the temporary secession of Buenos Aires prov. (1861) and the downfall of the Urquiza plans. Under the administrations of Mitre (1862-68), Sarmiento (1868-74), and Nicolás AVELLANEDA (1874-80), schools were built, public works started, and liberal reforms instituted. The War of the Triple Alliance (see TRIPLE ALLIANCE WAR OF THE), 1865-70, brought little advantage to Argentina. In 1880 federalism triumphed, and Gen. Julio A. ROCA became president (1880-1886). Buenos Aires remained the capital, but the federal district was set up, and Buenos Aires prov. was given La Plata as its capital. Argentina flourished during Roca's administration. The conquest of the Indians by General Roca (1878-79) had made colonization of the region in the south and the southwest possible. Already the Pampa had begun to undergo its agricultural transformation. The immigration of Europeans helped to fill the land and to make Argentina one of the world's granaries. Establishment of refrigerating plants for meat made expansion of commerce possible. The British not only became the prime consumers of Argentine products but also invested substantially in the construction of factories, public utilities, and railroads (which were nationalized in 1948). Efforts to end the power of the great landowners, however, were not genuinely successful, and the military tradition continued to play a part in politics, the army frequently combining with the conservatives and later with the growing ranks of labor to alter the government by coup d'état. The second administration of Roca (1898-1904) was marked by recovery from the crises of the intervening years, a serious boundary dispute with Chile was settled (1902), and perpetual peace between the two nations was symbolized in the CHRIST OF THE ANDES. Even before World War I, in which Argentina maintained neutrality, the wealthy nation had begun to act as spokesman for the rights and interests of Latin America as a whole, notably through Carlos CALVO, Luis M. DRAGO, and later Carlos SAAVEDRA LAMAS. Internal problems, however, remained vexing. Electoral reforms introduced by Roque SÁENZ PENA (1910-14) led to the victory of the Radical party under Hipólito IRIGOYEN (1916-22). He introduced social legislation, but when, after the presidency of Marcelo T. de ALVEAR, Irigoyen returned to power in 1928, his policies aroused much dissatisfaction even in his own party. In 1930 he was ousted by Gen. José F. Uriburu, and the conservative oligarchy—now with Fascist leanings—was again in power. The administration (1932-38) of Agustín P. JUSTO was opposed by revolutionary movements, and a coalition of liberals and conservatives won an election victory. The Radical leader Roberto M. Ortiz became president (1938), but serious illness caused him to withdraw (1942), and the conservative Ramón S. Castillo succeeded him. In 1943, Castillo was overthrown by a military coup. After two provisional presidents a "palace revolt" in 1944 brought to power a group of army colonels, chief among them Juan PERÓN. After four years of pro-Axis "neutrality" Argentina belatedly (March, 1945) entered World War II on the side of the Allies and became a member of the United Nations. A return to liberal government momentarily seemed probable, but Peron was overwhelmingly victorious in the election of Feb. 1946. Peron, an admirer of Mussolini, established a type of popular dictatorship new to Latin America, based initially on support from the army, reactionaries, nationalists, and some clerical groups. His regime was marked by curtailment of freedom

ARGININE

of speech, confiscation of liberal newspapers such as *La Prensa*, imprisonment of political opponents, and transition to a one-party state. His second wife, the popular Eva Duarte de Perón, helped him gain the support of the trade unions, thereafter the main foundation of Peron's political power. In 1949 the constitution of 1853 was replaced by a new constitution that permitted Peron to succeed himself as president, the Peronista political party was established the same year. To cure Argentina's serious economic ills, Peron inaugurated a program of industrial development—which advanced rapidly in the 1940s and early 50s, but was severely hampered by the lack of power resources and machine tools—supplemented by social welfare programs. Peron also placed the sale and export of wheat and beef under government control, thus undermining the political and economic power of the rural oligarchs. In the early 1950s, with recurring economic problems and with the death (1952) of his wife, Peron's popular support began to diminish. Agricultural production, long the chief source of revenue, dropped sharply, and the economy faltered. The Roman Catholic church, alienated by the reversal of close church-state relations, excommunicated Peron, and, finally the armed forces became disillusioned with him. In 1955, Peron was ousted by a military coup, and the interim military government of Gen. Pedro Aramburu attempted to rid the country of *justicialismo* (Peronism). In 1957, Argentina reverted to the constitution of 1853 as modified up to 1898. In 1958, Dr. Arturo FRONDISI was elected president. Faced with the economic and fiscal crisis inherited from Peron, Frondizi, with U.S. advice and the promise of financial aid, initiated a program of austerity to "stabilize" the economy and check inflation. Leftists, as well as Peronistas, who still commanded strong popular support, criticized the plan because the burden lay most heavily on the working and lower middle classes. Frondizi later fell into disfavor with the military because of his leniency toward the regime of Fidel Castro in Cuba and toward Peronistas at home, who, in the congressional elections of 1962, scored a resounding victory. Outraged by this resurgence of Peronista strength, the military arrested Frondizi. Jose Maria Guido assumed the presidency, but the military remained in power. In 1963, after months of political crisis and control by the military, presidential elections were held. The Peronista and Communist parties were banned before the election, and many persons were placed under arrest. Following the election as president of the moderate liberal Dr. Arturo ULLIA, many political prisoners were released, and relative political stability returned. The new president was faced, however, with serious economic depression and with the difficult problem of reintegrating the Peronist forces into Argentine political life. In 1964 an attempt by Peron to return from Spain and lead his followers was thwarted when Peron was turned back at Rio de Janeiro by Brazilian authorities. In elections in 1965 and 1966 the Peronists showed that they remained the strongest political force in the country, unwilling to tolerate another Peronist resurgence, a junta of military leaders, supported by business interests, seized power (1966) and placed Gen. Juan Carlos ONGANIA, a long-time right-wing opponent of Illia, in the presidency. Under Ongania, and with the strong backing of the military, the new government dissolved the legislature, banned all political parties, and exercised unofficial press censorship. Ongania also placed the national universities under government control. Widespread opposition to the rigid rule of the Ongania regime grew, and an antigovernment campaign developed. Faced with labor and student unrest, the military deposed (1970) Ongania and named Gen. Roberto M. Levingston president. Economic problems and increased terrorist activities caused Gen. Alejandro Lanusse, the leader of the coup against Ongania, to dismiss (1971) Levingston and initiate an active program for economic growth, distribution of wealth, and political stability. His direct negotiations with Juan Peron and his call for national elections and a civilian government led to the return of Peron to Argentina in 1972. After failing to achieve unity among the various Peronist groups, Peron declined the nomination from his supporters to run for president in the March, 1973, elections, which were won by Dr. Hector Campora, a Peronist candidate who subsequently resigned from office to make way for Peron's return. When new elections were held in Sept., 1973, Peron was elected president and his third wife, Isabel Martinez Peron, vice president. Peron died in July, 1974, and, as provided for in the constitution, was succeeded as president by his widow, the nation's vice pres-

ident. The government of Isabel Peron, who had only a small personal following, faced an uncertain future complicated by economic troubles, labor unrest, political violence, and deep divisions within the Peronista party. arginine (ar'janin), organic compound, one of the 22 α -AMINO ACIDS commonly found in animal proteins. Only the L-stereoisomer participates in the biosynthesis of proteins. Its basic side chain often adds a positive charge and hence a greater degree of

water-solubility to proteins in neutral solution. Although arginine can be synthesized from cellular metabolites, it is usually considered essential to the diet of children for the maintenance of normal rates of growth. Arginine is the direct metabolic precursor of UREA, the dominant nitrogenous waste product of most mammals. It was discovered in protein in 1895.

Argirocastro: see GJINOKASTER, Albania

Argo (ar'gō), in Greek mythology, ship in which JASON and the Argonauts sailed in quest of the Golden Fleece. Most legends say that Argus, son of Phrixus, was the builder, with the help of Athena. Others claim that Argus the Thespian, or Argus the son of Arestor, built the ship. The *Argo* included a beam cut from the divine tree of Dodona, which could foretell the future.

Argob (ar'gōb), region of Bashan, E of the Sea of Galilee. Deut. 34,13,14, 1 Kings 4,13. The interpretation of Argob as a person is uncertain. 2 Kings 15,25.

argol (ar'gāl) see TARTAR

Argolis (ar'gālīs), region of ancient Greece in the NE Peloponnesus. It was roughly identical with the Argive plain and was the area dominated by the city of Argos.

argon (ar'gōn) [Gr., = inert], gaseous chemical element, symbol Ar, at no. 18, at wt. 39.948, m.p. -189.2°C, b.p. -185.7°C, density 1.784 grams per liter at STP (see separate article), valence 0. Argon is a colorless, odorless, tasteless gas occurring in air (of which it constitutes 0.94% by volume) and in some volcanic gases. It is a member of group 0 of the PERIODIC TABLE, a group called the noble or INERT GASES from the mistaken former belief that none of its members could form chemical compounds, in fact, other members of the group, e.g., krypton, xenon, and radon, do form compounds. Argon is prepared by fractional distillation of liquid air. Its extreme inertness has caused it to be substituted for nitrogen in electric light bulbs. It is mixed with neon in so-called neon signs (gas discharge tubes) to produce a green-to-blue glow. It is used as a protective atmosphere in arc welding, in the refining of reactive elements, and in the growing of crystals for use in semiconductor devices. Argon was first obtained by Lord Rayleigh and Sir William Ramsay in 1894. Previously Lord Rayleigh had noticed that a liter of supposedly pure nitrogen drawn from the air weighed more than a liter prepared from a nitrogen compound. This difference in weight led him to conclude that another gas was present in the supposedly pure nitrogen. Actually several unreactive gases were present, the first samples of "argon" also contained HELIUM, NEON, KRYPTON, and XENON. Ramsay obtained pure argon later by evaporating it from liquid air.

argonaut, in zoology see PAPER NAUTILUS

Argonauts. see JASON, ARGO, GOLDEN FLEECE

Argonne (ar'gōn'), region of the Paris basin, NE France, in Champagne and Lorraine (Meuse, Marne,

and Ardennes dept.), a hilly and woody district centering around the capital, Sainte-Menehould. Thinly populated, with unimportant cultivation and only small industries, its significance has been strategic. There, in 1792, the French repulsed the Prussians. The sector was a battleground throughout World War I. In the Allied victory drive (Sept.-Nov., 1918), the Meuse-Argonne sector was carried by the Americans.

Argonne National Laboratory, nuclear research center, principal facilities located in Argonne, Ill., 27 mi (43 km) SW of downtown Chicago, other facilities located at the National Reactor Testing Station, 50 mi (80 km) W of Idaho Falls, Idaho. This atomic energy research and development establishment was founded in 1946 by the U.S. Atomic Energy Commission. Since 1966 the laboratory has operated under an agreement involving the U.S. Atomic Energy Commission, the Argonne Universities Association, and the Univ. of Chicago. The principal objectives of the laboratory are to carry out multidisciplinary basic research, much of which involves the use of radiation as a tool in the physical and life sciences, and to work on the design and development of nuclear reactors.

Argos (ar'gōs, -gās), city of ancient Greece, in NE Peloponnesus, 3 mi (4.8 km) inland from the Gulf of Argos, near the modern Nauplia. It was occupied from the early Bronze Age and is mentioned in Homer's *Iliad* as the kingdom of Diomed. Argos was the center of Argolis and in the 7th cent. B.C., under King Pheidon, dominated much of the Peloponnesus. For centuries it was one of the most powerful Greek cities, struggling with Sparta and rivaling Athens and Corinth. Much of Argos' power disappeared after Cleomenes I of Sparta took (c. 494 B.C.) the city. Pyrrhus was killed in an attack on Argos in 272. The city joined the Achaean League in 229, and in 146 it was taken by Rome, under whose rule trade flourished. The Heraeum temple, 6 mi (9.7 km) N of Argos, was the principal center for the worship of the goddess Hera. Argos produced important sculptors, including Polycleus, in the 5th cent. There is a small modern town called Argos on the site of the ancient city.

Argos, in Greek mythology see ARGUS

Arguedas, Alcides (alsē'thās argā'thās), 1879-1946, Bolivian writer and diplomat. His essays and novels, which have social and moralizing tendencies, are a reaction against the romantic idealization of the Indian. His best-known works are *Pueblo enfermo* [a sick people] (1909) and *Raza de bronce* [a race of bronze] (1919), a novel exposing the exploitation of the Indians by the landowners. Some of the Indian folktales he collected are included in the volume *Singing Mountaineers: Songs and Tales of the Quecha People* (tr. and ed. by Ruth Stephen, 1957, repr. 1971).

Arguello, Point (argwē'lō), promontory, SW Calif., extending W into the Pacific Ocean. A U.S. navy missile-launching complex is nearby.

Argun (ar'gōn'), Mandarin *O-erh-ku-na*, river, 950 mi (1,529 km) long, rising in the Great Khingan mts., Heilungkiang prov., NE China, and flowing W to the USSR border, then NE along the USSR-China frontier, where it joins the Shilka River to form the Amur. The Chinese Eastern RR, a branch of the Trans-Siberian RR, follows the upper Argun valley. Hailar, China, is the largest city on the river. Corn, grains, and sugar beets are grown in the fertile Argun valley. Silver, lead, and coal are found along the river banks.

Argus (ar'gās) or **Argos** (ar'gōs, -gās), in Greek mythology. 1 Many-eyed monster, also called Panoptes. He guarded Io after she had been changed into a heifer. 2 Builder of the ARGO. He built the ship on which Jason and the Argonauts (of which he was one) sailed in quest of the Golden Fleece.

Argyll, Archibald Campbell, 1st duke of, d. 1703, Scottish nobleman, eldest son of the 9th earl of Argyll. Having unsuccessfully sought favor with James II in order to recover the estates forfeited by his father, he supported the cause of William of Orange and formally offered William and Mary the crown of Scotland in 1689. Since his support was important to William, particularly as a basis for encouraging the submission of the clans, he was restored to his estates and made a privy counselor. He remained William's chief adviser on Scottish affairs and was made a duke (1701). Although two companies from his regiment were used to perpetrate the massacre (1692) of the MacDonalds of Glencoe, it is unlikely that he was in any way personally involved.

Argyll, Archibald Campbell, 3d duke of, 1682-1761, Scottish nobleman, brother of the 2d duke. As

lord high treasurer of Scotland (1705) and a commissioner for the union (1706), he helped negotiate the union (1707) of the kingdoms of Scotland and England. He had been created earl of Islay in 1705, and he sat as a Scottish representative peer in the united Parliament from 1707 until his death. Consistently loyal to the Hanoverian kings, he held high offices in Scotland and promoted the trade, industry, and schools of his native land. He succeeded his brother as duke in 1743.

Argyll, Archibald Campbell, 5th earl of, 1530-73, Scottish statesman. He and Lord James Stuart (later earl of Murray) became followers of John Knox in 1556 and led the troops of the Scottish Protestants, the lords of the congregation, against those of the Roman Catholic regent, Mary of Guise. Won over by Mary Queen of Scots when she arrived in Scotland (1561), he supported her until she proposed marrying Lord Darnley. He then tried to enlist the aid of Elizabeth I of England against Mary. Failing in this, he returned to Mary's party and is thought to have had some part in the murder of Darnley (1567). Argyll was in command of Mary's soldiers when they were defeated at Langside in 1568 by the soldiers under Murray, now regent, but he was reconciled with Murray the next year. Becoming a supporter of James VI, he was made lord high chancellor in 1572.

Argyll, Archibald Campbell, 8th earl and 1st marquess of, 1607-61, Scottish statesman. He became chief of the powerful Campbell clan at the death (1638) of his father, the 7th earl. A staunch Presbyterian, he was a leading opponent of Charles I's attempt to strengthen episcopacy in Scotland. Charles sought to win his support by making him a marquess (1641), but after the outbreak of the English civil war Argyll represented the COVENANTERS in negotiating (1643) the alliance with the English parliamentarians. He commanded the Covenanter army against the earl of MONTROSE and was repeatedly defeated (1644-45). In 1646, Argyll negotiated with both the defeated Charles and the English Parliament, attempting to secure a Presbyterian settlement in England. He later supported Oliver Cromwell but suffered a serious loss of influence because of the revulsion of feeling in Scotland at the king's execution (1649). Hoping that Charles II could be restored as a Presbyterian king, Argyll turned from Cromwell and crowned (1651) Charles II in Scotland. He opposed the disastrous Scottish invasion of England in that year and submitted to the English Commonwealth in 1652. He was executed for treason at the Restoration. See biography by John Willcock (1903).

Argyll, Archibald Campbell, 9th earl of, 1629?-1685, Scottish nobleman, son of the 8th earl. An ardent and active royalist and a Protestant, he opposed extreme measures against the COVENANTERS, thereby incurring the enmity of the duke of York (later James II), who in 1680 was high commissioner of Scotland. Argyll was accused of treason and sentenced to death in 1681. He escaped to Holland, was a leader of the rebellion in favor of the duke of MONMOUTH, and was captured and beheaded.

Argyll, John Campbell, 2d duke of, 1678-1743, Scottish general, son of the 1st duke, whom he succeeded in 1703. For his ardent support of the union of England and Scotland he was created (1705) earl of Greenwich. He served under the duke of Marlborough in the War of the Spanish Succession (1701-14) and rose to be commander in chief in Spain in 1711. On his return to Scotland he actively supported the succession of George I. He commanded the army that put down the Jacobite rebellion in 1715 and was made duke of Greenwich in 1719. His ambitions brought him high political offices, but he was tactless and too forthright, and his later career was uneven.

Argyllshire (ärgil'shîr) or **Argyll**, county (1971 pop. 59,909), 3,124 sq mi (8,091 sq km), W central Scotland. Inveraray is the county town. The county includes numerous islands of the Inner HEBRIDES, including the island of IONA. The coast of the mainland is jagged and deeply indented by lochs, MINTRE peninsula juts sharply into the North Channel. Wild and mountainous, the county has little arable land. Sheep grazing is the main occupation, crop raising (oats, hay, and barley) is confined to the islands and coastal strips. Fishing and distilling are also important. OBAN and Dunoon are favorite resorts. Argyllshire was settled by Celts from Ireland in the 6th cent. It became the seat of the powerful Campbell clan in the 16th cent. Under the Local Government Act of 1973, Argyllshire was divided between the new Highland and Strathclyde regions.

Argyrokastron: see GJINOKASTER, Albania

Århus (ôr'hōös), city (1970 com. pop. 237,514), capital of Århus co., central Denmark, on Århus Bay, an arm of the Kattegat. The second largest city in Denmark, it is a commercial, industrial, and shipping center. Manufactures include beer, textiles, machinery, processed food, locomotives, and tobacco products. First mentioned in the mid-10th cent., Århus is one of the oldest cities in Denmark. It developed rapidly after it became an episcopal see in the 11th cent. The city declined after the Reformation (16th cent.) but recovered its prosperity in the 18th cent. Århus is also a cultural center, with a university (opened 1928), a prominent theater, a museum group of early Danish houses, and a large library. Noteworthy buildings include the Cathedral of St. Clemens (12th cent.) and the town hall (1942), made of Norwegian marble. Until 1948 the city's name was spelled Aarhus.

aria (är'ēä), elaborate and often lengthy solo song with instrumental accompaniment. In the 16th cent. it was a melody improvised over a strophic bass line, and a distinction was made between instrumental, vocal, and dance arias. The use of the term to indicate instrumental music was continued by such composers as Froberger, Pachelbel, and J. S. Bach. The first use of the term to indicate solo song was by Giulio Caccini in 1602. Later in the 17th cent. Italian OPERA composers developed the *aria da capo*, a throughcomposed (nonsymphonic) three-part structure in which the beginning section is repeated after a contrasting middle section. Though this formal scheme was first used by Monteverdi, he did not designate it *aria da capo*. This type achieved artistic perfection in the operas of Alessandro SCARLATTI and Handel and in the works of J. S. Bach. In the 18th cent. the three main sections were divided into subsections, and there were classifications of many various types of arias. The extreme convention of using as many types as possible, but never the same type in succession, developed in the Neapolitan opera, and the subsequent formal rigidity led to a decline of the *aria da capo*. Later in the 18th cent. prominent virtuoso singers, seeking a means for technical display, caused the development of a type consisting in reality of two separate arias, the first usually dramatic and the second lyrical. Most of the arias of Mozart are of this kind. But in French operas, especially those of Christoph W. von GLUCK, there was a development leading to greater similarity of recitative and aria, which eventually culminated in the complete abandonment of arias in the late operas of Richard WAGNER, who substituted a highly melodic RECITATIVE called *Sprechgesang* [Ger., =speech-song]. The form continued to be preferred by Italian opera composers, however, and the romantic aria reached its height in the works of Giuseppe VERDI.

Ariadne (är'äd'nē), in Greek mythology, Cretan princess, daughter of Minos and Pasiphaë. Because of her love for Theseus, she gave him a clue that enabled him to kill the monstrous Minotaur. When Theseus left Crete, he took Ariadne with him, but before they reached Greece, he abandoned her at Naxos. There the god Dionysus consoled and later wedded her. She bore him several children, including Oenopion, whom Dionysus first taught the art of wine making. It was said that Zeus granted Ariadne immortality and that Dionysus set her bridal crown among the stars.

Ariana or **Aryana** (both är'äd'nä, -ä'nä), general name for the eastern provinces of the ancient Persian Empire. It was used to mean the regions S of the Oxus (modern Amu Darya) River, the regions to the north were called Transoxiana. Ariana is included in present E Iran, N and E Afghanistan, and India NE of the Indus River.

Arianism, Christian heresy founded by ARIUS in the 4th cent. It was one of the most widespread and divisive heresies in the history of Christianity. As a priest in Alexandria, Arius taught (c. 318) that God created, before all things, a Son who was the first creature, but who was neither equal nor eternal with the Father. According to Arius, Jesus Christ was a supernatural creature not quite human and not quite divine, but more like a demigod. In these ideas Arius was a disciple of Lucian, who was a disciple of the heretic PAUL OF SAMOSATA. Arius was condemned and deprived of his office. He went to Asia and propagated his doctrine among the masses through popular sermons and songs and among the powerful through the efforts of influential leaders, e.g., EUSEBIUS OF NICOMEDIA and, to a lesser extent, EUSEBIUS OF CAESAREA. The civil as well as the religious peace of the East was threatened, and Roman Emperor Constantine I convoked (325) the first ecumenical council (see NICAEA, FIRST COUNCIL OF). The

council condemned Arianism, but the Greek term *homousios* [consubstantial, of the same substance] used by the council to define the Son's relationship to the Father was not universally popular. It had been used before by the heretical Sabellius. Some, like MARCELLUS OF ANCYRA, in attacking Arianism, lapsed into SABELLIANISM. Eusebius of Nicomedia used this fear of Sabellianism to persuade Constantine to return Arius to his duties in Alexandria. ATHANASIUS, chief defender of the Nicene formula, was bishop in Alexandria, and conflict was inevitable. The Eusebians managed to secure Athanasius' exile, and when the Arian Constantius II became emperor, Catholic bishops in the East, e.g., EUSTATHIUS, were banished wholesale. The exile of Athanasius to Rome brought Pope JULIUS I into the struggle. A council wholly favorable to Athanasius, convened at Sardica (c. 343), was avoided by the Eastern bishops and ignored by Constantius. The Catholics were left dependent on Rome for support. After the West fell to Constantius, the Eusebians reversed the decisions of Sardica in several councils (Arles, 353; Milan, 355; Boziers, 356), and Pope LIBERIUS, ST. HILARY OF POITIERS, and HOSIUS were exiled. The victorious Arians, however, had now begun to quarrel among themselves. The Anomoeans [from Gr., =unlike], followers of EUNOMIUS and AETIUS, were pure Arians and held that the Son bore no resemblance to the Father. The semi-Arian court party were called Homoeans [from Gr., =similar] from their teaching that the Son was simply like the Father as defined by Scripture. A third party called Homoiousians [from Gr., =like in substance] were largely prevented from joining the orthodox (Homoousian) party through a misunderstanding of terms. The Arians debated their differences at a series of formularies at Sirmium (351-59). The final formula was an ambiguous Homoean declaration that Constantius imposed (359) upon the church in two councils, Rimini (for the West) and Seleucia (for the East). The voices of orthodoxy, however, were not silent. In the West St. Hilary of Poitiers and in the East St. BASIL THE GREAT, ST. GREGORY NAZIANZEN, and ST. GREGORY OF NYSSA continued to defend and interpret the Nicene formula. By 364 the West had a Catholic emperor in Valentinian I, and when the Catholic THEODOSIUS I became emperor of the East (379), Arianism was outlawed. The second ecumenical council was convoked to reaffirm the Nicene formula (see CONSTANTINOPLE, FIRST COUNCIL OF), and Arianism within the empire seems to have expired at once. However, ULFILAS had carried (c. 340) Homoean Arianism to the Goths living in what is now Hungary and Yugoslavia with such success that the Visigoths and other Germanic tribes became staunch Arians. Arianism was thus carried over Western Europe and into Africa. The Vandals remained Arians until their defeat by Belisarius (c. 534). Among the Lombards the efforts of Pope St. Gregory I and the Lombard queen were successful, and Arianism finally disappeared (c. 650) there. In Burgundy the Catholic Franks broke up Arianism by conquest in the 6th cent. In Spain, where the conquering Visigoths were Arians, Catholicism was not established until the end of the 6th cent. (by Recared), and Arian ideas survived for at least another century. Arianism brought many results—the ecumenical council, the Catholic Christological system, Nestorianism, and, by reaction, Monophysitism. See John Henry Newman, *The Arians of the Fourth Century* (1833, repr. 1968), H. M. Gwatkin, *Studies of Arianism* (2d ed. 1900), Adolf von Harnack, *History of Dogma* (tr. of 3d ed., 7 vol., 1898-1903).

Arias, Arnulfo (arnōōl'fō är'yās), 1901-, president of Panama (1940-41, 1949-51, Oct., 1968). A Harvard-trained physician, he dominated Panamanian politics throughout the 1930s, leading the coup that deposed President Florencio Harmodio Arosemena in 1931 and generally selecting the country's presidents. He held several cabinet and diplomatic posts. In June, 1940, he was elected president by an unprecedented majority. He jailed dissidents, disenfranchised the non-Spanish-speaking portion of the population, and espoused a totalitarian state, which led to his ouster in Oct., 1941. Reelected president in 1949, he was deposed in May, 1951, after organizing his own secret police and suspending the constitution. He ran unsuccessfully for the presidency in 1964, then won election in 1968 after putting together a strong, five-party coalition. Taking office in October, he immediately maneuvered to gain absolute control of the national assembly and the supreme court and attempted to restructure the command of the national guard. After only 11 days as president, he was ousted by national guard officers.

Arias de Ávila, Pedro (pā'thrō a'ryas dā a'vēla), known as **Pedrarías** (pā'thra'ryas), c 1440-1531, Spanish colonial administrator. He was sent (1514) as governor to Darien (now part of Panama), then under the rule of Vasco Nuñez de Balboa. A long quarrel between the two ended with Balboa's execution. Pedrarías jealously guarded his power and his administration was notoriously harsh and cruel. He sent (1523) Francisco FERNÁNDEZ DE CORDOBA to usurp control of Nicaragua, conquered the year before by Gil GONZÁLEZ DE ÁVILA. When Fernández de Córdoba attempted to free himself from Pedrarías' control, Pedrarías captured and executed him. Pedrarías extended the Spanish dominions and founded (1519) Panama City, he first aided, but later hindered, Francisco PIZARRO and Diego de Almagro in their conquest of Peru. Superseded as governor in 1526, he went to Nicaragua, where he retained power until his death. His name also appears as Pedrarías Davila.

Arias de Saavedra, Hernando (ārnan'dō a'ryas dā savā'dra), known as **Hernandarias** (ārnan'da'ryas), 1561-1634, Spanish colonial governor, b Asunción, in present-day Paraguay. A remarkable administrator, he was elected (1592) lieutenant governor of Asunción by the CABILDO and was chosen governor of Rio de la Plata prov. three times (1597-99, 1602-9, 1614-18). He consolidated the Spanish settlements, pacified and protected the Indians, introduced public schools, and stimulated the growth of Buenos Aires. In 1617 he secured a royal order for the separation of Paraguay (then Guairá) from Rio de la Plata, and granted the Jesuits territorial privileges for the religious colonization of the region.

Arias Montanus, Benedictus (bēnədīk'tas ā'rēas mōntā'nas), or **Benito Arias Montano** (bānē'tō a'ryas mōntā'nō), 1527-98, Spanish Benedictine monk, editor of the Antwerp POLYGLOT BIBLE. He attended the Council of Trent (1562).

Arica (arē'ka), city (1970 pop. 92,394), N Chile, on the Pacific Ocean, just south of the Peruvian border and at the northern limit of the Desert of Atacama. Peru ceded Arica to Chile after the War of the Pacific (see PACIFIC WAR OF THE). With the settlement of the TACNA-ARICA CONTROVERSY in 1929, Chile retained sovereignty over the city but was required to furnish complete port facilities to Peru. The district of Arica is now a free zone where both Chile and Peru maintain customs houses. The city is a resort and a port through which the mineral exports (chiefly copper, tin, and sulfur) of both countries are shipped.

Aridar (arīd'āt), one of Haman's sons. Esther 9:9

Aridatha (arīd'athə), son of Haman. Esther 9:8

Ariège (ar'yēzh'), department (1968 pop. 138,478), SW France, in Languedoc, bounded by Spain and Andorra. FOIX is the capital.

Arieh (ār'ā), one of the two guards murdered with King Pekahiah. 2 Kings 15:25

Ariel (ār'ēel), aide of Ezra. Ezra 8:16. In two other passages AV calls them "lionlike men" ("two ariels of Moab" in RV). 2 Sam. 23:20, 1 Chron. 11:22. Nothing is known of them. Ariel is also used as a symbolic name of Jerusalem. Isa. 29.

Ariel (ār'ēel), in astronomy, one of the five known moons, or natural satellites, of URANUS.

Aries (ār'ēz) [Lat. = the ram], CONSTELLATION lying on the ECLIPTIC (the sun's apparent path through the heavens) between Taurus and Pisces, it is one of the constellations of the ZODIAC. It contains the bright star Hamal (Alpha Arietis). About 2,000 years ago the vernal EQUINOX was located at the beginning of Aries and was thus also called the "first point of Aries", however, the PRECESSION OF THE EQUINOXES has since shifted the vernal equinox into Pisces. Aries reaches its highest point in the evening sky in December.

Arikara Indians (ārīk'ara), North American Indians whose language belongs to the Caddoan branch of the Hokan-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). Archaeological evidence shows that they occupied the banks of the upper Missouri River since at least the 14th cent. A semisedentary group, they lived in earth-covered lodges. In winter they hunted buffalo, returning to their villages for spring planting, the Arikara were influential in bringing agricultural knowledge from the Southwest to the prehistoric peoples of the upper Missouri River. They traded corn with hunting tribes in return for buffalo hides and meat, and they were active in bartering with early white traders, who frequently called them the Rees. They were closely associated with the MANDAN INDIANS and the HIDATSA INDIANS, these three tribes now share the Fort Berthold Reservation in North Dakota. See D. J. Lehmer, *Arikara Archaeology* (1968).

Armathaea (ār'imathē'a), home of St. Joseph of Arimathea, not otherwise known. It may be the same as RAMATHAIM ZOPHIM. Mat. 27:57, Mark 15:43, Luke 23:50,51, John 19:38.

Ariminum: see RIMINI, Italy.

Arioch (ār'ēōk), 1. See CHEDORLAOMER. 2. Captain under Nebuchadnezzar. Dan. 2:14.

Arion (ar'ion), Greek poet, inventor of the dithyramb. He is said to have lived at Periander's court in Corinth in the late 7th cent. B.C. A legend repeated by Herodotus tells how, having been thrown overboard by pirates, Arion was saved by a dolphin charmed by his music. See A. W. Pickard-Cambridge, *Dithyramb, Tragedy, and Comedy* (1927, repr. 1962).

Artosto, Ludovico (lōdōdōvē'kō ar'yōs'tō), 1474-1533, Italian epic and lyric poet. As a youth he was a favorite at the court of Ferrara, later he was in the service of Ippolito I, Cardinal d'Este, and then of the duke of Ferrara. He was never properly rewarded by his patrons. While at the duke's court, he began the *Orlando Furioso*, published in its final form in 1532. This epic treatment of the ROLAND story, theoretically a sequel to the unfinished masterpiece of BOIARDO, greatly influenced Shakespeare, Milton, and Byron. It was intended to glorify the Este family as Vergil had glorified the Julians. Artosto also wrote lyric verse of unequal merit and several comedies, among them *I suppositi* [the pretenders] and *Il negromante* [the necromancer]. See the famous 16th-century translation of *Orlando Furioso* by Sir John Harrington, ed. by Robert McNulty (1972), studies by A. V. Cameron (1930), Benedetto Croce (tr. 1920, repr. 1966), E. G. Gardner (1906, repr. 1968), and Robert Griffin (1974).

Ariovistus (ār'ēōvīs'tas), fl. 58 B.C., Germanic chieftain, leader of the Suebi. He crossed the Rhine c. 71 B.C., defeated the AEDUI, and came to dominate much of Gaul (see GALLIC WARS). In 60 B.C. he was made a friend and ally of Rome, but his power threatened the Romans in Gaul, and Julius Caesar, soon after winning the great victory of Bibracte over the Helvetii, undertook a campaign against him. Caesar defeated Ariovistus somewhere in Upper Alsace in 58 B.C.

Arisai (arīs'āi), son of Haman. Esther 9:9.

Arish, Al (al arēsh'), town (1970 est. pop. 43,000), NE Egypt, in the Sinai peninsula, on the Mediterranean Sea. It is a fishing port and administrative center. In 1118, King Baldwin I of Jerusalem died in Al Arish on the way back from his Egyptian campaign. In 1800, during the venture of Napoleon I in Egypt, the French signed a convention in the city by which they were to evacuate the country. The British did not ratify the convention, and fighting resumed. Israeli troops briefly held Al Arish during the 1956 Arab-Israeli war and occupied the town in the 1967 war. After the 1967 war an Israeli settlement, Nahal Yam, was established nearby. In 1969, Israel evacuated the civilian population of Al Qantarāh, a town on the Suez Canal, to Al Arish.

Arista, Mariano (mar'yā'nō arē'sta), 1802-55, Mexican general and president (1851-53). A royalist in the revolt against Spain, he later joined Agustín de Iturbide. He fought in the Mexican army that tried to put down the Texas revolt (1836). In command of the army in N. Mexico in the Mexican War, he was defeated by Zachary TAYLOR at Palo Alto and at Resaca de la Palma (1846). Arista succeeded J. J. Herrera as president. His administration sought to bring fiscal stability to the nation. Difficulties in maintaining a loyal cabinet and a conservative revolt in 1852 led to his resignation the following year.

Aristaeus (ārīstē'as), in Greek mythology, son of Apollo and Cyrene, especially honored as the inventor of beekeeping. Aristaeus tried to violate Eurydice, wife of Orpheus. Eurydice was fatally bitten by a snake while fleeing him. As punishment, the nymphs, who had previously been his mentors, caused all his bees to die. However, he sacrificed several cattle in atonement, and from their carcasses new swarms of bees were generated. Learned in the arts of medicine and soothsaying, Aristaeus wandered through many lands teaching his skills and curing the sick. He came to be widely worshiped as a beneficent deity.

Aristarchus (ār'īstar'kas), Macedonian companion of Paul. Phil. 2:29, 20:4, 27:2, Col. 4:10.

Aristarchus of Samos (sām'ōs), fl. c. 310 B.C.-c. 230 B.C., Greek astronomer of the Alexandrian school. He is said to have been the first man to propose a heliocentric theory of the universe. Of his writings only a treatise, *The Sizes and Distances of the Sun and Moon*, remains. This does not mention his conclusion that the earth moves around the sun and

that the sun is at rest, but a quotation by Archimedes and statements by Copernicus prove that he held this theory. Other conclusions in which he seems to have anticipated later scientists are that the sun is larger than the earth, that the earth rotates upon its axis causing day and night, and that its axis is inclined to the plane of the ecliptic, causing the change of seasons. See T. L. Heath, *Aristarchus of Samos* (1913).

Aristarchus of Samothrace (sām'ōthrās), c. 217-c. 145 B.C., Greek scholar, successor to his teacher, Aristophanes of Byzantium, as librarian at Alexandria. He was an innovator of scientific scholarship, and his critical revision of Homer is responsible for the excellent texts of Homer that survive. Though only fragments of his works survive (he is said to have written more than 800 volumes of commentary and exegesis), frequent quotations by ancient critics provide an insight into his subjects and method. His works cover such writers as Alcaeus, Anacreon, Pindar, Hesiod, and the tragedians.

Aristides, Saint (ārīstī'dēz), 2d cent., Greek philosopher, author of an early Christian apology. It was presented (c. 126 or 136) to the emperor to protest anti-Christian slanders and persecutions. The text is embedded in transcribed versions of the medieval legend BARLAAM AND JOSAPHAT. Feast Aug. 31.

Aristides (ārīstī'dēz), d. c. 468 B.C., Athenian statesman and general. He was one of the 10 generals who commanded the Athenians at the battle of Marathon (490 B.C.) and in the next year became chief archon. In 483 he was ostracized because he opposed the naval policy of Themistocles. However, in 480 Aristides fought beside his countrymen at Salamis, and the following year he commanded the Athenian army at the battle of Plataea. Later he organized the finances of the Delian League. He is a classic example of probity in public life and was called Aristides the Just.

Aristippus (ārīstīp'əs), c. 435-c. 360 B.C., Greek philosopher of Cyrene, first of the CYRENAICS. He held pleasure to be the highest good and virtue to be identical with the ability to enjoy. His doctrines, comprising the first coherent exposition of HEDONISM, opposed those of the Cynics, although both groups drew upon aspects of Socratic philosophy.

Aristobulus: see MACCABEES.

aristocracy (ār'īstōk'rāsē) [Gr. = rule by the best], in political science, government by a social elite. In the West the political concept of aristocracy derives from Plato's formulation in the *Republic*. The criteria on which aristocracy is based may vary greatly from society to society. Historically, aristocracies have usually rested on landed property, have invoked heredity, and, despite frequent conflicts with the throne, have flourished chiefly within the framework of MONARCHY. Aristocracy may be based on wealth as well as land, as in ancient Carthage and medieval Venice, or may be a theocracy like the Brahman caste in India. Other criteria can be age, race, military prowess, or cultural attainment. The best example of a modern landowning aristocracy that conducted government was in England from 1688 to 1832. A resurgence by the French aristocracy in the 18th cent. was ended by the French Revolution, which abolished most of the privileges on which it was based. Inflation, which cut into the fixed income of the aristocracy, the loss of the traditional military role of the aristocracy, and the rise of industry and decline in the importance of landed property have all worked against the aristocracy. Today the political power of traditional western aristocracy has all but disappeared.

Aristogiton: see HARMODIUS AND ARISTOGITON.

Aristophanes (ār'īstōf'anēz), b. c. 448 B.C., d. after 388 B.C., Athenian comic poet, greatest of the ancient writers of COMEDY. His plays, the only full extant samples of the Greek Old Comedy, mix political, social, and literary satire. The direct attack on persons, the severity of invective, and the burlesque extravagances made the plays fitting for the festival of Dionysus. Aristophanes was conservative in all things, hence he distrusted sophistry and Socrates alike, satirized Euripides' art as degenerate, and deplored the tendency to excessive imperialism that ruined Athens in the Syracusan expedition. The typical plan of an Aristophanic comedy is simple—the protagonist undertakes seriously some preposterous project, and the play is an elaboration of his success or failure. Despite the absurdity of the situation, Aristophanes' characters are real as types, their verisimilitude comes from their perfectly natural behavior in unnatural circumstances. Aristophanes' Greek is exceptionally beautiful, and many of his choruses are among the finest lyric pieces in

Greek literature His careful diction and his ability to characterize in a few words are remarkable, and he shows himself especially astute in his parodies of Euripides. Eleven of his plays survive. *The Acharnians* (425 B.C.), an attack on the Peloponnesian War, *The Knights* (424), a political satire on the demagoguery of the period, *The Clouds* (423), a satire on the sophists and on Socrates, *The Wasps* (422), a satire on the Athenian passion for litigation, *The Peace* (421), a defense of the Peace of Nicias, *The Birds* (414), an escape into an amazing imaginary kingdom, *Lysistrata* (411), in which the Athenian women boycott their husbands to end a war, *The Thesmophoriazousae* or *The Women at Demeter's Festival* (411), in which the women conspire to ruin Euripides because of his misogyny, *The Frogs* (405), a literary satire involving Aeschylus and Euripides, *The Ecclesiazusae* or *The Women in Politics* (c.392), in which the women take over the government, and *Plutus* (388), in which the blind god of wealth recovers his eyesight and distributes the gifts of fortune more equitably. See his plays (tr. by B. B. Rogers, 3 vol., rev. ed. 1950), studies by V. Ehrenberg (3d ed. 1962), G. Murray (1933, repr. 1964), C. Whitman (1964), K. J. Dover (1972), and Alexis Solomos (tr. 1974).

Aristophanes of Byzantium (bizān'shēam, -tēam), c. 257-180 B.C., Greek scholar. He was librarian at Alexandria, edited various texts, and reputedly invented the Greek diacritical marks. Aristarchus of Samothrace was his pupil.

Aristotle (ār'tistōt'al), 384-322 B.C., Greek philosopher, b. Stagira. He is sometimes called the Stagira. His father, Nicomachus, was a noted physician. Aristotle studied (367-347 B.C.) under Plato at the ACADEMY and there wrote many dialogues that were praised for their eloquence. Only fragments of these dialogues are extant. He tutored (342-c.339 B.C.) Alexander the Great at the Macedonian court, left to live in Stagira, and then returned to Athens. In 335 B.C. he opened a school in the Lyceum, some distinguished members of the Academy followed him. His practice of lecturing in the Lyceum's covered portico or walking place (*peripatos*) gave his school the name Peripatetic. During the anti-Macedonian agitation after Alexander's death, Aristotle fled in 323 B.C. to Chalcis, where he died. His extant writings consist largely of notes made on his lectures by his students and edited in the 1st cent. B.C. Chief among them are the *Organon*, consisting of six treatises on logic, *Physics*, *Metaphysics*, *De Anima* [on the soul], *Nicomachean Ethics* and *Eudemian Ethics*, which are both versions of his *Discourse on Conduct*, *Politics*, *De Poetica* [poetics], *Rhetoric*, and a series of works on biology and physics. In the late 19th cent. his *Constitution of Athens*, an account of Athenian government, was found. Aristotle placed great emphasis in his school on direct observation of nature, and in science he taught that theory must follow fact. He considered philosophy to be the discerning of the self-evident, changeless first principles that form the basis of all knowledge. LOGIC was for Aristotle the necessary tool of any inquiry, and the SYLLOGISM was the sequence that all logical thought follows. He introduced the notion of category into logic and taught that reality could be classified according to several categories—substance (the primary category), quality, quantity, relation, determination in time and space, action, passion or passivity, position, and condition. Aristotle also taught that knowledge of a thing, beyond its classification and description, requires an explanation of CAUSALITY, or why it is. He posited four causes or principles of explanation: the material cause (the substance of which the thing is made), the formal cause (its design), the efficient cause (its maker or builder), and the final cause (its purpose or function). In modern thought the efficient cause is generally considered the central explanation of a thing, but for Aristotle the final cause had primacy. He used this reduction of causes to examine the relation of form to matter, and in his conclusions differed sharply from his teacher, Plato. Aristotle believed that a form, with the exception of the Prime Mover, or God, had no separate existence, but rather was immanent in matter. Thus, in the Aristotelian system, form and matter together constitute concrete individual realities, the Platonic system holds that a concrete reality partakes of a form (the ideal) but does not embody it. Aristotle believed that form caused matter to move and defined motion as the process by which the potentiality of matter (the thing itself) became the actuality of form (motion itself). He held that the Prime Mover alone was pure form and as the "unmoved mover" and final cause was the goal of all motion. Aristotle in

ethics reflects Aristotelian metaphysics. Following Plato, he argued that the goodness or virtue of a thing lay in the realization of its specific nature. The highest good for man is the complete and habitual exercise of his specifically human function, which is his rationality. Well-being (*eudaimonia*) is not the pursuit of pleasure (hedonism), but rather is the pursuit of the contemplative life. Aristotle also emphasized the traditional Greek notion of virtue as the mean between extremes. The *Politics* studies man as a political being and holds that in fulfilling the civic function man realizes an intrinsic part of his human virtue. For Aristotle's aesthetic views, which are set forth in the *Poetics*, see TRAGEDY. After the decline of Rome, Aristotle's work was lost in the West. However, in the 9th cent., Arab scholars introduced Aristotle to Islam, and Muslim theology, philosophy, and natural science all took on an Aristotelian cast. It was largely through Arab and Jewish scholars that Aristotelian thought was reintroduced in the West. His works became the basis of medieval SCHOLASTICISM, much of Roman Catholic theology shows, through St. Thomas Aquinas, Aristotelian influence. There has also been a revival of Aristotelian influence on philosophy in the 20th cent. His teleological approach has continued to be central to biology, but it was banished from physics by the scientific revolution of the 17th cent. His work in astronomy, later elaborated by Ptolemy, was controverted by the investigations of Copernicus and Galileo. See edition of his works by Richard P. McKeon (1941), D. J. Allan, *The Philosophy of Aristotle* (1952), Ernest Barker, *The Political Thought of Plato and Aristotle* (rev. ed. 1959), J. H. Randall, *Aristotle* (1960), G. E. R. Lloyd, *Aristotle: The Growth and Structure of his Thought* (1968), John Ferguson, *Aristotle* (1972).

Aristoxenus of Tarentum (āristōk'sānas, tarēn'tam), fl. 4th cent. B.C., pupil of Aristotle. He marks a turning point in Greek musical theory by being the first to base theory on analysis of musical practice. In his two extant treatises, *Elements of Rhythm* and *Elements of Harmony*, he systematized Greek music by clear definitions of terms and orderly arrangement of scales. See H. S. Macran, *The Harmonics of Aristoxenus* (1902).

arithmetic, branch of MATHEMATICS commonly considered a separate branch but in actuality a part of ALGEBRA. Conventionally the term has been most widely applied to simple teaching of the skills of dealing with NUMBERS for practical purposes, e.g., computation of areas, proportions, costs, and the like. The four fundamental operations of this study are addition, subtraction, multiplication, and division. The older teaching arbitrarily divided arithmetic into elementary arithmetic and higher arithmetic. In advanced study the concept of number is greatly generalized to include not only complex numbers, but also quaternions, tensors, and abstract entities with no other meaning than that they obey certain laws (see NUMBER THEORY). This division of arithmetic into the practical and the theoretical dates back to classical Greek times, when the term *logistic* referred to elementary arithmetic and the term *arithmetic* was reserved for the theory. The basic operations of arithmetic were formerly learned largely or even entirely by rote. In the early 20th cent., however, new and more practical methods were adopted, and late in the 1950s there was a turn in elementary education toward utilizing the methods developed by higher mathematics and by the use of computers. For the ordinary purposes of practical figuring the old method survives.

arithmetic progression: see PROGRESSION.

Arius (ār'i'as, ār'ē-), c. 256-336, Libyan theologian, founder of the Arian heresy. A parish priest in Alexandria, he advanced the doctrine famous as Arianism and was excommunicated locally (321). He was declared orthodox in Asia Minor, where he had fled (323), but he was anathematized by the Council of Nicea (see NICAEN FIRST COUNCIL OF) and banished by Roman Emperor Constantine (325). But in the reaction after Nicea, he came into imperial favor. The emperor had ordered the Athanasians at Alexandria to receive him at communion when he suddenly died.

Arizona, state (1970 pop., 1,770,900), 113,909 sq mi (295,024 sq km), SW United States, admitted as the 48th state of the Union in 1912. The capital and largest city is PHOENIX. Arizona is bounded on the N by Utah, on the W, where the Colorado River forms the border, by S Nevada and California, on the S by Mexico, and on the E by New Mexico. In N Arizona are the Colorado Plateau, an area of dry plains more than 4,000 ft (1,220 m) high, and deep canyons, in-

cluding the famous Grand Canyon cut out by the Colorado River. Along the Little Colorado River, which runs northwest through the plateau to join
